The sugar bounties, which transfer to the coffers of the sugar manufactures from 70,000,000 to 90,000,000 francs annually that are raised by general taxation and make French sugar three times as dear in France as in England, were reduced by a bill that passed the Senate on July 17. The surtax of forty francs on foreign alcohol was continued for an indefinite period. In the discussion of a bill to exact compensation for accidents to workmen it was proposed that the family of a foreign workman should not be entitled to compensation from employers in case of death by accident unless resident in France, until it was pointed out that this would make the labor of foreigners more desirable to employers. A bill was passed regulating the employment of women and children in factories.

The ministerial budget scheme was rejected by the budget committee, the majority of the members being Moderate Republicans, owing to the practice of the Reactionaries of aiding in the election of a committee hostile to the Government of the day. The Government proposed an increase of 60,000,000 francs in the ordinary expenditure for 1889, and of 90,000,000 francs in special military and naval expenditure. M. Peytral expected an increase of 12,000,000 francs in the revenue through the Universal Exposition and 25,000,000 francs from the readjustment of the sugar duties. The deficit he proposed to cover by issuing treasury bonds for 100,000,000 francs.

The Government was censured by the Senate on July 1 for not dismissing the *mairie* of Carcassonne, who had been convicted of an election fraud that was intended, not to alter the result, but to save the necessity of a sec-

ond ballot. Appealing to the Chamber, the ministers obtained a vote of confidence, which was passed by 326 votes against 173. Charges against the monks of a reformatory at Cîteaux led to the passing of a bill to suppress all male religious orders, which was defeated in the Senate. It was decided to improve the naval defenses of Brest and Cherbourg. The army bill, reducing the term of military service to three years, while making the obligation universal, including seminarists and students of the liberal professions, who have, however, to serve only one year with the colors, has been before the Chambers for several years, and has been remodeled by different ministers of war. In 1888 it finally passed the Senate.

The session closed in the middle of July, and the new session opened on October 15. M. Floquet presented his revision proposals, which did not involve the abolition of the Senate, but restricted its control over legislation to the right of remonstrance and postponement, and did not touch the presidential power, which the extreme Radicals wished to do away with altogether.

The revision scheme proposes that one third both of the Senate and the Chamber shall retire every second year, the two sets of elections being held simultaneously. Between the Radical demand of direct election of senators and the present system a compromise is made by having the delegates nominated by the communes, instead of by the municipalities, which is indirect election in two degrees, in the place of three. It proposes that the Council of State shall be nominated partly by Parliament and partly by chambers of commerce and trade-unions. It is to be given a consultative voice in legislation from a judicial point of view, and be divided into technical sections, qualified to advise on questions affecting labor, commerce, agriculture, and the arts. The council shall frame bills at the instance of the Government, and its commissaries will take part in their discussion in Parliament. Bills will be first introduced in the Chamber, and after it has passed them the Senate will have only a suspensive veto, leaving the question to be decided by the next biennial election. The Senate can send back to the Chamber amendments to the budget, but the vote of the Chamber on these shall be final. The power of the President and the Senate to dissolve the Chamber is to be abolished. The stability of ministries, of which there had been twenty-three since the foundation of the republic, was promoted by providing that they can only be removed by the President after a formal vote of want of confidence.

Boulangism.—When Gen. Boulanger was presented for the first time as a candidate for the Chamber in four departments, Gen. Logerot, Minister of War, sought an interview with him, and, after receiving his positive denial that he had taken any part in the election manoeuvres, told him to return to Clermont,

the headquarters of the army corps that he commanded, and take care that his name should not be improperly used by his friends in the future. Not many days afterward he broke his parole by going to Paris in disguise, where he was recognized by an army officer, and on investigation it was found that he had personally directed the electioneering campaign by means of cipher telegrams. For these acts he was relieved of his command and placed in non-activity, called before a court-martial, consisting of five generals, on March 26, 1888. This was the signal for demonstrations for and against Boulanger, and, while his trial was pending, he was a candidate at Marseilles, receiving a small vote, and in Aisne, where he headed the poll in the primary elections, although as an officer in active service he was ineligible, and then withdrew in favor of one of his partisans. He defended himself before the military court by saying that he came to Paris to visit his sick wife and denying his participation in the electoral canvass; but when confronted with the telegraphic dispatches, he made no answer. The court voted unanimously against him, and President Carnot signed the decree placing him on the retired list. Freed thus of the restraints imposed by his military duties, he openly took the field as a candidate for the department of the Nord with an address in which he accused the Chamber of suppressing the defenses of the nation, and the Senate of checking every reform, and his judges of condemning him for reasons which they dared not avow. His condemnation gave him a greater prominence than he had before. The antagonists of the third republic—Imperialists, Clericals, Royalists, and many extreme Radicals and Socialists—supported him, openly or secretly, as the representative of dissatisfaction with the existing order of things and with the men who controlled the policy of the nation. His popularity rested chiefly on the military reforms that he had effected as Minister of War. He was regarded among the common soldiers and the peasantry as the creator of an army that was capable, or soon would be, of avenging Sedan, and in his speeches he hinted vaguely at war. The rural voters, who formerly adhered to the empire, at the beck of Bonapartist leaders, now turned to Boulanger as the embodiment of the idea of personal government, which is strong among the French peasantry. Boulanger called himself a democratic Republican, although his political friends and financial supporters were Bonapartists; and, in his demand for a revision of the Constitution, he hinted at a system resembling that of the United States, in which the President should be chosen by a *plébiscite*, and the ministers be responsible to him, and not to Parliament. The Monarchist and Socialist factions that constituted his party each hoped to shape the changes after their own ideas. He was elected by a majority of 100,000 in the Nord, where Bonapartists and

Republican extremists are strong. He was elected in the Dordogne also, but took his seat as deputy for the Nord department. The programme on which he was elected, chiefly by Bonapartist votes, was dissolution, revision, and a constituent assembly. He made his appearance in the Chamber on June 4, and arraigned parliamentarism, characterizing cabinets as servile tools of selfish coalitions, and the President as a mere log. Expressing a Platonic belief in the Radical plan of abolishing both the Senate and the presidency, he proposed as a practical solution the election of the Senate by universal suffrage, the submission of laws to a referendum, and the election of the President directly by the people, who desired to have a visible head of the Government. Then a national policy would take the place of intrigue, and France would enter on the condition of having fixed and regular governments. M. Floquet in his reply described the scheme as veiled Cæsarism, and alluded to one of Boulanger's manifestoes, in which he said that the people must be cared for like a child.

On July 12 Gen. Boulanger appeared in the Chamber again, in order to bring forward a motion for the dissolution of the Chamber, supporting it in a speech denunciatory of the existing Chamber and of the Government. The Prime Minister replied in caustic terms, describing him as one who, having passed from vestibules into antechambers, yet had the effrontery to insult tried Republicans, the least of whom had done the republic more good than he could do it harm; whereupon Gen. Boulanger declared that M. Floquet had "impudently lied" in speaking of him as a frequenter of antechambers, and announced that he resigned his seat, his letter of resignation being already in the speaker's hands. His purpose was to obtain another election from the people. He at once presented himself as a candidate to fill a vacancy in the representation of the Ardèche, but was defeated, as was his nominee, Paul Déroulède, the apostle of revenge, in the Charente. His revision scheme was presented, and referred to the committee on revision that had been appointed at the beginning of the new ministry. During the five months of the existence of his party of National Protest, which was amply supplied with Bonapartist funds, he had received in the various by-elections fully half a million votes. The insult to the Premier resulted, as was expected, in a duel. Gen. Boulanger's seconds were M. Laisant and Count Dillon; M. Floquet's were MM. Clémenceau and Georges Périn. The insulted party chose swords as the weapons. They met on the following morning. Gen. Boulanger showed a determination to make the duel fatal, rushing into close quarters with impetuosity, and, after the interchange of slight wounds on both sides, M. Floquet, in parrying a thrust, pierced him in the throat, inflicting a severe wound close to the carotid

artery. The result was humiliating to the soldier, particularly so because M. Floquet had the reputation of not knowing how to handle a sword, and had not practiced for twenty years till the preceding winter, when he fenced for the benefit of his health. On August 19 he was a candidate in elections that were held in the department of the Nord, where his majority was only 27,000, in the Charente-Inférieure, where he received 57,000 votes to 42,000, and in the Somme, where he had 76,000 votes to 41,000 for his Republican opponent.

After this electoral triumph, which caused much alarm throughout Europe, Gen. Boulanger disappeared, and traveled *incognito* in foreign lands, not returning till October. On the 24th of that month he appeared before the revision committee of the Chamber, having two days before taken his seat as a member for the department of the Somme. He said that he would leave the question of revision to be decided entirely by the Constituent Assembly, and declined to give his own views further than that he desired an Executive that should not be responsible to the Legislature. There was a renewal of disquieting popular agitation. Collisions took place at political meetings between Boulangists and anti-Boulangists, and on October 30 the Government ordered the police to seize pictures that were sold in the streets representing Gen. Boulanger driving out the deputies from the Chamber, and portraits, likewise in uniform, of the Comte de Paris and Prince Victor Bonaparte.

Strikes and the Closure of the Labor Exchange.—The Bourse du Travail in Paris is a large hall for the use of workmen's associations and unions, and was built with municipal subventions. The majority of the Syndical Chambers, which have their offices there, belong to the Possibilist party, which aims at gradual social revolution by constitutional and peaceable means, while some are Anarchists, others are Blanquists, and some style themselves Independent, and show revolutionary tendencies. One of the objects of the central labor hall was to maintain an open register where employers could find workmen at the different trades without the intervention of the employment bureaux, which charge fees that are often exorbitant. This feature was not sufficiently developed, because hirers of labor persisted in patronizing the private agencies. In the summer of 1888 the war of class interests broke out in a series of strikes in Paris, which were instigated mostly by the leaders of the revolutionary minority. The specter of labor politics has influenced the selection of cabinets by the Presidents who preceded M. Carnot, and was one cause of their instability, for they have usually been chosen from among the discredited leaders of the Opportunist minority, the Floquet Cabinet being the first that approximates the center of gravity of the Republican party. The labor disturbances of the year began at the annual celebration of the Com-

munist insurrection at the cemetery of Père Lachaise on May 27. Some of the extreme Socialists, under the lead of Henri Rochefort and the "Intransigeant" newspaper, had attached themselves to the Boulangist movement. A large section of the Possibilists, led by Citizen Joffrin, had joined a Society of the Rights of Man hostile to Boulanger, which had been founded by MM. Clémenceau and Ranc, and had for its ostensible object the defense of the republic against attempts at reaction or dictatorship. Orators from these groups, as well as Blanquists and Anarchists, made speeches over the graves of Communards. As a Boulangist wreath was being deposited at the foot of the wall where the defenders of the Commune were shot down by the Versailles troops, an Anarchist named Lucas, who had recently been tried for an attempt on the life of Louise Michel at a public meeting in Havre, fired with a revolver at the bearer, whose name was Rouillon, wounding two Blanquists in the crowd. A fight ensued between Anarchists and Communists, which was stopped by the police. On July 25 a general strike of the laborers in the building trades began in Paris, throwing out of employment a great number of other workmen of the class most addicted to Anarchist sentiments. The strike originated among the laborers employed at the Exhibition works on the Champs de Mars, who demanded 60 centimes an hour, the price established by the Municipal Council for the public works of the city, instead of 45 or 50 centimes, that the contractors were paying. Men throughout Paris who continued at work were compelled by the strikers to throw down their tools. Most of the strikers were Belgians, Italians, and Germans. The police, assisted by the military, attempted to prevent disturbance and illegal interference with workmen, and many strikers were arrested, but let go. The Municipal Council rejected, by 40 to 28 votes, a proposition of M. Vaillant to aid the strikers with money. By July 31, the number of workmen on strike who had inscribed their names at the Syndical Chamber was 9,812. The carters joined the strike in the beginning of August. M. Floquet received a deputation of strikers, and announced that the Government would permit no interference with combinations to strike nor intimidation of laborers who wished to work. Strikes were threatened by the carpenters and in other trades where wages were lower than the municipal tariff. The agitation and strikes spread to the provinces. Disturbances were made by strikers at Amiens, who sacked and burned a velvet-factory and fought the police behind barricades. At Beséges the miners struck for an advance of 50 per cent. At Calais demonstrations of the unemployed were accompanied by violence. The upsetting of carts and taking away of tools went on in Paris, and the public prosecutor could find no law directed against such offenses. The hair-dressers, coffee-

house waiters, cooks, and dairymen took revenge on the employment agents by destroying their signs and windows. The funeral, on August 8, of Gen. Eudes, ex-Communard and leader of the Blanquists, who fell dead while addressing a meeting of strikers, gave rise to two serious affrays with the police, who captured some red flags that were unfurled in the procession after a struggle, and, after a bomb was thrown, charged on a mob, making arrests, and repeated the charge when the crowd besieged and stoned the police station, cutting with their swords, not only Anarchist rioters, but many spectators, even women and children. The funeral procession was to have started from the Bourse du Travail, but in compliance with a clamor for the closing of this rallying-place, where strikers had been encouraged and inflamed by many violent speeches, the Government had decided to take possession of the hall, and this morning sent troops to stop all the approaches. On August 18 the joiners, and afterward the cabinet-makers struck in sympathy with the laborers. The fund that was raised for the strikers having given out, at the end of twenty-five days, when many families were suffering from hunger, the strike was abandoned, and the 8,000 laborers who still held out returned to work. The workmen employed on the Eiffel tower, the swaying of which created alarm as to its security, also struck, and did not resume till an increase was granted. Strikers at the coal-mines at Treuil attacked miners who continued at work on September 26, and fought desperately with the police who interfered.

The Wilson Case.—Daniel Wilson, ex-President Grévy's son-in-law, who was charged with complicity in the swindling operations of Mme. Rattazzi and others who had been convicted or were on trial for obtaining money on the pretense of procuring decorations, was convicted by the Correctional Tribunal on March 1, and sentenced to two years' imprisonment and a fine of 3,000 francs. It was proved that he had promised the Cross of the Legion of Honor for a bribe, and his counsel argued that this was not obtaining money on false pretenses because he really possessed influence. The Court of Appeals adopted that view, and quashed the conviction.

Foreign Relations.—The adoption of vexatious passport regulations by the German Government for the purpose of making the entrance into Alsace-Lorraine difficult to Frenchmen caused much irritation in France, and led to retaliatory restrictions. The regulations were contained in an administrative decree that was published in May ordering that every foreigner arriving in Alsace-Lorraine by the French frontier, whether he is simply passing through the country or desires to reside there, must have a passport furnished by his Government or its diplomatic representatives, bearing the *visa* of the German embassy in Paris. The *visa*, the expense of which is fixed in all cases at

twelve francs fifty centimes, must be renewed every year. Every Frenchman who remains more than twenty-four hours in the commune of Alsace-Lorraine, arriving by any of the frontiers, must make a declaration of residence and establish his identity by a passport viséed by the German ambassador at Paris, which formality will entitle him to remain eight weeks, at the end of which he must obtain permission to prolong his stay from the president of the district. Before giving his *visa* in such cases the embassy must make inquiries of the provincial authorities whether there are any objections to the sojourn of the person seeking permission.

The regulations proved an annoyance, not only to Frenchmen, but to travelers of all nationalities who enter Germany through Alsace-Lorraine, many of whom were stopped at the frontier because their passports had not received the requisite *visa* of the German ambassador. Some of the German travelers were roughly treated by the exasperated inhabitants of the French border districts which led to attacks in the German official press denouncing France as a "savage country," and calling on other nations to adopt toward her the policy that they pursue in regard to uncivilized countries. On June 20 two French newspaper correspondents were expelled from Berlin for writing and telegraphing to Paris matter that was insulting to high personages.

The jealousy that has existed between France and Italy since the occupation of Tunisia, becoming a settled condition on the entrance of Italy into the Austro-German alliance, the terms of the Triple Alliance were made known to the world in the beginning of 1888, while French and Italian plenipotentiaries were engaged in the negotiation of a new commercial treaty to end the war of tariffs which added to the causes of tension. The sensitiveness shown in the negotiations prevented a satisfactory conclusion by mutual concessions, and in January the negotiations were interrupted, to be resumed again in June.

In the summer arose the incident of the refusal of French subjects and *protégés* to pay communal taxes at Massowah on the advice of the French Government, and the resulting correspondence in regard to the capitulations (see *ABYSSINIA*). M. Goblet's note was couched in calm diplomatic language, and the heated and provocative tone in which Signor Crispi replied and his visit about the same time at Friedrichsruhe gave rise to a suspicion of German promptings. "The powers, having before them all the details of the discussion," said the Italian minister in his reply of August 18 to M. Goblet's second note, "will know which side is in the wrong—whether it is the power which enforces respect for the law assuring public order or whether it is the one which excites a peaceful population to disregard the law and to defy the authority of the established Government." Italy was technically in the wrong

in treating the capitulations as having lapsed before a formal notification to the powers of the taking possession of Massowah, in compliance with the Congo treaty that was made at Berlin in 1885, and in his first circular Signor Crispi made such notification. This was treated by the French Government in the further correspondence as only a preliminary to negotiations respecting the abolition of the capitulations by consent of the powers.

The Hungarian Premier, M. Tisza, in announcing in May that the Hungarian Government would not only take no official part in the French Exhibition of 1889, as he had already declared a year before, but would discourage Hungarians from exhibiting, based the decision on the ground that the French Government would not or could not protect foreigners from violence. His utterances on this subject in the Hungarian Chamber conveyed an admonition that the days of Hungarian sympathy for France were over in a tone so provocative that explanations were asked.

Colonies.—The colonial possessions and protectorates of France have a total area of 2,267,084 square kilometres, with a population of 26,008,995. The following table shows the area and population of the colonies and protectorates, according to the latest estimates and returns:

POSSESSIONS.	Square kilometres.	Population.
<i>Asia:</i>		
Possessions in India.....	509	275,961
Cochin-China.....	59,458	1,792,738
French Tonquin.....	90,000	2,000,000
<i>Africa:</i>		
Algeria.....	667,000	3,817,465
Senegambia.....	250,000(?)	188,287
Gaboon and Gold Coast.....	180,000(?)	184,188(?)
Congo region.....	480,000(?)	500,000(?)
Eboulon.....	2,512	179,689
Ste. Marie.....	880	7,684
Nossi Bé and Mayotte.....		21,348
Obock.....	10,000	22,870
<i>America:</i>		
Guiana.....	191,418	26,502
Guadeloupe.....	1,869	181,096
Martinique.....	937	169,283
St. Pierre and Miquelon.....	235	6,900
<i>Oceania:</i>		
New Caledonia.....	19,828	56,468
Marquesas Islands.....	1,244	8,776
Tahiti and Moorea.....	1,179	10,889
Taiuan and Raiuval.....	209	665
Tuamotu, Gambier, and Rapa islands.....	1,000	8,500
Total colonies.....	1,788,268	16,459,995
<i>Protectorates:</i>		
Tunis.....	118,000	2,000,000
Annam.....	275,300	6,000,000
Cambodia.....	88,960	1,500,000
Comoros.....	1,606	58,000
Total.....	478,766	9,558,000
Grand total.....	2,267,084	26,008,995

The budget for 1888 estimates 41,841,831 francs for the colonies, including 2,500,000 francs for New Caledonia, 6,838,000 francs for Senegambia, 8,000,000 francs for Cochin-China, and 8,250,000 francs for Annam.

By a decree that was issued on Oct. 17, 1887, the whole of the possessions of France in Indo-China, comprising Cochin-China, Tonquin, Annam, and Cambodia, were united under one civil governor-general of Indo-China, with a lieutenant-governor in Cochin-China, a resident-general in Tonquin and Annam, and a resident-general in Cambodia. M. Constans, previously resident at Hanoi, was nominated Governor-General, but in the beginning of September, 1888, he was dismissed in consequence of a dispute between himself and the under-secretary for the colonies, and M. Richaud, his chief subordinate, was appointed to succeed him. The revenue of French Indo-China for 1888 was estimated at \$18,656,000, and the expenditure at \$18,756,126. The estimated revenue of Annam and Tonquin for 1887-'88 was 44,860,000 francs, and the expenditure 44,758,230 francs. The expenses of the annexation and Government of Tonquin up to the end of 1887 were 299,000,000 francs. For 1888 the ministry asked for \$20,000,000 francs, and was almost defeated by the vote of the Chamber on February 18. The number of troops maintained in Indo-China is still nearly 14,000. There are moreover 18,000 native troops. The King of Annam has ceded to France the towns of Haiphong, Hanoi, and Tourane, and the country around them, and has decreed that French property shall be subject to French laws in Tonquin and the free ports, and that Frenchmen may acquire property in any part of his kingdom, subject to the laws of Annam. Rebellion against French authority, or "piracy," as it is called, is still rife in Tonquin, and the conquerors have resorted to the plan of imposing heavy fines on villages that are suspected of aiding or harboring pirates, and distributing one half of the proceeds among villages distinguished for loyalty, while the remainder is employed in maintaining and improving the Tonquinese militia, which has been reorganized under the name of the civil native guard, and is no longer trusted to oppose the rebel bands, but is employed for police duties only. In October, 1888, the former King of Annam, who, with his minister Thuyet, kept up a vigorous resistance after his capital had been captured and another king installed, was made a prisoner by French troops, Thuyet being slain. For protective and fiscal purposes, the French general tariff was put in force in Indo-China on July 1, 1887. Although it increased the revenue, the change did not stimulate the importation of French goods, and the effect on commerce and production was very unfavorable.

The Senegambian possessions have been extended in the past four years, either by treaties with native chiefs or by simple assumption of dominion, until they include the whole of the upper Niger as far as the great falls east of Timbuctoo. The territory claimed by France embraces all the country behind British Gambia and Portuguese Senegambia

and half of the region inclosed in the great bend of the Niger. Between Sierra Leone and Portuguese Senegambia the French have a strip of coast. Their possessions in this region are about 130,000 square miles in extent, not counting the indefinite claims to the east of the Niger. The trade of Senegambia, which is almost exclusively with France, now amounts to 50,000,000 francs per annum, equally divided between imports and exports. On the Guinea coast France claims about 10,000 square miles behind the stations of Grand Bassam, Assinie, Grand Popo, Porto Novo, and Kotonere, from which an export trade in cabinet-woods and palm-oil is carried on. The exports from Porto Novo alone are estimated at 1,000,000 francs a year, and the imports at an equal amount. The practice of claiming the entire interior back of occupied sections of the coast has led to a rivalry between the French, whose coast line faces the west, except the limited establishments on the Ivory and Gold Coasts, and the British, whose possessions on the Guinea coast, if extended into the interior, will cut off the French from the regions lying behind Senegambia, which they claim to include in their sphere of influence, and over a part of which they assert, but have not yet exercised, a protectorate. In this race the British have at present the advantage in their possession of the water-way of the Niger.

The activity of the English on the Niger impelled the French to push more vigorously the project of extending their Senegambian provinces so as to embrace the upper Niger and Timbuctoo. When this scheme was first entertained several expeditions were sent from St. Louis to penetrate to the Niger, and 50 miles were built of a railroad that was to extend from Medina, on the middle Senegal, to Bamakou, on the upper Niger, a distance of over 300 miles. After sinking much capital and losing many lives in fights with the natives and by the diseases of the climate, the work was stopped. In 1887 Lieut. Caron descended the Niger in a gun-boat from Sansanding to Timbuctoo, where he was inhospitably received. This is the precursor of other expeditions, which will result in the annexation of Timbuctoo, an important trading-center, but not the only town in the western Soudan in which a caravan trade is carried on with the north. The work on the Senegal railroad is to be resumed, and the project has been revived of extending it through the Sahara so as to connect Senegambia with Algeria.

The French have lately been busy in extending their influence over the tribes of the interior behind the Gold Coast. One of the chiefs near Lagos was seized and transported by the British for listening to overtures of French officers, one of whom subsequently visited Abeokuta, a populous town in the kingdom of Agbas, and made a treaty with several native chiefs, which, except for the active measures that were taken by the British, would have

resulted in closing the roads to Lagos and diverting the entire trade of the river Ogoni to Porto Novo.

The French possessions in the Gaboon and Congo regions have expanded greatly since 1884, until now the French Congo, the Ogowé, and the Gaboon colonies have an area of 238,000 square miles that is conceded to France, while her sphere of influence on the north of the Congo reaches at present over at least 160,000 square miles more. The entire basin of the Ogowé, and the Kwilu with its stations were conceded by the Berlin Conference, while her claim to the interior as far as the Mobangi, which has been identified as the Wellé, comprising the entire north bank of the river until it cuts the 4th parallel of north latitude, has been virtually admitted. The commercial value of these acquisitions has been very slight up to the present time. The entire trade of the Gaboon is estimated not to exceed 10,000,000 francs per annum. The total trade of the French dominions in Africa amounts to about 500,000,000 francs. Including Algeria and Tunisia, about 700,000 square miles, or nearly one sixteenth of the entire surface of Africa, are subject to France, with a population of between 7,000,000 and 10,000,000 souls.

The Marquesas Islands have been a French protectorate since 1841. In September, 1888, the French flag was hoisted and the islands were taken possession of after severe fighting between French marines and the natives.

The New Hebrides convention released France from an engagement, made in 1847, not to annex Raiatea, Borabora, and Huahine, called the *Iles sous le Vent* or the Leeward Islands, of the Society Archipelago. In 1878 the French took possession of the principal one of the group, Raiatea, and since then the French flag has floated over the island, but only through the sufferance of Great Britain, and, by virtue of a convention that had to be renewed annually, only for six months of each year. The English and German residents, hoping still to induce the British Government to revoke its decision by fomenting native opposition to the French occupation, stirred up a rebellion against King Tamatoa, the ruler who enjoyed French protection. After failing to intimidate the rebels with cannon shots, the officer in command of the naval force on Dec. 17, 1887 issued an ultimatum calling on the inhabitants to submit to Tamatoa, and on the refusal of several chiefs the gun-boat "Scorpion" bombarded their villages and landed troops. On March 16, the French flag was raised on all the islands. Five days after the annexation of Huahine the natives hostile to French rule attacked a patrol, killing an officer and two sailors. The disturbance was quelled, and did not recur. In June the hostile natives of Raiatea sent a demand that the French should evacuate the island, to which the naval commander replied by landing a company of marines and a cannon.

The Wallis Islands, lying midway between Samoa and Fiji, were declared a French protectorate on Dec. 31, 1887. French influences became predominant half a century ago, but regard for British susceptibilities prevented annexation at that time. Unea, the principal island, is only 7 miles long, but contains 4,000 inhabitants, belonging to the finest of the Pacific races, a large majority of whom, including Amélie, their Queen, are Catholics.

Algeria.—The Governor-General of Algeria is Louis Tirman, appointed Nov. 26, 1881.

In the census of 1886, the population was 3,817,465, exclusive of wandering Arab tribes, occupying an area of 122,867 square miles. Of the total population the department of Algiers contained 1,880,541, Constantine 1,566,419, and Oran 869,505. To the above must be added the Algerian Sahara, with an estimated area of 185,000 square miles, and an estimated population of 50,000. In 1886, of the total population, 261,591 were of French origin, 42,744 naturalized Jews, 3,274,354 French indigenous subjects, 5,055 Tunisians, and 233,721 foreigners, including Spaniards, Italians, Anglo-Maltese, and Germans. The population of the city of Algiers in 1886 was 71,199; of Oran, 58,545; of Constantine, 36,536.

The total expenditure of the Government for 1887 was 120,340,256 francs, the cost of the civil government being 89,205,285 francs; special services, 6,127,206 francs; military services, 54,048,968 francs; extraordinary expenses, 20,958,797 francs; colonization, 2,815,000 francs. The revenue for the same year was 43,734,303 francs. The number of troops in Algeria was 54,000.

The imports in 1886 amounted to 242,274,279 francs, of which 189,175,785 francs came from France, and 53,098,494 from other countries. The exports were 182,255,122 francs, 125,587,932 francs to France and 56,667,191 francs to other countries.

The lines of railway open for traffic in 1887 were 1,290 miles in length. The receipts in 1886 amounted to 21,174,400 francs.

Wine-growing is an industry of increasing importance. The area planted in vineyards in 1887 was 190,000 acres, yielding 2,000,000 hectolitres of wine. The product of the older vineyards compares favorably with the best French wines. The phylloxera has appeared, but has been kept in check by stringent measures of protection. The colonization of Algeria has increased rapidly since 1871, when 10,500 refugees from Alsace-Lorraine were granted lands and the means of beginning as agriculturists. During the past eleven years 8,000 families have been settled under favorable conditions on lands that were taken from the Arabs in consequence of revolts, at a cost to the Government of 15,000,000 francs, not reckoning the value of the land. Grasshoppers did much damage to the growing crops in 1887, and in 1888 swarms of crickets devastated many localities.

VOL. XXVIII.—23 A

Tunisi.—The principality of Tunis has not been formally annexed, but is under the regency of France. The ruling Bey is Sidi Ali, born Oct. 5, 1817, who succeeded his brother, Sidi Mohamed-es-Sadok, Oct. 28, 1882. The French Resident-General, M. Massicault, practically administers the government of the country under the Bureau des Affaires Tunisiennes of the French Foreign Office.

The area is about 42,000 square miles, and the estimated population is 2,100,000, of which number 2,028,000 are Mohammedana, 45,000 Jews, 25,100 Roman Catholics, 400 Greek Catholics, and 100 Protestants. The capital city, Tunis, has a population of about 145,000.

The estimated revenue for 1887-'88 was 21,806,581 francs, which was balanced by the expenditure. The main sources of revenue are as follow: Direct taxes, 7,454,562 francs; monopolies, 4,355,825 francs; customs, 2,020,000 francs. The charges for civil government that are borne by France do not exceed 150,000 francs per annum. In 1886, 5,752 vessels, of 1,301,695 tons, entered, and 5,592 vessels, of 1,292,275 tons, cleared the ports of Tunis. The principal articles of export are olive-oil, wheat, barley, sponges, and woolen goods. The imports are cotton goods, coffee, sugar, spirits, silks, etc. Tunis had 256 miles of railway and 2,000 miles of telegraph in operation in 1885.

Since Tunis was made a French protectorate European farms have become numerous, the cultivation of the vine has been introduced and is extending, foreign commerce has doubled, banks have been established, and public works have been constructed, though without undue haste. Much attention is given to the conservation and improvement of native industries, and some new branches have been introduced. There has been much progress in education, primary schools having been established in all parts of the country, and supplied with teachers from a normal college in Tunis. The Government has given care to the preservation and encouragement to the study of the ancient monuments that are scattered through the country, and has founded libraries and museums. In 1888 the first steps were taken toward the establishment of a uniform system of education, such as exists in France; but the Italians, who have schools in which their language is taught and formerly received concessions and encouragement from the Bey, objected to having the continuance or the character of these schools depend on the will of French officials. They therefore invoked the capitulations, which were originally designed for the protection of subjects of the Christian powers of Europe against arbitrary acts of Mussulman governments. The French Government, while insisting that the capitulations were still operative at Massowah, denied the Italian contention that they were in force in Tunis. The Italian residents in Tunis objected especially to the new school-regulations that the Bey had

issued, introducing the inspection of schools by French officials, and the Italian school-masters, under the instructions of the Consul-General, refused admittance to the Bey's inspectors. The powers, which had sustained Italy in the Massowah question, because in that port the authority of the former Mohammedan Government had been openly superseded, as in Cyprus and Bosnia, joined in the Italian protest in respect to Tunis, because, although the authority of France is supreme, she has only accepted a protectorate, and ostensibly maintains the rule of the Bey.

The Panama Canal.—The affairs of the Panama Canal Company reached a crisis in December, 1888. The technical committee of the Paris Congress of 1879 estimated the total cost of a sea-level canal of 78 kilometres at 1,200,000,000 francs, of which 1,070,000,000 francs would be for tunnel construction. The company has had to contend with difficulties from the beginning. The first attempt to float the shares failed, and on the second attempt the subscription was barely covered. The issues of obligations have never more than partially succeeded. The company has labored under the disadvantage of having to pay 5-per-cent. dividends out of the capital. The engineering difficulties were greatly underestimated; the disadvantages of the deadly climate, for instance, were not sufficiently taken into account. The company had money enough to begin work in 1881, and by 1888 had 11,000 men employed. After three years, only 119,000,000 tons of the estimated 3,500,000,000 tons of excavation had been removed. Many millions have been spent in constructing a dam, more than a mile long and 140 feet high, across the Chagres valley, in order to prevent the river in times of flood from sweeping away the canal works; but this dam is still far from being completed. The company had expended 1,400,000,000 francs by 1888. After repeated appeals, the French Chamber was induced to authorize a lottery loan on June 8, 1888, but the subscriptions were disappointing. The company sold only 850 of these bonds; yet to make good its promise as to prizes it was compelled, under the law, to invest 100,000,000 francs in *rentes*. A final effort was made to raise a new loan. It was announced that unless 400,000 obligations were taken up the subscription would be null and void. Only 125,000 were subscribed, and on December 14 the company suspended payments. The Chamber refused to authorize the company to defer payments for three months. M. de Lesseps said that the canal could be finished by 1891, not on the level plan but with locks, and that 357,000,000 francs of additional capital would be required. It was proposed to form a new company to complete the work, which should assume the capital obligations of the old company, but pay no interest on the existing bonds and shares until it can be defrayed out of the profits of the canal. M. de Lesseps and his

colleagues resigned their posts as administrators of the company on December 14, whereupon the Tribunal of the Seine appointed judicial liquidators.

FRIEDRICH WILHELM NICOLAUS KARL, eighth King of Prussia and second Emperor of Germany, born in Potsdam, Prussia, Oct. 18, 1831; died there, June 15, 1888. He was the only son of Emperor Wilhelm I of Germany, who at the time his son was born was Prince Wilhelm of Hohenzollern, second son of King Friedrich Wilhelm III of Prussia. The birth of the prince was the occasion of general rejoicing throughout Prussia, as the succession to the crown devolved upon the issue of Prince Wilhelm; the Crown-Prince, afterward Friedrich Wilhelm IV, being childless. His mother, Augusta, daughter of the Grand Duke Karl Friedrich of Saxe-Weimar, a woman of rare attainments, devoted her whole time and energy to his education. Col. von Unruh was appointed his military instructor, and on his tenth birthday the prince officially entered the army as second lieutenant of the First Regiment of the Guards. The first tutor of the young prince, the Rev. W. Godet, was succeeded in 1844 by Dr. Ernst Curtius, the Greek historian, who directed his studies till 1850. According to a custom of the Hohenzollern family, which requires every prince to learn a trade, Prince Friederich, at the age of fourteen, chose that of a printer, and, in Hoenels' royal printing-office at Berlin, attained such proficiency that, in setting up the type for a book in German, Greek, and Latin, one of the oldest compositors had difficulty in keeping pace with him. Much of his time between 1841 and 1846 was spent in traveling throughout Germany. In 1846 he entered the University of Bonn, the favorite educational institution of German princes. He spent four semesters at the university, engaged in the study of history, civil and criminal law, and kindred sciences. His vacations were spent in pedestrian tours and in the study of the architecture of Cologne, Aix-la-Chapelle, and other German cities. At the university he was highly popular, in spite of the fact that the name of Prussian was then a rebuke in the Rhineland province. On May 3, 1849, he entered the First Foot Guards. The year 1850 was spent in traveling through Switzerland, the Tyrol, the north of Italy, and the south of France. The opening of the London Industrial Exhibition of 1851 took him to England for the first time, where he became acquainted with his future bride, the Princess Victoria, then a girl of eleven years. On his return to Berlin he was promoted to the rank of captain in the Guards, and the following year he accompanied the Emperor Nicholas of Russia back to St. Petersburg, where he was appointed colonel of a Russian regiment. He studied the practical workings of administrative law under Herr Flottwell president of the province of Brandenburg, and the art and tactics of war under Von Moltke. Toward the close of 1853

he went to Italy, where he spent four months in the company of painters, sculptors, archaeologists, and statesmen, and first met Pope Pius IX, for whom he always retained a feeling of veneration.

He was now ordered to serve with the dragoons, and his commander, Col. von Griesheim, was instructed to subject him to the actual labors and duties of a soldier's life. In 1854 he was appointed a member of a commission to test the Minié rifle, and shortly afterward he was nominated to the command of the Second Landwehr Guards.

In 1855 Col. von Moltke became adjutant to the prince, who had attained the rank of colonel, and in September of that year, in company with Moltke, he visited England, and before his return he became betrothed to the princess royal. In May, 1856, he again visited England, and in August of this year went to Moscow as the representative of the Prussian royal house at the coronation of the Emperor Alexander II. The following December, on returning from a visit to England, he visited Paris for the first time. The Empress Eugenie, in a letter to a friend, described the prince as tall and handsome, slim and fair, and commented: "They are an imposing race, these Germans. Louis calls them the race of the future. But we have not come to that."

He married Princess Victoria on Jan. 25, 1858. On becoming Crown-Prince, when his father succeeded to the throne of Prussia on the death of King Friedrich Wilhelm IV, he was sworn in a member of the King's Council, and was appointed on the commission for the reorganization of the army. After the dissolution of the Chamber of Deputies and the abolition of the liberty of the press in 1863, the Crown-Prince protested against the methods of the Bismarck ministry, which he declared to be "both illegal and injurious to the state and the dynasty." The King demanded a retraction of his sentiments on pain of being recalled to Berlin and deprived of his military command. The prince replied that he could not retract his speech, that he was ready, if required, to lay down his commission in the army and resign his seat in the Council of State, saying, "If I am not allowed to speak my mind, I must naturally wish to disavow myself entirely from the sphere of politics."

Domestic legislation in Prussia was overshadowed in 1864 by a war with Denmark, arising out of the disputed succession to the duchies of Schleswig and Holstein. The Crown-Prince had at this time attained the rank of lieutenant-general in the army without having ever seen a battle, but the outbreak of the Danish war sent him to the field of real warfare as an officer on the staff of Field-Marshal Wrangel. He was engaged at the battle of Düppel, and in the subsequent operations of the Prussian and Austrian forces in the brief campaign that resulted in the defeat of Denmark, displaying courage and energy, and on

his return to Berlin he was nominated to the general command of the Second Army Corps.

In the war with Austria Prince Friederich was placed in command of the Second Army Corps, forming the left wing of the force in Silesia. He was also appointed general of infantry and military governor of Silesia during the continuance of hostilities. The Second Army Corps was intended to play a secondary part, but when Saxony was occupied without opposition, and the armies were concentrated for the invasion of Bohemia, the burden on the Crown-Prince's shoulders was largely increased. By three days' fighting he successfully carried his army from the frontier to the Elbe, defeating four of the six army corps opposed to him. He fought spirited engagements at Trautenau and Nachod, coming up to the latter place at a critical moment in support of Gen. Steinmetz. Fighting continued until June 29, when the prince with his army took possession of Skalitz. During this brief campaign, the soldiers under the Crown-Prince had captured five colors, two standards, twenty guns, and 8,000 prisoners. The great battle of Sadowa or Königgrätz was fought on July 3, 1866. The opportune arrival of the Crown Prince with his army, which was fifteen miles away at the beginning of the engagement, gave the victory to the Prussians after one of the most sanguinary battles of modern times. For this victory the prince received the Order of Merit on the field of battle, and shortly after the close of the war was appointed president of a military commission to analyze and formulate the experiences of the war. The prince described his recollections of the war in a privately printed work entitled "Erinnerungen aus dem Kriege."

In October, 1869, the Crown-Prince, accompanied by Prince Ludwig of Hesse, journeyed by way of Vienna, Venice, Athens, and Constantinople to Egypt, to attend the opening of the Suez Canal.

The outbreak of the Franco-Prussian war in 1870, found the Crown-Prince in command of one of the three divisions of the German army, consisting of the armies of Bavaria, Wurtemberg, and Baden, and the Fifth, Sixth, and Eleventh North German Corps, numbering in all about 200,000 men. The first military triumph of the war was his victory on Aug. 4, 1870, over a portion of Marshal MacMahon's forces stationed at Weissenbourg. Alsace was now open to the prince, the roads to Strasburg and Bitsch were seized, and in his further advance toward the passes of the Vosges he encountered the main body of the army of MacMahon at Wörth. This battle, which lasted fifteen hours, terminated in a decisive victory for the prince, the French losses being 10,000 killed or wounded, and 6,000 prisoners. By the 11th of August, the Crown-Prince had crossed the Vosges and occupied the town of Nancy. He detached the Baden division of his army, which captured Hagenau, and besieged Stras-

burg. The Castle of Lichtenburg was taken by the Württemberg division, and Pfalsburg was invested by the Bavarians. After the battles of Mars-la-Tour and Gravelotte, between Prince Friedrich Karl and Marshal Bazaine, the Crown-Prince began his march toward Paris, and laid siege to the fortresses of Toule and Verdun, and finally reached Chalons. MacMahon now endeavored to make a circuit to the north, and by forced marches to reach and relieve Metz in an attack upon Friedrich Karl. The Crown-Prince set out in pursuit, and although MacMahon had four days' start, he was overtaken at the fortified town of Sedan, which he had occupied with 110,000 men and 280 guns. The joint forces of the Crown-Prince and Prince Friedrich Karl surrounded him with an army of 250,000 men and 800 guns, and on September 1 the battle took place which resulted in the defeat of the French forces, and the capture of the Emperor Napoleon III. The Crown-Prince now pushed rapidly on to Paris, and on September 19 his army occupied Versailles, and laid siege to the capital. From this time until the termination of the siege, the prince personally directed the operations around the city, including the repulse of the French under Gen. Vinoy, on September 30. In recognition of the victories that he had gained at Weissenbourg, Wörth, and Sedan, the King raised him to the rank of field-marshal, which was the first instance of that rank being conferred on a prince of the reigning family. On March 7, 1871, after the conclusion of peace, the prince issued his farewell manifesto to his soldiers of the Third Army Corps, and, rejoining the Emperor at Nancy, returned to Berlin in a blaze of triumph. On arriving there he was decorated by the Emperor with the grand cross of the Iron Cross.

"Unser Fritz," as he was affectionately called, returned unquestionably the most popular commander of the war. He was the idol of his soldiers, and his subsequent triumphant reception in South Germany, as Inspector-General of the Fourth German Army Corps, proved how complete was the union between the north and the south, which his military achievements had helped to bring about.

The Crown-Prince manifested keen interest in the development of Germany, and in scientific, industrial, and patriotic undertakings, the Kaiser-Wilhelm-Stiftung for invalid soldiers, and the excavations at Olympia, being notable instances of his activity. On various occasions he accompanied or represented his father, as at the opening of the Vienna Exhibition in 1873 and the funeral of Victor Emmanuel at Rome in 1878, and visited Sweden and Denmark in 1873, St. Petersburg in 1875, and Holland and Belgium in 1876-'77. When the Emperor was wounded by Nobling in 1878, the prince was recalled from England to carry on the Government.

The conflict between Prussia and the Vatican was pending, and in a letter to the Pope

the Crown-Prince thus emphatically expressed himself: "To the suggestion in your holiness's letter that the laws of Prussia should be so modified as to accord with the statutes of the Roman Church, no Prussian monarch could listen for a moment. The independence of the monarchy, which, as a patriot and my father's heir, I am bound to maintain, would at once be compromised if its freedom of legislation were subordinated to any external power." During his temporary occupancy of the throne he was called upon to sign the death-warrant of the young Anarchist, Hoedel, who had made an attempt upon the Emperor's life in May, 1878, and it is said that he went through days of mental agony before he felt himself sufficiently steeled to put his name to the warrant. The Treaty of Berlin was ratified by the Crown-Prince in his capacity as deputy Emperor.

The Emperor Alexander II of Russia was assassinated in 1881, and it devolved upon the Crown-Prince to represent Prussia at the funeral in St. Petersburg. Anxiety was felt in Germany for his safety, in consequence of the threats of the Nihilists, and the Emperor, when pressed to prevent his son visiting Russia, replied, "*C'est notre métier.*"

After an extended tour through western Europe, the Crown-Prince visited Rome in January, 1884, where, in an audience with the Pope, the differences still existing between the empire and the Vatican were amicably discussed. He was present at the Jubilee of Queen Victoria's reign, in London, in June, 1887.

The disease that eventually proved fatal to the Crown-Prince was first noticed in January, 1887, as an inflammatory affection of the throat, accompanied by a cough and slight hoarseness. These symptoms refusing to yield to ordinary treatment, and the appearance of a small growth upon the left vocal chord, aroused in the minds of the attending physicians the suspicion that the disease was malignant. No change in his condition resulted from a long sojourn at Ems, and in May several German specialists, in consultation, decided that the prince was suffering from cancer of the larynx, and that an immediate operation for its extirpation was imperative. Before resorting to such extreme measures, it was thought advisable to get the opinion of some other specialist, and Dr. Morell Mackenzie was summoned from London for a consultation with Profs. Gerhardt, Von Bergmann, and Tobold, and Drs. Von Lauer, Wegner, and Schrader. As the result of his examination, Dr. Mackenzie claimed that, although the growth might possibly be cancerous, the symptoms did not warrant a positive diagnosis, and he consequently declined to give an opinion as to the exact nature of the disease until a portion of the growth had been submitted to microscopical examination. He accordingly removed, on May 31, a portion of the diseased tissue, which was sent to Prof. Virchow for examination. The result failed

to reveal any evidences of cancer in the growth, and Dr. Mackenzie advised against the radical operation proposed by the German surgeons, favoring intra-laryngeal rather than extra-laryngeal treatment. The case having been placed entirely under his care, Dr. Mackenzie proceeded to remove the growth by means of forceps especially devised for the purpose. The portions of the tumor removed at each operation were sent to Prof. Virchow for microscopical examination, but no evidences of cancer were found in any of them. In July Dr. Mackenzie reported that the growth had been entirely removed from the left vocal chord. However, it soon reappeared and, despite all treatment, gradually increased in size. For several months after the prince's return from the Queen's Jubilee there was very little change in his condition, but while he was at San Remo, in November, the disease suddenly assumed a more serious phase, and Dr. Mackenzie was summoned from London. The growth was found to be very much increased in size, and other portions of the larynx had become involved, but hopes were still entertained that the condition would ultimately disappear under appropriate treatment. Contrary to these expectations, the tumor continued to increase in size, and by the beginning of the following February, it had become so large as to encroach considerably upon the air-passages, and seriously impede respiration. The imminent danger of suffocation rendered the operation of tracheotomy necessary. The operation was performed on Feb. 9, 1888, by Dr. Bramman, Prof. Bergmann's assistant. The beneficial results of the operation were immediately apparent in the improvement in respiration, which was now accomplished through a silver tracheotomy tube, inserted into the wind-pipe through an opening in the neck. For several weeks after the operation there was a slight improvement in the patient's condition. On March 4, a portion of necrosed tissue, which had come away through the tracheotomy tube, was examined microscopically by Prof. Waldeyer, who found the first distinct evidences of the presence of cancer.

The death of Emperor William I, on March 9, made the Crown-Prince King of Prussia and Emperor of Germany under the title of Friedrich III. On the 10th he left San Remo for Berlin, and on his arrival was published, simultaneously with his proclamation to the people, a letter to Prince Bismarck warmly acknowledging the services of the Chancellor during the reign of the late Emperor. Among the first acts of the new Emperor's reign were the promotion of General von Blumenthal to the rank of field-marshal, and the conferring of the order of the Black Eagle on Dr. Friedburg, the Russian Minister of Justice, a Jew by descent. His proclamation of an amnesty decree for political offenses was hailed as a concession to Liberal sentiment. Early in his reign the inundations in the eastern and north-

ern portions of Germany aroused his sympathies, and he sent the Empress to inspect the relief measures instituted at Posen.

A fortnight had hardly elapsed after his accession to the throne before an unfavorable change took place in the progress of his disease, and on March 21 he issued a decree, addressed to the Crown-Prince, expressing the wish that the latter should make himself conversant with the affairs of state. The prince was accordingly intrusted with the preparation and discharge of such business as the Emperor assigned to him, and empowered to affix all necessary signatures without obtaining special authorization.

A serious difficulty arose between the Emperor and Empress and Prince Bismarck, regarding the contemplated marriage between the Princess Victoria and Prince Alexander of Battenburg, ex-Prince of Bulgaria. Prince Bismarck threatened to resign, and the projected alliance was abandoned.

About the 16th of April the Emperor's condition became critical, bronchitis having supervened, but he improved in condition, and on June 1 he left Charlottenburg for Potsdam. A few days later a ministerial crisis arose in consequence of the disinclination of the Emperor to give his assent to the quinquennial election bill adopted by the Prussian Diet. The official publication of the bill was followed by the resignation of Herr von Puttkamer, the Minister of the Interior and Vice-President of the Ministerial Council.

Abscesses began to form in the Emperor's neck, in the neighborhood of the wound made in performing the operation of tracheotomy, and the patient experienced great difficulty in swallowing, and grew rapidly weaker. The cancer was extending, and already the whole of the larynx was involved, and the surrounding organs were invaded to such an extent that an opening appeared between the trachea and the oesophagus, permitting food to escape through the tracheotomy tube. Artificial feeding had to be resorted to, but the efforts of the physicians to relieve his condition were of no avail, and on June 15 the German nation was called upon, a second time in a little more than three months, to mourn the death of their sovereign.

Emperor Friedrich III was succeeded on the throne by his eldest son, Friedrich Wilhelm, born Jan. 27, 1859, who reigns under the title of Emperor William II of Germany. The other surviving children are Princess Charlotte, born July 24, 1860; Prince Heinrich, born May 20, 1862; Princess Victoria, born April 12, 1866; Princess Sophie Dorothea, born June 14, 1870; and Princess Margarethe, born April 22, 1872.

After the death of the Emperor the Government published the official reports of the German doctors who were in attendance upon him, and in this report Sir Morell Mackenzie was censured both for his opposition to the

operation of extirpation of the larynx, as proposed by the German physicians at the beginning of the disease, and for his treatment of the case after it had been placed under his care. Not long afterward the Scotch specialist published a book entitled "The Fatal Illness of Frederick the Noble" (London, 1888), in which he answered the charges made against him by the Germans, and in his turn made serious accusations against them, alleging that the diseased growth may have been benign in the beginning, and cancer have been induced by frequent electro-cauterization before he took the case, and that death was hastened by the clumsy recklessness of Dr. von Bergmann, who made a false passage in inserting a tracheotomy tube. For a portrait of the Emperor Friedrich Wilhelm, see "Annual Cyclopædia" for 1887, frontispiece.

FRIENDS. The number of members of the Society of Friends in America, as computed by O. W. Pritchard, editor of the "Christian Worker," from the minutes of the yearly meetings for 1887, is 72,968. This shows an increase in two years of 3,493, of which the yearly meetings west of the Alleghany Mountains are credited with 3,271, and the Eastern yearly meetings with 222.

Standards of Faith.—Although the Society of Friends has, as a body, refused to adopt a formal creed, its standards of faith are well defined and frequently promulgated. Its doctrines are illustrated in the writings of Robert Barclay, George Fox, William Penn, and other early Friends; and for more than two hundred years the yearly meetings of the Society have added what has seemed to be needed, in the way of exhortation, reproof, and elucidation. The views of American Friends who most closely adhere to the primitive features of belief and practice are expressed, with statements of the principles and arguments on which they are based, in epistles and special declarations that have been issued from time to time by the Philadelphia Yearly Meeting.

Orthodox Divisions.—Mention has been made in previous volumes of the "Annual Cyclopædia" of the growth of divisions among Friends respecting doctrines and forms of worship, and particularly respecting the tolerance of certain outward forms of ritual, such as vocal prayer, singing, baptism, and the observance of the Lord's Supper, against which the earlier Friends bore testimony. The origin of these divisions may be traced back to the year 1830, when doctrinal views were first preached and published in England by members of the Society tending to exalt the sacrifice of the cross rather than the inward work of the Holy Spirit, as the chief element of the covenant of salvation. A small separation took place in England on account of these preachings; and the doctrines spreading to America, the Philadelphia Yearly Meeting, in 1836, remonstrated with the London Yearly Meeting upon the subject. In 1843, the Philadelphia Yearly Meeting issued a

pamphlet entitled "The Ancient Testimony of the Society of Friends, commonly called Quakers, respecting some of their Christian Doctrines and Practices." It contained extracts from the declarations and writings of the earlier Friends, concerning the one true God, divine revelation, the fallen state of man, the universality of the light of Christ, the Holy Scriptures, justification, baptism and the Supper, divine worship, ministry, prayer, war, slavery, trade and lying, and parents and children and urged that those testimonies be maintained. In 1845, the advocates of the later views had obtained the preponderance in the New England Yearly Meeting, and it was divided. In 1886 the Ohio Yearly Meeting invited the attention of the London Yearly Meeting to the agitation, and urged it to take action for the removal of the "cause of complaint." That meeting failing to respond satisfactorily to its request, the Ohio Yearly Meeting, though not without objection, adopted a pamphlet that had been issued in the previous year by the Philadelphia Yearly Meeting—corresponding in spirit with the "Ancient Testimony" already mentioned—entitled "An Appeal for the Ancient Testimony of the Society of Friends," together with the testimony that had been adopted in 1830 by the eight yearly meetings then existing in America. The Ohio Yearly Meeting was divided in 1854, the party adhering to the old order retaining about two thirds of the members. Upon the reception of the usual epistle from this body, the Indiana Yearly Meeting declined to correspond with it, and gave its fellowship to the other meeting bearing the same name. The latter is the body which has been described in previous volumes of the "Annual Cyclopædia" as the Ohio Yearly Meeting, and which, in 1878, changed its discipline in regard to marriage and other subjects, and refused in 1885 and 1886 to reaffirm the testimony of the society against the outward rites of baptism and the Lord's Supper. Divisions have also taken place in Western, Canada, Kansas, and Iowa Yearly Meetings, one branch of each of which, together with the Philadelphia Yearly Meeting, where no separation has occurred, are in unison in support of the ancient order. None of these conservative meetings took part in the General Conference of Friends that was held in Richmond, Ind., in 1887.

These divisions are in no way related to the separation that resulted about 1822 from the preaching of Elias Hicks.

Doctrinal Statements.—The declaration of faith that was adopted by the General Conference of Friends that was held in Richmond, Indiana, in September, 1887 (see "Annual Cyclopædia" for 1887), was considered, but not approved, in the Dublin and London Yearly Meetings. The Dublin Yearly Meeting adopted a minute declaring that it did not see its way formally to adopt the declaration; but was willing to receive it as a valuable outcome of the conference. The minute of the London

M. M. Keller

W. H. Miller

Yearly Meeting, which was adopted at the close of a long discussion, after expressing the cordial esteem of English Friends for their American brethren, and conveying to them a fresh message of love and encouragement, reaffirmed in general terms the belief of the society in the fundamental and scriptural principles of the Gospel of Christ, but with respect to this particular article, recorded that "this meeting refrains from expressing any judgment on the contents of the declaration now produced."

The following statement of the doctrine of justification by faith and regeneration, and on the beginning of salvation, has been adopted by the Indiana Yearly Meeting, with the reservation that it is not intended to cover the whole ground of belief on any other point:

By repentance toward God and faith toward our Lord Jesus Christ, the sinner experiences justification. This is pardon, forgiveness, remission, absolution for his past transgressions. By faith in the atoning blood of Christ shed on Calvary, the guilt of his sins is taken away, and their legal penalties remitted. He experiences conversion. This implies a change of heart and becoming a new creature in Christ Jesus. He experiences regeneration—a new birth, a new life in his soul, a being born again of the incorruptible seed. He experiences adoption; he becomes a son. He experiences the witness of the Spirit, and cries, Abba, Father! and then Christ does dwell in his heart by faith. Sanctification begins contemporaneously with and as soon as a man is justified. 'Therefore being justified by faith, we have peace with God through our Lord Jesus Christ: by whom, also, we have access by faith into this grace wherein we stand, and rejoice in hope of the glory of God.'

Missions.—The Indiana Yearly Meeting has adopted a proposition for the formation of a "Board of American Friends' Foreign Missions," to exercise for the present advisory functions, while it is left optional with existing associations of men and women Friends whether they shall surrender the control of their work to it; the board not to be organized till six yearly meetings have agreed to unite in it.

Several American Friends' Women's Societies for Missionary Work have been established within recent years. The first was formed in connection with the Western Yearly Meeting, in 1881. Others have been organized, in connection with the Philadelphia Yearly Meeting, in 1882; Iowa, 1888; Indiana, 1888; New England, 1884; Ohio, 1884; Canada, 1885; North Carolina, 1885; Kansas, 1885; and New York, 1887. College Societies have been formed at Earlham College, Indiana, and Wilmington College, Ohio. In 1886 these societies had 8,892 members, and had raised \$27,840. The "Friends' Missionary Advocate" is published in their interest, at Chicago.

The American Indian Missions are under the control of an associated committee, which returned a total of 388 members in the meetings of the Indian Territory, showing a net increase for the year of forty-six. There are also stations among the Mexican Kickapoos and Iowas. White's Manual Labor School, in Indiana, occupying an estate of 760 acres, is well supplied with buildings and mechanical shops, and re-

turned in 1888 an enrollment of 85 pupils, more than half of whom were professed Christians. Three day-schools in the Indian Territory had 64 pupils. Other schools, wholly or partly under the care of individual yearly meetings, were maintained among the Eastern Cherokees in North Carolina, at Tunesassa, N. Y., and at Douglass Island, Alaska; having a total enrollment of 344 pupils. The expenditures of Friends during the year for Indian education, including buildings, had been \$9,222.

The mission in Mexico returns 42 members admitted, and a total enrollment of 127 pupils in the schools. Schools for boys are sustained at Matamoras and Victoria; for girls at Victoria and Quintero; and a boys' and girls' school at Santa Barbara.

A mission conference of Friends was held in London, in April. Mr. Samuel Southall, of Leeds, occupied the chair. It appeared from the reports that the society is indirectly represented in Japan by four or five members. Mechanical and religious labor are carried on in South Africa by Mr. Elbert Clarke. A number of missionaries are at work in India, and a favorable opening was recognized in Burmah. Two missionary Friends are laboring in China. In Madagascar, Friends have many thousand native Christians under their care. The results of effort among Syrians have not been wholly satisfactory. The results of home mission work were encouraging.

The Friends' Missionary Station at Constantinople was established in 1881, and is carried on in harmony with the work of the American Board. A meeting was organized in 1888, with twenty men and women as members. The mission has an estate valued at \$8,000, at Stamboul, with a dispensary, which is resorted to by Moslems and Armenians. An industrial school is carried on at Bahjiig, sixty miles from Constantinople, with which thirty pupils are connected.

FULLER, MELVILLE WESTON, eighth Chief-Justice of the Supreme Court of the United States, born in Augusta, Me., Feb. 11, 1833. He was graduated at Bowdoin College, Maine, in 1853, studied law in Bangor with his uncle, George M. Weston, and then at Harvard Law School, and began practice in 1855 in his native city. There he was an associate editor of the "Age," served as President of the Common Council, and became City Attorney in 1856. He resigned that office in June of the same year and removed to Chicago, Ill., where he was in practice for thirty-two years. He rose to the highest rank in his profession, and was concerned in many important cases, among which were the National Bank tax-cases, one of which was the first that was argued before Chief-Justice Waite, the Cheney ecclesiastical case, the South Park Commissioners' cases, and the Lake Front case. He was a member of the Illinois Constitutional Convention of 1862, and in 1863-'65 of the lower house of the Legislature, where he was a leader of one

branch of the Democratic party. He was a delegate to the Democratic National Conventions of 1864, 1872, 1876, and 1880. On April 30, 1888, he was nominated by President Cleveland to be Chief-Justice of the United States, and on July 20 he was confirmed by the Senate. On October 8 he took the oath of office and entered upon his duties. Judge Fuller is, with one exception, the youngest

member of the Supreme Court. He has attained reputation as a public speaker. Among his addresses are one welcoming Stephen A. Douglas to Chicago in 1860, and one on Sidney Breese, which is prefixed to Judge Breese's "Early History of Illinois" (1884). The degree of LL.D. was conferred upon him by the Northwestern University and by Bowdoin College in 1888.

G

GEORGIA. State Government.—The following were the State officers during the year: Governor, John B. Gordon, Democrat; Secretary of State, Nathan C. Barnett; Treasurer, R. U. Hardeman; Comptroller-General, William A. Wright; Attorney-General, Clifford Anderson; Commissioner of Agriculture, J. T. Henderson; State School Commissioner, James S. Hook; Railroad Commissioners, Alexander S. Irwin, C. Wallace, L. N. Trammell; Chief-Justice of the Supreme Court, L. E. Bleckley; Associate Justices, M. H. Blandford and T. J. Simmons.

Finance.—For the two years ending on September 30 the report of the State Treasurer is as follows: Balance in the treasury on Sept. 30, 1886, \$250,927.96; receipts during the subsequent year, \$1,682,652.89; disbursements during the same time, \$1,583,818.47; balance on Sept. 30, 1887, \$349,762.38; receipts during the subsequent year, \$1,900,692.21; disbursements in the same time, \$2,019,108.07; balance on Sept. 30, 1888, \$231,351.52. The State receives \$300,000 each year for rental of the Western and Atlantic Railroad, and \$25,000 from hire of convicts, in addition to the amounts raised by State taxation.

The bonded debt of the State bearing interest on Sept. 30, 1887, was as follows: Bonds of 1884, interest 4½ per cent., \$3,892,000; bonds of 1877, interest 6 per cent., \$2,141,000; bonds of 1870, interest 7 per cent., \$2,098,000; bonds of 1872, interest 7 per cent., \$307,500; bonds of 1876, interest 7 per cent., \$542,000; obligations to the State University, \$255,000; total, \$8,735,500. To this should be added \$91,040 of non-interest-bearing bonds not canceled, but of which \$74,285 were canceled during the present year, leaving the total debt on September 30, \$8,752,805. The issue of 1877 will become due on Jan. 1, 1889, and for the purpose of meeting this obligation the Legislature of 1887 authorized the issuance of \$1,900,000 of new bonds at a rate to be fixed by the Governor. During the present year a sale of these at 4½ per cent. interest was negotiated at a premium of 4½ per cent. This is the highest price ever paid for bonds issued by the State, and indicates an increased confidence in its credit. On October, 1890, the bonds of 1870 will mature, and it will devolve upon the Legislature chosen this year to provide for their payment.

Provision was made by the Legislature of 1887 for gradually reducing the debt by creating a sinking-fund for the years 1887 and 1888 and for the years 1897 to 1915, inclusive, thus carrying into effect the clause of the State Constitution requiring that \$100,000 should be raised each year by taxation, and held as a sinking-fund, for the payment of State bonds.

Assessments.—The total assessed valuation of property for 1888 was \$357,167,458, of which \$29,304,127 was the valuation of railroad property. The valuation for 1887 was \$341,504,921, of which \$24,899,592 was railroad property. The following table gives some details of the assessment of 1888 compared with that of 1879:

PROPERTY TAXED.	1879.	1888.
Improved lands.....	\$88,639,168	\$107,732,644
City and town property.....	49,007,296	84,921,108
Live-stock.....	21,017,684	25,745,018
Farm implements.....	2,971,872	5,040,475
Household furniture.....	9,156,404	13,682,614
Cotton manufactories.....	1,640,000	8,088,167
Iron works.....	295,640	590,801
Invested in mining.....	97,550	197,649
Bank stock.....	4,667,567	7,609,855
Money, solvent notes, etc.....	24,513,005	34,715,451
Merchandise.....	12,012,755	15,657,752

The valuation of property held by colored persons has risen from \$5,182,398 in 1879 to \$9,681,271 in 1888.

Education.—The following statistics of the public schools for the school-year 1887 were compiled and published during 1888: Schools for white pupils, 5,083; schools for colored pupils, 2,512; schools established under local laws, 201; enrollment of white pupils, 208,865; enrollment of colored pupils, 133,429; total, 342,394; average attendance, 226,290.

During 1888 a census of persons within school-age was taken, showing 292,624 white and 267,657 colored children, or a total of 560,281. Of the total, 61 per cent. were enrolled as school-attendants during 1887, but only 41 per cent. were in regular attendance. The average length of the school-year is not over three months. During 1887 the sum of \$493,509.52 was raised by the State for the schools, and \$302,477.74 by city and county taxation.

An act to establish a technological school, as a branch of the State University, and forming one of its departments for the education and

training of students in the industrial and mechanical arts was approved on Oct. 13, 1885. Pursuant to this act a commission, charged with the duty, selected a site in the city of Atlanta and erected suitable buildings at a cost of \$101,062.98. These were transferred to the State by the commission in October, 1888, when the first school-year began. The institution opened under favorable conditions, 118 students being enrolled before the close of 1888.

Charities.—The State Lunatic Asylum is the largest and most expensive charity of the State. On Oct. 1, 1887, it contained 910 white and 385 colored patients, a total of 1,295. This total had increased on Oct. 1, 1888, to 1,386, of whom 980 were white and 406 colored patients. The cost of supporting the institution is about \$180,000 per annum.

The Georgia Academy for the Blind had 91 pupils in attendance during the year, 78 white and 13 colored. The expenses of the institution were \$17,580.62 for the year. The institution for the Deaf and Dumb has an average attendance of nearly 100 pupils. For 1887 the disbursements for this charity amounted to \$18,226.32; for 1888, \$16,315.96.

Penitentiary.—There were on Oct. 1, 1886, in the different convict camps, 1,526 prisoners, of whom 1,377 were colored and 149 white persons. At the same date in 1888 there were 1,537 prisoners, 1,888 colored and 149 white. During the two years there were 81 deaths, or 8½ per cent. of the total number on the rolls. This rate of mortality could hardly happen under any other than the convict-lease system.

The State Capitol.—Up to October 24 of this year the total sum expended by the Capitol commissioners upon the new Capitol building was \$851,064.75. The contract for its construction calls for an expenditure of \$862,756.75. The structure was completed, according to the contract, at the end of the year, and is an imposing work well suited to the needs of the State. No debt was incurred in its erection, the requisite funds being obtained by the levy of a special tax.

Railroad Commission.—The Governor says in his message in November: "The Railroad Commission has grown in importance with the enormous development of the railroad system of the State. It has been uniformly conservative in its policy and cautious in its action upon the very delicate questions and sensitive interests with which it has to deal. The result is that the commission has grown in the confidence of the people and in the respect of the corporations.

"The Supreme Court of the United States, on the 29th of October last, in the case of the Georgia Railroad and Banking Company *vs.* James M. Smith, *et al.*, affirmed the decision of the court below. This decision is in effect an affirmation of the right of the Railroad Commission to fix rates for the Georgia Railroad and Banking Company, as for any person or company or corporation which does business

as a common carrier in this State, and finally disposes of a litigation which has been pending in the courts for several years."

The State Railroad.—The report of the committee appointed by the Legislature of 1887 to appraise the Western and Atlantic Railroad, preparatory to making some disposition of it at the end of the present lease in 1890, was completed and published in August. The road is about 187 miles in length, running from Augusta to Chattanooga, Tenn. The committee estimates its present value, including rolling-stock, stations, etc., at \$6,064,139.06. During the eighteen years that the present lessees have held it, betterments have been made by them upon it to the value of \$750,889.74, as estimated by the committee. For these betterments the lessees demand compensation. The general condition of the road is pronounced by the committee to be good. At the session of the Legislature in November, several plans, both for the sale and lease of the road, were fully discussed in committee, and two reports made to the House. The sentiment was generally opposed to a sale of the property, but the matter went over to the next session for determination.

Confederate Soldiers.—Under the act of 1879, and acts amendatory thereto, bounties were paid triennially to soldiers who had suffered amputation of a limb or limbs on account of injuries received in the service of the Confederate States. The sum thus paid from the treasury of the State amounted in 1879 to \$69,870; in 1883 to \$61,605; and in 1886 to \$57,650. The act approved Oct. 24, 1887, provides small annual bounties for a number of classes of disabled Confederate soldiers who were not included in the benefits of the act of 1879. The purpose of this act was to embrace and relieve all who had been permanently disabled by wounds or disease in the Confederate service. From the large number of applications filed under this law, nearly eleven hundred were allowed; the payments made up to and including Nov. 2, 1888, amounting in the aggregate to \$27,525. The beneficiaries under this act will be increased in 1889, without change in the law, by the number of those who have been recognized as entitled under the act of 1879, and may be still living and resident in the State of Georgia; and \$65,000 is estimated as the amount that must be paid to them.

Prohibition.—During the year there has been an evident reaction from the prohibition movement of the two years preceding. Under the local-option law all but 38 of the 188 counties of the State had declared for prohibition before the last of September, 1887. Before the close of 1888, however, the number of "wet" counties had increased to 64.

Legislative Session.—The Legislature elected in October met on November 7, and remained in session till December 22, adjourning on that day to meet on the first Wednesday of July following. It elected T. J. Simmons to be

Judge of the Supreme Court, and United States Senator Colquitt to be his own successor in the United States Senate. There was no opposition to either candidate. The appropriation bill and the tax bill were the most important measures passed. Unusual liberality was shown in these toward the educational interests of the State. The Technological School recently established obtained an appropriation of \$18,000; the branch colleges belonging to the State University received a separate appropriation for the first time, and an additional tax of one half of one per cent. for 1889, and of 1 per cent. for 1890 was voted for the public schools. The annual session of these schools may now be lengthened from three months to four months in 1889 and five months in 1890, and a corresponding increase in their efficiency is expected. The act of Congress providing for establishing agricultural experiment stations in the various States was accepted, but instead of establishing such a station in connection with an agricultural college, as required by the terms of the act, the Legislature appropriated \$5,000, in addition to the sum payable to the State under the act, for the construction of a new State institution to be located by a board of commissioners. The sum of \$85,000 was appropriated as the final payment for the construction of the new Capitol, and \$92,000 for furnishing it and for ornamenting the grounds. Provision was also made for an additional sinking-fund to meet the State debt when it shall become payable. It was made unlawful for corporations or other employers to pay their employés in checks or orders payable in merchandise at the employer's store; all such notes or checks must be redeemable in cash. Banks and building associations were relieved from the double taxation heretofore imposed upon them.

Political.—The Democratic State Convention met at Atlanta on August 8, and renominated Governor Gordon, Secretary Barnett, Treasurer Hardeman, Comptroller Wright, and Attorney-General Anderson. It adopted the following resolutions:

We heartily indorse the platform of principles adopted by the Democratic National Convention at St. Louis this present year, and the nominations of Grover Cleveland and Allen G. Thurman as candidates upon the principles embodied in it. Federal taxation can only be rightfully imposed to provide for the necessary and proper purposes of the General Government economically administered. Luxuries should not be unbridled in order that necessities may be burdened. We indorse the platform of the National Democracy of 1888, and the recent message of the President as the proper construction of the platform of 1884, advanced to the conditions of 1889.

The Democracy of Georgia deplore the spirit of sectionalism which seems still to animate the passions of the leaders of the Republican party and some of their misguided followers. We seek a manly fraternity among all the States and peoples of the United States, and declare that the only enemies of perpetual American concord are those Republicans who insist upon reviving and maintaining the passions of past conflicts, terminated forever and honorably adjusted. Let others deal in post-mortem feuds. "We face

the rising and not the setting sun," and invite all men who love liberty regulated by law to unite with us in efforts after the highest progress of our State and common country. We denounce the Republican party as having been the worst and most destructive enemy of our State.

With no grudge against the policy or the people who preserved the Union, we hail with pleasure the accession to Democratic ranks of those Republicans who abandoned that party when convinced that it had ceased to struggle to perpetuate the Union, and had left for its mission only the tasks of keeping alive feuds and oppressing the poor, and who have joined the party which opposes legislation for favored classes and propounds a policy for the general good.

There was no opposition ticket, and at the election in October Governor Gordon received the entire vote cast. A State Legislature was elected at the same time, composed almost entirely of Democrats. The people also voted upon a constitutional amendment proposed by the last Legislature, increasing the number of Supreme Court judges from three to five. This was defeated by a vote of 87,688 votes in favor, to 46,720 against, four counties not reporting. At the November election, Cleveland received—according to unofficial returns—100,472 votes; Harrison, 40,448 votes; and Fisk, 1,802 votes. An unbroken Democratic delegation to Congress was chosen.

GERMANY, an empire in Central Europe, consisting of a confederation of twenty-six states, united under the Constitution of the German Empire, which went into force on May 4, 1871. At the beginning of 1888 the reigning sovereign was Emperor Wilhelm I, born March 22, 1797, who was proclaimed the first German Emperor at Versailles, Jan. 18, 1871, and died March 9, 1888. He was succeeded by his eldest and only surviving son, Friedrich, born Oct. 18, 1831, who at the time of his accession to the throne was suffering from what proved to be cancer of the larynx, and died, after a reign of three months, June 15, 1888. (See **FRIEDRICH WILHELM**.) His eldest son, the present Emperor, Wilhelm II, was born Jan. 27, 1859. The heir-apparent is Friedrich Wilhelm, born May 6, 1882.

The legislative functions of the empire are vested in two bodies of representatives of the people: the Bundesrath or Federal Council, composed of 62 members, appointed each year by the individual states that they represent; and the Reichstag, or Diet of the Realm, numbering 397 members, elected for a term of three years by universal suffrage. There are 9,769,802 electors, constituting 20.9 per cent. of the population. In the general election of 1887, 7,540,938, or 77.5 per cent. of the electors voted. Both the Bundesrath and the Reichstag meet in annual session. The members of the Reichstag are elected from 397 districts, of which 21 consist wholly of towns, 93 of districts each containing a town of at least 20,000 inhabitants, and 283 of districts without any large towns. In 252 districts the majority of the population is Protestant. The Bundesrath is presided over by the Chancellor of the Em-

pire. The President of the Reichstag is elected by the deputies.

Area and Population.—The area of Germany is 211,196 square miles, and its population, on Dec. 1, 1885, was 46,855,704, of whom 22,933,664 were males, and 23,922,040 females. The average density of the population was 221 per square mile. There were 5,378,077 inhabited houses, and 9,999,558 households in 1885. The bulk of the population is Teutonic, but there were 3,205,000 non-Germanic inhabitants, including 2,454,000 Slavs; 2,800,000 Walloons and French; 150,000 Lithuanians; 140,000 Danes; and 140,000 Wends, Moravians, and Bohemians. In 1886, 76,687 persons emigrated from the German Empire by way of the German ports and Antwerp, 41,898 of whom were males, and 34,789 females; there were 10,809 families, comprising 38,950 persons. Of the emigrants in 1886, Prussia sent 50,461; Bavaria, 8,068; Würtemberg, 3,717; Baden, 2,883; Saxony, 2,888; Hesse, 1,725; Mecklenburg-Schwerin, 1,262; Hamburg, 1,675; Oldenburg, 990; Bremen, 883; and Alsace-Lorraine, 602. The United States received 72,403; Brazil, 2,045; British North America, 330; other American countries, 1,068; Africa, 191; Asia, 116; and Australia, 534. In addition to the above total, 3,188 Germans left the empire by way of Rotterdam, Amsterdam, and Havre in 1886. The number of emigrants from the empire in 1887 was 99,712. On Dec. 1, 1886, there were 372,792 foreigners in Germany.

Commerce and Industry.—The total export trade of the empire in 1887 was valued at 3,269,900,675 marks, against 3,127,655,275 marks in 1886. The imports amounted to 3,268,517,950 marks in 1887, and to 3,018,475,350 marks in 1886.

Protective duties on grain and cattle were imposed in 1879, which had the effect of increasing the receipts of the treasury from the duties on cereals from 14,800,000 to 30,600,000 marks, and from the cattle duties from 1,021,500 to 4,590,750 marks. Nevertheless, they had failed to protect German agriculture from the competition of foreign countries where production is much cheaper. The duties were raised in 1885 still higher, but without producing the desired effect. Wheat, instead of rising, fell to a price unknown for a century. The Central Council of Agriculture, therefore, called for a further measure to preserve the agricultural interests of Germany, both large and small, from the ruin with which they were menaced. The Government proposed to double the existing duties, but the Reichstag, in the measure that was finally passed, slightly reduced this proposal. The new tariff fixes the duty on wheat and rye at about 40 cents a bushel; on oats and malt, 31 cents; on barley, 18 cents; on buckwheat, legumes, and Indian-corn, 16 cents. Farinaceous preparations pay duties from 30 to 50 per cent. higher than formerly.

In 1886-'87 there was under cultivation a total area of 64,989,560 acres. The leading

agricultural products were, wheat, 2,933,065 tons, produced from 4,791,583 acres; rye, 6,702,134 tons, from 14,596,255 acres; barley, 2,570,921 tons, from 4,328,600 acres; oats, 5,341,483 tons, from 9,615,387 acres; potatoes, 27,657,340 tons, from 7,289,367 acres; clover, hay, etc., 28,242,253 tons, from 21,867,500 acres; wine, 33,066,594 gallons, from 300,752 acres; tobacco, 81,166,000 pounds, from 49,000 acres. The product of raw and refined sugar was 1,418,900 tons. The total value of the mineral products in 1886 was 463,000,000 marks. The value of the coal raised was 800,727,000 marks; lignite, 40,270,000 marks; iron-ore, 29,642,000 marks; zinc-ore, 7,722,000 marks; lead-ore, 15,919,000 marks; copper-ore, 14,415,000 marks; silver and gold, 3,977,000 marks; mineral salts, 13,427,000 marks; other salts, 35,024,000 marks. In 1886 the value of the pig-iron produced in Germany was 140,888,000 marks, 229 furnaces being in operation. The finished iron was valued at 418,727,000 marks, and the total value of the productions of foundries of all kinds was 690,000,000 marks. In the manufacture of iron 200,000 men are employed.

Navigation.—In 1887 the mercantile navy comprised 694 steamers, of 453,914 tons, and 3,327 sailing-vessels, of 830,789 tons, making a total of 4,021 vessels, of 1,284,703 tons. Of these, 2,518 vessels, of 412,417 tons, belonged to Prussian ports. The total number of sailors employed in the merchant service in 1887 was 39,021. The movement of shipping at all German ports in 1886 was as follows:

VESSELS.	With cargoes.	Tonnage.	In bal- last.	Tonnage.	Total No.	Total tonnage.
Entered ..	49,819	9,423,304	9,485	866,109	59,304	10,399,413
Cleared ...	44,791	7,638,540	14,445	2,655,831	59,236	10,309,421

Of the total tonnage entered and cleared 10,263,018 tons were under the German and 5,751,954 tons under the British flag.

Railroads.—The total length of the railroads open to traffic in 1887 was 24,197 miles, of which 21,112 miles belonged to the state. The Government is rapidly acquiring all the remaining lines now owned and operated by private companies. The total amount expended in the construction of German railways to the end of 1886 was 9,472,606,000 marks. The receipts for 1886 were 998,693,000 marks, and the expenses 574,975,000 marks, showing a net profit of 4.42 per cent. on the capital.

Telegraphs and Postal Service.—At the end of 1886 the length of telegraph lines in the empire was 53,874 miles, having 191,272 miles of wire. The number of messages during the year was 20,510,294, of which 14,568,346 were internal.

The receipts of the post-office during 1886-'87, amounted to 202,346,982 marks, and the expenditure to 175,076,000 marks. There were 13,688 post-offices, employing 97,868 persons, at the end of 1886. During the year there were transmitted 858,587,550 letters, 261,056,660 post-cards, 20,187,170 patterns,

245,618,370 stamped wrappers, 578,611,143 journals, and 180,492,148 registered packets and money-orders of the total declared value of 18,116,304,652 marks.

Education.—Elementary education is general and compulsory throughout Germany. In 1886 only 1.06 per cent. of the recruits of the army could neither read nor write. Among 169,240 recruits, which was the number that entered the army in 1887, there were 163,203 who had received an education in Germany, 4,822 were educated in some foreign language, and 1,215 could neither read nor write. In 1881 there were 57,000 elementary schools, with 7,100,000 pupils, in Germany. In 1885 there were 847 normal schools, with 26,281 pupils; 858 gymnasia, with 186,766 students; and 270 Realschulen, with 49,196 students. In addition there were, in 1887, 9 technical high-schools, with 3,985 students; and 4,346 industrial and special schools. There are 21 universities in Germany, with the following numbers of instructors and matriculated students in 1887-'88:

UNIVERSITIES.	Professors and teachers.	STUDENTS.				
		Theology.	Jurisprudence.	Medicine.	Philosophy.	Total.
Berlin	292	669	1,006	1,140	1,889	4,654

In fourteen of the universities the faculties are Protestant; in four, viz., Freiburg, Munich, Münster, and Würzburg, they are Catholic; and in three, viz., Bonn, Breslau, and Tübingen, they are mixed Protestant and Catholic.

The Army.—The peace strength of the German army in 1887-'88 was 18,936 officers, 471,007 rank and file, 90,492 horses, and 1,374 guns. The new army law of March 11, 1887, renewed the Septennate, which is to continue in force till March 31, 1894, and added 50,000 soldiers to the regular military establishment, fixing the peace strength of the army at 468,409 rank and file, and 23,991 officers, surgeons, paymasters, etc. The war strength of the army is 1,567,600 officers and men, 312,730 horses, and 2,958 guns. To these numbers may be added the Landsturm and one-year volunteers, together numbering 1,082,400 officers and men, and the untrained men capable of serving in the army, numbering 3,020,000,

making the total available force in time of war 5,670,000 officers and men. The railway and telegraph service in time of war numbers 1,238 officers, 7,000 men, and 5,400 horses.

The Prussian contingent of the German army had a peace strength in 1887-'88 of 361,902 officers and men.

The empire is divided into nine fortress districts, in which there are 17 fortified places of the first class and 26 other fortresses.

In the session of 1887-'88 the Government introduced an army reorganization bill for increasing the fighting strength of the nation in war time by 700,000 men or more. The Reichstag passed the bill on the third reading without much opposition, on Feb. 8, 1888, and approved a money bill to provide 281,550,536 marks for carrying it into execution, authorizing a loan of 278,335,562 marks, while the Federal governments furnished the remainder in matricular contributions. The new army law extends the period of service in the Landwehr, and provides for arming and equipping both the Landwehr and Landsturm forces, and for supplying them with barracks, artillery, munitions, and other necessary war materials. The organization of the Landwehr into regiments and battalions is to be replaced by a territorial division into infantry brigade districts, and the subdivision of these into battalion districts, which will be extended to Württemberg and Bavaria.

When the Crown-Prince Friedrich became Emperor, he announced in a rescript, dated March 26, 1888, that, like his father, he should devote his immediate and unremitting attention to the army, and gave notice of intended changes in drill tactics, made necessary by the introduction of improved infantry weapons, which rendered expedient more thorough individual drilling and stricter training in discipline under fire. In order to enable the army to give attention to these matters, he suggested the discontinuance of the system of formation in triple ranks, which is never used in war. Wilhelm II, on September 9, published an order directing that, in grateful remembrance of his father, the new infantry drill regulations should be put in force. The German infantry wear lighter helmets than formerly, and no longer march with their overcoats coiled round the back and chest, but strap them to their knapsacks, in the French fashion. The cuirassiers have laid aside the cuirass, and are now armed with the lance, like the uhlans, and the same weapon is being adopted for the lussars. The new magazine rifles of the infantry are fitted with small knife-like bayonets. In the autumn manoeuvres a captive balloon was used for observations.

Gen. Field-Marshal Count von Moltke, Chief of the General Staff of the German Army since Sept. 13, 1853, on August 3 asked the Emperor to relieve him of his post and permit him to spend the remainder of his days in rural retirement, saying that, at his great age, he is no

longer able to mount a horse. In the letter accepting his resignation, and in an ordinance, dated August 10, relieving him of his former post and appointing him to the presidency of the National Defense Commission, which was filled by the Emperor Friedrich when Crown Prince, Wilhelm II eulogized the services of the retiring strategist, who had attained the age of nearly eighty-eight years. The Emperor appointed as Marshal von Moltke's successor Gen. Count von Waldersee, who was born in 1832, first served on the general staff in 1866, was made a colonel for his services in the Franco-Prussian War, and was appointed quartermaster-general in 1882, in connection with which post he has acted as deputy chief of the general staff and aide-de-camp general to the Emperor.

The Navy.—The naval forces of the Empire in 1887 consisted of 105 vessels of an aggregate displacement of 201,521 tons, mounting 605 guns. The ironclad navy comprises 8 frigates, 5 corvettes, and 14 gun-boats, 11 of which are built on the same model, and armed each with a single 36-ton gun. Among the unarmored vessels are the cruisers "Zieten," "Hohenzollern," "Pfeil," and "Blitz," which are built for offensive ocean warfare, and are capable of steaming 16 miles an hour. The number of first and second class torpedo-boats that were completed was 110, and others were building. The larger vessels in course of construction on Jan. 1, 1888, were two frigate cruisers, of 4,800 tons, the "Prinzessin Wilhelm" and "Irene"; three corvettes, the "Eber," "Schwalbe," and "B"; a transport, the "Ersatz Eider"; and two dispatch-boats, "Wacht" and "Ersatz Pommerania." The last named was completed in July. The personnel of the navy on Jan. 1, 1888, consisted of 7 admirals; 800 officers, including engineers and surgeons; and 14,437 non-commissioned officers, marines, and sailors. Germany has three ports of war, viz., Kiel and Dantzig on the Baltic, and Wilhelmshaven on the North Sea. In the naval manœuvres the last-named port was subjected to a sham attack, which was repelled in a way to prove in the view of the umpires that the place is impregnable. In a similar attack on the harbor of Kiel, a new method of attacking hostile craft and exploding submarine mines was tried by swimmers in inflated rubber suits, who were sent out with explosives from vessels.

Lieut.-Gen. von Caprivi, who succeeded Herr von Stosch as Chief of the German Admiralty in 1883, besides completing the construction of the torpedo-flotilla, and building several fast cruisers, formed a training squadron, which is an admirable school for sailors, introduced a system that enables Germany to put ships in commission with great promptitude, organized a cruising squadron that has been the chief instrument in the formation of the German colonial empire, and raised the entire fleet to such a degree of effectiveness that no accidents and failures, such as marked

the British and French evolutions in the summer of 1888, occurred during the manœuvres of the German squadron. When Wilhelm II succeeded to the throne, the project of a further development of the ironclad navy by adding to the number of armored battle-ships and replacing with modern vessels those of obsolete types came into favor, and Gen. von Caprivi, who had given his attention chiefly to coast defenses and unarmored fast cruisers, retired from the naval office, to be succeeded by Vice-Admiral Count von Monts, who has undertaken to build up a navy that shall be superior to that of any of the second-rate naval powers, not even excepting Italy, for offensive as well defensive purposes. Of the thirteen squadron ironclads afloat in 1888, only the broadside frigate "König Wilhelm," the central-battery ships the "Kaiser" and "Deutschland," and the corvette "Oldenburg" are regarded as satisfactory by naval critics. The four corvette cruisers, of the "Sachsen" type, having only deck-armor at the ends, are considered weak. The broadside ship "Hansa," with six-inch armor, was removed from the navy list in 1888, and two others, the "Kronprinz" and "Friedrich Karl" are to go out of commission as soon as more modern ironclads can be built to take their places. The class of corvette cruiser now approved of, which was under construction in the beginning of 1888, is a vessel of from 3,000 to 4,000 tons displacement, with a complete belt of armor at the water-line, carrying a few heavy guns in a thickly armored central battery. It is proposed to construct ten such vessels altogether, of which five are to be begun immediately. For the defense of the North Sea and Baltic Ship-canal twelve gun-boats are to be constructed of similar design to the existing ones, but larger. In the naval budget estimates for 1889-'90 the Government proposes the expenditure, in the space of six years, of 116,802,000 marks on the construction of 28 new vessels, 4 of which will be first-class ironclads of the latest design, costing 9,800,000 marks each; 9 will be coast-guard ironclads; 7 are to be protected cruiser corvettes, costing 5,500,000 marks each; and of the others 4 will be unprotected cruisers, 2 avisos, and 2 torpedo division boats.

The Baltic and North Sea Ship-canal, which is intended primarily for strategic purposes, will facilitate navigation and commerce in this part of Europe and alter the course of trade in favor of Germany. The canal will run from Høltensau, in the Gulf of Kiel, in a south-westerly direction, by way of Rendsburg, to a point on the Elbe below Hamburg, about half-way between Brunsbüttel and St. Margarethen. Its length will be 61 miles; its breadth at the surface of the water 196 feet, and at bottom 84 feet; and its depth 27 feet. There will be one lock at each end. The work will be completed by 1895. Dantzig is to be converted into a second-class naval station to counter-

balance the one that Russia has created at Libau, and for the defense of the southern end of the canal Brunsbüttel is to be fortified likewise. It is intended in the future to extend the ship-canal from the Elbe across the northern part of Hanover to the Jade on which Wilhelmshaven is situated, which will enable ships of war to pass between that port and Kiel without going to sea, and afford means of communication between all the German naval ports even if an enemy held entire command of the German Ocean.

The Ministry.—The Imperial Secretaries of State do not form a cabinet, but act independently of each other and under the supervision of the Chancellor, Prince Bismarck-Schönhausen. The departments are filled as follows: Ministry for Foreign affairs, Count Herbert von Bismarck; Imperial Home Office, Herr von Bötticher, who is also the Representative of the Chancellor; Imperial Admiralty, Count von Monts; Imperial Ministry of Justice, Dr. von Schelling; Imperial Treasury, Dr. Jacobi; Imperial Post-office, Dr. Stephan; Imperial Railroad Bureau, Herr Maybach; Imperial Exchequer, Herr von Stünzer; Bureau of the Imperial Invalid Fund, Dr. Michaelis.

The Prussian Ministry of State consisted in the beginning of 1888 of the following members: President of the Council, Minister of Foreign Affairs, and Minister of Commerce and Industry, Prince Otto von Bismarck-Schönhausen; Vice-President of the Council of Ministers and Minister of the Interior, Robert Victor von Puttkamer; Minister of State and Secretary of State for the Interior, Herr von Bötticher; Minister of War, Gen. Bronsart von Schellendorf; Minister of Public Works, Dr. August von Maybach; Minister of Agriculture, Domains, and Forests, Dr. Robert Lucius; Minister of Justice, Dr. Friedberg; Minister of Public Worship, Education, and Medical Affairs, Herr von Gossler; Minister of Finance, Herr Scholz.

Finances.—The budget for the year ending March 31, 1889, estimates the receipts of the German Empire at 921,689,140 marks, derived from the following sources:

SOURCES OF REVENUE.	Marks.
Customs and excise duties	493,860,610
Stamps	27,655,000
Posts and telegraphs	80,064,098
Printing-office	1,066,090
Railways	13,264,100
Imperial bank	1,741,500
Departmental receipts	9,848,758
Interest of invalid fund	26,359,414
Interest of imperial funds	948,000
Extraordinary receipts	99,676,566
Federal contributions	212,670,009
Total	921,689,140

The estimated ordinary expenditure is 771,961,697 marks. The following are the principal items: Expenditure for the army, 362,465,016 marks; navy, 35,900,751 marks; imperial treasury, 271,266,826 marks; interest on the national debt, 27,803,000 marks; pension fund, 28,717,888 marks; invalid fund, 26,359,414 marks. The estimated extraordinary expendi-

ture includes a deficit of 22,157,246 marks in the finances of 1886-'87; 77,267,954 marks of expenditure for military purposes; 12,920,318 marks for the navy, and 17,880,750 marks for the interior. The Federal contributions toward the revenue of 1887-'88 were 186,937,315 marks.

The total funded debt was estimated to be 576,372,000 marks on Oct. 1, 1887. The whole debt bears interest at 4 per cent. There was also an unfunded debt of 138,868,475 marks on April 1, 1887. As an offset to the public debt there are several invested funds, amounting to 666,241,100 marks. These include the invalid fund, the fortification fund, the parliamentary-buildings fund, and the war treasure of 120,000,000 marks.

The Reign of Friedrich I.—While the Emperor Wilhelm I was gradually sinking under the infirmities of old age, the Crown-Prince Friedrich Wilhelm was seized with the disease of which he eventually died. The physicians declared it to be cancer, and if their verdict had been accepted the Crown-Prince would have been precluded from the exercise of the royal and imperial prerogatives on the death of his father, according to the Prussian family law, which provides for a regency in case the successor to the throne is suffering from an incurable malady. Prince Friedrich was an opponent of the system of absolutism and military rule that was cultivated by his father and Prince Bismarck, and a sympathizer with the advocates of parliamentary government and of personal liberty, but after some unavailing conflicts with the Chancellor he had not raised his voice in public affairs for many years. The old Emperor endeavored to persuade the Crown-Prince to abdicate his right of succession to the powers of royalty by nominating as regent his son, Prince Friedrich Wilhelm, who was on bad terms with both his parents, but was a favorite of his grandfather, whose military and monarchical ideas of government he shared. The Crown-Princess Victoria would have been cut off, not only from the dignity of Empress-Consort during her husband's reign, but from the privileges and allowances of Empress-Dowager after his death. She had averted the legal disqualification of the prince for the succession by having the case committed to the English specialist in throat-diseases, Dr. Morell Mackenzie, who asserted that there were no symptoms of cancer. In order to remove him from the influences of his family she now went with him to San Remo, by the advice of Dr. Mackenzie, who declared the climate of Berlin to be too harsh. After the death of his father he returned from Italy to assume the government under the titles of Emperor Friedrich I of Germany and King Friedrich III of Prussia. Arriving in Berlin on March 12, he issued a proclamation to the people, giving praise to his father for the great achievements of his reign and to the people for the sacrifices that made them possible. He

promised to devote all his efforts to carrying on the work of making Germany a shield of peace and attending to the welfare of the country, in agreement with the Federated Governments and with the constitutional organs of the empire and of Prussia. The proclamation was accompanied with a rescript to the Chancellor, in which he foreshadowed the policy that he was determined to follow. The Constitution and laws of the empire and of Prussia should, above all, be based on the reverence and the conscience of the nation, and therefore frequent changes in Government institutions and the laws are to be avoided. In the empire the constitutional rights of the Federated Governments are to be faithfully respected, as well as those of the Reichstag, but from both a like respect for the rights of the Emperor is due. New requirements of the nation, as they arise, must be satisfied. The army and navy should be kept up to the highest perfection in training and organization. The programme embraced the continuance of social legislation, the admission of a wider class to the advantages of superior education, religious toleration and equal protection for all confessions, the discouragement of private and the checking of public extravagance, the reduction of the number of civil officials so as to allow an increase of salaries, the control of municipal taxation, and the encouragement of art and science. Friedrich's deliverance was greeted in liberal circles as the presage of a new political era. On March 21 the Emperor issued a decree empowering the Crown-Prince to act in his place and to sign documents whenever he should be unable to attend to business. On March 31 an imperial proclamation of amnesty extended full pardon to all persons who had been sentenced in Prussia for *lèse majesté*, insulting members of the royal family, offenses connected with the exercise of political rights, resisting the authorities or disturbing public order, and offenses against the press laws. Military offenses were also amnestied by an imperial decree, dated April 19, granting a free pardon to soldiers and sailors who had been sentenced for resisting officers of the law or violating public order, to those undergoing disciplinary punishment, and to those who had been found guilty of absenting themselves without leave or of deserting for the first time, provided that no charge of conspiracy was made out against them. Another decree set at liberty all who had been convicted of political offenses in Alsace-Lorraine, including infractions of the special laws of the Reichsland regarding publications, seditious cries, and prohibited banners and emblems. This and other conciliatory acts and expressions went further than anything that had occurred since the war to disarm the feeling of revenge in France, where Friedrich was remembered as the most chivalrous and considerate commander among the conquerors. Among his other acts of government may be mentioned

directions to rebuild the Dom-Kirche in Berlin, making it a memorial cathedral of the Evangelical Church; the conferring of titles of honor on many dignitaries, parliamentarians, and industrialists; the abolition of expensive and irrational military exercises, signs, and distinctions; and the furtherance of the scheme of insurance for aged and invalid laborers, which became law while he was Emperor. When Posen was devastated by an inundation he gave 50,000 marks from his private purse for the sufferers, while the Empress Victoria, leaving his sick-bed, visited the flooded district and inspected the arrangements for relief. The Emperor labored to discharge his official duties, notwithstanding his bodily distress and weakness, but a relapse compelled him to delegate one part of his functions, having to do with military affairs, to his son, whom he had previously empowered by a rescript that was published on March 23 to consider and settle such matters of Government as the Emperor should refer to him and append his signature to state papers as the Emperor's substitute without special order, as it was the Emperor's wish that the Crown-Prince should make himself acquainted with affairs of state by taking an immediate part therein.

Differences between the Emperor and the Imperial Chancellor, if they had not yet arisen, were inevitable, owing to the great diversity of their political opinions, although the Emperor took every occasion to express his regard for Prince Bismarck and to treat him as indispensable. About the end of March the Chancellor was informed at a conference with the Emperor at Charlottenburg, the castle which he made his residence, that the Emperor intended within a few days to summon Prince Alexander of Battenberg, ex-Prince of Bulgaria, whose brother had married the Empress's sister, to Berlin, in order to confer on him the order of the Iron Cross, assign him to the command of an army corps, and raise him to the dignity of Fürst, as preliminaries to his formal betrothal to the Princess Victoria. This princess, the eldest unmarried daughter of the Emperor, who was not quite twenty-two years old, had formed an attachment for Alexander before he was called to the Bulgarian throne; but the Emperor Wilhelm disapproved a union between them, and had exacted from him a promise that he would not press his suit. The Chancellor, when he heard of the intended marriage, protested against it as a step of grave political moment, which would be likely to disturb the external relations of Germany and lead to difficulties with Russia, in view of the prince's continued candidacy for the Bulgarian throne, his pledges to the Bulgarian people, and his connection with their anti-Russian aspirations. The Empress, who had firmly set her mind on securing her daughter's happiness, angrily resented the Chancellor's interference in what she regarded as a private family matter, although the Emperor was inclined to de-

fer to the statesman's objections and give up, or at least postpone, the intended alliance. Prince Bismarck presented his reasons in a written memorial and announced the intention of laying down his office if the Empress did not abandon her design. In Russia the intended marriage seemed to be regarded with indifference or even as a way of eliminating Prince Alexander from the Bulgarian complications, since it would not be fitting for a son-in-law of the German Emperor to become a vassal of the Sultan, nor would he be considered an acceptable candidate for the throne of the principality in view of the article of the Berlin Treaty excluding all members of reigning dynasties. Yet Prince Bismarck held firmly to his opinions, while the Empress seemed equally determined. They had several interviews, Prince Alexander's visit to Berlin being put off several times meanwhile. The Chancellor crisis, as it was called, lasted more than a week, and ended with the sacrifice of the marriage project to state reasons and the continuance of Prince Bismarck in office. Prince Henry, of Prussia, the younger son of the Emperor, married his cousin, the Princess Irene, of Hesse, in May; and in the beginning of September the Princess Sophie, Victoria's younger sister, was betrothed to Constantine, the Crown-Prince of Greece.

Shortly before the Emperor's death another ministerial crisis arose that gave proof of the strength of his reformatory purposes. The law of the Reichstag making the duration of parliaments five years instead of three was promptly signed by him; but when a bill of identical provisions in reference to the period of the Prussian Diet was brought to him, he withheld it for further consideration and returned it to the Vice-President of the Ministry of State, Robert Victor von Puttkamer, on the following day, May 27, with his signature attached, and an accompanying letter, saying he expected that in the future the freedom of elections would not be impaired by the interposition of official influence. Minister von Puttkamer, an extreme Conservative, whose interpretation of the remarkable rescript of Jan. 4, 1882, declaring that officials were bound by their oaths to promote the policy of the Government at elections had earned for him the nickname of "electoral patronage chief," answered the Emperor by referring to this command of his predecessor and to the electoral laws, which impose but slight restraints on official activity at elections. The Emperor declared that the law should not be published till he received the required assurance, and this the Prussian Minister of the Interior considered to be equivalent to his dismissal. He accordingly tendered his resignation, which was forthwith accepted. Prince Bismarck manifested surprise at the retirement of his colleague, and exhibited his regret in an ostentatious manner. The National Liberals were disappointed at the fact that the successor of Herr von Puttkamer

was not chosen from their ranks, and as soon as Herr Herrfurth, under-secretary in the Interior Department, was nominated, they threatened to dissolve the "cartel" or electoral alliance with the Conservatives which was called into existence by Prince Bismarck's appeal to the nation after the rejection of the army bill and the dissolution of Parliament. Herr von Puttkamer was succeeded as Vice-President of the Prussian Ministry by Herr von Bötticher, Secretary of State for the Interior, who received the appointment in August.

The Emperor Friedrich's Diary.—In the latter part of September the "Deutsche Rundschau" magazine, published extracts from the diary of the Emperor Friedrich covering the period of the French war. The editor accompanied the publication with a note to the effect that the extracts were received from a person to whom the late Emperor had communicated the diary, or portions of it, with permission to publish it when three months had passed after his death. The diary shows that Friedrich had pressed for the immediate mobilization of the whole army and navy as soon as Count Bismarck informed him that the negotiations with France in regard to the candidacy of Prince Hohenzollern for the Spanish throne had broken down and that war was inevitable. At the close of the war, when the question of German union came up, it was Friedrich who from the beginning urged the creation of the empire, while the King was very reluctant to take such a step until he was persuaded by the Crown-Prince and the Grand Duke of Baden. Bismarck said he feared that the proclamation of the empire would cause Bavaria and Württemberg to join their fortunes with the Austrian Empire, and wished to leave the question to be solved by time. He seems to have resented the interposition of the prince in the political question, even going to the length of threatening to resign, while seeking to bring about the result at which Friedrich aimed at his own time and in his own way, having the demand proceed from the Reichstag instead of from the allied German princes; but he finally deferred to the prince's views, supported by those of the heads of the states of Baden, Oldenburg, Weimar, and Ooburg, and composed the letter which the King of Bavaria was induced to accept as his own, inviting King Wilhelm to assume the imperial crown. When the matter was finally settled, the Crown-Prince wrote with elation of the realization of long-deferred hopes of the German people and of the dreams of German poets, and regarded it as the result of his own persevering efforts. When the title of "German Emperor" was fixed upon, since the Bavarian plenipotentiaries objected to that of "Emperor of Germany," which was proposed by the Crown-Prince, the King said: "My son is devoted with his whole soul to the new order of things, while I care not a straw about it, and only cling to Prussia."

The Emperor Friedrich had at different times had copies taken of parts of his diary. The original was found at San Remo after his departure, and was forwarded to his wife, in whose possession it remained after his death. The new Emperor and Prince Bismarck were angry at the divulging of the extracts that appeared in the "Rundschau," the authenticity of which was called in question by the chancellor, who declared that the historical statements were untrue, saying, in a report to the Emperor Wilhelm, that his father, the author of the diary, was not allowed to be made privy to the political negotiations in France, for fear that he would betray the confidence reposed in him to the English court. In this report he gave his opinion that the diary in the form in which it was published was a forgery, and recommended that the author should be criminally prosecuted on the charge of libeling the memory of the Emperor Friedrich in declaring him capable of menacing Bavaria and Württemberg with threats of war to compel them to enter the empire and in ascribing to the Prussian Government intentions such as were involved in the statement of the diary that the Chancellor threatened as soon as the French war was over to combat the doctrine of Papal infallibility. In replying to a passage representing him as returning to Varzin on July 18, 1870, under the impression that peace was secured, the Chancellor exhibits his attitude during the negotiations over the Hohenzollern candidature for the Spanish throne in a new light by saying that, far from considering peace secured, he was convinced that war was necessary, and that he intended to resign his ministry and to return to Varzin if the King's reluctance to engage in war had led to a peaceful conclusion of the diplomatic controversy. In accordance with the Chancellor's suggestion, the Minister of Justice instituted criminal proceedings. The unsold numbers of the magazine were confiscated by the Government, and Prof. Geffken, who furnished the diary for publication, was arrested on the charge of either calumnious attacks on the memory of the dead or of divulging state secrets. In his examination by the judicial authorities he repeated the statement that he had received the diary from the Emperor, but the authorities in their inquiries acted on the suspicion that the Empress Victoria had procured the publication. She was called upon, but refused to deliver the original diary into the custody of the state to be placed in the Prussian archives.

The Accession of William II.—The young Crown-Prince during his father's brief reign held little communication with his parents, and maintained a rival court in Berlin, consorting with reactionary politicians and military men, and evincing in toasts and speeches a dislike for his father's pacific and progressive policy. His first act after the death of Friedrich was to issue two striking addresses, one to the army and one to the navy. In the former he said

that he assumed the place to which he was called with unshakable confidence, because he was aware of the enthusiastic feeling of honor and duty that his predecessors had implanted in the army. The attachment between the army and the monarchs of the Hohenzollern dynasty had grown stronger with each generation. "Thus," he continued, "we belong to each other, I and the army. Thus were we born for each other. And firmly and inseparably will we hold together, whether God's will gives us peace or storm." A proclamation to the Prussian people was issued on June 18, in which he promised to be a just and mild prince, to foster piety and the fear of God, to protect peace, to promote the welfare of the country, and to be a helper of the poor and the oppressed, and a true guardian of the right, counting on the fidelity of his people, who have always stood faithfully by their king, in good and in evil days.

The ceremony of opening the Reichstag in the Old Palace at Berlin on June 25, on which occasion he was attended by most of the sovereign princes of Germany and by the dignitaries of the empire, was a pageant of unexampled splendor. Two days later he took the oath on the Prussian Constitution before both houses of the Diet with a pomp and circumstance that were equally impressive and spectacular. The father had chosen to reign under the name with which he was originally christened and by which he was best known throughout his life. The son, who also bore the double name of Friedrich Wilhelm, discarded the first part in order to follow the royal style of his grandfather, whose example he continually extolled, and which, he said in his speech from the throne, he was resolved to follow, striving to assure the military and political safety of the empire abroad and watching over the execution of the laws at home. He adopted the first Wilhelm's economical policy as his own in regard to affording to the working population, in conformity with Christian morality, such protection as legislative measures can give to the weak and distressed in the struggle for existence, and in this way seeking to equalize unhealthy social contrasts; but all efforts having an aim or tendency to undermine public order he considered it necessary to suppress. His foreign policy he declared to be to maintain peace with every one, as far as lies in his power, and not to use the strength obtained through the new military law for aggressive purposes, for Germany needs no fresh military glory nor conquests since she has won by fighting the right to exist as a united and independent nation.

In his opening speech the Emperor spoke of the existing arrangements with Austria-Hungary and Italy as permitting him to cultivate his personal friendship for the Emperor of Russia and the peaceful relations that have existed with the neighboring Russian Empire for a hundred years. On July 18 he set out

from Potsdam on a visit to his friend and relative the Czar. He embarked at Kiel in the royal steam-yacht "Hohenzollern," which was escorted by an ironclad squadron under the command of his brother, Prince Henry. He was met at sea by the Russian Emperor, taken to St. Petersburg on the yacht "Alexandria," and there entertained with a military spectacle and other pageants. From there he went to Stockholm, arriving on July 26, and, after exchanging courtesies with King Oscar, sailed two days later for Copenhagen, where he was the guest of the King of Denmark for a few hours, and returned to Germany after an absence of eighteen days. He next manifested his perfect confidence in Prince Bismarck by paying him a visit at Friedrichsruhe. On August 16 the Emperor delivered a speech at a dinner of officers of the Third Army Corps, in which he denied the imputation that his father was willing to relinquish a part of the conquered territory as the price of disarmament and lasting peace, and said that in the army there is but one opinion, and that is "that we would leave our entire eighteen army corps and 42,000,000 inhabitants lying on the field rather than abandon one single stone of what we have won."

After the trial evolutions of the fleet and the autumnal manœuvres of the army, which were arranged on an unprecedented scale, the young Kaiser carried out his intention of visiting his allies, the sovereigns of Austria-Hungary and Italy. On September 25 he set out on his tour, first visiting the German courts of Detmold, Stuttgart, and Munich, and on October 8 arrived at Vienna, where he was received with festivities, and afterward spent some time in a hunting trip with the Emperor Franz Josef. His visit at the Quirinal with King Umberto occurred in October. On the 12th he was the guest of Pope Leo at the Vatican, after which he inspected a parade of the Italian military, and on the 21st arrived again in Germany.

The Emperor was offended at the comments and insinuations of the Liberal press touching the friction and conflicting purposes which the question of the Battenberg marriage, the controversy between the doctors in regard to the treatment of his father's disease, and the proceedings in relation to the publication of Friedrich's diary proved to have existed between members of the royal family and to be still existent between himself and his mother. At last he complained of the attitude of the press in a reply to an address of the municipal authorities of Berlin that he made to the burgo-master. That official resented the inference that any part of the newspaper press was subject to his direction, and the papers vindicated themselves with unwonted boldness. The Liberal and the Conservative papers at first disputed as to which had given offense, the most indiscreet revelations regarding the royal family having appeared in the semi-official journals. An official announcement made it clear

that it was the language of the Liberal press to which the Emperor objected, especially to comparisons between himself and his father. The Liberal journals criticised his desire to suppress the side of the controversy that was unfavorable to himself, while giving free scope to comparisons that were unfavorable to his father's memory, and declared that the independent press of Berlin would "defend its independence against the municipal authorities as well as against every one else who threatens it," and that it would "render unto the Kaiser the things that are his, and also unto the free Constitution what belongs to it."

On November 22 the Emperor opened the Reichstag with great pomp of rank, uniform, and military display. In the speech from the throne he announced a measure relating to co-operative societies and the completion of the legislation for the insurance of aged and ailing laborers. He expressed satisfaction at the signs of sympathy and attachment that had been shown to him and to the idea of the German Empire that he represented by the princes and peoples of the Federated States. The alliance with Austria and Italy he declared to have no other object but peace. "To plunge Germany needlessly into the horrors of war, even if it were a victorious one," he said, "I should find inconsistent with my belief as a Christian and with my duties as Emperor toward the German people. Filled with this conviction, I thought it meet, soon after ascending the throne, to visit in person, not only my allies in the empire, but also the monarchs who are my neighbors and friends, and to confer with them regarding the task of securing peace and prosperity for our peoples. The confidence that was shown in me and my policy warrants me in hoping that I and my allies and friends will, with God's help, succeed in maintaining the peace of Europe."

The Anti-Socialist Law.—The repressive law against Socialists and Anarchists was originally passed in 1878 for a limited period, and has been periodically renewed without material alteration, sometimes for two, and sometimes for three years. In January, 1888, the Government proposed not only that it should be re-enacted for a period of five years, but that the penal provisions should be strengthened. The punishment for printing or circulating forbidden publications was to be increased from six to twelve months' imprisonment, together with a fine of 1,000 marks, and in other cases the penalties were rendered more severe. Certain classes of offenders would be liable, not only to be expelled from their ordinary domicile, as under the old act, but to be banished from the empire altogether, and deprived of their rights of citizenship. The bulk of the Clerical party, under the lead of Dr. Windhorst, demanded the mitigation, instead of the accentuation, of the act, and were seconded by the Liberalists. The National Liberals declined to prolong the act for more than two years,

and even the National Conservative party objected to the expatriation clauses. The measure, at the end of a long and animated discussion, was referred to a committee of twenty-eight members, and as altered in their hands and finally passed by the House and signed by the Emperor Friedrich, it is simply a continuance of the act as it stood before for two more years from the autumn of 1888.

Insurance of Workmen.—The last installment of the scheme of insurance against the worst consequences of poverty, which was foreshadowed in the imperial message of Nov. 17, 1884, is the bill making provision for work-people incapacitated by age or chronic ailments, which was elaborated by the Federal Council in the summer of 1888. The measure provides for compulsory insurance, the funds for which are raised in three parts, one of them being contributed by the Imperial Government by means of assessment, one part by employers, and the third part by the laborers themselves, the men paying in 21 pfennige, or about 5 cents weekly, and the women 14 pfennige. Every man who becomes invalided will receive a pension of 120 marks, and every woman 80 marks. The pension for superannuated working-people begins at the age of seventy-one, with an allowance of 180 marks. No contributions are exacted during the periods when men are required to perform military service.

The first part of Bismarck's scheme of state socialism was the sick-insurance law that was enacted in 1883, which compels the workman to insure himself against sickness by contributing to a fund insuring him medical care and medicines from the beginning of his sickness, and half-wages for thirteen weeks. At the end of this time he falls a charge on another fund, which is raised from employers under the law that was passed in 1884 for insuring against accidents. The first accident-insurance act was a tentative measure, and was made to apply only to those trades and occupations in which accidents are most frequent. It was extended in 1885 to a much larger class, and made to cover also workingmen employed by the Government in the railway, postal, telegraph, and naval and military administrations. By a supplementary act that was passed in 1887, and went into operation on Jan. 1, 1888, accident insurance was extended further to all persons engaged in marine occupations, with the exception of fishermen and those employed on small craft, who are to be dealt with in a later act. The accident-insurance fund is raised by compulsory assessments on employers, who are grouped for the purpose into associations, according to employments and locality, and these are divided into sections. Exclusive of the one that was created for the execution of the marine-insurance act, there are sixty-two associations in Germany, which are, to a large extent, self-governing, drawing up their own statutes and regulations,

and managing their own finances. They were divided in 1886 into 366 sections. The association of marine employers is divided into six sections. The Government control is exercised through the Imperial Insurance Department, which initiates the organization of the associations, supervises their administration, approves their statutes, divides such of them as become unmanageable, and acts as a last court of appeal in disputes on the subject of the payment of insurance that arise between the employers and the employed. This supervising board, which is an organ of the state, consists, in part, of permanent members, who are appointed by the Emperor, and, in part, of delegates of the employers and the workingmen, who are elected for four years. The insurance indemnities to be paid out of the fund consist of the expenses of the cure in cases of disablement, where there is no legal obligation on others to bear them; of a fixed allowance during the disablement; and of an allowance to the family in case of death. The allowance in each case is calculated according to a scale based on the annual wages. The assessments are made by specially appointed committees or by the boards themselves. Each section has an arbitration committee, which is presided over by an official, while the assessors are elected representatives of the employers and the employed. The members of the association must provide the expenses of administration and accumulate a reserve fund. The share of each member of the association depends on the number of workmen that he employs, and is subject to increase if the employment is especially dangerous. The indemnities are paid by post-office orders. The associations are required to consult with the workmen in drawing up regulations for the avoidance of accidents, and to see that these are enforced, which, of course, is in the interest of members of the association, the amount of whose assessments depends on the frequency of accidents.

The boards of the sixty-two trade associations organized under the insurance law that was in force in 1886 contained 742 members, and the 366 sectional boards were composed of 2,356 members. There were 6,501 officers, 39 salaried inspecting agents, 404 arbitration courts, and 2,445 representatives of the workmen. The number of business establishments was 269,174; the number of work-people insured, 3,478,435; and the total amount of annual wages on which the indemnities were calculated was 2,276,250,000 marks, or \$543,157,600. The total amount of indemnities paid out during 1886 was 1,736,500 marks; the cost of administration was 2,374,000 marks; and the cost of investigating accidents, fixing indemnities, arbitrating, and taking precautions against accidents was 282,000 marks. A reserve of 5,516,000 marks was formed, and, including this, the total expenditure was 10,521,500 marks, while the total receipts were 12,646,000 marks. Including employes of the

state, the total number of workmen insured was 3,725,313. There were 100,159 accidents during the year, of which 2,716 were fatal, requiring 5,935 indemnities to be paid to widows, orphans, and other relatives of the deceased. The total expenditure was about 72 cents per head of the persons insured, and \$1.15 on every \$250 of wages; but, deducting the costs of institution and the contributions to the reserve fund, the expenditure was 18 cents per capita and 48 cents on every \$250 of wages paid. The cost of administration largely exceeded the amount of indemnities paid, but the expense will be less disproportionate after the system is established, and will be partly covered by the interest on the reserve fund. This part of the expenditure is large because the associations have to see to the prevention of accidents and the investigation of their nature and causes, not merely to pay indemnities. The amount paid in indemnities will increase from year to year as new annual allowances are made to injured men and their families, while the cost of administration will remain stationary, or, perhaps, decrease, and therefore the report is considered to be, under all the circumstances, a favorable showing.

The Incorporation of Hamburg and Bremen.—The two chief seaports of Germany remained till 1888 outside the customs boundary of the Zollverein, which had, however, absorbed the territorial districts and some of the populous suburbs of the old Hanse towns. In October these cities gave up their ancient privileges as free ports and entered the Zollverein, thus rendering complete the policy of the commercial union of the German states, which was initiated by Prussia sixty years before political union was achieved. Their claim to remain free ports was conceded in 1868, and was ratified in the Imperial Constitution of 1871, although the privilege was in the case of Hamburg restricted to the city and port, and withdrawn from the rest of the state, which extends to the mouth of the Elbe, embracing 160 square miles. It was arranged that the two Hanse towns should remain outside the common customs boundary until they should themselves demand admittance. In 1880 the German Government brought pressure to bear to secure the inclusion of Hamburg in the customs league, which was desirable to Germany for political reasons, and still more for commercial reasons, because the 7,000 ships entering the port every year and taking cargoes to the most remote countries of the world, carried, besides German goods, large quantities of the manufactures of England and other countries, which the Chancellor desired to see displaced by German products. A project of union was negotiated on May 25, 1881, subject to the approval of the Hamburg Legislature. There was much opposition among the citizens, but the Senate agreed to the treaty, which it thought would be beneficial to the commerce of the port. The House of Burgesses could not accept that view,

but ratified the convention on being appealed to for the sacrifice of private and local advantage in the interest of national prosperity. The conditions of trade had so changed, however, as to make the isolation for which Hamburg had stood out less desirable to preserve than it was when the city entered the empire. Formerly Hamburg merchants had to depend on British products, for there were but few German manufactures, but in recent years many of the manufactured articles that are in most demand in neutral markets are produced in Germany more cheaply than in Great Britain. The growth in the trade of the port for the past ten years has been twice as great in German as it has in British manufactures. The German Chancellor, under these circumstances, could exact the acquiescence of the most unwilling of the burghers by threatening so to build up and favor Altona and Glücksbург that the German trade would leave Hamburg, and pass through those ports. A small area on the north bank of the Elbe, with the small islands opposite, was still reserved, and the space was subsequently extended, yet it only affords room for mooring vessels to the wharves, and for the erection of warehouses that simply correspond to the bonded warehouses of every customs port. In order to carry into effect the resolution of the Hamburg Government, of June 15, 1881, to enter the German customs union, time was required to build warehouses and make quays in that part of the city that is still free from customs, in order that the important transit and shipping trade might not be lost. It was therefore decided that the resolution should not go into effect till October, 1888. The seven years have been employed in making a great transformation, widening canals, building docks and quays, and erecting in the place of the poor buildings that formerly stood near the water blocks of warehouses that are as large and fine as can be found in any seaport. The cost of the improvements has been about 160,000,000 marks, one fourth of which was defrayed by the Imperial Government. The bill to incorporate Hamburg in the customs union was passed in 1882 by the Reichstag, notwithstanding the vehement opposition of the free-traders in that assembly. The city of Bremen was in like manner induced to join the Zollverein, and the German authorities began the collection of customs duties in both places on the same day, Oct. 17, 1888. A great number of officials visited the citizens and received their declarations as to the possession of dutiable goods. A reasonable amount was allowed to go free, but on all other goods liable to pay duty the back duties were levied, which were turned into the treasury of the Hamburg state, while all duties accruing subsequent to the formal incorporation into the Zollverein belong to the treasury of the empire, in consideration of which Hamburg is relieved from the annual military subsidy of 5,000,000 marks that she has paid heretofore. The part of the city on the left bank of the

Elbe, for which the free-port privileges are retained, was made into an island by digging a broad canal. Ships are permitted to pass from the sea into this free port without customs inspection, and the supervision between it and the customs-union territory is left to Hamburg officials. No bridges are allowed to be made between the free-port part of the town and other parts, nor will any one be permitted to reside within the district that remains open to free trade. The city of Hamburg has till now retained the system of taxation that was prevalent in the middle ages, but before the incorporation in the Zollverein all the old excise duties were abolished, and its fiscal conditions were assimilated to those of the rest of the empire.

The Prussian Elections.—After it had passed the bill making the electoral period five years, the Prussian Diet was dissolved, and new elections were held in October. In the new quinquennial the Government majority, as made up of the "Cartel Brothers," or union of the Conservatives and National Liberals, was strengthened, and if on any question this alliance should be broken, the Government can obtain a strong working majority, as it has in former parliaments, by attracting the support of the Clericals. The United Conservatives elected 199 deputies, losing one seat, while the National Liberals increased their representation from 72 to 87. The Clericals elected 97 members, the same number as in 1885. The Poles kept their 15 and the Danes their 2 seats; but the Guelphs lost a seat, electing only a single member, and the Independents decreased from 5 to 3. The Feisinnige or Liberalist party lost 11 seats to the National Liberals, electing 29 members, against 40 in the last Diet.

Foreign Relations.—On Feb. 6, 1888, Prince Bismarck reviewed the political situation in a great speech that he made in the Reichstag in connection with the loan bill to provide the money for adding 700,000 men to the fighting force of the empire. France, he said, looked less explosive than it had a year before, for the election of a pacific President and the appointment of a ministry composed of men who subordinated their plans to the peace of Europe were favorable signs that the French Government did not wish to plunge its hand into Pandora's box. The apprehensions that had arisen, which had been encouraged in order to further the passage of the military bill, were caused by the massing of Russian troops near the German and Austrian frontiers. In demanding the money for arming and equipping the Landwehr the Government had made the most of this menacing movement of troops, and encouraged the warlike attitude of the German press. Now that the passage of the bill was certain, the Chancellor sought to calm the public mind, saying that he was convinced that the dislocation of troops proceeded from no intention to fall upon Germany unawares, because in his recent interview with the Czar he had been

assured that no such purpose was contemplated. In explaining the causes that led to the alliance with Austria, he ironically declared that at the Berlin Congress he had acted almost like a third plenipotentiary of Russia in his desire to serve that power, but that his intentions were misinterpreted by the Russian press, and a controversy regarding the course of German diplomacy arose, which led to "complete threats of war from the most competent quarter." Hence he negotiated at Gastein and Vienna the treaty of alliance. "We shall sue for love no longer," he said, "either in France or Russia. The Russian press and Russian public opinion have shown to the door an old, powerful, and trustworthy friend, and we shall not seek to push our way in again. We have tried to re-establish our old intimate relations, but we shall run after no one." He conceded, to the dismay of the Austrians and especially of the Hungarians, the right of domination that Russia claimed in Bulgaria, and said that it was no concern of Germany's if Russia should restore by force the supremacy that she exercised before 1885. In any case, he was convinced that "the tiny province between the Balkans and the Danube is not an object of sufficient importance to involve Europe in a war extending from Moscow to the Pyrenees and from the North Sea to Palermo, of which no mortal can foresee the results, and yet at its close the combatants would scarcely know why they had fought at all." He was not alarmed at exhibitions of Russian hatred, "for no wars are waged for mere hatred." He did not believe that Russia would attack Germany, even if she became involved in a war with France; but, if a war with Russia should break out, no French Government could be strong enough to restrain the French people from a war against Germany. The new military bill enables Germany to place an army of 1,000,000 men on each frontier. "When we undertake a war," said the Chancellor, "it must be a people's war, which all approve. If we are attacked, then the *furor Teutonicus* will flame out, and against that no one can make head." He concluded with the proud boast, "We Germans fear God, and nothing else in the world."

The Austrian Government gave no indication of willingness to permit Russia to regain by an armed intervention the supremacy in Bulgaria that Russian arrogance and intrigue had lost, and Tisza, in the Hungarian Chamber, intimated the contrary. The German Kaiser, by visiting the Czar before going to the Austrian and Italian courts, showed a desire to conciliate Russia, which was partly due to his personal friendship for Alexander III. In August, Crispi, the Italian Premier, had an interview with Prince Bismarck at Friedrichsruhe, and stopped at Vienna to confer with Count Kálnoky, who also had his annual meeting with the German Chancellor.

Besides the passport regulations for Alsace-Lorraine nothing occurred to cause ill-feeling

between France and Germany. An Alsatian Government clerk named Dietz was tried, with his wife, for selling information to the French authorities regarding the German railroads in Alsace-Lorraine, and was sentenced to a long term of imprisonment. In November a German ex-officer, who was settled in France as a teacher of languages, was arrested in the act of mailing a Lebel cartridge. These and other spy incidents caused less stir than the expulsion from Prussia, on November 17, of two French journalists, named Latapieh and D'Oriot, for publishing obnoxious statements concerning members of the royal family.

Colonial Possessions.—Germany had no dependencies beyond the seas before 1884. Since that date she has established protectorates over extensive regions in Africa and many islands in the Pacific Ocean. In 1884, Togoland, on the Slave Coast of West Africa, with Porto Seguro and Little Popo, in all about 400 square miles, with 40,000 inhabitants and a trade of \$1,200,000 a year, was annexed, and in the same year the German flag was raised over the Cameroon region, extending for 300 miles along the coast, from Rio del Rey on the north to the River Campo on the south, and into the interior to 15° of east longitude, comprising 120,000 square miles. The exports of Cameroons, consisting mainly of oils, are valued at \$3,750,000 per annum. Damaraland and Namaqualand, in South Africa, were taken under German protection between 1884 and 1886, embracing a territory of 230,000 square miles, with 200,000 native inhabitants (see CAPE COLONY).

In East Africa the territory acquired by the German East African Society in Usagora and the neighboring districts, comprising 20,700 square miles, was made a German protectorate in 1885 by the *Schutzbrief*, or protecting charter of the Emperor. In the same year Wituland, 5,200 square miles in extent, was added; and in 1886, by virtue of an agreement with Great Britain and Zanzibar, the German Government established a protectorate over 122,800 square miles of territory in East Africa. The German acquisitions extend from Kilimanjaro mountain on the north to the River Rovuma in the south. The total area in Africa that has been brought under German domination is about 740,000 square miles, not including 200,000 square miles in East Africa, over which German traders claim to have secured territorial rights, comprising the districts of Khutu, Usambara, Pare, Ugono, Arusha, Djagga, Usuvamo, Ulena, Wamatschonde, Mahenge Magindo, Girijsania, Sabaki, the Galla country, and Ukamba Gasi. The districts that were included in the protectorate before 1888 are Usagara, Ukami, Ngnru, and Uesgua. The entire region embraced in the German sphere of influence has a coast line stretching from Cape Delgado in 11° of south latitude to the harbor of Wanga in 4° 30', and extends inland to the great lakes. In accordance with a treaty made with the Sultan of Zanzibar on April

28, 1888, the German East African Company has acquired a fifty-years' lease of the entire strip of coast, with rights to all duties and tolls, whereas previously the possessions of the company were cut off from the sea, and it had only a concurrent right to use the two harbors of Dar-es-Salam and Pangani. The region south of Tana is inhabited by the peaceful Suaheli tribes, while north of that river, in the Galla country and on the Somali coast, dwell the warlike and predatory Galla and Somali tribes. The little sultanate of Witu, which lies immediately north of the Tana, is administered by a company connected with the German Colonial Association. The territory that came under German dominion by arrangement with Great Britain is bounded by a line passing from Witu to Fungasombo, and Mknumbi, and then running to the ocean, which it strikes at a point between the mouths of Mknumbi and Osi rivers. The boundary on the other side ascends the Osi as far as Kau, and then the river Magogoni to its source, whence it follows a straight line to Witu. The soil is fruitful and well-watered, and on the coast are several good harbors. The Germans expect to find a rich field of commerce in Somaliland. The country produces gum-arabic, frankincense, myrrh, and other aromatic resins and herbs, coffee of the finest quality, honey and wax, ostrich-feathers, ivory, dye-woods, pharmaceutical plants, cloves, coconuts, sesame, earth-nuts, palm-oil, and gum copal, and on the plateau that forms the interior the Bedouins and pastoral Somali tribes raise herds of camels that they count by thousands, as well as sheep and goats, cattle, and asses in vast numbers, and all ride Arab horses of purest race. There is now a large export of cattle, hides, and butter. In the Suaheli country the Germans have experimented in the cultivation of cotton, tobacco, sugar, which is already raised and manufactured by the Arabs, vanilla, pepper, nutmeg, and indigo. The result of the trials in tobacco-culture has encouraged them to undertake planting on a large scale. The specimens of cotton proved fair in quality, and much is expected from the cultivation of coffee in a country that is the natural habitat of the plant. The German East African Plantation Society has 62,000 acres planted, and has adopted a system of modified slavery, contracting with Indian traders, who furnish gangs of 150 negroes for terms of two years, the contractors feeding, housing, and overseeing the laborers.

The northern part of southeastern New Guinea, lying between Humboldt Bay and Huon Gulf, with an area of 70,300 square miles and an estimated population of 109,000 souls, was made a German possession during 1885 and 1886, and given the name of Kaiser Wilhelm's Land. New Britain and other islands lying between 141° and 154° of east longitude and between 8° of south latitude and the equator, having a land surface of 18,150 square miles and 188,000 inhabitants, were annexed

in 1885, and called Bismarck Archipelago. In 1886 were added the islands of Bougainville, Choiseul, Isabel, and others in the northern part of the Solomon group, with an area of 8,500 square miles and a population of 80,000 persons. The acquisitions of 1885 included some of the Marshall Islands, having an area of 42 square miles and about 10,000 inhabitants. The Providence and Crow groups have also become German territory. In the summer of 1888 the natives for the first time attacked German officials in the Bismarck Archipelago. Kaiser Wilhelm's Land is the field of operations for a trading and colonization society called the New Guinea Company, which has stations on the coast at Finsch-Haven and Constantine and Hatzfeld harbors. There is much land that is considered suitable for settlement by Europeans and adapted for the cultivation of tobacco and food-plants, but no progress has yet been made in colonization. The islands of the Bismarck Archipelago produce copra, or dried coconut, of which 1,500 tons were exported in 1885, mother-of-pearl, and trepang. A plantation at Blanche Bay is producing cotton of the Sea Island variety. In New Guinea there have been several collisions with the natives, who have no rifles, but use the spear and the bow with dexterity. The first serious fight occurred in December, 1886, in Huon Gulf, where a boat from the "Samoa" gun-boat was attacked, which led to the burning of their village. The same punishment befell the assailants who killed some Malay laborers on a plantation at Hatzfeld harbor in July, 1887.

GILCHRIST, ROBERT, an American lawyer, born in Jersey City, N. J., Aug. 21, 1825; died there, July 6, 1888. He had a liberal education at private schools, studied jurisprudence, in 1847 was admitted to the bar of New Jersey, and practiced his profession till the time of his death. He was a counselor of the Supreme Court of the United States, and was a member of the Assembly of New Jersey in 1859. In 1861 he enlisted, in response to the first call by the State for troops, and went to the front as captain in the Second New Jersey Volunteers. Until the close of the war he adhered to the Republican party, but he left that party on the question of the reconstruction of the Southern States, and in 1866 was nominated for Congress on the Democratic ticket. In 1869 he was appointed Attorney-General for the unexpired part of the official term vacated by the resignation of Hon. George M. Robeson, and in 1873 was reappointed for a full term. In 1875 he was presented as a candidate for the office of United States Senator. In 1873 he was appointed one of the commissioners to revise the Constitution of the State of New Jersey, but resigned before that work was completed; and, likewise, his obligations to important professional engagements required him to decline an appointment as a justice of the Supreme Court, as also the office of Chief-Justice of New Jersey. Mr.

Gilchrist was endowed with a bold will and intrepid moral courage; he was faithful, just, generous, and notably non-partisan. His knowledge of the principles of jurisprudence, especially of constitutional law, was erudite and accurate and profound, and few have been engaged in a greater number of celebrated

ROBERT GILCHRIST.

causes. As Attorney-General his services were acknowledged to be valuable. His interpretation of the fifteenth amendment peaceably secured the right of negro suffrage in New Jersey, and he was the author of the Riparian Rights act, and was the counsel for the State in the suit to test the constitutionality of that statute. From this source the fund for the maintenance of the public schools of New Jersey is chiefly derived. In his private practice his thoroughness and attention to minute detail made him exceptionally successful. His skill and courage secured to the United States the half-million dollars left by Joseph L. Lewis to be applied to the payment of the national debt, and he brilliantly won many other important suits. Mr. Gilchrist was not only an able counselor in many matters relating to the most difficult portions of law-practice, but was an effective orator before a jury. He continued to pursue his profession until the last year of his life.

GOVERNMENT DEPARTMENTS AT WASHINGTON. The administration of the United States Government is conducted by the President through nine departments, the heads of which are appointed by him, and, with two exceptions, constitute his Cabinet of advisers. These Departments are the State, Treasury, War, Navy, Interior, Post-Office, Justice, Agriculture, and Labor. The respective Secretaries of State, Treasury, War, Navy, and Interior, and the Postmaster and Attorney Generals, receive an annual salary of \$8,000; the Commissioners of Agriculture and Labor, \$5,000. Public business in these departments is transacted be-

tween the hours of 9 A.M. and 4 P.M. Until 2 P.M. the buildings are open to visitors, but at that hour they are closed to all but official employes. An annual report to Congress, in detail, is made by each head of a department, giving the expenditure of its contingent fund, together with the number and name of all employes and the salaries paid to each. The total number of persons employed in the several branches of the civil service is 182,072; total number in the departments at Washington, 8,433.

State Department.—This occupies the south pavilion of the State, War, and Navy Department Building, on Seventeenth Street, south of Pennsylvania Avenue and immediately west of the Executive house. The structure is in the style of the Italian Renaissance, and consists of three harmonious buildings, with connecting wings. This department was established July 27, 1789, under the name of Department of Foreign Affairs, its secretary bearing the same title. On Sept. 15, 1789, it received its present denomination, its duties being also extended. The total number of employes of this department is 1,345; in department proper, 78. All diplomatic intercourse of the United States with foreign powers is conducted by the Secretary of State, who instructs and corresponds with all ministers and consuls and negotiates with foreign ministers. He holds the first rank among members of the Cabinet, and, by act of Jan. 19, 1886, is designated to succeed to the presidency in the event of a vacancy in both Executive offices. He is custodian of the Great Seal of the United States, and affixes it to documents and commissions. He also preserves the originals of treaties and of all laws and resolutions of Congress, and directs their publication, with amendments to the Constitution and proclamations of admission of new States into the Union. He grants and issues passports, and makes annual report to Congress of commercial information received from diplomatic and consular sources. There is an assistant secretary, salary, \$4,500; a second assistant secretary, salary, \$3,500; and a third assistant secretary, salary, \$3,500. There are six bureaus, the chiefs of which receive \$2,100 yearly; viz.: Bureau of Indexes and Archives; Diplomatic Bureau, in three divisions (total number employed in diplomatic service abroad, 63); Consular Bureau, in three divisions (same countries allotted to each as in Diplomatic Bureau—total number employed in consular service abroad, 1,204); Bureaus of Accounts, of Rolls and Library, and of Statistics. The appropriation for the diplomatic and consular service for the year 1888 was \$1,429,942.44.

Treasury Department.—The building is of Ionic architecture, at Fifteenth Street and Pennsylvania Avenue, 582 × 300 feet. This department has existed since Feb. 11, 1776, under a resolution of the First Congress of Delegates, assembled in Carpenter's Hall, Philadelphia,

providing for a committee of five to superintend finances. The Treasury was successively extended until on Sept. 2, 1789, it was organized as a department. Subsequent additions have been made to its officers. The total number employed in the Treasury service is 15,228; in the department proper, 2,477. The duties of the Secretary of the Treasury embrace the collection and disbursement of the national revenues, plans for the improvement of which he devises and the support of the public credit. He annually submits to Congress estimates and accounts of expenditures of appropriations, warrants for payment of which are issued by him, as also for the covering in of funds. He also superintends the coinage and printing of money, the construction of public buildings, the administration of the Coast and Geodetic Survey, life-saving, lighthouse, revenue-cutter, steamboat inspection, and marine hospital branches of the public service, and collection of statistics. There are two assistant secretaries, with annual salaries of \$4,000. The office work is in 10 divisions, viz.: warrants, estimates, and appropriations; appointments; customs; public moneys; loans and currency; mercantile marine and internal revenue; revenue marine; stationary, printing, and blanks; captured property, claims and lands; mails and files and special agents. The following are the principal officers of the Treasury:

First Comptroller.—Office established Sept. 2, 1789. Countersigns all warrants issued by the secretary, and receives accounts from First and Fifth Auditors (with exception of customs returns), and from the Commissioner of the General Land-Office; revises them, and certifies balances. Salary, \$5,000.

Second Comptroller.—Office established March 3, 1817. Revises accounts from Second, Third, and Fourth Auditors. Salary, \$5,000.

Commissioner of Customs, more properly Third Comptroller.—Office created March 3, 1849. Certifies accounts of receipts in general from customs, and disbursements for collection of them, also for revenue-cutter, life-saving, and shipping services, seal-fisheries in Alaska, lighthouses, marine hospitals, etc. Commis-sions customs officers, approves bonds, files oaths, etc. Salary, \$4,000. The total number employed in collection of customs is 4,356; in the revenue marine, 997.

Six Auditors, salary \$3,600 per annum each, receive all accounts of Government expenses, which they certify in following order:

First Auditor.—All accounts accruing in the Treasury (except those of internal revenue), including contingent expenses of Congress, Judiciary, etc. The work of the office is in 5 divisions, viz: customs; judiciary; public debt; warehouse and bond; miscellaneous. Office established Sept. 2, 1789.

Second Auditor.—Accounts in part of War Department, for pay of army, back pay and bounty, Soldiers' Home, and various military institutions, expenses relating to Indians, etc.

All clothing accounts of the army are adjusted finally, also property accounts of Indian agents. Office established March 3, 1817.

Third Auditor.—Remaining accounts of the War Department, army pension, Military Academy, horse claims, claims miscellaneous, etc. Office established, March 3, 1817.

Fourth Auditor.—Accounts of the navy, including pay, pensions, and prize-money. Office established March 3, 1817.

Fifth Auditor.—Accounts of the State Department and internal revenue, census, Smithsonian Institution, National Museum, etc. Office established March 3, 1817.

Sixth Auditor, in the Post-Office Department building. Adjusts finally all accounts for postal service, subject to appeal to the First Comptroller. Collects debts, etc., of the Post-Office Department. Office established July 2, 1836.

Treasurer of the United States.—Office established Sept. 2, 1789. In charge of all public moneys on deposit in the Treasury at Washington, in nine sub-treasuries at Boston, New York, Philadelphia, Baltimore, New Orleans, San Francisco, St. Louis, Chicago, and Cincinnati, and in the national bank United States depositories. Pays the interest on the public debt and salaries of members of the House of Representatives. Trustee of bonds for national bank circulation and custodian of Indian-trust fund bonds. Salary, \$6,000.

Register of the Treasury.—Office established Sept. 2, 1789. Official book-keeper of the United States. Prepares an annual statement to Congress of all receipts and disbursements of public funds, signs and issues all bonds, and registers warrants. Salary, \$4,000.

Comptroller of the Currency.—Office established June 3, 1864. Under direction of the secretary, he controls the national banks. The number of these is 294. Salary, \$5,000.

Solicitor.—Chief law-officer of the Treasury, with special cognizance of revenue frauds. Approves bonds, etc. Salary, \$4,000.

Commissioner of Internal Revenue.—Office established July 1, 1862. Duties, assessment and collection of internal taxes, preparation of instructions and stamps. The work of the office is in 8 divisions, viz., appointments, law, tobacco, accounts, distilled spirits, stamps, assessments, revenue agents. Salary, \$6,000. The total number employed in the service is 3,218. A laboratory, with chemist and microscopist, for tests of oleomargarine, under the act of 1886, is attached to this bureau.

Director of the Mint.—Salary, \$4,500. The total number of employes in the 3 mints and 6 assay offices in the United States is 948. The amount of silver required to be coined monthly, by act of Feb. 28, 1878, is \$2,000,000.

Supervising Architect of Treasury.—Office established 1853. Salary, \$4,500. The total number employed on public buildings is 655.

Commissioner of Navigation.—Salary, \$3,600. Number of employes, 46.

Superintendent of the Life-Saving Service.—Service reorganized June 18, 1878. Salary, \$4,000. The number of life-saving stations is 213; of employes, 242.

Superintendent of Steamboat Inspection.—Salary, \$3,500. He presides at meetings of Board of Supervising Inspectors on the third Wednesday in January. The number of employes is 164.

Supervising Surgeon-General of Marine Hospital Service.—Instituted 1799; office, No. 1421 G Street, N. W. Salary, \$4,000. The number of employes is 406.

Light-House Board.—Organized Aug. 31, 1862; employs 1,321 persons.

The following bureaus occupy separate buildings, viz.:

Bureau of Engraving and Printing, corner Fourteenth and B Streets, S. W. The number of employes is 895. The number of sheets of securities produced in 1888 was 88,088,939; cost, \$948,819.29. The chief of the bureau has a salary of \$4,000.

Bureau of Statistics, No. 407 Fifteenth Street, N. W. The number of employes is 85. The chief of the bureau has a salary of \$3,000. It furnishes annual reports on commerce and navigation, internal commerce, annual statistical abstract, quarterly reports on commerce, navigation, and immigration, monthly statement of imports and exports, reports on total values of foreign commerce and immigration, of exports of breadstuffs, of provisions, of petroleum and cotton.

Coast and Geodetic Survey.—Building south of the Capitol. Reorganized April 29, 1848. The superintendent's salary is \$6,000. Besides annual reports to Congress, it publishes maps and charts of our coasts and harbors, books of sailing-directions, and annual tide-tables. The number of employes is 178.

War Department.—Established Aug. 7, 1789; occupies the north wing of the State, War, and Navy Department Building. The total number in the service, including the army of the United States, Signal Corps, etc., is 31,958; in the department proper, 1,536. All duties of the military service, purchase of supplies, transportation, etc., devolve upon the Secretary of War, who is also invested with affairs of a civil nature. He provides for the taking of meteorological observations, arranges the course of studies at the Military Academy, supervises the work and expenditures of the engineer corps, and purchases real-estate for national cemeteries. He controls the appropriation of the Mississippi River Commission, and directs the construction of piers or cribs by owners of saw-mills, the removal of sunken vessels obstructing navigation, etc., and regulates bids for contracts. The headquarters of the army are in the War Department. The standing army of the United States numbers 27,159 men. The army appropriation for the fiscal year 1888 was \$23,724,718.69. Salary of the general, \$13,500. Chiefs of bureaus of

War Department have the rank of brigadier-general. Salary, \$5,500. They are:

Adjutant-General, has 5 assistants. Promulgates orders of the President and the general of the army, conducts correspondence, has charge of enlistment, recruiting service and muster-rolls, and general discipline. Office force, 590; staff corps, 17.

Inspector-General, has one assistant. Reports upon *personnel* and material of the army, inspects posts, stations, depots, etc., and accounts of disbursing officers. Force of office, 5; staff corps, 7; detailed officers of the line, 4.

Quartermaster-General, has 5 assistants. Provides transportation, quarters, clothing, etc., for the army. In charge of national cemeteries. Force of office, 164; staff corps, 61. Number of civilian employes at military departments outside of Washington, 1,568.

Commissary-General, has 2 assistants. In charge of Subsistence Department. Force of office, 40; staff corps, 26.

Surgeon-General, has 6 assistants. Force of office, 487; staff corps, 195. Number of civilian employes in various places, 813.

Paymaster-General, has 1 assistant. Pays the army. Force of office, 48; staff corps, 48. Number of army paymasters, rank of major, 42.

Chief of Engineers, has 3 assistants. Has direction of all fortifications, survey, and improvements of rivers and harbors, engineers' work in the field, bridges, etc. Force of office, 64; staff corps, 109; engineer battalion, 450.

Chief of Ordnance, has 3 assistants. In care of arsenals, artillery service, and all weapons and munitions of war. Force of office, 40; staff corps, 59.

Judge-Advocate-General, has 1 assistant. He is chief of the Bureau of Military Justice. Force of office, 13; staff corps, 8.

Chief Signal Officer. Superintends Signal Service. Number of stations, 182; force of office, 227; staff corps, 17; signal corps of the army, 487. The first systematic synchronous meteoric reports were taken in the United States Nov. 1, 1870. Cautionary signals on the Atlantic and Gulf coast were established in October, 1871.

Office of Publication of War Records, corner of G and Twentieth Streets, N. W. Force of office, 26.

The Army Medical Library and Museum, in the National Museum, employs 46 persons.

The appropriation for the Military Academy at West Point, N. Y., for 1888, was \$419,936.98.

Navy Department.—Established April 30, 1798. It occupies the south half of the east connecting wing of the State, War, and Navy Department Building. Total number in service, including United States Navy and Marine Corps, 15,429; in the department proper, 257. The Secretary of the Navy has general direction of the construction, equipment, manning, armament, and employment of all vessels of war of

the United States. The office of the Admiral of the Navy is in Washington; salary, 13,000. The total number on the active list of the navy is 9,006; on the active list of the Marine Corps, 1,992. The total number of pay-clerks, cadets, etc., at navy yards and stations is 3,770. The navy appropriation for the fiscal year 1888 was \$25,767,348.19. The following are the bureaus, organized in 1862, the chiefs of which receive salaries of \$5,000: Bureau of Yards and Docks; Navigation (the judge-advocate-general—salary, \$4,500—is attached to this bureau); Ordnance; Equipment and Recruiting; Provisions and Clothing; Medicine and Surgery; Construction and Repair; Steam-Engineering. There are also the Naval Observatory at Washington, Twenty-third and E Streets, N. W.; superintendent's salary, \$5,000. Hydrographic Office, hydrographer's salary, \$3,000. Office of the Nautical Almanac, superintendent's salary, \$3,500.

Interior Department.—Established March 3, 1849, occupies the building known as the Patent-Office, covering two squares between Seventh and Ninth and F and G Streets, N. W.; style, Doric. The total number employed in the service is 9,154; number appointed by the President and secretary, 3,600. The legal organization of the department places under the supervision of the Secretary of the Interior all business of public lands and surveys, Indians, pensions, patents, railroads, education, the commissions of interstate commerce and the United States Pacific Railway, the architect of the Capitol, and certain hospitals in the District of Columbia. He has also the direction of the census, and is invested with certain powers and duties in the Territories. There are two assistant secretaries; salary, \$4,000 each. The following officers are heads of bureaus:

Commissioner of Patents, salary \$5,000, has 1 assistant. Prior to the organization of the Interior Department, patents were issued by the Secretaries of State and War and the Attorney-General. The number of employes is 578. The receipts of the office in six months ending June 30, 1888, were \$508,091.26.

Commissioner of Pensions, salary \$5,000, has 2 deputies and 1 medical referee. Office established March 2, 1833, under the Secretary of War; transferred to the Interior Department March 3, 1849. The Pension building is in Judiciary Square. The number of employes is 1,554; number of pension agencies, 18; appropriation for 1888, \$83,152,500.

Commissioner of the General Land-Office (in the Patent-Office building), salary \$4,000, has 1 assistant; office established April 25, 1812, in the Treasury Department. The number of employes is 468. The Land-Office audits its own accounts. The number of land-offices is 111; surveyor-generals, 15.

Commissioner of Indian Affairs (Second National Bank building, Seventh Street, N. W.), salary 4,000; has 1 assistant. Office established July 9, 1832. The number of employes

is 101; Indian agents, 60; Indian appropriation for the fiscal year 1888, \$5,226,897.66.

Commissioner of Education (corner of G and Eighth Streets, N. W.), salary, \$3,000. Bureau established March 2, 1867. The number of employes is 41.

Commissioner of Railroads (corner G and Eighth Streets, N. W.), salary, \$4,500. Bureau established June 19, 1878. The force of the office is 7.

Director of the Geological Survey (Hoe Building, F Street, N. W.), salary \$6,000. Office established March 3, 1879. The number of employes is 240.

Interstate Commerce Commission (Sun Building, F Street, N. W.), appointed Feb. 4, 1887. The number of Pacific Railway commissioners is three.

The officers in the District of Columbia under the Interior Department, are: Recorder of Deeds, Register of Wills, and Inspector of Gas-Meters.

Post-Office Department, established, temporarily, Sept. 22, 1799, and permanently, May 8, 1794. Occupies the Post-Office building, covering one square between Seventh and Eighth and E and F Streets, N. W. Style, Corinthian. The number of employes in the department and postal service is 94,386; in the department proper, 600. The appropriation for the fiscal year 1888, was \$55,694,650.15. The Postmaster-General appoints all officers and employes of the department, with the exception of his three assistants, and all postmasters in the United States at a salary less than \$1,000. He makes postal treaties, awards contracts, and directs the foreign and domestic mail service.

First Assistant Postmaster-General, salary, \$4,000. In charge of Appointment Office, with 5 divisions.

Second Assistant Postmaster-General, salary, \$4,000. In charge of Contract Office, with 3 divisions.

Third Assistant Postmaster-General, salary, \$4,000. In charge of Finance Office, with 4 divisions.

The other officers of the Post-Office Department are:

Superintendent of Foreign Mails (corner Eighth and E Streets, N. W.), salary \$3,000.

Superintendent of the Money Order System, (corner of Eighth and E streets, N. W.), salary, \$3,500. Work of office in 6 divisions.

Superintendent of Dead-Letter Office.—The number of employes is 110, and the work of the office is in 6 divisions. The number of pieces of mail matter treated in the office during the year 1887 was 5,578,965.

The number of postmasters in the United States is 54,774; assistant postmasters, 384. The number of employes in Railway Mail Service, is 4,760. The number of pieces of mail matter handled by them in 1887 was 5,851,394,057. There are foreign agencies of the Post-Office Department at Shanghai and Panama, in charge of the consuls-general.

Department of Justice.—Established June 22 1870. Opposite Treasury building, on Pennsylvania Avenue. The office of Attorney-General was created Sept. 24, 1789. The total number employed in the service is 1,800; in the department proper, 89. The Attorney-General, as chief law-officer of the Government, furnishes advice and opinions to the President and heads of Executive departments upon all legal questions referred to him; represents the United States in the Supreme Court, the Court of Claims, and any other court, when deemed necessary; supervises and directs United States attorneys and marshals in the several judicial districts of the States and Territories, and provides special counsel for the United States when required by any department. His assistants are: Solicitor-General, salary, \$7,000; two Assistant Attorney-Generals, salaries, \$5,000. The law-officers of the Executive Department, allowed by the act of 1870, are the Solicitor of the Treasury, salary, \$4,500; Solicitor of Internal Revenue, salary, \$4,500; Assistant Attorney-General for Department of the Interior, salary, \$5,000; Assistant Attorney-General for Post-Office Department, salary, \$4,000; Naval Solicitor, salary, —; Examiner of Claims, State Department, salary, \$3,500.

The number of United States district attorneys is 70; number of assistants, 65; number of special assistants, 39; number of United States marshals, 70; number of deputies, etc., 1,467.

Department of Agriculture, South Washington, opposite Thirteenth Street; established May 15, 1862. The first distribution of rare grains, seeds, plants, etc., under the Commissioner of Patents, was made on July 4, 1836; the first propagating garden established in 1858. The number of employes is 408. The appropriation for the department for the fiscal year 1888, was \$1,028,730. The duty of the Commissioner of Agriculture is to acquire and diffuse among the people of the United States useful information connected with agriculture, and to procure, propagate, and distribute new and valuable seeds and plants. The following are the principal officers: Chief of Bureau of Animal Industry, bureau established May 29, 1884, for investigation of diseases among animals. Entomologist, investigates insect-ravages; section of silk-culture established 1884. Botanist, section of vegetable pathology established July 1, 1886. Chemist, analyzes butter, soils, fertilizers, etc.; experiments in manufacture of sugar. Microscopist, for this and other departments. Statistician, collects statistics from domestic and foreign sources. The number of State agents is 23; 1 in England. The divisions are: Forestry, ornithology, pomology, seeds, propagating garden, library.

Department of Labor, Kellogg Building, No. 1416 F Street, N. W. By act of June 18, 1888, the Bureau of Labor of the Interior Depart-

ment, established June 27, 1884, was erected into a department, "the general design and duties of which shall be to acquire and diffuse among the people of the United States useful information on subjects connected with labor, in the most general and comprehensive sense of that word, and especially upon its relations to capital, hours of labor, the earnings of laboring men and women, and the means of promoting their material, social, intellectual, and moral prosperity." Until the complete organization of the department has been effected, the condition of the bureau remains the same. The number of employes under the legal organization is 64.

Closely connected with the above-named departments are:

The United States Civil-Service Commission.—Offices in City Hall building; established Jan. 16, 1883, "to regulate and improve the civil-service of the United States." The commissioners receive salaries of \$3,500 each; the Chief Examiner, \$3,000. Examinations are held for places in the departmental, customs, and postal services in every State and Territory of the Union.

Government Printing - Office.—This establishment is at the corner of North Capitol and H Streets, Washington. The total number of employes is 2,038. The Public Printer has a salary of \$4,500.

One officer of the Department of Justice, and one medical officer from the army, navy, and Marine Hospital Service, respectively, are detailed to the National Board of Health, established March 8, 1879.

GRAY, ASA, botanist, born in Paris, N. Y., Nov. 18, 1810; died in Cambridge, Mass., Jan. 30, 1888. He was descended from a Scotch-Irish family, who emigrated to this country in the early part of the last century, and in 1795 his grandfather settled in the Sanquoit valley. When a boy he fed the bark-mill and drove the horse of his father's tannery; but, as he showed a greater fondness for study than for farm-work, his father sent him to the Clinton Grammar School. In 1825 he entered Fairfield Academy, where he spent four years, and his first interest in botany was aroused by reading on that subject in Brewster's "Edinburgh Encyclopædia." A story is told of his eager watching for the first spring beauty in the spring of 1828, which, by the aid of Amos Eaton's "Manual of Botany," he found to be the *Claytonia Virginica*. Owing to the wishes of his father, and probably his own inclination, he entered himself as a student at the Medical College of the Western District of New York in Fairfield, Herkimer County, and in 1831 he was graduated at that institution. The sessions were short, and the remainder of his time was spent in study with physicians in the vicinity. His leisure was occupied in gathering an herbarium, and he began a correspondence with Dr. Lewis C. Beck and Dr. John Torrey, who aided him in the determina-

tion of his plants. He never entered upon the practice of medicine, but, on receiving his degree, became instructor in chemistry, mineralogy, and botany in Bartlett's High School in Utica, N. Y., where he was an instructor from 1831 till 1835. In 1832 he gave a course of lectures on botany at the Fairfield Medical School, and in 1834 he delivered a course on mineralogy and botany at Hamilton College, Clinton, N. Y. During the year 1833-'34, he was assistant to John Torrey, then Pro-

ASA GRAY.

fessor of Chemistry and Botany at the College of Physicians and Surgeons in New York city, but that institution could not afford to retain his services, and in 1836, through the efforts of Dr. Torrey, he was made curator of the New York Lyceum of Natural History. Dr. Gray's earliest papers in botany—"A Monograph of the North American Rhynchosporæ" and "A Notice of Some New, Rare, or Otherwise Interesting Plants from the Northern and Western Portions of the State of New York"—were read before the Lyceum in December, 1834, and in 1836 his first text-book, "Elements of Botany," was published in New York. This volume, with various revisions, was widely adopted in schools and academies, and for a long time was almost the only text-book on botany in popular use.

In 1836 Dr. Gray was appointed botanist of the exploring expedition to the South Pacific, under Capt. Charles Wilkes, but, owing to the delay in the starting of the expedition, he resigned that place in 1838. Meanwhile, he became actively associated with Dr. Torrey in the preparation of the "Flora of North America," Parts I and II of the first volume of which were issued in July and October, 1838; and in November of that year he sailed for Europe to consult the various herbaria that contained large numbers of American plants made by foreign collectors. He visited England, Scotland, France, Germany, Switzerland, Italy, and

Austria, and met all of the eminent botanists of the day, forming life-long friendships with some of them. In 1838 he was chosen Professor of Botany and Zoology in the University of Michigan, but he never filled that chair, although his name heads the list of the faculty; and in 1842 he resigned that appointment to accept the Fisher chair of Natural History in Harvard University, which place he held until his death. On his return from Europe, he pushed to rapid completion Parts III and IV of the "Flora," which were issued in June, 1840, and completed Volume I. Of Volume II, he issued Part I in May, 1841, and Part II in April, 1842, while Part III was not published until February, 1843, when he had settled in Cambridge. His energies were thereafter for a time most closely directed to his duties at Harvard, where the botanical department of that university was practically created by him. On his accession there no herbarium was in existence; there was no library, and only one insignificant greenhouse in a garden that was all confusion, containing only a few plants of value. He soon brought together an herbarium and library, and arranged the garden systematically; but his collection of plants shortly overran his house and was in every room. Dreading their destruction by fire, he offered to present his collections to Harvard on condition that a suitable building be erected for them, and accordingly, in 1864, through the liberality of Nathaniel Thayer, of Boston, a brick building was provided for their reception. At that time (November, 1864), the herbarium contained at least 200,000 specimens, and the library had about 2,200 volumes, and when Dr. Gray died the herbarium had nearly doubled in size, and become by far the largest and most valuable of its kind in America. The library, at the same time, was roughly estimated to contain something over five thousand volumes and three thousand pamphlets. The botanic garden was also improved during his administration by the addition of several greenhouses, in which were cultivated a choice selection of exotics, and the garden itself contained good representatives of the temperate regions, the collection of the *Compositæ* being especially important. His work as a teacher continued until the close of his life, and under his immediate instruction have been at one period or another nearly all of those who have since aided in the development of botanical studies in the United States. Dr. Gray was relieved from the active duties of his chair in 1872 by the appointment of Prof. George L. Goodale to be his associate, and in 1873 he was still further relieved by the call of Prof. Charles S. Sargent to the care of the botanic garden, while in 1874 Dr. Sereno Watson became curator of the herbarium.

Dr. Gray's scientific work began at a time when the old artificial systems of botany were giving way to the natural system, and with Dr. Torrey he was among the first to attempt

the classification of species on the natural basis of affinity. After the publication of the two volumes of the "Flora of North America," which brought it down to the end of the *Compositæ*, the accumulation of fresh material had so increased that to finish the great undertaking would require an appendix larger than the original. In 1878 he again took up this work, and published Part II of Volume II on the *Gamopetalæ* in "The Synoptical Flora of North America" (New York, 1878). He issued Part II of Volume I—the *Caprifoliaceæ compositæ*—in 1884, and his last labors, just before his death, were on the grape-vines of North America. The valuable acquisitions of the National Government exploring expeditions were referred to him, and the results are to be found in numerous memoirs published in the official reports and as separate monographs. The most important of these are "Plantæ Lindheimerianæ," an account of plants collected in Western Texas by Ferdinand Lindheimer (Boston, 1849-'50); "Plantæ Fendlerianæ Novi Mexicanæ," a description of plants collected in New Mexico by August Fendler (1849); "Plantæ Wrightianæ Texano-Neo Mexicanæ," describing the extensive collections made by Charles Wright (Washington, 1852-'53); "Plantæ Novæ Thurberianæ," being those gathered by George Thurber, botanist to the Mexican Boundary Survey (Boston, 1854); "Genera Floræ Americæ Boreali Orientalis Illustrata" (New York, 1848-'49); and a report on the botanical specimens brought back by Capt. Charles Wilkes (1854). He also reported on the plants collected in Japan by the Perry expedition in 1856, and, in one of his more important papers upon "The Botany of Japan" (1859), based upon the collection made by Charles Wright, of the Rogers Exploring Expedition, he demonstrated the close relationship between the floras of Japan and Eastern North America. Dr. Gray's relation to Darwinism was important. Although a man of the deepest religious convictions, and thoroughly imbued with a firm belief in a divine Creator, he declared, "I am scientifically, and in my own fashion, a Darwinian, philosophically a convinced theist, and religiously an acceptor of the 'creed' commonly known as the 'Nicene' as the exponent of the Christian faith." It was largely through his efforts that Darwin's "Origin of Species" was published in America, and graceful tributes to his influence are rendered by Darwin in his "Life and Letters." Dr. Gray's literary works consist of collections of papers variously published and of lectures, notably a series before the Divinity School of Yale in 1880. They are "A Free Examination of Darwin's Treatise on the 'Origin of Species,' and of its American Reviewers" (Cambridge, 1861); "Darwiniana: Essays and Reviews pertaining to Darwinism" (New York, 1876); and "Natural Science and Religion" (1880). The degree of A. M. was given him in 1844

by Harvard, while that of LL. D. came to him from Hamilton in 1864, from Harvard in 1875, and from McGill in 1884. In 1887, on the occasion of his last visit to Europe, he was everywhere received with distinguished honors. Cambridge gave him the degree of Dr. Sc., Edinburgh gave him her LL. D., and Oxford her D. C. L. In 1874 he was appointed a regent of the Smithsonian Institution, succeeding Louis Agassiz in that office. He was elected a fellow of the American Academy of Arts and Sciences in 1841, was its president in 1868-'73, and in 1871 presided over the American Association for the Advancement of Science, delivering his retiring address at the Dubuque meeting on "Sequoia and its History." Dr. Gray was one of the original members of the National Academy of Sciences, but afterward passed to the grade of honorary membership. Besides his connection with societies in this country, he was either corresponding or honorary member of the Linnean Society and the Royal Society in London, and of the Academies of Sciences in Berlin, Munich, Paris, St. Petersburg, Stockholm, and Upsala. He was a large contributor to periodical literature, and his separate papers include nearly two hundred titles. For many years he was one of the editors of the "American Journal of Science," and his "Botanical Contributions" were long published in the "Proceedings of the American Academy of Sciences and Arts." He also wrote biographical sketches of many who have achieved eminence in science; of these the more important American subjects were Jacob Bigelow, George Engelmann, Joseph Henry, Thomas P. James, John A. Lowell, William B. Sullivan, John Torrey, and Jeffries Wyman. On his desk at the time of his death was left the unfinished necrology for 1887 of botanists. Dr. Gray's series of text-books are used throughout the United States, and have passed through many editions. They include "Elements of Botany" (New York, 1836), republished as "Botanical Text-Book" (1853), and now called "Structural and Systematic Botany" (1858); "Manual of the Botany of the Northern United States" (Cambridge, 1848; 5th ed., New York, 1867); "First Lessons in Botany and Vegetable Physiology" (New York, 1857); "Botany for Young People and Common Schools," comprising "How Plants Grow" (1858) and "How Plants Behave" (1872); "Field, Forest, and Garden Botany" (1868), which has been bound with the "First Lessons in Botany" under the title "School- and Field-Book of Botany" (1875); "Structural Botany or Organography, with Basis of Morphology" (1879), being the first volume of the series called "Gray's Botanical Text-Book" and "Elements of Botany" (1887), which is a revision of the "First Lessons in Botany." The funeral services were held on February 2 in Appleton Chapel of Harvard, and his remains were buried in Mount Auburn Cemetery. Of the several memoirs

of his life, that by Walter Deane (with portrait), in the "Bulletin of the Torrey Botanical Club" for March, 1888, and that by William G. Farlow, in the "Memorial of Asa Gray," issued by the American Academy of Arts and Sciences" (Cambridge, 1888), are the most important. See also a "List of the Writings of Dr. Asa Gray, chronologically arranged," with index, in the "American Journal of Science" for September and October, 1888.

GREAT BRITAIN AND IRELAND, UNITED KINGDOM OF, a monarchy in western Europe. The reigning sovereign is Victoria I, Queen of Great Britain and Ireland and Empress of India, who was born on May 24, 1819, and succeeded to the throne on June 20, 1837. The heir-apparent is Albert Edward, Prince of Wales, born Nov. 9, 1841, and the next in succession is his eldest son, Albert Victor, born Jan. 8, 1864.

The legislative power is vested in the House of Lords and House of Commons, constituting together the Parliament of the British Empire, which holds annual sessions, usually lasting from the middle of February to the end of August. The House of Lords, in the session of 1887, consisted of 560 members, made up of 5 peers of the blood royal, 2 archbishops, 22 dukes, 20 marquises, 120 earls, 29 viscounts, 24 bishops, 294 barons, 16 Scottish representative peers, and 28 Irish representative peers. Twelve new peerages were created in 1887. The reform bill of 1884, with the redistribution-of-seats act of 1885, fixed the number of seats in the House of Commons at 670, of which England and Wales fill 495, Ireland 108, and Scotland 72.

The total number of registered electors in 1887 was 5,848,173, of whom 4,492,875 belonged to England and Wales, 779,389 to Ireland, and 575,909 to Scotland. The county electors in England and Wales numbered 2,582,610; in Ireland, 662,741; and in Scotland, 326,055. The borough electors numbered 1,895,440 in England and Wales, 112,556 in Ireland, and 235,450 in Scotland. The university constituencies furnished 14,825 electors in England and Wales, 4,092 in Ireland, and 14,404 in Scotland. The members of Parliament receive no compensation.

Most of the members of the present Cabinet were appointed on Aug. 3, 1886. It is composed as follows: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury; Lord High Chancellor, Lord Halsbury, formerly Sir Hardinge S. Giffard; Lord President of the Council, Viscount Cranbrook, formerly Gathorne Hardy; Chancellor of the Exchequer, George Joachim Goschen; Secretary of State for the Home Department, Henry Matthews; Secretary of State for War, Edward Stanhope; First Lord of the Treasury, William Henry Smith; Secretary of State for the Colonies, Sir Henry Thurstan Holland; Secretary of State for India, Viscount Cross, formerly Sir Richard Cross; First Lord of the Admiralty,

Lord George Hamilton; Lord Chancellor of Ireland, Lord Ashbourne, formerly Edward Gibson; Chief Secretary to the Lord Lieutenant of Ireland, Arthur J. Balfour; Chancellor of the Duchy of Lancaster, Lord John Manners; President of the Board of Trade, Lord Stanley; Lord Privy Seal, Earl Cadogan; President of the Local Government Board, Charles Thomas Ritchie; Minister without portfolio, Sir Michael Hicks-Beach.

Area and Population.—The area of the United Kingdom is 120,832 square miles, with an estimated population in 1887 of 37,091,564, exclusive of the army, navy, and merchant seamen abroad. At the census of 1881 the population was 35,241,482—17,254,109 males and 17,987,373 females. The total area of the British Empire is 8,981,130 square miles, and the population is estimated at 310,735,840 persons. In 1886 there were in the United Kingdom 1,145,070 births, 697,990 deaths, and 240,869 marriages. The number of marriages in Ireland in 1887 was 20,945, against 20,594 in 1886; the births 112,400, against 113,927; the deaths 88,585, against 87,292. The total number of emigrants from the United Kingdom was 396,702 in 1887, of whom 281,487 were natives of Great Britain and Ireland. The immigrants numbered 119,018, of whom 85,475 were natives of the British Islands. Of the emigrants 296,881 went to the United States, 44,424 to British North America, and 35,282 to Australasia. In 1886 there were 63,135 emigrants from Ireland. Emigration from the United Kingdom, especially to the United States, is found to increase whenever the general prospects of trade improve. From the maximum of 413,288 in 1882 emigration declined to 264,385 in 1885, and then showed a large increase in 1886 and a further increase in 1887. The British and Irish emigrants of 1887 exceeded the number of any previous year since the nationalities began to be distinguished except 1883. The proportion of emigration to population was 76 per cent., which was less than in 1882 and 1883, when it was 79 and 90 per cent. respectively, but was greater than in any other year since 1854. The net emigration was 196,012 in 1887, as compared with 152,882 in 1886, and 122,176 in 1885. The Irish percentage in the aggregate emigration since 1858 is 41, the Scotch 10. Of the 4,222,377 emigrants to the United States from the United Kingdom during 35 years, 2,165,532 were Irish. In the same period 647,974 went to British North America from the United Kingdom, but the Irish contributed only 168,349 to the total; of 1,228,176 emigrants to Australasia from 1858 to 1887, the Irish contingent was 283,331; and of 271,600 who went to all other places, 19,639 were Irish. Of the Irish emigrants of 1887 no less than 87.6 per cent. were bound for the United States.

The population of the chief cities of the United Kingdom in 1887, computed by the Registrar-General, was as follows: London,

4,215,192; Glasgow, 674,095; Liverpool, 592,991; Birmingham, 441,095; Manchester, 377,529; Dublin, 353,082; Leeds, 345,080; Sheffield, 316,288; Edinburgh, 236,002; Bristol, 223,695; Bradford, 224,507; Nottingham, 224,230; Salford, 218,658; Belfast, 208,122; Hull, 196,855; Newcastle-on-Tyne, 157,048. The most densely populated cities are Liverpool, with 114 persons to the acre; Manchester, with 88; Glasgow, with 86; London, with 56; Plymouth and Birmingham, with 53; Bolton and Brighton, with 47; and Leicester, with 45.

Religion.—The Protestant Episcopal is the established religion of the United Kingdom, though all forms of religious observance are freely tolerated. The Established Church numbered 13,500,000 members in England and Wales in 1883, 76,939 in Scotland in 1884, and 620,000 in Ireland in 1888. There are 2 archbishops and 81 bishops in England. In 1882 the Church of England possessed 14,573 churches and chapels, and in 1881 there were 24,000 clergymen of all grades. The total annual income of the various cathedral establishments and benefices of the Church is estimated at £10,000,000. The Church of Scotland is organized on the Presbyterian system of government, in which the clergymen are all equal. There are in all 84 presbyteries grouped into 16 synods, divided into 1,320 parishes, with 1,625 churches and chapels, and 1,700 clergymen in 1887. In 1886 there were 571,029 members or communicants. The Church of Ireland in 1888 had 2 archbishops, 11 bishops, 1,750 clergymen, 1,500 churches, and 620,000 members. The Roman Catholics in 1887 numbered 1,354,000 in England and Wales, with 2,314 priests and 1,304 churches. In Scotland there were 326,000 members, 334 priests, and 327 churches. In Ireland in 1881 the Roman Catholic population was 3,960,891. The Presbyterian Dissenters from the Church of Scotland had 1,180 ministers, 1,118 churches, and 331,055 members in 1887. The United Presbyterian Church of Scotland in 1886 had 620 ministers, 565 churches, and 182,068 members. In 1883 the Jewish population of Great Britain was estimated at 70,000, of whom 40,000 resided in London.

Education.—A royal commission on education that was appointed in 1886 made its final report in June, 1888. The commission recommended that school accommodations should be provided for one sixth of the population, and that that should be the proportion of daily attendance. The minimum space for each child in school buildings should be ten square feet. A supply of secondary schools should be organized adequate for the wants of the whole country, and promising children of poor parents should be enabled to take advantage of them. The classification of instruction and of Government examinations should be more elastic, as the present methods lead to cramming and overpressure. The parliamentary grant, which is distributed on the principle of payment by

results, the commission do not propose to abolish, but the income of the school should not be wholly dependent thereon, and the results ought to be more thoroughly tested, since under the present system the children lose with extraordinary rapidity the knowledge that has been so laboriously and expensively imparted to them. In view of the fact that the training of teachers is now mainly conducted in denominational colleges, the minority of the commission proposed that secular normal colleges should be established on a large scale by the state, while the majority thought that such schools should be at first of an experimental character, and that they should depend on private liberality. The minority thought that Sunday-schools could relieve the day-schools of a large part of the religious and moral instruction, but the majority reported in favor of compulsory religious instruction. The commissioners were unanimous in recommending that the minimum age at which a child can be taken from school and sent to work should be eleven, instead of ten, as under the act of 1876, and that attendance at school for half the time should be required for two years longer. They concurred, too, in the opinion that the process of recovering fines for non-attendance by distress, instead of by commitment, has encouraged parents to defy the law. They recommend, in the place of a uniform curriculum for all schools that is only adapted for the largest and best equipped, a simplified standard for the small village schools. Reading-books should be increased, and prepared with the aim of infusing in the minds of the scholars a confirmed taste for reading, for the gratification of which school libraries should be provided; drawing should be taught as an aid to instruction in writing; and the teaching of arithmetic should not be confined to dry exercises in numbers, but ought to show the applications of the science. The commission recommended the extension and improvement of instruction in English, history, geography, and elementary science. Singing should be taught by note, as well as by ear. Boys and girls should receive some physical training, and the girls receive instruction, in addition to their needlework, in practical cookery and elementary physiology. The commissioners recommended the introduction of manual and technical training in the elementary schools, but were not in agreement as to the method and extent. The number of schools inspected in 1886 was 19,022 in England and Wales, as compared with 18,895 in 1885, and 3,092 in Scotland, as compared with 3,081. The average attendance was 3,488,425 in England and Wales and 476,890 in Scotland in 1886. There were 89,180 teachers in England and Wales, and 11,889 in Scotland. Of the schools in England and Wales, 4,402 were directly under school-boards; 11,798 were connected with the National Society or Church of England; 554 were Wesleyan; 882 were Roman Catholic, and 1,887 were undenominational,

or conducted under the auspices of other societies. In Scotland there were 2,569 public schools, 96 connected with the Church of Scotland, and 154 Roman Catholic, and 273 belonging to other religious bodies or undenominational. There were 41 training colleges, with 3,259 students, in England and Wales in 1886, and in Scotland 7, with 859 students. In Ireland the number of national schools in operation in 1886 was 8,024, with 490,484 children in average attendance. The English schools in 1886 received £2,866,700 in annual grants from Parliament, and £3,960,489 from endowments, school fees, local rates, and voluntary subscriptions; the annual grants for primary schools in Scotland amounted to £419,217, and the income from other sources was £594,161; in Ireland £851,973 of annual grants were supplemented by £84,887 from other sources. The education estimates for England and Wales for 1888-'89 are £3,576,077. The increase in the number of children enrolled in 1887 was 129,000, and the increase in daily attendance over the preceding year was 89,000. The number on the school registers amounts to 16·41 per cent., or nearly one sixth of the population, having increased from 7·08 per cent. in 1869. The average cost of maintenance for each scholar in daily attendance is £2 14s. 11½d. in the board schools, and £1 16s. 4½d. in the voluntary schools.

Commerce and Industry.—The total value of imports in 1887 was £361,935,006, against £349,803,472 in 1886, and £370,967,955 in 1885. The exports of British produce in 1887 had a total value of £221,398,440, against £212,434,754 in 1886, and £213,044,500 in 1885. The exports of foreign and colonial produce amounted to £59,106,598 in 1887, against £56,234,263 in 1886, and £57,359,194 in 1885. The imports of gold bullion and specie in 1887 were £9,939,934 and the exports £9,323,614, as compared with £13,392,256 of imports and £13,783,706 of exports in 1886, and £13,876,561 of imports, and £11,930,818 of exports in 1885. The imports in 1887 were divided among the different classes of commodities as follows: Articles of food and drink, £148,860,404; tobacco, £3,409,267; metals, £16,618,148; chemicals and dyes, £7,728,884; oils, £6,088,246; raw materials, £111,963,919; manufactured articles, £54,134,820; miscellaneous, £13,131,318. The exports of domestic products were divided as follows: Articles of food and drink, £10,093,317; raw materials, £12,753,980; textile fabrics and thread, £108,060,714; metals, raw and worked, £34,930,183; machinery, £11,145,745; apparel, etc., £10,227,990; chemicals and drugs, £7,028,392; all other manufactured or partly manufactured, £27,158,119. The quantity of grain and flour imported *per capita*, in 1886, was 185·76 pounds, as compared with 155·85 pounds in 1869; the quantity of sugar, 65·96 pounds, as compared with 42·56 pounds; of butter, 7·17 pounds, as compared with 4·52 pounds; of bacon and hams, 11·95 pounds, as

compared with 2·68 pounds; of cheese, 5·14 pounds, as compared with 3·52 pounds. The import of wheat in 1887 was 11,156,980 quarters, against 14,192,000 quarters in 1885, 7,131,100 in 1870, and 5,843,800 in 1866. Of the import of 1887, 6,100,000 quarters came from the United States, 1,418,000 quarters from India, 680,800 quarters from Canada, 224,500 quarters from Australasia, 922,180 quarters from Russia, 367,710 quarters from Chili, and 258,620 quarters from Germany.

The chief articles of import and their values in 1887 were as follow: Grain and flour, £47,819,927; raw cotton, £39,897,816; wool, £24,380,598; metals, £16,618,148; sugar, £16,412,784; wood and timber, £11,989,159; butter and oleomargarine, £11,886,717; silk manufactures, £10,873,166; tea, £9,858,088; bacon and hams, £8,629,941; flax, hemp, and jute, £8,554,822; chemicals, £7,728,884; seeds, £6,961,940; animals, £6,149,066. The following were the largest exports: Cotton manufactures, £70,956,769; iron and steel manufactures, £25,000,356; woollen and worsted manufactures, £24,138,407; machinery, £11,145,745; linen, jute manufactures, and apparel, £10,227,990; coal, £10,176,402.

The area under cultivation in England in 1887 was 32,597,898 acres, or 80 per cent. of the total area; 4,721,828 acres, or 60 per cent. in Wales; 20,819,947 acres, or 74 per cent., in Ireland; and 19,466,978 acres, or 28·8 per cent., in Scotland. The wheat-crop of Great Britain in 1887 was 74,822,747 bushels, as compared with 61,467,898 bushels in 1886. The yield per acre was 32·07 bushels, against 26·89 bushels in the preceding year, and against a normal average of 28·80 bushels. The acreage under wheat was 1·37 per cent. greater than in 1886. The barley-crop was 65,800,994 bushels in 1887, as compared with 72,090,269 bushels in 1886; the aggregate yield of oats was 107,288,392 bushels, against 116,596,481 bushels; the produce of potatoes was 3,564,894 tons, against 3,167,763 tons; the crop of turnips was 19,747,726 tons, against 29,982,940 tons. In Ireland there was likewise an increase in the wheat and potato crops, and a falling off in barley, oats, and turnips, owing, as in England, to the dry spring and summer.

The live stock in 1887 comprised 1,936,925 horses, 10,689,960 cattle, 29,401,750 sheep, and 3,720,957 swine.

The product of the fisheries in 1887 was valued at £4,104,445 in England, £1,896,968 in Scotland, and £648,000 in Ireland. The total number of men employed was 125,764, with 32,189 boats.

The total value of the mineral products of the United Kingdom in 1886 was £55,010,241. There were mined during the year 157,518,482 tons of coal, valued at £38,145,930; and 4,967,574 tons of iron-ore, valued at £11,259,884. The number of persons engaged in mining in 1886 was 561,092, of whom 448,657 worked underground. The export of coal was 23,283,889

tons. France received of this 4,081,843 tons, valued at £1,635,581; Germany, 2,857,819 tons, valued at £1,009,560; Italy, 2,852,204 tons, valued at £1,101,698. The total consumption of iron-ore in the United Kingdom during 1886 was 17,336,000 tons. There were 899 blast-furnaces in operation, and 6,566,451 tons of pig-iron and 2,541,928 tons of steel were manufactured.

In 1886, 1,715,044,800 pounds of cotton were imported, of which 1,517,186,720 pounds were retained for home consumption. Wool was imported to the extent of 596,470,995 pounds, and 812,006,380 pounds were exported. There were 7,465 factories in the United Kingdom in 1885, employing 1,084,911 hands, 406,820 males and 629,248 females. The children employed in the factories numbered 43,808 males and 48,508 females.

Navigation.—In 1886 the mercantile marine of Great Britain was composed of 17,917 vessels of all kinds, of 7,184,269 tons, employing 204,584 men. They were divided as follows: Engaged in foreign trade—3,018 steam-vessels, of 8,491,380 tons, employing 97,602 men; 2,928 sailing-vessels, of 2,526,117 tons, with crews of 50,590 men; engaged in home trade, 1,667 steam-vessels, of 300,598 tons, with 18,082 men and 9,626 sailing-vessels, of 646,697 tons, with 32,696 men; engaged in both home and foreign traffic, 235 steam-vessels, of 110,091 tons, and 3,485 men; and 448 sailing-vessels, of 59,436 tons, and 2,129 men. During 1886 there were built and registered in the United Kingdom, 308 steamers, of 154,638 tons, and 368 sailing-vessels, of 188,362 tons. At the end of 1886, the total number of vessels of all kinds registered as belonging to the United Kingdom was 22,815, with a tonnage of 7,927,818, a decrease of 68,227 tons from the preceding year. The total tonnage of vessels of all kinds which entered and cleared the ports of the United Kingdom during 1886 was 62,841,077, of which 46,078,299 tons were under the British flag, and 16,762,778 under foreign flags. The main part of the foreign tonnage was divided among the chief trading countries as follows; Norway, 3,848,860; Germany, 3,535,926; France, 1,782,752; Denmark, 1,468,675; Sweden, 1,886,076; Holland, 1,486,970; Spain, 952,066; Italy, 587,845; Belgium, 620,726; Russia, 429,616; United States, 392,268; Austria, 112,492.

The Post-Office and Telegraphs.—The number of post-offices in the United Kingdom on March 31, 1887, was 17,191. The permanent staff of the post-office was composed of 50,083 males and 3,767 females. The total number of letters sent in 1887 was 1,460,000,000; post-cards, 180,000,000; newspapers, 151,000,000; parcels and book-packets, 402,000,000. Foreign money orders were issued to the number of 10,818,084, valued at £25,854,601. The inland money orders numbered 9,762,562, valued at £22,262,708. There were 31,605,984 postal orders sent, valued at £12,958,940. During

the year ending March 31, 1888, there were delivered in the United Kingdom 1,512,200,000 letters, 188,800,000 post-cards, 889,500,000 books and circulars, 152,800,000 newspapers, and 86,732,000 parcels. There were 8,851 post-office savings-banks in 1886, with 3,731,421 open accounts, amounting to £50,874,380. The deposits made in 1886 were £15,696,852, against £15,034,694 in 1885. There were 3,643,161 open accounts in England and Wales, 139,681 in Scotland, and 158,848 in Ireland on Dec. 31, 1887. The total amount standing to the credit of all open accounts was £53,974,065. The regulations of the savings-banks, which were twenty-seven years old, were amended by an act of Parliament which went into force in 1888. The main purpose of the act was originally to increase the limit of deposits allowed in a single year from £30 to £50; yet this provision was abandoned on account of the opposition of the banking element in the House of Commons. The transfer of deposits from the name of one depositor to that of another is made easier, restrictions on payments to creditors, assignees, or relatives of deceased depositors are removed, and the general indemnity enjoyed by the post-office authorities is modified and the Post-master General made liable for payments made to the wrong person in cases of fraud in which the depositor is not implicated. Another act of Parliament passed during the session does practically abolish the limit of £30, for it permits a depositor who has reached that limit to have the whole or a part of the £30 to be invested in consols, which pay 3 per cent. interest, whereas the savings-banks give only 2½ per cent. The depositor is not allowed, however, to invest more than £100 in any one year or £300 in all. The author of the bill hopes that it will lead to millions of people becoming interested in Government securities, as in France, instead of the few thousands who are now holders of consols.

The revenue from the post-office in 1886-'87 was £10,715,976; expenditure, £8,201,848.

On April 1, 1887, there were 29,895 miles of telegraph lines in operation in the United Kingdom, with 173,539 miles of wire. The revenue for 1886-'87 was £1,855,686, and the expenditure £1,939,768, showing a deficit of £84,082. The total number of messages sent was 50,243,639—42,320,185 in England and Wales, 5,106,774 in Scotland, and 2,816,680 in Ireland.

Railways.—The total length of railroads open for traffic in the British Empire in 1886 was 55,599 miles, of which the United Kingdom had 19,332 miles; India, 13,390 miles; Canada, 11,523 miles; Australia, 8,891 miles; Cape Colony and Natal, 1,995 miles; other colonies, 463 miles. The 19,332 miles of railroad in the United Kingdom in 1886, carried 725,584,390 passengers; the total receipts for the year were £69,591,953, and at the end of the year the paid up capital was £828,344,254. In 1887 the new capital invested was £17,628,000, making the total capital at the end of that year £845,-

972,000. The freight receipts for the year showed a considerable improvement, and the passenger receipts were also larger, enabling the companies to pay an average dividend of over 4 per cent., whereas in 1886 it was below 4 per cent. The first and second class passenger receipts have steadily decreased for ten years, while third-class travel has increased. The gross receipts of the railroads in 1887 were £70,900,000.

The Army.—The army estimates for 1887-'88 called for an expenditure of £18,393,900 to provide for an effective of 149,891 men of all ranks, exclusive of the force maintained in India. In the beginning of 1887 the total strength of the regular army was 208,357 officers and men, of whom 73,215 were in England, 3,730 in Scotland, 25,252 in Ireland, 9,289 in Egypt, 70,790 in India, 24,889 in the colonies, and 1,192 on passage. The force in the United Kingdom was 102,197, while the troops stationed abroad numbered 106,160. The number of horses was 24,242, and the number of field-cannon 624. The total military strength of the nation in 1877-'88, according to the returns of the various forces, was 679,522 men of all ranks, comprised of 138,765 men on the regular establishment at home and in the colonies, 52,000 in the first class of the army reserve, 5,800 men in the second class, 141,438 militia, 14,405 yeomanry, 255,923 volunteers, and 71,691 regular troops in India.

The War Office has settled on the pattern of a magazine rifle, with which the regular troops are to be furnished. The artillery has been provided with a new twelve-pounder field-gun, and a large number of machine-guns are to be issued. The national defense bill, which was enacted in the session of 1888, gives the Government larger and more stringent powers over the volunteer organizations, especially in regard to their mobilization, and also in regard to the mobilization of the militia in public emergencies. A sensation was caused in December, 1888, by the peremptory disbandment of the Ancient and Honorable Artillery Company of the City of London, which refused to be treated on the same same footing as the ordinary militia, and would not submit to the regulations issued by the War Office to secure discipline and efficiency.

The Navy.—The naval estimates for the year 1888-'89 call for an expenditure of £12,082,800, an increase of £506,000 over the estimates for 1887-'88. This increase is more than accounted for by the vote of £1,863,500 for naval armaments, an item that formerly appeared in the army estimates. Attached to the navy are 62,400 officers and men, against 62,500 in 1887-'88. The government of the navy is in the hands of the Board of Admiralty, in which the First Lord, who is a member of the Cabinet, has supreme authority. In December, 1887, there were 400 ves-sels of all kinds in commission in the British navy, besides 106 engaged in harbor service. The armored fleet

numbers 48 vessels. In the British navy there are five vessels capable of steaming at a speed greater than 20 knots an hour, and 37 capable of making between 15 and 20 knots.

The vessels in process of construction were the "Blake" and "Blenheim," each of 9,000 tons displacement, which are designed for a maximum speed of 22 knots; the "Vulcan," which is calculated to attain 20 knots; and seven small vessels of about the same speed. The armament of the navy in 1887-'88 included 1,281 breech-loading cannon, 790 quick-firing guns, and 1,818 torpedoes. In 1888-'89 £2,669,089 are to be expended on new vessels, hulls, and machinery. The hull of the "Sans Pareil," a sister ship to the "Victoria," which was launched in April, was completed in September, 1888. She has a displacement of 10,470 tons, armor 16 and 18 inches thick, a single turret constructed of compound 18-inch plates, mounting a 10-ton gun, and coal space for a voyage of 7,000 miles at 10 knots, while her maximum speed is 17 knots. The "Medea" and the "Medusa," the first of five twin-screw second-class cruisers of identical build, were launched in the summer, and the "Melpomene" in September. Of 2,800 tons displacement, they have engines of 9,000 horsepower, capable of giving a speed of 20 knots, and will be armed with five breech-loading guns of 6-inch caliber, besides quick-firing and machine-guns and torpedo tubes. They have no side-armor, depending on the position of their vital parts, their speed, and the ease with which their guns can be manipulated.

The Admiralty are spending £750,000 on ships and guns for the special squadron in Australasia, which is to be maintained by joint contributions of the Imperial and the Colonial governments. During the years 1887-'88 there were 18 vessels completed and made ready for commission, with an aggregate of 64,650 tons, of which 41,000 tons are iron-clads; and in 1888-'89 the new vessels number 29, of 100,000 tons, of which 60,000 tons are iron-clads. The programme laid down by Lord Northbrook in 1885 has been completed in three years, instead of in five, as was calculated. The "Nile" and the "Trafalgar," the heaviest ships ever built in England, were launched within two years after their keels were laid, and were nearly completed in 1888. The policy of completing as rapidly as possible the ships that are begun is pursued, but the efforts of the Admiralty have been hampered through the slowness of the War Office in supplying guns. There were eight finished iron-clads in 1888 that were useless for lack of ordnance.

Naval manœuvres were conducted in the summer of 1888 on a scale of unprecedented magnitude. A supposititious hostile fleet, consisting of 9 armored and 12 unarmored vessels and 12 torpedo-boats, under the command of Admiral Sir George Tryon, was blockaded in the two Irish ports of Berehaven and Lough Swilly by a fleet of 13 armored and 18 unar-

mored vessels and 12 torpedo-boats, commanded by Admiral Baird. Mimic war was declared on July 23. The passage of the fleets to their rendezvous revealed the unseaworthiness both of the torpedo-boats and the torpedo-catchers. On August 2 a cruiser escaped unobserved from Lough Swilly; on the following night the "Warspite," a powerful steel-clad cruiser, the "Iris," and the "Severn" passed by the blockading squadron at Berehaven in spite of electric lights and rockets; and on the night of the 4th three other vessels ran the blockade at Lough Swilly. Some of the escaped vessels attacked Aberdeen, Leith, and Edinburgh, and preyed on the commercial shipping, and when Admiral Baird sailed in pursuit Sir George Tryon went to Liverpool and took possession of the harbor and the iron-clad left to defend it, while another squadron levied tribute on the ports of the east coast of England. The experiments demonstrated the difficulty of sealing up a hostile fleet as powerful as that of France in its own harbors with the present naval force of Great Britain, and led to the conclusion that in the event of war with a first-class naval power the entire coast and all the commerce of England except what is in the mouth of the Thames would be at the mercy of the enemy's fleet.

Finance.—For the year ending March 31, 1888, the revenue was £88,185,000, and the expenditure, £87,846,295. The principal items of expenditure were as follow: Charges on the consolidated fund, £27,928,000; expenses of the army, £18,893,900; of the navy, £12,261,508; collection of customs and of inland revenue, £2,715,727; post-office, £5,420,770; telegraph service, £1,950,248; packet service, £699,341. The treasury receipts for the year ending March 31, 1887, were £188,864,759, and the issues, £132,414,652, leaving a balance of £5,950,107. Of the total receipts from customs in 1887, amounting to £20,812,886, the amount realized from tobacco, tea, spirits, and wines was £19,334,198, leaving less than a million pounds for the other articles on the list. During the ten years from 1878 to 1887, the total expenditure of the Government exceeded the total revenue by £9,102,135. On March 31, 1887, the national debt was £736,278,688, divided as follow: Funded debt, £637,637,640; terminable annuities, £81,123,148; unfunded debt, £17,517,900. The annual charges on the debt are £27,958,023. A treasury minute of May 25, 1887, proposes, by a permanent annual charge of £26,000,000 to redeem the funded debt in about fifty-six years. A large scheme of conversion was successfully carried out by Chancellor of the Exchequer Goschen in April, 1888. The new 3-per-cent. stock, amounting to £166,000,000, which was redeemable without notice was exchanged for 2½-per-cent. consols, and consols and reduced 3-per-cent. were converted into the same stock, the holders, who were entitled to a year's notice, being induced to take it by a

bonus of $\frac{1}{2}$ of 1 per cent. and the continuance of the old rate of interest for another year. The scheme effects a yearly saving on the charge of the public debt of £1,400,000 from the beginning of 1889 and of double that sum from 1903, when the rate of interest will descend to $2\frac{1}{2}$ per cent., which is guaranteed for twenty years thereafter. The holders of £514,000,000 out of £558,000,000 3-per-cent. stocks of all descriptions accepted the arrangement, and the Chancellor of the Exchequer was authorized to pay off the remainder during 1889. The new stock, which acquired the market name of "Goschen's," stood for some time above par. A similar scheme of conversion was contemplated by Mr. Gladstone, when at the head of the Treasury, and was attempted by Mr. Childers without success.

In the budget for 1888-'89 the Chancellor of the Exchequer looked for a surplus on existing taxation of £2,377,000; but he had to make provision for the promised contribution in aid of the rates for the new system of local self-government. Grants from the Imperial Exchequer to the local bodies, amounting to £2,600,000 were to be withdrawn, but permanent resources estimated to bring in £5,500,000 annually were promised instead, consisting mainly of license duties, some at present operative and others to be afterward created, and, in addition, the Central Government was to pay over to the county council one half the total receipts from the probate duties. But the withdrawal of the control of public-houses from the county councils, and other important changes in the local government bill, necessitated considerable modification of this financial scheme.

The immediate obligation on the Chancellor of the Exchequer to facilitate the changes in local government was met by a grant of one third of the probate duty, distributed in England and Wales according to the amount of indoor pauperism, which, with the abolition of the hawkers' duty, the readjustment of the carriage duty, and the relief from income-tax of lands returning no agricultural profit, reduced the surplus by nearly £1,500,000. On the other hand, the withdrawal of local grants was to come into operation at once, though to a limited extent, the succession duty was increased by $\frac{1}{4}$ per cent. in the case of lineal succession and $1\frac{1}{2}$ per cent. for heirs by collateral descent, heavier taxation was exacted from the Stock Exchange in the form of an additional stamp on contract notes, a transfer duty on securities to bearer, and a registration duty on limited liability companies, and an import duty of 5s. a dozen was laid on bottled wines. Thus Mr. Goschen reconstructed a surplus of £1,762,000, which enabled him to reduce the income-tax from 7d. to 6d. in the pound. The proposed duty on bottled wines was modified so that it falls only on expensive champagne, while in compensation the hawkers' duty was not abolished, but reduced one half.

The Parliamentary Session.—The third session of the present Parliament was opened by Royal Commission on February 9. In the Queen's speech mention was made of the completed Anglo-Russian demarkation of the Afghan boundary, the unsuccessful mission to the King of Abyssinia to dissuade him from engaging in war with Italy, the pending fisheries negotiations at Washington, the arrangement concluded with France for the regulation of the Suez Canal, the New Hebrides convention with the same power, and the sugar-bounty conference in London. The House of Commons was asked to consider estimates for improvements in the defense of the ports and coaling-stations and for providing a special squadron for the protection of Australasian commerce, the cost of which would be borne partially by the colonies. The result of measures passed at the cost of great labor in the preceding session for the benefit of Ireland was said to be a diminution of agrarian crime and the abatement of the power of coercive conspiracies. New measures tending to develop the resources of Ireland and to facilitate an increase in the number of proprietors of the soil were promised. The principal measure in the legislative programme was the reform of local government in England, including the adjustment of the relations between local and imperial finance and the mitigation of the burdens resting on the rate-payers. Other legislative proposals relate to cheapening land transfers, the collection of tithe rent-charge, the promotion of technical education, the prevention of preferences in railway rates on foreign and domestic produce, the remedying of abuses in the formation of limited liability companies, and the amendment of the law as to the liability of employers in case of accidents; also bills for improving Scottish universities and regulating the borough police in Scotland, and proposals for diminishing the cost of private bill legislation. The debate on the address was over on February 23. Mr. Parnell's motion denouncing the administration of the crimes act, in the discussion of which Mr. Gladstone inveighed against the "cruel, wanton, and disgraceful bloodshed" committed by the Irish constabulary at Mitchelstown, and declared exultantly that the Government had been unable to put down either the National League or the Plan of Campaign, was lost by a vote of 317 against 229. Mr. Shaw-Lefevre offered an amendment demanding the wiping out of arrears and the prevention of evictions, which was rejected by a majority of 261 against 186. The revision of the procedure rules was the first work undertaken after the address was voted, and changes of considerable importance were carried almost without resistance. The hour of meeting on ordinary days was altered from 4 o'clock to 3 o'clock, and it was arranged that, while the sittings were to end normally at 1 o'clock, opposed business should not be taken without special permission after midnight. The closure

rule was made more stringent, the numbers of the majority required to put it in force being reduced from 200 to 100. When this proposal was put to the vote, the dissentients mustered only 134 against 256. The Government was also supported by large majorities in the proposals to strengthen the rules against disorderly conduct, irrelevance, repetition, dilatory motions for adjournment, and vexatious divisions. The revival of the standing committees provisionally appointed in 1883 led to a proposition from the Home Rulers for constituting the representatives of Scotland and Wales respectively standing committees for dealing with Scotch and Welsh bills. The revised rules were made standing orders on the 7th of March.

The resignation of Lord Charles Beresford, Junior Naval Lord of the Admiralty, shortly before the meeting of Parliament, weakened the party in power, which had lately lost seats to the Gladstonian Liberals in by-elections. He resigned because the First Lord, after agreeing to the creation of a regular naval intelligence department, nullified the measure by reducing the pay of the officers detailed for this service. In common with other naval men, Lord Charles Beresford considered the system of administration of the navy wasteful and inefficient, and held that in technical matters like this it should be made the duty of the civilian who is now the sole autocrat of the navy to be guided by the opinion of the naval authorities. Later in the year, Lord Wolseley, who testified before a royal commission that the defenses of the country were in an unsatisfactory condition, repeated his assertions in public, and was taken to task by the Prime Minister; whereupon he brought the matter forward again in the House of Lords, reasserting that the demands of military and naval men did not receive proper attention. The Government, although the financial situation was critical, could not withstand the assaults of the military and naval experts. Both the War Office and Admiralty promised amendment, and eventually large expenditures were proposed.

A bill to reorganize the Irish Land Commission met with little favor in any quarter. A bankruptcy bill for Ireland became law, but the opposition of the Parnellites and Liberals caused the abandonment of Mr. Balfour's measure for the arterial drainage of the basins of the rivers Bann, Barrow, and Shannon.

The Local Government Act.—The government of counties in England and Wales is entirely reconstituted by the new act, which was signed on August 13, and the functions of the governing bodies have been much enlarged. A great part of the powers of the justices of Quarter Sessions is transferred to a county council, which consists of county councilors, elected for three years by the freeholders, and county aldermen, elected by the councilors. The council has power to levy and expend all rates, borrow money, pass the accounts of the county treasurer, license houses for music and danc-

ing and race-courses, establish and direct lunatic asylums for paupers, establish and maintain reformatory and industrial schools, erect and repair bridges, keep the highways in repair, fix the fees of inspectors and analysts, appoint the county treasurer, county surveyor, public analysts, and coroners and health officers, and determine their salaries, divide the county into polling districts for parliamentary elections, execute laws relating to contagious diseases of animals, destructive insects, the pollution of rivers, the keeping and sale of explosives, fish conservancy, wild birds, weights and measures, and gas-meters, assess damages for riots, and provide for the registration of scientific societies, places of worship, charitable gifts, and loan societies. Appeals against the amount of rates in any locality can be made to the Quarter Sessions. The county council and the Quarter Sessions have joint control over the police. The Local Government Board can at any time confer new powers on the county councils. The receipts from local taxation licenses are to be paid over to the county councils, and the Government is empowered to transfer to them the authority to levy these duties. The county councils also have the disposal of 40 per cent. of the receipts from probate duties, but are required to pay school fees for pauper children, half the salaries of health officers, the maintenance of pauper lunatics, half the cost of the police, etc. Any of the powers of the county council, except that of raising money by taxation or loan, may be delegated to committees. Boroughs containing a population in June, 1888, of over 50,000 were created by the act into administrative counties, and are called county boroughs. In these, however, the mayor, aldermen, and burgesses, who occupy the place of the chairman, aldermen, and county councilors of other counties, do not have the appointment of county officers, but can appoint the coroner when his district does not extend beyond the borough limits. The power of dividing the county into election districts and some other rights of the county council are withheld. A borough with 10,000 inhabitants or upward retains its municipal administrations, but is assessable by the county council, like the rest of the county in which it lies. In the case of boroughs of fewer than 10,000 inhabitants having their separate courts of quarter sessions, the county council assumes the administration in regard to lunatic asylums, reform schools, coroners, and some other matters, and in all boroughs of fewer than 10,000 inhabitants the control of the police, the appointment of analysts, and the execution of the laws relating to contagious diseases of animals, weights and measures, and gas-meters is transferred to the county council.

The metropolis is created into an administrative county, in which the sheriff and the justices of the peace and of quarter sessions are appointed by the Crown. The city of London loses the privilege of electing the sheriff of

Middlesex, and the powers and duties of the Court of Quarter Sessions and justices of the city are divided between the Court of Common Council and the county council. The Metropolitan Board of Works is extinguished, and all its great powers and responsibilities devolve on the county council of London, which also has charge of reformatory schools, industrial schools, pauper lunatic asylums, and the licensing of places for music and dancing, and of race-courses within ten miles of Charing Cross, extermination of cattle-disease, prevention of fires, inspection of food, regulation of the storage of explosives and petroleum, and matters connected with tramways, railways, and gas and water supply, besides the assessment and levying of county rates. The commissioners of sewers remain the sanitary authority, and in other matters of local management no change is made in the government of the city, while in other parts of the metropolis the vestries and district boards will still have the direction of branch sewers, street-cleaning, lighting, paving, and the abatement of nuisances, until by a future enactment these powers are transferred to district councils elected by a body of electors corresponding to the burgesses of a municipal borough. The county council of London consists of nineteen aldermen, chosen at a special meeting of the council, and one hundred and eighteen councillors, or double the number of parliamentary representatives, who are elected, like these, by direct suffrage, whereas under the old system the rate-payers elected the vestrymen, the vestry the members of the district board, and each district board a member of the Metropolitan Board of Works. The Metropolitan Board of Works had recently been the subject of an investigation by a royal commission, and the revelations of bribery and corruption insured a smooth passage for the London clauses of the bill. In the elections for the county council, even members of the Metropolitan Board of Works against whom no charges had been brought shared the disgrace and discredit attaching to the old body through the actions of the culpable members, and were invariably defeated.

The Government intended to combine the reform of local government with temperance reform by conferring on the county councils the power to license public-houses and to abrogate licenses, thus introducing the principle of local option. The Liberals approved this part of the bill, but opposed the proposition to compensate liquor-sellers whose licenses should be taken away. On this question some of the supporters of the Government in Parliament took the side of the Opposition, and in some of the parliamentary elections many votes were lost. The ministry could not strike out the compensation clause without sacrificing the powerful support of the licensed victuallers, and therefore abandoned the main part of the intended reform, and restricted the judicial powers of the county council in this matter

to the granting of music and dancing licenses. The elections for the county councils were appointed for January, 1889, and the new bodies enter on their functions on April 1, 1889.

The Adjourned Session.—The House of Commons was occupied with the local government bill and the bill for the investigation of charges and allegations against members of Parliament till the usual time for separation. The railway rates bill, which was introduced in the House of Lords, re-establishes the railway commission on a new basis, compels companies to frame a classified schedule of charges, and prohibits undue preference in freight rates. When the local government bill had finally passed through all the stages, and the tithe rent-charge bill, which was finally abandoned, the employers' liability bill, which with many others was also thrown over, and other measures had been discussed and some progress made with the budget, the House adjourned on August 18 to meet again on November 6 in order to finish the votes in supply and other necessary business. The proposed employers' liability act was not pressed because Mr. Broadhurst and other workmen representatives declared that it was worthless. The old act was therefore continued. The determination of the Parnellites and Gladstonians to bring forward the arrears question and expose the cruelties and abuses of coercion was the main cause of the extraordinary length of the session. The questions raised in Mr. Morley's vote of censure, which was rejected in the latter part of June by a majority of 98, were gone over again in the debate on the estimates for the Irish administration. Mr. Labouchere, who was one of the most pertinacious assailants of the ministry, about three weeks before the close of the session moved the adjournment of the House in order to call attention ironically to the unsatisfactory state of public business. A libel law amendment bill, introduced by Sir Algernon Borthwick, removes some of the hardships to which owners of newspapers are subjected by vexatious prosecution on account of statements that have been published in good faith. Mr. Bradlaugh's parliamentary oaths bill was a compromise with the ministry, and provides that members who desire to affirm in lieu of an oath must state beforehand that they either have no religious belief, or that their belief forbids them to take an oath. Mr. Morley and some of the extreme Radicals objected to this proviso, and Dr. Hunter and Mr. Picton joined with the ultra-Conservatives in an unsuccessful effort to defeat the bill. Sir Edward Watkins's channel tunnel scheme was again defeated. A large majority voted against an early closing bill introduced by Sir John Lubbock. A merchant shipping bill presented by Lord Onslow and a bill offered by the Lord Chancellor for consolidating the mortmain acts were passed without opposition, as were also Lord Herschell's bill to exempt tools and bedding from the law of

distress and Mr. Stanhope's bill to facilitate the sale of glebe lands. Parliament was not prorogued till December 24.

Proposed Reforms in the Constitution of the House of Lords.—After the defeat of the motion of Lord Rosebery for a committee to inquire into the constitution of the House of Lords with a view to extensive reforms, Lord Dunraven presented a bill which was withdrawn after eliciting from the Government a promise to introduce at some future time a measure for facilitating the entrance of life peers into the House, and before the end of the session he brought in a tentative bill, which, however, found little support, and was not carried beyond a second reading. The Prime Minister also approved the proposition to give the Upper House the power that the House of Commons already possessed of expelling unworthy members. Lord Cadogan proposed a committee which should not only revise the standing orders and strike out such obsolete rules as that requiring the members of the House of Commons to stand uncovered while the Lords sit covered in joint session, but should also elaborate substantial changes in the constitution—such as making the age of entrance twenty-five instead of twenty-one years, disqualifying peers who do not attend the sittings of the House, increasing the number required for a quorum, which is at present three, and allowing peers to resign their seats.

Resignation of Sir Charles Warren.—In the autumn of 1888 a series of ghastly murders took place in London and its environs, at intervals usually of a few days, most of them in the densely populated Whitechapel district. The seven victims were all women of degraded lives, and their bodies were mutilated in a manner indicating that the murders were all the work of a single hand. The popular indignation at the inefficiency of the police was great, its chief objects being the Home Secretary, Henry Matthews, and the Chief Commissioner of the Police, Sir Charles Warren, who had distinguished himself as the leader of the Bechuanaland expedition, was afterward a commander of constabulary in Ireland, and was then placed at the head of the Metropolitan police, in which capacity he rendered himself obnoxious to the London democracy by taking vigorous measures to prevent a meeting of the unemployed in Trafalgar Square. He had differences with the Secretary of the Home Department because Sub-Commissioner Monro, who had charge of the detective force, consulted directly with the Secretary, and tendered his resignation, but withdrew it when Mr. Monro himself resigned. Mr. Matthews continued, however, to advise with the latter regarding criminal matters and the re-organization of the detective bureau. When accused of incompetency because the police failed to catch the Whitechapel murderer, Sir Charles Warren defended himself in a magazine article explaining that he was in no wise responsible for the organization or discipline of the detective force.

Secretary Matthews reprimanded him for publishing matter relating to the police, which was forbidden by a regulation issued from the Home Office. Warren replied that the Metropolitan police is governed by statute, and denied the authority of the Home Secretary to regulate the force, at the same time again offering his resignation, which was accepted on November 10.

The Sweating System.—A select committee of the House of Lords was appointed to inquire into the sweating system at the East End of London, and the scope of the inquiry was afterward extended to embrace the whole country. Many employers made concessions to their work-people as soon as the investigation was set on foot. The sweating system in its narrower sense is understood as meaning the employment of labor by sub-contractors, who, being without capital or commercial standing, can practice impositions on their employes with impunity. In a larger sense it is taken to comprehend all the methods by which, in house-labor, piece-work, and other forms of employment not protected by the regulations of trade unions or the factory acts, the hours of work are lengthened, the rate of production stimulated, and wages cut down to a minimum. The sub-contractors in the clothing industry of the East End of London are accustomed to hire unskilled hands at a shilling a day for sixteen hours' work, and women receive only seven shillings a dozen for finishing trousers, each pair taking four hours to finish. The merchants in clothing, furniture, shoes, and other articles produced with a considerable subdivision of labor make arrangements for their supply with contractors, who sometimes furnish the materials, and sometimes receive all or part of them from the merchants. The contractors have the articles made, either complete or in parts, by sub-contractors, who carry on the manufacture in their own houses or in ill-ventilated workshops, training children, youths, women, and foreign immigrants to perform each one some minute part of the process. In so far as women and children are employed, these sweaters' dens come within the purview of the factory and workshop act of 1878. There are, however, such legal formalities required to be gone through with before an inspector can gain entrance that when he arrives all evidence of evasions of the law can be removed. Many of the contracting tailors, shoemakers, and cigar-makers are Jews, and to some extent, though not as often as was supposed, their victims are immigrant Jews from the east of Europe. One effect of the subdivision of labor incident to the contract system by which the large retailers of London obtain their stock of goods is that the skilled tailors, shoemakers, and other tradesmen have been forced by the competition of sweaters to emigrate to other places, and the apprenticeship system has disappeared. The laborers that become skilled only in some single mechanical manipulation are not only reduced

to starvation wages, but when change of fashion or trade depression throws them out of work, they are less able to turn to other employments than they would be if they had learned their trade in all its branches.

Tithe Agitation in Wales.—The land troubles in Wales chiefly took the form of resistance to the tithe rent-charge, of which the Established Church and the English universities are the beneficiaries. The great majority of the Welsh are Nonconformists, and in many parts of the country the churches are empty, and the Establishment is a heavy and a useless burden for the people, who, as was the case in Ireland, have to support in addition their separate religious institutions. The present agitation is for a commutation of the tithes in view of the fall in the prices of agricultural produce, with the ultimate aim of the disestablishment of the Church of England in Wales and complete relief from the tribute exacted of the Welsh for a religion the English have vainly sought to impose on them, most of the ministers of which are strangers to the people and their language. A Welsh Land League was formed, and the farmers banded together to compel the Church Commissioners to resort to legal compulsion to collect the tithes. The latter attached cattle and movables in distraint proceedings, but wherever the law officers appeared they were confronted by crowds of farmers with stout sticks, and in the few cases in which property was seized there were disturbances, as at Meifod, Whitland, and Brynteriffe.

Gold-Mining in Wales.—Gold has recently been discovered in certain parts of Wales, associated with silver, in ledges that are as rich as are found in California and Australia. The claim of the Crown to all precious metals found is a serious hindrance to mining in the United Kingdom. Alluvial gold was discovered in the south of Ireland during the political disturbances in the latter part of the last century, and many hundreds of men and women flocked to the locality and washed out gold-dust and nuggets deposited in the stream beds; but the military drove them away, and the Government asserted its right to the gold, and for some time guarded the field, which has not been worked to this day. One of the Welsh mines was opened in 1887 at great expense, and when a large amount of gold had been extracted and the value of the mine was confirmed, the Government interposed, demanding a royalty of one thirtieth of the product from the landholder, who had already leased the mining rights for thirty years for one fortieth royalty. The lessee found that he had no redress when his employes stole the gold, because, if the Crown did not assert its right to the property, it belonged to nobody.

The Crofters.—The Lewis island in the Hebrides was the scene of a deer raid, forcible seizures of lands, and collisions with the military and police toward the end of 1887. The land belongs to Lady Matheson. One half of

the surface has been leased to strangers as a deer-forest, and one half of the remainder converted into sheep-farms. There is consequently much overcrowding, and the crofters and cottars have to pay twenty and thirty shillings rent an acre for land that is so poor that no one would take it at any price if it were in England. The herring-fishery enabled them to pay the rent till this failed, leaving them destitute. Commissioners appointed to inquire into the condition of the people found them suffering already for lack of food, and threatened with starvation. The population of the island was 25,487 in 1881. Sentences were passed at Edinburgh, on February 8, upon sixteen prisoners concerned in disturbances, who were condemned to from nine to fifteen months' imprisonment. The Crofters Commission, empowered by act of Parliament to revise rents in the Highlands, reduced rents on the island of Sanday nearly 49 per cent. and canceled 81 per cent. of the arrears. On other estates the reductions were from 80 to 60 per cent., and arrears were wiped out to the extent of from 40 to 80 per cent. On the estate of the Duke of Argyll, who participated in the newspaper controversy over the crofter question, the rents were largely reduced.

The Plan of Campaign.—The Plan of Campaign in Ireland was organized in 1886, and was sustained and encouraged by the members of the National League chiefly on the Luggacurren, Mitchelstown, Ponsonby, O'Grady, Brooke, and Leader estates. In each case the tenants, after presenting their demands regarding a reduction of rent, the amount of back-rent they are willing to pay, and other conditions, if they meet with a refusal, place the sum that they consider due in a common purse, which is committed to the custody of a trustee, usually either a politician or a priest. The trustee notifies his willingness to settle with the landlord on the terms that have been concerted, expressing the determination otherwise to use the fund in defending the tenants against evictions or vexatious legal proceedings, and in supporting the evicted. The landlords formed a corporation or league for the purpose of combating the Plan of Campaign, by advancing money to embarrassed landlords and working vacant farms from which the tenants had been evicted. They also organized a subsidiary emergency committee, which undertook to furnish tenants or caretakers for evicted farms, and sheriffs' deputies to enforce writs of ejectment. In some cases new tenants were imported from the Protestant districts.

The tenants on Lord Lansdowne's property at Luggacurren demanded a reduction of 20 per cent. The holders of 84 of the best farms, together with 20 sub-tenants, were evicted, and were maintained by the league in wooden huts, while their land was worked for the landlord by the Land Corporation. No tenants could be found willing to take the vacant farms, and a large force of emergency men and police was

kept on the estate in order to defend the property. Two of the tenants who joined the Plan of Campaign accepted the landlord's terms, and paid their rent and costs, thereby forfeiting the sum they had paid into the "war chest." The leader of the Plan of Campaign on the estate, Mr. Kilbride, who was one of the principal tenants and the companion of William O'Brien on an oratorical tour in Canada and the United States, was elected member of Parliament for South Kerry, and took his seat at the beginning of the session of 1888. On June 21 negotiations for a settlement on the basis of the sale of the farms to the tenants under the Land Purchase Act, on condition of their paying a year's rent, which was half the arrears, were begun between Father Dempsey in behalf of the tenants and Townsend Trench, Lord Lansdowne's agent, and were continued during the landlord's visit to his estate, but were suddenly broken off after he left in August.

On the Ponsonby estate at Youghal the tenants, acting under the advice of Dr. Tanner and Mr. Lane, Irish members of Parliament, asked a reduction of 25 per cent. on judicial rents, which was more than double the average reduction that was subsequently made in cases adjudicated by the Land Commission. Evictions were carried out against eight tenants, but after desperate riots, in which the police killed a man named Hanlon with a bayonet, the authorities contented themselves with holding the rest of the tenants in a state of siege.

The tenants on the O'Grady estate at Herbertstown demanded an abatement of 40 per cent., while the landlord offered 15 per cent. The principal farms were taken possession of by the authorities. Thomas Moroney, a tenant, was committed to jail for contempt of court, because he concealed his assets, in bankruptcy proceedings to which he was subjected.

On Lady Kingston's Mitchelstown estate the Plan of Campaign was adopted in December, 1886, when the tenants demanded an abatement of 20 per cent. The farmers and the shopkeepers in the town disposed of all their movable property, and business remained at a standstill till a settlement was effected in 1888, based on the decisions of the Land Commissioners, who made an average reduction of 20½ per cent. in the rents. The owner's husband and agent, Mr. Webber, agreed to apply the same rate of reduction to arrears due to March, 1887, and to reinstate evicted tenants and forgive them all costs, that they might have their rents fixed by the Land Commission.

The Plan of Campaign was adopted on Murray Stewart's estate, near Glenties, the tenants demanding 33 per cent. reduction in January, 1888, although the Land Commission had only granted 15 per cent. reduction in the same locality.

The Plan of Campaign was a failure on the property of the Skinner's Company; yet it was successful on Lord Dillon's estate, where the demands of the tenants were granted after

a struggle, during which Major Neild was fatally assaulted by the tenants and their friends, who mistook him for a process-server.

The evictions that attracted most attention in 1888 were those on Lord Massarene's estate. The agent had recommended in 1886, after the heavy fall in prices, an abatement of 15 per cent. on judicial, or 20 per cent. on non-judicial rents, but Lord Massarene refused to accept his advice, though all the other landlords that he represented had followed his suggestions, and employed other agents, whom he instructed to adopt every means to break up the combination that was formed among the greater part of the tenants to secure a reduction of 20 per cent. on judicial, and 25 per cent. on non-judicial rents. After the Plan of Campaign had been in operation on the estate for eighteen months, the Land Commissioners in numerous cases made the reductions in the rents, averaging 22½ per cent., or only 2½ per cent. less than the tenants demanded. Then the landlord offered to compromise, but excepted three of the tenants, whom he considered to be leaders of the resistance, and his proposition was therefore rejected by the tenants as a body. The Protestant tenants had not joined the combination, having received an abatement. The agents instituted proceedings whereby ten of the tenants were evicted, and some of them prosecuted for resistance.

Landlord Leader of the Ourass estate refused an abatement of 25 per cent. He evicted eight tenants in February, 1887, who were housed and fed by their friends. The whole district rose against the landlord, who was unable to cultivate his own farm of 8,000 acres, as his laborers left, and no smith, butcher, or other tradesman would do any work for him. When some of the tenants showed an inclination to come to terms, they were visited by moonlighters and beaten, and one man named Curtin was shot and wounded. Proceedings were taken under the crimes act, and several persons were convicted of boycotting Leader. On Sept. 5, 1888, Mr. Leader suddenly appeared on the estate, with 20 bailiffs and 100 police, and evicted 5 tenants, some of whom had barricaded their houses, and threw stones, and poured boiling water on the heads of the police.

On Lord Olanricarde's estate a demand was made for an abatement of 40 per cent. The feeling against the landlord was exceptionally bitter, and the conflict was carried on without mercy on either side. Houses were burned and blown up, woods set on fire, crops and cattle destroyed, telegraph wires cut, roads torn up and blockaded, and eight persons killed. Here and nearly everywhere the campaigners held their ground at the opening of the season of 1888, and in some cases they had gained their point, so that Mr. Gladstone could boast that the plan of campaign was "entire, successful, and triumphant."

On the Coolgreany estate in County Wex-

ford, near the border of County Wicklow, there were eighty tenants, and of these all but ten were evicted. One of these, John Kinsella, took refuge on the farm of a man named Kavanagh, and some days afterward 18 emergency men with Freeman, the bailiff of the estate, made a raid for cattle on this farm. They were warned by the police that the intended seizure was illegal. Kavanagh, Kinsella, and many others of the evicted tenants were in the court-yard, and as the emergency men came up Kavanagh raised a pitchfork in a threatening manner. Upon that Freeman stepped forward, and, taking aim with a pistol, shot Kinsella dead, after which the emergency men entered the yard and drove off the cattle. One of the policemen went before the magistrate, Lord Courtown, to report the murder, but he refused to issue a warrant. At the inquest five witnesses swore to the killing of Kinsella by Freeman, and yet, when the matter was presented to the grand jury, that body ignored the bill. An indictment against Freeman was nevertheless tried, but the prosecuting attorney seemed to act in collusion with the defense, a pistol was produced as Freeman's which the bullet did not fit, the judge instructed the jury that Freeman did not fire the shot, and no steps were taken to find out who else could have been the murderer. The landlord of Coolgreany, Mr. Brooke, gained a victory by compelling the managers of the Plan to pull down the comfortable houses that had been erected for the evicted tenants in order to prevent their seizure for rent.

The Plan of Campaign was adopted on the Vandeleur estate in West Clare more recently than in the other cases. The reduction asked was 25 per cent. on judicial, and 85 per cent. on non-judicial rents. Several of the tenants went before the land court in 1888 and obtained reductions averaging 82½ per cent. The rents had been raised 25 per cent. in 1874, out of revenge, it is said, for the landlord's defeat as a parliamentary candidate, and a considerable rent was exacted even for bog-land that the tenants had reclaimed. The tenants had taken the land originally in the wild state, and had brought it under cultivation and made all the improvements. The Plan of Campaign was adopted in the beginning of 1887, when 300 tenants put their money into the "war chest," 100 others joined the combination, and 120 were not admitted because they were insolvent and unable to pay their rent into the fund. The agent negotiated with the nine parish priests on the estate, headed by the Rev. Dr. M. Dinan, who insisted on the original demand. Proceedings were taken against 85 tenants, and writs of ejectment were procured in 24 cases, and carried out in July, 1888. The alarm was sounded with the church bells at the approach of the evicting party, and the people cut all the bridges on the road to Kilrush. A force of 200 police and military was employed to carry out the executions, who ef-

fecting an entrance into the barricaded houses by means of a battering-ram, and were received with showers of missiles and boiling water. The men who defended the houses were threatened with rifles if they would not come out, many were badly beaten with clubs, and the furniture in the houses was destroyed by the police. After the evictions the houses were demolished.

The Papal Rescript.—Since the nomination of Archbishop Walsh to the Irish primacy the hierarchy as well as the local clergy have been practically unanimous in the National cause, which Cardinal Manning and many of the English Catholic clergy embraced with Mr. Gladstone and his party. The Catholic landlord class, headed by the Duke of Norfolk, on the other hand, redoubled their efforts to secure the Church's condemnation of the Irish movement, especially the agrarian phase. The Duke of Norfolk was sent as the representative of the Catholic Union on the occasion of the Pope's sacerdotal jubilee. In January Pope Leo, in replying to some Irish pilgrims, said that no occasion can arise when public benefit can come from the violation of justice, which is the foundation of order and the common good. The view indicated by this pronouncement was called in question by Archbishop Walsh on the authority of private declarations of the Pope. On April 18, however, the Pope formally condemned the Plan of Campaign and boycotting, in an edict addressed to the Irish clergy, which was the result of the mission of Monsignor Persico to Ireland, and of the deliberations of the Congregation of the Inquisition on his report. The grounds of the condemnation are that it is unlawful to break a voluntary contract that has been freely made between landlord and tenant; that the land law has opened the courts to tenants who think that they have entered into inequitable contracts, although of their own free will; and that the funds collected for the prosecution of the Plan of Campaign are in many cases extorted from the contributors. Boycotting is declared to be opposed to the principles both of justice and of charity when it is used against people who are willing to pay a fair rent or who are desirous of exercising the legal right to take vacant farms. The Irish clergy and laity are advised and exhorted not to transgress the bounds of Christian charity and of justice while endeavoring to secure a remedy for the distress of the people.

Mr. Dillon, Mr. O'Brien, and other leaders in the Plan of Campaign raised their voices to protest against the conclusions of this decree even before it was circulated in Ireland, dwelling especially on the point that the contracts between landlords and tenants are far from being voluntary on the part of the latter. It failed of the effect that the Tories expected, and even the clergy largely disregarded the command, while the Irish leaders vehemently protested against the Papal interposition in politics. The

Irish bishops held a theological conference regarding the interpretation of the rescript, and refrained from promulgating it till they had learned from the Pope whether the condemnation was to be understood as conditional, limited by the reasons given by Cardinal Monaco for the prohibition of the Plan of Campaign. The answer came that it was absolute.

A meeting of Irish members of Parliament to protest against the Papal rescript was followed on May 20 by a popular assemblage in Hyde Park, London, which numbered 6,000. Similar demonstrations took place all over Ireland. The Bishop of Limerick, Dr. O'Dwyer, was the only prelate who gave full effect to the Papal admonition in a pastoral letter, and vigorously denounced the agitation that was carried on by Roman Catholics against their Holy Father, the Pope. In his and some other dioceses the parish priests refrained from taking an open part in the meetings, yet even then they sent letters of regret expressive of sympathy. The feeling of the subordinate clergy was so rebellious that a schism was feared if the Vatican adhered to the position it had taken. The branches of the league and public boards throughout the country protested against the intervention of the Pope, a council of laymen that met in Dublin condemned the decree, and even bishops showed opposition and explained away its plain intent. The Pope listened to the remonstrances of the Irish hierarchy and the arguments of Archbishop Walsh, who visited Rome, and, without retracting his theological position regarding property rights and the binding force of contracts, while declaring his condemnation of boycotting and the Plan of Campaign to be unqualified and final, he was satisfied to see his decree become what the Irish politicians threatened to make it, a dead letter, and sent explanations which modified its application. At a meeting of the archbishops and bishops that was held at Conliffe College on May 30 resolutions were unanimously adopted declaring that the decree was intended to affect the domain of morals alone, and saying that assurances had just been received from the Pope displaying deep and paternal interest in the temporal welfare of the country, and showing that, so far from intending to injure the National movement, it was his intention to remove things that he feared might in the long run prove obstacles to its advancement. The resolutions conveyed a warning to the people against the use of hasty or irreverent language with reference to the Sovereign Pontiff or the sacred congregations, and a reminder to the leaders of the National movement that the Roman Pontiff has an inalienable and divine right to speak with authority on questions appertaining to faith and morals, which was accompanied with an expression of lasting gratitude to the Nationalist leaders for their services to religion and morality. This, the first formal acceptance by the prelates of the Pon-

tifical injunction, beginning with the deprecatory announcement that it was given "in obedience to the commands of the Holy See," was praised by the Nationalist press for its "eloquent silence" in making no mention of the Plan of Campaign or boycotting.

At a general meeting of the archbishops and bishops, held in the College of Maynooth on June 27 and 28, the following statement was adopted: (1) The demand of the agricultural tenants in the matter of rent is in substance for the establishment of an impartial public tribunal to adjudicate between landlord and tenant. They do not claim the right to fix the rent themselves, but object to its being determined by the arbitrary will of the landlord. (2) The principle that tenants should be protected by law against exorbitant rents and eviction has been recognized by the British Parliament in the land act of 1881 and subsequent statutes. (3) The tenants ask the effective application of this principle and the removal of obstacles that have been allowed to remain, even where the right to have a fair rent fixed has been conferred by act of Parliament. (4) The most serious of these obstacles is the accumulation of arrears from exorbitant rents, which the courts have no power to reduce. The heavy indebtedness of tenants puts it in the power of harsh landlords to use the threat of eviction as a means of keeping back their tenants from applying to the Land Commission to have their rents adjusted. (5) Thousands of tenants have been deprived of the right of recourse to the courts and their legal status as tenants by having had notices of eviction served upon them. (6) No difficulty exists in providing a remedy. There is already an act in operation in Scotland applicable to arrears, under which rents have been judicially reduced 80 per cent. and arrears no less than 61 per cent., but Parliament has refused to extend the operation of the act to Ireland. (7) Unless Parliament at once applies some effective measure for the protection of Irish tenants from oppressive exactions and arbitrary eviction, consequences disastrous to public order and to the safety of the people must ensue.

Archbishop Walsh, in an address to the dean and chapter of his diocese in the early part of July, described the results of his interviews with Pope Leo, whom he had fully informed of the claims and aspirations of the Irish in regard both to national autonomy and the redress of agrarian grievances, and said that the people of Ireland may count on the entire sympathy of the Vatican on every legitimate effort, and that the foolish fiction that recent legislation has done justice to the people or to the tenants finds no footing there. The Pope, in July, addressed an encyclical letter to the Irish bishops, in which he condemned the conduct of the men who put themselves forward to upset his authority and the duties of religion. The priests absented themselves from public meetings in behalf of the Plan of Campaign

only for a few weeks. After the return of Archbishop Walsh from Rome they took as active a part as ever in the meetings.

Arrest of Members of Parliament.—In January, 1888, Mr. Cox, member of Parliament for East Clare, was sentenced to four months' imprisonment for a speech inciting his hearers to join the league, and accusing the Government of driving the Irish people to commit outrages. Commoners Pyne and Gilhooly were committed to jail about the beginning of the parliamentary session. English Gladstonians were inclined to go into Ireland and defy the Government to put the crimes act into operation against them, but concluded to leave the agitation in the hands of Irishmen. John Morley and the Marquis of Ripon made a political tour in Ireland in January in order to manifest the sympathy of the English Liberal party. In April, John Dillon and William O'Brien went over from London with the express purpose of braving the Government by taking an active part in the Plan of Campaign, and of convening meetings in proclaimed districts. Mr. Dillon met the tenants of Lord Massarene's estate at Tullyallen, and delivered a speech intended to counteract the effect produced by the act of the tenant that had first been evicted in October, 1887, who had redeemed his farm, saying that the sympathies of Englishmen did not go with men who went cringing to their landlords. For this speech he was arrested, and tried at Mill, County Louth, and was sentenced on May 10 to six months' imprisonment for taking part in an illegal conspiracy to induce tenants not to pay and with having taken part in an unlawful assembly in a proclaimed district. He was the sixteenth member of Parliament who, up to that time, had been sentenced under the crimes act. On September 18 he was unconditionally released by order of the Lord Lieutenant, because the rigors of confinement had seriously impaired his health. William O'Brien and others were brought to trial at Loughrea on April 19, on the charge of having attempted to hold an illegal meeting on the 8th of the same month. The crimes act was applied with severity to boycotters. Persons were sentenced to three and four months' imprisonment with no further proof of conspiracy than that they had individually refused to sell their merchandise or services to members of the constabulary force, even when the latter had made a demand for things with which they were already plentifully supplied, for the sole purpose of procuring evidence and making arrests. One of the anomalies of the administration of the act was the increase of sentences by county courts on appeal from the courts of summary jurisdiction. One of many instances was that of Mr. Blane, a member of Parliament, whose sentence the Appellate Court raised from four to six months, adding the penalty of hard labor.

Thomas Condon, member of Parliament, was imprisoned two weeks in May in Cork jail for

advocating the Plan of Campaign, and on his release was tried and sentenced to a month's confinement for conspiring, with others, to induce certain persons not to pay a levy of £1,000 that the grand jury of Cork County ordered to be paid as compensation to Constable Leahy, who was injured by the crowd in the Mitchelstown riots. J. O'Brien, member of Parliament, after undergoing a sentence of four months in Tullamore jail, was taken at its expiration to Kilkenny, to pass through a second term of imprisonment of the same length. James O'Kelly was arrested in London, on July 24, when leaving the Houses of Parliament, and was tried at Boyle on the charge of inciting his constituents not to give evidence under the "Star Chamber" clauses of the crimes act, and sentenced on August 10 to imprisonment for four months. John E. Redmond, member of Parliament, with Edward Walsh, proprietor of the "Wexford People" newspaper, was tried and convicted of using intimidating language in reference to a landlord at Scarawalsh, a proclaimed district, in saying that the landlord would find no tenants for a farm from which he had evicted the occupier, and that he could not afford to arouse the ill-will of the people among whom he lived. Mr. Redmond was confined in Tullamore jail five weeks, regaining his liberty on October 30. William Redmond was present at some evictions at Coolroe, where the bailiffs were resisted desperately and several constables assaulted. He was tried for inciting people to obstruct officers of the law in the discharge of their duties, and was sentenced to prison for three months. Mr. Sheehan, member of Parliament for East Kerry, was committed to Tralee prison for a month in November, having been convicted of using threatening and abusive language to the district inspector of the constabulary. Near the end of the year, Edward Harrington was condemned to six months' imprisonment in Tullamore jail for publishing in his paper, the "Kerry Sentinel," reports of the meetings of suppressed branches of the National League. A question of privilege was raised in Parliament, near the close of the session, in the case of Mr. Sheehan, on whom a summons was served by an Irish policeman within the precincts of the House of Commons.

The Plan of Campaign was not defeated by the imprisonment of Irish members, and after the Mandeville inquest the Government relaxed the severities to which the prisoners were subjected, and embraced the first pretext they could find for releasing the leaders. They were scornfully dared, across the benches of Parliament, to apply the crimes act to Roman Catholic priests, and visit them with the indignities of prison garb, association with felons, oakum-picking, and stone-breaking. Many of the landlords who attempted to fight the Plan of Campaign were glad to accept in the end the terms offered, and receive their rent from

the trustees of the Plan. Among these were Lord Dillon, Lord Westmeath, and Lord De Freyne. The Marquis of Conyngham, Mr. Murphy, the landlord of Gweedore, and others, dismissed their agents and compromised with their tenants. It was impossible to find tenants for evicted farms, and toward the close of the year 5,000 farms were vacant.

The Death of John Mandeville.—Mr. Mandeville, an Irish member of Parliament, was taken to Cork jail with William O'Brien in 1887, and transferred with him to Tullamore jail. He struggled against being clothed in prison dress, though less pertinaciously than O'Brien, and resisted being placed in companionship with criminals and the performance of menial prison work. In consequence he was subjected frequently during his confinement to disciplinary punishment; and as he was a man of remarkable strength and vigor, the officials were more severe and merciless with him than with his fellow-prisoner. The punishment-cell, where his bed was a bare plank, was so chill and damp that his throat became sore, and continued so during the whole time he was in prison. When placed on punishment-diet he was unable to swallow the dry bread and cold water, and consequently suffered from starvation to such a degree that he bound a rope round his waist to ease his pangs, and at times felt himself to be on the verge of madness. A scrap of meat that a warder once threw to him, as to a dog, gave him more pleasure than anything that he had ever eaten. He told the prison doctor that he was ill, but the latter, Dr. James Ridley, overestimating the strength of his constitution, judged that he could stand the punishment. The surgeon had been reproved for his leniency to former prisoners, and feared that he would lose his place if he released political prisoners from punishment without strong cause. Dr. Moorhead, the visiting justice, who found Mandeville suffering from rheumatism and exhausted from lack of nourishment, wrote protests in the prison journal, and complained to Dr. Ridley, but the latter certified that he was healthy and fit for punishment. Mandeville came out of prison on Dec. 24, 1887, pale, anæmic, emaciated, and tremulous. He partially recovered his strength, then suffered relapses, and on July 8, 1888, died of a congestive chill. A coroner's inquest was opened at Mitchelstown on the day of the funeral, which was attended by 6,000 persons. Dr. Ridley wrote a remorseful letter to the governor of the jail, and on July 20, the day on which he was summoned to give evidence before the coroner's jury, committed suicide.

Investigation of the Charges against the Parnellites.—The accusations against the Irish Land League leaders, contained in a series of articles entitled "Parnellism and Crime," published in the London "Times" in April, 1887, were met by a demand on the part of the Irish members of Parliament for an inquiry by a select

committee, to which the Government would not consent. In July, 1888, the matter was brought before the public again in a suit for defamation of character, instituted against the publishers of the "Times" by Frank Hugh O'Donnell. In the trial Attorney-General Webster, who acted as counsel for the defendants, brought evidence to show that the plaintiff was not a member of the League, and thus his action failed, and instead of vindicating the reputation of the chiefs of the Irish parliamentary party, simply afforded counsel for the "Times" an opportunity to reiterate the charges of complicity in murder and outrage. Mr. Parnell, in Parliament, repeated his request for an investigation by a committee of the House of Commons. The Government at length agreed to an inquiry into the charges against members of Parliament and other persons in the action of O'Donnell *vs.* Walter and another by a special commission. In accordance with the proposition of W. H. Smith, the leader of the House, a commission was constituted with powers to examine witnesses under oath and to compel full disclosure of all facts and documents, and grant certificates protecting from all proceedings, except for perjury, witnesses who may have criminated themselves by their disclosures. Mr. Parnell would not positively accept the Government proposition, but left it for the House of Commons to decide. He wished to have the inquiry limited to the forged letters and other specific libels and to the actions of members of Parliament. After an excited debate, the bill was passed under application of the closure on August 8, every amendment offered by the Parnellites and Gladstonians having been rejected. Judges Hannen, Smith, and Day were appointed by the Government as members of the commission, which first met on September 17. Sir Charles Russell and Henry Asquith appeared for the Parnellites, and Mr. Graham and Attorney-General Webster for the "Times." It was decided that the commission had authority to order the production of the originals of the letters published in the "Times" and other documents, but would decide what documents Sir Charles Russell's clients could expect; also, that Mr. Dillon should be released on bail in order to appear as a witness. Instructions were given to the publishers of the "Times" to formulate the definite charges that they were prepared to prove as well as the allegations falling short of definite charges. The commission then adjourned till October 22, after issuing an order for an inspection of the bank-books of the Land League. William Redmond was also released to appear before the commission.

Dynamite Plot.—Thomas Callan and Michael Harkins, who arrived from the United States in June, 1887, were convicted on February 3, 1888, of being in the unlawful possession of dynamite and of a conspiracy to cause a dangerous explosion, and were sentenced to fifteen

years' penal servitude. They had associated in London with a suspected Irish revolutionist named Melville, and received money from him, and with a certain Cohen, who, when taken seriously ill in September, 1887, before he died gave two boxes of dynamite into the charge of Harkins, one of which the latter left with Callan. Harkins was apprehended and searched by the police, without anything suspicious being found, but Callan became alarmed, and clumsily attempted to do away with the dynamite in his possession. His lodgings were searched, and both in his baggage and in that of Harkins experts discovered traces of dynamite. They asserted that they had taken the explosive from Cohen as an act of friendship in order to shield him by concealing it, but the jury were convinced from their relations with Melville, who escaped to Paris, as well as with Cohen, that all four were concerned in a dynamite plot. One of the Irish members of Parliament had introduced the two Americans to the gallery of the House of Commons, a circumstance which afforded a fresh opportunity to the Unionists to accuse the Nationalists of being in league with Fenian assassins and possibly cognizant of a plot to blow up the Houses of Parliament.

The Land Purchase Act.—Lord Ashbourne's act, which became law on Aug. 14, 1885, authorized advances of the aggregate amount of £5,000,000 to Irish tenants to enable them to become owners of their farms. At the end of three years this sum was exhausted. Under this act the state advanced the whole purchase money, but was secured by a deposit of cash equal to at least one fifth of it, which the purchasing tenant had to place in the hands of the Land Commission, and when the security seemed insufficient the commissioners called for a fourth, and in some cases even for a third of the amount of the loan. The security was usually retained from the purchase money, the selling landlord receiving 8 per cent. interest for it or causing it to be invested under the laws governing the investment of trust moneys. Under the Ashbourne act about 12,000 tenants have acquired the freehold of their farms, more than half of them being Ulster farmers, whereas in Connaught the sum applied for was only £412,687. The purchasing tenants have paid their installments with promptness and regularity, except in very few cases. Before advancing the money for the purchase of a holding, the Land Commission sends an inspector, who examines the property and reports whether the land is sufficient security for the price stated in the contract of sale between the landlord and the tenant, and whether the installments can be paid out of the profits of the farm, leaving a fair margin for the cultivator and for bad seasons. The average rate of purchase has been seventeen or eighteen times the net annual rent. The tenant pays back the entire purchase money advanced by the Government in annual installments of 4 per cent. of the loan,

8½ per cent. constituting the interest, and seven eighths of 1 per cent. a sinking-fund which will extinguish the debt in forty-nine years. The landlords have benefited by the voluntary sales through the eagerness of the tenants to acquire land, and the leaders of the Land League have advised against purchasing under the act, save in exceptional cases. Those who have purchased in the north have usually secured fair terms, and in general the new proprietors have till now shown little dissatisfaction, evincing a disposition to work harder in order to meet their installments, and many have applied for loans under the land improvement act. The installments are less than the old rent, the purchaser having in addition to assume the whole of the poor rate, and in cases where the purchase was based on rents fixed since 1870 the county taxes also, but they exceed the rents adjusted under the last land act. The peasants who have become proprietors under the act are for the most part large farmers who were well off before, while in the congested and impoverished districts there have been few sales. The most important business of the adjourned session of Parliament was the continuance of Lord Ashbourne's act, which passed the third reading on November 29. The Irish party endeavored to introduce instructions to the Land Commission to consider the question of arrears in applying the act. The sum of £5,000,000 was placed at the disposal of the commissioners for advances to purchasing tenants on the same conditions as under the original act.

Sugar Bounties.—In an international conference held in London in November, 1887, all the chief sugar-producing nations of Europe, through their representatives, agreed in principle to the total abolition of bounties on the export of sugar. In France, Germany, Austria, Belgium, and Holland the excise duty on sugar is levied on the beet-roots as they are taken in at the factory, while the manufacturer receives a drawback or bounty on all the sugar that he exports, which was intended to be exactly equal to the duty that he has already paid. After the saccharine yield had been fixed by law, the refiners had an extraordinary incentive to perfect their processes and machinery and the growers to improve the culture, in order to obtain a higher yield than the legal standard. There was a rapid development of the methods of cultivation and extraction, and the governments soon found themselves paying out more in drawbacks than they received in taxes. Under this stimulus the cultivation of the sugar-beet and the manufacture of sugar outstripped the demand. A glut in the market, a great fall in prices, and a universal crisis in the sugar industry resulted. The governments had hesitated to lower the bounties while the industry was prosperous, because none could move in the matter without placing its own producers at a disadvantage. To take away the bounties now, when the producers were embarrassed, would create a more widespread financial crisis

and take away every chance for the industry to recover. A conference was held in Paris in 1877 to consider the question of abolishing bounties in all countries simultaneously, but it came to nothing, owing to the opposition of Belgium and the Netherlands. The legal yield was fixed in Germany at 8½ per cent. of the weight of the roots, but with improved processes 12½ per cent. or more of sugar was extracted, giving the manufacturer a clear bounty of \$10 a ton on all the sugar that he exported. In order to make good the loss to the treasury, which was 21,000,000 marks in 1884, the Government raised the tax on consumption from 1·60 to 1·70 mark, but did not venture to disturb the export bounty. According to the latest statistics, bounties cost France \$17,000,000 a year; Germany, \$16,000,000; Austria-Hungary, \$5,000,000; Belgium, \$4,000,000; and Holland, \$3,000,000. The English, who are the greatest consumers of sugar in Europe, formerly used only cane-sugar, mainly the product of the British West Indies and Guiana. The beet-root sugar gradually displaced cane-sugar altogether. When the refiners, whose business was destroyed, called on the Government for a remedy, they were told that the people of England ought to be well content if the Continental governments chose to pay a part of the price of their sugar, and thus make them a gift of about \$25,000,000 a year. The West Indian planters could not be so easily answered, for sugar is almost the only product of the British colonies in the West Indies, and, after refusing to seek for them a new market by the negotiation of a reciprocity treaty with the United States, the British Government was constrained to open negotiations with the Continental governments for the abolition of the bounty system. Belgium ranks fourth among the sugar-producing nations of Europe, and is one of the chief exporting countries, since the excise duty is fixed so high that little sugar is consumed in the country and four fifths of the product goes abroad. The Belgian representative at the London conference did not oppose the removal of export bounties, but would not accept the remedy on which all the other delegates were agreed, viz., the system of manufacturing in bond. The Belgian Government employs a machine for gauging the saccharine yield in the refineries, and proposed Government control of the legal yield and a system of equivalents in preference to the more troublesome and inquisitorial bonding system, which, it was further objected, would not prevent the covert enjoyment of bounties by means of frauds on the revenue. The other governments took the same ground in condemning the Belgian proposals. Before the second meeting of the conference at London, Baron de Worms, the English delegate, made a tour of the European capitals, seeking to bring about an agreement. The basis of a treaty on which the plenipotentiaries agreed in London on Nov. 24, 1887, was that the measures to be adopted

must give complete and absolute security that no premiums on the export of sugar, direct or indirect, should be granted, and a system of taking manufactured sugar that is destined for consumption is the only method of abolishing premiums, the taxes being extended to sirup and glucose. The conference reassembled in London on April 5, 1888. Germany, Austria, Belgium, Brazil, Denmark, Spain, France, Great Britain, Italy, the Netherlands, Russia, and Sweden, were officially represented. The United States followed the proceedings unofficially, and is expected to join a union of sugar-growing countries if one can be formed that shall embrace all those that produce beet-sugar and four fifths of the cane-producing countries. The final protocol, with a draft convention, was signed by the plenipotentiaries on May 12, with reservations on important points. In France the producers of sugar were strongly opposed to the treaty, as they consider that the conditions for production are more favorable in Germany. France and Spain raised the objection that the United States and other countries holding aloof from the convention would swamp the countries entering into the treaty with their bounty-fed sugar. In order to remove their doubts, a clause was introduced whereby the contracting powers agreed to prohibit the importation of sugar from bounty-giving countries. This, however, did not satisfy France. England, Germany, Belgium, Spain, Italy, the Netherlands, and Russia signified their acceptance of the treaty. Austria reserved its adherence until all European countries producing or consuming sugar should also adhere to the agreement. Brazil reserved her freedom; Denmark refused to exclude the produce of favored nations because it would be a breach of treaties. France reserved her adherence until all sugar-producing and sugar-consuming countries adhere and frame laws with which she is satisfied. Sweden refused to bind herself in any way. The seven countries that signed the convention agreed to appoint commissioners, who should sit at London and report what countries give bounties to sugar exporters, and to what extent, and the parties to the treaty are bound to exclude from their markets sugar that a majority of the commission decides to be bounty-fed. Before ratifying the convention, Belgium reserved the right of withdrawing her adhesion in case the treaty should be rejected by any of the signatory powers.

Colonies.—The colonial possessions of Great Britain have a total area of more than 2,000,000 square miles and a population of 275,000,000, but of this number 256,000,000 are found in British India and the feudatory states. The possessions in Europe are Heligoland, Gibraltar, and Malta. The Asiatic dependencies include Cyprus, Aden, India, Ceylon, Perrin, Labuan, the Straits Settlements, the Keeling Islands, the Kurea Murea Islands, and Hong-Kong, which have an aggregate area, inclusive of the feudatory states of India and the Malayan

peninsula, of 1,845,866 square miles, and 261,201,491 inhabitants. The possessions and protectorates in Africa have an area of nearly 500,000 square miles and a population of about 3,000,000. They include Gambia, the Niger Districts, Sierra Leone, Lagos, part of the Gold Coast, St. Helena and Ascension Island, Tristan d'Acunha, Socotra, Mauritius, St. Paul and Amsterdam, Cape Colony, Basutoland, Bechuanaland, Zululand, Natal, and Berbera and its vicinity. In America the colonies of Great Britain are the Dominion of Canada, Newfoundland, the Bahamas, Bermudas, and Barbadoes, Jamaica and Turk's Island, Leeward Islands, Windward Islands, Trinidad, Honduras, Guiana, Falkland Islands, and South Georgia. Their aggregate area is 3,648,140 square miles, and their population, according to the latest enumerations, is 6,215,000. In Australasia and Polynesia the colonies of Australia and New Zealand, with the Norfolk Islands, British New Guinea, the Kermadec Islands, and Auckland, Lord Howe, Caroline, Starbuck, Malden, and Fanning islands, have a total area of 3,270,232 square miles, and contain altogether 3,667,811 inhabitants.

The island of Cyprus, in the northern part of the Levant, is administered by Great Britain in behalf of the Ottoman Empire, having been ceded to England by the convention concluded on June 4, 1878. Great Britain agreed to pay a perpetual tribute of £92,800 a year, which was calculated on the net revenue derived from the island by the Porte at the time of the cession. The present High Commissioner is Sir Henry Ernest Bulwer, who carries on the Government with the aid of a Legislative Council of eighteen members, of whom six are appointed by the Government, nine are elected by the Christian inhabitants, and three are elected by the Mohammedans. The area is 3,584 square miles, and the population in 1881 was 186,173, of which number 45,458 were Mohammedans and 137,681 belonged to the Orthodox Greek Church. When Sir Garnet Wolseley took possession in the name of the Queen in July, 1878, he issued a proclamation promising great benefits to the people. None of the promised blessings have resulted from the connection with England, except a reform of the judiciary. The Government has done nothing to give the people improved roads and harbors, or to ameliorate the primitive agriculture of the country or promote education, while collecting £43,000 more taxes on the average than were paid under the Ottoman administration, and since there has been no influx of English capital the productive resources of the island have not improved. The expenses of British administration are so much greater that Parliament has been compelled each year to vote money to make up the Turkish tribute, and many people in Great Britain consider Cyprus a useless incumbrance, since its strategical value has been called in question in recent years. The grant

in aid was £78,000 in 1882, £90,000 in 1883, £80,000 in 1884, £15,000 in each of the following two years, and £18,000 in 1887. The imports have increased from £333,512 in 1883 to £355,795 in 1887, and the exports from £276,129 to £312,797. The revenue in 1886-'87 was £187,044 and the expenditure £110,044. Of the total expenditures the sum of £66,171 was for salaries, £10,723 for police, and £10,024 for public works. The chief sources of revenue are tithes, yielding £56,159, and Verghi taxes, yielding £26,862. The tribute to the Ottoman Government was paid over at Constantinople according to the stipulation as long as Lord Beaconsfield remained in power. When the Liberal Government of 1880 came in, the covenant was broken and the tribute from that time has been detained, first to repay advances made by the English and French governments to meet the interest on the guaranteed Ottoman loan of £5,000,000 which was raised in 1855 and on which the Turkish Government defaulted in 1875, and, after these were cleared off, to provide the annual interest on that loan in excess of the Egyptian tribute. This absorbs £82,000 of the Cyprus tribute, leaving £10,800 which is also detained toward meeting the sinking-fund of 1 per cent. on the guaranteed loan. In 1887 Cyprus suffered from drought and deficient harvests, and the administration was compelled to resort to extraordinary measures to relieve famine and to expend a larger sum than usual on the police in order to check agrarian crime. Consequently the surplus revenue for 1887-'88 fell off, and the Governor informed the Colonial Secretary that a grant in aid of not less than £60,000 would be required to restore the financial equilibrium. The Chancellor of the Exchequer, however, refused to sanction a larger vote than £30,000, and suggested a temporary reduction of the salaries of the English officials. The Legislative Council had already resolved to cut down some of the higher salaries, but the proceedings were disallowed by Lord Knutsford, who announced, however, that when the next vacancy occurs the salary of the High Commissioner will be fixed at £2,000 instead of £4,000, and the salaries of other superior officials will be reduced. The people of Cyprus, groaning under the load of oppressive taxation, clamor for the repudiation of the Turkish tribute, which with the cost of the British official establishment consumes the bulk of the revenue, leaving but a fraction to be applied to public works or other useful objects. The arrangement by which the Turkish tribute has been diverted for the benefit of the British and French treasuries does not rest on a definite understanding with France, but continues only during the good pleasure of the British Government. The total sum of the grants in aid up to 1888 is £294,000, which is less by £77,200 than the half of the eight years' tribute that has been appropriated by the British Exchequer since 1880.

New defensive works at Singapore and Hong-Kong were completed in 1888, and a part of the armament was in place, though the 10-inch guns were still wanting. The fortifications in Mauritius are to be completed in 1889. The works at Trincomalee and St. Helena were nearly finished in the middle of 1888, and those at St. Lucia were well under way. The Imperial Government has co-operated with the colonial authorities in fortifying Cape Town. The Australasian colonies have constructed forts for themselves, and armed them with guns superior to those at present available for the defense of English seaports. The imperial defense bill that was passed in the session of 1888 provides for the expense of fortifying the ports and naval stations by a loan, which is secured on the reversionary increase in value of the Suez-Canal shares held by the Government, to accrue when the existing charge is paid off. The dividends on these shares, 106,702 in number, which were purchased from the Khedive Ismail in 1875 for the sum of £3,976,582, had been pledged by him to the company till 1894.

The Queensland ministry in 1888 attempted to dictate the choice of a Governor for the colony, and thus deprive the home Government of almost the last vestige of authority and participation in the government of the colony. When Sir Anthony Musgrave, the late Governor, died suddenly in October, the Queensland ministers endeavored to obtain a promise that the name of the proposed new Governor should be communicated to them before the appointment was definitely made. Lord Knutsford declined to accede, in a dispatch dated October 19, saying that it is obvious that the officer charged with the duty of conducting the foreign relations of the Crown and of advising the Crown when any question of imperial, as distinct from colonial, interest arises must owe his appointment and be responsible to the Crown alone, and that therefore it is not possible for the responsible ministers of the colony to share the responsibility of nominating the Governor or to have a veto on his appointment. The choice of the Secretary of State for the colonies fell upon Sir Henry Blake, Governor of Newfoundland, who was obnoxious to the Queensland colonists, especially on account of his position on the Irish question. His first colonial appointment, that of Governor of the Bahamas, was given as a reward for his services to the Government as a divisional magistrate in Ireland. When this appointment was communicated to the Queensland ministers, they telegraphed a strong protest. On November 22 Sir Henry Parkes, the Premier of New South Wales, moved an address to the Queen, to which the Legislative Assembly agreed without a division, expressing the opinion that colonial governors should be selected from men who have held high office or served in the Imperial Parliament, and that a colonial Government should be informed of an intended appointment before it is actually

made. South Australia and the other colonies, with the exception of Victoria, likewise supported Queensland in the position that she had taken. The incident was closed by Sir Henry Blake's asking to be relieved, and the acceptance of his resignation.

In Africa Great Britain has abandoned to Germany her claims to Damaraland and Great Namaqualand, and has contracted her sphere of interests in the region where the Germans have founded their colony of the Camaroons. In Zanzibar the Germans compete for the supremacy once held by Great Britain. Berbera and parts of the Somali coast were proclaimed British territory at various dates between July, 1884, and January, 1886, and the powers were notified, in compliance with the general act of the Berlin Conference, on July 20, 1887. The annexation of Zululand was notified on July 8, 1887. The Gold Coast protectorate has been extended so far eastward as to include the mouths of the Niger and the Calabar oil rivers. The trade of the colonies of Gambia, Sierra Leone, the Gold Coast, and Lagos is about £3,000,000 annually. The area of the Niger protectorate, extending from the mouths of the river to Yola, on the Binué, is 28,000 square miles, while the Royal Niger Company has obtained trade rights by treaty with native chiefs over 260,000 square miles more, reaching up the Binué to the German boundary, and up the Niger as far as the rapids, and including the kingdoms of Gandu and Sokoto. The protectorate over the Niger districts was notified on June 5, 1885, in the "London Gazette," and announced in diplomatic form six days later. The recent extension northward from Cape Colony into Bechuanaland and the Kalahari desert has added more than 180,000 square miles to the area of British South Africa, of which 48,000 square miles form a Crown colony, and the remainder a protectorate. According to a recent treaty with Germany, the region north of German East Africa, bounded by a line following the Sana river northward, across the equator, and down to Victoria Nyanza, has been allotted to England as her sphere of influence. The coast and the right of collecting transit duties have been leased by the Sultan of Zanzibar to the British East Africa Company. This acquisition is expected to give the English the control of one of the richest regions of Central Africa. The rainfall is deficient in the territory covered by the treaty, although there is good grazing country both on the coast and in the highlands of Masailand. But the chief value of the British section is that it gives access to the rich and populous countries around Lake Victoria and Lake Albert, including the Equatorial Provinces of Egypt. The total area over which Great Britain exercises a commanding influence in Africa, exclusive of Egypt, is not less than 1,000,000 square miles, with a population of 80,000,000, and a commerce of about £20,000,000 a year.

The island of Mauritius, lying in the Indian Ocean, 500 miles east of Madagascar, has an area of 708 square miles, and a population of 368,415. The present Governor is Sir John Pope Hennessy. The Council of Government is composed of 10 elective, 8 official, and 9 appointed members. A new Constitution was adopted in 1885, introducing the elective principle. But few votes are cast by the Indians, who constitute two thirds of the population, and who are at present represented in the Government by one of the nominated members of the Council. The rest of the population comprises natives of African race, Chinese, French Creoles, a few English, and mixed races. The imports in 1886 were valued at 23,946,967 rupees, and the exports at 32,383,399 rupees, of which sum 29,126,169 rupees represent the export of raw sugar.

In the beginning of 1888 the English, by means of a warlike expedition, imposed their dominion on the Yonnies and other tribes back of Sierra Leone. The Mendis and the Lok-kohs, residing within the frontiers of British Quiah, made an attack on their neighbors outside of the British protectorate. These invited the aid of the Yonnies, who in October, 1887, descended on the town of Sennehoo, and destroyed this and other places belonging to a female chief called Madame Yoko. Sir Francis de Winton was then appointed the head of an expedition into the Yonie country, which captured Robari, the chief town, and subjugated the country, which was then placed under a chief selected by the conquerors.

The state of Sarawak, in the island of Borneo, was founded in 1841 by Sir James Brooke, who established a settled and peaceful government among the hostile races of Sulus, Malays, and Dyaks, who had previously lived by piracy and rapine. He prayed for the protection of the British Government, and even offered to transfer the dominion that he had established to the British Crown, with reservation of the rights of the natives; but was unable to obtain from his own Government the recognition of the country as an independent state until after the United States and Italy had given such recognition. After he had relinquished the government to his successor, and returned to England to end his days, he still labored to secure the protection of the Imperial Government for the state that he had created, which he feared would pass under the dominion of some other European power, and in 1864 was gratified when a British consul was appointed to Sarawak. In June, 1888, the Supreme Council of Sarawak sanctioned an agreement that the present Rajah Brooke had concluded with the British Government, which has at last decided to establish a protectorate over Sarawak, which will probably soon be extended to the recently founded state of North Borneo and the independent native state of Brunei. Sarawak will continue to be governed as an independent state by the Rajah Brooke and his successors, and the

British Government acquires no right to interfere in the internal administration, but will be the arbiter in cases of disputed succession and in all disputes with foreign states, including North Borneo and Brunei, and no cession of territory to a foreign power can take place without its consent.

Labuan, an island thirty square miles in extent, off the northwest coast of Borneo, is a Crown colony. It is peopled by about 6,000 Malays from Borneo, with some Chinese traders and a score of Europeans who carry on a trade in sago, gutta-percha, India-rubber, wax, and other products of the main island with Singapore. The imports of 1887 were valued at \$370,751, and the exports at \$417,551. The state of North Borneo is under the direction of the proprietary British North Borneo Company, with headquarters in London, which pays over \$50,000 in salaries in the colony. The area is 27,500 square miles, and the population 175,000, consisting of Mohammedan settlers on the coast and native tribes in the mountainous interior, with a few Chinese traders and artisans. Sandakan, on the east coast, is the chief port. The revenue in 1886 from licenses, duties, royalties, etc., was \$127,781, and from land sales \$12,084; the expenditure, \$213,061. The value of the exports was \$524,724; of imports, \$849,115. The convention with Sarawak is of the same form as those concluded with the sultans or rajahs of Perak, Selangore, Sungei Ujong, and other native territories around Singapore, and the acquisitions in Borneo will probably, like these, be placed under the direction of the Governor of the Straits Settlements. The last protectorate established in the Malay peninsula was over the dominions of the Rajah of Pahang, lying to the east of Perak and Selangore. The rajah, who is invested by the treaty with the title of sultan, agrees to make no concession or grant of any kind to a foreigner unless he be a British subject or a person of Chinese, Malay, or other Oriental race. The present Governor of the Straits Settlements is Sir Frederick Aloysius Weld, who received his appointment in 1880. The colony comprises the islands of Singapore and Penang, with small adjacent islands, the strips of coast on the Malayan peninsula known as Province Wellesley and the Dindings, newly acquired territory south of Krian, and Malacca, on the western coast of the peninsula. The native states under British protection occupy the whole coast line between Malacca and Province Wellesley. The British Resident in each native state, and the European officers on his staff, besides discharging executive functions reserved to them, share in the government as members of the State Council. The native rulers obtain their revenue mainly from the export duty on tin. The population of Singapore, Penang, and Malacca, in 1881, was 423,384. There were 3,483 whites, 30,985 natives of India, 174,327 Chinese, and 174,392 Malays. The chief exports are tin, sugar, pepper, nutmegs,

maize, sago, tapioca, rice, buffalo-hides, rattan, gutta-percha, India-rubber, gambier, gum, coffee, and tobacco. These are mostly the products of the islands of the Malaysian Archipelago and of the peninsula outside of the Straits Settlements. The total imports in 1886 amounted to £21,776,714, and the exports to £18,655,240. The largest amount of trade is with Netherlands India, which is nearly equaled by that with Great Britain, the Malay Peninsula, and Hong-Kong coming next, and after these Siam, India, and British Burmah.

On April 3, 1888, the war-ship "Caroline" raised the British flag on Fanning, Christmas, and Penrhyn Islands in the Micronesian archipelago. The first-named was discovered in 1798 by an American sea-captain, Edmund Fanning, and has been occupied since before 1855 by an Englishman who, with native labor, cultivates the cocoanut-palm. Christmas Island, another coral lagoon island, lies near it, to the southeast, in 2° north latitude and 158° east longitude. They are about equidistant from the Samoan, the Hawaiian, and the Society groups. Large quantities of guano have been taken from both Fanning and Christmas Islands, but the old deposits are nearly exhausted. Penrhyn Island, likewise of coral formation, in 10° south latitude and 158° west longitude, is larger than the others, having a circumference of thirty-five miles, and may prove a valuable acquisition commercially and strategically, as it has a large, deep, and safe harbor, and produces considerable quantities of *bêche-de-mer* and mother-of-pearl. It is also useful as a port of refuge, as it lies in the route between Sydney and Panama, and near the course taken by mail steamers between Auckland and San Francisco.

The Hervey or Cook Islands, lying southwest of the Society group and southeast of Samoa, in 20° south latitude and 160° west longitude, were made a British protectorate in the autumn of 1888. There are seven islands, the largest of which are Rarotonga and Mangaia, each about thirty miles in circumference. Both possess a good soil and rich vegetation. On Mauki, one of the smaller islands, iron-wood is found in large quantities. Hervey Island is a large atoll, covered with cocoanut-groves. The Rarotongans are governed by a queen. They are the most civilized, well-conducted, and prosperous of all the Pacific islanders. The English Government refused their prayer for a protectorate in 1864. Since then the New Zealand authorities have repeatedly recommended the annexation of the group. Rarotonga has two small, but fairly secure harbors, and its annexation, like that of Fanning and Penrhyn Islands, is due to its prospective value as a coaling station and port of safety in case the Panama Canal is completed. The population of the Hervey Islands does not exceed 8,000. The protectorate was proclaimed by the British vice-consul in Rarotonga on October 20, and afterward in the other islands.

GREECE, a constitutional monarchy in South-eastern Europe. After gaining its independence by a successful rebellion against Turkey, the kingdom was constituted in 1830 under the protection of England, France, and Russia. The present sovereign, Georgios I, born Dec. 24, 1845, a son of King Christian of Denmark, was elected King of the Hellenes in 1863, and in 1867 married Olga, daughter of the Grand-Duke Constantine, brother of the Emperor Alexander II of Russia. The heir-apparent is Prince Konstantinos, Duke of Sparta, born Aug. 2, 1868, who was betrothed in September, 1888, to the Princess Sophie of Prussia. The legislative power is lodged in a single chamber. The members of the Boulé or Legislative Assembly, 150 in number, are elected for four years by universal suffrage. The ministry, constituted May 21, 1886, was composed of the following members: President of the Council and Minister of Finance and of War, C. Tricoupis; Minister of the Interior, C. Lombardos; Minister of Justice, D. S. Voulpiotis; Minister of Worship and Public Instruction, P. Manetas; Minister of Foreign Affairs, E. Dragumis; Minister of Marine, G. Theotokis. M. Lombardos died on Sept. 5, 1888, and M. Tricoupis assumed temporarily the portfolio of the Interior.

Area and Population.—The area of Greece is 25,014 square miles, including 5,073 square miles that were detached from Turkey under pressure of the great powers in 1881. The population probably exceeds 2,200,000. The capital, Athens, had 84,908 inhabitants in 1884. The vital statistics for 1882, the last year reported, were as follow: Births, 48,157; deaths, 32,194; excess of births, 10,963; marriages, 11,186. The Hellenes constitute only about one fourth of the Greek race, as there are nearly 6,000,000 Greeks in European Turkey, Asia Minor, and the Ottoman islands of the Levant, and considerable trading colonies in Northern Africa and various parts of the East.

Commerce.—The chief exports are dried currants, of which 270,000,000 pounds were produced in 1887; olive-oil; lead, of which the mines at Laurium yielded 10,147 metric tons in 1885; silver-ore; zinc; dye-stuffs; wines, the export of which is increasing; tobacco; wool; and sponges. The annexed province of Thessaly is fertile and well cultivated, and produces large quantities of wheat and barley.

A large part of the carrying-trade of the Black Sea and the eastern parts of the Mediterranean is under the Greek flag. The merchant navy at the beginning of 1886 consisted of 72 steamers, having a tonnage of 36,272, and 3,141 sailing-vessels, of 225,224 tons, not including 6,000 coasting-vessels.

There were 320 miles of railroads in operation in 1887, while 56 miles were building, 60 miles more had been authorized, and 880 miles in addition were projected. In the session of 1888-'89 the Government proposed a network in the Peloponnesus and a line to Larissa unit-

ing the Greek system with the great European artery. The telegraph lines had in 1886 a total length of 4,128 miles, with 4,800 miles of wires. The number of internal telegrams sent in 1885 was 544,556; of international telegrams sent and received, 181,991. The Post-Office forwarded 6,182,571 letters, 167,321 postal-cards, and 4,792,522 journals, circulars, etc. The receipts were 954,477 drachmas or francs, and the expenses 802,120 drachmas.

The Army and Navy.—Universal military service was introduced by an act that was passed in 1879. The laws of 1882 and 1886 make the total period of service 19 years, namely, 2 years with the colors, 7 or 8 in the reserve, and the remainder in the militia. The term of active service is shortened by long leaves of absence. The estimates for 1888 fix the strength of the army at 26,840 officers and men.

The navy in 1887 consisted of 2 small iron-clads, 1 unarmed cruiser, 3 iron gun-boats, 8 small steamers for coast-service that were built in England in 1885, 1 corvette, 1 transport, 1 torpedo-ship, 14 small gun-boats, and 48 torpedo-boats. The Government has ordered 4 iron-clads, which are being constructed in France at a cost of 26,000,000 drachmas. In September, 1888, a squadron left the Piræus in order to re-enforce the remonstrances of the Government regarding the seizure of Greek vessels engaged in sponge-fishing in Chios and Rhodes. The Ottoman Government ultimately released the captured vessels and crews.

Finances.—The revenue in 1887 was estimated at 94,656,907 drachmas, and the expenditure at 94,269,188 drachmas. There was a deficit in 1886 that was estimated at 61,000,000 drachmas, and one of 25,000,000 drachmas in 1886, not reckoning 75,000,000 drachmas of extraordinary expenditure for mobilizing the army at the time of the Bulgaro-Servian war. These deficits compelled the Government, when it had just resumed specie payments, to re-issue a forced paper currency, causing a depreciation of 25 per cent. The budget for 1888 makes the revenue 95,806,231 drachmas, and the expenditure 92,509,705. The debt absorbs 87,409,249 drachmas of the expenditure. The salt, petroleum, and match monopolies have been pledged for the interest on a new loan of 135,000,000 drachmas, which is applied to paying off old loans bearing 7 and 9 per cent. interest, funding the floating debt, and enlarging the navy. The debt on Jan. 1, 1888, amounted to 529,921,220 drachmas, exclusive of 104,800,300 drachmas of paper notes and 6,500,000 drachmas of treasury bills.

The Macedonian Question.—Renewed activity of the Pan Slavist committees in the Bulgarian part of Macedonia, impelled the leaders of the Greek population of the province to prepare for a rising in case the Bulgarian agitation should lead to rebellion. Several Greek inhabitants of the district of Monastir were arrested on the charge of high treason, the bishops of Serres and Castoria were expelled by the

Turkish authorities, and the Greek Consul there, M. Panuria, was ordered to leave the country in April, 1888. In retaliation, the Greek authorities gave the Turkish Consul at Larissa notice to quit. At the close of that month the Turkish minister at Athens, Feridoun Bey, received a letter of recall; but mediation of Great Britain and Austria resulted in his being ordered to continue at his post, and the imprisoned citizens were released. The disturbances were continued by Greek brigands until they were suppressed by the energetic action of the military. On June 20 a famous robber named Nico, who some years before had captured an English officer, Col. Singer, and obtained a ransom of \$75,000, was killed near Oastoria, with nine of his men, and thirteen other brigands were shot at Blatza in the same week.

GREEN, SETH, pisciculturist, born in Irondequoit, N. Y., March 19, 1817; died in Rochester, N. Y., Aug. 20, 1888. He attended the district school, but spent much of his time in

SETH GREEN.

hunting and fishing, and as he grew older was noted for his knowledge of natural history. In pursuit of the white fish he became familiar with all the great northern lakes, and long before Northern New York was known to sportsmen, he had explored its woods, and in pursuit of trout had fished in the streams and lakes of the Adirondacks. His chief business for many years was the furnishing of fish and game to his patrons. In 1837 he conceived the idea of the artificial propagation of fish, and in 1838, while on a trip to Canada, studied the habits of salmon. Finding that as soon as the spawn was cast, the male salmon and other fish eat it, he devoted his attention to methods of protect-

ing it, and increased the yield of fish until he had raised the product to ninety-five per cent. His main principle was, that in proportion as the milt of the male fish was separated from water mixed with it in a natural state, a large percentage of eggs would become impregnated by it. In 1864 he purchased property in Caledonia, N. Y., where he began the artificial breeding of fish, and after his success with the salmon and the trout fry, continued his undertaking until he had hatched artificially whitefish; German, California, mountain, rainbow, brook, lake, and salmon trout; carp; salmon; striped and Otsego bass; sturgeon; muscalonge; grayling; herring; wall-eyed pike; mullet; creek red-side suckers; and shiners. At his shad-hatcheries, on Connecticut river, he also produced frogs and lobsters. By invitation, in 1867, of the fish commissioners of four of the New England States, he experimented on the hatching of shad at Holyoke on Connecticut river, and by his method he produced 15,000,000 shad fry from spawn submitted to him, and in 1868 40,000,000 shad fry were hatched by his improvements. In the first-named year he devised the form of floating hatching-box, with a wire bottom, that tilted at an inclination toward the current, with which his success was so great. On the establishment of the New York Fish Commission, in 1868, he was made a member of it, and continued so until his death, having been made superintendent in 1870. In 1869 he began shad-culture in Hudson river, and in 1870 he stocked the Susquehanna, Potomac, and Savannah rivers with shad. His great triumph was the transportation, in 1871, of 10,000 young shad from Hudson river across the continent to Sacramento river, in California, as a result of which this fish is now found in almost every stream entering the Pacific Ocean. Upward of a million marketable shad are now annually sold on the Western coast. He also introduced shad into the tributaries of the Ohio and Mississippi rivers, and stocked the lakes of New York and the Great Lakes. In 1874 he visited Au Sable river, Mich., in search of the grayling, but finding the fish had spawned, he sought for fertilized eggs and finally succeeded in hatching out these fish. He hybridized striped bass with shad; shad with herrings; brook trout with salmon trout; brook trout with California salmon; salmon trout with whitefish; and European trout with American brook trout. He was one of the earliest members of the American Fish Culture Association, and his name appears as an honorary or active member on the rolls of nearly every society in this country that has for its object fishing, hunting, or the protection of fish and game. His great familiarity with trout-fishing made him famous as a fly-caster, and at one time he was the champion for long distances. The Société d'Acclimation of Paris gave him two gold medals, and his services were recognized by various foreign governments. He published

"Trout Culture" (Rochester, 1870), and "Fish-Hatching and Fish-Catching" (1879). He was called the father of American fish-culture.

GUATEMALA, a republic of Central America; area, 121,140 square kilometres; population, Jan. 1, 1887, 1,857,900. The number of deaths in 1887 was 23,401, while there were born 59,784 children, 18,020 of whom were white and 41,714 Indian. On Jan. 1, 1888, the population had increased to 1,894,233.

Government.—The President is Gen. Manuel Lisandro Barillas. The Vice-President is Gen. Calixto Mendizábal. The Cabinet is composed of the following ministers: Foreign Affairs, Don Enrique Martínez Sobral; Public Instruction, Don Francisco Muñoz; Interior and Justice, F. Anguiano; Public Works, S. Barrutia; Finance, Don Mauricio Rodríguez; War, C. Mendizábal. The Guatemalan Minister at Washington is Don Francisco Lainfiesta; the Consul-General at New York is Mr. Jacob Baiz; the Consul at New Orleans, Don Emiliano Martínez; and at San Francisco, Don José M. Romá. The U. S. Minister for all Central America, resident at Guatemala, is Henry C. Hall; and the Consul-General, James R. Hosmer.

Army.—The regular army is distributed among the capitals of departments and a few larger towns; it varies in strength, according to the exigencies of the times. It did not exceed 2,000 in number in 1888, whereas the militia, well drilled and equipped with the best of modern arms, constitutes a force of 50,000 men.

Finances.—On Dec. 31, 1887, the national indebtedness stood as follows: Home debt, \$7,659,396; foreign debt, £908,292 (\$4,541,460); total, \$12,200,856. The outstanding 5-per-cent. loan of 1856 and the 6-per-cent. loan of 1869 were converted, April 30, 1888, into a 4-per-cent. consolidated bonded sterling debt up to July 1, 1891, from which date the interest will be 4½ per cent., but the arrears of interest to be paid only at the rate of 72 per cent. The income of the Government in 1887 was \$6,398,727, the outlay being an equal amount. The budget for 1888 estimates the expenditure at \$4,135,294. During the summer and autumn the discount rate in Guatemala ruled at 9 per cent., and only a fraction over that for advances of funds on coffee.

Postal Service.—In 1887 the home mails forwarded 4,523,885 items of mail-matter, as compared with 3,987,489 in 1886, an increase of 535,896 items. The foreign mail-matter dispatched consisted in 1887 of 186,796 ordinary letters and postal-cards, 10,688 registered letters, and 442,845 newspapers and packages; together, 640,324 items; in 1886 there were 198,168 letters and postal-cards, 8,877 registered letters, and 410,413 newspapers and packages, aggregating 617,458 items—showing an increase of 22,866 items.

Telegraphs.—The length of wire of the national telegraphic system, early in 1887, was 2,082 miles, with 89 offices, employing 259 telegraphers, and representing an investment of

\$240,515. The number of messages sent in 1887 was 406,583, 152,757 being Government dispatches. The aggregate receipts were \$187,712, and the expenses \$180,302. The number of cablegrams sent from the central office in 1887 was 2,457.

Railroads.—There were in running order in 1888 the line connecting Guatemala with the port of San José, and the one between Retalhulen and the port of Champerico; together, 73 miles. Work was begun on the one which, starting from Puerto Barrios on the Atlantic, in the department of Livingston, is to join, at Guatemala, the line connecting the latter with the Pacific. A contract had been made for a line between Quezaltenango and the port of Ocós. A few miles were in operation between Antigua, Guatemala, and Palín, in the department of Amatitlán, as well as the branch line between Guatemala and El Guarda-Viejo.

Commerce.—The imports and exports for five years have been as follow:

YEARS.	Imports.	Exports.
1888.....	\$2,420,569	\$5,718,841
1884.....	8,339,651	4,987,941
1885.....	8,788,135	6,006,646
1886.....	8,587,899	6,719,508
1887.....	4,241,408	9,089,891
Total.....	\$17,817,162	\$32,484,822
Excess of exports over imports.....		14,667,660

The duties collected in the five years aggregated \$8,541,960. The countries from which the goods were imported in 1887 and the amounts in thousands of dollars, were as follow:

England.....	1,297	China.....	48
United States.....	708	Belgium.....	89
South America.....	699	British Honduras.....	84
France.....	876	West Indies.....	25
Germany.....	286	Italy.....	25
Central America.....	218	Mexico.....	19
Spain.....	61		
Switzerland.....	51	Total.....	8,743

In 1887 the coffee production in Guatemala was 655,075 quintals, and there were exported, between Oct. 1, 1886, and Sept. 30, 1887, 503,305 quintals. The sugar production in 1886 was 20,773,516 quintals; in 1887, 19,266,578. The molasses production in 1886 was 3,885,972 quintals; in 1887, 3,898,001. Guatemala consumed, in 1887, 72,522 head of cattle, and 85,415 hogs. The flour consumption in the same year amounted to 7,459 tons, of which there were ground in the country 4,207 tons, and 3,252 tons imported.

The banana crop excites much attention on the Atlantic coast. The export of this fruit during 1887 was 117,514 bunches. Favorable decrees on the part of the Government, by which land can be readily purchased at a low price (30 to 35 cents an acre), have stimulated this industry. Many Americans have settled in the section referred to, and either bought plantations already producing or are planting new ones. The rich alluvial lands lying along the Dulce and Sarstoon rivers and on the shores of Lake Yzabal are well adapted for

this fruit. It is estimated that 250,000 banana-plants were set out in 1888. The profits from a well-managed banana-plantation are estimated at from \$75 to \$100 an acre each year. Bananas will come to perfection in their production in the course of twelve to sixteen months. The average cost per acre, up to time of production, is \$25. The price paid at the port per bunch is 50 cents during seven months, and 37½ cents during five months in the year.

The American trade presents these figures:

YEARS.	Imported into the United States.	Domestic export from the United States to Guatemala.
1886.....	\$1,957,632	\$523,640
1887.....	2,643,718	553,179
1888.....	2,055,467	887,771

The rise in coffee and growing prosperity in Guatemala cause a more liberal consumption of American goods. There entered the ports of the republic, in 1887, 400 steamers and 88 sailing-vessels, of an aggregate tonnage of 510,465. Among the vessels arrived, 347 carried the American flag, 39 the British, and 25 the German. By a decree of Dec. 20, 1887, an extra duty of 15 per cent. has been levied on all imported merchandise, dating from Jan. 1, 1888. The Government decreed early in 1888 that a 8-per-cent. rebate on import duties should accrue to merchandise shipped to Guatemalan ports, on board of steamers keeping up a regular service to Atlantic ports of the republic, and 2½-per-cent. rebate on goods arriving by steamers trading regularly to Pacific ports. Entire freedom in all commercial transactions between Guatemala and Mexico was established in 1888, and a mixed commission is to examine and adjudicate upon all claims made by Guatemalan citizens against Mexico.

Education.—The number of schools in the twenty-two departments, in 1887, was 1,037, and the number of pupils attending, 50,000. They are non-sectarian and compulsory.

Immigration.—While there arrived in 1887, through the ports and across the frontier, 4,346 individuals, 4,061 left. Among those that arrived 2,824 were Central Americans, 410 Mexicans, 177 from the United States, 118 Frenchmen, and 124 Germans. The Government is about to appoint a commission to devise plans for the encouragement of immigration.

Hospitals.—On Jan. 1, 1887, there were under treatment in the hospitals of the country 748 individuals; there were admitted during the year 13,538 sick persons, and dismissed as cured 12,212, only 727 having died. There remained under treatment on Jan. 1, 1888, 1,843 individuals. The total expenditure for the hospital service in 1887 was \$108,570.

Treaty.—The treaty of commerce and navigation and consular convention, concluded on Sept. 20, 1887, between Guatemala and Germany, was ratified and exchanged at Guatemala on June 22, 1888.

H

HARRISON, BENJAMIN, twenty-third President of the United States, born in North Bend, Ohio, Aug. 20, 1833. He is the son of John Scott Harrison, who was the son of William Henry Harrison (ninth President of the United States), who was the son of Benjamin Harrison (a signer of the Declaration of Independence), whose ancestor, Thomas Harrison, became a lieutenant-general under the Protector and a member of the Parliament that tried King Charles I., as his clearly written name on the death-warrant attests, opposite to which is his seal, which bears an eagle like that on our silver dollar. On the return of the Royalists to power, Thomas Harrison was executed. Samuel Pepys records in his "Diary" that he saw the heart removed from his body and passed about among the company. It is believed that the family of the murdered Round-head leader came to this country soon afterward. In view of questions that have recently been brought freshly into national politics, it is pertinent to quote a brief paragraph from the inaugural address of the first President Harrison:

The greatest danger to our institutions appears to me to be, not so much in a usurpation by the Government collectively of power not granted by the people, as in the accumulation in one of the departments of powers which were assigned to others. I proceed to state in as summary a manner as I can my opinion of the sources of the evils which have been so extensively complained of, and the correctives which may be applied. Some of the former are unquestionably to be found in the defects of the Constitution. Others, in my judgment, are attributable to a misconstruction of some of its provisions. Of the former is the eligibility of the same individual to a second term of the presidency. The sagacious mind of Mr. Jefferson early saw and lamented this error. It may be observed, however, as a general truth, that no republic can commit a greater error than to adopt or continue any feature in its system of government which may be calculated to create or increase the love of power in the bosoms of those to whom necessity obliges it to commit the management of its affairs; and surely nothing is more likely to produce that effect than the long continuance in the same hands of an office of high trust. Nothing can be more corrupting, nothing more dangerous to all those noble sentiments and principles which form the character of a devoted republican patriot. When this insidious passion once takes possession of the human mind, like the love of gold, it becomes insatiable. It is the never-dying worm in his bosom, which grows with his growth and strengthens with the declining years of its victim. If this be true, it is the part of wisdom for a republic to limit the service of that officer at least to whom she has intrusted the management of her foreign relations, the execution of her laws, and the command of her armies and navies, to a period so short as to prevent his forgetting that he is the accountable agent, not the principal; the servant, not the master of the people. Until an amendment to the Constitution can be effected, public opinion, if firm in its demands, may secure the desired object. I cheerfully second it by renewing the pledge heretofore given that under no circumstances will I consent to serve a second term. I consider the veto power,

given by the Constitution to the Executive of the United States, solely as a conservative power to be used only to protect the Constitution from violation, the people from the effects of hasty legislation, where their will has been probably disregarded or not well understood, and to prevent the effects of combinations, violative of the rights of minorities.

William Henry Harrison, at the age of twenty-two, married Miss Anna Symmes, to whose father, Judge Symmes, had been deeded a large tract of Western land. He carried his young bride to the post of Cincinnati, and later built her a house at North Bend, on the Ohio river. The third son born to them was John Scott Harrison, father of the subject of this sketch. John Scott was the boy who stayed upon the farm. He was of quiet temperament, industrious, fond of reading, determined to educate his children, overgenerous, not a good financial manager, and almost devoid of ambition. He was twice elected to Congress. In the division of political bodies at the breaking up of the old Whig party he became an American, and supported Bell and Everett, on the Constitution-and-Union platform, in 1860. In 1861 the Democratic State Convention of Ohio nominated him for the office of Lieutenant-Governor. In his letter declining the nomination, he said:

I could not consent to be a party candidate for office in the present condition of the country. Party spirit, in my opinion, has done more than anything else to bring about the late calamities which now so seriously afflict us, and the poison which has induced this national paralysis would not prove an efficient remedy in the restoration of the patient. The time has come when we should forget party, throw off its trammels and obligations, and stand up for the country, its union, Constitution, and laws. I was not, as you know, a supporter of Mr. Lincoln for the presidency, neither do I approve of all the acts of his administration. But it seems to me that this is not the proper time to arraign the Administration for these errors of policy, and that it is neither the part of wisdom nor patriotism to assail the Government when the enemy is thundering at the gates of the capital. Let us first settle the great question of country or no country, government or no government, union or disunion; and having accomplished this great work of duty and patriotism, we will have ample time to inquire into the alleged delinquencies of our rulers, and if we find them wanting in the Jeffersonian requirements for office, let them be condemned by a verdict of the people. I certainly owe the Republicans, as a party, no debt of political obligation, and yet I do not hesitate to say that the Administration has my warmest sympathy in its effort to put down this rebellion, and I am in favor of doing this effectually and permanently—in peace if we can, in war if we must.

John Scott Harrison married Miss Elizabeth Irwin, of Mercersburg, Penn., and they made their home on a farm five miles below that of the widowed mother, at North Bend. Mrs. Harrison was a sweet-tempered, devout woman, who looked well to the ways of her home, knit endless stockings, and brought up in simple piety her six children. Of these, Benjamin

was the second. When he was sixteen years old he was sent to school at an institution on College Hill, a suburb of Cincinnati. It had been called Carey's Academy, but was at this time enlarged and renamed Farmer's College. Here Harrison's literary tastes were fostered, and history and political science became his chief delights. He entered the junior class at Miami University, Oxford, Ohio; joined the literary society, and very soon distinguished himself in debate. The drill of that little rostrum was of incalculable benefit to the speaker, who during a political canvass of intense excitement was to make one, two, or three speeches a day, for which the nation was listening.

The best known of his classmates are Hon. Milton Saylor, formerly a member of Congress, and the Rev. David Swing. One who knew him in college writes:

Harrison, as I remember, was an unpretentious but courageous student. He was respectable in languages and the sciences, and excelled in political economy and history, the former being largely due to the foundations laid under the instruction of Dr. Bishop at Farmer's College. Harrison had a good voice and a pure diction. He talked easily and fluently. His manner was indicative of much earnestness of character. He never seemed to regard life as a joke, nor the opportunities for advancement as subjects for sport. During the four years that I was with him, he impressed me with the belief that he was ambitious. As a writer and speaker, he always did his best. By this I mean that he, as a rule, made special preparation, giving as much time as possible to the matter in hand. The subject of his graduating address was "The Poor of England," and his treatment of it showed that he had sounded both the depths and the causes of this poverty. He was a protectionist at the age of nineteen. He is a protectionist still. His whole career has been illustrative of his desire to save his countrymen from the poverty which oppresses "The Poor of England."

He decided to become a lawyer, and after leaving Oxford was received into the office of Storer and Gwynne, in Cincinnati, in which city he found a home with his half-sister, wife of Dr. Eaton. At the close of his second year of study he brought his young bride, Caroline Lavinia Scott (whose father was principal of a seminary in Oxford), to the homestead at North Bend, and on concluding his studies he settled in Indianapolis, Ind. He had inherited from an aunt a plot of ground in Cincinnati, on which he raised the \$800 with which they began the world. John Rea, Clerk of the United States Court, gave him desk-room. There Gen. Lew Wallace (who has written his biography) first met him, and he gives this description of his personal appearance: "He was small in stature, of slender physique, and what might be called a blonde. His eyes were gray, tinged with blue, his hair light, reminding one of what in ancient days along the Wabash was more truly than poetically described as 'a tow-head.' He was plainly dressed, and in that respect gave tokens of indifference to the canons of fashion. He was modest in manner, even diffident; but he had a pleasant voice and look, and did not lack for words to express himself." He was soon

appointed crier of the Federal Court, which during term-time brought him two dollars and a half a day, the first money he had earned.

In August, 1854, a son, Russell, was born to them, and Mr. Harrison removed the little household to a home of their own. It was one story high, and had three rooms and a lean-to kitchen. Sometimes Mrs. Harrison em-

MRS. BENJAMIN HARRISON.

ployed a servant, but she was her own cook as well as nurse. Her husband filled the water-buckets and brought in the wood before he left for the office. Of these days he says: "They were close times, I tell you. A five-dollar bill was an event. There was one good friend through it all—Robert Browning, the druggist. I shall always recollect him with gratitude. He believed in me. When things were particularly tight I could go into his store and borrow five dollars from the drawer. A ticket in its place was all that was required." Not long after this, Harrison formed a law partnership with William Wallace.

In 1858 a daughter, Mary, was born. In 1860 Mr. Harrison became Republican candidate for Reporter of the Supreme Court, and he went into the canvass with his usual energy and enthusiasm, and was elected.

A year later came President Lincoln's call for troops. Business led Harrison to call upon Gov. Morton, who was found pacing gloomily up and down his room. When the matter in hand was disposed of, the never-resting subject of the state of the country was broached. Gov. Morton expressed deep anxiety and bitter mortification that there had been no response to the call for troops. Pointing to a building in process of erection, he said: "The people are following their own private affairs, so that it has come to be a serious question what I shall do next to arouse them." To the man at his side this was the final and irresistible appeal. He said, simply: "Governor, if I can be of any service, I will go." Gov. Morton replied instantly: "You can raise a regiment, but it is asking too much of you to go into the field with it; you have just been elected Reporter of the Supreme Court. But go to work and raise it, and we will find somebody to command it." Harrison replied that he could not;

that if he influenced others to go, he must be with them. "Very well, then," said the Governor, "if you want to go, you can command them." "I do not know that I want to command them," replied Harrison; "I do not know anything about military tactics. So, if you can find some suitable person of experience, I am not at all anxious to take the command." He left the court-house and, without going home, bought a military cap, engaged a fifer and drummer, returned to his office, flung out a flag from the window, and began recruiting for Company A. The regiment was soon full, and the Governor, without solicitation, commissioned him as its colonel. It was designated as the Seventieth Indiana, and was brigaded with the Seventy-ninth Ohio, the One Hundred and Second, One Hundred and Fifth, and One Hundred and Twenty-ninth Illinois, under Brig.-Gen. William T. Ward, of Kentucky. The organization of the brigade remained unchanged during the war, Harrison holding the right wing, as he held the older commission. Gen. Wallace has made a collection of letters written by various men in the regiment, some of whom are now well known. The following extracts are from these letters:

"We were encamped near Nashville, and, as all who were there at the time remember, it was one of the coldest winters on record. I remember that during one of the cold nights I was on picket, and I saw a man approaching from the direction of the officers' quarters. I halted him, and, when he gave the countersign and advanced, I saw it was Gen. (then Col.) Harrison. He had a large can filled with hot coffee, and, when I asked him what he was doing, he said he was afraid that some of the pickets would freeze to death, and he knew some hot coffee would help the men to keep alive. He was the most welcome visitor I ever met, for I really believe I would have frozen before morning had not the coffee been brought. After leaving me, the general passed on to all the other pickets."

"On the 14th of May, the day before the battle of Resaca, our regiment was ordered to advance through a strip of woodland, which ended at the foot of a hill. On the brow of an opposite hill were the rebels, and the position we were ordered to take put us in direct range of their guns. We were subjected to a terrific fire, and, as we could see no reason why we should occupy such an exposed position, many of us wanted to fall back. Gen. Harrison was with us, on foot, at the head of the column, and he said we would obey orders and stay there if we died. Our ranks were thinned by the bullets of the enemy, but we held our position, and Gen. Harrison never left his advanced post."

"No man was dearer to the boys in the line than Gen. Harrison, and it rose from one single element in the man's character—his determination to take the leading part in whatever he asked his men to do. I shall never forget the sight I had of him waving his sword and shouting, in that shrill voice for which he was noted, 'Come on, boys!' One scene has always lived in my memory. Our old chaplain, Allen, a man who was beloved by all the boys, and for whom almost every man in the regiment would have lost his life, conducted services on Sunday, with Gen. Harrison (then colonel) and Lieut.-Col. Sam Merrill assisting. I have often heard Gen. Harrison offer up the prayer for the boys' welfare and protection down there on those Southern fields, so far away from home, and many times have heard him address the boys in place of the chaplain."

"Going out a civilian and without any military training whatever, he became one of the closest students of the science and art of war there was in the army. As he does in everything else, he threw his whole heart into the work of making himself a proficient officer and his regiment a well-disciplined body of men. And he succeeded in an eminent degree in both instances. He was a very sympathetic man. Whenever a soldier was hurt in the discharge of his duty, none was readier to offer sympathy than he. And as a result of this trait of his character, he always looked after the welfare of his regiment with scrupulous care. He never went to bed at night without knowing that the boys were going to have as good a breakfast as could be secured in the morning."

"On the Atlanta campaign Harrison's regiment one day crossed a small bridge over a sluggish stream and advanced through an open field toward a neighboring crest. While they were in the field the pickets just over the hill came flying back, being driven in by the advance of the rebels in force. Harrison's regiment, and the others making up the brigade, pressed rapidly up toward the crest, and when they reached the top they met the enemy face to face. It was a fierce struggle to see who could hold the commanding position, and the fight became fierce and bloody, a hand-to-hand encounter in which soldiers on each side thrust bayonets and clubbed each other with muskets. Just at that time the rebels captured a battery on the Union right, and turned the guns on our men. It looked like disaster, indeed, and doubly so because the mule-trains, close in the rear of the troops, were filling up the road and clogging the bridge in a way that made a stampede imminent. Just then I saw Gen. Harrison riding up and down in front of the line, waving his sword and calling on the boys to stand their ground. Nothing but such an example on the part of the commander could have held the troops. They retook their battery, and prevented what looked at one time to be disaster and complete ruin."

"At Peach Tree Creek our regiment charged on their [the Confederates'] line and cleaned it out, but we lost 250 men in half an hour, so you may know we had hot work. In this fight Harrison, still a colonel, took the lead. As he swung himself into line not six feet from me he said: 'Come on, boys; we've never been licked yet, and we won't begin now. We haven't much ammunition, but if necessary we can give them the cold steel, and before we get licked we can club them down; so, come on.' And we went, glad to fight by the side of 'Little Ben,' who shirked nothing, and took just the same chance of getting a bullet through the heart as we did. Not a soldier but liked Ben Harrison. We won the day after a hard fight. For his bravery on that day Harrison was promoted at the special recommendation of Gen. Hooker."

"I believe it was twenty-four years ago that Dr. Jones and myself found him alone taking care of the poor wounded boys of his regiment that suffered so severely that day. With his coat off, and sleeves rolled up, he worked far after midnight, until every wounded man was attended to."

The following is the official letter of Harrison's commander, Gen. Joseph Hooker, which was followed by his promotion:

HEADQUARTERS NORTHERN DEPARTMENT,
CINCINNATI, OHIO, Oct. 31, 1864.

HON. E. M. STANTON, *Secretary of War*:

I desire to call the attention of the department to the claims of Col. Benjamin Harrison of the Seventieth Indiana Volunteers for the promotion to the rank of Brigadier-General Volunteers. Col. Harrison first joined me in command of a brigade of Ward's division in Lookout valley preparative to entering upon what is called the Campaign of Atlanta. My attention was first attracted to this young officer by the superior excellence of his brigade in discipline and instruction,

the result of his labor, skill, and devotion. With more foresight than I have witnessed in any officer of his experience, he seemed to act upon the principle that success depended upon the thorough preparation in discipline and *esprit* of his command for conflict, more than on any influence that could be exerted on the field itself, and when collision came his command vindicated his wisdom as much as his valor. In all of the achievements of the Twentieth Corps in that campaign Col. Harrison bore a conspicuous part. At Resaca and Peach Tree Creek the conduct of himself and command was especially distinguished. Col. Harrison is an officer of superior abilities, and of great professional and personal worth. It gives me great pleasure to commend him favorably to the Honorable Secretary, with the assurance that his preferment will be a just recognition of his services and martial accomplishments. Very respectfully, your obedient servant,

JOSEPH HOOKER, *Major-General commanding.*

When Col. Harrison had been two years continuously in the field, the War Department detailed him for special duty in Indiana. In five weeks he had completed this duty, and, hurrying back to Chattanooga, was given command of a brigade and transferred to Nashville. After Sherman reached Savannah, Harrison was ordered to join him, and was on his way when he was stricken down with scarlet fever, and lay dangerously ill for several weeks, and then rejoined Sherman at Goldsboro, N. C., in command of a brigade, where he remained until the end of the war.

Before his return he had been offered a partnership in the law-firm in Indianapolis of Porter & Fishback, which he immediately entered, the name being Porter, Harrison, & Fishback. A case of national interest was one in which Gen. Harrison, by appointment of President Grant, appeared against Thomas A. Hendricks. Gov. Hendricks appeared for Lambdin P. Milligan, who sued Gen. Hovey and others for damages sustained while working in the paint-room of the State prison, where he was placed on a charge of conspiracy against the United States Government. Harrison conducted the defence. The arguments by which he proved the fact of the conspiracy of the Sons of Liberty, or Knights of the Golden Circle, can not be given at length, but the closing paragraphs of his speech will suffice to illustrate his manner of treatment:

The nation, as the individual, through its officers, has the right to strike before it is struck. It is a right given from God. If a man is threatening my life, his hand lifted with the dagger to strike me to the heart, I am not to wait until the blow is delivered. The law acquits me if I strike him dead at my feet. How much more shall these defendants stand acquit before the courts and their fellow-men who, seeing the deadliness of the peril, struck the treason before it could strike the nation? I think I have shown you now, not merely that there was peril, but that, from the information he had, Gen. Hovey was justified in arresting Milligan and bringing him to trial before the military commission. If the State had broken out in rebellion and insurrection, and your own homes been invaded by these ruthless men, your families outraged, insulted, and slain, could you have ever forgiven the recreant commander of the department, who, apprised of the danger, failed to interpose his military power? Senator Hendricks will have a great deal to say to you about the security which the Con-

stitution guarantees to life, person, and property. It is indeed a grand birthright that our fathers have given us; but, gentlemen, it was a legacy handed down to the loyal and the law-abiding. The law covers with its broad and impenetrable shield the true-hearted citizen, not the traitor and the law-breaker. Yet the gentleman comes to make appeals from a Constitution which his client would have destroyed, and in behalf of a liberty which would have been exercised for the destruction of our Government. He complains of a restraint which was in the interests of public peace. Listen to him, then, give your full accord to all he may say of the right of the citizen to be secure in person and property, but remember, those guarantees are to the loyal and the law-abiding.

If his Honor says to you that this question of the existence of war in the State is one for you, I ask you to take the definition of war given by Mr. Hendricks, and tell me on oath whether, in the summer of 1864, there was not a conflict of organized forces in the State of Indiana—whether Gen. Hovey, with home forces and the few veterans who were at home, was not arrayed upon the one hand, and if upon the other Bowles and Milligan and Hovey, with their secret legions of armed traitors, were not organized into an army within the State for the destruction of our Government. There was not more truly a state of war in Charleston harbor before the gun was fired that hurled the first shot against Sumter, than existed in the State of Indiana at the time of which I have been speaking.

And what less shall be said of the gentlemen who composed the commission that tried the plaintiff? One of them, now the marshal of this district, maimed for life, drags himself about disfigured by the loss of a left arm. Yonder, on the bloody sides of Kenesaw, he gave an arm, almost a life, for the country which he, and these his comrades, loved so well. While he lay upon the field bleeding, almost dying, here in Grand Council in the State of Indiana Milligan and his associates were plotting treason; and now they seek to rob him of the little savings from the office which a grateful country and a President who honors his valor have conferred upon him, in order to enrich traitors.

Gen. Harrison was elected United States Senator from Indiana in 1880, and filled that office for six years. His views on the political issues of the time are to be found in various speeches, some delivered from the platform and some on the floor of the Senate. On the subject of civil-service reform he said, in 1882: "I am an advocate of civil-service reform. My brief experience at Washington has led me to utter the wish, with an emphasis I do not often use, that I might be forever relieved of any connection with the distribution of public patronage. I covet for myself the free and unpurchased support of my fellow-citizens, and long to be able to give my time and energy solely to the public affairs that legitimately relate to the honorable trust which you have committed to me. It is easy for theorists to make suggestions upon this subject which in their opinion would cure all existing evils. I assure you it is more difficult to frame a law that shall be safe and practical in its application." He vigorously opposed the "greenback" theory and the demand for "fiat" money, holding that the only safe and stable currency was one based on gold and silver. In 1886, discussing the tariff question, he said: "We need not have any fear that wages will anywhere be too high. We have a common in-

terest that a margin for comfort may be added to the necessities of life. I am sure that none of us are so anxious for cheap goods that we would be willing to admit 'the spoils of the poor' into our houses. It seems strange that we should find a party among us opposing the protective principle when even the provinces of Great Britain are adopting it and finding increased prosperity. France and Germany still embody this idea in their legislation. There may be fair ground for debate as to the rate which particular articles of import should bear, or as to whether this or that article should not be on the free list; but that our legislation should discriminate in favor of our own country, her industries and laboring people, ought not to be questioned. I want no other evidence that wages and all the other conditions

prompt payment of wages in money. I believe that the number of working-hours can, in most of our industries, be reduced without a serious loss to production, and with great gain to the health, comfort, and contentment of our working-classes. I advocated and voted for the law of Congress prohibiting the importation of laborers under contracts made abroad, and believe that such legislation is just and wise." On the subject of the navy he declared: "I am in favor of putting upon the sea enough American ships, armed with the most improved ordnance, to enforce the just rights of our people against any foreign aggressor. It is a good thing in the interests of peace and commerce to show the flag of our navy in the ports where the flag of commerce is unfurled." On the "South-

BENJAMIN HARRISON'S RESIDENCE, INDIANAPOLIS, INDIANA.

of labor are better here than in Europe than this—the laboring men and women of Europe are coming this way, and they come to stay. Millions of earnings have gone back to the old countries to pay the passage-money of friends hither, but the steerage of the returning vessel is empty." On the labor question he said: "If any railroad or other business enterprise can not earn enough to pay the labor that operates it and the interest on its bonds, no right-minded man can hesitate to say which ought to be paid first. The men who have invested money in the enterprise, or loaned money on its securities, ought to have the right to stop the business when net earnings fail; but they can not fairly appropriate the earnings of the engineer or brakeman or laborer. I believe the law should require the

ern question" he said, in February, 1888: "The truth to-day is, that the colored Republican vote of the South, and with it and by consequence the white Republican vote of the South, is deprived of all effective influence in the administration of this Government. The additional power given by the colored population of the South in the Electoral College, and in Congress, was more than enough to turn the last election for President, and more than enough to reverse, yes, largely more than reverse, the present Democratic majority of the House of Representatives. Have we the spirit to insist that everywhere, North and South, in this country of ours no man shall be deprived of his ballot by reason of his politics? There is not in all this land a place where any rebel soldier is subject to any restraint, or is denied

the fullest exercise of the elective franchise. Shall we not insist that what is true of those who fought to destroy the country shall be true of every man who fought for it, or loved it, as the black man of the South did; that to belong to Abraham Lincoln's party shall be respectable and reputable everywhere in America?" In a speech delivered in Indianapolis, in June, 1884, he said: "I would not dispose of an acre of the public land otherwise than under the homestead laws." Referring to "trusts," he said: "We must find some way to stop such combinations."

In the Republican National Convention held in Chicago in June, 1888, on the first ballot fourteen candidates were voted for. John Sherman received the highest number of votes, 225; Walter Q. Gresham, 111; Channcey M. Depew, 99; Russel A. Alger, 84; Benjamin Harrison, 83. On the eighth ballot, Sherman received 118; Alger, 100; Harrison, 544. Gen. Harrison accordingly became the party's candidate for President, and at the election in November he was elected, carrying every Northern State except New Jersey and Connecticut, and receiving 233 electoral votes, to 168 for Mr. Cleveland (see UNITED STATES).

President Harrison was inaugurated on Monday, March 4, 1889, in the midst of a rain-storm, delivering a long inaugural address, and the next day sent to the Senate the following nominations for Cabinet officers: Secretary of State, James G. Blaine, of Maine; Secretary of the Treasury, William Windom, of Minnesota; Secretary of War, Redfield Proctor, of Vermont; Secretary of the Navy, Benjamin F. Tracy, of New York; Attorney-General, William H. H. Miller, of Indiana; Postmaster-General, John Wanamaker, of Pennsylvania; Secretary of the Interior, John W. Noble, of Missouri; Secretary of Agriculture, Jeremiah M. Rusk, of Wisconsin. The Senate went into executive session, and within ten minutes confirmed all the nominations.

(See "Life of Benjamin Harrison," by Lew Wallace, Philadelphia, 1888.)

HAWAII, a constitutional kingdom occupying the Hawaiian or Sandwich Islands, in the Pacific Ocean. The reigning sovereign is Kalakaua I, born Nov. 16, 1836, who was elected by the people in 1874. The heiress presumptive to the throne is the King's eldest sister, Princess Lydia Kamaheha Liliuokalani, born Sept. 2, 1838, whose husband, John O. Dominis, is Governor of Oahu and Maui. The Legislature consists of 24 Representatives and 24 Nobles, who sit together. A new Constitution was proclaimed on July 6, 1887. The nobles, who were formerly nominated by the King, were made elective. The electoral body consists of all the adult male citizens. The nobles, in addition to the educational qualifications required in the representatives, must possess a certain amount of property. Their term is six years, while the representatives are elected for two years. The Legislative Assem-

bly has power to amend the Constitution. The absolute veto formerly exercised by the King was changed into a conditional veto, which can be annulled by a two-third vote of the Assembly, by the Constitution of 1887, which also established the principle of ministerial responsibility. The present Cabinet is composed of the following members: Minister of Foreign Affairs, J. Auskin; Minister of the Interior, L. A. Thurston; Attorney-General, C. W. Ashford; Minister of Finance, W. L. Green.

Area and Population.—The area of the kingdom and the population of the inhabited islands on Dec. 27, 1884, when the last census was taken, were as follow:

ISLANDS.	Square miles.	Population.
Oahu.....	680	28,068
Hawaii.....	4,470	24,991
Maul.....	500	15,970
Kauai and Nihau.....	670	8,985
Molokai and Lanai.....	310	2,614
Kahulawe.....	60
Total.....	6,670	80,578

Honolulu, the capital, on the island of Oahu, had 20,487 inhabitants. In 1884 the natives numbered 40,014, a decrease of 4,084 since 1878. The foreign population is rapidly increasing, and the soil has passed in a large measure into the hands of Americans and other foreigners, who cultivate sugar-cane, with imported labor, Portuguese, Chinese, and latterly Japanese. The number of arrivals in 1886 was 3,725; departures, 2,189. Of the arrivals, 1,766 came from China and 929 from Japan.

Commerce.—The totals for the foreign commerce of the past three years are given in the subjoined table:

YEARS.	Imports.	Domestic exports.	Total exports.	Customs receipts.
1887.....	\$4,944,000	\$9,485,000	\$9,529,000	\$595,000
1886.....	4,878,000	10,840,000	10,457,000	680,000
1885.....	8,881,000	8,959,000	9,069,000	502,000

In 1862 the total imports were only \$998,000 in value; the exports of domestic produce, \$587,000; the total exports, \$838,000; and the customs revenue, \$107,000. The commerce of 1887 was distributed among the countries having commercial relations with Hawaii in the following proportions:

COUNTRIES.	Imports.	Exports.
United States.....	\$8,648,000	\$9,491,000
Great Britain.....	662,000
China and Japan.....	262,000	6,000
Germany.....	185,000
Australia.....	158,000	5,000
Other countries.....	29,000	27,000
Total.....	\$4,944,000	\$9,529,000

The export of sugar in 1887 was valued at \$8,695,000; of rice, \$554,000; of skins, \$104,000; of bananas, \$55,000; of molasses, \$11,000; of wool, \$7,000; of other products, \$103,000. The imports of bullion and specie were

\$900,853 in 1887, and the exports \$21,276. The principal seaport is Honolulu, where in 1887 imports of the value of \$4,573,196 were landed, and exports of the value of \$8,216,458 were shipped.

Navigation.—The number of merchant vessels entered in 1887 was 254, of 210,703 tons, against 310, of 222,372 tons, in 1886, and 253, of 190,138 tons in 1885. The vessels and tonnage entered in 1887 were as to nationality in the following proportions:

FLAG.	Number.	Tons.
American.....	174	118,847
English.....	19	90,040
German.....	8	4,950
Hawaiian.....	43	59,287
Other.....	10	7,599
Total.....	254	210,708

The mercantile marine in 1887 counted 57 vessels, including 15 steamers. The aggregate tonnage was 12,244.

Finances.—The budget is voted biennially. In that for 1886-'88 the receipts are estimated as follows: Customs, \$982,066; internal commerce, \$226,842; internal imposts, \$766,422; fines, fees, etc., \$92,299; sales of Government property, \$513,732; loans, \$1,811,800; Postal savings-bank, \$319,983; miscellaneous, \$149,482; total, \$4,812,576.

The expenditures voted under the various heads were as follow: Civil list and appanages, \$137,892; Legislative Assembly and Privy Council, \$60,284; Justice, \$154,566; Foreign Affairs, \$257,996; Interior, \$1,204,214; Finances, \$727,264; police, etc., \$279,819; instruction, \$165,913; Board of Health, \$247,907; miscellaneous, \$1,476,430; total, \$4,712,285.

By virtue of a law signed on Sept. 1, 1886, a debt of \$2,000,000 was contracted in London at 6 per cent. interest, in order to pay off anterior loans. The capital of the debt on April 1, 1888, was \$1,936,500.

HAYTI, a republic in the West Indies, covering the western third of the island of Santo Domingo. (For details relating to territorial divisions, see "Annual Cyclopædia" for 1888.) The population was estimated in 1887 at 960,000.

Government.—The provisional President of the Republic is Gen. Légitime. His Cabinet was composed of the following ministers: Foreign Affairs and Justice, Eugène Margron; Interior, Gen. Isman Piquant; Finance and Commerce, Alexander Roessignol; War and Navy, Gen. Anselme Prophète; Agriculture, Dr. Roche Grellier.

The United States Minister at Port-au-Prince, is Dr. John E. W. Thompson; the Haytian Minister to the United States is Stephen Preston; the American Consul at Cape Haytien is Stanislas Goutier; the Haytian Consul-General at New York, Ebenezer D. Bassett.

Army and Navy.—The army is recruited partially through conscription, and in part by volunteers. The usual exemptions are legally

admitted, the conscripts serving seven years and the volunteers four. The strength of the permanent army is 6,828. The navy consists of four war-steamers, one of which is armored, mounting four guns.

Telegraphs.—In 1888, cable communication between Hayti and Cuba was opened, the first message having been received at Mole Saint Nicolas from Aguadores, Cuba, on April 15. Mole Saint Nicolas is the Haytian landing-point of the cable with which all the towns of the republic will be connected by land wires.

Postal Service.—There were in operation, in 1886, 31 post-offices, which forwarded 233,873 letters and postal-cards, and 181,520 newspapers and sample packages; the receipts being 69,200 francs, and the expenses 137,215.

Finances.—The national indebtedness amounted in 1888 to \$13,500,000, composed of a foreign debt, the loan of 1875, of \$4,320,000, and the home debt of \$9,180,000. The outlay in 1885-'86, amounting to \$6,412,956, was met by an income of equal amount, while in 1887-'88 the expenditure was limited to \$4,066,236.

Up to the year 1881 hardly any coin but Mexican and American silver was to be met with. The latter gradually became scarce, and in its stead the country was invaded by Mexican coin. The American silver dollar then commanded a premium of 10 to 15 per cent. above the Mexican. When subsequently, in 1881, the National Bank was established at Port-au-Prince, with branch banks at Aux Cayes, Jacmel, Petit Goave, and Gonaïves, a newly coined Haytian silver dollar began to circulate, the "gourde," which was not worth over 80 cents in American gold. In spite of its lower intrinsic value, captains of vessels who had to collect freight in Haytian ports were frequently paid in Haytian dollars, which were charged them in account 4s. 4d. English. On refusing to submit to this unfavorable exchange, their ships' papers were simply retained. This proceeding has since become generally known, and captains usually provide themselves for ships' expenses in Hayti with the necessary silver coin abroad, and take good care to stipulate in bills of lading the coin in which they are to be paid.

Commerce.—In 1887 there were imported into Hayti \$6,854,597 worth of merchandise, while the export of Haytian products reached \$10,185,866. The chief exports were: Coffee, 49,811,781 pounds; logwood, 227,595,803 pounds; cocoa, 3,634,860 pounds; cotton, 2,255,540 pounds; and besides hides and skins, fustic, lignum vitæ, honey, cotton-seed, tortoise-shell, mahogany, wax, old copper, and orange-peel. The American trade with Hayti has been as follows:

FISCAL YEAR.	Import into the United States.	Domestic export to Hayti.
1885.....	\$2,471,436	\$3,227,000
1886.....	2,608,992	2,968,147
1887.....	1,752,587	3,069,318
1888.....	2,918,820	4,322,658

The increase both in imports and exports was due to the rise in coffee, which enabled Haytians to import American goods on a more liberal scale. From similar causes, the maritime movement in the leading ports also exhibited great activity, as represented by these figures, showing the record of vessels entered in 1887:

PORTS.	Vessels.	Tonnage.	OF WHICH WERE STEAMERS.	
			Vessels.	Tonnage.
Cape Haytien	266	289,257	168	180,651
Port-au-Prince	227	246,014	146	225,754
Gonaïves	184	111,344	88	100,116
Aux Cayes	99	94,685	71	87,777
Total	726	691,150	468	594,298

Events of 1888.—On June 2, President Salomon, then in his seventy-fifth year and with failing health, apprehending a revolutionary outbreak to upset his severe *régime*, expelled Generals Manigat and Légitime. The capital had meanwhile been put under martial law, but when the two alleged conspirators departed, it was released from it on June 4. On July 4 and 7, incendiary fires occurred at Port-au-Prince—the usual indication in Hayti that a revolution is at hand—causing the destruction of one fifth of the city and the loss of ten lives. Two rebels who tried to set fire to another quarter were summarily shot. As there was considerable discontent with Gen. Salomon's *régime*, Gen. Baïbrond Canal asked the aid of the North to make an end of his rule. Gen. Thélémaque, commanding the Department of the North at Cape Haytien, responded to his summons, and arranged a general uprising there, which took place on August 5, and was quickly and willingly joined by the Departments of the Northwest and Artibonite, of which Gonaïves and St. Marc are the capitals. Salomon, seeing that resistance to such an uprising was vain, abdicated and left the country. Thereupon a general election under the supervision of a provisional government was held, and eighty-four "constituants," or electors, were chosen. Thélémaque, Boisrond, Légitime, and Hyppolite formed a part of the supervisory provisional government. When the names of the eighty-four electors became known, it was evident that Thélémaque would receive a majority of their votes. But before they could assemble at Port-au-Prince a riot occurred there on September 28, on which occasion Thélémaque met his death. Immediately thereafter, and before even a large majority of the electors could arrive at Port-au-Prince, Légitime called upon those who were present and in his interest to declare themselves a regularly constituted assembly and to vest in him supreme power. This was done by thirty three electors, little more than a third of the whole number. Seizing then upon the treasury, the arms at the capital, and the war-vessels in its harbor, Légitime assumed a dictatorship. But

the whole country was shocked at the supposed murder of Gen. Thélémaque, and another general uprising of the northern departments instantly took place. A central revolutionary committee was formed by the three protesting departments, and Jacmel, too, raised its voice in their favor. Gen. Florvil Hyppolite was named president of that committee. Thereupon Légitime, powerless to subjugate his adversaries on land, initiated a blockade, maintained only by two vessels, the "Dessalines" and "Toussaint l'Ouverture," running in and out of Port-au-Prince. Finally he got himself into trouble with the United States by capturing, on October 21, the American steamship "Haytian Republic." While she was coming out of St. Marc, she was seized by the cruiser "Dessalines," and taken to Port-au-Prince. On November 19, the Department of State at Washington received official information that the prize court, on November 8, had condemned the vessel. The United States minister immediately protested against the proceedings, alleging that the prize court was illegally constituted, and appealed to a higher court. He also advised the captain of the seized vessel to refuse to surrender the craft. The United States man-of-war "Boston" arrived on the same day, to support the protest of the United States minister. The President of the United States, in his message of December 8, made the following allusion to this case and another in which a sailing-vessel had been seized:

The tenure of power has been so unstable amid the war of factions that has ensued since the expulsion of President Salomon, that no Government constituted by the will of the Haytian people has been recognized as administering responsibly the affairs of that country. Our representative has been instructed to abstain from interference between the warring factions, and a vessel of our navy has been sent to Haytian waters to sustain our minister and for the protection of the persons and property of American citizens. Due precautions have been taken to enforce our neutrality laws and prevent our territory from becoming the base of military supplies for either of the warring factions. Under color of a blockade, of which no reasonable notice had been given, and which does not appear to have been efficiently maintained, a seizure of vessels under the American flag has been reported, and, in consequence, measures to prevent and redress any molestation of our innocent merchantmen have been adopted.

A week later, the United States war-vessels "Galena" and "Yantic" were dispatched to Port-au-Prince, arriving there on December 20, and demanding the surrender of the seized steamer. The release of the latter to Rear-Admiral Luce was not made under protest, but Gen. Légitime reserved the right to appeal to the United States courts. It was thought at Port-au-Prince that this reservation was made principally for the benefit of his followers, who were led by him and the decision of the Court of Claims to believe the seizure of the vessel lawful, and that the vessel would be held and converted into a man-of-war. An indemnity was also to be claimed

in the usual form through the American minister to Gen. Légitime, the amount demanded in behalf of the owners being \$200,000; that for the passengers and crew, \$150,000. The "Haytian Republic" was to be formally accepted by Rear-Admiral Luce on December 24. On December 31, the Secretary of State at Washington received the copy of a decree, dated December 10, issued by the Légitime Government, closing all the northern ports—St. Marc, Gonaïves, Port de Paix, and Cape Haytien to foreign commerce provisionally.

HOLLAND. See **NETHERLANDS**.

HONDURAS, a republic in Central America, area, 39,600 square miles; population in 1887, 329,184.

Government.—The President is Gen. Luis Bográn, whose term will expire on Nov. 29, 1891. The Cabinet is composed of the following ministers: Foreign Affairs, Licenciado Don Jerónimo Zelaya; Justice, Public Works, and War, Señor R. Alvarado; Interior, Señor A. Gomez; Finance, Señor F. Planas; Agriculture, Señor A. Zelaya. The United States Minister is Hon. H. O. Hall, resident at Guatemala; the American Consul at Ruatan and Trujillo is William C. Burchard, and at Tegucigalpa, Daniel W. Herring; the Consular Agent at Yuscaran is Theodore Koehnke. The Consul-General at New York is Jacob Baiz; at San Francisco, William V. Wells.

Finance.—The outstanding remainder of the \$25,000,000 foreign debt, contracted in 1869, is gradually being canceled through the operations of the custom-houses, where 40 per cent. of the duties may be paid with such old bonds. The consolidated internal indebtedness is represented by \$700,000 bonds in circulation, and there is also a floating debt of \$200,000. In February the Government made a contract for the founding of a national bank at Tegucigalpa. In March a contract was made with Don Gilberto Larios for the establishment at Tegucigalpa of the Banco Centro-Americano, with a capital of \$600,000, and the privilege to increase it to \$1,000,000.

Treaties.—In January the Congress of Honduras ratified the treaty of commerce and navigation signed in January, 1887, at Guatemala, between Honduras and Great Britain, together with the one made with Germany, under date of Dec. 12, 1887, and also the Central American treaty of friendship agreed to between the five republics on Feb. 16, 1887.

Border Questions.—In January, commissioners delegated by the governments of Honduras and Nicaragua met on the boundary-line between the two republics, at points in dispute between the departments of Choluteca and Nueva Segovia, in order to make the necessary surveys for the settlement of this question.

Railroads.—Construction on the Honduras North Coast Railway was begun by the contractor George E. Mansfield, of Boston, in May. The road is being built under a concession originally granted in July, 1884, by the

Government of Honduras to W. Allstrom, who organized the Honduras North Coast Railway and Improvement Company in New Orleans. The concession is for 99 years, and grants nine square miles of land for each mile of line built, also exemption from taxation and the privilege of importing material for construction free of duty. The line surveyed is 150 miles long, the termini being Trujillo and Puerto Cortez, and it passes through extensive forests of mahogany, cedar, and iron-wood, and will open up the Sierra Madre mountains on their northern slopes. According to the grant, the company is obliged to have 75 miles of road in operation by July, 1889. The only railroad in Honduras at present is a line of 38 miles from Puerto Cortez, which is a portion of a projected transisthmian route to the Bay of Fonseca. The Honduras Railway Company was incorporated in London in May, with a capital of £8,000,000, to complete this enterprise, and a New York syndicate has been found to construct another line from Trujillo to the Bay of Fonseca, passing through the principal mining districts, and connecting with the capital, Tegucigalpa. The London *concessionnaire* sent in June three engineers to Puerto Cortez, for the purpose of completing the survey of the road over a track of 40 miles from Ojos de Agua toward the Atlantic, and they began their work on July 7.

New Steamship Line.—In September the Government made a contract with F. L. Philips & Co. for the establishment of regular steamship communication between the coast and bay islands, granting them certain privileges.

Mining.—Honduras is rapidly becoming an active mining country, and many miners are going there from the United States. The pay is usually \$50 a month, with board and traveling expenses, for "hand-drill" men, as little machinery is used, and about \$75 for mill engineers. The climate in the interior is represented as being healthful. To mining companies Honduras offers the advantages of surface mining, cheap labor, and unknown but certain mineral wealth. The Government is also willing to make liberal concessions. The New York and Honduras Rosario Mining Company, at San Jacinto, has opened tunnels driven direct on the vein down to the 650-foot level, and is producing 80 tons of ore a day. The levels are 100 feet apart, and vary in length from 600 to 1,400 feet on the vein, connected by winzes at convenient distances almost to the lowest level. The ore consists of the decomposed sulphurets of copper, iron, and some lead, carrying considerable chloride and native silver in a quartz gangue. A three-hearth roasting-furnace has been erected for chloridizing the concentrates, which consist largely of undecomposed sulphurets. The product in the summer of 1888 was from 40 to 50 bars of bullion a month, weighing 100 to 110 pounds each, and running from 600 to 800 fine in silver and 10 to 17 fine in gold. The Los An-

geles Mining and Smelting Company, Valle de los Angeles, resumed ore-extraction at the Animas mine in August. The works consist of two twenty-ton water-jacket furnaces. The ore is an argentiferous galena. Many other companies have been formed.

Molybdate of lead, or wulfenite, is of frequent occurrence in Honduras, principally in the mining districts of Los Angeles and San Juancito, where limestone and slate occur.

Commerce.—The American trade shows a steady increase, and has developed as follows:

FISCAL YEAR.	Import into the United States.	Domestic export to Honduras.
1886	\$780,559	\$428,104
1887	857,919	425,741
1888	957,381	672,796

Condition of the Country.—One of the daily papers of Tegucigalpa drew, on August 30, the following sketch of the happy change in the republic under the present administration:

Formerly the sanguinary ground of battles and passions, we meet to-day in the new Honduras, a busy camp where foreigners and natives vie with each other to advance this country, in as short a time as possible, to the high standing which Providence and Nature have destined it to occupy in this progressive period. There are over eighteen foreign mining companies at work to explore the rich and precious veins of gold and silver which abound in this country; there are a number of improvement companies engaged to cultivate the ground and to navigate the rivers; and there are at present three important railroad lines partly under consideration and construction.

When the subject of a highway to the coast was brought to the attention of Gen. Bogran, he was found equal to the occasion. Simple as this need will appear to the reader, it must be remembered that for three hundred years this country had found in the pack-mule not merely its only means of transportation, but thereby all the requirements of the producer, merchant, and householder had been met. "All roads lead to Rome," and all highways started from the Imperial City, and thence continued to the projected point. A Latin race would naturally follow such teachings, and hence Soto had a boulevard road built from Tegucigalpa to the Cerro de Hule (which has an elevation of five thousand feet) toward the Pacific coast, extending it twenty-five miles; but as neither a wagon nor the parts of a wagon could well be carried by the pack-mule over the intervening mountains between the terminus of this boulevard and the port, it presented simply an admirable road-bed, suggesting possibilities if a connection were made with the coast. Bogran, acting under the advice of American engineers, completed a wagon-road from the Pacific road of San Lorenzo to meet this, and connect the capital with the port. A force of 175 men was employed for eleven months to build it around the mountains to the terminus of the macadamized boulevard, and from Tegucigalpa thence fifty miles to Yucatan, which an enthusiastic expert has named the "Comstock of Central America." The work of internal improvements did not stop here. A New York company is dredging the Aguan river and building canals to connect the Olanchito district with the northern ports. One of our great railway systems has recently had a survey made to determine the feasibility of building a railway from Puerto Cortez eastward, near the coast, in the interest of the fruit trade; other important internal improvements are being made in Olanchito, and carbonate mines are being opened at La Union.

A Government decree, dated September 26, amplifies and modifies a good many provisions of the "Código de Minería" at the personal instigation of the President, who, during the summer, paid a visit to the mining regions.

Education.—On September 15 was founded at the capital, Tegucigalpa, in presence of the President of the Republic, the Academy of Science and Literature of Honduras, having Dr. Antonio Ramirez Fontecha for its president. Premiums of from \$1,000 to \$100 are to be awarded at the meeting of Sept. 14, 1889, to the best works in Spanish on primary instruction, on Central American history from the Conquest to 1842, with special reference to Honduras, and, finally, to a poem in praise of Central Union and the illustrious Gen. Francisco Morazan.

HOUSE-BOATS. It is not to be denied that the world owes very many of its most healthful and sensible out-of-door recreations to England and Englishmen. Even base-ball, now justly regarded as the American national game, is merely a scientific improvement of "rounders," known probably to English boys centuries ago. Canoeing as a civilized recreation probably originated in Canada, but it had to cross the ocean twice before it became firmly established in the United States. In like manner, the house-boat has become so thoroughly domesticated that it has ceased to be an object of curiosity on the little rivers, lakes, estuaries, and canals of the British Islands. That it is destined to a greater and more glorious career on the infinitely varied coastwise and inland waters of America, may be taken as a foregone conclusion.

We are not without our house-boats in America; but we have not passed beyond the practical and utilitarian stage. Every raft has its "head-works," rude shanties, usually, where the crew have their bunks and where the cook does his cooking. Oyster-men often keep a house-boat anchored over the beds, for protection or convenience, and floating boat-houses are common wherever boating-clubs exist. But none of these fulfill the idea of a house-boat as developed in England and as presented in Mr. Black's recent novel, "The Strange Adventures of a House-boat." Such is the present demand for this type of craft in England that there are in London several builders who devote themselves almost exclusively to their construction.

A house-boat is precisely what its name implies—a house on a boat, or at least on a float; and just as a house on land may have only one room or a score of rooms, so the house-boat may be merely a narrow cabin with the most compact arrangements for living, eating, and sleeping, or it may be a floating "establishment" with half a dozen state-rooms, dining-room, parlor, and quarters for a full corps of servants.

To the lover of out-door life, the advantages of the house-boat are at once obvious. It can

be moored in any sheltered place where there is water enough to float it; it is readily supplied with provisions and other stores by means of small boats; it is easily kept clean by the simple process of throwing waste materials overboard; and it is readily moved from place to place, according to the fancy of its owner. There is no fair ground of comparison between house-boats and yachts, since they are intended for widely different purposes; but a house-boat may be built for \$1,000 with better accommodations than could be secured for \$10,000 in a yacht.

The first thing to be considered in planning a house-boat is the foundation or float. This may be merely a raft of logs or a frame connecting a system of water-tight pontoons, or a flat-bottomed scow of any desired dimensions or shape. Whichever form is selected, it should be covered with a slightly convex deck, so that water spilled anywhere will tend to run out-board. The raft is the cheaper form. Its advantage is, that it can never leak, and consequently requires no pumping. Its disadvantage is that it is hard to tow. The pontoon system is more costly, is also hard to tow, and is liable to leakage; but it can be so arranged that one pontoon at a time can be removed for examination or repair. The pontoons may be wooden boxes or cylinders or empty oil-barrels. By far the best float, however, is a scow or boat of some kind, such as any carpenter or amateur can build, since none of the complicated problems involving wave-

line theories, strains, etc., need be taken into consideration. The only elements to be considered are dimensions, strength, and tightness. In the vicinity of seaports it is often possible to purchase at a reasonable figure flat-boats that will answer every purpose; but if it is desired to build, and economy is an object, the following plan is suggested: Having decided upon the length and breadth and depth of the boat, estimate the amount of planking necessary, and buy common pine matched boards accordingly. If the boat is to be small, two thicknesses are enough; but if large, three or more are required. It is desirable to have the bottom or floor rockered or curved slightly, so that she will take the ground easily when beached; but this is not absolutely necessary. Any mechanic will know how to provide for the curve if desired. The floor is laid first on

supports, the boards running crosswise—or better, diagonally. When laid and securely nailed to temporary timbers, the ends should be sawed off along a line marking the intended shape of the bottom. This done, prepare a second course of boards of the same shape, but to be laid breaking joints with the first course, or, if diagonal, to be laid in the opposite direction. In Fig. 1 the continuous lines represent the first or lower course and the broken lines the second or upper course. Before laying the second course, a sufficient quantity of hot pitch should be prepared, and before each board is driven home and nailed, a bed of pitch should be prepared to receive it, so that all the seams and even the grooves in the edges of the boards shall be filled with pitch. Any number of courses may be laid, according to the size of the boat, but three are enough for any length less than fifty feet. Copper nails, clinched, are best but iron clinch-nails will answer very well, especially for fresh water.

FIG. 1.

In driving them, it is desirable to set them at a slight angle and in differing directions, and all care must be taken not to split the wood. This makes a very strong and elastic bottom, absolutely water-tight.

The next step is to set up the stem and stern-posts, at A and B. C shows the section of the post having a rabbet on each side deep enough to nail on the side-courses. These posts may be natural knees worked out of solid pieces, or they may be triangles built up of plank bolted together (see D, Fig. 1).

At intervals of about ten feet, transverse frames, as shown at E, should be set up, with the top piece slightly arched to make the deck shed water. The side-posts, F, should be of light stuff, only large enough to receive the nails of the first course of siding. The cross-braces, G, may be still lighter, or even ordinary

boards. The deck timbers, H, should be of two-inch plank set on edge. All these may be simply bolted or nailed together, no framing or mortising being necessary.

When the bow and stern posts and the transverse frames are in position (and there is no reason why they should not be made flaring outward to secure more deck-room), the first course of matched boards is nailed on, all abutting surfaces and edges being covered with pitch. When the siding is nailed to the edges of the bottom boards, use wire nails, to avoid splitting and to secure a better hold. Cover the first course of siding with a second course, with pitch between, the same rules being followed as to driving nails. Along the outside angle formed by the meeting of the

able to mark them out before driving the deck nails, as the saw will otherwise be pretty sure to encounter nails. Of course, if deck-timbers are cut through for the hatches, stanchions must be set to take the strain; but a two-foot hatch is generally wide enough.

Towing-posts or bitts will be required at both ends, and these may serve also to make fast the cables when the boat is at anchor. They may be placed anywhere, simply strengthening the deck by means of stout plank bolted down, and, in a large boat, re-enforced by carrying the posts through the deck, down to a step on the bottom. If desired, a rudder may be hung on the stern-post in the usual manner, but in most cases an oar or sweep will answer quite as well.

Large vessels have been built on this plan of

FIG. 2.

sides and the bottom, fasten angle-irons wide enough to overreach the seams, so that the screws with which they are fastened will not be in danger of striking the nails previously driven.

Deck-timbers corresponding with the one shown at E must be placed at about two-foot intervals throughout the whole length of the boat. The deck may be laid precisely as was the bottom of the boat, except that care should be taken not to allow a surplus of pitch to work up to the surface. Before laying the deck, a stout strip or out-wale should be spiked or bolted along the upper edge of the siding, on the outside, and the ends of the deck-boards nailed to it. This out-wale affords protection to the siding, and if payed over with pitch makes a perfectly tight line of junction between deck and sides.

Hatches to afford access to the hold may be cut through the deck anywhere, but it is desir-

superimposing layers, and they have proved wonderfully strong and seaworthy, even without any interior timbers whatever. The system has never found favor with professional builders, but for a shallow, flat-bottomed hull, such as is required for a house-boat, it is an excellent method of construction, and is amply strong for smooth water.

The hull being finished, nothing remains but to build a house upon it, leaving a clear space fore and aft and making the roof available for a promenade or a post of observation. Any carpenter or amateur can build such a house. It may have only one room, with such arrangements of bunks and tables as suit the owner, or it may have a sitting-room and kitchen and separate sleeping-rooms to suit either the most economical ideas of bachelors or the more luxurious notions of those to whom money is no object.

The illustration (Fig. 2), from a design pub-

lished in "Forest and Stream," represents one of the larger and more luxurious class of boats, 95 feet long by 17 feet beam. The masts are, of course, superfluous, merely lending a somewhat nautical air to the general appearance. It may be said, however, that a mast and sail of moderate size may often prove of great convenience in changing anchorage. To effect such a change requires some practical knowledge of seamanship. In a tidal river one may easily progress up stream by the aid of a pair of sweeps or a skiff to tow the house-boat out into the current and to regain anchorage-ground just before the tide turns ebb. In a lake or an inland river some outside means of propulsion is necessary, and a sail might often prove useful. Tugs are generally available on navigable streams, and for a few dollars they will enable the house-boat owner to shift his berth a score of miles in two or three hours.

Such bodies of water as Lake George or Lake Champlain, or indeed any of the ten

thousand inland lakes and rivers of North America, are lined with sheltered coves where a house-boat may lie secure from storms the summer through. She may often be moored so near the shore that a gang-plank will afford ready passage to the land. Small boats for sails or oars or both, are, of course, an indispensable adjunct for fishing, for exercise, and for the various errands necessary to a company that must depend more or less on the markets for supplies. For a large house-boat a naphthalaunch would be a great convenience. (See NAPHTHA-MOTORS, in "Annual Cyclopædia" for 1887.)

In many respects life on a house-boat is to be preferred to ordinary camp or cottage life on shore. These house-boats, with their wide variety in structure and cost, will prove a welcome addition to our American resources for out-of-door existence during the summer months, and indeed for the whole year round in some of the Southern States.

I

IDAHO. Territorial Government.—The following were the Territorial officers during the year: Governor, Edward A. Stevenson, Democrat; Secretary, Edward J. Curtis; Comptroller and Auditor, James H. Wickersham; Treasurer, Charles Himrod; Attorney-General, Richard Z. Johnson; Superintendent of Public Instruction, Silas W. Moody; Chief-Justice of the Supreme Court, James B. Hays, who died on May 31, and was succeeded by Hugh W. Weir; Associate Justices, Norman Buck and Case Broderick, succeeded by John Lee Logan and Charles H. Berry.

Population.—The following estimate of population by countries is given by the Governor in his annual report:

COUNTRIES.	Population.	COUNTRIES.	Population.
Ada.....	11,000	Latah.....	9,630
Alturas.....	14,250	Lemhi.....	4,600
Bear Lake.....	5,750	Nez Percé.....	5,000
Bingham.....	12,000	Oneida.....	4,500
Boise.....	4,250	Owyhee.....	2,250
Cassia.....	4,500	Shoshone.....	3,000
Custer.....	4,000	Washington.....	5,000
Idaho.....	4,000		
Kootenai.....	1,430	Total.....	105,260

In this list, Latah County appears for the first time, having been created out of the northern part of Nez Percé County, by act of Congress, passed and approved May 14, 1888. A county organization was effected under this act on May 29 following.

Finance.—The receipts from all sources from Nov. 1, 1886, to Nov. 1, 1888, were \$114,127.98, and the expenditures, \$109,660.11; the balance on hand Nov. 1, 1888, was \$4,467.82.

No change in the bonded debt of the Territory was made during the year.

Education.—From the report of the Superintendent of Education, the following compari-

son of the condition of the public schools for 1886 and 1888 is given:

ITEMS.	1886.	1888.
School districts.....	818	887
School-houses.....	288	368
Schools.....	884	865
Pupils enrolled.....	9,878	10,438
Libraries.....	7	12
Children of school age.....	18,555	20,180
Amount received from county tax.....	\$78,006 05	\$101,009 53
Amount received from district.....	45,184 76	33,810 74
Amount received from all sources.....	160,173 57	164,789 55
Paid teachers' salaries.....	85,457 97	92,910 81
Estimated value of school property.....		\$79,500 00

Of the compulsory school law, passed in 1887, the Superintendent says: "Under the exceptions in this law, many parents are avoiding its operation by setting up the excuse that their children are taught in private schools or at home, which is a valid excuse, but affords an opportunity to those whose religious belief opposes the employment of Gentile teachers to keep their children away from the public school of the district. I have not heard of a single fine being collected, and believe that such a law is of no benefit until thoroughly amended."

The act of Congress of May 20, 1886, concerning the teaching of the effects of alcoholic drinks and narcotics upon the human system, has been called to the attention of superintendents and teachers throughout the Territory, and is generally enforced. But many teachers report that they can not carry out its provisions to the letter, if strictly construed, by reason of its requiring impossibilities in the matter of using text-books.

Charities and Prisons.—In the Territorial Insane Asylum at Blackfoot, 72 patients were treated during the year ending September 15,

of whom 49 were men and 23 women. At the latter date there were 48 patients—35 men and 13 women. The cost of maintaining the institution for the year was \$14,827.

There were confined in the United States Penitentiary at Boise City in October, at the expense of the Territory, 75 prisoners. The condition of this prison is characterized by Gov. Stevenson as "disgraceful." There are only 40 cells, into which are crowded 78 prisoners, three of them being United States prisoners. No provision is made for working the convicts, who are confined to their cells 20 hours each day, although a stone-quarry near at hand would afford an excellent opportunity for using their labor in enlarging the present building. The Territory pays \$18,000 a year to the National Government for keeping its convicts at this place. But the crowded condition of the prison is likely to be soon relieved, Congress having this year appropriated \$25,000 for its enlargement.

The Governor, in his annual report for 1888, says: "I wish particularly to call the attention of the department and Congress to the great injustice of the act of Congress of March 8, 1885. This act compels our Territorial courts to take cognizance and jurisdiction of all offenses committed by Indians against the property of another Indian or other persons, and of certain crimes committed on the Indian reservations. We have now in the Penitentiary two Indians sentenced for long terms, for which we are paying the United States \$1.50 a day, besides all the expenses of their trials and convictions. Others have also been sentenced who have served out their terms and been discharged. I can not comprehend why the General Government should compel the Territory to pay for the support of a criminal class who are the wards of the Government, from whom the Territory derives no revenue, income, or support."

Statistics.—The assessed valuation of the Territory, by counties, is shown in the following table:

COUNTIES.	Valuation.	COUNTIES.	Valuation.
Ada.....	\$3,020,000	Latah.....	\$1,668,255
Alturas.....	3,787,582	Lemhi.....	768,998
Bear Lake.....	580,028	Nez Percé.....	1,080,564
Bingham.....	2,565,180	Onida.....	1,018,811
Boisé.....	720,949	Owyhee.....	1,081,925
Cassia.....	919,170	Shoshone.....	1,051,909
Custer.....	775,892	Washington.....	917,419
Idaho.....	843,566		
Kootenai.....	548,781	Total.....	\$31,288,892

In this total are assessed 241,515 cattle, valued at \$3,036,234; 71,984 horses, valued at \$1,904,848; 1,608 mules, valued at \$55,843; and 251,634 sheep, valued at \$389,988.

The production of wheat for 1888 is estimated at 2,986,280 bushels; oats, 1,264,590 bushels; barley, 394,690 bushels; hay, 528,965 tons.

The mining product for 1887 is estimated by the assayer at Boise City as follows: Gold, \$2,522,209; silver, \$3,422,657; gold and sil-

ver, \$5,944,866; lead, \$2,960,270; gold, silver, and lead, \$8,905,186.

Railroads.—There were about 1,000 miles of railroad in the Territory at the close of the year. Construction has been going on during the year upon the following lines: Spokane and Palouse Railway, Oregon Railway and Navigation Company, Cœur d'Alene Railway, and Spokane and Idaho Railway.

Forests.—There are about 18,000,000 acres of timber and mineral land in the Territory, a very large portion of which is covered with timber. In some places the forests are mostly black or lodge-pole pine, which grows about 8 inches in diameter and from 60 to 100 feet high, and so thick that a person can scarcely pass between the trees. It is valuable for fuel, mining-timbers, buildings, and fencing, and is very durable. There are in other localities immense forests of the finest white and yellow pine, also spruce, fir, and cedar, suitable for manufacturing into lumber, the trees being from 2 to 4 feet in diameter and 50 to 60 feet without a limb. The lumber now manufactured in the Territory is only for home consumption.

Indians.—The extent of the various Indian agencies in the Territory and the number of Indians upon them during the year were as follow: Fort Hall or Shoshone and Bannocks, 1,700 persons, 1,202,320 acres; Lemhi, 548 persons, 105,960 acres; Cœur d'Alene, 500 persons, 598,500 acres; Western Shoshone, 400 persons, 131,800 acres; Nez Percé, 1,227 persons, 746,651 acres. No disturbances have occurred during the year. There is a doubt as to whether the valuable mineral lands near the borders of the Cœur d'Alene reservation, on which miners have made locations, are within the limits of the reservation. Dangerous complications are liable to result unless this doubt is soon settled by a resurvey of the region.

Annexation.—To any plan for dismembering the Territory, and especially to the bill before Congress creating the State of Washington out of the eastern part of that Territory with the four northern counties of Idaho attached, the people of Idaho are almost unanimously opposed. A protest against it was passed by the Territorial Legislature of last year. In June, 1888, the Democratic Territorial Convention at Boise City adopted, by a vote of 44 to 6, the following resolution:

That we reiterate our opposition to any dismemberment of the Territory by annexation of any county or counties to any State or Territory, and that we favor at the earliest date practicable the introduction of a law in Congress for the admission of Idaho, with its present lines and boundaries, as a State of the Union.

Only one of the four northern counties, Nez Percé (with Latah, lately a part of Nez Percé), voted against the resolution. The Territorial Republican Convention, in May, included in its platform the following:

That we denounce the Stewart or any other measure for the segregation and consequent annihilation of Idaho; that while North Idaho appears before this convention through one county (Latah) and demands the annexation of North Idaho to Washington, another county (Shoshone), representing more votes, appears here with resolutions directly and absolutely opposed to any segregation of the Territory; and, further,

That the Republicans of Idaho Territory, while recognizing the sentiment as expressed by one county, and as said to exist in Nez Percé County, hereby declare for statehood for the whole Territory.

These resolutions were repeated at party conventions held in August. In his message to the Legislature, in December, the Governor says:

I would recommend that the Legislature make provision for the election and holding of a convention to form a Constitution for the State of Idaho, to be convened at an early day, and that the Constitution so formed be submitted to the people for their ratification at the next general election or at a special election to be held before that time, and that when ratified it be laid before Congress by our Delegate, with the request that Idaho be admitted a State of the Union on an equality with the original thirteen; and that the necessary appropriations to defray the expenses of such Constitutional Convention be made.

Political.—Territorial conventions to elect delegates to the national party conventions were held in May and June. On August 22 the Democrats met in convention again at Boise City to choose a candidate for Territorial Delegate to Congress, and James H. Hawley was selected for that office. The following are some of the resolutions adopted:

That we heartily favor the filling of Territorial offices, as far as practicable, by appointments from the Territory, and we cite with pride its wisdom in the appointment of our citizen Governor, who has made us the best Governor ever appointed for the Territory.

That we favor liberal appropriations by Congress for irrigating canals and artesian wells, by which multiplied acres of our lands may be reclaimed and opened for entry and settlement.

That the settlement of our Territory is greatly retarded by the existence within our borders of large Indian reservations, useless to the Indians and of incalculable value to the whites for the valuable agricultural, mineral, and timber resources; and we earnestly recommend the opening up of the reservation to settlement having due regard to the rights of the Indians.

The second Republican Convention was in session in Hailey August 29 and 30, and nominated Delegate Dubois for re-election. The platform contains the following:

That we are unalterably opposed to any reduction of the import duties upon the product of silver, lead, and copper mines, and that any change of existing laws that shall check or hinder the prosecution and growth of this industry would be unwise and unjust; and therefore we denounce the action of the Democratic Convention of Idaho for their indorsement of the Mills Bill.

That we remain unalterably opposed to the Mormons, their priest-rule and polygamy; that we favor the Idaho test-oath, and pledge ourselves to strenuously oppose any interference with or repeal of the same, and that we view with contempt the action of the Democratic Convention at Boise City resulting in the formation of an unholy alliance with the Mormons for political profit.

That inasmuch as the Mormon people have in no wise renounced polygamy and the other practices which have hitherto deprived them of their franchise, and yet defiantly declare their intention to vote at the coming election, even though they commit the crime of perjury, we call upon the Territorial administration of Idaho to see that the election laws of this Territory are sustained.

Both platforms contain also the same declarations against annexation adopted at the respective conventions in May and June. No resolution was adopted by the Democrats upon the Mormon problem. A third candidate, ex-Justice Norman Buck, was in the field as the representative of a small party in the Territory which favors division and annexation of the northern counties to Washington Territory. At the November election Buck received 1,458 votes, all but 163 of which were cast in Latah and Nez Percé counties, where he led the poll. Dubois received 8,151 votes, and Hawley 6,404 votes. A legislature was chosen, to which the Republicans elected about three fourths of the members. One Mormon was chosen, and two of the Democrats elected were supported by Mormon votes.

Legislative Session.—The Legislature chosen in November met on December 10 and sat about two weeks, adjourning until January. One of its first acts was to unseat Mr. Lamoreaux, a Democratic member of the council, on the ground that he had been elected by Mormon votes, contrary to the provisions of the Mormon test-oath. In the Lower House, Messrs. Kinport, Democrat, and Kinnersley, Mormon, were unseated for the same reason. No legislation of importance was accomplished.

IDENTIFICATION AND DESCRIPTION, PERSONAL. This has been made the subject of special study and experiment by Prof. Francis Galton, F. R. S., who detailed his results in a lecture before the Royal Institution in London on May 25. He pointed out that there is no such thing as infinite unlikeness, two profiles, or other irregular lines, for instance, differing from each other always by a finite number of least discernible differences. To illustrate, suppose two figures, A and B (Fig. 1), to be placed one on the other, and draw a third line, C, equally subdividing the interval between them. C is more like B than A was, and in like manner a line D can be drawn, still more like B. By continuing thus, a figure will be reached which, if drawn separately, is indistinguishable from B. If this is the fourth equal subdivision, there are sixteen grades of least discernible differences between A and B. This measure of resemblance is evidently applicable also to colors, sounds, tastes, and other sense indications, and may be used in personal description by first making a collection of standard profiles drawn with double lines, so that any human profile would lie entirely within some one of them. This would be quite possible; indeed, all human profile lines, taken from the brow to the lips, fall between the lines shown in Fig. 2. The

measurement of profiles seems to be the best means of personal identification. Prof. Galton prefers for reference-lines B O (Fig. 8), touching the concavity above the nose and the con-

FIG. 1.

convexity of the chin, and a line parallel to this, touching the tip of the nose. From these lines various measures may be taken which are characteristic of the individual. Instead of these profile measurements, measures of the head and limbs are generally employed in prisons for purposes of identification, this idea originating in France with Alphonse Bertillon. But,

FIG. 2.

whatever the system, the practical difficulty is to classify the sets of measures that are so made, so that it may be told at a glance whether any given set of measurements agrees with any or none of them within specified limits, and for this purpose Prof. Galton has devised what he calls a mechanical selector. It consists of a large number of strips of card or metal, C_1 , C_2 (Fig. 4), eight or nine inches long, and having a common axis, A, passing through all their smaller ends. A tilting-frame T, turning on the same axis, has a front cross-bar, F, on which the tips of the larger ends of the cards rest when the machine is left alone, the opposite end of the frame resting on the base-board, S. When this end is raised, as in the figure, the cards descend by their own

weight. Each card has notches cut in its lower edge, whose distances from the axis represent the measurements in one of the sets. The greater the number in the set the longer the cards must be. In the figure the card has only four notches. The given set of measures that is to be compared with the sets already made is represented by the positions of movable wires, strung perpendicularly to the plane of the figure. When the cards are released, by raising the end of the tilting-frame, if the positions of all the notches in any card correspond with those of the wires, that card will fall so that a wire enters each notch; but, otherwise, the card will rest on one or more of the wires. A glance thus enables the experimenter to determine whether any sets of measurements agree with the one to be tested, and, if so, what sets so agree. In the figure, the card C_2 so agrees, and has therefore fallen lower than C_1 , which rests on the second wire. By making the notches fit the wires closely or loosely, the limits within which the sets must agree may be made small or large. There is thus theoretically no limit to the number of sets of measurements that can be compared with a given set by this machine, by a single movement of the hand, and in practice the only limit is the necessity of making the machine of convenient size. It seems a valuable adjunct to the system of personal identification in prisons.

Various markings on the human body remain unchanged for years, and so afford a basis for identification, where the question is simply whether two persons are or are not identical. Those of them that admit of approximate measurement by the method of least discernible differences, described above, can also be used for the comparison of one person with a thousand others. Among them are the markings on the iris (of which there are thousands of varieties) the arrangement of the superficial veins, the shape of the ear, and the furrows on the hands and feet. The markings on the under surface of the finger-tips can be made more plainly visible by rubbing on the finger a paste of prepared chalk and water, which fills the furrows. They may be made to leave a per-

FIG. 4.

manent record by inking the finger lightly and pressing it on paper. Sir William Herschel made two such impressions in 1860 and 1868, in which the positions of the furrows and ridges remain the same, and they are probably unchanged through life. The thumb has been used as a seal that can not be counterfeited. It has been proposed to use this method for identifying Chinese immigrants, and it has been commonly supposed to be used for a like purpose in Chinese courts of justice. A large number of such thumb-impressions, taken during several generations, would doubtless enable scientists to settle interesting questions regarding heredity.

ILLINOIS. State Government.—The following were the State officers during the year: Governor, Richard J. Oglesby, Republican; Lieutenant-Governor, John C. Smith; Secretary of State, Henry D. Dement; Auditor, Charles P. Swigert; Treasurer, John R. Tanner; Attorney-General, George Hunt; Superintendent of Public Instruction, Richard Edwards; Railroad and Warehouse Commissioners, John J. Rinaker, B. F. Marsh, and W. T. Johnson; Chief-Justice of the Supreme Court, Alfred M. Craig; Associate Justices, Benjamin M. Magruder, Simeon P. Shope, David J. Baker, John Scofield, Jacob W. Wilkin, and Joseph M. Bailey.

Finance.—The amount of all funds in the State Treasury, Oct. 1, 1886, was as follows: General revenue fund, \$2,663,570.01; State school fund, \$218,876.23; delinquent land-tax fund, \$331.06; unknown and minor heirs' fund, \$10,776.19; local bond fund, \$558,158.38; total, \$3,451,711.82. The receipts from all sources from Oct. 1, 1886, to Sept. 30, 1888, inclusive, were as follow: General revenue fund, \$5,693,563.32; State school fund, \$2,196,492.36; unknown and minor heirs' fund, \$3,209.80; local bond fund, \$2,866,268.45; total, \$10,759,533.93; grand total, \$14,911,245.75. The disbursements from Oct. 1, 1886, to Sept. 30, 1888, inclusive, were as follow: General revenue fund, \$5,437,843.29; State school fund, \$2,109,144.16; unknown and minor heirs' fund, \$153.39; local bond fund, \$2,824,887.69; total, \$10,372,028.53. Balance of all funds in treasury Oct. 1, 1888, \$3,839,217.22. The principal of the bonded debt of the State outstanding Oct. 1, 1886, was \$23,600.

Canals.—The report of the Canal Commissioners shows that the revenue derived from tolls and from other sources, during the last year, have been sufficient to keep the canal in good condition, so that it may still be utilized in connection with Illinois river. It costs the State nothing; the usual contingent appropriation of \$20,000 a year is never touched by the commissioners. The affairs of the canal have been so wisely managed that the revenues collected have been sufficient, not only to keep up repairs, but to complete the system of rip-raps, which will insure the banks from waste by washing and floods. Their report shows a bal-

ance of \$63,825.13 to the credit of the canal for the year ending Nov. 30, 1888, after the payments of all debts and accounts for maintenance, repairs, management, and materials and improvements thereon.

Penitentiaries.—The report of the Commissioners of the Illinois State Penitentiary, at Joliet, shows a healthy condition of that prison. The number of convicts there on Sept. 30, 1888, was 224 fewer than on Sept. 30, 1886. There was a falling off in the earnings at that institution of about \$50,000 during the two years, and \$85,000 was drawn from the general appropriation to make good the deficit. As the contract system has been abolished, the Governor, in his message, says: "I know of no other or better than the State-account plan. To put this into execution, so as to keep the convict employed, and not to bring his labor in conflict with free outside labor of the honest mechanic, artisan, or laboring man, will test the ingenuity of the most skilled legislator. In the mean time, under existing conditions, appropriations will be necessary for the penitentiaries of the State for the next two years. I recommend at least \$100,000 for the one at Joliet." At Chester, the report shows no material change in the number of convicts confined in the prison from the two previous years. Existing contracts for the labor of about 225 convicts will expire June 30, 1890; other contracts for about 150 convicts will not expire, with the existing privilege of renewal, until several years later. The appropriation for ordinary expenses for 1887 and 1888 was \$75,000 per annum. The commissioners and warden ask for \$65,000 per annum for the next two years for ordinary purposes, and \$15,000 for other and special purposes.

Education.—The report of the Superintendent shows that the number of children of school age in 1888 was 1,118,472; the number of pupils enrolled was 751,349; the average attendance was 518,043; the average duration of the schools was 153.3 days; the average number of days of attendance for each pupil was 105.7; the average monthly wages of male teachers was \$52.93; of female teachers, \$43.09. The total expenditures for public schools was \$10,661,017.15. Of this amount there was paid for salaries of teachers \$6,714,516.93, and the permanent productive school funds for the State, not including the university, was \$10,333,132.99. The University of Illinois, the State and Southern Normal Universities, were reported as in excellent condition.

Charities.—The tenth biennial report of the State Commissioners shows that for 1886 and 1887 there was distributed \$3,800,250.26 among the institutions under their jurisdiction, as follows: Northern Hospital for the Insane, \$349,847.02; Eastern Hospital for the Insane, \$893,511.74; Central Hospital for the Insane, \$497,833.91; Southern Hospital for the Insane, \$350,859.10; Institution for the Deaf and Dumb, \$318,281.75; Institution for the Blind,

\$111,884.80; Institution for Feeble-Minded Children, \$201,261.28; Soldiers' Orphans' Home, \$158,660.58; Charitable Eye and Ear Infirmary, \$71,242.67; State Reform School, \$805,933.75; Soldiers' and Sailors' Home, \$544,453.66. The Northern Hospital is at Elgin, and from Oct. 1, 1886, till Sept. 30, 1888, 712 patients were under treatment, of whom 189 were discharged. The Eastern Hospital is at Kankakee, and during the same time 2,121 patients were at the hospital, of whom 512 received their discharges. The Central Hospital is at Jacksonville, and 1,401 persons were at that institution during the time mentioned, of whom 478 were discharged. The Southern Hospital is at Anna, where, from Oct. 1, 1887, till June 30, 1888, 732 patients were treated, of whom 102 were discharged. It is estimated that the insane increase at the rate of 1,300 to 1,500 each year in Illinois, and efforts are being made to revise the lunacy law so that greater stringency shall be used in committing those alleged to be insane. The Institution for the Deaf and Dumb is at Jacksonville. On June 30, 1888, there were 581 pupils on the rolls, and since the previous report of Sept. 30, 1886, there had been admitted 77 new students, 24 graduated, and 88 removed. At the Institution for the Blind, likewise situated at Jacksonville, there were during the nine months ending June 30, 1888, 171 persons enrolled, of whom 97 were males and 74 females. In June, 1888, six students were graduated and certificates of proficiency were issued to those who had taken the workshop course. The Soldiers' Orphans' Home is at Normal, and 611 inmates were there during the time between Oct. 1, 1886, and June 30, 1888; and 255 were for various reasons removed during that period. The other charitable institutions referred to were, according to the Governor's last message to the Legislature, "wisely, humanely, and economically managed by the various boards of trustees and superintendents charged with their care."

Railroads.—During 1887-'88 there were sixty-one railroad corporations, controlling and operating 13,000 miles of road, including 346 miles built in 1888, giving steady employment to 56,000 persons, the aggregate of whose wages exceeds \$38,000,000 a year. The estimated total cost of construction and equipment of all the roads exceeded \$380,000,000; and they carried, in 1888, 32,000,000 passengers at an average rate of 2-29 cents a mile, the total income of the passenger department of these roads for 1888 amounting to more than \$17,000,000. They transported in the same year more than 53,000,000 tons of freight, at an average charge of one and six tenths cent (1-6) a ton a mile, the total income from which was about \$39,000,000. The total amount of the operating expenses of all the roads amounted to more than \$88,000,000, contributing in the way of taxation for State and local purposes \$2,789,612.

Live-Stock.—The acts of 1885 and 1887, creating the board of live-stock commissioners, was a timely and prudent effort upon the part of the State to protect the lives and health of domestic animals. The board appointed to carry the law into execution reports to the Legislature the complete extirpation of contagious pleuro-pneumonia in the State. The returns of local assessors show, for 1888, for purposes of taxation, the following number and value of domestic animals:

ANIMALS.	Number.	Value.
Horses.....	998,081	\$24,526,145
Mules and asses.....	100,618	2,517,970
Cattle.....	2,428,484	17,229,877
Sheep.....	554,910	584,769
Hogs.....	1,966,700	2,798,828
Total.....		\$47,901,587

The practice of assessing all property in this State by local assessors, at one third or one fourth its actual or cash value, indicates that the real value of the domestic animals above enumerated would exceed \$150,000,000.

Political.—At the presidential election there were cast 370,473 votes for Gen. Harrison; 348,278 for Mr. Cleveland; 7,090 for Mr. Streeter; and 21,695 for Gen. Fisk. The following Republican State officers were also chosen: Joseph W. Fifer, for Governor; Lyman B. Ray, for Lieutenant-Governor; Isaac N. Pearson, for Secretary of State; Charles W. Parey, for Auditor; Charles Becker, for Treasurer; and George Hunt, for Attorney-General. The congressional delegation includes 13 Republicans and 7 Democrats, representing a gain of one for the Democrats over the representatives sent to the Fiftieth Congress. The Legislature includes in the Senate 35 Republicans and 16 Democrats; in the House, 80 Republicans and 72 Democrats.

IMMIGRATION, PAUPER. The war of the American Revolution virtually put an embargo upon immigration for seven years, and the European wars that immediately followed, and continued almost without interruption until 1815, checked, for a whole generation, the movement across the Atlantic. Scattered notices from shipping-lists furnish the only basis for estimates as to the number arriving previous to 1820, and investigators differ considerably in their estimates. As shrewd a guess as any seems to be that of 250,000 immigrants from 1775 to 1820, which was made by Dr. Loring, of the United States Statistical Bureau, some years ago. Since 1819 the law of Congress has required that all who come to the sea and lake ports should be registered at the custom-houses. Their names, ages, sex, nativity, occupation, and destination are ascertained and reported to the National Government. The State Department, at first, and the Treasury Department latterly, have published annual reports of the number and character of the immigrants. So far as these documents go, they may be received with confidence;

but there were manifest omissions at some ports in the earlier years, and they could give no account of foreigners who entered this country through other channels than the sea and lake ports. And yet the official returns rendered by the collectors of customs do not indicate what portion of the whole may be considered pauper immigrants. The act of Congress regulating immigration, passed Aug. 3, 1882, authorizes the Secretary of the Treasury to enter into contract with such board, commission, or officer, as may be designated by the Governor of any State, to take charge of the local affairs of immigration in the ports of such State, and to provide for the support and relief of such immigrants landing therein as may fall into distress or need public aid, to be reimbursed by the collector of the port out of the fund derived from such tax. It is made the duty of such board, commission, or officer, to examine and inquire into the condition of all passengers arriving at such ports; and if, on such examination and inquiry, there shall be found any convict, lunatic, idiot, or any person unable to care for himself, who is likely to become a public charge, this shall be reported in writing to the collector of such port, and such person shall not be permitted to land; and the expense of his return shall be borne by the vessel in which he came. Under this act the Secretary of the Treasury, soon after its passage, entered into contract with the Commissioners of Emigration of New York, with the Boards of Charities of Massachusetts and Pennsylvania, and with various local boards, commissions, and officers of other States; and the examinations, inquiries, landing, relief, and care of all immigrants arriving in the United States since then have devolved upon these local officers, commissions, and boards. A ruling of the United States Treasury Department, in September, 1885, authorized the commissioners of emigration of the State of New York, their agents or servants, to go on board of all vessels arriving from foreign ports at the port of New York; and all immigrants found thereon may be taken to Castle Garden and there examined; and if, on such examination, there shall be found any persons not entitled to land, the Collector of the Port of New York, and the owners, agents, or masters of the vessel on which such persons arrived, shall be forthwith notified in writing; and the commissioners of emigration shall detain under their custody or care, either on shipboard or elsewhere, all such persons forbidden to land by the second section of the act of 1882, except convicts, who, as provided in the fifth section of "An act supplementary to the acts in relation to immigration," approved March 3, 1875, shall be subject to the charge and direction of the collector of customs of said port; and such detention shall continue until the sailing of the vessel upon which such persons arrived, or until proper provision can be made for their return to the countries

whence they came. It was the evident intention of Congress, by these enactments, to secure ample and proper protection to immigrants arriving at our shores, and, at the same time, guard against the influx of convicts, lunatic, and otherwise infirm and chronic alien paupers. The law, as at present executed, however, is little or no barrier against the shipment of these classes, and there is no remedy after they have passed the port at which they have landed. The expenditure of a small sum for passage to any interior point generally insures the delivery of the person to the place of destination; and, though he be insane, or otherwise incapable of self support, no provision is made for his return, and he falls upon the locality where he may be as a public charge through life. The statistics of the prisons, penitentiaries, poor-houses, asylums, and other institutions of the United States, show that there are proportionately many more of the criminal, insane, pauper, and helpless alien classes in them than in former years; and the evils from these sources, apparently, are constantly and heavily increasing. These evils, it is claimed, are due largely to defects in the Federal law, in that its execution depends upon local officers, likely to be influenced by local considerations, in the generally hurried and superficial examination of immigrants at the time of their landing, in the absence of any reciprocal action between the officers of the various ports, and in the failure of the statute to prescribe any penalty for its violation. The clearest exposition of the subject ever made from the standpoint of Americans abroad was through one hundred consuls of the United States to the General Government at Washington in 1888. The consul at Palermo said: "Emigration is here considered as a mere matter of business, so far as steamship companies are concerned, and it is stimulated by them in the same sense that trade in merchandise is when they desire a cargo, or to complete one, for their vessels. Law never enters the subject, so far as emigrants are concerned. The company desire that all space in their vessels shall be occupied, and, in order to accomplish this, they employ emigrant brokers or agents, to whom they pay from three to five dollars for each emigrant obtained; sometimes even more than the latter sum is paid, the amount depending on the competition or the urgency of the case. The brokers, as may be imagined, are a low, lying, dishonorable set, who will swear to anything to induce the poor, ignorant people to emigrate, and thus earn their fees. They tell them that work is plentiful and wages very high, and that after they shall have labored for a year or two they will have saved enough to return to their homes and live without doing anything. Thus the poor, ignorant people are wheedled into selling or mortgaging what little they may have, and after the broker has received his fee from the transportation company he never thinks or

cares more for the poor people whom he has swindled. Until the United States shall have arrived at some agreement with Italy in the premises, this will continue. It would be a great blessing if the class of Italians who are practically forced by the brokers to emigrate could be kept from landing on American shores." The consul at Venice wrote: "Emigrants are recruited from those people whom, as a rule, their native country does not wish to retain. They are often fugitives from justice, and, in many cases, those leaving their native countries to evade legitimate duties imposed by law—men whose stupendous ignorance is unequalled by any other class of people found in the civilized world. They are no more fitted to perform the duties of citizenship than slaves newly released from bondage. They have no intention of becoming citizens of the United States. They desire simply to get more money for their work, and to decrease as much as possible the amount of work to be done for the money received." This word came from Vienna: "I am quite positive that the intelligent classes among the emigrants are in the minority. The bulk of emigration comes from Bohemia, and it is composed of the lower classes. The educated, intelligent Bohemian remains at home. Many of the emigrants have most perverted ideas of liberty. They believe that in the United States no policeman interferes with entire freedom of action. Many of them think they have been governed too much at home, and hope to find a country where they will not be governed at all. During the last summer no fewer than eighty runners of the Hamburg-American Packet Company and of the North German Lloyd, were arrested at Oswiecine and Kraken, in the province of Galicia, on the charge of fraud and encouraging emigration. There can be no doubt that they were on the hunt for contract-laborers." The consul at Annaberg, Saxony, said: "Any one who has observed the masses of humanity crowding on board the great ocean steamers bound for the promised land, can not but be convinced of this fact. A few days ago I saw at a railway junction two common freight-cars filled with emigrants for the United States, forlorn-looking creatures, half-starved and not decently clad. In these cars were men, women, and children, with all the worldly goods they possessed, packed like sardines, to the number of sixty. There was not a seat in the car, not so much as a board on which the poor mothers with infants might rest. I have seen whole trains of just such emigrants. I have observed these people on all occasions, and I do not hesitate to say that one third of all the emigration to the United States from the Continent of Europe is not only undesirable, but positively injurious and dangerous. So much of the scum of the population of these old countries has been transferred to us, that among well-ordered people who remain it has become a

settled idea and a common expression, that America is the asylum for all the disreputable persons of Europe. The other day I had a small job for a printer. I found his door locked, and turned away, when a woman stuck her head out from a window opposite and shouted: 'He's gone to America, where all the rascals go.' I have come across direct information confirming the evidence now before the committee, to the effect that much undesirable emigration is going on to our country by way of Canada. These emigrants are dupes of rascally agents (located, as a rule, in the German shipping-ports) who, knowing that the emigrants are so poor that they might be refused a landing in New York, sell them tickets to Montreal or Quebec, representing to these ignorant creatures that passage to those points is cheaper than to New York, and that, once in Canada, they have but to step over the border and be in the United States. The transportation companies advertise extensively all over Europe, and they have innumerable agents who picture the United States and the opportunities it offers to emigrants in glowing colors; and it is common belief that they misrepresent nearly everything in connection with the United States. The character of all the emigration has lately changed for the worse, and now more than ever is decidedly injurious to our working people and our general peace and prosperity."

It has been said that to remedy these evils the execution of the law should be placed in the hands of Federal officers untrammelled by local influences and free to act in the interest of the entire country; that the examinations should be thorough and vigilant and the capacity of each immigrant for self-support be conclusively established before he is permitted to land; that the procedure at the various ports, so far as practicable, should be uniform and reciprocal; and that violations of the statute in bringing criminals, insane, and other helpless persons to the country, should subject the owners of the vessels implicated to a fine in each case, in the nature of a libel on the vessel, to be enforced in the courts. The Secretary of the Treasury, in 1886, sent to the House of Representatives a bill providing a penalty of \$500 for the permanent landing of alien paupers, idiots, insane, and convicts. By it the Secretary was given power to appoint commissioners of immigration, not to exceed three in number, at Boston, New York, Philadelphia, Baltimore, Key West, New Orleans, Galveston, and San Francisco, to take exclusive charge and provide for the support and relief of such alien immigrants as may fall into distress; but this bill did not pass. Another unsuccessful bill was introduced in the Senate of the United States in December, 1887, which provided that the Secretary of State shall establish such rules and regulations, and issue from time to time such instructions to consuls of the United States, not inconsistent with law or with treaty

obligations, as shall enable well-disposed and worthy persons who desire to become resident citizens of the United States to obtain certificates of character and fitness therefor from the consul of the district in which they reside without hardship or unreasonable delay, which certificate shall contain, in addition to other specifications required by this act or which may be prescribed by the Secretary of State, the full name of the individual receiving it, the place of birth, age, occupation, last legal residence, physical marks or peculiarities, and all facts necessary for identification of such individuals; that no certificate shall be granted to any convict except those convicted of political offenses, nor to any lunatic, idiot, or any person unable to take care of himself without becoming a public charge, nor to any Anarchist, Nihilist, or person hostile to the principles of the Constitution or form of Government of the United States, nor to any believer or professed believer in the Mormon religion who fails to satisfy the consul, upon examination, that he intends to and will conform to and obey the laws of the United States, nor to any person included in the prohibition in the act to prohibit the importation and immigration of foreigners and aliens under contract or agreement to perform labor in the United States, the Territories, and the District of Columbia, approved Feb. 26, 1885, or in acts amendatory to that act. In addition to this the bill provided for penalties to be imposed on any vessel violating the law by transporting uncertified persons, established machinery for enforcing the law, and created an immigration fund by imposing a per-capita tax on each immigrant, to be used in defraying the expenses incident to such regulation of immigration. These efforts led to an investigation by a committee of Congress in 1888, a part of whose work was the collection of the consular reports noted above. As the result of its labors, the committee has visited the several centers of immigration in the eastern and central parts of the United States, and it is now (January, 1889) about to report a bill providing for the appointment of consular inspectors to every foreign land that sends large numbers of immigrants to the United States, and these inspectors will be attached to the consular and ministerial services in the several countries. Those who desire to come to the United States must file applications, giving age, birthplace, occupation, purpose, pedigree, and other important or material points, thirty, sixty, or even ninety days (as may be decided upon), before taking passage; and during that time the inspectors must investigate the past lives and records of the applicants, and then act according to the finding. If the candidate for admission to the United States is honest, sober, and industrious, and desires to come over to better his condition or join those of his family who are already here, and if he gives promise by his past life to make a good citizen, he will receive

his passport. But if he is found to be a pauper, an idiot, a criminal, or insane; if he is depraved and dissolute, or wishes to come over in fulfillment of a contract, he will be rejected, and without his papers, even if he secured passage on a vessel, he will not be permitted to land. It is believed that this plan, or a modification of it, will become a law within the year.

INDIA, an empire in Southern Asia, subject to Great Britain. By act of Parliament, the British Government in 1858 assumed the administration of all the territories of the East India Company. The powers of the company and its Board of Control are now exercised by the Secretary of State for India, who is a member of the British Cabinet. The Queen of Great Britain was proclaimed Empress of India at Delhi on Jan. 1, 1877. The executive authority in India is vested in the Governor-General, commonly spoken of as the Viceroy, who acts under the orders of the Secretary of State, and has power to make laws, by the advice of his Council, for British India and for British subjects in the native states, subject to the approval of the British Government. The ordinary measures for the government of India are usually expounded by the Secretary of State at the presentation of the annual budget, and receive the approval of Parliament.

The Earl of Dufferin, who was appointed Viceroy in 1884, resigned in January, 1888, on account of the state of his wife's health, but did not hand over the administration to his successor till November. The present Viceroy is the Marquis of Lansdowne, who was transferred from the Governor-Generalship of Canada. Lord Dufferin, as a mark of honor for his annexation of the Kingdom of Ava, or Upper Burmah, was created, before his retirement, Marquis of Dufferin and Ava and Earl of Ava. The native press expressed satisfaction at his retirement, as he had disappointed all expectations, and undone much of what was done by Lord Mayo, Lord Northbrook, and Lord Ripon for the good of the people of India. His administration was marked by a vigorous foreign policy in Afghanistan and Burmah, which increased the burdens of the poor Indian taxpayers without any resulting benefits for them, but the domestic policy of progress and reform, in sympathy with the desires and aspirations of the natives, was abandoned when Lord Dufferin took the government from Lord Ripon. The Secretary of State for India is Viscount Cross.

The Council of the Governor-General consists of six ordinary members and the Commander-in-Chief. With from six to twelve additional members, appointed by the Viceroy, they constitute the Legislative Council. The Viceroy and the Governors of Bombay and of Madras, whose appointments are political, though not vacated by a change of ministry, are nominated by the home Government; and so are, sometimes, the members of the Council and the judges of the High Court, though

usually the recommendations of the Government of India are followed in filling these posts. The covenanted civil service was formerly widely separated in pay, rank, and privileges from the uncovenanted, and the distinction is still officially observed, although there are numerous uncovenanted civil servants in the special departments of accounts, archæology, customs, education, forests, geological survey, jails, meteorological survey, mint, opium, pilot service, post-office, police, public works, registration, salt, surveys, and telegraphs, whose duties are more important and as highly remunerated as those of a large proportion of the covenanted officials. Among the 941 appointments of the covenanted service, ranging from an assistant-magistrate up to a lieutenant-governor in the executive branch, and up to a chief-justice of the High Court in the judicial branch, only twelve are held by natives who entered the service by competition in England under the old rules, and forty-eight by natives appointed in India direct, under the statute of 1870 and the rules made by Lord Lytton in 1879. The special services employ about 2,000 officials, of whom one quarter, mostly in the lower grades, are natives. The uncovenanted executive and judicial service, consisting of deputy-magistrates and subjudges and their subordinates, is mostly in the hands of natives, who fill 2,449 out of 2,588 posts. Of the 114,150 posts below these, with salaries less than 1,000 rupees, 97 per cent. are held by natives. A Civil Service Commission that was appointed in October, 1886, to devise a scheme that will do justice to the claims of natives to higher and more extensive employment in the public service, has reported in favor of doing away with the names "covenanted" and "uncovenanted," and dividing the civil service into imperial and provincial. Instead of throwing the higher grades of offices wider open for the admission of natives, the commission, which was composed exclusively of officials, would abolish the appointment of natives under the statute of 1870 and Lord Lytton's rules, and compel all candidates for the imperial civil service to pass the examinations in London, which are to be open to applicants between the ages of nineteen and twenty-three, the extension of the limits of age being intended to attract more university graduates, as well as to satisfy the demands of the natives of India. The most important changes are the attaching to the provincial service of 108 offices of the covenanted service and of all of the special services, excepting some of the chief posts, which are transferred to the imperial service. By this measure the Secretary of State will be deprived of the chief part of his remaining patronage, and many offices that have heretofore been held by Europeans will fall to natives, who will receive much smaller salaries.

Area and Population.—The first complete census of British India was taken on Feb. 17, 1881, when the population was found to be 201,790,-

758, inhabiting an area of 1,064,720 square miles. The feudatory native states, in which the rulers govern under the advice of the British authorities, have an aggregate area of 509,780 square miles, and in 1881 contained 55,191,742 inhabitants, making the total area of India 1,574,450 square miles, and the total population 256,982,495. The density of population for the British territories is 229, for the native states 108, and for all India 184 to the square mile. The density varies from 441 per square mile in Cochin, a native state in Madras, and 408 in the Northwest Provinces and Oudh, to 79 in Rajputana and 43 in Lower Burmah. The Christian population comprised 968,059 Roman Catholics, 858,712 Anglicans, 20,084 Scotch Presbyterians, 23,185 Episcopalians, 188,200 Baptists, Congregationalists, and other Protestants, 2,142 Greeks and Armenians, and 865,235 unspecified. The British-born population of India was returned as 89,798, divided into 77,188 males and 12,610 females. There are more than one hundred languages and dialects classed with languages spoken in India. The numbers speaking the principal languages are as follow: Hindoostani, 82,497,168; Bengali, 38,965,428; Telugu, 17,900,858; Marhatti, 17,044,684; Punjabi, 15,754,798; Tamil, 13,068,279; Guzarati, 2,620,688; Canarese, 8,387,027.

Emigrant labor from India is mainly recruited in Madras. The bulk of the emigration is now directed to the Straits Settlements, to Burmah, and to Ceylon, where the tea-cultivation and the pearl-fisheries attract coolie labor. There is no emigration at present to French colonies, and very little to Natal, Mauritius, or any distant English colonies, excepting Trinidad and Demerara, a fact attributed to the decline in the sugar-trade. The number of emigrants from Madras in 1887 was 126,831. The Government, in September, 1888, prohibited further emigration to any of the French colonies, on the ground that the French authorities decline to submit to a form of procedure required for the protection of the coolies similar to that adopted in the British colonies.

The following cities contained over 150,000 inhabitants: Calcutta, with its suburbs, 871,504; Bombay, 778,196; Madras, 405,848; Hyderabad, 354,692; Lucknow, 261,308; Benares, 199,700; Delhi, 178,898; Patna, 170,654; Agra, 160,208; Bangalore, 155,857; Amritsar, 151,896; Cawnpore, 151,444.

Education.—Education has made much progress during the past few years. English schools have been established in every district, and in each of the provinces a department of education, under a director and a staff of inspectors, has been organized. Some of the colleges and schools are entirely supported by the Government, and all the higher institutions receive some aid. In 1886 there were 16,048 Government schools of all kinds, with 868,772 pupils; 61,183 missionary and other schools, with 1,662,835 pupils, that were partly supported

by Government grants; and 45,412 schools, with 812,454 pupils, that received no aid. The total expenditure on education in 1886 was 24,243,950 rupees, of which one third was paid out of governmental and provincial revenues. The universities of Calcutta, Madras, and Bombay admitted 3,802 students during the academic year 1885-'86. There are 106 other colleges for males, and two have been established for girls, which had 81 students in 1886. The technical, medical, industrial, and other special schools number 285, with 12,667 students, exclusive of 88 schools for females, with 832 students. The number of persons receiving instruction in 1886 was 3,382,851 out of a population of 32,000,000 between the ages of five and ten years and 43,000,000 between ten and twenty. Very few of the Mohammedan population have received any education, and hence they resist the demands of the National Congress for the multiplication of native employes in the civil service and the establishment of a genuine system of representative local self-government, since the Hindus who have received a European education, about 1,000,000 in number, would be the only available candidates for official places. The Government has decided to introduce stricter regulations for the discipline of the schools, by keeping pupils under constant supervision in boarding-houses, and introducing the use of the rod wherever local feeling permits, in order to curb the spirit of independence that manifests itself with adult years in demands for representative institutions and assaults on the Government by a satirical press. The institution of a homogeneous system of education under the guidance of the Government was the result of the Educational Commission, which made its report in 1883. The system of board-schools that were established are destined to cover eventually the whole of India. The natives responded quickly to the increased facilities that were afforded them. Two years after the commission made its report there were 75 per cent. more people under instruction than there were two years before it sat. The extension of education has not been equal all over India. In Bengal, lack of funds has prevented the Government from carrying out the suggestions of the commission, and in 1886-'87 there was an actual diminution in the number of pupils in the inspected elementary schools, owing to the withdrawal of subsidies from small temporary or backward schools, while in the higher educational institutions of the same Government there was a considerable increase of students. The Mohammedans of Bengal, who were originally proselytized from the ignorant peasant class of low-caste Hindoos, were slow to take advantage of the opportunities for education, but the special efforts of the Government of Lord Mayo resulted in a tenfold increase of Mohammedan pupils. Until recently they took no interest in higher education, and, al-

though in the early part of the century nearly all the lawyers in Calcutta were Mussulmans, they disappeared from the professions and Government offices from the opening of the educational era till quite recently. In the Northwest Provinces and Oudh, on the contrary, the Mussulmans, who constitute only 18 per cent. of the population, but preserve the instincts of a governing aristocracy, are found in the schools and colleges considerably in excess of that ratio, and in open competition with the Hindoos secure 84 per cent. of the administrative offices and 57 per cent. of the superior judicial and executive posts to which natives are eligible. The Mussulman nobles have founded and endowed at Aligarh one of the largest and finest colleges in Islam. A prime reason for the preponderance of Hindoos in official and professional life is that they devote themselves chiefly to English, mathematics, and other studies that are of practical advantage, whereas Mohammedan youth of promise are usually sent to the religious colleges to become versed in Arabic and the theology and laws of Islam.

Commerce.—The ocean commerce of India, exclusive of Government stores and treasure, amounted in 1887 to 697,100,000 rupees of imports and 901,100,000 rupees of exports, showing an increase in ten years of 131,000,000 rupees in the imports and 228,000,000 rupees in the exports, or an expansion of 33 per cent. in the total trade. The export trade in the principal staples showed the following increase in the ten years: Raw cotton, from 93,800,000 to 134,700,000 rupees; seeds, from 78,600,000 to 92,200,000 rupees; rice, from 69,500,000 to 88,300,000 rupees; wheat, from 28,700,000 to 36,200,000 rupees; hides and skins, from 37,500,000 to 51,490,000 rupees; tea, from 30,600,000 to 48,800,000 rupees; raw jute, from 35,100,000 to 48,600,000 rupees; jute manufactures, from 7,700,000 to 11,500,000 rupees; indigo, from 34,900,000 to 36,900,000 rupees; cotton twist and yarn, 7,400,000 to 84,100,000 rupees; cotton manufactures, from 15,500,000 to 24,300,000 rupees; wool, from 9,600,000 to 13,400,000 rupees; coffee, from 13,400,000 to 15,100,000 rupees. Opium showed a falling off, the export in 1878 having been valued at 123,700,000 rupees, and in 1887 at 110,700,000 rupees. The exports of gums and resins increased each year till 1887, when they fell below the value in 1878, owing to exceptional causes. Jewelry, sugar, wool, woolen manufactures, and raw silk show a considerable and increasing decline, while the exports of hemp, ivory, and coir, and their manufactures, of the manufactures of silk, of drugs and medicines, and of oils, spices, and tobacco have grown in importance. The sea-borne imports of merchandise, exclusive of Government stores, in the year ending March 31, 1887, were valued at 586,960,710 rupees, and the imports of treasure on private account at 110,483,290 rupees, making a total of 697,-

443,930 rupees. The merchandise exports were 884,895,780 rupees in value; treasure, 16,844,210 rupees; total, 901,289,990 rupees. The imports of Government stores and treasure amounted to 81,158,890 rupees, and the exports to 774,610 rupees. The total imports of gold during the year were 28,285,610 rupees; of silver, 82,197,610 rupees; exports of gold, 6,564,920 rupees; of silver, 10,689,380 rupees. The principal countries that participated in the trade of India in 1887 and their respective shares in the imports and exports of merchandise in rupees were as follow:

COUNTRIES.	Imports.	Exports.
Great Britain.....	467,095,190	842,986,100
China.....	21,579,580	134,385,810
France.....	8,083,150	77,280,150
Straits Settlements.....	15,905,460	41,546,010
Italy.....	4,255,410	52,721,660
United States.....	11,703,810	32,481,040
Belgium.....	2,952,580	86,084,450
Austria-Hungary.....	7,287,640	26,894,320
Mauritius.....	16,561,550	8,515,320
Egypt.....	666,070	25,484,110

The imports of cotton manufactures were 291,643,850 rupees in value; of metals and hardware, 55,544,950 rupees; of silk, raw and manufactured, 21,771,111 rupees; of sugar, 20,805,390 rupees; of woolen goods, 15,288,650 rupees; of liquors, 14,597,740 rupees; of railway material and rolling-stock, 14,351,240 rupees; of oils, 14,084,300 rupees; of machinery, 18,714,590 rupees; of coal, 18,166,150 rupees.

The imports by way of the land frontiers were valued for the year 1887 at 51,410,386 rupees, and the exports at 8,463,343 rupees.

Agriculture and Industry.—There are 864,051,611 acres of land in British India, exclusive of 40,185,729 acres of forests; but only 152,834,640 acres are actually cultivated, including 22,725,891 acres of fallow land. Of the 166,492,453 acres of uncultivated land, about half is fit for cultivation, affording enormous scope for the extension of the wheat, cotton, coffee, tea, indigo, and other crops of exportable produce. The distribution of the crops in 1887 was as follows: Rice, 23,114,662 acres; wheat, 19,863,040; other grains and pulse, 71,489,218; tea, 226,412; cotton, 9,852,654; oil-seeds, 7,678,882; indigo, 1,034,889. The exportation of wheat, which was always one of the principal crops of India, was rendered possible by the abolition of the export duty in 1873, and has grown to its present proportions in consequence of the development of the Indian railroads and the Suez Canal. Oil-seeds were freed from the export duty in 1875, and their exportation increased from 4,000,000 cwt. before that time to 18,000,000 cwt. in 1885. The export of indigo in 1887 showed an increase of 15½ per cent. over the preceding year in quantity, but prices fell heavily, except in the qualities demanded in the American market, owing to the competition of the Java indigo, which is said to rival the best produce of Tirhut. The pro-

duction of tea in Assam for 1886-'87 was reported as 61,719,678 pounds, which, added to 16,500,000 pounds produced in Bengal, makes the total product of India more than five times greater than in 1872. There was a failure of the wheat-crop in the Punjab and the Northwest Provinces in 1886-'87.

Cotton-weaving by hand was an important industry in India until it was crushed by the competition of the Lancashire mills. Steam-mills have since been established, and the manufacture is expanding with great rapidity. In 1884 there were one hundred mills for the manufacture of cotton and jute, with 22,000 looms and 2,000,000 spindles, giving employment to 110,000 people. The manufacture of iron by modern methods is a new industry that has not yet passed the experimental stage. There is an unlimited supply of iron-ore and of coal, but facilities for transportation are lacking, and new methods of smelting must be devised because the Indian coal contains from 14 to 20 per cent. of ash, six or eight times as much as English coal. This difficulty has been overcome in the application of coal to locomotives and steamboats, and partly overcome in metallurgical industry.

Gold-Mining.—Gold in Southern India is generally found only in quartz reefs at depths where the native miners have been unable to quarry, but which are accessible with the modern appliances for draining and ventilating mines. The gold-bearing rocks of India seem to be much richer on the average than those of Australia or California. In Mysore there are a large number of reefs, which even at shallow depths yield from one to two ounces per ton. The Mysore Gold Company, the first one in India to go into practical operation, has thus far worked with profit what appears to be a true fissure vein, paying twenty per cent. dividends. Other mines have been opened in the same state, and the Maharajah and his Prime Minister do all that they can to promote the industry, and have become shareholders in several of the companies. The pioneer company has now sixty stamps at work.

Navigation.—The tonnage entered and cleared at the ports of British India in 1887 was 7,172,193. The number of vessels arriving and departing by the Suez Canal was 1,671 of 2,946,650 tons. Of 5,140 vessels of 8,514,672 tons entered at all the ports, 1,908 of 2,745,162 tons belonged to England or her colonies; 1,011 of 138,865 tons were British Indian; 1,446 of 75,784 tons belonged to native states; and 780 of 359,861 tons were foreign vessels. The total number cleared was 5,444; the tonnage, 3,657,521. Coasting-vessels are not included in the foregoing figures. Of these there were entered 112,871 of 7,982,226 tons; cleared, 108,821 of 7,941,851 tons.

The Post-Office.—The number of letters, postal-cards, and money-orders that passed through the Indian Post-Office in 1886 was 216,145,796; of newspapers, 20,341,814; of parcels,

1,476,271; of packets, 5,119,385. The receipts were 11,180,860 rupees, and the expenses, 18,026,040 rupees.

Telegraphs.—The telegraph lines in 1887 had a total length of 30,034 miles, with 86,891 miles of wire. The number of messages was 2,584,685. The mileage and the business have about doubled in ten years, and the receipts also, which are not yet equal to the expenditures, although the disparity is less than in 1887, when the figures were 8,400,000 rupees for receipts, and 4,700,000 rupees for expenditure, whereas in 1887 they were respectively 6,900,000 and 7,100,000 rupees.

Railroads.—The number of miles of railroad open to traffic on March 31, 1888, was 14,888, of which 8,911 miles belonged to guaranteed companies, 654 to assisted companies, 8,994 to the Government, and 824 to native states. The mileage had increased from 13,390 miles in 1887, 12,376 in 1886, 11,988 in 1885, and 10,784 in 1884. There were 2,487 miles under construction in 1888, and 355 miles more had been sanctioned. The length of the guaranteed lines has decreased, the roads having been purchased by the state. There are 50 separate lines, of which 22 belong to the Government. The guaranteed companies have the concession of the profitable trunk lines, while the state lines serve as feeders. The total passenger traffic increased from 58,875,918 in 1882 to 95,411,779 in 1887; the freight traffic from 14,838,243 tons to 20,195,677; the receipts from 158,000,000 rupees in 1882 to 184,600,000 rupees in 1888; and the cost of operation in the same time from 76,600,000 to 91,000,000 rupees. The capital expended in railroad construction up to the beginning of 1887 was 1,704,989,107 rupees. The Government had expended £78,858,404 in building railroads and £35,048,868 in guaranteed interest on the subsidized lines up to March 31, 1888. The increase of capital in the guaranteed lines in five years had been £4,896,262, and in that period there had been a profit of £10,700, whereas up to 1888 there was a loss of more than £17,000. The existing railroads form five classes, viz., state lines worked by companies, with a capital expenditure of £62,500,000; state lines worked by the Government, with £50,000,000 of invested capital; the lines of guaranteed companies, which have invested £61,888,000; the lines of assisted companies, which cost £3,750,000; and those owned by native states, with a capital of more than £5,000,000. The construction of military railroads in recent years has added to the annual losses of the treasury on account of railroads, the net deficit in 1886-'87 being 9,827,927 rupees, the transportation of grain having been much less than in the preceding year. The cost of the Scinde-Pishin and Bolan Pass strategic lines has been over 80,000,000 rupees.

The Army.—The strength of the British garrison in India for 1887-'88 was fixed in the army estimates at 2,551 officers and 69,240

men. Including the native army, but exclusive of artificers and followers, the Indian forces at the close of 1886 numbered 5,192 officers and 183,594 men. The Hindoo feudatory states have armies numbering 275,075 men and 3,872 guns, and the Mohammedan states 74,760 men and 865 guns. The British, after an investigation of the strength of the native armies in 1884, had in contemplation measures for the compulsory disbandment of these forces. When the Russian war-scare came two years later, the native princes, actuated partly by the old dread of a barbarian invasion from the north, and partly by the desire to prove that their military establishments are a source of strength instead of a menace to the empire, began to offer pecuniary aid and military service to the Government in case the frontier is attacked. Such offers continue to be received. In the beginning of 1888, with 60 lakhs that the Nizam of Hyderabad had promised to contribute, and 10 lakhs proffered by the Maharajah of Cashmere, the specific offers of money amounted to over a crore of rupees, or a million sterling. The princes offered troops in addition, and others of the feudatory princes, including the rulers of Bhawalpore, Patiala, Tonk, Rampore, Alwar, and Mandi, offered troops or money according to the necessities of the empire, some of them placing the entire resources of their states at the disposal of the Government.

Finances.—The revenue for the year ending March 31, 1886, was 746,641,970 rupees, and the expenditure 772,659,230 rupees, of which 598,897,580 rupees were expended in India and 184,261,700 rupees in Great Britain. The revised estimates for 1886-'87 make the revenue 760,810,000 rupees and the expenditure 760,210,000 rupees. The budget estimates for 1887-'88 calculate the total receipts at 774,600,000 rupees, of which 229,880,000 rupees represent the land revenue, 154,320,000 rupees the road and railroad receipts, 88,930,000 rupees the revenue from the opium monopoly, 66,050,000 rupees the salt-tax, 42,250,000 rupees the excise duties, 37,160,000 rupees the stamp duties, 29,570,000 rupees the provincial rates, 20,250,000 rupees the receipts from the postal and telegraphic services and the mint, 16,880,000 rupees the irrigation rates, 14,060,000 rupees assessed taxes, 12,830,000 rupees customs duties, 11,310,000 rupees forest receipts, and 87,870,000 rupees interest, tribute, registration duties, and other receipts. The expenditure for 1887-'88 is estimated at 774,430,000 rupees, of which 221,100,000 rupees represent expenditures on roads and railroads, 191,970,000 rupees for military purposes, 131,800,000 rupees in the civil departments, 80,800,000 rupees the cost of collection, 44,120,000 rupees interest on the debt, 24,410,000 rupees irrigation expenses, 22,620,000 rupees expenses of the post-office, telegraphs, and mint, and 9,030,000 rupees for other purposes. The extraordinary expenditure on public

works, fixed at 49,940,000 rupees, is not charged against the revenue. The revenue in 1887-'88 exceeded the first estimates by 15,000,000 rupees; but there was an unexpected increase in the civil expenditures of almost that amount, while the military expenditures as usual went far beyond the estimates. To avoid a deficit, the Government raised the salt duty and imposed a new import duty on petroleum, expecting to obtain from both sources an increased income of 17,900,000 rupees. The petroleum duty is a specific duty, the rate of which is about eight per cent. The salt duty is raised to one rupee in Burmah and two and a half rupees in other parts of India per maund of eighty-two pounds. The additional tax is expected to bring in 15,000,000 rupees in India and 1,250,000 rupees in Burmah.

The National Congress.—The first Indian National Congress met in Bombay in 1885, and consisted of 50 delegates. The second was held in Calcutta in 1886, and numbered 486 delegates. A third Congress appointed by a more developed system of electoral bodies, and intended to present with the force of a general consensus the opinion of the educated native community on the political needs of the country, assembled in Madras in December, 1887. It was composed of 603 delegates, of whom 311 were appointed at public meetings and 292 were sent by organized associations. Some of the public meetings were great gatherings at the capitals of presidencies, and others concourses of representatives from the towns and villages of a province or revenue circle. The local associations represented at the Congress were of the most varied character, and included race societies of Hindoos, Mohammedans, Eurasians, native Christians, Jains, and Parsees, mercantile corporations, associations of agriculturists, landholders, tenants, and artisans, and a committee of native journalists. The Mohammedan community had taken no part in former congresses and was represented by 83 delegates in this one, which chose a Mohammedan, who had been a member of the council of the Governor of Bombay, for its president. The delegates represented widely different classes. There were Rajahs, Mohammedan nobles, members of legislative councils, officials of various grades, the prime ministers of native states, merchants, bankers, editors, professors, manufacturers, and even a Hindoo abbot, who represented his monastery, and a high-priest.

The Congress adopted resolutions for a permanent organization, providing for twelve standing committees distributed among the great territorial divisions of the Indian Empire, for the preparation of the business to be brought before the Congress at the end of each year, and for the submission of the conclusions of the Congress to the Viceroy and the Secretary of State. Four of the resolutions of the Congress relate to the expansion or modification of the existing institutions of civil government. One of these is a proposal for the separation without delay of

the judicial from the executive branch of the administration. The higher judicial and executive functions were divided in the early part of the century, and the separation has been gradually carried into the lower grades until it is almost complete in some of the provinces. The collector magistrate, however, is a relic of the system preserving its faults in an obnoxious form. He is the executive head, the collector of revenue, the chief of the police administration, and the judicial magistrate for a large area embracing sometimes as many as 2,000,000 inhabitants. As collector he must move about his district, and suitors and witnesses must follow him in his journeys, and submit often to postponements when his fiscal duties are pressing. The Government in some places has appointed a joint magistrate to hear criminal cases, with appeal to the collector. The unruly state of the country was formally pleaded as a reason for abolishing the combination of judge and executive officer in the same person, but now the main obstacle is the expense. Another subject on which the Congress laid much stress is the need of technical education to enable India to compete with Europe and America in modern industries. The 6,287 students under instruction in technical schools and colleges are confined almost exclusively to medicine and engineering, whereas schools in the mechanical arts, such as exist in European countries, and also schools of husbandry, are needed. Another proposal was to raise the limit of incomes on which the income-tax is levied from 500 to 1,000 rupees. The extortions and oppressions of subordinate officials which are mainly practiced on the poor, render the tax odious, and its severity was acknowledged by the Government, which proposed to exempt incomes of persons in public employ below 1,000 rupees, but abandoned its purpose on account of the opposition shown to such an unfair distinction. A fourth resolution suggests the expansion and reform of the legislative councils. The functions of the Viceroy's Legislative Council should embrace the examination and discussion of the budget, in the opinion of the native community, as represented in the Congress, which is sustained by the views of the Anglo-Indian community. English statesmen have often deplored the expenditure of Indian public money without criticism or control, except the farce of a discussion in Parliament before empty benches. The last new rules of parliamentary procedure deprive members of the right of raising questions of general Indian administration in the debate on the Indian budget, which must now be confined to financial and economic subjects, and consequently there is no opportunity of presenting Indian grievances. The Congress asked also for the restoration of the right of interpellation in the Legislative Council, which was conceded to the earlier body in 1854, in regard to all questions of internal civil administration. The Congress desired the increase

of the non-official members from one third to one half of the Council, which would still leave the Government with a working majority, since it could never provoke the united opposition of the non-official members. The army ought, in the opinion of the Congress, to be excluded from the Council, and the introduction of the elective principle in choosing the non-official members of the councils of the Viceroy and the provincial governors was suggested. The proposition for introducing the elective method was as cautious as the other resolutions of the Congress. It is proposed that, after the electoral college has been constituted with due precautions from the municipal councils, chambers of commerce, and other representative bodies, it shall be subjected to the scrutiny and revision of the Government, which would supply the representation of classes that have been passed over or are inadequately represented by nominating additional members. The Congress reaffirmed the resolution adopted in 1886, when Russian aggression in Afghanistan drew from the leading potentates of the feudatory states the offer of a million sterling and their armies, asking the Government to authorize a system of volunteering. The Congress pointed out that the age of mercenaries is over in Europe, that England must depend in a great struggle on the fighting-men among her own subjects, and that India can furnish what England chiefly lacks, that is, numbers. The delegates were of various minds in regard to a resolution requesting the repeal of the arms act, some thinking the prohibition to carry arms a slur on the loyalty of the people, others wishing to avoid so delicate a subject, and others still insisting on the practical hardships of the people whose lives are exposed to wild beasts, whose cattle are killed by thousands, and whose crops are destroyed by wild boars, and a resolution was adopted in favor of transferring the licensing authority from the Central Government to the municipal and rural councils.

In April a meeting of Mohammedans was held at Madras to protest against the National Congress and express regret at the prospective departure of Lord Dufferin, who had shown a desire to promote the welfare of all classes and sympathy with the Moslem community. Anti-Congress meetings were held at Peshawur, Dacca, and other places, where Mohammedans condemned the movement as dangerous. The fourth National Congress met in Allahabad, the capital of the Northwest Provinces, in December, 1888.

Marriage-Reform Movement.—The movement for the reform of the Hindoo customs of infant marriage and enforced celibacy of widows is not merely an extraneous agitation carried on by Europeans, but has many adherents among educated Indians from the classes that chiefly follow these practices, viz., the higher Brahmin and Rajput castes, for neither custom is practised by the lower classes of the people. In Bengal, among every 1,000 girls between the

ages of five and nine, 271 are provided with husbands, and 11 are widows, doomed to an unhappy position of isolation and ignominy. There are about 1,000,000 girl-widows among the Hindoo population. Among the high caste every female child becomes a wife, and many are widows, before reaching their fourteenth year. The custom of enforced celibacy is closely connected with the liability of the husband's heirs to provide that no woman of the family should be without a home, and that of early marriage on the requirements of the Brahmanical religion which make it a father's duty to secure protectors for his daughters. The customs of infant marriage and perpetual celibacy in themselves have no sanction in the Veda, but they were enjoined by religious teachers of mediæval times, and are considered to have a religious sanction by the great majority of the priests. A large sect of the Brahman caste, which represents advanced thought and supplies the intellectual leaders of the people, is strongly in favor of reform, and is supported by large numbers in the lower castes. The British authorities have established by law the right of Hindoo widows to marry again and retain their property, provided they embrace some other religion. They do not venture, however, to meddle with the ecclesiastical laws and religious customs of the Hindoos.

The Government convened a meeting in March, at Ajmere, of representatives of the states of Rajputana, to consider the question of marriage reform. The representative committee adopted a set of resolutions for regulating the excessive expenses of weddings and funerals, which weigh heavily on the community, to the advantage of certain privileged classes, as well as making the marriageable age older in both sexes, to wit, fourteen years for girls and eighteen for boys. These resolutions were embodied in a decree that was issued by the princes of Rajputana, who have always held the highest rank in Hindoo society, and whose initiatory action in reforming the custom of infant marriages was, therefore, strongly desired by the British authorities.

Religious Animosities.—The religious hatred between the Hindoos and Mohammedans has been aggravated by an agitation that has sprung up among the Hindoos against cow-killing. In 1888 the Moslem festival of Mohurram and the Hindoo festival of Ramilla, fell on the same day, with the inevitable result of sanguinary collisions and disorders. Serious disturbances at Agra, Ghazipore, and Coorg, were narrowly averted by the prompt action of the authorities in calling out the troops and volunteers to restore order. At Nujibabad a mob made an attack on a civil officer, at whose command the police fired, killing and wounding many persons.

The Hyderabad Mining Concession.—The Nizam, in January, 1888, granted a monopoly of mining rights in his dominions for ninety-nine years

to two English promoters named Watson and Stewart, who undertook to form a company, primarily to work the coal-mines at Singeréni, for which purpose £150,000 shares of capital, one half paid up should be issued. The remainder of the £1,000,000 nominal capital was to be issued when new mines were opened or iron-works established, in such amounts as the needs of the company warranted. The East India Deccan Mining Company was incorporated in London, and the promoters issued to themselves the 85,000 reserve £10 shares, no part of which was paid up. The Nizam, who expected the company to aid in the material development of his country and the completion of its railroad network, authorized his Secretary of the Interior, Abdul Huk, who was in London as his representative at the Queen's Jubilee, to invest in the enterprise. Abdul Huk, who had privy of the issue of the entire stock, and received a bribe of £150,000, purchased 10,000 shares, bidding the price up to £12 per share. The Nizam, when he learned how the *concessionnaires* were swindling him and the public, in collusion with his agent, compelled the latter to disgorge the bribe, and considered how he could annul the franchise without prejudice to the rights of *bona-fide* investors. On the motion of Mr. Labouchere, the subject was investigated by a special committee of the House of Commons. Sir Salar Jung, who had innocently arranged the purchase of shares in London for the sake of aiding the credit of the company, was soon afterward succeeded as Nawab or Prime Minister by Sir Asman Jah.

The War in Sikkim.—The commercial exploitation of Tibet has been discussed by English writers for some years past, especially since the extensive travels in that country of two native Indian officials were published. The tea-planters of Assam are covetous of the Tibetan market, because the refuse of their product is superior to the article supplied at exorbitant prices by a combination of the Lama priests and Chinese merchants to the Tibetans, who would eagerly exchange their excellent wool for tea, of which they are extraordinarily fond, although so ill supplied. In 1886 a commercial mission to Lhasa was planned by the Indian Government, and an expedition was organized on a large scale, which was to start from Darjeeling, under Colman Macaulay, with an imposing military escort. The Tibetans taking alarm, occupied Sikkim, a frontier feudatory state of India, and built a fort at Lingtu to contest the advance of the English expedition from Darjeeling to the Jelapla Pass. The commercial mission was therefore abandoned, and the Tibetans were left in possession of Sikkim, the Rajah of which retired into Tibet, and made common cause with the invaders. A force was sent in 1887 to reassert British sovereignty, but it was totally inadequate, and retired on discovering the true situation. Great

Britain then made representations to the Chinese Government, considering Tibet a tributary state of China. The Chinese disclaimed any sovereignty over Lhasa, except one of a spiritual and ceremonial nature, and denied having rights of any sort over the numerous kingdoms outside of Lhasa. In the treaty concluded with the British Government on the subject of the occupation of Upper Burmah, the Pekin Government promised to exercise its good offices at Lhasa to prepare a favorable reception for a commercial mission if the English would defer the expedition till a more favorable time. The Chinese ministers in 1876, when the British Government negotiated with them for an additional article to the convention of Chefoo, explained that their authority over Lhasa was very limited, and that they could do no more than exercise their influence to assist a British mission to enter the country. In 1883, when referring to the visit of an English traveler to Yarkand, they declared that they would always issue passports to British subjects to travel in Turkistan, because that was a dominion of the empire, but were unable to issue passports for Tibet, which did not belong to the empire, and the Pekin Government could not overcome the reluctance of the lamas to admit Europeans. And again, in documents relating to the journey of Mr. Carey in Turkistan and Tibet, they made the same disclaimer of authority in Si-Tsang, or the Lhasa territory. The British have nevertheless assumed to regard Tibet as a dependency of China, and regard the two Chinese Ambans Residents at Lhasa, as the actual regents of the country. In the beginning of 1888, before taking military measures for the re-establishment of British power in Sikkim, the Government of China was called upon to secure the evacuation of the country by the Tibetans. The Lhasa authorities have heretofore given currency to the fiction that they are subject to the Chinese Emperor's rule, by pretending to have orders from Pekin whenever they refused permission to travelers to enter Tibet from India. The exclusiveness of the Mongol races is exaggerated in the Tibetans, owing to the mountainous nature of their frontiers, the character of their religion, and their dread of an influx of foreigners to contest with them the scanty food-supply of their infertile land. Formerly the Tibetans received English missions freely, and it is only since they have become afraid of British conquest that they refuse to allow Europeans to set foot on the other side of the Himalayan passes, although they admit native Indian traders.

The Indian Government made preparations to expel the Tibetans from Sikkim in August, 1887, but the Chinese Government pleaded for delay in order that it might use its influence at Lhasa. The request was granted, and the 15th of March was fixed as the last day of grace for the evacuation of Sikkim. The Rajah of Sikkim returned from Tibet to Tumlong, his capi-

tal, before the close of 1887, bringing with him a large train of Tibetan counselors. A regiment of pioneers, with two mountain-guns, was ordered to Sikkim, with the expectation that they would secure possession of the country and frighten away the Tibetans. At their approach the Rajah sent a message expressing a wish to enter into friendly negotiations, and asking for the restoration of the stipend that he received from the Indian Government before he went to Tibet. In conferences with Mr. Paul, deputy-commissioner at Darjeeling, he nevertheless showed an intractable and defiant disposition. The Viceroy addressed the lama on the subject of the violation of the Indian frontier, saying that the Indian Government desired to be on terms of friendship with Tibet; and the Chinese Government brought pressure to bear at Lhasa to secure the withdrawal of the Tibetan garrison in Sikkim. The advance of the British force of 1,800 men, whose ostensible mission was to repair the road that had been constructed by the Indian Government through Sikkim, was preceded by an ultimatum demanding the evacuation of Fort Lingtu, on the receipt of which the Tibetans strengthened their garrison. The Viceroy went to Darjeeling to hold a conference with the Rajah of Sikkim, who refused to come. The Chinese Ambans were recalled from Lhasa on account of the failure of his mediation, and others of higher rank were sent, while the Pekin Government requested a further postponement of hostile operations to allow time for one more diplomatic effort. To this the English would not accede. The expeditionary force, which was increased to 2,000 men and transformed from a pretended road-mending expedition into a regular field force, commanded by Col. Graham, halted on the border, and made preparations to march into Sikkim at the expiration of the time set. Meanwhile the Tibetans collected large bodies of troops beyond the Jelapla and Donkyla passes, ready to enter Sikkim if the British advanced. Lingtu is forty miles from Darjeeling and within seven miles of the Jelapla Pass, which is 18,700 feet above the sea-level. There are several passes connecting Sikkim with Tibet, 18,000 to 16,000 feet in height. Sikkim is the most insignificant of the Indian dependencies of Great Britain, which has no value except that it commands the principal route into Tibet. The road to the Jelapla Pass that the Tibetans seized was built by the British under a treaty made with the Rajah in 1861, giving them the right to make and maintain roads in Sikkim. The relations between the Indian Government and Sikkim began in 1814, when they entered into an alliance against Nepal. At the close of the war the Rajah received a large accession of territory, and twenty years later he ceded to the Indian Government the district of Darjeeling, which has since become important as a sanitarium and as a tea-growing district. A few years after this the Rajah, in retaliation

for some act of the British authorities, made a captive of Dr. Joseph Hooker, the botanist, and was compelled by a military expedition to part with a section of his territory. Another expedition in 1860 extorted a treaty granting free trade, protection of foreigners, and the right of road-making. The Rajah is a Buddhist, owning the authority of the Grand Lama, and when the Macaulay expedition collected on the confines of his territory he retired to Lhasa and submitted the question to his spiritual lord to dispose of, and the latter posted a force in Sikkim to meet the invaders. The present area of Sikkim is 1,550 square miles, and the population does not exceed 7,000. The Rajah is sovereign also of a territory in the Chumbi valley across the Himalayas, where he has been accustomed to spend a portion of every year.

Col. Graham's force moved forward in two columns on March 17. On the 20th they reached the works at Lingtu under cover of a fog, and took them with a rush, the Tibetans hastily escaping into the forest. The troops advanced to Rhaderchen, where they were brought to a stand by a Tibetan force firing from a stockade. This was captured on the following day. Garrisons were posted at several points, while a Tibetan army mustered in the Chumbi valley, beyond the Jelapla Pass. The Tibetan lamas made an attack on the British at Lingtu, but were severely defeated and pursued in all directions. In the middle of April Col. Graham transferred his principal encampment from Padong to Gnatong, which commands the Tukola Pass. The Lieutenant-Governor of Bengal made an unsuccessful attempt to open peace negotiations. On May 28 the Tibetans nearly surprised the camp at Gnatong, and made a heroic effort to capture it, but were repelled after an engagement of three hours, with a loss of one hundred killed, while with their antiquated weapons they inflicted on the British a loss of only three killed and seven wounded. The European troops, who suffered severely from the cold and storms, were ordered to withdraw from Sikkim before the rainy season, being replaced by native troops in the fortified camp that was constructed at Gnatong. A campaign far away from the base, beyond the snowy mountains, was what the British desired to avoid, for if it were undertaken nothing would solve the difficulty but an expensive war for the occupation of Lhasa and the effective conquest of Tibet. They therefore preferred to remain in the awkward situation in which they had been betrayed, looking to Chinese intervention for an escape from the necessity of keeping a permanent military guard in the icy passes of the Himalayas. The Tibetans were as active as the English in the work of fortification, throwing a high stone wall across the entire width of the Jelapla Pass. Soon after the arrival of the new Chinese Residents the authorities at Lhasa sent messengers to Gnatong, but instead

of making proposals for peace, they massed an army of 8,000 men that was ready to fall upon the fortifications as soon as the European forces retired to Darjeeling, and Col. Graham therefore remained at Gnatong with a part of his force. The Tibetan levies were increased to 15,000, and though they did not venture to attack the earthworks defended by mountain-guns and steel 7-pounders, they strongly held the passes. Re-enforcements of Goorkhas were sent from India, and all the British troops were ordered back to Sikkim. The lamas advanced to the foot of the Pemberingo Pass, where they threw up fortifications, and pushed forward their outposts into the Sikkim valleys, where several skirmishes took place with British troops. The threatened advance of the lamas caused consternation among the European residents of Darjeeling. By the beginning of September all the re-enforcements had arrived at Gnatong, and Col. Graham made preparations for an offensive movement against the Tibetans, who already occupied the Japhu valley in front of the Jelapla and Pemberingo passes, and were ready to take possession of the whole of Sikkim as soon as the British should retire into winter quarters at a lower level, which would tend to strengthen the endeavors of the Tibet authorities to confederate Nepal, Bhotan, and the other frontier powers against the Indian Government. The Rajah of Sikkim was allowed to remain unmolested at Entohi or Gantok, till now an attempt was made to seize him in the night, which resulted in his flight to the Tibetans. On September 24 the British advanced on the fortified positions. The Tibetans, who mustered in strong force on the Tukola ridge, were dislodged by artillery fire followed up by the charge of the infantry, and fled in disorder to the Jelapla and Pemberingo passes. These were also occupied, and the Tibetan levies, completely disorganized, escaped into Bhotan and northward into Tibet, while the British force crossed the mountains to Rinchigong, and on the following morning occupied Chumbi and the Rajah's palace, where his papers were seized. The Tibetan loss was 1,000, while only one Goorkha was killed on the British side, though Col. Bromhead, who commanded the left wing, was severely wounded. The troops carried only a single day's provisions, and therefore returned to Gnatong. The rout of the Tibetan army was so effectual that only 3,000 or 4,000 out of 11,000 rallied, and their magazines and commissariat supplies at Lingmutong were destroyed. The Rajah returned and yielded submission, arriving at Gnatong on October 2. The Chinese Amban at Lhasa sent a letter requesting a meeting with the Lieutenant-Governor at Darjeeling to discuss terms of peace on behalf of the Tibetan Government. The Dalai Lama, whose spiritual and temporal supremacy is acknowledged by the Tibetan Buddhists, does not rule in person, but through a regent, called the Desi, being a

minor, as all his predecessors have been for nearly a hundred years. The British were anxious to make peace on any terms short of acknowledging the Tibetan claim to Sikkim, which would endanger their supremacy over the other frontier states. The government of the Dalai Lama extends over 4,000,000 people, including the monks in the monasteries, and to conquer this nation would necessitate not only the destruction of an army of 60,000 men that the lamas could immediately place in the field, but the continuous occupation of a wide country, barren of supplies, where the native Indian troops could not endure the arctic severity of the winters.

The Black Mountain Expedition.—Col. Richmond Batty and Capt. Urmston were killed in June, 1888, while making an excursion in the Hazara district, in the extreme northeastern part of the Peshawur division of the Punjab. They crossed the line into Agror, and when returning were attacked by a body of Akazais, a Black mountain tribe, against which the Indian Government had for some time maintained a blockade as a punishment for various offenses. The English officers were accompanied by a Goorkha escort of seventy men, and in defending Col. Batty, who was the commander of the blockading force stationed at Oghi, six of the sepoys were killed. In September an expedition of 8,000 fighting men was equipped to punish the mountaineers. There were five regiments of British and nine of native infantry, one regiment of native cavalry, a company of sappers, and three batteries of artillery, all under the command of Maj.-Gen. J. W. McQueen. The Government of Cashmere agreed to guard the frontier near Khagan with 1,000 men. The Hazara field force, as the expedition was called, advanced in four columns from Oghi and Darband early in October. The Hassanzaïs and Akazais offered a bold resistance, and were only dislodged after severe fighting. The Likariwals were the only tribe to pay their fine without fighting. Capt. O. H. H. Beley, quartermaster of one of the brigades, was killed, Col. A. Crookshank, commanding the column, received a deadly wound, and two other officers were wounded. The most desperate fighting was with the Hassanzaïs at Kotkai, the objective point of one of the columns, which was occupied on October 5. The villages and crops of the tribesmen were destroyed, and strategic positions were occupied, yet their resistance was not broken, and detachments sent out to scour the country were more than once defeated. The Black mountain district, which is only thirty miles long by ten in breadth, is a rugged ridge that is transected by the Indus. The Hassanzaïs and the Akazais together mustered only 2,000 fighting men, armed with matchlocks, and with the Chagarzaïs in the north, the Allaiwals, and the Parais, the Black mountain tribes were about 6,000 strong. They all belong to the Yusufzai branch of the indomitable Pathan

race and are Mohammedans in religion. When a large force of Khyber mountaineers, under Maj. Adam Khan, were sent against the Akazais, and proved a match for them in guerilla tactics, they made their submission and paid the fine after their principal villages had been burned. The Hassenzais promised to pay the fine. The Ohagarzais remained neutral, but it was decided to compel them to make submission, which they did before the end of October. One of the columns advanced to Thakot on the Indus in the extreme north, and from that point invaded the Allaiwal country. The Pararis and the Allaiwals held out till early in November, and when they offered their submission the expedition returned to India.

Burmah.—The troops in Upper Burmah numbered 27,859 in February, 1887, when the army of occupation was larger than at any previous time. It was composed of 6,781 British and 21,078 Indian troops. At the end of 1887 the force had been reduced to 3,791 British and 14,275 natives, making a total of 18,066. The extra army charges were 6,050,000 rupees in 1885-'86, 11,600,000 rupees in 1886-'87, and 18,500,000 rupees in 1887-'88, making a total of 31,150,000 rupees up to March 31, 1888. The Indian Government, which formerly drew a large revenue from Burmah, but has been compelled to spend still greater sums annually on the pacification of the country since the conquest of Upper Burmah, pursues a policy that is calculated to exterminate the Burmese race, in order that their fertile country may be peopled by servile Indian ryots. The opium vice, which is singularly fatal to the Burmese, was forced upon them for the benefit of the Indian revenue, against the protests of the respectable part of the community, and the traffic in strong drink has been encouraged for the same purpose. The hatred that the conquerors provoked by suppressing the Buddhist dynasty was almost as strong in Lower Burmah, where the people had been peaceful and orderly for half a century, as in the newly annexed province; yet, instead of trying to allay this feeling and winning respect by a just and beneficent rule, the British took the course most likely to fan disaffection into rebellion. Raw and ignorant, corrupt and brutal administrators, the dregs of the Indian civil service, were placed over the country, who attempted to practice on the high-spirited Burmese the insolent tyranny to which abject Indian races are accustomed to bow their necks. A military police recruited from the treacherous and bloodthirsty tribes of northern India was let loose on the country. These Indians mutinied against their English officers, who attempted to restrain their depredations, and practiced on the unarmed inhabitants various forms of violence, oppression, and pillage. The policy of disarming the Burmese had left the industrious and honest a prey to the robbers. They asked to have a police force raised in the country, and felt it to be the harshest of their ills

that the English, whom they looked upon as their equals in intelligence and civilization, sent a horde of ferocious savages to trample upon them. The military police, in March, 1888, consisted mainly of Punjabees, and numbered 20,000 men. Dacoity, as rebellion was officially called, in order that the bold and patriotic who took up arms against the oppressors might be destroyed without quarter, spread from Upper to Lower Burmah. After the effective campaign of 1887 the chief rebel leaders had all been killed or driven out of the valley of the Irrawaddy into the outlying regions where English rule had not yet been established. Yet oppression drove others to revolt, and new bands sprang up which carried on their guerilla operations secretly, returning to their fields after tearing up the railroad or attacking a police station, or plundering the friends of the invaders. When discovered they took up their abode in the forest, and levied tribute on the villagers for their support. In order to combat the evil without the expense of hunting the dakoits the Government adopted the punitive police tax, a measure that soon reduced prosperous communities to starvation. Wherever rebellion and disorder existed the villagers, taxed already by the dakoits, are compelled to pay heavy exemplary taxes to the Government, or often to corrupt officials who use the measure as a means of extortion. The English officials have no restraints on their actions but their sense of duty, since the judicial evidence of natives against them is not admitted. An English civil officer named Powell, after two villagers who had committed no legal offense had been killed by his orders and their brother-in-law bound, was shot by the father, and Mr. Hildebrand, superintendent of the Shan states, after a thorough investigation, decided that the man was justified in avenging the butchery of his sons and attempting to rescue his son-in-law. When the Indian police had scourged the country only to produce disorder, a small Burmese force was tried, on the recommendation of Sir Frederick Roberts, with good results.

The revenue of Lower Burmah for the year 1886-'87 was 30,184,790 rupees, an increase of 4,000,000 rupees over the receipts of the previous year; and the cost of civil administration was 15,656,940 rupees, leaving a surplus for military expenditures and expenses of the Indian Government of 14,477,850 rupees. The increase of revenue was obtained by raising the salt duty and imposing an income-tax. The province of Upper Burmah yielded a revenue of about 5,200,000 rupees, while the military and police expenditure amounted to 20,000,000 rupees. The railroad between Tounghoo and Mandalay, 220 miles in length, was completed in 1886, and a section of 59 miles, reaching to Pinyinana, was opened in the summer. The creditors of King Thebaw and Queen Soopyalat, 393 in number, among them three Americans, presented claims for ninety-eight lakhs.

A privileged group obtained six lakhs, and the other creditors whose claims were recognized two and a half lakhs.

The northern Shan states, as far as the Salwen river, were invaded early in 1888 by a column commanded by Maj. Yates, and most of the chiefs acknowledged allegiance to the British Government. The most powerful of these, the Tsawbwa of Thebaw, had been banished by the late King, but was restored by the British, and with their aid extended his rule over neighboring territories. Other Tsawbwas who opposed the British were deposed in favor of rivals. In April the first disturbance occurred in Arrakan, the inhabitants of which are a distinct race from the Burmese. A band of dakoits crossed the hills from the valley of the Irrawaddy, released their leader, Mikhaya Bo, who was confined in Myohoung jail, and burned the town and the neighboring village of Gmoung, where the people fled on them. Although the Arrakanese hate the Burmese and have taken no part in the insurrection, the policy of disarmament was carried out among them as elsewhere throughout Burmah. The Setkya prince in Upper Burmah defeated the military police in several encounters in the summer of 1888. The Choungwa prince, another Alompra pretender, conducted his operations with bands of Shans and Kachyens in the neighborhood of the ruby-mines. Boh Shwayan, an able dakoit chief, who led the revolt in the Tsagain district, was killed by a detachment of British soldiers on July 25. Boh Ngano kept the Minbu and Toundwingyee districts in a state of disturbance. The Chins of the Tashon hills captured the town of Indin and held it till a force of 1,000 men, with two guns, came from Mandalay to expel them in May. The other Chins joined in the rising, and raided the Kubo and Chindwin valleys. The Shwegyobin prince led the movement, and the Tsawbwa of Kale, whom the British had deposed, planned the operations. The Chins were closely pressed by the troops that were sent out against them, and finally released the new Tsawbwa, whom they had carried off, and said that they were willing to make peace if their own plundered cattle were restored. The British refused this, and added the unacceptable condition that the Shwegyobin prince and other rebels among them should be delivered up. The military authorities contemplated an expedition into the Chin country in the winter, but this the Indian Government refused to sanction. Disturbances in the Tharawaddy and Tenasserim districts of Lower Burmah were distinctly traceable to the corruption of the officials and the cruelty and criminal excesses of the police. Arbitrary exactions under the pretext of punitive taxes caused a famine in Tharawaddy. At Tavoy, a town on the border of Siam, from which country arms were smuggled in for the rebels, the merchants, some of whom were Chinese and some natives of India, informed the Commis-

sioner of Tenasserim that his subordinates were implicated in this traffic. The commissioner took no notice of their accusations, but some time afterward a punitive tax was levied on the town. On their refusal to pay the tax, which was illegal because no dakoities had taken place in the town, the police seized the furniture, jewelry, and stock in trade of the inhabitants. The Kachyens north of Bhamo attacked the fort at Mogoung in the spring, and held the country during the summer and autumn at their mercy. In November a military expedition was sent against them. In the south the Red Karens and Shans ravaged loyal villages. The Government in June decided not to enforce strictly the disarmament decree among the Christian Karens and Burmese villagers of the lower province. On June 9 dakoits plundered and burned Yeanangyoung, the headquarters of the petroleum trade. At the time of the conquest one of the great advantages that the people were led to expect was the abolition of monopolies. The monopolies of King Thebaw were abolished, except that of the teak-forests, which was held by a British-Indian company. The British ostensibly began the war. The financial exigencies of the Government and the jobbery that prevails in the Burman administration have led to the old monopolies being reconferred and others created. The holders of the India-rubber, jade, and mineral-oil concessions are empowered to close entire districts to all enterprises except their own. The Government of India granted the monopoly of the ruby-mines to the London jewelry firm of Streeter, but, owing to the scandalous manner in which the contract was awarded, the concession was not confirmed. The Queen-mother, Princess Soopyagee, the elder sister of Soopyalat, and an Alompra prince, who were confined at Mergui, were sent to India for greater safety in June. Deportation as a precautionary measure was applied not only to members of the royal family and political personages, but to persons of all ranks and conditions, of whom 50,000 had been sent to India before the autumn of 1888. The chief commissioner, in addressing an assemblage at Myinmu, a disturbed district, accused the people of cowardice in not giving information that would lead to the capture of dakoits who plundered them and burned their town. He threatened them with hanging or imprisonment across the seas and the confiscation of all their property, so that their wives and children would have to beg if they did not give the required assistance to the Government. Burmese who could aid the police to detect dakoits very rarely gave information, even though anxious to serve the Government, because their act was sure to come to the knowledge of rebels, and would be revenged by a death of lingering torture. An emigration scheme has been devised for peopling the rich bottom lands of the Irrawaddy with Bengalee emigrants. Large tracts

of land on the Mandalay Railway line are to be granted on very favorable terms to planters who undertake to cultivate indigo, sugar, or other produce, and bind themselves to employ 90 per cent. of natives of India and not more than 10 per cent. of Burmans on their plantations. The Indian emigrants are to be brought from Calcutta at greatly reduced rates. The Burmese chief priests at Mandalay visited many districts and endeavored to restore peace.

During the rainy season pursuit of the dacoits is impossible, as the whole surface of the country is covered with deep mud. When the cold season approached, the troops and police resumed active operations against the rebels who had defied them during the summer. In October, Tha-Do and Nga-Chak, two notorious *boes*, or bandit chiefs, were killed by the police in the Pakoku district, and Gna-Bo-Ka, another dakoit leader, surrendered. On the 25th of the same month the Sekya pretender was driven from a fortified position in Kyoukse after a severe fight. The Government has been accustomed to grant amnesties to dacoits who surrendered themselves, promised to remain in a particular village, and found securities for their good behavior, and in this way many dangerous marauders were induced to settle down to peaceful occupations. Before the beginning of the winter campaign, Chief-Commissioner Crosthwaite announced his determination to grant no more pardons except for special reasons.

In December an expedition was sent in two divisions, one from Upper and one from Lower Burmah, against the eastern Karenees, who invaded the land of British tributaries.

Afghanistan.—The Government of India announced the intention of sending Henry Durand, the Foreign Secretary, on a confidential mission to the Ameer of Cabul in October, 1888; but the war between Abdurrahman and his cousin, Ishak Khan, Governor of Afghan Turkistan, interfered with the plan and caused a postponement of the embassy. The war between the two grandsons of Dost Mohammed originated in Ishak's preparations to assert his right to the succession when Abdurrahman was sick and was expected to die. On recovering, the Ameer summoned Ishak to his court, and the latter, knowing that he had mortally offended his cousin, instead of accepting the invitation and going to Cabul to meet his death, prepared to fight. Gholam Haidar, the Ameer's general, led a powerful army against Ishak. The Ameer's troops had a great advantage in the rifles and artillery furnished by the Indian Government. After preliminary engagements, the two armies met in pitched battle at Tashkurgan. One of the Ameer's divisions, commanded by the Governor of Badakshan, was routed in the beginning of the fight, but the fortune of the day was retrieved by Gholam Haidar's successful attack on the main body of the enemy, and,

when it was routed, turned on the division that had driven back a section of his own troops, and made prisoners of the whole of them. Pursuing the broken army to Mazari-Sherif on the following day, Gholam completed his victory, and made a prisoner of Mohammed Hosain, commander-in-chief of the defeated army. Ishak Khan made good his escape into Russian territory. The Ameer went into Turkistan to make a final settlement of the country and inquire into the history and instigators of the revolt.

INDIANA. State Government.—The following were the State officers during the year: Governor, Isaac P. Gray, Democrat; Lieutenant-Governor, Robert S. Robertson, Republican; Secretary of State, Charles F. Griffin, Republican; Treasurer, Julius A. Lemcke, Republican; Auditor, Bruce Carr, Republican; Attorney-General, Louis T. Michener, Republican; Superintendent of Public Instruction, Harvey M. La Follette; Judges of the Supreme Court, William E. Niblack, George V. Howk, Byron K. Elliott, Allen Zollars, Joseph A. S. Mitchell.

Finance.—For the fiscal year ending October 31, the receipts of the State treasury were \$3,575,091.78; cash on hand at the beginning of the year, \$873,941.21; total, \$3,949,035.99. The disbursements during the same period were \$3,621,809.83, leaving a balance of \$327,726.16 on October 31. In his message, in January, 1889, the Governor says:

The last General Assembly failed to pass the general appropriation bill for the support of the State and its institutions, or to provide for the completion of the State-house, the three additional hospitals for the insane, the institution for feeble-minded youth, the Soldiers' and Sailors' Orphans' Home, and the soldiers' monument. At first it seemed as though the failure to enact such legislation would leave the State in such a financial condition that it would be impossible to meet the current expenses of the State and the additional obligations which the State had incurred by so many public improvements, or to complete any of the new institutions; but, contrary to the most sanguine expectation, nearly all the obligations of the State have been met—the interest on the public debt paid under provisions of the act of 1852; the Soldiers' and Sailors' Orphans' Home at Knightstown rebuilt; the land for the institution for feeble-minded youth at Fort Wayne purchased and the construction of the building commenced; the Hospital for Insane at Logansport completed, equipped, and opened for reception of patients; the hospitals at Evansville and Richmond completed ready for equipment and furnishing.

During the past two fiscal years the State debt has been increased by two temporary loans of \$340,000 each, bearing date of April 1, 1887, and April 2, 1888, from which the interest on the debt was paid. The total debt is now \$6,770,608.34, of which the sum of \$3,904,783.22 is in the form of school-fund bonds held by the State for the benefit of schools, \$340,000 is held by Purdue University, and \$144,000 for the benefit of the State University by the State Treasurer. The remainder of the debt, \$2,881,825.12, is taken by New York banks.

Charities.—The superintendent of the Insane Hospital reports that at the beginning of the

fiscal year, Oct. 31, 1886, there were 1,588 patients at the institution, 696 being men and 892 women. To this number were added during the year 697. There were discharged in the same period 387 men and 301 women, a total of 688, and there were 84 deaths, leaving 1,513 patients at the end of the year. The suit brought in 1887 by the State to oust Directors Harrison and Gapen from the governing board of the institution, failed in its object. This hospital has long been inadequate to the needs of the State, many insane persons being supported at ill-equipped county institutions. An act was passed in 1883 providing for the construction of three additional hospitals; but the failure of the last Legislature to make appropriations delayed their completion. One of these, however, the Northern Hospital at Logansport, was completed and equipped during the year, being opened for patients on June 26. It was rapidly filled from county poor-houses and jails, and contained at the end of the year 188 men and 140 women; in all 328 persons. The estimated capacity of the hospital is 366 inmates.

The Soldiers' and Sailors' Orphans' Home at Knightstown contains accommodations for only 300 children, but at the end of the fiscal year in 1888 there were 340 in the institution and 100 additional on the rolls as applicants for admission. During the year, 195 applicants were admitted and 21 inmates discharged. The receipts from the State treasury for the year were \$55,580, and the disbursements \$54,447.85.

The School for the Feeble-Minded, being separated from the Orphans' Home by act of the last Legislature has been temporarily domiciled at the Eastern Insane Asylum at Richmond, now in process of erection, until permanent quarters at Fort Wayne can be completed. Land has been purchased at the latter place, and buildings are in process of erection. On October 31 there were 239 pupils, an increase of 179 from the time of the passage of the law, and of 184 from Oct. 31, 1887.

The State institution for the deaf and dumb had at the close of the fiscal year an attendance of 318, and the institution for the blind 144.

Prisons.—The number of prisoners at the Northern Prison at the close of the fiscal year was 702, and at the Southern Prison 539. At the reformatory for boys there were 462 persons.

The Women's Reformatory contained in its penal department on October 31, 55 convicts, and in the girls' reformatory 153 inmates. The receipts from industries carried on at the institution last year were \$3,827.50, and the managers claim that the inmates are nearly self-supporting.

Normal Schools.—The State Normal School at Terre Haute suffered the entire loss of its building and library by a fire on April 9. At that time there were 624 students at the institution, representing eighty of the ninety-two counties of the State. The Centenary Methodist Epis-

copal Church, of Terre Haute, offered its building, and this and a portion of the Terre Haute High-School, which was also offered, enabled the work of the schools to go on without interruption. The city of Terre Haute also gave \$50,000 toward the erection of a new building, which has been completed so far as the walls, iron, and stonework are concerned.

The Capitol.—On October 23 the State Capitol building, which had been in course of construction since 1879, was completed. Later in the year the Capitol Commission rendered its final report, showing the following yearly expenditures: 1879, \$132,085.69; 1880, \$193,760.47; 1881, \$201,681.67; 1882, \$187,066.03; 1883, \$52,891.72; 1884, \$286,178.97; 1885, \$424,825.65; 1886, \$313,510.88; 1887, \$169,082.91; 1888, \$178,333.72. These amounts, with the sum of \$50,491.68 expended by the commission from May 24, 1877, when it was organized, to Dec. 31, 1878, make the total expenditure \$2,191,859.42. Of this amount, \$1,560,658.82 were raised by taxation, \$507,500 by issuing ten-year bonds, maturing in 1895, and \$200,000 by appropriation from the general fund.

Railroads.—The assessment for 1888 upon railroads in the State amounted to \$64,211,717.

Live-Stock.—The following returns for 1888 are given by the Bureau of Statistics: Number of horses, 587,709; mules, 60,188; cattle (including milch cows), 1,843,478; sheep, 1,266,109. These figures show an increase over 1887, except in the sheep industry. The wool-product has also decreased, being 3,684,159 pounds against 4,197,000 pounds in 1887.

County Statistics.—The total expenditures of ninety of the ninety-two counties of the State for 1887 was \$6,110,302, and for 1888 \$7,093,645. Sixty-nine county asylums support 2,572 needy inmates, and forty-five county jails contain 7,467 convicts.

Coal and Natural Gas.—One of the most important resources of the State is its coal-deposits, which cover about 7,000 square miles. These coal-beds are found in the following counties: Warren, Fountain, Vermilion, Parke, Vigo, Clay, Sullivan, Green, Davis, Dubois, Pike, Perry, Spencer, Knox, Gibson, Vanderburg, and Posey. Clay County is the largest coal-producing county, having thirty-eight mines; Gibson County the smallest, having only three mines. During 1887 the product of 220 mines was 3,217,711 tons; during 1886 the product of 208 mines was about 3,000,000 tons. Natural gas, which has only recently been known to exist in the State, has been discovered in twenty-two counties. There are now in operation about 125 gas-wells, producing 1,000,000 cubic feet of gas a day.

Election Frauds.—Early in the year the Government succeeded in securing a new trial of the persons charged with forging tally-sheets showing false returns of the congressional election in 1886 at Indianapolis, an acquittal having been obtained in the former trial. The

result of this trial was a verdict of guilty, rendered on January 28, against Simeon Coy and William F. A. Bernhamer, while Stephen J. Mattler, the third defendant, was acquitted. A motion for a new trial was denied, and the defendants were sentenced to the State Prison for eighteen months and one year respectively, with a slight fine in each case. Coy and Bernhamer then applied to Justice Harlan, of the United States Supreme Court, for a writ of error, which the latter refused by a decision rendered early in March. This decision was affirmed by the full bench of the court at Washington in May.

The White Caps.—A secret organization of vigilantes by this name has existed for several years in the southern part of the State. One of its first principles is said to be that no negro shall live in the region dominated by it; but it also undertakes to drive away all persons who incur its displeasure. It proceeds by first giving a warning to leave the State, which, if disregarded, is followed by a midnight visitation from members of the order. The victim is taken from his house and severely whipped or otherwise abused; his life is in danger if he chooses to remain after this treatment. The counties of Crawford, Orange, Perry, Harrison, Spencer, and Dubois have especially suffered from these outrages by the White Caps. In the early part of the year the organization was unusually active, and the local authorities seemed powerless to bring the offenders to justice. In August, Attorney-General Michener, at the request of the Governor, made a tour of several of the southern counties for the purpose of investigating the condition of affairs. His report, especially relating to Crawford County, the center of the difficulty, was made in September, and contains the following:

The condition of affairs is not only deplorable but alarming. For at least two years past the most outrageous offenses have been committed with impunity by the "White Caps"; they have in many ways shown their entire disregard for the law and its officers; they have driven citizens out of the county and out of the State; they have cruelly whipped their victims in the villages of the county without molestation; they have dragged large numbers of persons from their beds and whipped them until the blood flowed to the ground; they have repeatedly flogged helpless women until life was nearly extinct, and they have procured the publication of their law-defying notices in the newspapers of the county. I have not given a detailed statement of these outrages, for they have long been so notorious that you are, doubtless, well informed concerning them. From the organization of one band of "White Caps" others sprung into existence, and now it is generally believed that all these bands are confederated together in one grand organization, covering portions of three or four counties. The number and the character of the violations of law to which I have briefly alluded, and the general belief that all these bands are combined in an organization of offense and defense, have brought about a reign of terror in the localities infested by the "White Caps," which can only be fully understood by those who have conversed with the people there. Property has been so depreciated that it can not be sold at half of its value. No one has that confidence

in his neighbor which is so essential to a good state of society. All is doubt, distrust, and confusion. The result is, that some who are considered good citizens openly applaud the doings of the "White Caps," and others are silent who should be loud in condemnation. The newspapers have said but little in disapproval, and of those who have openly stood for the enforcement of law, a number have been threatened with violence. As one result of such a state of affairs, there has been recently organized there, as I am informed, a body known as "Black Caps"; and it is said that they place armed men each night on the roads in the region most infested by the "White Caps," with instructions to fire upon any band of the latter which they may find. This is the inevitable result of a long and widely spread defiance and violation of the law without punishment.

The State authorities at once took active measures to destroy the organization, if possible, and to bring the members to justice. At the end of the year the Governor says, in his message:

Evidence was finally procured against the principal participants, who were indicted and their trials set for Dec. 24, 1888. The defendants have taken a change of venue, and the time of trial is now fixed for March 26. Additional evidence has been obtained, which will lead to the indictment of several others, and some who would have been arrested have fled from the State. The lawlessness has been completely suppressed.

Political.—The State campaign was opened on March 15, when the Prohibitionists met in convention at Indianapolis and nominated the following ticket: For Governor, J. S. Hughes; Lieutenant-Governor, John W. Baxter; Secretary of State, Dr. W. A. Spurgeon; Auditor, Thomas Marvel; Treasurer, Allen Furnas; Superintendent of Public Instruction, O. H. Kiracofe; Reporter of the Supreme Court, T. O. Barnes; Attorney-General, Elwood Hunt; Judges of the Supreme Court, First District, W. N. Land; Second, W. R. Coffey; Third, Newton Burrell. The resolutions adopted include the following:

We present to our fellow-citizens the one overshadowing crime—the liquor traffic. We are unalterably opposed to the enactment of laws that propose to license, tax, or otherwise to regulate the drink traffic, because they provide for its continuance.

We believe in a free and carefully-protected ballot, unrestricted by sex.

We favor applying the golden rule to the relations of capital and labor, and arbitration in cases of conflict, but the best interests of both capital and labor demand the prohibition of the liquor traffic.

We view with alarm the growing desecration of the Lord's day and the efforts making by the liquor power to repeal the laws protecting it, and we call upon all good citizens to join us in maintaining these laws.

The Democratic State Convention met at Indianapolis on April 26, and made the following nominations: For Governor, Courtland C. Matson; Lieutenant-Governor, William R. Myers; Secretary of State, R. W. Miers; Auditor, Charles A. Munson; Treasurer, Thomas Byrnes; Reporter of Supreme Court, John W. Kern; Attorney-General, John R. Wilson; Superintendent of Public Instruction, E. E. Griffith; Supreme Judges, First District, William E. Niblack; Second District, George V.

Howk; Third District, Allen Zollars. A platform was adopted, commanding the administration of President Cleveland, demanding a reduction of the tariff as recommended in the President's message, favoring liberal pensions, and approving Gov. Gray's administration and his candidacy for the vice-presidential nomination. Its other declarations were as follow :

The Democratic party, being of the people and for the people, favors such legislation as will guarantee the broadest protection to the interests and welfare of the industrial masses; it recognizes the fact that labor is the producer of the wealth of a nation, and that laws should be so framed as to encourage and promote the interest, progress, and prosperity of all classes, and especially of all laboring people.

We recognize the right of all men to organize for social or material advancement; the right of wage-workers to use all lawful means to protect themselves against the encroachments of moneyed monopolists, and the right to fix a price for their labor commensurate with the work required of them, and we hold that every man has the right to dispose of his own labor upon such terms as he may think will best promote his interests. In relations between capital and labor the Democratic party favors such measures and policies as will promote harmony between them, and will adequately protect the rights and interests of both. We freely indorse and approve the laws passed pursuant to the demands of former Democratic conventions making provision for the safety and protection of laborers and miners, and providing for the collection of their wages, and are in favor of all other enactments to that end which may be necessary and proper.

It is provided by the Constitution of this State that the liberty of the people should be protected, and that their private property should not be taken without just compensation, and we are opposed to any change in the Constitution tending to weaken these safeguards, or to any legislation which asserts the power to take or destroy the private property of any portion of the people of this State without compensation or which unjustly interferes with their personal liberty as to what they shall eat or drink, or as to the kind of clothing they shall wear, believing that the government should be administered in that way best calculated to confer the greatest good upon the greatest number, without sacrificing the rights of person or of property, and leaving the innocent creeds, habits, customs, and business of the people unfettered by sumptuary laws, class legislation, or extortionate monopolies. While standing faithfully by the rights of property and personal liberty guaranteed to the people by the Constitution, we distinctly declare that we are in favor of sobriety and temperance, and all proper means for the promotion of these virtues, but we believe that a well-regulated license system and reasonable and just laws upon the subject, faithfully enforced, would be better than extreme measures, which, being subversive of personal liberty and in conflict with public sentiment, would never be effectively executed, thus bringing law into disrepute and tending to make sneaks and hypocrites of our people.

The Republican State Convention met on August 8, at Indianapolis. Strenuous efforts were made to induce Ex-Gov. Albert G. Porter to accept the gubernatorial nomination, but upon being assured of his absolute refusal, the convention nominated Congressman Alvin P. Hovey, on the second ballot. The remainder of the ticket was completed as follows: Lieutenant-Governor, Ira J. Chase; Secretary of State, Charles P. Griffin; Auditor, Bruce Carr; Treasurer, Julius A. Lemcke; Superin-

tendent of Public Instruction, R. M. La Follette; Judges of the Supreme Court, First District, S. D. Coffey; Second District, John G. Berkshire; Fourth District, Walter Olds; Reporter of the Supreme Court, John L. Griffiths. The resolutions commend the work of the National Convention, especially the nomination of Gen. Harrison, and treat at length of State and local issues as follows:

Crimes against an equal ballot and equal representation are destructive of free government. The iniquitous and unfair apportionment for congressional and legislative purposes, made at the behest of the liquor league of Indiana, followed by conspiracy and forgery upon the election returns of 1886, in Marion County, for which a number of prominent Democratic leaders were indicted and tried, two of whom are now suffering the deserved penalty of their acts, demand the rebuke of every patriotic citizen. The gerrymander, by which more than half of the people of the State are shorn of their just rights, must be repealed and constitutional apportionments made, whereby the votes of members of all political parties shall be given equal force and effect, equal political rights to be the only basis of a truly democratic and republican form of government.

The action of the Democrats in the last General Assembly was revolutionary and criminal. The will of the people expressed in a peaceable and lawful election, advised and participated in by the Democratic party, was set at defiance, and the Constitution and laws as expounded by the Supreme Court of the United States disregarded and nullified. Public and private rights were subverted and destroyed, and the Capitol of the State disgraced by violence and brutality. The alleged election of a United States Senator was accomplished by fraud and forced by high-handed usurpation of power, the overthrow of constitutional and legal forms, the setting aside of the results of a popular election, and the theft of the prerogatives of duly elected and qualified members of the Legislature. That stolen senatorship is part of the Democratic administration at Washington, now in power by virtue of public crimes and the nullification of Constitution and laws.

We favor placing all public institutions under a wisely conceived and honestly administered civil-service law.

In the interests of labor we favor the establishment and permanent maintenance of a bureau of labor statistics. We favor the passage and strict enforcement of laws which will absolutely prevent the competition of imported servile, convict, or contract labor of all kinds with free labor; prohibit the employment of young children in factories and mines; guarantee to workmen the most favorable conditions for their service, especially proper safeguards for life and comfort in mines and factories, on railways and in all hazardous occupations; to secure which the duties and powers of the State Mine-Inspector should be enlarged, and provision made whereby only skilled and competent men can be placed in positions where they may be in control of the lives and safety of others; enforce the certain and frequent payment of wages; abridge the hours of labor wherever practicable; and provide for the submission to just and impartial arbitration, under regulations that will make the arbitration effective, all controversies between workmen and their employers. The right of wage-workers to organize for the legitimate promotion of their mutual good can not be questioned.

The amendments to the State Constitution making the terms of county officers four years, and striking out the word "white" from section 1, Article XII, so that colored men may become a part of the regular militia force for the defense of the State, should be renewed.

Politics and legislation should be kept free from the

influence of the saloon. The liquor traffic must obey the law. We favor legislation upon the principle of local option, whereby the various communities throughout the State may be as they deem best—either control or suppress the traffic in intoxicating liquors.

Democratic filibustering in the national House of Representatives prevented the return to the treasury of the State of Indiana the sum of \$904,875.23, the justice of which claim against the General Government has been officially acknowledged and its repayment provided for. Like hostile Democratic action has also prevented the return to our State treasury of \$606,979.41 discount and interest on war-loan bonds, rendered necessary to equip and maintain the volunteer soldiers who went out under the first call for troops in 1861. More than a million and a half of dollars, justly due the State, are thus withheld in the presence of an increasing Federal surplus and of a practically bankrupt State treasury caused by the incompetence of the Democratic State administration.

There was also a Union Labor ticket in the field, headed by John B. Milroy. The canvass was one of great interest and excitement. Strenuous efforts were made by the Republicans to take the State from Democratic control, especially in view of the fact that the presidential candidate of their party was from Indiana. These efforts, aided by the popularity of Gen. Harrison, were successful in securing the election of the entire State and National ticket. Gen. Harrison obtained 268,861 votes; Mr. Cleveland, 261,013; Mr. Fisk, 9,801; and Mr. Streeter about 2,700. For Governor, Hovey obtained 268,194 votes; Matson, 260,994; Hughes, 9,920; and Milroy, 2,702. The Republicans elected only three out of thirteen Congressmen, a loss of four seats.

IOWA. State Government.—The following were the State officers during the year: Governor, William Larrabee, Republican; Lieutenant-Governor, John A. T. Hull; Secretary of State, Frank D. Jackson; Auditor, James A. Lyons; Treasurer, Voltaire P. Twombly; Attorney-General, A. J. Baker; Superintendent of Public Instruction, Henry Sabin; Railroad Commissioners, Peter A. Dey, Lorenzo S. Coffin, succeeded by ex-Lieutenant-Governor Frank T. Campbell, and Spencer Smith; Chief-Justice of the Supreme Court, William H. SeEVERS; Judges, James H. Rothrock, Joseph R. Reed, Joseph M. Beck, and Gifford S. Robinson.

FINANCES.—During the past fiscal year the State debt has been gradually diminishing. On June 30, 1887, the amount of outstanding warrants was \$455,987.30, which had been reduced on May 25 of this year to \$324,772.60, and was still further diminished before the end of the year. A part of this debt, \$245,435.19, represents an indebtedness of the State to the school fund. By the so-called Hutchison law of the Legislature this year, the direct war-tax, if refunded to the State by the General Government, is to be applied, first to the payment of this debt to the school fund, the remainder, if any, being added to the general revenue. It is believed that this tax, if refunded, would be sufficient to wipe out the entire State debt. The receipts of the treasury

for the fiscal year 1888 largely exceeded the expenditures.

Legislative Session.—The Twenty-second General Assembly convened on January 9, and was in session three months. United States Senator James F. Wilson, who received the Republican nomination, was re-elected for a second term. The Democratic candidate was T. J. Anderson, and the Labor candidate Daniel Campbell. By far the most important feature of the session was its legislation affecting railroads, which is discussed below. A new pharmacy law was passed which forbids the sale of intoxicating liquor by any manufacturer or dealer other than a registered pharmacist. It amends the former law so that a person manufacturing lawfully in the State may not sell to persons outside the State for purposes other than medicinal. The act also provides additional requirements to be observed in order to obtain permits to sell liquors for medicinal purposes, and imposes severer penalties on pharmacists convicted of illegal selling. Evasion of the prohibitory law is thereby made more difficult and dangerous. The so-called "trusts" are made unlawful by the following act:

SECTION 1. If any corporation organized under the laws of this State or any other State or country for transacting or conducting any kind of business in this State, or any partnership or individual shall create, enter into, become a member of or a party to any pool, trust, agreement, combination, or confederation with any other corporation, partnership, or individual to regulate or fix the price of oil, lumber, coal, grain, flour, provisions, or any other commodity or article whatever; or shall create, enter into, become a member of or a party to any pool, agreement, combination, or confederation to fix or limit the amount or quantity of any commodity or article to be manufactured, mined, produced, or sold in this State, shall be deemed guilty of a conspiracy to defraud, and be subject to indictment and punishment as provided in the next section.

SEC. 2. Any person or corporation found guilty of a violation of this act shall be punished by a fine of not less than one hundred dollars, nor to exceed five thousand dollars, and stand committed until such fine is paid.

Another act provides for the levy of an additional property tax of three tenths of a mill, the proceeds of which shall be expended for the relief and for the funeral expenses of indigent soldiers and sailors and their families. A "Soldier's Relief Commission" is created for each county, with power to award the money raised under this act, and to distribute it according to such award. The State was redistricted for members of the Lower House, one hundred representatives being apportioned to ninety-four districts. A tax of half a mill was levied for the years 1888 and 1889 to provide funds for paying the State debt. Among the special appropriations were \$17,000 for improvements on the State Capitol; \$5,000 for the site and foundation of a State soldiers' monument; \$102,000 for furnishing and equipment of the Hospital for the Insane at Clarinda; \$58,000 for additional lands, a new

building, and other improvements at the Mount Pleasant Hospital; \$28,750 for improvements at the Independence Hospital; \$30,000 for the State Normal School; \$17,084.80 for the College for the Blind; \$21,850 for the Boys' Industrial School; \$17,400 for the Girls' Industrial School; \$24,800 for the Soldiers' Orphans' Home; \$44,000 for the Institution for the Feeble-Minded; \$52,000 for the State University; \$32,900 to the two State Penitentiaries. Other acts of the session are as follow:

Creating in cities of over 80,000 inhabitants a board of public works.

Empowering cities of certain grades to fund their indebtedness.

Authorizing incorporated towns to refund their outstanding bonded debt.

Providing for the reassessment and relevy of special taxes and assessments when the first assessment or levy is for any cause invalid.

Amending the law relative to registration of voters in cities.

Providing a court for the trial of contested cases arising out of the election of presidential electors.

Creating a State board of examiners for mine inspectors, and requiring an examination of such board of all candidates for the office of mine inspector.

To establish a uniform system of weighing coal at the mines of the State, and to punish certain irregularities connected therewith.

To provide for the payment of wages of workmen employed in mines in lawful money of the United States, and to forbid any dictation on the part of any person, firm, or corporation, as to where any employé shall purchase his goods or supplies.

To punish blacklisting of employes, or any attempt on the part of a former employer to prevent a discharged employé from obtaining employment other than by furnishing on request a truthful statement concerning such discharge.

To provide for the formation of independent school districts, and authorizing changes of boundaries in the same.

To prevent diseased swine from running at large.

Imposing a penalty on the sale of grain, seed, or other cereals at a fictitious price, and prohibiting any bond or other contract to sell at such price, or the procuring of any valuable consideration for such bond or contract.

To prevent fraud in the sale of lard by requiring all adulterations thereof to be labeled "compound lard."

To prevent fraud in the weight of flour and other mill-products.

To punish bribe-taking by State, county, township, city, school, or other municipal officers, and to punish the bribery of or the attempt or conspiracy to bribe such officers.

Restricting non-resident aliens in their right to acquire and hold real estate in the State.

To prevent persons unlawfully using or wearing badges of the Grand Army of the Republic or of the Military Order of the Loyal Legion of the United States.

Appropriating \$1,500 for the aiding of discharged convicts.

Giving legislative assent to the purposes of the congressional act of March 2, 1887, in regard to the establishment of agricultural experiment stations in connection with agricultural colleges.

Authorizing the trustees of the insane hospital at Independence to purchase one hundred and eighty acres of land adjoining that now owned by the State.

Relinquishing to the United States all right and title to the so-called river lands except such as were granted to the State by resolution of Congress of March 2, 1861.

Railroads.—In his message to the Legislature, in January, Gov. Larrabee suggested several measures restrictive of railroads. A few days later, in his second inaugural address, he dwelt at length, and with considerable severity, upon the alleged tyranny and oppression of the railroads. The keynote thus struck was taken up by the Legislature, and during the session much bitterness was at times shown against railroad corporations. Numerous measures extremely radical and unjust were proposed and supported by a large minority of the members, but cooler heads finally won, although the legislation of the session is much more oppressive to railroads than that in any other State. The railroad act as passed at this session requires railroad charges to be just and reasonable; prohibits discrimination in charges for transportation either by special rate, rebate, drawback or other device; makes it unlawful for a common carrier to give preference or advantage to any particular parties, locality, or kind of traffic, except in the shipment of perishable property, or to subject to any prejudice or disadvantage any party, locality, or kind of traffic; requires all such carriers to afford reasonable, proper, and equal facilities for interchange of traffic between their respective lines and for receiving, forwarding, and delivering passengers, freight, and cars received from each other; forbids a greater charge for a short than for a long haul, or the pooling of freights between competing lines; requires printed schedules of rates for transportation of passengers and freight to be published and posted; prescribes in detail what such schedules shall contain, and how they shall be changed, and gives the railroad commissioners power to apply for and obtain a writ of mandamus for refusal to file and publish such schedules, whereupon a fine of \$500 a day shall be laid upon the company disobeying the mandamus. Every carrier must adhere strictly to its published rates; it is made unlawful to prevent, by combinations or other devices, the continuous and uninterrupted carriage of freight; and for any violation of this act the common carrier is made liable to the person or persons injured thereby for three times the amount of damages sustained, with costs and a reasonable attorney's fee for the complainant, unless restitution is made within fifteen days after demand.

Penalties are also imposed, varying from \$500 to \$10,000, for violations of the various sections of the statute. It is the duty of the railroad commissioners, and they have authority, to inquire into the management of the business of all common carriers and for that purpose to require the attendance and testimony of officers and other witnesses and the production of books, papers, etc. They are directed to investigate and report upon all complaints made to them by individuals or others against common carriers, and their findings are *prima-facie* evidence of the facts found. It is also provided—

that whenever any common carrier shall violate or refuse or neglect to obey any lawful order or requirement of the said Board of Railroad Commissioners, it shall be the duty of said commissioners, and lawful for any company or person interested in such order or requirement, to apply in a summary way, by petition to the District or Superior Court . . . alleging such violation or disobedience as the case may be; and the said court shall have power to hear and determine the matter, on such short notice to the common carrier complained of as the court shall deem reasonable . . . and said court shall proceed to hear and determine the matter speedily as a court of equity and without the formal pleadings and proceedings applicable to ordinary suits in equity, but in such manner as to do justice in the premises; . . . and on such hearing the report of said commissioners shall be *prima-facie* evidence of the matter therein, or in any order made by them stated; and if it be made to appear . . . that the order or requirement of said commissioners in question has been violated or disobeyed, it shall be lawful for such court to issue a writ of injunction, or other proper process mandatory or otherwise, to restrain such common carrier from further continuing such violation or disobedience; . . . and in case of any disobedience of any such writ, it shall be lawful for such courts to issue writs of attachment, or any other process of said court incident or applicable to writs of injunction or other proper process, and said court may, if it shall think fit, make an order directing such common carrier or other person so disobeying . . . to pay such sum of money not exceeding for each carrier or person in default the sum of one thousand (\$1,000) dollars for every day after a day to be named in the order that such carrier or other person shall fail to obey such injunction or other proper process mandatory or otherwise . . . and the payment thereof may without prejudice to any other mode of recovering the same be enforced by attachment or order, in the nature of a writ of execution, in like manner as if the same had been recovered by a final decree *in personam* in such court.

Another section provides as follows:

The Board of Railroad Commissioners of this State are hereby empowered and directed to make for each of the railroad corporations doing business in this State, as soon as practicable, a schedule of reasonable maximum rates of charges for the transportation of freight and cars on each of said railroads, and said power to make schedules shall include the power of classification of all such freights, and it shall be the duty of said commissioners to make such classification; provided, that the said rates of charges to be so fixed by said commissioners shall not in any case exceed the rates which are or may hereafter be established by law; and said schedules so made by said commissioners shall in all suits brought against any such railroad corporations, wherein is in any way involved the charges of any such railroad corporation for the transportation of any freight or cars or unjust discrimination in relation thereto be deemed and taken in all courts of this State as *prima-facie* evidence that the rates therein fixed are reasonable and just maximum rates of charges for the transportation of freight and cars upon the railroads for which said schedules may have been respectively prepared.

Said commissioners shall from time to time, and as often as circumstances may require, change and revise said schedules, subject to the same provision that the rates fixed are not to be higher than now or hereafter established by law.

Annual reports from the various railroad companies are also required.

Another act requires all railroads in the State to be fenced, and a third makes the Board of Railroad Commissioners more directly responsible to the people by providing that the

members shall be chosen by popular election. A full board shall be chosen in November, 1888, and one member thereof each year subsequently.

The new railroad act went into effect on May 10, and in accordance with its provisions the commissioners soon thereafter prepared and published a schedule of maximum freight rates, which should go into effect on July 10. These rates, being on an average over 20 per cent. below the previous schedule rates, were strenuously opposed by the railroads. Immediately upon their publication, certain of the roads applied to Judge Brewer, of the United States Circuit Court, for a temporary injunction against their enforcement by the commission. This was granted, and July 5 was set as the day for a hearing upon the matter. On that day the question of the reasonableness of the rates and the constitutionality of the new act was argued before Judge Brewer, who, on July 26, decided to continue the temporary injunction till a further hearing and more extended evidence should be given as to the reasonableness of the schedule. Meanwhile, the Chicago, Rock Island and Pacific Railroad had applied to Judge Fairall, of the district court at Iowa City, for an injunction on the same ground, that the rates fixed were unreasonably low. The judge granted a temporary injunction, which the commissioners moved to have dissolved. The hearing and arguments on this motion consumed nearly a week. Late in August, Judge Fairall rendered his decision, denying the motion, whereupon the commissioners appealed to the State Supreme Court, where the case was argued in October. Early in September the opponents of the railroads, anticipating that the commissioners would not be able to enforce their schedule until after a long litigation, if at all, adopted a new method of securing a reduction of rates, under a section of the same act, which provides that on complaint of a person or class of persons that the charges of any common carrier are too high, the commissioners shall investigate, hear all parties interested, and fix a reasonable rate. The shippers of Davenport, Dubuque, and Burlington entered complaints under this section with the commissioners; these complaints were heard separately, and the decision, signed by two of the three commissioners, was published a few days before the November election. The rates established were somewhat higher than the corresponding rates of the July schedule. No sooner had the commissioners announced their decision than the Chicago, Burlington and Quincy Railroad, and one other road interested, obtained from Judge Brewer a temporary injunction against the enforcement of these new rates. The hearing upon the continuance of this injunction was set for December 11 at Minneapolis, at which time the various questions involved were argued; but no decision had been made by Judge Brewer before the end of the year.

Meanwhile, the plaintiff in the suit before Judge Fairall, from whose decision the commissioners had appealed, applied to Judge Fairall and had the suit withdrawn, on the ground that the question in controversy had actually been settled by the abandonment of the schedule by the commissioners in making and adopting another and higher schedule of rates in the Dubuque, Davenport, and Burlington jobbers' decisions. This withdrawal left nothing for the Supreme Court to decide on appeal, and it, therefore, in December, dismissed the case before it.

By the report of the commissioners it appears that during the fiscal year ending June 30, 349 miles of new railroad were constructed, making the total mileage in the State 8,436 miles; but of this new construction only four miles were built since January, when the Legislature began to discuss the railroad problem. The assessed valuation of all roads in the State for 1888 was about \$42,500,000, against \$38,250,000 in 1887.

Education.—The annual report of the State Superintendent of Education for 1888 shows that there are 12,752 school-houses in the State, valued at \$12,007,340; as against 12,444, valued at \$11,360,472, at the close of the fiscal year 1887. The average school year in months is 7.7, against 7.4 in 1887. The number of female teachers has increased largely during the year, while the number of male teachers has decreased. The whole number of male teachers employed in the State is given as 5,595, and of female teachers 19,578. The average compensation of male teachers has decreased from \$38 per month in 1887 to \$36.44 in 1888. The average compensation of female teachers has increased from \$29.50 in 1887 to \$30.05 in 1888. The number of pupils between five and twenty-one returned is, males 325,741, females 313,507, total 639,248. The number of pupils actually enrolled in the schools of the State is 477,184, and the total average attendance only 281,070.

Prisons.—Reports from the two State Penitentiaries show a marked decrease in the number of convicts during the past fiscal year. At Anamosa there were 259 convicts on July 1, against 313 one year previous; while at Fort Madison the decrease has been from 860 on July 1, 1887, to 330 on the same day in 1888. It is claimed that this diminution is due to the enforcement of the prohibitory law.

Coal.—The coal-product of the State for the year ending June 30 is reported by the State mine inspectors as follows: District No. 1, 1,528,967 bushels; district No. 2, 1,668,206 bushels; district No. 3, 918,185 bushels; total, 4,105,558 bushels.

Prohibition.—The prohibitory law received this year a serious blow by a decision of the United States Supreme Court, rendered on March 19, in the case of *Bowman vs. The Chicago and Northwestern Railroad Company*. The question at issue turned upon the validity

of the law enacted in 1886, prohibiting the transportation of liquors on railways from without the State, unless accompanied by a certificate from the officials of the county to which it was assigned attesting its importation for legal purposes. This enactment was held to be an interference with interstate commerce, and therefore unconstitutional. The difficulties of enforcing prohibition were multiplied by this decision, which removed all restraint upon importation. In October the same court rendered a decision affirming the rulings of the State Supreme Court in the case of *Pearson vs. The International Distillery*, by which the manufacture of liquors for export was declared to be forbidden by the statute. Reports during the year showed that prohibition was well enforced in 60 counties, reasonably well enforced in 28, and disregarded in 11.

Political.—The Republican State Convention was held at Des Moines on August 22, and nominated the following candidates: for Secretary of State, Frank D. Jackson; Auditor, James A. Lyons; Treasurer, Voltaire P. Twombly; Judge of the Supreme Court, Charles T. Granger; Attorney-General, John Y. Stone; Railroad Commissioners, Frank T. Campbell, Spencer Smith, and John Mahin. The platform contained the following:

We declare our firm adherence to the principle of legislative control of railways and other corporations. Having been created by the Government, they are of right subject to such just laws as may be enacted for their control and must obey the same. We would deal as justly with corporate as with individual interests. But we demand that the people shall be fully protected in all directions from corporate rapacity, whether arising from discriminations, trusts, combines, railways, or other aggregated capital. We commend the general railway legislation of the last General Assembly and demand that all just proceedings and rates thereunder shall be promptly, impartially, and vigorously enforced.

We repudiate the imputation that the people of Iowa are antagonistic to the rights of capital or desire to oppress any corporation, but we demand such legislation as will develop the agricultural, industrial, and manufacturing interests of our State and at the same time render a just equivalent for capital and labor employed.

We congratulate the people of our State on the temperance legislation inaugurated in the Eighteenth General Assembly and on the faithful obedience of all subsequent General Assemblies to the expressed will of the majority of the people, which has given to Iowa the best prohibitory law in the United States. To the credit of the Republican party, for its unselfish and non-partisan respect for the will of the people, no backward step in Iowa has been taken and none will be taken on this question, so vital to the moral welfare of all our communities. In this connection we refer with satisfaction to the large decrease in the population of our State prisons, the empty jails in so many of our counties, and the decreasing costs and expenses upon the criminal dockets of the courts.

We declare that the Democratic majority in the Lower House of Congress has shown its injustice in defeating the Senate bill, which directed the refunding to the Northern States the direct war-tax, and remitting the same which was unpaid to the United States. This tax would have placed in the treasury of Iowa about \$400,000, and to that extent would have relieved Iowa tax-payers.

At the Democratic State Convention the following nominations were made: for Secretary of State, Walter McHenry; Auditor, Daniel J. Okerson; Treasurer, Amos Case; Judge of the Supreme Court, P. Henry Smythe; Attorney-General, Joseph C. Mitchell; Railroad Commissioners, Peter A. Dey, Christian L. Lund, and Herman E. Wills.

The Union Labor party nominated for Secretary of State, J. B. Van Court; Auditor, O. M. Farnsworth; Treasurer, James Rice; Judge of the Supreme Court, M. H. Jones; Attorney-General, D. H. Williamson. It adopted the Republican candidates for Railroad Commissioners. A Prohibition ticket was also in the field, presenting James Micklewait for Secretary of State; Malcolm Smith for Auditor; and E. O. Sharpe for Treasurer. For other places on the ticket the Republican nominees were generally adopted.

At the November election the vote for Secretary of State was as follows: Jackson, 211,577 votes; McHenry, 180,455; Van Court, 9,005; Micklewait, 2,690. The vote for Auditor, Treasurer, Supreme Judge, and Attorney-General was substantially the same as for Secretary of State. For Railroad Commissioner, Smith received 225,928 votes; Campbell, 224,800; Mahin, 200,075; Dey, 201,265; Lund, 176,327; Wills, 175,049.

Candidate Dey ran over 21,000 votes ahead of his ticket, and is the only Democrat that has been elected to a State office in many years. The Republicans carried 10 of the 11 congressional districts, gaining two seats from the Democrats, one of them being the seat of Gen. Weaver.

ITALY, a constitutional monarchy in southern Europe. The reigning sovereign is Umberto I, born March 14, 1844, the eldest son of Vittorio Emanuele II, and Archduchess Adelaide of Austria, who succeeded to the throne on the death of his father, Jan. 9, 1878. The heir to the throne is Vittorio Emanuele, Prince of Naples, born Nov. 11, 1869. The King's only brother, Amadeo, Duke of Aosta, who was elected King of Spain in 1870, abdicated three years later, and has since been a lieutenant-general in the Italian army, married, on Sept. 11, 1888, for his second wife, his niece, the Princess Letitia Bonaparte, daughter of Prince Napoleon and the Princess Clotilde of Savoy, and sister of Prince Napoleon Victor Bonaparte, the French pretender.

The Constitution of the kingdom of Italy is contained in the fundamental statute granted by King Carlo Alberto to the people of Sardinia in 1848, and extended to the whole of Italy when Vittorio Emanuele was proclaimed King of the united nation on March 17, 1861. The legislative powers are vested in a Senate and Chamber of Deputies. The Senators are nominated by the King from among the persons above forty years of age who have held high posts in the public service, or gained fame in science, literature, or other pursuits, or pay

8,000 lire in taxes. The Deputies, 508 in number, are elected by *scrutin de liste*, every citizen having a vote who can read and write and pays 19 lire per annum in taxes, as well as members of academies, professors, and all who have served two years in the active army. The legislative period is five years, but the King can dissolve the Chamber at any time, in which case new elections must be held within four months. The executive power is exercised by the King under the advice of a cabinet of ministers responsible to the Parliament. The present Cabinet, which was constituted on Aug. 7, 1887, is composed of the following members: President of the Council and Minister of the Interior, Francesco Crispi, who has also been Minister of Foreign Affairs *ad interim* since the transfer of Count Robilant to the London Embassy in the spring of 1886; Minister of Public Instruction, P. Boselli, who succeeded Michele Coppino in February, 1888; Minister of Finance and of the Treasury, Agostino Magliani, appointed Nov. 26, 1887; Minister of War, Gen. Ettore Bertolè Viale; Minister of Marine, Benedetto Brin; Minister of Justice and Public Worship, Giuseppe Zanardelli; Minister of Commerce, Industry, and Agriculture, Bernardino Grimaldi; Minister of Public Works, Giuseppe Sarracco.

Area and Population.—The area of the kingdom, as estimated by the Military Geographical Institute of Florence, is 286,588 square kilometres or 110,620 square miles, of which 25,740 square kilometres or 9,935 square miles constitute the area of the island of Sicily, and 24,077 square kilometres or 9,293 square miles belong to Sardinia and adjacent islands. The total population on Dec. 31, 1887, was computed to be 30,260,065. The number of Protestants in Italy is about 62,000, of whom 22,000 are in the valleys of the Vaud. The Israelitish population is estimated at 38,000. The number of marriages in 1887 was 233,386; of births, 1,194,700; of deaths, 876,777; excess of births over deaths, 317,923. The emigration to European countries in 1887 was 82,474; to Egypt, 567; to Tunis, 638; to Algeria, 1,375; to the United States and Canada, 38,853; to the Argentine Republic, Uruguay, and Paraguay, 54,499; to Brazil and other South American countries, Mexico, and Central America, 33,003; to South America, without declared destination, 3,108; to Asia, Africa, and Oceania, 553; total emigration, 215,665, as compared with 167,829 in 1886, 157,193 in 1885, 147,017 in 1884, and 169,101 in 1883. An act for the protection of emigrants was passed in 1888. Domiciled residents who desire to act as emigration agents must obtain a license from the Minister of the Interior, for which the recommendation of the police prefect of the province is necessary, and must deposit from 1,000 to 3,000 lire as a guarantee fund to secure emigrants against losses incurred through the fault or negligence of the agent. The agents are forbidden to receive compensation

from emigrants, or to counsel, induce, or incite emigration, or to furnish emigrants with their passage, or mediate between them and the shipping company. Clergymen and local officials are likewise prohibited from advising or promoting emigration, even without hope of gain. The spreading of false information with the object of encouraging emigration is punishable as swindling.

Commerce.—The total value of the special imports in 1887 was 1,690,500,000 lire or francs, and of the exports 1,109,700,000 francs. The value of the imports and exports of the various classes of commodities were as follow :

CLASSES.	Imports.	Exports.
Articles of consumption.....	487,500,000	801,900,000
Raw materials.....	522,400,000	898,900,000
Manufactures.....	478,700,000	148,400,000
Waste materials.....	1,800,000	700,000
Drugs, dyes, and chemicals..	48,000,000	70,900,000
Gums, fats, and oils.....	62,100,000	89,100,000
Total merchandise.....	1,601,500,000	999,900,000
Precious metals.....	89,000,000	110,500,000
Total special commerce..	1,690,500,000	1,109,700,000

The transit trade in 1887 amounted to 50,046,819 lire. The imports of cereals in 1887 were valued at 232,600,000 lire; exports, 31,200,000 lire; imports of wines and liquors, 16,600,000 lire; exports, 111,200,000 lire; imports of tobacco, 19,000,000 lire; imports of fruits, vegetables, etc., 25,800,000 lire; exports, 79,700,000 lire; imports of animal food products, 104,100,000 lire; exports, 73,800,000 lire. The imports of coal amounted to 86,600,000 lire; imports of metals, 118,000,000 lire; imports of textile materials, 180,100,000 lire; exports, 827,700,000 lire; imports of timber, 81,800,000 lire; exports, 11,800,000 lire. The imports of machines and vehicles were valued at 78,900,000 lire; imports of textile yarns, 126,100,000 lire; exports, 21,900,000 lire; imports of tissues and garments, 141,560,000 lire; exports, 27,600,000 lire; imports of jewelry and art objects, 50,300,000 lire; exports, 40,600,000 lire. The value of the commerce with each of the principal foreign countries for 1887 is given in francs in the following table :

COUNTRIES.	Imports.	Exports.
France.....	404,600,000	496,900,000
Austria.....	250,800,000	95,800,000
England.....	806,500,000	78,900,000
Germany.....	165,800,000	115,200,000
Switzerland.....	69,600,000	100,500,000

Navigation.—The number of vessels engaged in foreign trade entered at the ports of Italy in 1887 was 17,552, of 7,052,659 tons, of which 10,016, of 1,680,927 tons, were Italian. The

number of steamers among all the vessels entered was 6,584, of 6,040,586 tons, of which 1,201, of 987,864 tons, were Italian. The number of vessels entered with cargoes was 15,605, of 6,521,638 tons. The total number of vessels cleared for long voyages was 17,431, of 6,742,191 tons, of which 9,515, of 3,547,886 tons, were laden. The vessels in the coasting trade entered were 93,899 in number, of the aggregate tonnage of 18,258,643, of which all were Italian excepting 3,299 vessels, of 2,854,080 tons. The fishing-vessels entered at the ports numbered 1,367, of 10,945 tons.

The merchant navy on Jan. 1, 1887, consisted of 6,992 sailing-vessels, of 801,849 tons, and 237 steamers, of 144,828 tons, making a total of 7,229 vessels, of 945,677 tons, as compared with 7,336 vessels, of 958,419 tons, on Jan. 1, 1886. There was a decrease of 119 in the number of sailing-vessels and of 27,470 tons in the sail tonnage, while the steam-vessels increased by 12 in number and the steam tonnage by 19,728 tons.

Finances.—The treasury accounts for the financial year 1886-'87 give the total receipts as 1,801,185,804 lire and the total expenditures as 1,789,413,851 lire, showing a surplus of 11,771,953 lire. The ordinary receipts for 1886-'87 were estimated at 1,548,789,972 lire, including receipts *d'ordre*, and the extraordinary receipts at 215,028,272 lire; total, 1,763,818,244 lire. The total expenditures were set down at 1,801,757,180 lire, of which 315,695,059 lire were for extraordinary purposes. The budget for the year ending June 30, 1889, makes the ordinary receipts 1,550,535,015 lire, of which 84,618,643 lire represent revenues from railroads and other state property; 894,207,684 lire the taxes on land, houses, and incomes from personal property; 212,723,000 lire the succession, registration, stamp, and railroad taxes; 667,877,245 lire the revenue tax on imports, *octrois*, profits of the tobacco and salt monopolies, and duties on beer, alcohol, powder, sugar, etc.; 76,802,000 lire profits of the state lottery; and 77,612,985 lire revenue from the post-office, telegraph, and other public services. Including 93,688,409 lire representing the expenses of working the domains, the interest on bonds deposited as reserve against paper money, and the funds for the payment of pensions, which items are entered on both sides of the account, the total ordinary revenue amounts to 1,644,228,424 lire. The extraordinary receipts are 246,461,967 lire, of which 195,399,784 lire constitute the sum set aside for the construction of railroads. On capital account the receipts are 88,845,860 lire, of which 14,450,446 lire are derived from sales of public lands and 21,384,000 lire from loans for the improvement of the Tiber, public works in Naples, and other purposes. The ordinary disbursements are estimated at the sum of 1,538,868,599 lire, showing a surplus in the ordinary budget of 105,854,825 lire. The extraordinary disbursements, amounting to 388,801,115 lire, or 142,839,148

lire more than the extraordinary receipts, convert this surplus into a deficit of 86,984,323 lire, the total receipts of the Government from all sources being 1,890,685,891 lire and the total expenditures 1,927,669,714 lire. The ordinary expenditures of the Ministry of Finance are fixed at 188,693,997 lire; of the Ministry of Grace, Justice, and Worship, 88,775,891 lire; of the Ministry of Foreign Affairs, 7,790,710 lire; of the Ministry of Public Instruction, 40,116,414 lire; of the Ministry of the Interior, 61,784,320 lire; of the Ministry of Public Works, 82,483,635 lire; of the Ministry of War, 247,479,368 lire; of the Ministry of Marine, 94,866,494 lire; of the Ministry of Agriculture, 18,665,256 lire. Of the extraordinary expenditures 222,168,759 lire are allocated to the Ministry of Public Works, 62,750,000 lire to the Ministry of War, 28,646,500 lire to the Ministry of Marine, and small sums to each of the other ministries. The interest on the consolidated debt, most of which bears 5-per-cent. interest, was 448,748,332 lire for the year ending June 30, 1888; the perpetual *rentes* due to the Holy See, 8,225,000 lire; the interest on special loans, 22,178,495 lire; the interest on various other debts assumed by the state, 73,898,478 lire; and the interest on the floating debt, 14,553,635 lire, making the total interest charge of the debt 562,603,985 lire, besides 906,926 lire paid for extinction of debts.

The Army.—The war strength of the Italian army on June 1, 1888, was, according to the official statement, 2,595,687 men. The number of officers and men under arms was 258,000. The entire war effective was composed as follows:

DESCRIPTION OF TROOPS.	PERMANENT ARMY.		MILITIA.	
	With the colors.	On leave.	Mobil.	Territorial.
Officers.				
Active	14,859	583	5,894
Complementary	8,873	2,744
Auxiliary	2,810
Reserve	8,996
Total officers	14,859	10,178	8,277	5,894
Rank and file:				
Carbineers	22,995	8,047	184	8,385

Total	256,000	694,090	885,598	1,330,954

The Navy.—The Italian fleet of war on Jan. 1, 1888, consisted of 175 steam-vessels of all descriptions, of 188,551 tons displacement, armed with 869 cannon. The 12 iron-clads of

the first class comprise some of the most powerful vessels afloat. Of these great iron-clads 7 were ready for service in the summer of 1888. The battle-ships of the second class number 13, of which 8 are armor-clad; and of the third class there are 16, none of them armored. The rest of the navy consists of 21 transports, 8 school-ships, 23 vessels for post service, 6 paddle-wheel gun-boats, 1 torpedo dispatch-boat, 15 sea-going torpedo-boats, 86 torpedo-boats of the first class, 21 of the second class, and 8 torpedo-vessels. There were under construction 6 iron-clad battle-ships of the first class, of a total displacement of 78,456 tons, 8 unarmored cruisers of the second class, 7 of the third class, 1 torpedo dispatch-boat, 32 sea-going torpedo-boats, 2 torpedo-boats for coast defense, 1 transport, and 1 propeller. Among the vessels lately acquired, the "Dogali," first christened "Angelo Emo," is a fast protected cruiser, carries six 4-ton guns, and the "America" is a converted merchant steamer. The value of the 102 vessels and 108 torpedo-boats comprising the Italian navy is 860,000,000 lire. The naval maneuvers of 1888 proved that Italy could arm a considerable part of her fleet without having recourse to extraordinary means for recruiting officers and sailors. The "Re Umberto," "Sicilia," and "Sardegna," have been built in the national dockyards and are being fitted mainly with domestic material. These sister vessels are equal in size to the "Italia" and "Lepanto," previously the largest war-ships in existence, and will carry four 104-ton Armstrong breech-loading guns each. The "Re Umberto," launched in October, 1888, is a twin-screw, steel, barbette ship of 18,298 tons displacement. Without side-armor, she is protected by a curved steel deck extending below the water-line, while her bottom is enveloped by a double layer of water-tight compartments, which have been proved by experiment to be a sufficient protection against torpedoes charged with 75 pounds of gun-cotton. The two barbettes are plated with inclined 19-inch compound armor. The compound triple-expansion engines are designed to be of 19,500 indicated horse-power and capable of propelling the ship at a maximum speed of 18 knots. The projectiles weigh 2,000 pounds each, and in weight of shot and energy of discharge she greatly excels any battle-ship in the French, British, or other navies. In addition to her ram and heavy guns she will be armed with twelve 6-inch guns, six 8-inch guns, ten machine and quick-firing guns, and torpedo tubes. She will be ready for commission in 1892. The "Fiera Mosca," a new cruiser, was launched at Leghorn on August 30. The Gruson turret has been adopted for sea-coast batteries at Spezia, after experiments that proved that the hardness of the chilled cast-iron at the surface, the toughness of the mixture of which it is made, and the angles presented by its mushroom-like shape, are sufficient to resist the heaviest projectiles. The

revolving turrets, each mounting 2 Armstrong 105-ton guns, are composed of sections of 80 tons weight, the whole weighing 1,800 tons. The same system has been adopted for coast defenses in Germany, Belgium, Holland, and Austria.

Railroads.—The length of railroad lines open to traffic on June 30, 1888, was 11,800 kilometres or 6,375 miles. The receipts for the preceding year amounted to 240,021,076 lire.

The Post-Office.—The number of letters, postal-cards, and manuscripts, forwarded in 1886 was 203,635,675; of circulars and printed matter, 179,094,704; of postal money-orders, 4,752,863 for the aggregate sum of 491,389,758 lire. The receipts of the post-office were 40,112,477 lire, and the expenses 34,068,912 lire.

Telegraphs.—The length of lines on June 30, 1886, was 30,573 kilometres, that of wires 108,908 kilometres, exclusive of 184 kilometres of submarine cables. The number of dispatches in 1885 was 7,821,357, of which 5,896,306 were paid internal messages, 581,657 private foreign dispatches, and 179,036 transit dispatches. The receipts were 12,826,488 lire, the expenses for service 10,218,159 lire, for material and maintenance 184,470 lire, for extraordinary purposes 553,820 lire.

Church and State.—The conflict between the Vatican and the Italian Government has become more acute since the Government has been dominated by the democratic element, and Pope Leo has put forth positive assertions of the temporal sovereignty, called on the clergy to repeat and maintain his protest against the usurpation of his kingdom, and striven to obtain the intervention of external powers. The new Italian law of communal and provincial reform says that public officers, agents, and others who, directly or through persons dependent on them, officially attempt to control the votes of electors for or against formal candidatures, or to induce them to abstain from voting, are punished by fines of from 500 to 1,000 lire, or according to the gravity of the case, by imprisonment for from three months to one year. The fine or imprisonment is applied to ministers of religion who attempt to control the votes of electors in favor of or against certain candidates, or to induce them to abstain, by allusions or discourses in places designed for worship, or in meetings of a religious character, with spiritual promises or menaces, or with instructions. The new penal code, in which for the first time an attempt is made to assimilate the penal procedure of all the provinces of Italy and make a common criminal law for all the kingdom, has the same provisions, intended to punish the assertion of the Pope's right to Rome as a crime. As it passed the Chamber of Deputies in the session of 1888, it applied special and aggravated penalties to this offense when committed by the priesthood. This drew out many protests, on the ground that it made a discrimination against the priest which was not justified by the recog-

nition of the priest in his clerical capacity, he being in the eyes of the law a simple citizen. These protests were taken into account by the Senate, and the bill was altered so as to read as follows:

The religious minister who, abusing his position, provokes contempt or disobedience of the institutions or laws of the state, or the acts of the authorities, or even the transgression of the duties inherent in a public office or service, is punished by from six months' to three years' imprisonment, with a fine of from 500 lire to 3,000 lire, with temporary or perpetual interdiction from the benefice.

Subject to the same penalty is the minister of any religion who urges or instigates anybody to acts or declarations against the laws of the state, or in prejudice of rights acquired by the state.

These stringent laws prevented the Italian clergy from instituting public demonstrations in favor of the restoration of the temporal power of the Pope such as took place during 1888 in Germany, Switzerland, Belgium, and France. The tension between the Government and the Vatican was partly due to the aggressive attitude of the clericals in connection with the fiftieth anniversary of Pope Leo's entrance into the priesthood. The congratulations and homage from sovereigns and peoples of which he was the recipient were interpreted as demonstrations of sympathy for the sorrows and wrongs of the "prisoner of the Vatican." The Pope himself raised the question in replying to various deputations, especially in addressing the Italian bishops, to whom he said, "You are among those who desire to see the Papacy restored to that condition of true sovereignty and independence which is in every way its due." The Duke of Torlonia, Syndic or Mayor of Rome, who requested the Cardinal Vicar to present the congratulations of the city to the Pope on the occasion of his jubilee, was dismissed from his post by the Government. The Syndic was governed in his action by the sentiments of the Municipal Council, in which the clericals have a majority, although they hold aloof from parliamentary elections.

Disputes with France.—Questions relating to ex-territorial jurisdiction under the capitulations in portions of the Turkish Empire that have virtually been annexed by France and Italy, arose several times between the two governments and were the subject of spirited diplomatic controversies in 1888. In January an incident occurred in Florence which was the subject of considerable correspondence. When Italy made a treaty with France in 1884, by which she consented to the suspension of the consular privileges in Tunis, France agreed that Italy's previous conventions with the Bey of Tunis should remain in force. The convention of 1868 provides that the estates of Tunisian subjects who die in Italy shall be settled according to Italian law. The French consul in Florence took possession of the property and papers of a Tunisian general, Hussein Pasha, who died in that city, leaving a large

fortune, against which certain Italian creditors had claims. The Italian judicial authorities summoned the consul, who had gone so far as to break the seals placed on the property by the Italian court and to sell part of the effects, to deliver up the property in his possession, and invited him to assist in the proceedings connected with the administration of the estate. The French consul paid no attention to the order of the court, and when the pretor went to the consulate he was compelled to break a door, as the French officials would yield only to force. The French Government complained of a violation of the consulate, and the Italian Government removed the pretor to another district in the same city as a disciplinary punishment for discourtesy, but maintained the entire legality of the proceedings, and demanded that the consul should be censured. In the end the French Minister for Foreign Affairs acknowledged that the consul's conduct was illegal, and the inheritance was returned to the Florentine tribunal for adjudication.

The dismissal of Count Corti, Italian Ambassador at London, who died soon after his disgrace, was an indication of the strong feeling on the Mediterranean question of the Italian Premier, whose antipathy to Count Corti dated from the time when the latter, while Minister for Foreign Affairs at the time of the Berlin Congress, would not press the Italian claims to Tunis, although overtures were made on the part of Germany, saying that Italy, when taking her seat for the first time among the great powers, would not appear as a suppliant for favors. In regard to the supposed French aspirations toward Tripoli, Italy has assumed a determined attitude. In fortifying Tunis, the French are said to have carried the frontier line into Tripolitan territory. In the summer the French Cabinet raised a troublesome question regarding the abolition of the capitulations in Massowah before the powers had been duly notified of the Italian annexation. After making good the omission, Signor Crispi retorted by raising a point in connection with the Suez Canal convention proposed by France, which was intended to draw from Turkey a declaration regarding her sovereignty, not merely in Massowah, where Italy claimed that it had lapsed, but in Tunis, where it was still nominally in force. The interpretation put by Italy on the Suez convention led the Sultan at the last moment to withhold his signature. In regard to Massowah, Italy was supported by the majority of the powers in the contention that the Turkish sovereignty was non-effective, and that the territory was *res nullius* at the time of the Italian occupation. The school question in Tunis was the subject of representations in consequence of which the Tunisian authorities, without foregoing their purpose to introduce the French educational system, modified their rules so as not to interfere with the missionary schools of Italian monks.

Tariff Negotiations with France.—The commercial treaty with France expired in 1887. During negotiations for a new treaty it was prolonged until March 1, 1888, as were also the treaties with Spain and Switzerland. These were renewed, but the French ministers and legislators were too much under the dominion of protectionist interests to agree to a treaty that would be acceptable to Italy. The negotiations were broken off in the beginning of February, 1888, and M. Teisserenc de Bort and Marie, the French plenipotentiaries, were recalled from Rome. The Italian representatives asked for reductions in the French duties on cattle, cereals, and the produce of the vine. On February 21 M. Flourens communicated to Count Manabrea, the Italian Ambassador in Paris, the final proposals of the French Government, and on February 27 the French Senate passed a bill authorizing reprisals against Italy in case the commercial treaty should lapse. The Senate bill contained a clause taxing raw silk, for which the Lyons manufacturers have largely depended on Italy. The Italian Government gave notice that it intended to present counter-proposals, and requested the suspension of the new tariff, but to this the French Cabinet would not accede. On March 10 Count Manabrea presented new proposals as a basis for reopening negotiations. In the mean time the reprisals were carried out. The Italian Government was armed with the necessary powers by an act that was passed on February 8, in accordance with which it declared that certain specified French imports would come under the general tariff on and after the 1st of March. Among the articles so treated were wine, spirits, coffee, sugar, chocolate, oils, soap, perfumery, dye-stuffs, furniture, toys, fire-arms, flour, preserved fruits, etc. The duty on textile fabrics, skins, railroad-cars, pottery, glass, and copper manufactures was raised to 50 per cent.; that on iron manufactures to 20 per cent.; and that on machinery to 30 per cent. The French and Italian merchants, however, very generally evaded the new tariffs by organizing a systematic smuggling trade. Goods were shipped into Switzerland, and from there invoiced to their destination in France and Italy, until persons who practiced this trick were punished for making false declarations. After that an extensive smuggling trade sprang up. The risks and cost of smuggling enhanced the prices of the goods only about 15 per cent., which nearly corresponded to the average rate of duties under the old tariff. The trade in Italian straw-goods, raw silk, and other valuable wares and in fine French manufactures was as brisk as before, but the large export of grapes and must from the Italian vineyards for the manufacture of wine was interrupted.

The Premier's Journey to Friedrichsruhe.—In the summer of 1888 Signor Crispi went to Germany in order to pay a second visit to Prince Bismarck at Friedrichsruhe, where he arrived on August 22. The meeting had the

effect of dispelling Clerical expectations of an intervention of Germany in the Roman question. The Italian Ambassador at Berlin, Count de Launay, was present at Signor Crispi's interviews with the German Chancellor. On his homeward journey the Premier had a conference with Count Kálnoky at Eger.

Colonial Possessions.—Italy has occupied or extended a protectorate over about 500 kilometres of the western coast of the Red Sea, extending from the village of Emberemi, in 16° of north latitude, a short distance north of the island of Massowah, to the southern limit of the territory of Raheita, in 12° of north latitude, situated on the Bay of Assab, inclusive of the small islands adjacent to the coast and the Archipelago of Dahlak. Italian sovereignty has been declared over Assab and its territory, extending from Ras Dermah to Ras Sinthiar in the south, a distance of about 60 kilometres; over Massowah and adjacent islands, and the coast from Emberemi to the peninsula of Buri; and over the Dahlak Islands. The island and town of Massowah, according to an enumeration made in September, 1885, contains 5,000 inhabitants; Emberemi, 1,000; the Dahlak

Islands, 2,000; and Assab, 1,000. The extent and population of the protected territories between Massowah and Assab, and south of Assab, are not known. By a law enacted on July 10, 1887, a special corps of African troops was created, numbering 5,000 men, of whom 288 are officers, with 492 horses. It is composed of volunteers from the regular army. The commerce of the African possessions of Italy amounted in 1887 to 158,920 lire by land, and 12,614,447 lire by sea. There is a railroad in operation between Massowah and Saati, having a length of 27 kilometres.

In the summer of 1888 Italy took possession of Zulla, in the Egyptian Soudan, and notified the powers of the step, declaring that it was taken in response to an urgent request of the natives. The Egyptian Government, acting under directions from the Porte, protested against the occupation on August 16. About the same time the Italian Government asked of the Sultan of Zanzibar the grant of the Kismaya Juba river, which flows into the Indian Ocean a few miles south of the equator, and affords a route of doubtful value to Shoa and southern Abyssinia.

J

JAPAN. The chief ruler of the Japanese Empire is Mutsuhito, born Nov. 8, 1852. The heir-apparent, Haru, was born Aug. 31, 1877. The Tenno or Mikado is assisted in his government by the Privy Council of 18 members; the Cabinet, consisting of the heads of the eight executive departments and a Minister-President of State; the Senate, or Genro In, of 60 members; and a Supreme Court of Justice, or Dai Shin In, consisting of 24 superior judges. For administrative purposes, the empire is divided into 44 ken, or prefectures, and 8 fu, or imperial cities. Each ken has a local assembly with limited powers, the members of which are elected by ballot. The number of persons that pay land-tax of over \$5 per annum is 1,581,726, of whom 1,488,700 have the right of voting. The number of persons who pay over \$10 tax is 882,517, of whom 802,975 have the right both of voting and of being elected to the local assemblies. In these petty legislative bodies 2,172 members sit, and the number of standing committees is 292. The Riu Kiu (Loo Choo) islands, formerly semi-independent, now form the Okinawa ken, but Yezo and the islands of Hokkaido are governed as a colony.

Population.—By the enumeration completed Jan. 1, 1887, the native population numbered 88,507,177, of whom 19,451,491 were males and 19,055,686 were females. These are divided by law into three classes, nobles, gentry, and common people, which numbered 8,480, 1,940,271, and 86,563,476 respectively. In 1886 there were 855,311 marriages, 1,050,617 births, and 988,843 deaths. The Central Sani-

tary Bureau of Tokio reported that, as the result of the violation of the quarantine by an infected vessel convoyed into Yokohama by a foreign man-of-war, the cases of cholera in 1886 numbered 155,474, of which 110,086 were fatal. Only 17 days of the year presented no cases. Of the cities having over 100,000 inhabitants, Tokio has 1,552,457; Osaka, 853,970; Kioto, 255,408; Nagoya, 126,898; and Kanazawa, 104,820. There are 80 cities having a population of between 80,000 and 100,000. Foreigners residing in Japan number 6,807, of whom 4,071 are Chinese, 1,200 British, 621 Americans, 318 Germans, 220 French, and 371 of various nationalities. Yokohama is the main seaport, and here 8,837 foreigners live, of whom 2,859 are Chinese. Of the foreign mercantile firms in Japan, 108 are British, 39 American, 42 German, 35 French, and 255 Chinese. Over 400 adult persons are connected with missionary operations. In 1887 5,489 passports were issued to Japanese to travel or live abroad, no native being exempt, by reason of absence, from the military laws.

Army and Navy.—The army consists of 43,897 privates, 7,189 non-commissioned officers, and 8,302 commissioned officers, of whom 41 are generals. There are also 2,057 pupils in the military schools, and 15,000 police, who are drilled to act as a reserve in time of war. In September, 1888, there were in the standing squadron of the navy 8, and in the reserve 21 vessels of war; besides two vessels for coast defense building in France, one first-class man-of-war in England, and three wooden ships at

Yokoska, near Yokohama; total, 85, of which 24 were true modern fighting ships. The Naval Construction Board have decided to build 25 more ships during the next five years. The facilities for ship-building at Yokoska are first class, and in addition to the finest wooden vessels of the latest approved types, iron and steel ships are in course of construction. Most of the steel plates used for the iron-clads come from England. About 85,000 sailors and officers comprise the personal equipment of the Japanese navy. For the construction of forts at Tsushima, Shimonoséki, and in Tokio Bay, the manufacture of heavy guns, torpedoes, and other items of coast defense, \$2,204,742 are appropriated for the present year. The War and the Navy Departments cost respectively \$12,156,474 and \$11,256,555, or \$25,617,771, or five sixteenths or nearly one third of the total revenue of the empire, according to the estimates of 1888-'89. Both army and navy are kept to the highest degree of efficiency.

Finance.—According to the budget of Count Matsukata for the twenty-first year of Meiji (1888-'89), the total annual revenue amounts to \$80,755,928; of which internal revenue yielded \$66,289,576; sale or rent of various Government properties, \$8,572,472; subscription to navy and coast defense, 5,898,874. The chief item of income is the land-tax, \$42,089,149; after which is saké-brewing, which yields \$14,226,680. The chief expenditures are: Redemption of the national debt, \$20,000,000; administrative expenses of the Department of the Interior, including public improvements, \$8,481,315; Finance Department, \$10,143,825; military and naval administration, \$25,617,771; Justice, \$3,167,686; communications, \$4,411,597; Foreign Affairs, \$838,854; Education, 854,885; colonization of Yezo, \$2,066,149, etc., the total being \$80,747,858. The national debt is now \$245,921,207. Japan is prevented by her treaty obligations from attempting to increase her revenue by increasing the tax on imports, which now scarcely more than pay their collection.

Mint and Coinage.—One of the most satisfactory, in its workings, of the Government industries, is the mint at Ozaka, which is equipped with the best modern machinery and supervised by Englishmen. During the year ending March 31, 1888, the amount of bullion imported into the mint was 184,486.86 ounces of gold; 9,702,708.47 ounces of silver; 11,846,223 ounces of copper; the coinage being 87,016,448 pieces, valued at \$11,660,141.97, in denominations of gold 5 yen, silver 1 yen, and 20 and 10 sen, and copper 1 and 1½ sen, besides 250 ingots for the imperial treasury valued at \$2,587,871.87. The total coinage since 1870 has amounted in value to \$149,718,992.69. The annual expense of administration is \$226,411.48. The employés number 473, of whom 18 are in Tokio. Of Korean gold in small bars and disk-shaped lumps, 547 ingots and 6 parcels of gold-dust were last year re-

ceived and refined, and 260.47 tons of copper were obtained by calling in and melting up the large oval copper coin called "tempo." Gas is now replacing coke as a fuel.

Communications.—A distinct department of the Government, with bureaus, has charge of light-houses, telegraphs, nautical schools, Government subsidies to steamship companies, and postal service at home and abroad. There are now 59 light-houses and light-ships, 12 of the lights being of the first order. In the telegraph service, 2,298 miles of wire are in operation, and the business is conducted by 2,569 operators, of whom 20 are women. The school of telegraphy is in Tokio. The approximate annual postal and telegraphic receipts amount to \$3,217,548, the net profits in 1887 being apparently \$251,168. The nautical school for the commercial marine is in Ozaka, conducted at an annual expense of \$30,000. In addition to the Nippon Yusen Kaisha, or Ocean Transportation Company, with its large fleet of steamers, the newly formed Ozaka Sho Sen Kaisha, or coast-trade company, is also subsidized by the Government, the former to the extent of \$880,000, and the latter \$52,000. The general post-office building in Tokio was burned during 1888, but statistics preserved show that during the year 85,307,658 covers were received, of which 28,091,091 were distributed in Tokio. The new line of postage-stamps as now issued is in sen (cents) as follows: 100, scarlet; 50, brick red; 25, pale green; 20, red; 15, purple; 10, dark orange; 8, violet; 4, brown. Of railways, in March, 1887, 431 miles were open, of which 266½ were Government property.

Industries and Wages.—Returns from all except two provinces show that the acreage of cereal crops is steadily increasing, as well as pasturage for the enlarged numbers of live-stock rendered necessary by the prevailing fashion of eating meat, in which the city people are far ahead of the country folks. In 1887 there were housed 1,482,642,658 bushels of grain of all kinds, which exceeded the total crop of the previous year by over 1,000,000 bushels. As an index of the amount of animal food consumed in the two largest cities, in which butcher's meat was almost unknown thirty years ago, there were slaughtered in one month, February, 1888, in Tokio, 2,281 animals, and in Ozaka, 772. The use of milk and ice is now quite general in the cities. Whereas coal was popularly unknown as fuel three decades ago, there were consumed in Tokio in 1887 18,000,000 tons of coal, most of which, however, went to supply the furnaces of steam-boilers in the manufactories. Despite the increasing number of brick buildings, fires are still numerous in the capital, there being 806 fires in 1886, consuming 8,491 houses. In 1887 there were 867 fires. In the central district, Nippon Bashi, in Tokio, the wages of carpenters, roofers, wood-sawyers, paper-hangers, and shipbuilders, average from 50 to 40

cents a day; plasterers and masons, 70 to 50 cents; bricklayers, matmakers, lacquerers, 55 to 40 cents; joiners, tailors, screen and door makers, 75 to 50 cents; laborers, 35 to 25 cents. As a rule, skilled workmen engaged in making articles of foreign wear, equipment, or furniture modeled on Western patterns receive higher wages than these, the native houses being increasingly furnished after European fashions.

Meteorology.—The Meteorological Office, established in 1888, is on the elevated ground within the walls of the old castle in the heart of the city. It is one of the best equipped in the world, the apparatus being both imported from Europe and the United States, and of native invention and manufacture. Reports are received by telegraph thrice daily from 80 stations in the Japanese archipelago and from Corea. Three forecasts of the weather are issued daily in telegraphic bulletins, at 6 A. M., and 2 and 9 P. M. The phenomena studied and recorded are earthquakes, typhoons, wind, temperature, and moisture. The theories of weather as formulated in other parts of the world and largely based on local phenomena, which have been assumed to be of general application, are only of moderate value here, and much of the utility of the forecasts made in Tokio depend upon the individual skill of the superintendent. Thus far it has been proved that 70 per cent. of the predictions accord with the facts as subsequently recorded. It is noteworthy that the success is far greater concerning rain than wind. There are 47 stations from which vessels may be warned of coming typhoons. The apparatus for the recording of earth-tremors has been largely invented in Japan, and is much more delicate than the Italian seismographs. A flourishing seismological society is established in Tokio, issuing regular accounts of proceedings and results. On the 1st of January, 1888, a standard meridian was officially declared, and a national system of standard time went into operation throughout the empire. The year 1888 has been noted for the number and violence of cyclonic storms, those of August and September causing the loss of nearly 300 human lives besides much cattle and shipping. On the 15th of July, at 7.30 A. M., the fire-peaked mountain Bandai san, in Fukushima ken, whose history as a volcano and the eruption of three hundred years ago had been popularly forgotten, blew up amid thunderous noises, sending out vast masses of ashes which fell like rain during four hours. Of two hot springs, around which were houses filled with patients, and of three villages, not a vestige was left. Besides the many square miles covered with lumps of mud and ashes, 108,000 square feet of valuable land was spoiled and 476 persons were killed. Steam escaped daily for weeks. The people driven from their homes were red by the Government and a thorough scientific investigation was ordered.

Literature and Art.—Since the revolution of 1868 the thought of the nation has been turned almost entirely away from Chinese ideas, traditions, and literature, to the knowledge, languages, and general literature of the nations of Christendom. In all the large cities there are shops for the sale of foreign books, several native firms in Tokio carrying notably large stocks. The majority of works imported treat of scientific subjects and the modern arts and handicrafts. Most of the copyrights issued by the Department of Education are for translations of Western books, or for treatises based on knowledge gained directly from Europe or America. The increased literary activity shown in all departments of inquiry may be seen from the statistical report published in Tokio, which shows that the books used during the years from 1881 to 1887 numbered in each year respectively as follows: 5,973, 9,648, 9,462, 9,893, 8,507, 8,105, 9,547. During the same years the newspapers and magazines published in the empire numbered respectively 252, 244, 199, 269, 321, 408, 497; and in the first half of the year 1888, 550; of which there were in Tokio 208, and in Osaka 43. Many of these periodicals are devoted to specialties in art and science. Among the books treating of Japanese themes, there are, besides solid reference-books of sterling value, notable essays in an almost entirely new branch of philosophical and critical literature. In these books the statements handed down from the past are sifted and appraised. Public libraries are increasing, and graduates of the university are being trained to the Western library methods. A special commission has been sent by the Government to study the American system of handling books and preserving archives. In the Tokio Library there were, at the end of 1886, 86,118,234 volumes, during which year 90,018 Japanese and Chinese volumes had been consulted by 4,852 readers, and 19,800 books read by 8,569 readers. In 323 days there were 42,826 visitors. A Japanese or Chinese book is usually divided into many volumes, the standard reference-works often including hundreds of lightly but durably bound fasciculi. European methods of print, binding, and general procedure in book publishing and manufacture are becoming yearly more general. A literary event of prime importance during 1888 was the issue of the complete translation of the Bible, made directly from the Hebrew and Greek original Scriptures by the American missionaries.

Religion.—Shintō (god-doctrine), the ancient state religion, re-promulgated in 1868, has now sunk to a merely nominal existence; the only public recognition, apart from the services in the imperial palace, being an annual grant of money, which keeps in repair the tombs of the Mikado's ancestors and the memorial shrines of patriots, together with the payment of "salaries to sinecure officials," amounting in all this year to \$305,451. Of Buddhist sects there

are 11, with 29 subdivisions, the temples and shrines belonging to which number 71,234, with 73,759 priests. Christianity makes steady progress, nearly all restrictions having been removed. Connected with the Reformed or Protestant churches there are 28,000 communicant members, and with the Roman and Greek Catholic a still larger number of Christians. The usual appurtenances of Christian work, propaganda, and education are established in the various towns and cities, such as churches, preaching-halls, Sunday-schools, orphan asylums, convents, theological seminaries, young men's Christian associations, religious newspapers. The first consecration in Japan of a Roman Catholic bishop took place at Yokohama, June 19, 1888.

Foreign Trade.—The summary of foreign trade for the year 1887 shows an increase of \$12,540,835 over that of 1886, the imports for the former year amounting to \$44,526,600, and the exports to 40,901,610. The trade movement at the chief ports was as follows: Yokohama, \$54,581,880; Kobe, \$25,873,165; Nagasaki, \$4,424,215; Hakodate, \$593,950. With Great Britain and her colonies, the trade amounted to \$23,227,785; with the United States, \$20,401,920; with China and Hong-Kong, \$16,571,495; with the East Indies, \$5,777,705; with France, \$9,903,265; with Germany, \$4,839,885. Of imports, Great Britain and her colonies sold goods to the amount of \$19,491,585; and the United States, \$3,353,690; while of exports Great Britain and her colonies took but \$3,745,895, while the United States took \$17,088,230. The American imports were petroleum, clocks, flour, books, leather, and manufactured tobacco, while the exports were silk, tea, camphor, sulphur, rice, rags, porcelain, plaited straw, and fancy wares. The ocean commerce was performed in 1,256 foreign vessels and 13,883 Japanese vessels of Western build, the former having a tonnage of 1,669,186, and the latter of 3,498,517, with totals of 15,139 ships and 5,167,708 tonnage. Most of the entries of Japanese steamers were those of the Nippon Yusen Kaisha, and belonged to the company's fleet of over sixty vessels which now control the trade with China, Corea, as well as the coast trade of Japan.

JEWS. The Jewish record of events, abroad and at home, is gratifying in every department. In education, religious progress, and literature, there has been a marked advance, while in philanthropy and general participation in the march of humanity the year shows its usual favorable exhibit. Happily, there has been no set-back in the form of persecutions—no anti-Semitic excesses of any magnitude—but a practical determination of the Jews in all lands to face the problems of the time.

In January, 1888, Baron de Hirsch, of Paris, gave 50,000,000 francs for the education of the Jews of Russia. Such a practical solution of a harassing problem was greeted with satisfaction throughout the globe. The fund is to be de-

posited with the Government, and devoted to the technical education of Jewish youth and their training in science. But not satisfied with such a donation, Baron de Hirsch commemorated the jubilee of the Emperor of Austria, in the latter part of the year, by a gift of 12,000,000 francs for the benefit of the needy population of the kingdoms of Galicia and Lodomeria, the Grand Duchy of Cracow, and the Duchy of Bukovina. While the main features of the trust are unsectarian, there are special provisions for the Jews, who, besides, will share largely in its benefits, because they form so large a portion of the population to be aided. The objects are "the spread of secular education and the promotion of handicrafts and agriculture." It is to establish schools, promote technical training, supplement the salaries of underpaid teachers, aid school-children with clothing, food, and books, apprentice boys and girls to remunerative trades, and grant subsidies and loans free of interest to Jewish artisans and agriculturists. One of the conditions is, that German must be taught in the schools, but in Galicia Polish may be employed. Baron de Hirsch's educational plans run in direct parallel lines with the efforts of the Alliance Israelite, whose schools in the East afford instruction to 10,000 Jewish children of the poor and neglected classes, and constitute what may be termed Jewish Foreign Missions. These have made steady progress during the year, and flourish in Asia Minor, Morocco, India, and Turkey. Similar bodies in England, Austria, Germany, and America co-operate with the Alliance Israelite Universelle, of Paris. A gift, in spirit equaling Baron de Hirsch's was the bequest of 800,000 lire, on March 16, by the late Guiseppe Giganto, of Alberto, Italy, toward the foundation of an agricultural school, open to all confessions. Baron Edmond de Rothschild continued to give large sums in aid of the struggling Jewish colonies of Palestine.

The anti-Semitic movement in Germany has been checked. In Roumania, the condition of the Jews has improved, thanks to a more liberal ministry. In Austria, Ritter von Schoenerer, the leader of the anti-Semites, was arrested. In Prague, anti-Jewish pamphlets were confiscated. In Hungary, the firm attitude of the Government prevented any riotous demonstrations. On March 8, the Jews of Cork, Ireland, were made the subject of harsh invective by the labor union. In Paris, Drumont's scurrilous work was followed by discussions in the press, but without any outbreaks. No further steps were taken to facilitate Jewish emigration to Spain. The sweating-system (see GREAT BRITAIN, page 891) caused much excitement in London and throughout England, and Lord Rothschild was appointed a member of the House of Lords committee. The investigation was favorable, on the whole, to the character of foreign Jewish immigrants in England; but no effective remedy was proposed to relieve the great poverty of the working-classes in the

East End of London. The first number of the "Jewish Quarterly Review" was issued in London. Among the more important new works by Anglo-Jewish writers were: "Jewish Portraits," by Lady Magnus; "Fables of Bidpai," edited by Joseph Jacobs; and "Anecdota Oxoniensis," by Dr. Neubauer. Among the noteworthy books by Jewish authors on the Continent were: L. Kahn's "History of the Jews of France"; Wogue's "Cours de Theologie Juive: Principes Generaux"; "Reime und Gedichte des Abraham Ibn Ezra," by Dr. D. Rosin; "Life of Ludwig Börne," by Dr. M. Holzmann; translations of Graetz's "History of the Jews" into French, Russian, Hebrew, and Judeo-Polish, together with a large number of brochures and essays on Jewish and Oriental subjects, showing the interest manifested by scholars in biblical and rabbinical literature.

Signor Maurogonato was re-elected Vice-President of the Italian Parliament. Baron Henry de Worms was appointed Under-Secretary for the Colonies of Great Britain. M. Lisbonne was elected a member of the French Senate. Isidore Gunzberg won the first prize at the International Chess Tournament in Bradford, England. Alderman Benjamin was re-elected Mayor of Melbourne, Australia.

The efforts to consolidate the various Russian and Polish synagogues in New York resulted in the election of Rabbi Joseph, of Wilna, as chief rabbi of a large number of congregations representing Russian orthodoxy. His arrival in New York formed the subject of much press comment, and his first series of lectures, as they were printed in the daily papers, reflected favorably on his tact and ability. The attempt to promote union among the tens of thousands who have reached New York from Russia of late years is fraught with difficulty, and it is by no means certain that Rabbi Joseph will succeed. He is without any influence on the great mass of American and German-American Jews.

The charitable activity continued unabated. The Jewish Hospital at Philadelphia laid the corner-stone of a new edifice on October 9, \$75,000 being subscribed in a few weeks. The Montefiore Home for Chronic Invalids was dedicated in New York on December 18, and \$30,000 was given in a few days. In May the Hebrew Technical Institute of Chicago was reorganized, Leon Mandel, of New York, giving \$20,000 for that purpose; while the Touro Infirmary of New Orleans received \$10,000 from Michael Frank. The Purim ball in New York, on February 28, netted \$10,000 for the Home for Aged and Infirm Hebrews. On January 18 the corner-stone of the new Benai Berith Orphan Asylum at Atlanta, Ga., was laid. On January 8, the Montefiore Hebrew Free School was dedicated in Chicago, and on July 8, the new Benai Berith Orphan Asylum was formally opened in Cleveland, Ohio. The Home for Aged and Infirm Hebrews was dedi-

cated in Boston, Mass., June 20. On March 8, the semi-centennial of the Hebrew Sunday-School Society was celebrated in Philadelphia. The first biennial convention, on March 11, in New York, of the Jewish Theological Association showed a hopeful exhibit. The Jewish Ministers' Association of America held its spring conference in Washington, D. C., on May 28. The subject of a religious union formed the topic of debate; an essay by Rev. Dr. Kohler, of New York, being read, followed by general discussion. Rev. Dr. S. Mendelssohn, of Wilmington, N. C., read a paper on "Funeral Orations." Committees were appointed to prepare a plan of action for religious union and uniform burial service. At the public session Rev. Dr. Gottheil spoke on the "Moral Education of the People," and orations were made by Rev. Dr. Bettelheim, of Baltimore, and Rev. Leon Harrison, of Brooklyn. At the winter conference in Philadelphia, December 8, the religious condition of the working-classes formed the subject of an earnest debate, and a series of resolutions, advocating special evening services and visitation was proposed by the Rev. H. S. Jacobs, of New York. Statistics as to Jewish prisoners in various penal institutions were presented, showing that they were few and generally well behaved. It was resolved to supply literature for Jewish convicts and take steps to secure the services of a regular visitor. At the public session the Rev. Dr. Kohler spoke on "The Bible and Modern Research," pleading for a broader estimate of its character and a rearrangement of its contents from "a higher point of view than the narrow Jewish one." The Rev. Dr. F. De Sola Mendes delivered an address, advocating union among the opposing parties in American Judaism.

There have been erected new synagogues in Portland, Me., Boston, Mass., New York city, Chicago, St. Paul, Minn., Scranton, Pa., Albany, N. Y., and elsewhere.

After much discussion, the Jewish Publication Society of America was formally organized at Philadelphia on June 8, the meeting being largely attended by delegates from the country in general. Active measures to insure a successful result were promptly taken, and the movement appears to be making headway throughout the United States. It is proposed to establish a Heilprin Endowment Fund of \$50,000 for the publication of original works in Jewish literature, and \$10,000 toward this fund has already been subscribed by Messrs. Jacob H. Schiff, of New York, and M. Guggenheim, of Baltimore.

The necrology of the year embraces many eminent names. Among those abroad who have passed away may be mentioned Henry Herz, composer, of Paris; Ritter von Rosenberg, of Venice; Dr. Gustav Wertheim, physician and scientist, of Vienna; Prof. Dr. G. Levy, of Parma; the journalists and novelists Michael Klapp and Dr. Märzroth, of Vienna, and

Dr. S. Gumbinner, of Berlin; Rabbis Elias Cohn, of Mayence; Abraham Caro, of Pinne; Louis Morhange, of Metz; M. Feuchtwang, Nicolauburg; Adolph Ehrentheil, of Bohemia; M. M. Stern, of Vienna; Asher Stern, of Hamburg; Ornstein, of Lemberg; Hillesum, of Holland; Solomon Debenedetti, of Naples; Rafael Foa, of Parma; Fröhlich, of Halle; Isidor, Chief Rabbi of France; Samter, of Berlin; Max Kayser, Socialist deputy of Berlin; Dr. S. A. Belmonte, of Hamburg; Moritz Ritter von Goldschmidt, of Vienna; the Russian financiers and philanthropists Samuel Poliakoff and Israel Brodsky; Madame S. Goldschmidt, of Frankfurt; Baroness Caroline de Hirsch, of Munich; and Miss Miriam Harris, of London, all noted for their piety and benevolence; Prof. Arsene Darmesteter, of Paris; Levi A. Cohen, of Tangiers; Rev. Dr. Louis Loewe, of London, the secretary and life-long friend of Sir Moses Montefiore; Alexander Blumenthal, President of the Venice Chamber of Com-

merce; Jacob de Neuscholz, the banker-philanthropist of Jassy; Moritz Lowenthal, of Dresden; Prof. Leone Levi, English political economist; Alexander Sidi, philanthropist of Smyrna; and Prof. L. Polizer, of Vienna. Among the more notable deaths among the Jews of the United States were Michael Heilprin, of New York, author and critic; Mrs. Henry Cohen, of Philadelphia; Alfred T. Jones, of Philadelphia, founder of the "Jewish Record"; Hon. G. N. Herrman, of New York; Col. Isaac May, of Philadelphia; and Dr. Joseph Aub, oculist, of Cincinnati.

The Rev. Dr. Isaac Schwab, of St. Joseph, published "The Sabbath in History"; Mr. Isaac Markens, of New York, "The Hebrews in America"; and the Rev. Dr. L. Grossman, of Detroit, "Judaism and the Science of Religion." A complete edition of Miss Emma Lazarus's poems was issued in two volumes. Dr. Charles Gross was appointed instructor in history at Harvard College.

K

KANSAS. State Government.—The following were the State officers during the year: Governor, John A. Martin, Republican; Lieutenant-Governor, A. P. Riddle; Secretary of State, E. B. Allen; Treasurer, James W. Hamilton; Auditor, Timothy McCarthy; Attorney-General, S. B. Bradford; Superintendent of Public Instruction, J. H. Lawhead; Superintendent of Insurance, Daniel W. Wilder; Railroad Commissioners, James Humphrey, L. L. Turner, and Almerin Gillett; Chief-Justice of the Supreme Court, Albert H. Horton; Associate Justices, William A. Johnston and Daniel M. Valentine.

Finances.—The bonded debt of the State, on Jan. 1, 1889, was \$303,500, showing a reduction since Jan. 1, 1886, of \$127,000, and a total reduction, during the past four years, of \$132,500. Of this debt, \$256,000 is in the hands of individuals or corporations, and \$547,000 is held by different State funds. The permanent school fund holds \$537,000; university fund, \$9,000; sinking-fund, \$1,000. State bonds to the amount of \$86,000 will fall due on July 1, 1889, but provision has already been made for meeting them, by the issue of new 4-per-cent. twenty-year bonds, to be sold to the permanent school fund, under the terms of an act of the last Legislature.

The Legislature at its last session also enacted a law "to provide for the assumption and payment of claims for losses sustained by citizens of the State of Kansas by the invasion of the State by bands of guerrillas and marauders during the years 1861 to 1865," commonly known as the Quantrell raid claims. This law assumed the payment of a certain portion of the claims audited by a commission appointed in 1875, and imposed upon the State Auditor

the duty of preparing a schedule of such claims, and issuing to each claimant "certificates of indebtedness bearing interest at 4 per cent. per annum from July 1, 1887." The auditor issued certificates of indebtedness, aggregating, up to the close of the year, \$346,776.54 in payment of claims, and \$98,252.90 in payment of interest; in all, \$445,029.44.

The law provides that these certificates shall bear interest at 4 per cent. per annum, but the Legislature neglected to make any provision for the payment of this interest, and early last spring the State officers were confronted with a serious dilemma. The State Treasurer finally made arrangements for the money necessary to pay the coupons falling due July 1, 1888, all the State officers signing a personal note for \$14,000, bearing interest at 4 per cent. per annum, and payable Jan. 31, 1889. The State's fiscal agent holds the coupons paid as security for the note.

The next installment of interest is payable on July 1, 1889. The coupons following are for one tenth of the principle, with interest, and fall due on and after Feb. 1, 1890, and on the same date of each year thereafter, until the whole of the certificate is paid.

The balance in the State treasury on June 30 was \$324,832.06, against \$584,273.16 two years previous. On Dec. 31 there was a balance of \$243,830.75.

Municipal Debts.—On this subject the Governor says:

The steady and enormous growth of our municipal indebtedness amply justifies alarm. On July 1, 1884, the county bonds and warrants outstanding aggregated \$8,065,748.29; township bonds and warrants, \$2,650,030.90; city bonds and warrants, \$2,437,436.17; and school-district bonds and warrants, \$2,743,714.50, making an aggregate municipal indebted-

edness of \$15,951,929.86. On July 1, 1886, the aggregate of this indebtedness had increased to \$17,779,299.42, and on July 1, 1888, it had reached the appalling sum of \$31,107,646.90, with \$378,712.03 in sinking funds, making the net municipal indebtedness to be yet provided for, \$30,728,934.87. The county bonds outstanding on the 1st of July, 1888, aggregated \$13,207,265.25; and the county warrants, \$732,963.37; township bonds outstanding, \$7,162,002.65; and township warrants, \$12,308.38; city bonds outstanding, \$5,244,307.40; and city warrants, \$164,168.66; school-district bonds outstanding, \$4,518,237.59; and school-district warrants, \$41,393.65; making a total, as above stated, of \$31,107,646.90. In other words, the municipal indebtedness of Kansas has been doubled since (in January, 1885) I called the attention of the Legislature to this subject, and urged that the most stringent restrictions and limitations be put upon the debt-creating and tax-levying powers of all municipalities. It seems to me, in view of the facts and figures presented, that it is the imperative duty of the Legislature to repeal at once every law authorizing the creation of municipal debts for any purpose whatever, except, perhaps, the building of school-houses.

Education.—The report of the Superintendent of Public Instruction shows the public-school system of the State to be in a condition of steady growth and improvement. The school population for the past school year numbered 532,010, an increase of 34,215 since 1886. The number of pupils enrolled during the last school year was 403,351, an increase of 38,112 over 1886. The average daily attendance was 145,881, an increase of 25,978. Number of teachers employed in 1886, 9,387; in 1888, 11,810. The average wages paid teachers, per month, were: Males, \$41.01; females, \$33.64. There were in the State, at the close of the fiscal year, 8,166 school-houses, having 10,142 rooms, and valued at \$8,608,202—an increase of 1,405 school-houses, 1,958 rooms, and \$2,015,455 in valuation during the past two years. The receipts and expenditures during the school year ending July 31, 1888, were as follow:

Receipts.—Balance in district treasuries, Aug. 1, 1887, \$533,200.10; amount received from county treasurers from district taxes, \$3,075,867.81; from the State and county school funds, \$553,390.28; from sale of school bonds, \$900,597.83; from all other sources, \$202,557.84, making a total of \$5,265,618.86.

Expenditures.—Amount paid for teachers' wages and supervision, \$3,677,513.29; for rents, repairs, fuel, and incidentals, \$688,567; for district libraries and school apparatus, \$62,893.45; for sites, buildings, and furniture, \$1,051,124.94; and for all other purposes, \$275,649.16—making a total of \$4,703,447.84, and leaving in the hands of district treasurers, July 31, 1888, a balance of \$561,966.02.

The State University comprises six departments—science, literature and arts, law, music, pharmacy, art, and medicine. The preparatory department has been recently discontinued, as the normal department was a few years ago, and advanced tests for admission have been established, so that the institution may be devoted to legitimate university work. These changes have largely reduced the number of students qualified for admission, but, notwithstanding this fact, the number in attendance shows a steady and gratifying increase. On Jan. 15, 1885, the students enrolled numbered

419; and 24 professors, assistants, and instructors were employed. On Jan. 1, 1889, 843 students were enrolled, and the corps of professors and instructors numbered 30.

During the past four years important additions have been made to the buildings of the university, including the "Snow Hall of Natural History," costing \$50,000.

The State Agricultural College on Dec. 31 had 359 students enrolled, an increase of 21 since the close of the autumn term of 1884. Its instructors in all departments number 25, an increase of 4 during the past four years. The improvements in buildings and fixtures, since Jan. 1, 1885, have aggregated in value \$27,000, and the increase in the value of the farm, furniture, stock, and apparatus is over \$70,000.

The State Normal School had 440 students enrolled on Jan. 1, 1885, and 660 at the close of 1888. Fourteen instructors are employed, an increase of three in four years. The expenditures during that period include \$26,200 for buildings, \$4,800 for museum and apparatus, and \$5,000 for furniture and improvements.

Charities.—The institution for the blind had in attendance on Jan. 1, 1885, 68 pupils; at the close of 1888 it had 86. At the institution for the deaf and dumb there were 172 pupils at the beginning of 1885, and 821 on Dec. 31, 1888. Two large school-buildings and a laundry have been erected during the past four years, at a cost of \$82,000. The Kansas institution for the deaf and dumb now ranks in size as the eighth in the United States.

The State Reform School had 103 pupils enrolled on Jan. 1, 1885; it now has 208.

The Soldiers' Orphans' Home, authorized by the Legislature of 1885, was opened for the reception of children on July 1, 1887. It was soon crowded beyond its capacity, and is now the home of 109 orphan children of deceased soldiers of the Union. The law authorizes the admission of children under sixteen years of age, but the board has been compelled to exclude all over ten years. Additional buildings are absolutely necessary to accommodate the demands made upon it.

The Asylum for Idiotic and Imbecile Youth was removed to Winfield in March, 1887. There are now over one hundred children cared for in this institution. The new building is well adapted for the uses of such an asylum, and was completed at a cost of \$25,000.

The insane asylums at Topeka and Ossawatimie contained at the close of the year 1,203 patients. On July 1, 1882, the insane patients in these asylums numbered 548; at the same date in 1884, the number had increased to 692; on July 1, 1886, to 881; and on July 1, 1888, to 1,181.

During the past four years the State has expended for new buildings, and for permanent improvements at its insane asylums, over \$353,000. Yet to-day it is confronted with an apparent necessity of providing additional accommodations for this class of dependents.

Prisons.—The number of prisoners in the State Penitentiary, when compared with the population of the State, has been steadily decreasing for eight years past, and there has been an actual decrease in the number in confinement during the past two years. On Jan. 1, 1887, there were 895 State prisoners confined in the Penitentiary; on Jan. 1, 1888, there were 898; and on Jan. 1, 1889, there were 861.

The Legislature of 1885 directed the building of an industrial reformatory, which was located at Hutchinson. Appropriations aggregating \$60,000 were made in 1885, and additional appropriations, aggregating \$100,000, in 1887. The board of commissioners having the building of this institution in charge, report that a cell-house with fifty completed cells therein has been inclosed, and the foundations and one story for the office and guard-house have been completed.

State Capitol.—A contract for the foundations of the east wing of the Capitol was let on May 2, 1866, and this wing, partially completed, was occupied by the State officers on Dec. 25, 1870; but it was not finished until early in 1873. The State issued and sold bonds to the amount of \$320,000, to provide means for its construction. Its total cost, however, was \$480,000. In the summer of 1879 the building of the west wing was begun, and it was, though in an unfinished condition, occupied in the summer of 1881. It was completed in 1882, and cost \$312,000. Work on the central building was begun in 1881, and its foundations were completed in 1884. Early in the spring of 1885, work was begun on the first story, and the walls are now finished to the height of the fourth and last story. The cost of the central building to date has been \$517,000, and it is estimated that from \$600,000 to \$700,000 will be required to complete it. The remodeling of the east wing, including the Senate Chamber, in 1885-'86, cost \$140,000; so that the Capitol, as it stands, has cost an aggregate of \$1,449,000. No bonds have been issued since the east wing was finished. The half-mill tax for State-house purposes has provided a fund sufficient to meet all the expenditures made.

In western Kansas a strong feeling has been developing that these expenditures have been ill-advised, and that the interests of the State require the removal of the State Capitol to some central location. In April a convention of six hundred delegates was held at Abilene for the purpose of organizing a Capitol-removal movement, at which the following resolution was passed among others:

Resolved, By the representatives of the citizens of Abilene and western Kansas, in convention assembled, that we will now, in the future, oppose any further appropriations by the State Legislature for the erectment of the present State institutions of whatsoever kind. That we pledge ourselves to oppose further appropriations for work on the State-house; that while we favor the maintenance of our present State

institutions where located, we favor and recommend the adoption of a new policy, commensurate with our new growth, present and future importance, and that in this line we ask all of central and western Kansas to unite with us in the work of duplicating every one of the present State institutions, locating the new buildings most advantageously to the interests of the State among the several towns of central and western Kansas, and the State Capitol at some suitable central point to be determined by the ballots of the people of the State.

Development.—The Governor says in his annual message:

The last two years have not been, in all portions of Kansas, seasons of plenty and prosperity. The harvests in many counties of the western half of the State have been below the average of former seasons. But, notwithstanding this, our general condition is fairly prosperous. The growth of the State has been constant and the development of her resources and industries remarkable. This fact is best shown by a comparison of the vote cast in 1884 and 1888. The total vote of 1884 was 265,879, while that of 1888 was 330,215—an increase of 64,336. A contrast of the vote of 1880 with the United States census of that year shows that the ratio of population to voters was nearly five to one. This ratio increases with the age of a State. The vote of 1888, therefore, clearly establishes the fact that the population of Kansas is fully 1,651,000—an increase since 1880 of over 654,000, and since 1885, of 392,000.

During the past four years twenty-three counties have been fully, and one partially organized, making a total of 106. These newly organized counties embrace an aggregate area of 19,932 square miles, or very nearly one fourth of the total area of the State. At the date of their organization their population aggregated 66,147, and they polled at the November election an aggregate vote of 19,428 votes, indicating a population, at that time, of 97,140. Five of these counties were organized in 1887, viz., Stanton, June 17; Haskell, July 1; Garfield, July 16; Gray, July 30; and Logan, September 17. Three have been organized during the past year, viz., Kearney, March 27; Grant, June 9; and Greeley, July 9.

The increase in the area of land cultivation during the past four years aggregates 6,756,873 acres; and of land taxable, 13,032,815 acres; while the assessed value of property has, during the same period, increased \$117,227,941.

The most extraordinary growth, however, is shown in the railway system of the State. On Jan. 1, 1885, the railways of Kansas aggregated 4,064 miles of main and 489 miles of side track, or a total of 4,553 miles. On Jan. 1, 1888, they had completed and in operation 8,799 miles of main and 899 miles of side track, or a total of 9,698 miles, and an increase in four years of 5,135 miles. The assessed value of railway property in March, 1884, was \$28,455,909, while on March 1, 1888 (when the assessments are made by the State board), it aggregated \$52,629,664—an increase of \$24,173,757 in four years, or very nearly double the valuation of 1884.

Statistics.—According to the assessor's returns for 1888, Kansas has 700,728 head of horses, 92,435 mules and asses, and 742,639 milch cows, a large increase in each class over the number reported in 1887. She has also 1,619,849 head of other cattle; 402,744 sheep, and 1,433,245 swine. The total value of the farms of the State, in 1887, was \$453,220,155; of farming implements, \$8,432,534.

The coal-product in 1885 was 30,001,427 bushels; in 1886, 34,750,000 bushels; and in 1887, 39,251,985 bushels. The industry gave

employment during the latter year to 4,728 miners and 870 day-laborers.

The following cities had a population of over 10,000 on March 1, 1888: Leavenworth, 85,227; Topeka, 34,199; Wichita, 33,909; Kansas City, 33,110; Atchison, 17,023; Fort Scott, 16,159; Hutchinson, 13,451; Lawrence, 11,055.

Prohibitions.—The Governor says in his message in January, 1889:

There is no longer any issue or controversy in Kansas concerning the results and beneficence of our temperance laws. Except in a few of the larger cities, all hostility to them has disappeared. For six years, at four exciting general elections, the questions involved in the abolition of the saloon were disturbing and prominent issues, but, at the election held in November last, this subject was rarely mentioned by partisan speakers or newspapers. The change of sentiment on this question is well grounded and natural. No observing and intelligent citizen has failed to note the beneficent results already attained. Fully nine tenths of the drinking and drunkenness prevalent in Kansas eight years ago have been abolished; and I affirm with earnestness and emphasis that this State is to-day the most temperate, orderly, sober community of people in the civilized world. The abolition of the saloon has not only promoted the personal happiness and general prosperity of our citizens, but it has enormously diminished crime; has filled thousands of homes where vice and want and wretchedness once prevailed, with peace, plenty, and contentment; and has materially increased the trade and business of those engaged in the sale of useful and wholesome articles of merchandise. Notwithstanding the fact that the population of the State is steadily increasing, the number of criminals confined in our Penitentiary is steadily decreasing. Many of our jails are empty, and all show a marked falling-off in the number of prisoners confined. The dockets of our courts are no longer burdened with long lists of criminal cases. In the capital district, containing a population of nearly 60,000, not a single criminal case was on the docket when the present term began. The business of the police courts of our larger cities has dwindled to one fourth of its former proportions, while in cities of the second and third class the occupation of police authorities is practically gone.

County Disorders.—In March, 1887, troubles were reported in Wichita County, growing out of a county-seat contest, and threatening serious consequences. Several persons had been killed and wounded, and the excitement and passion evoked by this affray were wide-spread. The Governor ordered the Adjutant-General and some other militia officers to the scene, and their presence was sufficient to restore quiet. Early in January, 1888, similar troubles were reported in Sherman County, also growing out of a county-seat controversy, and were quieted in the same manner. Of the difficulties in Stevens County, the Governor reports as follows: "Early in June, 1888, Sheriff Cross, of Stevens County, telegraphed me that he had been driven from the county-seat, and requesting the presence of a company of militia. A few days later a writ of mandamus was issued by the Supreme Court, directing the county commissioners to canvass a vote recently taken to establish a county-seat, and a special messenger was sent to serve this writ. On his arrival at Hugoton, this messenger found it necessary to request the presence of troops in

order to secure obedience to the decrees of the court, and I at once directed Gen. Myers to take two companies of the Second Regiment and proceed to Stevens County. The board of commissioners canvassed the vote, as directed by the court, and the troops were thereupon ordered to their respective homes. Late in July troubles were again reported in Stevens County, resulting in an armed expedition to No-Man's-Land by rival factions, and the brutal murder of Sheriff John Cross and three other citizens by persons from Hugoton. I requested Attorney-General Bradford and Brig.-Gen. Myers to proceed to Stevens County, make a thorough investigation, and report to me. These officers reported that there were two hostile factions of armed men in the county, and advised me that the presence of a strong military force was necessary to prevent further bloodshed, preserve the peace, and insure the orderly enforcement of law. Acting on this advice, I directed Gen. Myers to return to Stevens County, taking with him the Second Regiment, and to remain there until all danger of an armed collision was averted. The command was transported to Stevens County by the most direct routes, and remained on duty until the 14th of August."

Farmers' Conventions.—Early in May a convention of representatives from Kansas, Missouri, Nebraska, Illinois, and Indiana met at Topeka, under the name of the Farmers' Trust Association. The interests of the farmers were discussed in rather a stormy session, and measures were urged looking to "trust" combinations by the farmers themselves, in order to give them a proper price for their products. The convention adjourned without action to meet at the same place in November, at the time of the National Farmers' Congress. This congress met on November 14, and, after considerable discussion, the members voted against the proposed scheme of "farmers' trusts" and against all other "trusts." Resolutions were also adopted favoring the free coinage of silver; favoring the expansion of a medium of exchange; approving the policy of the Government in improving the rivers and harbors of the country, and urging a continuance of the policy; indorsing boards of railway commissioners; condemning the provisions of the national banking laws, which prohibit the acceptance of real-estate securities for loans, and asking Congress to amend the law so as to put real estate on an equal footing with other property; recommending the enactment of laws by legislatures regulating railroads and governing railroads; and recommending the enactment of a law favoring a home market. The congress was in session three days, and contained representatives from every part of the Union. At the same time and place the annual session of the National Grange was held.

Political.—The Democratic State Convention met at Leavenworth on July 4, and nominated for Governor Judge John Martin, of Topeka.

The other nominees were H. Miles Moore, for Lieutenant-Governor, superseded before election by F. W. Frasier; Allen G. Thurman for Secretary of State; W. H. Willhert for Auditor; William H. White for Treasurer; I. F. Differbaker for Attorney-General; A. N. Cole for Superintendent of Public Instruction; and W. P. Campbell for Associate Justice of the Supreme Court. Resolutions were adopted ratifying the work of the St. Louis National Convention, urging the necessity of tariff reform, and continuing as follow:

We are opposed to all sumptuary laws as being vicious in principle and unsuccessful in practice; also the action of the Republican party of Kansas in passing the law for the establishment of a metropolitan police system in certain cities in this State, and for its inequitable and unfair application and enforcement of the same for purely political reasons. We denounce the system as being partial, unjust, and undemocratic. It is a substantial denial of home rule and the right of local self-government. It impeaches the intelligence, challenges the integrity, and denies the patriotism of the people affected by it. It brands them individually and collectively as being ignorant, vicious, dishonest, corrupt, and wholly incapable of self-government, and we demand a repeal of the law.

We oppose any system of State policy which permits competition between convict and Chinese labor and the labor of the free American workman.

We favor the abolition of the grand-jury system as a useless and unnecessary measure, which adds greatly to the cost burdens of a tax-ridden people, and we demand its repeal as expensive and inquisitorial legal machinery.

The Prohibitionist Convention was held at Hutchinson on July 18. It nominated the following ticket: Governor, Rev. J. D. Botkin, of Wichita; Lieutenant-Governor, R. J. Freerley; Secretary of State, L. K. McIntyre; Treasurer, R. M. Stonaker; Auditor, Gabriel Burdett; Attorney-General, Stanton A. Hyer; Superintendent of Public Instruction, Miss S. A. Brown; Associate Justice of the Supreme Court, J. O. Pickering. The usual prohibition resolutions were passed, woman suffrage was demanded, tariff reform was favored, and restrictions upon immigration, a liberal pension law, and arbitration between nations and between employer and employed were advocated. It was further resolved that—

We demand that the General Government shall by equitable and lawful means own and operate all railways and telegraphs in the interest of the whole people.

We demand that the interest be so regulated by national law that the average net earnings of capital shall not exceed the average net earnings of agriculture and labor.

We favor such a change in our present system as shall provide for the election of President, Vice-President, and United States Senators by a direct vote of the people.

We are opposed to the acquisition of landed estates by persons not citizens of the United States, or who have not under oath made *bona-fide* declaration of their intention to become such. And we believe the time has come when ownership of land should be so limited as to preserve a reasonable amount as a homestead for the citizen, and prevent the further acquisition of large bodies by corporations and individual speculators.

As under the Constitution and laws of the State all

errors and irregularities of the inferior courts may be corrected by proper proceedings in the Supreme Court, a tribunal composed entirely of Republicans, the action of Gov. Martin in exercising executive clemency to release convicted liquor-sellers who have not sought a review of their cases in the Supreme or other proper court for the correction of errors, is an attempt to destroy the confidence of the people in the courts, thereby inciting lawlessness and disobedience to public authority; and such conduct on the part of the Governor, under solemn oath to obey the Constitution and enforce the laws, merits and deserves the condemnation of all citizens, irrespective of party affiliation and regardless of personal views as to the policy of prohibition.

The Republicans held their State Convention at Topeka on July 26, and on the third ballot nominated Lyman U. Humphrey for Governor. The remainder of the ticket was as follows: Lieutenant-Governor, A. J. Felt; Secretary of State, Williams Higgins; Auditor, Timothy McCarthy; Treasurer, James W. Hamilton; Attorney-General, L. B. Kellogg; Superintendent of Public Instruction, G. W. Winans; Associate Justice, W. A. Johnston. After approving the work of the Chicago convention, and the character of the present State administration, the platform continues as follow:

We believe in the protection of the home against the saloon. We demand the complete execution of the prohibitory laws in every part of the State, including the vigorous prosecution of officers who fail to perform their duties under the law. The Republican party of Kansas is convinced that prohibition is right, and is a success, and we assert that those who seek a refuge in the third, or Prohibition, party, blindly seek a revolution in our Government for that which a revolution can not give.

We demand stringent laws to protect our workmen against contract, pauper, or Chinese immigrants, and every class who would drag down by mere cheapness the standard which American workmen are struggling to maintain. We favor American markets for American products, and American wages for the workmen of America. And we favor such additional legislation as will secure weekly payments of wages to employees of municipal and private corporations, and also a practical apprenticeship law, so that our handicraftsmen may have additional protection against foreign labor.

All so-called "trusts" or combinations to monopolize food-supplies or control productions are dangerous to the interests of the people, and should be prohibited under the severest penalties of law. The "trust" or combination of the packing-houses to drive out of business all other butchers, and thus control the cattle markets, as well as the supply and prices of dressed meats, is especially obnoxious and destructive to the interests of all classes of the people, and particularly to those in Western States.

The Republican party will ever retain a sense of gratitude to those through whose valor Kansas and the nation became free, and the union of our States preserved. We especially commend the action of the Legislature in making provision for the maintenance of orphans of soldiers in a soldiers' orphans' home, and we heartily indorse the resolutions adopted by the Grand Army of the Republic at its last State encampment at Winfield on the subject of pensions.

We request our railroad commissioners to do all in their power to protect the farmers of this State against the excessive charges in the removal of the vast crops assured to Kansas this year.

We favor legislation reducing the legal rate of interest upon money to six per cent., reducing the maximum contract rate to ten per cent., prohibiting usury, and providing penalties for violations thereof.

There was also a Union Labor ticket in the field, headed by P. P. Elder.

At the November election the Republican State and National tickets were successful, receiving a large majority of the vote cast. For Governor, Humphrey received 180,841 votes; Martin, 107,480; Botkin, 6,439; and Elder, 85,837. The State Legislature, chosen at the same time, is overwhelmingly Republican, only four Democrats being elected to the House and one to the Senate. Seven Republican Congressmen, the entire State delegation, were chosen.

Two amendments to the State Constitution were voted upon at the same election—one permitting colored citizens to join the State militia, the other giving the Legislature power to regulate the rights of aliens to the ownership of land in the State. Both amendments were adopted, the former by a vote of 228,474 in favor and 22,251 against; the latter by a vote of 220,419 in favor and 16,611 against.

KENTUCKY. State Government.—The following were the State officers during the year: Governor, Simon B. Buckner, Democrat; Lieutenant-Governor, James W. Bryan; Secretary of State, George M. Adams; Auditor, Fayette Hewitt; Treasurer, James W. Tate, succeeded by Stephen G. Sharp; Attorney-General, P. W. Hardin; Superintendent of Public Instruction, Joseph D. Pickett; Register of the Land Office, Thomas H. Corbett; Railroad Commissioners, J. P. Thompson, A. R. Boone, John D. Young; Chief-Justice of the Court of Appeals, William S. Pryor; Associate Justices, William H. Holt, Joseph H. Lewis, Caswell Bennett.

Legislative Session.—The General Assembly, which met at Frankfort on the last day of 1887, remained in session over four months, adjourning on May 4. Early in January James B. Beck was nominated by the Democratic caucus and re-elected United States Senator for a third term, beginning in March, 1889. No fewer than 1,571 acts and 86 resolutions, covering nearly 3,400 printed pages, were passed during the session, of which only 168 acts, covering 216 pages, are of a general nature. Aside from legislation growing out of the defalcation of Treasurer Tate, an important act of the session provides for a second election by the people in August, 1889, on the question of calling a convention to revise the Constitution, the first election, in August of last year, having been favorable to such a convention. Another act amends, revises, and codifies the common-school laws. It was also enacted that no juror should be challenged for having read newspaper accounts of a crime, or for having formed an opinion or impression therefrom, provided he shall declare upon oath that he believes he can render an impartial verdict according to the law and the evidence. An appropriation of \$150,000 was made for the completion of the Eddyville Penitentiary to the extent of accommodating at least 418 convicts; and, in order to forward the work so

that convicts now leased outside the prison-walls may be employed within the prison, in labor not competing with free labor, a further sum of \$50,000 was placed at the disposal of the Governor, if he should find it necessary. Improvements at the Institute for Deaf Mutes and at the Eastern Lunatic Asylum were provided for. Other acts of the session were as follow:

Requiring all buildings of three or more stories, in cities of more than 10,000 inhabitants, in which over 20 persons are employed, to be provided with fire-escapes.

Accepting the provisions of the act of Congress providing for the establishment of agricultural experiment stations in connection with the agricultural colleges.

Making actual possession unnecessary in order that an owner may maintain an action of trespass.

Establishing a State Board of Pharmacy, defining its duties and powers, and regulating the practice of pharmacy in the State.

Making May 30 a legal holiday.

Providing for the continuation of the geological survey of the State.

Requiring all teachers in the State to obtain certificates of qualification from the county board of examiners.

Creating a lien on canals, railroads, and other public improvements, in favor of persons furnishing labor or materials therefor.

Providing for the parole of prisoners confined in the State Penitentiary under the direction of the commissioners of the sinking fund.

Establishing a State Board of Equalization of Assessments.

Providing for the care and custody of vagrant and destitute children in the city of Louisville.

Regulating the conduct of municipal elections in the city of Louisville.

Treasurer Tate's Defalcation.—On March 20 a message was sent to the Legislature by Gov. Buckner announcing that he had suspended the State Treasurer from office, and conveying the information that a large deficit had been found in his accounts. As no intimation had before been received by the Legislature or the public of any irregularities, none in fact being known to exist until the day preceding, this announcement created great surprise. Tate, generally called "Honest Dick Tate," had been universally trusted and popular, having been renominated without opposition by his party at each biennial convention for twenty years, his term of service dating from 1868. At the same time it was discovered that he had been missing from the capital for several days and had escaped from the country. The Legislature at once adopted a resolution offering a reward of \$5,000 for his capture, and by another resolution confirmed the act of the Governor in suspending the defaulting official and authorized him to appoint a successor until Tate should be restored to his office or a successor should be regularly elected. Under this act the Governor appointed Stephen G. Sharp on March 27. The Senate then resolved itself into a court of impeachment, summoned the various State officers as witnesses, and on March 30, after a formal trial, found the missing Treasurer guilty of misappropriating the public

funds, whereupon he was deposed from office. On March 31 the Governor appointed a commission to examine the accounts of the late Treasurer and ascertain the exact liability of his sureties. The report of this commission, laid before the Legislature by the Governor on April 24, shows that Tate's defalcations had extended over a term of years, beginning with 1876, and that the total amount missing was \$229,009.21. To offset this sum there were found in the treasury vaults due-bills and other evidences of indebtedness to the late Treasurer amounting to \$59,782.80, showing that he had not only used the funds of the State himself, but had lent them freely to others. For the purpose of making a settlement with these debtors of Tate, the Legislature created a commission, to be filled by appointment of the Governor, which entered upon its duties in May, and before the end of the year had made terms with nearly all persons indebted to the late Treasurer. The proceeds derived from these assets, and from other property left behind by Tate, reduced the liability of his bondsmen below \$200,000. In June criminal proceedings were begun against him in Franklin County, where he was indicted under several counts for embezzlement. To guard against similar episodes in the future, the Legislature passed an act creating the office of State Inspector and Examiner. This officer is appointed and removable by the Governor, and is required to examine annually the management of the Auditor's and Treasurer's office, all the public institutions, and all other officers intrusted with property of the State, to be present at each monthly settlement between the Auditor and the Treasurer, and to report to the Governor his findings in all investigations.

Assessments.—The following table shows the assessed value of property in the State for 1888 and the changes made by the State Board of Equalization recently created:

PROPERTY.	Assessed value.	Equalized value.
Lands	\$227,979,166	\$227,481,065
Town lots	183,640,825	183,961,648
Personalty	77,964,416	78,694,023
Personalty not subject to equalization	52,549,792	52,549,792
Total	\$491,554,199	\$492,685,182

The total assessed valuation for 1887 was \$483,491,690.

The Insane.—The State supports three asylums for the benefit of the insane. During 1887 the daily average number of patients at the Western Asylum was 580; at the Central, 788; and at the Eastern, 635. The steward's expenses at the Western Asylum amounted to \$94,282.95, or an average of \$162.55 for each patient; at the Central the expenses were \$135,744.99, or an average of \$188.93; and at the Eastern the amount was \$106,325.98, or an average of \$167.35.

Political.—On August 6 elections for county officers were held throughout the State. In

the Second Appellate District an election for Judge of the Court of Appeals was also held, at which Judge William S. Pryor was re-elected without opposition. No general election for State officers was held. In November the Democratic National ticket was successful. Democratic Congressmen were elected in nine districts, and Republicans in two.

Rowan County.—The Legislature, early in its session, appointed a committee to investigate the disturbances occurring in this county in 1887 and previously, and to report upon the conduct of Judge Cole in his administration of justice there. This committee visited Rowan County, and, after taking much testimony, made a report in March, censuring Judge Cole and recommending the abolition of the county courts. The Legislature passed an act removing it from the fourteenth and annexing it to the thirteenth judicial district, thus taking it from the jurisdiction of Judge Cole, who was permitted to retain his office.

Pike County Disorders.—Early in January the inhabitants of Pike County petitioned the Governor for arms and ammunition to defend themselves against threatened attacks from West Virginia. The difficulties grew out of a feud between the family of McCoy's in this county and the Hatfield family of Logan County, West Virginia. This feud originated in 1882, when, in an election dispute, one of the McCoy's shot and killed a Hatfield. Four McCoy's were arrested for this act, captured by a Hatfield mob, carried into West Virginia, and then secretly taken back to Kentucky and shot. The matter had rested since that time till September, 1887, when Gov. Buckner offered \$500 reward for the murderers of the McCoy's, and at the same time made a requisition for them upon the Governor of West Virginia, which the latter refused. Later in the year the sheriff of Pike County, induced by this reward, entered Logan County, captured three of the Hatfield party, and lodged them in the Pike County jail. The remaining Hatfields retaliated on New Year's eve by burning the house of the elder McCoy and killing his wife, daughter, and son. The father escaped, and at once organized a party of about thirty men, who invaded Logan County, killed two of the Hatfields in an encounter, and later captured six others, who were also lodged in the Pikeville jail. About the middle of January another party from Kentucky made a second attack and killed another of the Hatfields. Late in the month the Governor of West Virginia sent a special agent to Gov. Buckner asking for the surrender of the captured Hatfields; but his mission was fruitless. The Governor then appealed to Judge Barr, of the United States Circuit Court, for a writ of habeas corpus; but Judge Barr, after a hearing on February 20, decided that the prisoners were properly in the custody of Kentucky authorities. During July and August, and later still, encounters took place upon the bor-

der between the two clans, and other murders were committed. The Governor also increased his reward for the Hatfield leaders to \$5,000, and early in the year stationed a company of Kentucky State troops at Pikeville to prevent a rescue of the Hatfields. At the close of the year the difficulties were still unsettled.

KING'S DAUGHTERS. An incorporated society, having its headquarters in New York city, chapters in the different States, and circles in numerous localities. The society grew from the meetings of a few charitably inclined women in January, 1886, at the house of Mrs. F. Bottome, in New York city. It was first intended to put into practice the system of working by means of clubs of ten, as recommended by Edward Everett Hale; but as the organization grew, this system of tens was found to be impracticable if closely adhered to, and the local clubs are permitted to consist of any number of members. The organization has now over 50,000 members. The object of the society is to promote the association of women into small clubs for the development of spiritual life and charitable activity. Any person that claims to be a Christian may become a member. The members wear as a badge a silver Maltese cross, engraved with the initials I. H. N., and bearing the date 1886. The yearly membership fee is ten cents; a payment of \$25 constitutes a contributor; and the payment of \$100 a donor. The motto of the society is "In His Name."

The management of the affairs of the society is vested in a Central Council consisting of not fewer than ten women, who must be members of the society and pay a yearly fee of one dollar. Vacancies in this council are filled by the remaining councilors. The officers are a president, vice-president, treasurer, general secretary, corresponding secretary, and recording secretary. No salaries are paid to any of the officers or councilors. The business of the society was at first attended to at the homes of the officers; but as the membership grew it was found necessary to procure separate quarters and employ clerks. The business headquarters are now at No. 47 West Twenty-Second Street, New York city. Each circle usually devotes itself to some special phase of work; for example:

To visit the sick, poor, and aged; to clothe them, and to write letters for those unable to do it themselves.

To visit strangers, and welcome them to the church and prayer-meeting. To take active part in the latter, and to be punctual and regular in attendance at all church services.

Work in hospitals, orphan asylums, nurseries, poor-houses.

Indian mission in Indian Territory. Assisting home missionary in southern Virginia.

To raise money for sending poor girls to the seashore. To raise money for Sunday-school building.

To be ready to speak and work for the Master; to live close to him.

To follow out the Golden Rule.

Bible study, with hope of outcome in practical work in many fields.

Letters for Christmas-letter mission.

Collecting pictures and cards, and making scrap-books for children in hospitals.

Making garments, towels, bibs, etc., to start day nursery.

Appointed one to sing, another to read to old lady almost blind.

Helping mothers who have to work with their sewing.

To indulge in no gossip. Object of circle to "make sunshine."

To teach Chinese.

To gather flowers and send in to city hospitals.

To help motherless children.

To read for inmates of Old Ladies' Home.

To sing at stated times in hospital wards.

To collect papers, magazines, etc., for Sailors' Mission.

To "keep the wrinkles from our mothers' brows."

To increase purity of life.

Each circle is known by a separate name, for example: Thoughtful Ten, Willing Ten, Clothing Ten, Children's Ten, Knitting Ten, "Inasmuch" Ten, Truthful Ten, Considerate Ten, Charity Ten, Visiting-Sick Ten, Fancy-Work Ten, Widows' Ten, Helping Ten, "Withhold not" Ten, Peacemakers, Memorial Circle. Each circle also has its separate motto, usually a text from the New Testament. The existence of one hundred members of the order in any State entitles the State to a State secretary, appointed by the Central Council, for one year. The State secretary has the appointment of county secretaries. The circles in each county report the work done by them to the county secretaries, who in turn report to their State secretary, and the State secretaries report to the Central Council. These secretaries receive no pay, but are not infrequently furnished by the circles over which they have supervision with funds to pay office-rent and clerk-hire.

The King's Sons is an organization for men and boys, similar in purpose to the King's Daughters and managed by that society.

L

LABRADOR, a country between the fiftieth and sixty-second parallels of north latitude, which forms a peninsula in the extreme northeastern part of North America; area, about 420,000 square miles. The south coast extends from the small Salmon river, which flows into the Strait of Belle Isle, opposite Newfound-

land, northeastward on the Atlantic Ocean, presenting a large mass of high rocks, a barrier against the Arctic icebergs. In the north the country borders on Hudson Strait and Ungava Bay; in the west, on Hudson Bay. The inland boundary, toward Canada, is not established.

The summer of Labrador corresponds almost with the English summer, from the middle of June (when snow disappears) to the middle of September. The arctic current freezes the coast, but has little effect inland. Twelve miles from the coast begins a luxurious forest-growth. Toward the north are barren moors, the homes of large herds of caribou. Randle F. Holme says: "A journey of twenty or thirty miles inland in summer-time, up the country from the sea, is like passing from winter to summer. The southern coast rises abrupt from the water's edge 200 feet, increasing to 500, and on the eastern coast to 1,400, until it reaches nearly 6,000, then diminishing in height until we reach the northern Cape Chidley, which is about 1,500 feet high. The mountains consist chiefly of Laurentian gneiss and red syenite, with characteristic scenery.

The greater part of the interior is table-land over 2,000 feet high, slowly falling toward the northwest until it reaches Hudson and Ungava Bays. Most of the streams are formed by a chain of ponds, connected by rapids and waterfalls, in an uncommon way. The southern part is especially well watered, and the whole interior is dotted with large lakes. The Indians are acquainted with a system of internal navigation joining the Seven Islands, Mingan, and the mouth of St. Augustine river, on the south coast, with Northwest river on the east, and Ungava on the north. The largest stream is South river, which flows into Ungava Bay the harbor resembling very much that of London. In consequence of the mountainous and broken features of the southern and eastern coast, there are innumerable good harbors.

The Government is represented by the Hudson Bay Company only. In summer there is mail communication from Newfoundland as far as Nain, but only once in winter. There is an English mission-house in Cartwright, and farther northward are several Moravian mission and trading settlements.

The accompanying map was compiled for the "Annual Cyclopædia" by Frederick Leuthner, according to the latest explorations. The hydrographic charts, a map of the Moravian Brethren, and the explorations of Hind, Randle F. Holme, and A. S. Packard furnished the material.

From Hamilton inlet along the coast live a large number of Eskimo and half-breeds, in scattered homesteads, who are occupied in salmon-fishing, trapping in winter, and hunting seal in spring. They are civilized, and have received Christian education by the Moravian Brethren; but those toward the north are pagan and uncivilized, and live in snow-houses. In the interior live a considerable number of Red Indians of the Cree nation, in families. They are nomadic, and in spring camp near the Hudson Bay Company's posts for trading. Their tents and canoes are very light, made of birch-bark or deer-hide, and they walk long distances over the snow. Newfoundlanders

visit the coast in spring, returning home at the close of the fishing-season.

The most common birds are wild geese, black ducks, shell-birds, divers, loons, and plover. Salmon, trout, and white fish are very common. No cattle can be kept. Iron is plentiful, and a beautiful stone called "Labradorite" may be seen about the beach of Hamilton inlet. Eskimo dogs are kept in large quantities. Mosquitoes and black flies are said to be worse than anywhere else.

LANDS, PUBLIC. The public lands of the United States lie within the boundaries of sixteen States—Alabama, Arkansas, California, Colorado, Florida, Iowa, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, Oregon, and Wisconsin—and eight Territories—Arizona, Dakota, Idaho, Montana, New Mexico, Utah, Washington, and Wyoming—which are known as "Land States and Territories." A few isolated tracts remain also in Ohio, Indiana, and Illinois. The estimated area of the public lands, exclusive of Alaska, is 608,448,145.40 acres, of which, 83,158,990.51 acres have been restored to the public domain since March 4, 1885. The recovery of 148,179,528.84 additional acres has been recommended to Congress. The only States that have not, at some time, contained public lands, are the thirteen original colonies, and Kentucky, Vermont, Maine, West Virginia, Tennessee, and Texas. Maps of the public-land States and Territories are prepared by the General Land Office at Washington.

History.—The public domain, as distinguished from and included within the national domain, of 4,000,000 square miles, embraces all lands acquired by the United States Government by treaty, conquest, cession of States and purchase, which are disposed of under and by its authority. (Article IV of the Constitution, section 3). It contained 2,843,575.91 square miles. The nucleus of this domain was an area of 404,955.91 square miles, ceded by seven of the original thirteen States to the General Government under the Articles of Confederation and the Constitution, after the definitive treaty of Sept. 3, 1783. These cessions of unoccupied chartered territory, extending to the Mississippi river, claimed often under conflicting grants, were made respectively by the States of New York, Virginia, Massachusetts, Connecticut, North and South Carolina, and Georgia, at intervals between March 1, 1781, and April 24, 1802. The first was volunteered by the State of New York, after previous discussion of expediency in Congress, and the passage of a resolution, Oct. 30, 1779, disapproving of the disposal of Western lands by States holding them. The total number of acres disposed of by State authority prior to June 30, 1796, was 1,484,047. Receipts, \$1,201,725.68.

A peculiar feature of the cession by North Carolina of the territory now constituting the State of Tennessee (45,600 square miles) was

an incumbrance of reservations, which was equivalent to adding nothing to the public domain. To the State of Georgia was paid, in all, \$6,200,000 in settlement of all claims, and a strip of land from the United States containing 1,500 square miles was added to her northern boundary. The reservation of "Virginia Military Lands" in the State of Ohio, an area of 6,570 square miles, occasioned much litigation and legislation by Congress prior to 1871. From the territory thus ceded by States were formed the present States of Ohio, Indiana, Illinois, Michigan, Wisconsin, and Tennessee, that part of Minnesota lying east of the Mississippi river, and all of Alabama and Mississippi lying north of the thirty-first parallel of latitude.

The following are purchases of the United States: From France, April 30, 1803, 1,182,752 square miles, at a cost of \$27,267,621.98. From this was formed the remaining portion of the States of Alabama and Mississippi south of the thirty-first parallel, Louisiana, Arkansas, Missouri, Iowa, Nebraska, and Oregon, all of Minnesota west of the Mississippi river; almost all of Kansas, and Dakota, Montana, Idaho, Washington, and Indian Territories, with a part of Wyoming and Colorado. From Spain, Feb. 22, 1819, the provinces of East and West Florida, an area of 59,268 square miles, costing \$6,489,768. The province of East Florida constitutes the present State of that name. West Florida (including the territory of Alabama and Mississippi south of the thirty-first parallel, with parishes in Louisiana) revolting from Spain in 1810, declared itself an independent State and framed a constitution, desiring annexation by the United States. It was occupied and held by proclamation of the President under the treaty of 1803, but the claim of Spain was recognized by purchase of 1819. From Mexico, Feb. 2, 1848, by treaty stipulation (at a cost of \$15,000,000) 522,568 square miles. On Dec. 30, 1853 (the Gadsden purchase) the Mesilla valley, 45,585 square miles, at a cost of \$10,000,000. The States formed are California, Nevada, and part of Colorado; Territories, Arizona, Utah, and New Mexico. From the State of Texas, Sept. 9, 1850, 96,707 square miles, at a cost of \$16,000,000. These lands are included in Kansas, Colorado, and New Mexico, in addition to the "Public Land Strip." From Russia, March 30, 1867, Alaska, containing 577,390 square miles, for \$7,200,000. The sum total paid by the United States for purchased territory, including the Georgia cession, is \$88,157,389.38.

The ordinance of July 13, 1787 (Congress of the Confederation), provided for the government of the territory northwest of the Ohio river (bounded by the Mississippi river), with provisions for the formation of States, and also with exclusion of slavery. On May 26, 1790, an act of Congress made similar provision for the territory south of the Ohio river (also bounded by the Mississippi), with the condition

"that no regulations made or to be made by Congress shall tend to emancipate slaves." Both acts became obsolete by the absorption of territory into States. The territory west of the Mississippi river was explored, settled, and organized into States and Territories by successive legislation. All business of administration and survey of the public lands is performed by the Secretary of the Interior, through the General Land Office.

Surveys.—The first surveys of public lands were conducted by the Geographer of the United States, appointed by ordinance of May 20, 1785. Thomas Hutchins was the first and only incumbent of that office. The act of May 18, 1796, for the sale of lands in the Northwest Territory, created the office of Surveyor-General. Surveying districts, under the control of surveyors-general, were created from May 7, 1822. Surveys within these are executed by contract, the surveyors-general employing deputies, with compensation fixed by Congress. A State, a Territory, or two or more of any of them joined together, constitute a surveying district. Mineral lands are surveyed by deputy mineral surveyors. There are fifteen surveying districts at present, and sixteen surveyors-general, one *ex officio* of Alaska.

When all lands within a surveying district have been surveyed, the office of the Surveyor-General is closed by act of Congress, the archives, plats, field-notes, etc., being transferred to the State authorities. Surveys of islands and keys on the sea-coast are made, under special laws, by the Coast Survey. Indian Reservations, by act of April 8, 1864, are surveyed under direction of the General Land Office.

Surveys of public lands in the United States have been uniform under the "Rectangular System," reported to Congress May 7, 1784, from a committee headed by Thomas Jefferson. By this system lands are divided into townships six miles square, and subdivided into sections one mile square, or 640 acres. These sections are again subdivided into half, quarter, and quarter-quarter sections, of 320, 160, and 40 acres. The number of principal surveying meridians and base lines intersecting at an equal number of initial points is thirty—viz., First, Second, Third, Fourth, Fifth, and Sixth Principal, Michigan, Tallahassee, St. Stephens, Huntsville, Choctaw, Washington, St. Helena, Louisiana, New Mexico, Great Salt Lake, Boise, Mt. Diablo, San Bernardino, Humboldt, Wilmamette, Montana, Gila and Salt River, Indian, Wind River, Uinta (special), Navajoe (special), Black Hills, Grand River, and Cimarron. Townships are numbered north and south of the principal base lines, and ranges, or series of contiguous townships, are reckoned east and west from the surveying meridians. The necessity for enduring monuments of iron or stone to mark corners and lines of public surveys is obvious, and has been repeatedly urged upon Congress. The deficiency is serious. Plats of surveys are prepared in triplicate, and filed

respectively in the offices of surveyors-general, in local land-offices, and in the General Land-Office at Washington.

Surveys are made under appropriations of Congress and under what is known as the individual deposit system. Prior to July 31, 1876, appropriations were made by separate item for the several surveying districts; subsequently a gross sum was apportioned, to be used at the discretion of the Secretary of the Interior. The annual appropriations for the years 1880 to 1886 were \$300,000 and upward. Since that date they have been \$50,000. The actual available appropriation of the fiscal year 1888 was \$40,000, an item of appropriations for surveys and resurveys being devoted to examinations of work in the field before approval of contracts. An additional \$10,000 was allowed on March 30, 1888, for deficiencies. Thirty-five contracts for the year were approved. The appropriations for surveys of Indian lands for the fiscal year 1888 were \$135,000.

The system of deposits by individual settlers in payment for desired surveys of lands, certificates of deposit to be received in payment for lands by act of 1871, within township surveyed, and by act of March, 1879, for any lands in the possession of the Government under the pre-emption and homestead laws, has been the occasion of serious abuse. The act of Aug. 7, 1882, restricted receipt of certificates in payment of lands to the district within which surveys were made. The amounts of deposits have largely exceeded the appropriations of Congress, and vast arid tracts, undisposible, the subdivision of which is undesirable, have been surveyed at heavy expense and without reference to the judgment of surveyors-general. From 1880 to 1885 the amount of special deposits for surveys was \$5,813,868.58, against \$2,093,000 appropriated by Congress, and during this period alleged fraudulent returns were made of surveys unattempted or egregiously performed. Among these are the "Benson cases," or "California syndicate," still under prosecution. In 1885 numerous contracts were suspended and ultimately disapproved. None were approved for 1886 and 1887. The amount deposited for surveys under this system during 1888 was \$68,578.50, and five contracts were awarded and approved. Surveys of railroad lands are made under deposits from companies.

The total number of acres of public domain surveyed to June 30, 1887, was 973,723,495. During 1888, 2,912,342.82 acres were surveyed. Surveys have not been extended over Alaska and the public-land strip. The highest prices paid per linear mile for surveying have been \$75 for State and Territorial boundaries astronomically determined; for outboundaries of Indian reservation, \$25; for principal bases and meridians, standard parallels, \$20; for township lines, \$18; section lines, \$12. The rates prescribed by law per linear mile for surveys of public lands have varied at various times

from \$3 to \$20. The present mileage allowed for public surveys—\$5, \$7, and \$9 for section, township, and meander lines—is below statutory rate, and reported inadequate by the Commissioner of the General Land-Office. The estimated cost per acre of surveys from the beginning of the system to June 30, 1880, was three and a quarter cents. The estimated cost to Dec. 1, 1883, was from two and a half to three cents and a half per acre.

Disposal.—The authority to dispose of public lands, vested in Congress was first exercised through the Board of Treasury (three commissioners), which made sales and gave certificates from May 20, 1785. The first patent, or deed in fee-simple, for land from the Government was authorized to be issued by the President, April 21, 1792. This title is purely allodial, and deprived of the last vestige of feudal import. There are fifty-seven forms of land patent in present use by the United States. The number of acres patented or otherwise passed title to or conveyed during 1888 is 8,605,194.29. The General Land-Office, under direction of a commissioner, was created April 25, 1812, subordinate to the Treasury Department. It was reorganized July 4, 1836, and on March 3, 1849, was transferred to the Interior Department. It is at present organized in fourteen divisions. The first patents for land were signed by the President, upon recommendation of the Secretary of the Treasury, countersigned by the Secretary of State, and recorded in his office. Mineral lands were disposed of by the Secretary of War prior to 1849.

A plan for the disposition of the public lands, submitted to Congress July 20, 1790, by Alexander Hamilton, Secretary of the Treasury, is the basis of the prior and existing land service of the Government. The act of March 3, 1795, provided for the application of net proceeds of sales of public lands to the payment of the national debt. They were to create a portion of the sinking-fund, and sales were ordered in the Northwest Territory, May 18, 1796. All sales were made under the credit system, on deposit of one-twentieth of the purchase-money. The total amount of sales under this system was 13,642,586 acres, for which \$27,900,879.29 were received. Cash payment for lands was ordered in 1806, and the credit system was finally abolished in 1820. The act of May 10, 1800, created defined districts of public lands open to disposal at local offices in charge of registers and receivers of public moneys. The first land-offices were within the Northwest Territory. But little change of organization has taken place to the present day. Registers and receivers are bonded officers, who make disposals of public lands, transmitting accounts to the General Land Office, and returns to the Treasury. Their salary is fixed at \$500, with receipts from fees not to exceed \$3,000. There are at present 111 local land-offices, with an equal number of registers and receivers. Vacant tracts of public lands in States containing

no land-offices are entered under act of March 3, 1877, at the General Land-Office. Land districts are made, abolished, consolidated, or reduced in area by Congress; mineral districts by the President. They are in nowise connected in boundary with surveying districts. Prior to April 20, 1820, all sales of public land were ordered by special acts of Congress, and the minimum price, except under contracts, was \$2 an acre. By act of that date the minimum price was fixed at \$1.25 an acre (except in cases of alternate sections reserved on line of railroads, by later provision); public lands were to be offered for sale by proclamation of the President, and those remaining unsold were to be opened to private entry at the minimum rate. Lands at present are disposed of by public sale and private entry, and under the pre-emption, homestead, and timber-culture laws. The following are the characters of lands disposable: agricultural; mineral; coal; desert, or lands requiring irrigation to produce crops; saline, or those containing salt springs; and timber and stone. There are special laws relating to each.

Sale.—By the policy of the Government all Western lands are held for settlement. Lands within the five Southern States of Alabama, Arkansas, Florida, Louisiana, and Mississippi, reserved for settlement under the homestead act of May 20, 1862, were by act of June 22, 1876, brought into market by proclamation. These lands, containing timber, coal, iron, and other valuable deposits, having been technically offered for sale, are entered at minimum rates, and are the only public lands of moment that can be purchased for cash without settlement. The act of March 3, 1881, excluded public lands in Alabama from operation of laws relating to mineral lands. Lands such as are valuable in Western States and Territories at \$2.50, \$5, \$10, and \$20 an acre, are sold in this State in unlimited quantities for \$1.25. The area of public lands within the five Southern States, June 30, 1883, was 18,620,645.98 acres. Of these there had been disposed of by public sale and private entry to June 30, 1887, 2,186,640.92 acres, for \$2,695,541.

Settlement.—Those only are legal settlers upon the public lands, male or female, who are citizens of the United States, or who have declared their intention to become such, who are heads of families, or are over twenty-one years of age. Proclamation of Congress in 1785 forbade settlement upon the public lands. Authority to remove settlers by force of arms was granted to the President at that time and later. The first pre-emption or preference right to purchase land, in view of prior settlement and improvement, was accorded March 3, 1801, to contractors for lands included in the purchase of John Cleves Symmes, but outlying the patent obtained by him. Subsequent legislation culminated, Sept. 4, 1841, in the passage of the act allowing pre-emption of 160 acres with credit of from 12 to 33 months, to be paid for

at the minimum rate of \$1.25 an acre. No person is allowed to pre-empt land who owns 320 acres of land within the United States, or who has removed from land of his own. The number of patents issued for pre-empted lands during 1888 is 12,403. Pre-emption filings are merged into cash sales upon making of final proof and payment, so that it is impossible to give the number or acreage of such filings for extensive periods. The filings so merged in 1887 numbered 23,151. The amount of land disposed of by pre-emption to June 30, 1887, is estimated at 185,969,023 acres. Pre-emption is allowed upon unsurveyed as surveyed lands, where not reserved or selected for town-site purposes, and where not saline or mineral.

The homestead law of May 20, 1862, originated in the Free-Soil movement ten years previous, and was the subject of animated discussion in Congress from that date. A bill passed by both Houses was vetoed by President Buchanan, June 23, 1860, but the measure finally received Executive sanction at the hands of President Lincoln. By its provisions, a home of 160 acres of the public lands is secured, without payment, upon condition of residence and improvement for a period of five years. Land thus acquired is not liable for debt contracted prior to the issuance of patent. Full citizenship is requisite for final title. Section 8 of the act allows commutation of homestead, or payment for the land as in pre-emption entry at any period within the term of five years after six months' settlement. This feature is open to the same objections as the pre-emption laws, and its repeal has been advised. Amendment to the homestead law provide for entries of homes of 160 acres by soldiers and sailors honorably discharged, their term of service in the civil war to be deducted from the five years of residence required by law. Actual residence for one year, however, is required. A claim may be filed by an agent or attorney, but entry can be made only by the soldier or sailor. Additional homestead and adjoining farm provisions are for entry of land to fill the limit of 160 acres, in cases where the right has been exercised for a smaller amount. Non-mineral affidavits are required previous to entry of lands within mineral districts. The total number of entries under the homestead law, to June 30, 1888, is 874,501, covering 113,878,601.48 acres. Of these 319,080 were final, covering 88,483,434.22 acres; and 16,077 homesteads were patented for the year 1888. Commutations of homesteads are merged in cash sales in the keeping of Government accounts; 5,885 homesteads were commuted during 1888. The act of March 3, 1875, extended the homestead privilege to Indian settlers. But commutation is denied them, nor are their titles subject to alienation or incumbrance for a period of twenty years. Commissions and fees are payable at times of making entry and final proof under homestead laws, and vary according to States, and number and value of acres.

On the Pacific slope they are advanced. The highest amount payable is \$34. By the act of June 14, 1878, pre-emption entries are convertible into homesteads, to date from original settlement.

Legislation to "encourage the growth of timber on Western prairies" was begun March 3, 1873. By amendatory act of March 18, 1874, settlers are allowed entry of 160 acres of public land, on condition that one fourth of it be devoted to raising timber for a period of eight years. Upon final proof at the end of that time, or within five years thereafter, a patent issues. Agricultural as well as timberland is thus secured by what is in reality a bounty-act for raising timber. Timber-culture entries are not liable for debt contracted prior to issue of patent. The total amount of commissions and fees, payable at making of entry and final proof, is \$18. Serious objections to the timber-culture laws, as encouraging frauds upon the public domain, are urged upon the attention of Congress. The number of timber-culture entries patented for 1888 was 754. The total number of entries made from March 3, 1873, to June 30, 1888, was 246,449, covering 89,958,558.45 acres, and 5,466 entries have been perfected. Oaths of settlers under all laws, in making final proof, when not taken by registers and receivers, are made before designated judicial officers. Acts of relief to settlers suffering under drouth, incursions of grasshoppers, etc., have been passed from time to time.

The act of Aug. 4, 1854, graduated prices of public lands to actual settlers from \$1 to twelve and a half cents an acre, according to the length of time the land had remained unsold in market. Entries under this act were original and for adjoining farms. It was repealed June 2, 1862. The total number of acres disposed of under the graduation act was 25,696,419.73.

Agricultural lands are obtainable under the above-mentioned laws, and 47,180 agricultural patents were issued for 1888, against 24,558 for the year previous. Mineral lands are patented or held under possessory title. They are not subject to pre-emption or homestead laws. The ordinance of May 20, 1785, for sale of lands, reserved one third part of all gold, silver, lead, and copper mined. The act of March 3, 1807, authorized lease of lands containing lead by the War Department in the Indian Territory. Lands containing lead and copper in Arkansas, Missouri, Iowa, Michigan, Minnesota, and Wisconsin were sold from March 3, 1829, under special laws, the mineral being conveyed with the soil. The area of the precious-metal bearing region of the United States is estimated at 65,000,000 acres. Iron is reckoned as among valuable deposits. The precious-metal bearing States and Territories are California, Colorado, Oregon, Nevada, Idaho, Montana, Wyoming, Utah, New Mexico, Arizona, Dakota, and Washington. (See MINING LAWS IN THE UNITED STATES.) One thousand and

thirty-four mineral patents were issued for 1888; 1,314 entries were made, for 31,734 acres, realizing \$117,996.85; 13,483 claims were patented to June 30, 1887.

Coal-lands, by act of July 1, 1864, were authorized for sale, and opened to pre-emption at \$20 an acre. The act of March 3, 1873, gave pre-emption right to 160 acres of coal-lands at \$10 an acre fifteen miles from a completed railroad, and \$20 within less distance. Entry of 320 acres is allowed to associations of persons. An additional entry of 640 acres is allowed to associations of not fewer than four persons who have expended \$5,000 in improvements. The number of coal entries patented for 1888 was 114, and 152 entries were made, realizing \$342,849.40. The total number of entries of coal-lands to present date cover 98,612.64 acres.

Desert lands, by act of March 3, 1877, may be entered to the amount of 640 acres, three years being given from date of entry to conduct water; twenty-five cents an acre is paid at filing of application, and the remaining \$1 an acre at any time within three years. The number of desert entries patented for 1888 was 1,187. The total number of entries to date under this act is 16,821, covering 5,564,727 acres. Of these 7,156 have been perfected.

Saline lands are disposed of by public sale and private entry at \$1.25 an acre, by act of Jan. 12, 1877. The act of May 18, 1796, reserved such lands to the United States. They were leased by the Surveyor-General. Grants not to exceed 12 in number, with 6 sections of land for each spring, for school purposes and public improvements, were made to each public-land State up to Nevada, upon admission into the Union; and 559,965 acres cover these grants. No saline lands are sold in the Territories nor in States with grants unsatisfied.

The act of June 3, 1878, authorized sale of lands, containing timber and stone, unfit for cultivation, at \$2.50 an acre in California, Oregon, Nevada, and Washington Territory. The fee for entry of such lands is \$5, and 1,063,781.54 acres have been disposed of. The protection of timber on public lands from fire and depredation has occupied the serious attention of Congress from the origin of the Government. Appropriations for the purpose were made in 1878. Forty-one special agents were employed by the General Land-Office for 1887, under an appropriation of \$75,000. The receipts for timber depredations for the fiscal year 1888 were \$13,320.65. The act of June 3, 1878, allowed cutting and removal of timber for mining and domestic purposes from mineral lands in certain States and Territories. Railroads were exempt.

Town sites are entered on the public domain by three methods, under sections 2,380 to 2,390, inclusive, of the Revised Statutes. Seventeen town-site patents were issued for 1888; the total number to date is 556. The town-site and town-lot entries under all laws

to date cover 168,818.12 acres. The act of May 26, 1824, authorized pre-emption of county-seats. About nine entries have been made. Mineral rights are reserved in town-site patents. Eleven hundred and twenty acres of public land may be legally obtained by any one person under the settlement and occupation laws, although contrary to their theory.

Reservations.—Lands reserved from the public domain are for Indians and for military purposes, and no settlement is allowed upon either. There are 147 Indian reservations, covering 186,894,985 acres. Surveys of these are made for definition of boundary, and for allotments in severalty to Indians under the act of Feb. 8, 1887. The receipts from Indian lands disposed of by the General Land-Office under special laws of Congress are deposited in the United States Treasury to the credit of the several Indian trust funds. The amount from lands so disposed of during 1888 was \$821,118.77.—Military reservations on the public lands cover, approximately, 2,477,878.60 acres. Abandoned military reservations are restored to the public domain by act of Congress, and disposed of by sale in Florida (act of Aug. 18, 1856) as other public lands.

Donations.—Miscellaneous donations of public lands and special grants have been made by Congress at various periods, to the number of perhaps a thousand. The latest were for reservoir purposes in Wisconsin and Minnesota, and for artesian wells east of the Rocky mountains, in charge of the Department of Agriculture (act of May 19, 1882). Two reservations for this purpose have been abandoned, the third still exists.

The grants of public lands to States are as follow: By State selection act of Sept. 4, 1841, to each State named and each one to be admitted, 500,000 acres for internal improvements, including the quantity granted for the purpose under the Territorial Government. By successive acts from March 2 1849, swamp and overflowed lands, unfit for cultivation, have been granted to States "to aid in constructing necessary levees and drains to reclaim such lands." The number of acres claimed for 1888 was 781,857.59, making the total amount 78,189,180.65 acres. The number of acres patented to all States is 56,840,251.09; for 1888, 96,515.19 acres. The Swamp Land grant has not been extended to the States of Kansas, Nebraska, Nevada, and Colorado, nor to the Territories. Under the acts of 1855 and 1857, more than \$1,500,000 have been paid from the Treasury, and 600,000 acres of agricultural land have been patented as indemnity for swamp and overflowed lands disposed of by the United States for cash, warrants, or scrip.

For educational purposes the following grants of public lands have been made in States and reserved in Territories at various periods from 1785: For public schools, in States admitted prior to 1848, every sixteenth

section of public land; for States and Territories organized since that period, every sixteenth and thirty-sixth section; to the State of Nevada, 2,000,000 acres, in lieu of school selection. For seminaries and universities, the quantity of two townships in each State or Territory containing public land, and in some instances a larger quantity in proportion to grade of institution. The act of July 2, 1862, granted to each State 80,000 acres of public land for each Representative and Senator in Congress, for agricultural and mechanical colleges, "in place," where the States contained public land, and scrip representing an equal number of acres locatable in other States or Territories. Lands thus ceded for educational purposes were disposed of or are held disposable, the proceeds constituting endowments for common-school funds. The estimated total is 78,659,439 acres. Indemnity selections are made for deficiencies in school grants.

Under the distribution act of Sept. 4, 1841, the net proceeds of sales of lands to Aug. 29, 1842, were divided as therein provided among States and Territories and the District of Columbia. Amount, \$691,117.05.

Acts giving lands to induce settlement in dangerous or distant portions of the nation have been passed at divers periods as follows: For East Florida (armed occupation act), Aug. 4, 1842, with amendments, total amount 200,000 acres; for Oregon Territory, Sept. 27, 1850, expiring Dec. 1, 1855; for Washington Territory, March 2, 1853, expiring Dec. 1, 1855; for New Mexico, July 22, 1854, still in force. The total amount of land covered by donation entries is 8,188,640 acres.

Grants of public land for public improvements are as follow: For canals, 4,424,073.06 acres. Grants from 1824, in Indiana, Ohio, Illinois, Wisconsin, and Michigan. Alternate sections were reserved in grant of May 24, 1828, for Miami Canal in State of Ohio, inaugurating system as pursued in other grants. For river improvements, 1,406,210.80 acres. Grants from 1828 to 1846 in Alabama, Wisconsin, and Iowa. For railroads, amount estimated to fill railroad grants, June 30, 1880, 155,504,994.59 acres; estimated value, \$891,804,610.16. There have been patented 49,907,135.96 acres; selections pending and undisposed of, 25,429,866.11 acres. Grants are made to States and corporations direct. To States from Sept. 20, 1850; to corporations from July 1, 1862, date of grant to Union Pacific Railroad Company. Lands withdrawn from settlement for indemnity purposes have been restored since March 4, 1885, to the amount of 21,822,600 acres. The grants forfeited for non-completion of roads, and lands granted in limits restored in the same period, amount to 80,861,764.83 acres.

The alternate (odd and even numbered) sections of land reserved within railroad limits are valued at the "double-minimum" rate of \$2.50 an acre. A homestead entry of but 80

acres of such land was allowed prior to the acts of 1879 and 1880. Cost of survey, selection, and conveyance of public land for railroad purposes must be paid by companies preceding issue of patent (act of July 31, 1876). For this purpose \$92,817.50 were deposited in 1888. The railroad patents issued during the year were to four States, and covered 829,162.45 acres. The selections made during the year were for 6,525,800.09 acres. Settlements upon lands granted or withdrawn for railroads have given rise to much litigation. The case of Guilford Miller, settler upon lands withdrawn for definition of limit, but not selected, was decided in his favor by the President April 28, 1887. The act of March 8, 1887, ordered immediate adjustment of all railroad grants by the Secretary of the Interior. Rights of way through public land in States and Territories have been granted (June 30, 1887) to 254 railroad companies under the act of March 8, 1876. For wagon-roads, grants, from 1863 to 1869, were made in Wisconsin, Michigan, and Oregon, covering 1,801,040.47 acres.

Private Land-Claims.—These are numerous, and have their origin in titles to land granted by governments preceding the United States in sovereignty. They have been in process of adjustment and confirmation by Congress from the earliest days. The most important are included in the French and Mexican purchases. Many are fabulous in extent, and many probably fraudulent. The area of land embraced in private land-claims, patented and unpatented, is estimated at 80,000,000 acres.

Bounties have been granted by the Government for military and naval services in the Revolution, the War of 1812, and the Mexican War. For the first two classes military districts were set apart to fill warrants, and subsequently commutations into scrip were allowed. Under the acts of 1847, 1850, 1852, and 1855, 551,644 warrants had been issued to June 30, 1887, covering 61,096,790 acres. Of these, 20,467 are still outstanding, embracing 2,821,440 acres.

Scrip.—The total amount of scrip issued by the Government in satisfaction of private land and other claims, to June 30, 1887, is for 79,365,716.66 acres. Of this, 76,540,675.42 acres have been located.

The gross receipts of the public domain to June 30, 1888, are \$289,786,496.42. This amount includes sale of Indian lands, of which the fee-simple title lies in the Government. The total cost of the public domain to June 30, 1888, was \$351,981,160.32, or nineteen cents an acre.

Taxation.—Public-land states, on admission to the Union, renounce the right to tax the public domain. In lieu thereof, by a series of acts from 1802, two, three, and five per cent. of the net proceeds of sales of public lands within their boundaries have been allowed, with the exception of California. Upward of \$8,000,000 have so accrued. Lands disposed of are

taxed after entry and payment, and before issue of patent. Railroad lands are not taxed before segregation from the public domain.

Unlawful Inclosures.—To June 30, 1887, 465 unlawful inclosures had been brought to the attention of the General Land-Office, aggregating nearly 7,000,000 acres. Proceedings to compel removal have been instituted, and the practice has been largely broken up.

LEBŒUF, EDMOND, a French general, born in Paris, Nov. 5, 1809; died near Argentan, Orne, June 7, 1888. He was educated for the military profession at the École Polytechnique and at École d'Application at Metz, where he was graduated and commissioned lieutenant of artillery in 1833. He was ordered to Algeria, where he obtained a captaincy in 1837 for brilliant services at the Iron Gates, and distinguished himself at the siege of Constantine.

EDMOND LEBŒUF.

His skill and coolness in protecting the retreat of a column of troops that was in danger of being cut off by the Kabyles, gained him the higher grade of the Legion of Honor in 1840, and two years later he was promoted colonel. In the Crimean campaign he was chief of the artillery staff, with the rank of major-general. He took part in the battle of Alma, and at the siege of Sebastopol commanded the artillery on the left. He was advanced to the grade of lieutenant-general in 1857, and in 1859 commanded the entire artillery of the French army in Italy. At Solferino he brought up his guns just in time to stay the advance of Gen. Benedek, who with the right wing of the Austrian army threatened to crush the forces of Vittorio Emanuele and render precarious the French position. In January, 1869, he succeeded Gen. de Goyon in command of the Sixth Corps at Toulouse, and in August, on the death of Marshal Niel, he was called to the head of the Ministry of War. He remodeled the War Department and the administrative services of the army, changed the *personnel* of the bu-

reans, and won general approbation by his energy in improving the efficiency and readiness of the military establishment. When the Ollivier ministry was constituted under the new parliamentary system, he was invited to retain his portfolio. On March 24 he was made a marshal of France and nominated a senator. Relying on reports from all the bureaux, Marshal Lebœuf told the Emperor, when war with Prussia seemed imminent, that the army was perfectly prepared for war in every particular, down to the buttons on the gaiters. When war was declared, he took command of the Army of the Rhine as major-general, and accompanied the Emperor to the field. The reverses at Wissembourg and Woerth revealed a state of disorganization, a lack of necessary materials, gaps in the ranks, and imperfections in the transport and auxiliary services, that surprised and grieved no one so keenly as the Minister of War. The Ollivier Cabinet resigned, and Marshal Lebœuf was compelled to give up his command. He was assigned to a subordinate command under Marshal Bazaine, and was shut up with him in Metz, after fighting with desperate valor in the hope of death at Gravelotte and St. Privat. After the surrender of the fortress of Metz, he was sent to Germany as a prisoner, and when peace was concluded he retired into Switzerland. In December, 1871, he appeared before the committee of the National Assembly that was appointed to investigate the action of the Government of National Defense in signing the treaty of peace. He testified that there were 567,000 men under arms at the mobilization, and attributed the disastrous issue of the campaign to Bazaine's unmilitary and disloyal conduct. Thenceforth he lived in retirement. Excepting Canrobert and MacMahon, he was the last surviving marshal of the French army.

LITERATURE, AMERICAN, IN 1888. A review of our literature during the year proves hardly more encouraging than did that of 1887. If possible, even fewer works of worth appeared, while book-production increased largely, reaching (from the figures of the "Publishers' Weekly") 4,631 volumes. Of these, at least, it may be said that 3,520 were produced within our own country, and but 590 from foreign sources, showing a tendency toward greater honesty on the part of native publishers and a development of fertility in native genius, but the majority were evanescent. It is surprising, in view of the efforts of specialists in some directions, to note the absolute paucity of American works in the higher regions of science and mental philosophy.

Fiction.—Of this class, 1,284 books, including juvenile books, produced in 1888, show a marked decrease from the 1,509 of 1887, which may perhaps be accounted for by the reduced issues of cheap libraries. The most widely circulated novels were "John Ward, Preacher," by Mrs. Margaret Deland, author of a volume of poems, a book somewhat similar in tone to

"Robert Elsmere," and "The Quick or the Dead," by Miss Amélie Rives (now Mrs. Chandler). The latter has been mercilessly criticised and travestied. Two other works by the same writer, "Virginia of Virginia" and "A Brother to Dragons and other Old-Time Tales," while less extravagant, exhibit the same peculiarities. "Annie Kilburn" was the single production in fiction of William Dean Howells, and, though entertaining, fell below his highest efforts. Henry James, published "The Reverberator" and a volume containing three short stories, entitled "The Aspern Papers," "Louisa Palland," and "The Modern Warning." Mrs. Poultney Bigelow published "Beautiful Mrs. Thorn-dyke." F. Marion Crawford wrote "With the Immortals," and Frank R. Stockton "The Dusan-tes," a sequel to "The Casting Away of Mrs. Aleshine and Mrs. Leeka," and "Amos Kilbright, his Adscititious Experiences, with other Stories." Edgar Saltus appeared with "Eden" and "The Truth About Tristrem Var-ick," and Edgar Fawcett with "Olivia Delaplaine," "Divided Lives," and "A Man's Will," the last a temperance story. "The Despot of Broom-edge Cove," by Charles Egbert Crad-dock (Miss Murfree), "Bonaventure, a Prose Pastoral of Acadian Louisiana," by George W. Cable, and "The Graysons, a Story of Illinois," by Edward Eggleston, were portrayals of local-ity and of character as influenced by it. "Queen Money," by the author of "Margaret Kent" (Mrs. Ellen W. O. Kirk), is a vigorous protest against one of the most deplorable tendencies of the age, and indicated growth of experience and power. "Better-Time Stories," collected from magazine sources, being the product of earlier days, "Mr. Tangier's Vacations," and "My Friend the Boss, a Story of To-day," by Edward Everett Hale, belong of right to the year, and it is impossible to omit mention of a new and illustrated edition of "The Man With-out a Country," first published twenty-five years ago. Another old favorite of the same age, which was revived, was "Two Men," by Elizabeth Stoddard. Bret Harte produced two volumes, "The Argonauts of North Lib-erty," and "A Phyllis of the Sierras" and "A Drift from Red-Wood Camp." The latter two are short stories, of no particular merit. "The World's Verdict," by Mark Hopkins, Jr., was the promising first attempt of a new writer of fiction. Arlo Bates wrote a continuation of his "Pagans," entitled "The Philistines," who proved hardly more attractive than their pred-ecessors. E. W. Howe's "A Man Story" was inferior to none of his former work in power, and O. M. Newell made an addition of "The Isle of Palms" to the "Fleetwing Series." "Our Phil and other Stories," by Katharine Floyd Dana, consisted of three clever sketches of negro life; and "Two Little Confederates," by Thomas Nelson Page, author of "Marse Chan and other Stories," is a capital book for boys. Mrs. Frances Hodgson-Burnett's "Sara Crewe" is a companion-piece to "Little Lord

Fauntleroy," and her "Editha's Burglar" was reprinted in book-form from "St. Nicholas." Sidney Luska (Henry Harland) wrote "My Uncle Florimond," and Joseph Kirkland "The McVeys, an Episode." Edward Bellamy, in "Looking Backward," aimed at rather more than success as a novelist, and produced one of the most suggestive books of the year. "A Nymph of the West," by Howard Seely, is a bright story with an unconventional heroine. Archibald O. Gunter followed "Mr. Barnes of New York" with "Mr. Potter of Texas," and Gay Parker has attempted an imitation, if not of style, of title, in "Mr. Perkins of New Jersey," having written also "Playing with Fire." Julian Hawthorne, on his own account, was responsible for "The Professor's Sister" and "The Disappearance of David Poindexter, with other Stories," and, in collaboration with Inspector Byrnes, for "Section 558, or the Fatal Letter," and "Another's Crime." "The Peckster Professorship," by J. P. Quincy; "The Veiled Beyond," by Sigmund B. Alexander; "Ilian, or the Curse of the Old South Church of Boston," by Chaplain James J. Kane, U.S.N.; and "An Unlaid Ghost," anonymous, were psychological in tendency. "The Doctor's Mistake," by O. H. Montague and O. M. Hammond, being "An Experiment With Life," dealt also with abstruse questions. J. S. of Dale (Frederick J. Stimson) published "First Harvests" and "The Residuary Legatee," and Gen. Lloyd S. Brice published "Paradise." "Aristocracy" was an anonymous answer to the many recent books that have reflected upon democracy, and "De Molai," an historical novel by Edmund Flagg, contained much information with regard to the Military Order of Templar Knights, from the last Grand Master of whom the book is named. "The Lone Grave of the Shenandoah, and other Stories," by Donn Piatt, brought that journalist forward in a new light as a *raconteur*. Sarah Orne Jewett wrote "The King of Folly Island"; William L. Alden, "A New Robinson Crusoe"; William H. Bishop, "The Brown Stone Boy and other Queer People"; Robert Tinsol, "A Pessimist in Theory and Practice"; and T. S. Denison, "The Man behind." Susan Coolidge (Miss Sarah C. Woolsey) completed the "Katy Stories" with "Olover"; Albion W. Tourgee published "Black Ice" and "Letters to a King"; and Howard Pyle a boys' story of mediæval Germany, entitled "Otto of the Silver Hand." "The Spell of Ashtaroth," also an historical novel, by Duffield Osborne; "Miss Hildreth," by A. De Grasse Stevens; and "The Secret of Fontaine La Oroix," by Margaret Field, received commendable notices, as did "Under the Maples," by Walter N. Hinman; "In War Times at La Rose Blanche," by M. E. M. Davis; and "The Youngest Miss Lorton and other Stories," by Nora Perry. "Miss Lou," the last novel of E. P. Roe, was left incomplete as to the final chapter at his death, but a note found among his papers supplied the defi-

ciency. His "Found yet Lost" was also published during the year. From Nora Helen Wardell we have "The Romance of a Quiet Watering-Place," and from One in the Swim "Society Rapids, High Life in Washington, Saratoga, and Bar Harbor." Edmund Pendleton was the author of "A Virginia Inheritance"; Gen. Hugh Ewing of "A Castle in the Air"; and Capt. Charles King of "A War-Time Wooing," "The Deserter," and "From the Ranks"—the last two included in a single volume. Lucretia P. Hale, in collaboration with Edwin B. Lassetter, wrote "An Uncloseted Skeleton," and "The Story of a D butante in New York Society" was told by Rachel Buchanan in a series of letters. F. Thickett brought out "A Mexican Girl"; and Mrs. Amelia E. Barr "Remember the Alamo," "Master of his Fate," and "Christopher and other Stories." "Wyoming" was the first volume of a series of tales of that valley, by E. S. Ellis, who also wrote "The Star of India," and "The Doom of Mamelons." "A Legend of the Saguenay," was told by W. H. H. Murray. "Uncle Tom's Tenement," by Alice W. Rollins, a book more creditable in aim than in execution, dealt with the question of possible morality in that abode. "His Broken Sword," by Winnie L. Taylor, was written in the interests of penal reform. "The Gallery of a Random Collector" was the somewhat misleading title given by Clinton Ross to several short stories, and the history of "Yone Santo, a Child of Japan," was feelingly narrated by Edward H. House. "A Strange Narrative found in a Copper Cylinder" was an exciting tale of supernatural adventure, from the pen of the late Prof. James De Mille, written, though unpublished, twenty years before the advent of "She." "Napoleon Smith," a pure extravaganza, was said to have been written by a well-known New-Yorker. "Tilting at Windmills" was "A Story of the Blue-Grass Country," told by Emma M. Connelly; and among Southern stories may be mentioned also "Monsieur Mott ," by Grace King; "A Blockaded Family," by Parthenia A. Hague; "Pleasant Waters," by Graham Claytor; and "Kenneth Cameron," by L. Q. C. Brown. "Isidra," by Willis Steel; "Mrs. Lord's Moonstone and other Stories," by Stokes C. Wayne; "The Silent Witness," by Mrs. J. H. Walworth; and "Montezuma's Gold," by F. A. Ober, held their own, as did "Roger Berkley's Probation," by Helen Campbell, and "A Blind Lead," by Josephine W. Bates. "The Case of Mohammed Benani" was an exciting story of wrongs in Morocco, published anonymously. "Glorinda," by Anna Bowman Dodd; "Young Maids and Old," by Olara Louise Burnham; "A Little Maid of Acadie," by Marion C. L. Reeves; and "Odds against her," by Margaret R. McFarlane—were all exceptionally good of their kind; and "Agatha Page," by Isaac Henderson, found many readers. Kirk Munroe wrote "Derrick Sterling" and "Chryse-

tal, Jack & Co."; the Rev. E. A. Rand, "Making the best of it" and "When the War broke out"; J. S. Shriver, "Almost"; and G. T. Keroheval, "Lorin Mooruck and other Indian Stories." "Renée" was a romance by Marian O. Wilson; "Bryan Maurice," a semi-religious novel, by the Rev. Walter Mitchell; and "Esther, the Gentile," a story of Mormon life, by Mrs. Mary W. Hudson. Miss M. G. McClelland sent forth "Madame Silva," mystical and occult; and "Eros," by Laura Daintrey, had a temporary vogue. Ernest de L. Pierson wrote "A Slave of Circumstances," a story of New York life, full of humorous situations; and Harry Castlemon (C. A. Fostick) "Snagged and Sunk, or the Adventures of a Canvas Canoe." From May Agnes Fleming we have two novels, "The Midnight Queen" and "The Virginia Heiress"; from Mary T. Palmer, "The Doctor of Deane"; and from W. F. Kip, "Would you have left her?" The latest novel of Marion Harland (Mrs. Terhune) was entitled "A Gallant Fight." Hester Stuart, in "A Modern Jacob," made a study of heredity. Mrs. Isabella M. Alden (Pansy) wrote "Judge Burnham's Daughters," and, with Mrs. C. M. Livingstone, "Profiles, and a Dozen of them," for children. Interesting stories were "Miss Merley," in the American Tauchnitz edition, by J. Elliot Curran; "Maurice Rossman's Leading," by Mary R. Baldwin; "Kesa and Saijiro, or Lights and Shades of Life in Japan," by Mrs. J. D. Carrothers; and "Judge Havisham's Will," by Miss I. T. Hopkins. "The Septameron" was a sportive imitation of the "Decameron" of Boccaccio, by seven authors leaving town to avoid the heat, who combined to produce a volume of light summer literature. Neither "The Gambler," by Franc B. Wilkie, nor "Len Gansett," by Opie P. Read, can be regarded as elevated in tone; while, on the other hand, "Mr. Absalom Billingslea" and "Other Georgia Folks" are specimens of the genial humor and quick characterization of Richard M. Johnston. Mary E. Bamford wrote "Marie's Story" and "Father Lambert's Family"; Maria McIntosh Cox, "Raymond Kershaw"; E. R. Roe (who must not be confounded with E. P. Roe), "May and June"; and E. Willett, "The Search for the Star"; while a rapid summary includes "Miss Middleton's Lover," by Laura J. Libbey; "The Major's Love," by Ellen Price Brown; "The Jolly Ten and their Year of Stories," by Agnes C. Sage; "In Safe Hands," by Mary Hubbard Howell; and "What Dreams may come" and "The Princess Daphne," by Mrs. G. F. Atherton. Among books more or less sensational are "The Great Amherst Mystery," by Walter Hubbell, who also wrote "The Curse of Marriage"; "Brinka, an American Countess," by Mary C. Spenser; "Cell 18," by Edwin H. Trafton, purporting to be "A Nihilist Episode in the Secret History of New York and St. Petersburg"; "Orion, the Gold-Beater," and "Karmel, the Scout," both by Syl-

vannus Cobb, Jr. (W. D. Dunlop). "Mr. Darling's Daughter," by Helen B. Williams, and "How Tom and Dorothy made and kept a Christian Home," by Margaret Sidney (Mrs. H. M. Lothrop), belong to the practical religious department of fiction, as "A Modern Adam and Eve in a Garden," by Amanda M. Douglas, "A Young Prince of Commerce," by S. R. Hopkins, and "The Boy Broker," by Frank A. Munsey, to the purely utilitarian.

In the line of children's stories we have, in addition to those already referred to: "Uncle Rutherford's Nieces," by Joanna M. Matthews, author of the "Beessie Books"; "Scotch Caps," by J. A. K.; "Sparrow, the Tramp," by Lily F. Wesselhoeft; "Margareta Regis and other Girls," by Annie H. Ryder; "Kelp, a Story of the Isles of Shoals," in the "Pine Cone Series," by W. B. Allen; and "Bob Burton," by Horatio Alger. "Taken by the Enemy," opened a new "Blue-and-Gray Series," by Oliver Optic (William T. Adams). J. T. Trowbridge wrote "Biding his Time" and "A Start in Life"; Mrs. Lucy G. Morse, "The Chezzles"; Mrs. L. C. Lillie, "My Mother's Enemy" and "The Household of Glen Holly." "Tales of King Arthur and his Knights of the Round Table," by Margaret Vere Farrington, and "St. George and the Dragon" and "Kensington Junior," by Margaret Sidney, found deserved favor with young folks.

Among translations received with favor may be mentioned "The Court of Charles IV" and "Leon Roch," from the Spanish of Perez-Galdós, as also the "Maximina," of Don Armando Palacio Valdes. The rage for Russian realism apparently expired in 1887. But few of the works of Tolstoi were translated, and those were of minor importance. Among them were "Family Happiness." From the German we have "Picked up in the Streets," by H. Schobert, and "The Owl's Nest," by E. Marlitt, both adapted by Mrs. Wister, and "For the Right," by K. E. Franzos; while French literature was represented by "The Dream," "The Soil," and "The Jolly Parisienne," of Zola; "The Magic Skin," "Modeste Mignon," and "Cousin Bette," of Balzac; and several charming stories. Among these were "The History of Nicholas Muss," by O. du Bois-Melly; "The Story of Colette" and "An Iceland Fisherman," by Pierre Loti. "The Steel Hammer" of Louis Ulbach, translated by E. W. Latimer, formed the first volume of "Appleton's Town and Country Library," and was followed by its sequel, "For Fifteen Years." "The Story of Jewād," by Ali Aziz Effendi, The Cretan, was a novel contribution from the Turkish. Last, but not least, came "Lajla, a Tale of Finmark," from the Norwegian of J. A. Friis.

History.—This department is, perhaps, the richest, although fewer works than usual were produced. "The Critical Period of American History" was supposed by John Fluke to lie between the years 1783 and 1789, to which he

devoted much research. Other important works bearing on the subject are: "Seven Conventions," by A. W. Clason; "Pamphlets on the Constitution of the United States, published during its Discussion by the People, 1787-1788," edited with notes and a bibliography by Paul Leicester Ford; "Pennsylvania and the Federal Constitution, 1787-1788," edited by John B. McMaster and Fred D. Stone; and a new edition of "The Federalist, a Commentary on the Constitution of the United States, being a Collection of Essays written in Support of the Constitution agreed upon Sept. 17, 1787," edited by Henry Cabot Lodge. "A Guide to the Study of the History and Constitution of the United States," by W. W. Rupert, should be mentioned in this connection, as also, "Civil Government," being studies of the Federal Constitution, arranged for use in public schools, by R. E. Clement. Edward Eggleston wrote "The Household History of the United States and its People, for Young Americans," with an edition for schools, both of which are beautifully illustrated in a novel style; G. B. Hall, "Historical Sketches and Events in the Colonization of America"; and Moncure D. Conway supplied "Omitted Chapters of History disclosed in the Life and Papers of Edmund Randolph, Governor of Virginia." Vol. II of "Franklin in France," edited by Edward Everett Hale, was issued. Anna M. Juliland presented "Brief Views of United States History, for the Use of High-Schools and Academies," and Eben N. Horsford printed an "Address on the Discovery of America by Northmen," delivered in Faneuil Hall, Boston, Oct. 29, 1887, at the unveiling of the statue of Lief Erickson. "The United States of Yesterday and To-morrow," by William Barrows, and "Natural Resources of the United States," by J. H. Patton, treat of our country as a whole, while Burke A. Hinsdale, in "The Old Northwest," made a valuable contribution to sectional literature. Edmund Kirke (James R. Gilmore), supplemented "The Rear-Guard of the Revolution" and "John Sevier" with "The Advance-Guard of Western Civilization." In "The Commonwealth Series" we have: "Ohio, First Fruits of the Ordinance of 1787," by Rufus King; "Missouri, a Bone of Contention," by Lucien Carr; and "Indiana, a Redemption from Slavery," by J. P. Dunn. D. J. Ryan furnished also a "History of Ohio, with Biographical Sketches of her Governors and the Ordinance of 1787." From James Phelan we have a "History of Tennessee, the Making of a State"; and "The Loyal Mountaineers of East Tennessee" found a eulogist in Thomas W. Humes. "The Story of Ohio" was again told by Alexander Black in "The Story-of-the-States Series"; G. J. Varney wrote "A Brief History of Maine," and E. B. Sanford a "History of Connecticut." "The Pilgrim Republic" of John A. Goodwin furnished "An Historical Review of the Colony of New Plymouth" and "Ten Years

of Massachusetts, 1878-1888" were treated by Raymond L. Bridgman, who assigns reason for laws passed during that period, with their place in State records. "Pilgrims and Puritans" was "The Story of the Planting of Plymouth and Boston," told by N. Moore, for children. "Colonial Times on Buzzard's Bay" was from the pen of W. R. Bliss, and George E. Ellis wrote on "The Puritan Age and Rule." "Blue Jackets of '76," by Willis J. Abbot, and "The Boston Tea-Party," by H. O. Watson, dwell particularly on Revolutionary days, and Lieut. W. Digby's journal of 1776-'77 furnished the material for "The British Invasion from the North." Thomas W. Higginson, in "Travelers and Outlaws," narrated "Episodes in American History." "The Republic" of John R. Irelan, M. D., reached completion in its eighteenth volume, and Hubert H. Bancroft added four volumes to his "History of the Pacific States of North America," viz., Vol. VI of "History of Mexico," Vol. VI of "California, 1848-1859," "California Pastoral" and "California Inter-Pocula." "The Narrative and Critical History of America," edited by Justin Winsor, was continued in Vols. V and VI. Among books relating to the civil war, we have "A Short History of the War of Secession," by Rossiter Johnson, which presents all information necessary to the general reader in a concise yet comprehensive manner; "France and the Confederate Navy, an International Episode," by John Bigelow; and, from the French, Vol. IV of "The History of the Civil War in America," by the Comte de Paris, and "Four Years with the Army of the Potomac," by Gen. Regis de Trobriand. "Marching to Victory," by O. O. Coffin, covers the second period of the civil war. Joseph T. Wilson (colored), in "The Black Phalanx," gives a history of negro soldiers of the United States in the wars of 1775 and 1812, as well as in that of 1861-'65, which is as creditable to the author as its incidents are to the race. Walter Allen's "Governor Chamberlain's Administration in South Carolina" presents an interesting chapter of reconstruction in the Southern States. Alfred E. Lee again fought "The Battle of Gettysburg"; and "The Volunteer Soldier in America," by the late Gen. John A. Logan, was published. "The Sailor Boys of 1861," by James R. Soley, a "History of the Corn Exchange Regiment, 118th Penn. Vols.," and S. Millet Thompson's "Thirteenth Regiment of New Hampshire Volunteer Infantry," with "Charleston in the Rebellion," by A. O. Voris, were all of interest, as were also "Incidents of the Civil War," by Mrs. Mary B. Herrick, "My Story of the War," by Mrs. Mary A. Livermore, and "The Other Side of War," by Katherine P. Wormley, which latter gives an account of the origin and work of the United States Sanitary Commission. "A Century of Town Life, A History of Charlestown, Mass., 1775-1887," by J. F. Hunnewell,

"Salem Sketches," by H. R. Blaney, and "A History of Essex County, Mass.," by D. F. Hurd, are purely local. "The Story of the City of New York," by Charles B. Todd, opened a new series of "Great Cities of the Republic"; "A History of the New York Ministerium" was written by Rev. John Nicum; and "Representative Methodists," by R. R. Doherty. Prohibition literature added to its annals "A History of the Temperance Reform in Massachusetts," by G. Faber Clark, and "Mother Stewart's Memories of the Crusade." "The Early Days of Mormonism" were traced by J. H. Kennedy. Elbridge S. Brooks wrote "The Story of the American Sailor." Histories of foreign lands, written by Americans, include the "History of Prussia under Frederick the Great," by Prof. Herbert Tuttle, "The Causes of the French Revolution," by R. Heath Dabney, "An Introduction to the Study of the Middle Ages," by Ephraim Emerton; "A Sketch of the Germanic Constitution, from Early Times to the Dissolution of the Empire," by Samuel E. Turner; and "Charles the Great," by J. I. Mombert.

Biography.—In general biography, no work extant can compare favorably with the "Cyclopedia of American Biography" (six volumes, 8 vo), just completed. One of the most valuable contributions to individual American biography is "The Diary and Letters of Gouverneur Morris," edited by his granddaughter, Anne Carey Morris. "Men and Measures of Half a Century" were studied by Hugh McCulloch from a high vantage-ground of observation, though with some astonishing blunders of fact, and "The Life and Times of Young Sir Henry Vane," by Prof. James K. Hosmer, was a work of rare interest. Lydia Hoyt Farner wrote a "Life of Lafayette." The contributions of W. O. Stoddard to the "Lives of the Presidents" include "William Henry Harrison," "John Tyler," "James K. Polk," "Abraham Lincoln," and "Grover Cleveland." From Sarah K. Bolton we have two volumes of "Famous American Statesmen" and "Successful Women." John Frost published "The Presidents of the United States, from Washington to Cleveland"; Noah Brooks, "Abraham Lincoln, a Biography for Young People"; and Edward M. Shepard, "Martin Van Buren," in "The Statesmen Series," a carefully written and scholarly production. To strictly war biography belong the "Personal Memoirs of General Philip H. Sheridan"; "A Life of Matthew Fontaine Maury, U. S. N. and C. S. N.," by Diana Fontaine Maury Corbin; "John Brown," by H. Von Holst; and "The Autobiography of Private Dalzell." James P. Boyd wrote "Roscoe Conkling, the Distinguished American Statesman and Brilliant Advocate." "The Life of Thomas Hopkins Gallaudet," founder of deaf-mute instruction in America, as detailed by his son, E. M. Gallaudet, is of deep interest; and "A Biography of Henry Ward Beecher" was written by H. W. Beecher.

er, Rev. S. Scoville, and Mrs. Beecher. A valuable and interesting book is "The Life and Letters of George Perkins Marsh," the first volume of which by Caroline C. Marsh appeared. "Harvard Reminiscences," by Andrew P. Peabody, recalled fifty-six years of college life. "The Life, Journals, and Correspondence of the Rev. Manasseh Cutler," by his grandchildren, is an interesting record of a varied career in the early days of the nation; and "The Life of Amos Lawrence," by his son, is also closely connected with historical events. "John B. Finch, his Life and Work," by Frances E. Finch and Frank J. Sibley, and "The Autobiography and Memorials of Samuel Irenæus Prime," edited by his son, possess more than ordinary interest; and this same may also be said of "Incidents in a Busy Life," by the Rev. Asa Bullard, an autobiography. In the literary world we have a "Life of James Russell Lowell," by E. E. Brown, and "Delia Bacon," a biographical sketch, by Theodore Bacon, of the remarkable woman who devoted herself to a theory. Louisa May Alcott was the subject of two brief biographies, one a "Souvenir," by Miss Lurabel Harlow, and another which Edna H. Cheney does not proffer as a substitute for the full story that it is hoped will one day be given to the world. "Amos Bronson Alcott, his Character," formed the groundwork of a sermon by Cyrus A. Bartol. "The Memorial of Sarah Pugh" and "The Life of Dr. Anandabai Joshee," by Caroline Healey Dall, were tributes to the memory of two remarkable women. R. H. Clarke wrote "Lives of Deceased Bishops of the Catholic Church in the United States." "The Nun of Kenmare," an autobiography of Sister Mary Frances Clare Cusack, details at length her reasons for resigning the office conferred upon her by the Holy Father. "From Flag to Flag," by Eliza McHatton Ripley, told "A Woman's Adventures and Experiences in the South during the War, in Mexico, and in Cuba"; and "A Business Woman's Journal" was a sequel to "Twelve Years of My Life," by Mrs. B. Beaumont. "The Mapleson Memoirs, 1848-1888," possess amusing interest. "Henry Hobart Richardson and his Works," by Mrs. Schuyler Van Rensselaer, is the biography of the man characterized by Matthew Arnold as "the one architect of genius they had" in America. The electoral year called forth, among other publications, a "Life of Gen. Benjamin Harrison," by the author of "Ben Hur"; "Lives of Benjamin Harrison and Levi P. Morton," by Rev. Gilbert L. Harney; and "The President and his Cabinet," by C. B. Norton, "Indicating the Progress of the Government of the United States under the Administration of Grover Cleveland." "The Life of Olinton Bowen Fisk," the Prohibition candidate, was written by A. A. Hopkins. "A Soldier of Fortune," by J. W. McDonald, narrates the life and adventures of Gen. Henry R. Maciver. Herman Lieb wrote

"Emperor William I." Translations from the "Great French Writers Series" include "George Sand," by E. Caro; "Madame de Sévigné," by Gaston Boissier; "Montesquieu," by Albert Sorel; "Turgot," by Leon Say; and "Victor Cousin," by Jules Simon.

Poetry.—A *résumé* of the poetry of 1888 is somewhat discouraging. Neither "Heartsease and Rue," a collection of poems by James Russell Lowell, nor "Before the Ourfew," by Oliver Wendell Holmes, nor "November Boughs," by Walt Whitman, offers much that is new or particularly striking; while the sadness aroused by the significant titles of the two last-named volumes of aged authors finds little alleviation. There seem to be no younger ones aspiring to the foremost rank of poets, to whom crudity might be forgiven in consideration of genius, and the poverty of effort is but too obvious. Miss Amélie Rives, it is true, astonished the literary world with "Herod and Mariamne, a Tragedy," which called forth much comment and criticism not altogether favorable. The translation of the "Kalevala," the epic poem of Finland, by J. Martin Crawford, deserves high commendation, and is, moreover, the first full rendering into English that the poem has received. Another translation of special interest is that of the Norwegian dramatic trilogy, "Sigurd Slembe," by Bjørnstjerne Bjørnson, made by William Morton Payne. J. Leslie Garner rendered "The Strophes of Omar Khayyam," from the Persian; and F. H. Hedge and Mrs. A. L. Wister published a collection of "Metrical Translations and Poems," from the German. G. E. Vincent's "Eight Songs from Horace" is a handsome attempt at reproduction of the poet in the style of his day.

To return to American poetry, we have "Forest Echoes," by G. E. Cole; and "The Witch in the Glass," which Mrs. Piatt has added to her former volumes of tender verse. "Changing Moods in Verse and Rhyme" is by W. Hunter Birkhead, and "Along the Shore" is Rose Hawthorne Lathrop's. A collection of the "Poems of Frank Forrester" (Henry W. Herbert), a novelist and writer of sporting sketches thirty years ago, was made for the first time and handsomely illustrated. Clinton Scollard wrote "Old and New World Lyrics," and Madison J. Cawein, "The Triumph of Music and other Lyrics." The "Poems" of Irwin Russell, mostly in negro dialect, were collected into a memorial volume from five years of "Century," Bric-a-Brac, and A. G. Gordon and Thomas Nelson Page were joint authors of "Befo' de War." "Some Dainty Poems," by Waldo Messaros; "Beyond the Shadow," by Stuart Sterne; "Joy, and other Poems," by Danske Dandridge; "Idylls of Israel," by D. J. Donahue; and "A Little Brother of the Rich," by E. S. Martin, offer no especial features for criticism. The same is true of "Madeleine," by D. O. Brewer; "Maurine," by Mrs. E. Wheeler Wilcox; "Tan-

cred's Daughter," by O. G. Blanden; "The Siege of Newport," by T. C. Amory; "Immortalles," by Cora M. A. Davis; and "Wanderers," by W. Winters. E. L. M. Bristol wrote "A Story of the Sands," and John Vance Cheney, "Wood-Blooms." "Judith," an English epic fragment, was edited with a translation and glossary by Prof. A. S. Cook, and "Favorite Folk-Ballads" was the product of several authors. "In the Name of the King" is the title of semi-religious poems by G. Klinge, and "The Inn of Rest," of later poems by May Riley Smith. Tracy Robinson published "The Song of the Palm and other Poems, mostly Tropical," and "The Poems of Emma Lazarus" were issued in two volumes. William D. Howells's lyrical farce, "A Sea Change, or Love's Stowaway," was welcomed by his admirers, and Harry L. Koopman wrote "Woman's Will" and "Orestes." The anthologies include "After Noontide," by Margaret E. White; "Ballads and Rondeaux," by Gleeson White; "Sundry Rhymes from the Days of our Grandmothers," by George W. Edwards; and "The Book of Latter-Day Ballads, 1858-1888," by Henry F. Randolph. From Mr. Randolph we have also "Fifty Years of English Song, Selections from the Poets of the Reign of Victoria," in four volumes.

Criticism and General Literature.—Of criticism proper there was but little, "Studies in Criticism," by Florence Trail, and "A Critical Exposition of the New Essays of Leibnitz," by J. Dewey, being perhaps the only professedly critical books. The critical element enters largely into others included under general literature, but discrimination is difficult. Prof. Henry W. Parker wrote "The Spirit of Beauty," and E. D. Walker "Reincarnation, a Study of Forgotten Truth," which presents evidence in verse and prose corroborative of the doctrine of pre-existence of souls. "Social Life and Literature Fifty Years Ago" is a spicy anonymous reply to the critical tone indulged in by prominent authors of the modern school toward that period, satirical and brief. "Books and Men" was a series of essays by Agnes Replier, and "Poetry, Comedy, and Duty" were handled separately and relatively by C. C. Everett. "Books that have helped me," as discoursed upon by several authors in "The Forum," were collected into a volume. "Martin Luther and other Essays" is by F. H. Hedge, and "Practical Occultism" by J. J. Morse. "Master Virgil, the Author of the *Æneid*, as he seemed in the Middle Ages," is a novel study by J. S. Tunison, and "Irish Wonders," by D. R. McAnally, a popular and entertaining work on the superstitions of that race. Palmer Cox also treated of "Queer People, such as Goblins, Giants, Merry-men, etc." "Some Thoughts on Life's Battle," by Mark Levy, and "Your Forces, and how to use them," by Prentice Mulford, may be classed together, and supplemented by "Great Thoughts for Little Thinkers," by Lucia T. Ames. "The Great

Cryptogram" of Ignatius Donnelly by no means diminished his reputation as an enthusiast of sensational novelty, if it did not materially establish his theory as to the authorship of the plays of Shakespeare. Other Shakespearean studies include "The Human Mystery in Hamlet," by Martin W. Cooke; "William Shakespeare portrayed by himself," by Robert Watters; "Shakespeare and the Bible," by G. Q. Colton; and "Shakespeare *versus* Ingersoll," by J. G. Hall. G. Theodore Dippold devoted himself to a solution of Richard Wagner's poem, "The Ring of the Nibelung," and O. Morris to "The Aryan Race, its Origin and Achievements." Brander Matthews wrote "Pen and Ink," William S. Walsh "Paradoxes of a Philistine," and Harold Van Sant "Half-Holidays," a bizarre collection of "Elysian Dreams and Sober Realities." Eugene M. Camp, in "Journalists born or made," brought forward the suggestion of adding journalism to the curriculum of our colleges; and "Pen and Powder," by Franc B. Wilkie, detailed the difficulties of field correspondence during the civil war. "Andersonville Violets," by Herbert W. Collingwood, deals impartially with one of the saddest pages of war history. H. M. Sylvester wrote "Homestead Highways," Margaret Sidney "Old Concord," and "Negro Myths from the Georgia Coast" were told in the vernacular by C. C. Jones. "Outlooks on Society, Literature, and Politics" is the title of a volume of previously uncollected essays by Edwin P. Whipple. "Fifteenth-Century Bibles" was the subject of a book by Wendell Prime. B. C. Burt wrote "A Brief History of Greek Philosophy," and "The Poetry of the Future" was handled by James W. Davidson. Austin Bierbower wrote "The Virtues, and their Reasons," and M. J. Barnett "Justice, a Healing Power." "Of Thoughts about Women, and other things," was the title of essays by S. R. Reed. "The Mind of the Child" was translated from the German of Prof. W. Preyer by H. B. Brown; and J. H. W. Stuckenberg wrote an "Introduction to the Study of Philosophy. The second volume of "American Literature, 1607-1885," by Charles F. Richardson, is devoted to "American Poetry and Fiction." Prof. Herbert B. Adams wrote on "The Study of American History in American Colleges and Universities." Abbie H. Fairfield culled "Flowers and Fruit from the Writings of Harriet Beecher Stowe." Rose Porter wrote "Rest Awhile," and the Rev. F. S. Child, "Be strong to hope." "Chapters from Jane Austen" by Oscar Fay Adams, and "Readings from the Waverley Novels," by Alfred F. Blaisdell, belong to the "Cambridge Series of English Classics," and "First Steps with American and British Authors" was also from the pen of the latter writer. Edwin Ginn made "Selections from Ruskin on Reading and other Subjects," and "Bits of Burnished Gold" was a compilation by Rose Porter in four volumes. "Letters,

Poems, and Selected Prose Writings of David Gray" were edited by J. N. Larned, and "British Letters illustrative of Character and Social Life" by E. T. Mason. "Partial Portraits," by Henry James, is one of the most delightful and characteristic of that author's productions. "The Young Idea, or Common-School Culture" is from the pen of Caroline B. Le Row. "Word English" was a proposition to secure "The Universal Language, based upon English, as Volapük on German," made by Alexander M. Bell, and Elias Molee made "A Plea for an American Language or Germanic English." "A Short Grammar of Volapük" was compiled by J. Hanno Deiler. "Success in Society," by Lydia E. White, "Manners," by A Woman of Society, and "Good Form in England," by An American Resident in the United Kingdom, were the principal books on etiquette.

Political, Social, and Moral Science.—During the excitement of a presidential year, problems of government and social life were discussed naturally in a concrete way, and with more or less partisan feeling, but attempts were also made at higher conceptions. James Russell Lowell published "Political Essays"; Theodore Roosevelt, "Essays on Practical Politics"; Edward Payson, "The Law of Equivalents, in its Relation to Political and Social Ethics"; and W. P. Atkinson, "The Study of Politics, an Introductory Lecture. "Problems of American Civilization" were discussed by Presidents McCosh and Gates, Bishop Cox, and others. "Selections illustrating Economic History since the Seven-Years' War" is by Benjamin Reed; and "Industrial Liberty," by John M. Bonham, investigated the tendencies of modern civilization in a broad and hopeful spirit. Edwin Cannan wrote "An Elementary Political Economy," and Richard T. Ely and John H. Finley "Taxation in American States and Cities," and Horace White translated from the Italian of Dr. Luigi Cossa "Taxation, its Principles and Methods." "How they lived in Hampton" was "A Study of Practical Christianity applied in the Manufacture of Woolens" by Edward Everett Hale. "Large Fortunes, or Christianity and Labor Problems," were handled by C. Richardson, and John Gibbons wrote "Tenure and Toil." "Property in Land," by Henry Winn, was an argument against the theories of Herbert Spencer and Henry George. "The Christian Unity of Capital and Labor," by H. W. Cadmon, gained the \$1,000 prize of the John O. Green income fund. Rabbi H. Berkowitz published "Judaism on the Social Question," and Frank G. Ruffin "The Negro as a Political and Social Factor." Alfred Shaw made a collection of papers by American economists on "The National Revenues," J. B. Clark wrote on "Capital and its Earnings," Prof. P. P. Hotchkiss on "Banks and Banking, 1171-1888," and a series of articles by different authors in the "Johns Hopkins University Series" were combined in-

to "A History of Co-operation in the United States." "Ultimate Finance" purported to be "A True Theory of Co-operation," by W. Nelson Black, and "The Stability of Prices" was discussed by Simon N. Patten. "True or False Finance the Issue of 1888" was anonymous, and from J. B. Clark and F. H. Giddings we have "The Modern Distributive Process." Of books relating to the question of the tariff, there was apparently no end. R. W. Thompson was author of "A History of Protective Tariff Laws," and Prof. Taussig, of Harvard University, of "The Tariff History of the United States." "Protection Echoes from the Capitol" were edited by Thomas H. McKee, Assistant Librarian of the United States Senate, assisted by W. W. Curry; and "Principles of the Economic Philosophy of Society, Government, and Industry" were laid down by Van Buren Denslow, with a leaning toward protective doctrines in his treatment of the last subject. Edward Everett Hale published "Tom Torey's Tariff Talks," Richard T. Ely "Problems of the Day," and Horace Castle "The Doctrine of Protection to Domestic Industries examined." "Is Protection a Benefit?" was asked by E. Taylor; "The Relation of the Tariff to Wages" was the work of David A. Wells, and "What shall we do with it?" (meaning the surplus), consisted of protective articles from various sources. "Protection *versus* Free Trade" was by Henry M. Hoyt, "Twenty-Two Years of Protection" by Henry V. Poor, "The Tariff and its Evils" by J. H. Allen, and "Tariff Chats" by H. J. Philpot. "Friendly Letters to American Farmers and others" were edited by J. S. Moore, and R. R. Bowker annotated "The President's Message, 1887." "The Civil-Service Law" was treated by W. Harrison Clarke. A "Citizen's Atlas of American Politics, 1789-1888," was prepared by F. W. Hewes, and a "Handbook of Politics for 1888" by Edward McPherson. E. Brown and A. Strauss furnished a "Dictionary of American Politics," and campaign text-books of both the Democratic and Republican parties of course appeared. John D. Long edited "The Republican Party," William L. Wilson "The National Democratic Party," and "Letters to a King," by Albion W. Tourgee, gave advice to young men about to cast their first vote. "The Ethics of Marriage" were treated by H. S. Pomeroy; "Inebriety, its Causes, its Results, its Remedy," by F. D. Clum, M. D.; and H. W. Blair wrote "The Temperance Movement." Henry Van Dyke wrote on "The National Sin of Literary Piracy," and Brander Matthews published "Cheap Books and Good Books." "The Third Annual Report of the Commissioner of Labor," on the subject of strikes and lockouts, was issued, and F. Howard Wines was responsible for "American Prisons, in the Tenth United States Census."

Theology.—Religious books, as usual, were numerous. The Rev. James McCosh published

a volume of "Gospel Sermons" and "The Religious Aspect of Evolution," a subject that was also treated by Prof. Joseph Le Conte in "Evolution and its Relation to Religious Thought." "The Credentials of Science the Warrant of Faith," was from the pen of Josiah P. Cooke, and C. M. Stockwell wrote on "The Evolution of Immortality." "The Field-Ingerson Discussion, Faith or Agnosticism," carried on in a series of articles in the "North American Review," was printed in pamphlet form. "Philosophy and Religion" was a rather voluminous but exceedingly earnest work, by Augustus H. Strong, D. D., and "Harvard Vespers" was a collection of addresses to students, by F. G. Peabody, P. Brooks, E. E. Hale, and others. "The Heart of the Creeds," by Arthur Wentworth Eaton, was a clear, concise exposition of "Historical Religion in the Light of Modern Thought," and "What is the Bible?" by G. T. Ladd, D. D., made an "Inquiry into the Origin and Nature of the Old and New Testaments in the Light of Modern Biblical Study." "Living Religions" was a presentation in popular form of "The Great Religions of the East," with the truths underlying each, and "Biblical Antiquities" a handbook for students of the Bible. David J. Burrell, D. D., in ten essays on "The Religions of the World," gave an outline of the great religious systems, and O. S. Stearns wrote an "Introduction to the Books of the Old Testament." "Some Chapters on Judaism and the Science of Religion" were furnished by Rabbi L. Grossman, and "Dissolving Views in the History of Judaism" by Rabbi Solomon Schindler. "Religious Reconstruction" was considered by M. J. Savage, and "Christian Science, its Truths and Errors," by the Rev. H. M. Tenney. "Co-operation in Christian Work" was the collected experience of Bishop Harris and Rev. Drs. Storrs, Gladden, and others. "The Best Method of Working a Parish" was set forth by the Rev. J. F. Spalding, Missionary Bishop of Colorado, and Rev. Charles F. Thwing discussed "The Working Church." Vol. VI of "The History of the Christian Church," by Philip Schaff, D. D., was issued, covering the period of the Reformation, and from the same author we have "Church and State in the United States." His "Select Library of the Nicene and Post-Nicene Fathers" was also increased by four volumes (vii-x). "The History of the Inquisition of the Middle Ages," by H. C. Lea, was completed in its second and third volumes, and from the Rev. George Park Fisher we have a "History of the Christian Church," which has received high commendation for its learning and strict impartiality. From the same source also appeared a "Manual of Christian Evidences." R. P. Kerr wrote "The People's History of Presbyterianism in all Ages," and the Rev. A. H. Lewis "A Critical History of Sunday Legislation." G. E. Ackerman, D. D., was the author of "Man a Revelation of God," W. A. Snively of "Testi-

monies to the Supernatural" and "Parish Lectures on the Prayer-book," O. Quick of "Mysticism unmasked, or Ministration of the Holy Spirit," and "Long Ago, as interpreted by the XIX Century," was by E. F. Burr, D. D. "The Bible Doctrine of Inspiration" was explained and vindicated by Basil Manly, D. D., and A. T. Pierson edited "The Inspired Word," a series of papers and addresses delivered at the Bible Inspiration Conference in Philadelphia, 1887. John Williams, Bishop of Connecticut, published "Studies in the Book of Acts," and from Lyman Abbott, D. D., we have a work on "The Epistle of Paul the Apostle to the Romans." "The Talmud, what it is, and what it knows about Jesus," was told by the Rev. Bernhard Pick. Hiram Orcutt was a layman "Among the Theologians." The Baldwin Lectures of 1887, delivered by the Rev. William Clark, are entitled "Witnesses to Christ." The Bishop-Paddock Lectures for 1888, on "The World and the Kingdom," were from Bishop Hugh Miller Thompson. The Rev. T. B. Neely wrote on "The Evolution of Episcopacy and Organic Methodism," Bishop W. L. Harris on "The Relations of Episcopacy to the General Conference," and C. W. Bennett on "Christian Archaeology." "The Bible a Workingman's Book," is from the pen of Francis N. Zabriskie. The Rev. Daniel Dorchester wrote "Christianity in the United States, from the First Settlement down to the Present Time," and also "Romanism *versus* the Public School System," and H. S. Burrage "Baptist Hymn-Writers and their Hymns." From James J. Treacy we have "Conquests of our Holy Faith," from the Rev. I. T. Hecker "The Church and the Age," and from J. Waterworth a translation of "The Canons and Decrees of the Sacred and Œcumenical Council of Trent under the Sovereign Pontiffs Paul III, Julius III, and Pius IV. Abraham Coles made "A New Rendering of the Hebrew Psalms into English Verse." Wolcott Oalkins wrote "Keystones of Faith." The "Sermons on the International Sunday-School Lessons" were published for 1888 and 1889, and other sermons include: "The Heath in the Wilderness, or Sermons to the People," of R. Newton, D. D., posthumously published; "Eternal Atonement," nineteen selected sermons of Dr. Roswell D. Hitchcock; "Spirit and Life Thoughts for To-Day," by Dr. Amory H. Bradford; and "The Transfiguration of Life," by Dr. E. S. Atwood. "The Seven Deadly Sins," inveighed against by the Rev. Morgan Dix in his Lenten sermons in Trinity Church, New York, form the subject of a volume, and from the Rev. J. W. Lowber we have "The Struggles and Triumphs of the Truth" and "The Devil in Modern Society." The Rev. W. Wright published eight lectures on "The Realities of Heaven"; Jermain G. Porter, Director of the Cincinnati Observatory, "Our Celestial Home"; J. S. Barlow, "Endless Being"; C. F. Dole, "Jesus and the Men about Him"; and James H. Potts,

"Faith made easy." "Christianity in the Daily Conduct of Life," was anonymous. Mrs. T. S. Childs wrote "The Altar of Earth," the Rev. E. P. Humphrey "Sacred History from the Creation to the Giving of the Law," the Rev. A. McCullagh "The Peerless Prophet," and the Rev. J. W. Jones "Christ in the Camp." "Atonement and Law" were reviewed by S. G. Burney, and "Endless Opportunity for All Souls" was advanced as a creed by the Rev. James Gorton. For children we have "A Father's Blessing and other Sermons," by the Rev. W. W. Newton, and the "Story of Moses," by Mrs. M. A. Hallock. "Missionary Enterprises in the South Sea Islands," by J. Williams, is unusually interesting.

Jurisprudence.—The yearly average of State and Federal Reports has been placed at one hundred volumes. In 1888 Myer's "Federal Decisions" reached Vol. XXVIII, and "U. S. Digests," new series, Vol. XVIII. A series of "American State Reports" was initiated by A. C. Freeman, and two volumes were published, beginning at the period where "American Reports" were discontinued, and Vol. I of the "American Digest (Annual)" was issued by the West Publishing Company, of St. Paul, Minn. Vol. I of "Interstate Commerce Reports" also appeared, and a "Digest of Decisions of the Department of the Interior and General Land-Office" was made by W. B. Matthews and W. O. Conway. Joel P. Bishop wrote on "Common Law and Codification, or the Common Law a System of Reasoning"; G. W. Field on "The Legal Relations of Infants, Parent and Child, and Guardian and Ward"; and M. M. Bigelow published "A Treatise on the Law of Fraud on its Civil Side." "A Practical Treatise on Criminal Law and Procedure in Criminal Cases" was from the pen of J. H. Gillett; and Vol. III of "Essentials of the Law," by Marshall D. Ewell, contained "Essential Parts of Pollock on Torts, Williams on Real Property, and Best on Evidence." F. Sackett prepared "Instructions and Requests for Instructions in Jury Trials," and Edwin Baylies a "Supplement to Wait's Actions and Defenses." Leonard A. Jones was an authority in "A Treatise on the Law of Liens," Joseph F. Randolph wrote "A Treatise on the Law of Commercial Paper" (Vol. III), and G. A. Finkelnburg "The Negotiability of Promissory Notes." "Commentaries on the Interpretation of Statutes, Founded on the Treatise of Sir P. B. Maxwell," were written by G. A. Endlich, and "A Brief Comparison of the most Important Statutes of the Codes of Virginia, 1878-1887," was made by C. W. Sams. F. H. Mackey set forth "The Practice and Procedure of the Supreme Court of the District of Columbia," and Morris Cooper "The Law and Practice of Referees and References under the Code of Civil Procedure and Statutes of New York." Corporations were extensively treated. T. W. Waterman published "A Treatise on the Law of

Corporations other than Municipal," F. S. Wait "A Practical Treatise on Insolvent Corporations," and H. Binmore "A Digest of the American Corporation Cases." "American and English Corporation Cases," by W. M. McKinney, reached Vol. XX, and "American and English Railroad Cases," by the same author, Vol. XXXIII. A. S. Bolles wrote on "The National Bank Act and its Judicial Meaning," and Nathan Newmark on "The Laws Relating to Bank Deposits." "A Treatise on the Law of Benefit Societies, and, Incidentally, of Life Insurance," by F. H. Bacon, "The Law of Voluntary Societies and Mutual Benefit Insurance," by W. C. Niblack, and "A Digest of the Law of Insurance," by J. R. Berryman, practically exhaust this subject. J. Lewis wrote "A Treatise on the Law of Eminent Domain in the United States," and W. H. Manier "The Law of Eminent Domain and of Railroads and Warehouses." "A Selection of Cases in the Law of Quasi-Contracts" was begun by W. Albert Keener, and the first volume completed. Clifford Boese wrote "A Hand-book on Naturalization," and B. K. and W. F. Elliott were jointly engaged on "The Work of the Advocate." "The Law in Pennsylvania of Voluntary Assignment in Trust for the Benefit of Creditors" was handled by W. Trickett, "The Law of Partnership," by Clement Bates, and J. C. Fowler published a "Supplement to the Revised Statutes of New York." M. H. Throop brought out "The Code of Civil Procedure of New York" and "The New York Justices' Manual," and G. O. Clemens "Powers and Duties of Constables, a Constable's Guide for use in the State of Kansas." "The Fish and Game Laws of the State of New York," also "The Laws for the Preservation of the Forests," were arranged by G. E. Kent, as were "The Excise Laws of New York in Chronological Order," by G. B. Oolby. "Commissioners in Chancery in Virginia" was by A. Meade Smith, and "A Chromatic Chart and Manual of Parliamentary Law" was prepared by J. Ross Lee. "General Assignments for Benefit of Creditors" was a "Complete Digest of Decisions, the Rules and Practice and Statutes of New York," from J. S. Derby, and E. S. More collected "The Laws of New York relating to Villages." T. B. Hall wrote "A Treatise on Patent Estate," W. H. Bailey "The Conflict of Judicial Decisions," and I. F. Redfield "The Law of Railways." "Removal of Causes from the State to Federal Courts" was treated by Emory Speer. "A Treatise on the Law of Building and Buildings," by A. P. Lloyd, supplies a want long felt. "The American and English Encyclopædia of Law," by J. H. Merrill, reached its sixth volume, and "Hubbell's Legal Directory" was issued for the year beginning Oct. 1, 1887.

Medicine and Surgery.—While no leading book appeared during the year in either of the departments under this head, most of the work

done was creditable. Eustace Smith wrote on "The Wasting Diseases of Women and Children"; A. J. C. Skene on "Diseases of Women"; J. V. Shoemaker, on the "Diseases of the Skin"; and H. R. Crocker, "Diseases of the Skin." From Allan McLane Hamilton we have "The Modern Treatment of Headaches"; from Thomas J. Mayo, "Theine in the Treatment of Neuralgia"; from J. L. Corning, "A Treatise on Hysteria and Epilepsy"; and from Mary Putnam Jacobi, "Essays on Hysteria, Brain Tumor, etc." O. A. Wall published "The Prescription Therapeutically, Pharmacaceutically, and Grammatically Considered"; S. Weir Mitchell, "Doctor and Patient"; and D. W. Buxton, "Anæsthetics, their Uses and Administration." Vincent D. Harris handled "Diseases of the Chest"; Norman Kerr, "Inebriety, its Etiology, Pathology, Treatment, and Jurisprudence"; and T. C. Van Nuys made "A Chemical Analysis of Healthy and Diseased Urine." Vol. V of the "Cyclopædia of Obstetrics and Gynecology" appeared. A. H. N. Lewers wrote "A Practical Text-Book of the Diseases of Women," and Vol. XI of "A System of Gynecology by American Authors," edited by M. D. Mann, was issued. Nathan Allen wrote on "Physical Development," J. H. Salisbury on "The Relation of Alimentation and Disease," and W. H. Welch on "The General Pathology of Fever." "Ptoimaines and Leucomaines, or the Putrefactive and Physiological Alkaloids" was by V. C. Vaughan and F. G. Noyes; "Clinical Lectures on Albuminuria," by T. G. Stewart; and an "Atlas of Venereal and Skin Diseases" was prepared by Prince A. Morrow. From Austin Flint we have "A Text-Book of Human Physiology"; from William Sterling, "Outlines of Practical Physiology"; and from J. F. Payne, "A Manual of General Pathology," designed as an introduction to the practice of medicine. L. A. Stimon published "A Treatise on Dislocations," and to surgery belong: "The Rules of Aseptic and Antiseptic Surgery," by A. G. Gerster; "Rectal and Anal Surgery," by Edmund and E. W. Andrews; "Surgery of the Abdomen," by J. E. Mears; "Abdominal Surgery," by H. C. Wyman; and "Ophthalmic Surgery," by R. B. Carter and W. A. Frost. "The Surgical Diseases of the Genito-Urinary Organs" was a revision by E. L. Keyes of the text-book by Van Buren and Keyes. R. B. Bontecon considered "What Class of Gun-shot Wounds justify Excision or Resection in Modern Warfare," and O. K. Newell, "The Best Surgical Dressing; how to prepare it, etc." "An Illustrated Encyclopædic Medical Dictionary," by Frank P. Foster; F. R. Campbell's "Language of Medicine"; and A. L. Ranney's "Applied Anatomy," were useful contributions, as were also "An Annual of the Universal Medical Science," edited by Charles E. Sajons, and a "Physician's Interpreter in Four Languages," the work of F. A. Davis. George A. Evans issued a "Hand-book of Historical and

Geographical Phthisiology, with Special Reference to the Distribution of Consumption in the United States." Valuable translations from the French were: "Animal Magnetism," by Alfred Binet and Charles Féré; "Clinical Lectures on Certain Diseases of the Nervous System," by J. M. Charcot; and, from the German, we have "The Pathology and Treatment of Displacements of the Uterus," by B. S. Schultze. "The Dispensary of the United States of America" (sixteenth edition), by George B. Wood and Franklin Bache, was rearranged, thoroughly revised, and largely rewritten by H. O. Wood, J. P. Remington, and S. P. Sadler.

General Science.—Works of this class were mostly popular in form. From Gen. A. W. Greely, Chief Signal Officer, U. S. A., we have "American Weather, a Popular Exposition of its Phenomena, with Numerous Illustrations and Charts," and from Mrs. Sophie B. Herrick, "The Earth in Past Ages," an elementary treatise. "Three Cruises of the United States Coast and Geodetic Survey Steamer Blake," in two volumes, by Alexander Agassiz, was a "Contribution to American Thalassography," being a study of deep-sea formations. T. K. Abbot published "An Elementary Theory of the Tides." "Astronomy with an Opera-Glass," by Garrett P. Serviss, was intended as a popular introduction to the science. "Great-Circle Sailing" and "Old and New Astronomy," by R. A. Proctor, were published; and from J. Haywood we have "The Earth, its Chief Motions and the Tangent Index"; and from Edward S. Holden, Director of the Lick Observatory, a "Handbook" of the same. "The New Agriculture," by A. N. Cole, sets forth an original theory of subterranean irrigation; and "Trees and Tree-Planting," by Gen. James S. Brisbin, was a vigorous and passionate plea for protection of American forests. "The Animal Life of Our Sea-Shore" was studied by Angelo Heilprin, with special reference to the New Jersey coast. The third series of "Butterflies of North America," by W. H. Edwards, appeared; and A. S. Packard, M. D., wrote an "Entomology for Beginners," which by intent should prove of use to fruit-growers and gardeners also. "A Frozen Dragon, and other Tales," was in reality a story-book of natural history by O. F. Holder, who published also "A Strange Company." "In Nesting-Time," was from Olive Thorne Miller, and "Three Kingdoms," a hand-book of the Agassiz Association, by H. H. Ballard. Two volumes of "Queer People," with "Paws and Claws," and "Wings and Stings," by Palmer Cox, author of "The Brownies"; "Little People and their Homes in Meadows, Woods, and Waters," by Stella Louise Hook; and "The Stories Mother Nature told her Children," by Jane Andrews, were books for children. R. P. Williams wrote a "Laboratory Manual of General Chemistry," and Annie Chambers Ketchum a "Botany for Academies and Colleges." Linus Faunce was the author

of "Descriptive Geometry," W. Wells of "The Essentials of Trigonometry," and C. W. McCord furnished "Practical Hints for Draughtsmen." "Numbers Symbolized" was an elementary algebra by M. D. Sensenig. Hand-books of practical application of scientific principles were unusually numerous. From Philip Atkinson we have "The Elements of Electric Lighting"; from Emory Edwards, "The American Steam-Engineer"; from E. D. Peters, "American Methods of Copper-Smelting"; and from A. W. Wright, "American Street Railways, their Construction, Equipment, and Maintenance." James H. Monckton wrote a work on "Stair Building," and W. F. M. Goss "A Course of Study and Practice of Bench-Work in Wood." "All Matter tends to Rotation," was a theory advanced by L. LeO. Hamilton.

Fine Arts.—The first volume of a "Cyclopædia of Music and Musicians," by John Denison Champlin, Jr., was published. "The Standard Symphonies" were added by George P. Upton to his former series of "Standard Operas" and "Oratorios," and James E. Matthew wrote "A Popular History of Music, Musical Instruments, Ballet, and Opera." G. H. Wilson edited "The Musical Year-Book of the United States"; and "Prestol from the Singing School to the May Musical Festival," was a short sketch of musical development in Ohio, by F. E. Tunison. Vol. II of "New Musical Miscellanies," by W. S. B. Matthews, told "How to understand Music." J. C. Fillmore was the author of "Lessons in Musical History," and L. O. Emerson of "Song Harmony." "How to Judge of a Picture" was told by J. C. Van Dyke, and W. H. Goodyear wrote a "History of Art," intended for the school-room. "Living New-England Artists," by Frank T. Robinson, contained biographical sketches with reproductions of original drawings and paintings of each, and Mrs. C. H. Stranahan compiled a valuable "History of French Painting, from its Earliest to its Latest Practice." Exquisite specimens of illustration were "Days Serene," by Margaret McDonald Pullman; "Favorite Birds," by Fidelia Bridges; "The Cathedrals of England and Wales," by Charles Whibley; and "The Home of Shakespeare," by Louisa K. Harlow, in water-color sketches. From Alice M. Baumgras we have "By Lawn and Lea." "Baby's Lullaby-Book of Mother-Songs," was the work of several artists. "The Story of Mary the Mother," compiled by Rose Porter from various sources, was illustrated by photogravures from celebrated paintings, as was "The Boyhood of Christ," by Gen. Lew Wallace. Reproductions by the photogravure process include: "Recent Italian Art," "Rembrandt's Etchings," "European Etchings," "Madonnas by Old Masters," "Important New Etchings by American Artists," "Gems of French Art," and "The Goupil Gallery," with texts illustrative and descriptive, by Ripley Hitchcock, Walter Rowlands, and "Recent Ideals of Amer-

ican Art," by G. W. Sheldon. "A Portfolio of Players," was a memorial of the Augustin Daly comic troupe, and "The Napoleon Gallery" was a collection of one hundred outline proofs from foreign paintings. "Old Songs, with Drawings," by Edwin A. Abbey and Alfred Parsons, formed a dainty volume. "The New York Mirror Annual and Directory of the Theatrical Profession for 1898," was edited by H. G. Fiske; "The Dramatic Year, 1887-'88," by E. Fuller; and N. Helmer published "The Actor's Make-up Book." N. Earle composed "The Gipsy's Festival, a Musical Entertainment for Young People"; and "How to shade Embroidered Flowers and Leaves," as "Studies in Needlework," by Ellen G. Smith, will perhaps be admitted to this category. The production of "Souvenirs" and booklets increased largely during the year.

Voyages and Travels.—These were extensive. William D. Howells and T. Sergeant Perry compiled a "Library of Universal Adventure by Sea and Land"; and beginning with the cradle of humanity, Percival Lowell, author of "Choson," has given us a study of Japan in "The Soul of the Far East." William E. Griffis issued a new edition of "Corea," with a chapter on Corea in 1888. The Rev. V. C. Hart described "Western China," and Simon Adler Stern made "Jottings of Travel in China and Japan." Mrs. Helen H. Holcomb wrote "Bits about India," and O. W. Wight told of "People and Countries visited in a Winding Journey around the World." Vol. II of "Around the World on a Bicycle," by T. Stephens, covered the distance "From Teheran to Yokohama." From Mrs. Susan E. Wallace we have "The Repose in Egypt," as well as "The Land of the Pueblos." The Rev. H. F. Fairbanks made "A Visit to Europe and the Holy Land," which he viewed with the eyes of a Catholic clergyman. The Rev. H. M. Field added "Old Spain and New Spain" and "Gibraltar" to his numerous delightful studies of other lands, and E. P. Thwing, M. D., wrote on "Outdoor Life in Europe." Curtis Guild produced a bright book on "Britons and Muscovites," Edwin C. Kimball wrote "Midnight Sunbeams," of course seen in the land of the Norsemen, and from Mr. and Mrs. Joseph Pennell we have "Our Sentimental Journey through France and Italy," performed on wheels. The enterprise of young ladies of the present day is shown by "Yankee Girls in Zululand," by Louise Vescelius Sheldon; "Two Girls Abroad," by Nellie M. Carter; "Three Vassar Girls in France," by Elizabeth W. Champney; and "Great Grandmother's Girls in New Mexico," by the same author. "Mexico" has been written about as "Picturesque, Political, and Progressive" by Mary Elizabeth Blake and Margaret F. Sullivan, and as "Our Neighbor" by J. H. Rice, while Fanny Chambers Gooch brings us "Face to Face with the Mexicans." F. A. Ober chronicles "The Knook-about Club in the Antilles," and William Elroy Cur-

tis, late United States Commissioner to the Governments of Central and South America, describes "The Capitals of Spanish America." W. H. Hurlbert presents his view of "Ireland under Coercion," G. Pellew treats of the same country in "Castle and Cabin," and Mrs. J. Ellen Foster in "The Crime against Ireland" found home rule the only remedy. W. F. Warren traversed Holland "In the Footsteps of Arminius." From Charles Nordhoff we have "Peninsular California," and Walter Lindley and J. P. Widney give us "The California of the South." "Sketches of the Old Santa Barbara Missions" comes from K. S. Torrey, "The Florida of To-Day" from James Wood Davidson, and "South Dakota" from Frank S. Child. Charles Dudley Warner, in "On Horseback," describes a tour of three States, and W. H. H. Murray, in "Daylight Land," furnishes a novel and interesting account of a journey from Montreal to Vancouver City. A. R. Calhoun wrote "Lost in the Cañon"; Edwards Roberts, "Shoshone and other Western Wonders"; Mrs. Elizabeth B. Ouster, "Tenting on the Plains"; and Buffalo Bill (W. F. Cody) told the story of "The Wild West" in his own way. "Ranch Life and the Hunting-Trail" were described by Theodore Roosevelt, "Historic Waterways" by Reuben Gold Thwaites, and "Sketches from the Saddle" were made by John Codman, a septuagenarian. "A Summer Cruise on the Coast of New England," by Robert Carter, was republished; and Wallace P. Stanley tells the story of "Our Week Afloat." "Up the North Branch" was by Charles A. J. Farrar, and "Tenting at Stony Beach" by Maria L. Pool. "A Winter Picnic" by J. and E. Dickinson and S. E. Dowd took place in the Bahama Islands, and James H. Stark prepared "A Bermuda Guide" and "Antique Views of ye Town of Boston." The "Narrative of a Journey down the Ohio and Mississippi in 1789-'90," by Maj. S. S. Forman, was edited with a memoir and illustrative notes by L. C. Draper. "Wrecked on Labrador" was a boy's book, by W. A. Stearns. From Thomas W. Knox we have "The Boy Travelers in Australasia," and from Hezekiah Butterworth, "Zigzag Journeys in the Antipodes."

Educational.—The works of the year on the art of teaching include "Contributions to American Educational History," by Herbert B. Adams; "Industrial Education in the South," by the Rev. A. D. Mayo; and "Aims and Methods of Classical Study," by W. G. Hale. Part I of "Technical Education in Europe," by J. Schoenhof, treated of "Industrial Education in France," and W. H. Carpenter translated from the German of Otto Solomon "The Slöjd in the Service of the School." "Methods and Aids in Geography" was from the pen of Charles F. King, and Clara Conklin wrote "Topics of Recitation in Ancient Geography," "The Orbis Pictus of Comenius," reproduced, is an imitation of that first child's

picture-book and first illustration of object-teaching. Levi Seeley explained and illustrated "Grube's Method of teaching Arithmetic"; R. P. Harrington prepared "Helps to the Intelligent Study of College Preparatory Latin"; and Robert Hoentz "Historical Tables; a Condensed Key to Universal History." Frank H. Foster illustrated, from Church history, "The Seminary Methods of Original Study in the Historical Sciences." "Our Language," by G. A. Southworth and B. F. Goddard, dwells upon "Its Use and Structure taught by Practice and Example," and Sarah E. H. Lockwood's "Lessons in English adapted to the Study of American Classics" is a text-book for high-schools and academies. "Arithmetic Exercises and Examination-Papers" were arranged by H. S. Hall and S. R. Knight, and Lamont Stilwell published "Practical Exercises in Analysis and Parsing." Virgil A. Pinkley's "Essentials of Elocution and Oratory," "Excellent Quotations for Home and School," by Julia B. Hoitt, and "The Patriotic Reader," by H. Carrington, were perhaps the most noticeable books of elocution. "Suggestions for Gymnastic Exercises for Schools" were made by Helen Clark Swazey.

Sports and Pastimes.—Books of special interest to sportsmen were "Wild-Fowl Shooting," by William Bruce Leffingwell, a work almost scientific, and "Names and Portraits of Birds which interest Gunners, with Descriptions understood of the People," by Gordon Trumbull. S. Brown Goode treated the subject of "American Fishes," with special reference to their habits and to methods of capture. J. Montgomery Ward published "Base Ball; how to become a Player, with the Origin, History, and Explanation of the Game"; R. M. Hurd "A History of Yale Athletics"; and F. W. Janssen "A History of American Amateur Athletics and Aquatics, with the Records." John Boyle O'Reilly wrote "The Ethics of Boxing and Manly Sport"; T. Robinson Warren, in "On Deck," gave "Advice to a Young Corinthian Yachtsman"; Howard Patterson issued a new and enlarged edition of "The Yachtsman's Guide," and also a "Canal Guide" for pleasure-seekers. "Official Lawn-Tennis Rules" were drawn up by the United States National Lawn Tennis Association, and Valentine G. Hall wrote on "Lawn Tennis in America." H. C. Leeds and James Dwight laid down the "Laws of Euchre as adopted by the Somerset Club of Boston, March 1, 1888," and Junius explained the intricacies of "The Game of Solo-Sixty." "Pranks and Pastimes" were devised by Mary J. Jacques; Lucretia Peabody Hale collected "Fagots for the Fireside," and L. A. Higgins was author of "A Christmas Entertainment for Young People at the Court of King Christmas."

Housekeeping.—About the usual number of books on this subject appeared during the year. Sallie Joy White published "Housekeepers and Home-Makers, a Housekeeping Manual"; Mrs.

E. R. Parker, "Mrs. Parker's Complete Housekeeper"; and Christine Terhune Herrick, "Housekeeping made Easy." Flora Haines Longhead wrote "Quick Cooking," and T. J. Murrey gave recipes for and made remarks upon "Luncheon," besides writing upon "Oysters and Fish." Mrs. E. T. Rover treated of "Hot-Weather Dishes," and H. O. Davidson of "Entrées and Table Dainties for the Epicure." M. L. Holbrook, M. D., in a work on "Eating for Strength," furnished 500 recipes for wholesome food and drinks. "How she did it, or Comfort on \$150 a Year," by Mary Cruger, and "Molly Bishop's Family," by Catherine Owen, deal principally with housekeeping details.

Miscellaneous.—Books not included in the classifications before given may be briefly enumerated as follow: "Our Fishery Rights in the North Atlantic," by Joseph K. Doran; "The Defense of the Sea-Coast of the United States," by Prof. H. L. Abbot; "Patriotic Addresses" of the late Henry Ward Beecher, edited by John R. Howard; and a "Tabulated Roster of the Army of the Potomac at Gettysburg," by James Beale. "The Lobby and Public Men, from Thurlow Weed's Time," by H. O. Tanner, was avowedly an attack upon the Bribery act of the State of New York; and "'89, Edited from the Original Manuscript in 1891," by Edgar Henry, essentially a sectional production. H. S. Rosenthal drew up a "Manual for Building and Loan Associations"; P. T. Barnum wrote "The Wild Beasts, Birds, and Reptiles of the World, the Story of their Capture"; Helen A. Smith told "Stories of Persons and Places in America;" and Rosa Hartwick Thorpe published "The Year's Best Days for Boys and Girls." "Children's Stories of the Great Scientists" was a most instructive and interesting volume by Henrietta C. Wright, and Esther Gracie Wheeler wrote "Stray Leaves from Newport." "Success in Speculation" was anonymous, as was also "American Ancestry." C. F. Pidgin made a useful contribution in "Practical Statistics," and J. H. Cromwell devised a "System of Easy Lettering." "Hints about Men's Dress" were given by a New York Clubman, and "Dress Cutting Out" was scientifically explained by Mrs. H. Grenfell and Miss Baker and "Minor Tactics," by Lieut. J. P. Wisser. "How Men propose" was shown by Agnes Stevens in a collection of love-scenes from popular works of fiction. J. P. Johnston wrote "Twenty Years of Huslin"; Wallace Peck, "The Golden Age of Patents"; H. Liddell, "The Evolution of a Democrat"; and W. J. Florence "Fables." Other humorous works include: "The Battle of the Swash and the Capture of Canada," by S. Barton; "Chip's Un-natural History," by F. P. W. Bellow; and "Nye and Riley's Railway Guide." S. Merrill wrote "Newspaper Libel"; J. D. Billings, "Hard Tack and Coffee"; and Anna E. Hahn, "Summer Assembly Days, or what was seen, heard, and felt at the Nebraska Chatauqua." "What shall make us whole?" was asked by

Helen B. Merriman; "Christian-Science Healing" was from Frances Lord; and "Ruth, the Christian Scientist, or the New Hygeia," was from the pen of Rev. John Chester. Henry Clews wrote "Twenty-eight Years in Wall Street," and a New York Broker, "The Art of Investing." "How to get rich in the South" was told by W. H. Harrison, Jr., and George W. Walling furnished "Recollections of a New York Chief of Police." "The Death-Blow to Spiritualism," by Reuben Briggs Davenport, gave "The True Story of the Fox Sisters"; and "Physical Proofs of Another Life" were proffered by F. J. Lippit, in "Letters to the Seybert Commission." Among books of reference, Vol. XII of "Appletons' Annual Cyclopædia" appeared, as also an "Index" to the series from 1876 to 1887, inclusive; a new "Cyclopædia of Universal Literature," by J. B. Alden, reached eleven, and a "Manifold Cyclopædia," from the same source, twelve volumes; and the "Library of American Literature," edited by Edmund C. Stedman and Ellen Mackay Hutchinson, was continued in four volumes. William Cushing issued a second series of "Initials and Pseudonyms." Ainsworth R. Spofford compiled "The American Almanac for 1888," and Carroll D. Wright published "Statistics of Colleges." The tenth number of "The Statistical Abstract of the United States for 1887" was issued by the Bureau of Statistics of the Treasury Department at Washington. "Ancient Rome in the Light of Recent Discoveries," by Prof. Rodolfo Lanciani, containing an account of excavations made by the Italian Government under his observation, while not, properly speaking, an American work, nevertheless made its appearance among us, and owed its existence largely to American resources.

The following are the figures given by the "Publishers' Weekly," as representing the issues of the year:

CLASS.	1887.	1888.	No. of books made in the United States.	No. imported.
Fiction.....	1,022	874	808	66
Theology and religion.....	858	482	889	148

Totals.....	4,437	4,631	3,520	1,111
Grand total.....				8,520
				4,631

LITERATURE, BRITISH, IN 1888. Book-production in England increased largely in 1888; 4,960 new books were published, an advance of 550 over those of 1887, and of new editions there were 1,631. The increase is especially to be noted in fiction, in theology, and in poetry and the drama; though, particularly in the last instance, there was no perceptible improvement in character. Voyages and travels, with biography and history, present nearly the same number of volumes recorded in 1887, and the activity in these departments aroused during the Jubilee year appears to have extended its influence over not only the quantity but the quality of the work. On the whole, but few books of enduring merit are to be expected from a single twelvemonth, and these are no doubt to be found amid the multitude that serve the purpose of their issue.

Fine Arts.—Foremost among works on the subject of art are to be mentioned "Imagination in Landscape Painting," by Philip Gilbert Hamerton, and a "Popular Handbook to the National Gallery," prepared by E. T. Cook, to which a preface was furnished by John Ruskin. W. W. May wrote on "Marine Painting," Lady Dilke on "Art in the Modern State," and Wilfrid Meynell on "Modern Art and Artists." Margaret Stokes made a study of "Early Christian Art in Ireland," and E. Sharpe of "The Seven Periods of English Architecture." "Our Recent Actors," by Westland Marston, and "The Prima Donna, Her History and Surroundings from the Seventeenth to the Nineteenth Century," by H. Sutherland Edwards, are the leading works relating to the stage. In music we have a "Manual of Orchestration," by H. Clarke. Among illustrated works the most prominent are "Sketches of North Italian Folk," from Randolph Caldecott, in a limited edition, with text by Mrs. Comyns Carr; "Pictures of East-Anglian Life," in photography and small drawings, descriptive text by P. H. Emerson; and "The Pied Piper of Hamelin," by Kate Greenaway.

History.—An event of the literary year was the completion, in two volumes (V and VI), of "The Invasion of the Crimea," by Alexander William Kinglake, bringing the narrative down, as set forth in the full title, to the death of Lord Raglan. Another important work was also finished in "A History of England: Period IV," by the Rev. J. F. Bright. "Two Centuries of Irish History, 1691-1870," were edited by James Bryce, whose "American Commonwealth" at last appeared in the closing days of the year. H. W. Dulcken wrote "A Popular History of England, from the Earliest Period to the Jubilee of Victoria, Queen and Empress, 1887," and from J. A. Doyle we have "The Puritan Colonies." "A History of Scotland," chiefly in its ecclesiastical aspect, was written by M. G. J. Kinloch. Mrs. Green published a revised edition of her husband's famous "Short History of the English People," with an interesting and valuable introduction;

and Walter Besant's "Fifty Years Ago," gave a graphic picture of life and times at the date of the accession of Victoria. "Fifty Years of European History," by Edward A. Freeman, covers "Teutonic Conquests in Gaul." F. A. Gasquet wrote "Henry VIII and the English Monasteries," and the Rev. A. Jessopp "The Coming of the Friars and other Historic Essays." "The Last of the Valois and Accession of Henry of Navarre," by Catharine Charlotte (Lady Jackson), and "The Bastille," by Capt. D. Bingham, were studies in French history. From W. H. D. Adams we have "The Makers of British India"; from Col. G. B. Matheson, "Decisive Battles of India, 1746-1849"; and "Two Chapters of Irish History" were written by T. Dunbar Ingram. R. Hassencamp also published "The History of Ireland, from the Restoration to the Union." To history properly belong: "Hildebrand and his Times," by W. R. W. Stephens; "Simon de Montford and his Cause," by the Rev. W. H. Hutton; "Strongbow's Conquest of Ireland," by F. P. Barnard; and, in the "Twelve English Statesmen Series," "William the Conqueror," by Edward A. Freeman; "Oliver Cromwell," by F. Harrison; "William III," by H. D. Traill; "Henry II," by Mrs. J. R. Green; and "Cardinal Wolsey," by M. Creighton. G. M. Theal wrote a "History of South Africa, 1486-1691," and "The Story of the Nations Series" contains: "The Story of Turkey," by Stanley Lane-Poole, assisted by E. J. W. Gibb and Arthur Gilman (the latter an American); "The Story of Holland," by J. E. Thorold Rogers; "The Story of Mediæval France," by G. Masson; "The Story of Media, Babylon, and Persia," by Zénaïde A. Ragozin; "The Story of the Goths," by Henry Bradley; and "The Story of Ireland," by Hon. Emily Lawless. "Imperial Germany" was from the pen of Sidney Whitman, and "The Fall of New France" from that of G. E. Hart. To Epochs of Church History were added: "The English Church of the Middle Ages," by William Hunt; "The Popes and the Hohenstaufen," by Ugo Balzani; and "The History of the University of Cambridge," by J. Bass Mullinger. Vol. I of "A New English Dictionary on Historical Principles," edited by J. A. H. Murray, was completed by the issue of Part IV.

Essays.—To this class strictly belong: "Essays in Criticism: Second Series," by Matthew Arnold; "Essays on some of the Modern Guides of English Thought in Matters of Faith," by Richard H. Hutton; "Essays Chiefly on Poetry," by A. De Vere; "Ignorant Essays," by R. Dowling; and fugitive essays of Prof. Dowden, collected under the title of "Transcripts and Studies." "Roman Mosaics" were "Studies in Rome and its Neighborhood," by Hugh Millan, D. D. Rev. Robert Burn wrote on "Roman Literature in Relation to Roman Art"; and "Society in Rome under the Caesars," by W. R. Inge, in its first essay form took the Hare prize at Cambridge Univer-

sity in 1886. J. P. Mahaffy published "Greek Life and Thought, from Alexander to the Roman Conquest," and also "The Principles of the Art of Conversation"; and from Max Müller we have "Biographies of Words, and the Home of the Aryas." S. Kydd wrote "A Sketch of the Growth of Public Opinion," and Elliot Stock "How to write the History of a Family." J. M. Barrie told "Auld Licht Idylls," Lady Wilde "Ancient Legends of Ireland," and "Coaching Days and Coaching Ways" were commemorated by W. O. Tristram. From Mrs. Oliphant came "The Makers of Venice," a companion-piece to "The Makers of Florence." G. Maspero wrote on "Egyptian Archaeology"; and from A. E. Waite we have "The Real History of the Rosicrucians" and "Lives of Alchemical Philosophers." "Studies of the Holy Grail," with reference to the hypothesis of their Celtic origin, were made by Alfred Nutt. J. T. Davidson published "Sure to Succeed"; and Samuel Smiles, "Life and Labor," a book somewhat on the same lines. E. J. Hardy, late chaplain of Her Majesty's forces, and author of "How to be happy though married," produced "The Five Talents of Woman." "The Book of Noodles," by W. H. Clouston, gave the history of "Fools and their Follies" in all times and lands.

Biography.—The leading work of this character produced during the year, and indeed one of the best that have appeared in some time, is a "Life of the Right Hon. W. E. Forster," by T. Wemyss Reid, which won earnest commendation from high authorities. From Archibald Forbes, the great war correspondent, we have a "Biography of the late William I of Germany," and from G. Barnett Smith "William I," while "Frederick, Crown Prince and Emperor," was the subject of a sketch by Rennell Rodd. "What I remember" was told by T. A. Trollope, a brother of the novelist, and proved to be much delightful literary gossip, more of which was supplied by the "Further Reminiscences" of W. P. Frith. "The Early Life of Samuel Rogers," by P. W. Clayden, covers a rich period of England's social, political, and literary life, and contains valuable correspondence, and "John Francis and the Athenæum," by J. C. Francis, is an interesting record of a literary career of fifty years. "Princetoniana; Charles and A. A. Hodge," by a Scottish Princetonian, Rev. C. A. Salmon, is of special interest to Americans as the first attempt at biography of the younger Hodge; and it is a striking fact that the "Life of Ralph Waldo Emerson," by Richard Garnett, in "The Great Writer Series," has been pronounced "the soundest biographical work on Emerson yet written." Other "Lives" in the same series, which is edited by Prof. Eric S. Robertson, are "Adam Smith" by R. B. Haldane, "Oliver Goldsmith" by Anstin Dobson, "Robert Burns" by John Stuart Blackie, and "William Congreve" by Edmund Gosse. Vol. II of "English Writers," by Henry Morley,

covers the period "From Cædmon to the Conquest," and Vol. III "From the Conquest to Chaucer." J. Ross wrote "Three Generations of English Women," and in "The Famous Women Series" we have "Elizabeth Barrett Browning," by John H. Ingram, the first biography of the poetess, and "Hannah More," by Charlotte M. Yonge. Adelaide Ristori published "Studies and Memoirs, an Autobiography"; and "Reminiscences of J. L. Toole, the Comedian," were told by himself and chronicled by Joseph Hatton. "The Life and Adventures of Edmund Kean" were detailed by J. Fitzgerald Molloy. C. R. Markham wrote "The Fighting Veres: Lives of Sir Francis Vere and Sir Horace Vere," Stanley Lane-Poole "A Life of the Right Honorable Stratford Canning," and T. A. Nash a "Life of Richard, Lord Westbury, Lord High Chancellor of England." "The International Statesmen Series" contain: "Lord Beaconsfield" by T. E. Kebble, "Prince Metternich" by G. B. Malleison, and "Lord Palmerston" by Lloyd C. Sanders. "Daniell O'Connell" was written by J. A. Hamilton, and "The Correspondence of Daniel O'Connell, the Liberator," was edited by W. J. Fitzpatrick. W. Dillon was the author of a "Life of John Mitchell." Dean Burgoon wrote "Lives of Twelve Good Men," who were influential though comparatively unknown; and "Christopher Wordsworth, Bishop of Lincoln" was the joint work of Canon Overton and Miss Elizabeth Wordsworth. The "Life of Bishop Colenso" was written by the Rev. Sir G. W. Cox, and "Richard Chenevix Trench, Archbishop," is the title of a volume of letters and memorials. The "Correspondence of Sir Henry Taylor" was edited by Edward Dowden, "The Letters from and to Charles Kirkpatrick Sharpe" by A. Allardyce, and other valuable "Letters" were those of "General C. G. Gordon to his Sister," and from "Dorothy Osborne to Sir William Temple," the story of a seven years' courtship. Mrs. Oliphant wrote "The Life of Principal Tulloch"; W. Knight, "John Campbell Shairp and his Friends"; Robert Louis Stevenson, a "Memoir of Fleeming Jenkin," which accompanied "Papers Literary, Scientific, etc.," of that professor, edited by S. Colvin and J. A. Ewing; and Walter Besant, "The Eulogy of Richard Jefferies." "Monarchs I have met" is the title of a book by W. Beatty Kingston, and "Life in the Confederate Army" was described by W. Watson from experience. "Reminiscences of W. Rogers," by R. W. Hadden, appeared, as did the "Recollections" of Dr. Westland Marston. "Robert Southey, the Story of his Life written in his Letters" was edited by John Dennis, and "The Letters of Charles Lamb" were newly arranged by Canon Ainger, with additions. "Emin Pasha in Central Africa: a Collection of his Letters and Journals," was translated from the German by Mrs. R. W. Felkin, and "The Correspondence between Liszt and Wagner, 1841-1861," by Dr.

F. Hueffer. In the philosophical classics appeared "Francis Bacon," by John Nichol, and "Spinoza," by John Caird; the latter, however, is rather a discussion of the "Ethics" of that author than a life. "Elizabeth Gilbert and her Work for the Blind" was told by F. Martin, and "The Fatal Illness of Frederick the Noble," by Sir Morell Mackenzie, was the reply to the report of the German doctors. Vol. XVII of the "Dictionary of National Biography," edited by Leslie Stephen, was reached.

Poetry.—Robert Browning made no contribution to the poetry of 1888, but a popular edition of his works was begun, showing the increasing interest that his genius has steadily excited. The "Complete Poetical Works" of William Wordsworth, including a hitherto unpublished poem entitled "The Recluse," which was also published separately, were edited with an introduction by John Morley, and "Glen Dessaray, and other Poems, Lyric and Elegiac," of the late Principal Shairp, by his successor in the Oxford chair of Poetry, Prof. Palgrave. "The Marriage of Shadows and other Poems," by Margaret Veley, were also posthumously published and warmly received. Edwin Arnold wrote "With Sa'di in the Garden," in part a translation from the Persian poet, and thoroughly Oriental, and "Lotus and Jewel." From Robert Buchanan we have "The City of Dream, an Epic." Andrew Lang wrote "The Gold of Farnilee" and "Grass of Parnassus"; W. E. Henley, "A Book of Verses," all of which possessed merit, and other authors who attained some prominence were May Kendall in "Dreams to sell," E. Nesbit in "Leaves of Life," and R. St. John Tyrwhitt in "Free-Field Lyrics." Miss A. M. F. Robinson wrote "Songs, Ballads, and a Garden Play," and Rennell Rodd, "The Unknown Madonna and other Poems." The chief collections of merit are: "More Lyrics from the Song-Books of the Elizabethan Age," by A. H. Bullen; "The Music of the Waters," a collection of sailor songs, by Laura Smith; and "In Praise of Ale," a specimen of curious research by W. T. Marchant. Plays of the old English dramatists were edited in "The Mermaid Series."

Fiction.—Mrs. Humphry Ward (a granddaughter of Dr. Arnold, of Rugby) has the credit of producing in "Robert Elsmere" the most widely read and variously discussed novel of recent years, the circulation of which in America has reached nearly 150,000 copies. "A Counsel of Perfection," by Lucas Malet (Mrs. Harrison), ranks perhaps next in power. The work done by familiar authors was of the usual average. William Black wrote "In Far Lochaber" and "The Strange Adventures of a House-boat"; Walter Besant, "Herr Paulus" and "The Inner House," both occult; and George MacDonald, "The Elect Lady." W. E. Norris wrote "Chris" and "The Rogue"; J. H. Shorthouse, "The Countess Eve" and "A Teacher of the Violin and other Tales"; and Thomas Hardy, "Wessex Tales." From Grant

Allen we have "This Mortal Coil" and "The Devil's Die"; from Frank Barrett, "A Recoiling Vengeance" and "The Admirable Lady Biddy Fane"; and from G. Mannville Fenn, "One Maid's Mischief," "The Story of Anthony Grace," and "Dick o' the Fens." H. Rider Haggard's three stories, "Mr. Meeson's Will," "Maiwa's Revenge," and "Colonel Quaritch, V. C.," achieved nothing of the popularity enjoyed by "She," but were nevertheless widely read. Mrs. Oliphant produced "The Second Son" and "Joyce"; Mrs. Louisa Parr, "Loyalty George"; and Jessie Fothergill, "The Lassies of Leverhouse" and "From Moor Isles." James Payn wrote "The Eavesdropper" and "The Mystery of Mirbridge"; Mrs. Alexander, "A Life Interest" and "Mona's Choice"; Rosa N. Carey, "Only a Governess" and "Aunt Diana"; and Miss Braddon, "The Fatal Three." Two anonymous works of unusual interest were "Fraternity" and "Nobody knows," and three of The Duchess were received by her admirers, "Marvel," "Undercurrents," and "The Hon. Mrs. Vereker." "The Happy Prince and other Tales," by Oscar Wilde, were handsomely illustrated.

Voyages and Travels.—Much of the work in this class was excellent. "The Early Adventures of Sir Henry Layard in Persia" were given to the world for the first time, and proved exciting and full of interest. Henry Drummond wrote on "Tropical Africa"; and "Incwadi Yami" was the record of twenty years' experience of Dr. J. W. Matthews in the southern part of that continent. "India, Pictorial and Descriptive," was anonymous. H. E. M. James described "The Long White Mountain, or a Journey in Manchuria"; O. M. Doughty, "Travels in Arabia Deserta"; and W. R. Carles, "Life in Corea." "Picturesque New Guinea" was from the pen of J. W. Lindt, Capt. J. Strachan published "Explorations and Adventures in New Guinea," and the Rev. S. MacFarlane "Among the Cannibals of New Guinea." W. B. Churchward was the author of "Blackbirding in the South Pacific," and James Inglis of "Tent-Life in Tiger Land." A most fascinating book is that of Mrs. Emily de Laszowska Gerard, "The Land beyond the Forest" (Transylvania). W. S. Caine wrote "A Trip Around the World in 1887-'8," and James A. Froude, "The English in the West Indies," mingling the discussion of political questions with much pleasant reading. "The Land of the Pink Pearl" is the title bestowed by L. D. Powles on the Bahama Islands, which were also visited, as well as numerous other places, by J. J. Aubertin in "A Fight with Distances." Count Gleichen went "With the Camel Corps up the Nile," and Isaac Taylor published "Leaves from an Egyptian Note-Book." A. J. C. Hare wrote "Walks in Paris" and "Days in and near Paris." Harold Brydges gave his impressions of "Uncle Sam at Home." J. O. Firth was "A New-Zealander in America," and D. J. Bannatyne

studied "Republican Institutions in the United States" for the benefit of his countrymen. "B. C. 1887, a Ramble in British Columbia," was made by J. A. Lees and W. J. Clutterbuck; and studies nearer home include: "Irish Pictures," by R. Lovett; "A Season in Sutherland," by J. E. Edwards Moss; "Old Chelsea," by B. Ellis Martin; and "De Omnibus Rebus," by the author of "Flemish Interiors." "Historic Towns," edited by Edward A. Freeman and the Rev. W. Hunt, reached "Colchester" in the sixth series; and "The Brontë Country" was made the object of special study by J. A. E. Stuart. "England as she seems, being Selections from the Notes of an Arab Hadji," though constructed on an old and somewhat trite idea, was a clever sketch by Edwin L. Arnold, son of the poet, of his native country under a disguise.

Physical, Moral, and Intellectual Science.—Of the scientific works issued during the year, to physical science belong: "The Story of Creation," by Edward Clodd; "The Building of the British Isles, a Study in Geographical Evolution," by A. J. Jukes; and an "Introduction to a Historical Geography of the British Colonies," by O. B. Lucas. In the "International Scientific Series" Sir John Lubbock wrote "On the Senses, Instincts, and Intelligence of Animals"; Sir J. W. Dawson, "A Geographical History of Plants"; the Rev. George Henslow, "The Origin of Floral Structures through Insects and other Agencies"; and the Hon. Ralph Abercrombie, "The Weather." Part XVI of the "Coleoptera of the British Isles," by Canon Fowler, was reached; and W. Swainsland, "Familiar Wild Birds"; "The Severn Tunnel, its Construction and Difficulties, 1872-1887," was described by T. A. Walker; and "Marvels under our Feet," by G. Hartwig. "The Economic Interpretation of History" was considered by J. E. Thorold Rogers, in a series of lectures; and "A History of Political Economy," J. K. Ingram, was reprinted in book-form, having been first published in the "Encyclopædia Britannica"; W. J. Ashley wrote an "Introduction to Economic History and Theory"; Wilfrid Richmond, "Christian Economics"; and L. L. F. R. Price, "Industrial Peace." "Guilds, their Origin, Constitution, Objects, and Later History," were treated by the late Cornelius Walford; and "London Government under the Local Government Act, 1888," by J. F. B. Firth and E. R. Simpson. A "Handbook to the Land-Charters and other Saxon Documents" was drawn up by J. Earle; and W. Easterly wrote a "History of the Law of Tithes." "Tariffs and Trade of the British Empire" were discussed by Sir R. Rawson; "Capital and Wages," by F. Minton; and a "History and Criticism of Wages" was furnished by W. D. McDonnell. J. H. de Ricci wrote on "The Fisheries Dispute." "The Morality of Nations," by H. Taylor, was a "A Study on the Evolution of Ethics." "Tempted London: Young Men," was the

title of a collected series of papers, which, first published in the "British Weekly," excited universal comment from the pulpits of the United Kingdom. "Savage London: Lights and Shadows of Riverside Characters," was from the pen of H. King. "The Fleet, its River, Prison, and Marriages," was the subject of a similar study by John Ashton; and "The Chronicles of Bow-Street Police Court" were opened by Percy Fitzgerald. The "Circuit Journeys," of Lord Cockburn, also belong to this class. G. Dawson wrote on "German Socialism"; and the last socialistic effort of William Morris was entitled "A Dream of John Bull and a King's Lesson," with a frontispiece by E. Burne-Jones. On the subject of Ireland we have "Gladstone and the Great Irish Struggle," by T. P. O'Connor and Robert McWade; "Ireland's Cause in England's Parliament," by Justin McCarthy, for Americans; "Ireland, the Causes of its Present Condition," by Earl Grey; "Ireland, Part II," by C. S. Ward; and a "Truthful Historie of the Settlement of Ireland by Cromwell," by Ethne. "Facts about Ireland" were told by A. B. Macdowall; and "Irish Union, before and after" was written by A. K. Connell. Sir Charles Dilke reviewed "The British Army" in an unsatisfactory mood; and Col. Maurice replied in "The Balance of Military Power in Europe." W. T. Stead advanced "The Truth about Russia"; and Stepniak treated "The Russian Peasantry, their Agrarian Condition, Social Life, and Religion." "Educational Ends, or the Idea of Personal Development," were dwelt upon by Sophie Brydges, and Laurence Oliphant, who died last year, wrote on "Scientific Religion, or Higher Possibilities of Life and Practice through the Operation of Natural Forces." "The Religion of Humanity" was the subject of an address by A. J. Balfour before the Church Congress at Manchester, and Karl Pearson discussed "The Ethics of Free Thought." The Hibbert Lectures for 1888, delivered by John Rhys, were on "The Origin and Growth of Religion as illustrated by Celtic Heathendom," and Dr. J. W. Taylor wrote on "Scotland's Strength in the Past and Scotland's Hope in the Future." James Martineau made "A Study of Religion," and A. Jukes of "The Names of God in Holy Scriptures." From E. M. Goulburn we have "Three Counsels of the Divine Master." Canon Farrar, with others, wrote on "Non-Biblical Systems of Religion," and, alone, published sermons on "Every-Day Christian Life." Dr. G. Matheson, with others, discoursed on "Christianity and Evolution," and the Rev. O. H. Spurgeon gave us "The Check-Book of the Bank of Faith." Six volumes of the "Expositor's Bible" appeared, Vol. I of the "Sermon Bible," and three additional volumes of the "People's Bible," by Joseph Parker, D. D. Spence, Exell, and Neil's "Thirty Thousand Thoughts" were completed in the sixth volume. "Kant's Critical Philosophy," Vol. III, by John P. Mahaffy, was issued, and in the

"International Education Series" we have "Memory," by David Kay. "The Secret Doctrine," by Madame Blavatsky, was set forth in two volumes.

During the year the "Encyclopædia Britannica," of which the first volume appeared in 1875, was completed, as was also "Cassell's Encyclopædic Dictionary"; and a revised and enlarged edition of "Chambers's Encyclopædia" was begun, of which Vols. I and II were issued. "Cassell's Miniature Cyclopædia," convenient for very brief reference, was compiled by W. Laird Clowes.

The summary of British books issued during the year is as follows:

CLASSIFICATION.	New books.	New editions.
Theology, sermons, biblical, etc.	748	164
Educational, classical, and philological	680	140
Juvenile works and tales	837	112
Novels, tales, and other fiction	929	885
Law, jurisprudence, etc.	115	57
Political and social economy and commerce	111	94
Arts, sciences, and illustrated works	184	69
Voyages, travels, geographical research	224	78
History, biography, etc.	877	109
Poetry and the drama	168	68
Year-books and serials in volumes	324	8
Medicine, surgery, etc.	126	73
Belles-lettres, essays, monographs, etc.	165	224
Miscellaneous, including pamphlets, not sermons	507	120
Totals	4,960	1,611
Grand total		4,960

LITERATURE, CONTINENTAL, IN 1888. On the whole, notwithstanding various disturbing causes, continental literature about held its own during the year. Authors and publishers have found occupation and profit in their vocations, and have not been disappointed with the results. Following our usual plan, we give the record in the alphabetical order of countries on the Continent of Europe.

Belgium.—Historical research has been prosecuted with spirit and industry. M. Namèche, of the University of Louvain, has published three new volumes (nineteenth, twentieth, and twenty-first) of his "Oours d'Histoire Nationale," comprising the last years of the reign of Philip II in the Netherlands, and the opening years of Albert and Isabella. The learned Bollandists are steadily working on the "Acta Sanctorum," which serves as an offset to M. Vander Haeghen's "Protestant Martyrology during the Sixteenth Century" (noted last year). M. Daris has supplied a "History of the Principality and Diocese of Liège to the Fifteenth Century," and M. H. Lonchay has dealt with a portion of the same subject in a volume that was crowned by the Royal Academy of Brussels. M. A. Wauters furnishes another volume of his "Ancient and Modern Belgium." Collections of important documents have been brought out, for the period between 1570 and 1750, by Baron de Lettenhove, M. Oh. Piot, and M. de Marneffe. The great work of M. Oh. Moeller, of the University of Louvain, "Traité

des *Études Historiques*," has been revised and brought out by his son, in parts, and is an admirable guide for those who wish to study history on sure and sound principles. A Monograph on Tilly and the Thirty Years' War, from 1618-'82, has been written by Count de Villermont, and M. Ch. Woeste has given the views of a Roman Catholic on the History of the *Oulturkampf* in Switzerland, 1871-'86. A number of interesting volumes on "Belgic Congo," and kindred topics in regard to African relations, have attracted much attention. Several excellent books of travel have appeared during the year, treating of Texas, China, Germany, Spain, etc. The history of the fine arts has not been neglected, and social science has been freely discussed by L. Dupriez, Ch. Lagasse, L. Halleux, Ch. Horion, Baron Collins, M. Heins, and M. E. de Laveleye. In poetry, too, both in Flemish and French, the yield has been creditable to Belgium. M. E. Verbaeren's "Les Soirs," G. Rodenbach's "Du Silence," and Ch. Potvin's "Nos Poètes Flamands," are well spoken of. Pure literature, in the hands of the school of "Young Belgium," seems to flourish, and promises better results than were looked for last year. Prof. Stecher's "History of Flemish Literature" is pronounced to be the best work that exists on this subject. M. F. de Potter continues to work on his great history of the monuments and institutions of the City of Ghent, which is not yet completed. Various local histories of more or less merit have also appeared. Folk-lore attracts much notice, due chiefly to the poet Pol de Mont and to Prof. A. Gittée. The latter has issued an excellent manual for the use of students of Flemish folk-lore. Of old Flemish popular tales two volumes may be noted, viz., "Grandmother's Book of Stories," and "Stories of John Everyman." The drama has not been neglected, and several creditable productions have appeared. A curious posthumous work of the famous novelist Hendrik Conscience, entitled "History of my Youth," has been published, and is highly praised for its truthfulness and sincerity. Light literature holds its place as usual, and the crop of novels is not inferior to that of last year. A brilliant work by M. J. de Geyter, entitled "The Emperor Charles V and the Kingdom of the Netherlands," written in Flemish meter of the middle ages, is highly praised by the critics. It produced also a great sensation in Holland.

Denmark.—The Northern Exhibition of Industry, Agriculture, and Art in Copenhagen, which was a great success, diverted attention to some extent from literature this year, as did also the jubilee of the Danish Society of Artisans, celebrated in July; the centenary of the emancipation from villanage, held in June; and the commemoration of the twenty-fifth year of the King's reign on November 15. Several historical works relating to the emancipation of the peasantry a hundred years ago have been published. Among these Prof. E. Holm's

"The Struggle for Agricultural Reforms, 1778-'91," is prominent; and Jørgensen's collection of memorials and documents, J. Steenstrup's "The Danish Peasant and Liberty," and Fredericia's "The Liberation of the Danish Peasant," are well worth consulting. In general and political history there is hardly anything worth mentioning. In literary history the first volume of J. Paludan's "Renaissance of the Literature of Denmark" has appeared; also, a small volume by R. Schröder, entitled "Ehlenschläger and the Romantic School." A considerable number of biographies have been published, of which we may name here a compendious account of the life and works of R. Kr. Rask, the eminent philologist (born one hundred years ago); a "Sketch of the Life and Times of Knud Lavard in the Middle Ages," by H. Olrik; and "The History of the Family of Bille," conspicuous in Danish annals, by Møllerup and Meidell. The great "Danish Biographical Dictionary" is being pushed forward as rapidly as possible. S. K. Sørensen has published a small volume about "The Arabs and their Civilization in the Middle Ages"; and Thor Lange, a professor at Moscow, has brought out an interesting book of travels, "A Month in the Orient." Philosophy has received only a moderate share of attention this year. In this connection may be named Wilkens's "Outlines of *Æsthetics*"; a treatise on "Oriental Mystics," by H. Ramussen; "The Religion of the Future," by A. O. Larsen; and a volume "On Temper," by F. Holberg. The death of M. A. Goldschmidt and of T. Lange (noted in last year's record) deprived Denmark of two of its best novelists. Posthumous novels, however, of both have appeared. H. P. Holst, the Nestor of living poets, has brought out the best of his writings as "Selected Works," and C. Hostrup has written a play, "Under Snefog," which is praised by the critics. Younger authors have made numerous efforts in light literature, and with fair success. A few of these may be noted here; as, "The Polar Bear," by H. Pontoppidan; "The Consul's Wife," by Miss Levison; "A Purgatory," by P. Möller; "La Grande Demoiselle" (of the time of Louis XIV), by S. Schandorph; and "Stuk" ("hollow splendor"), by H. Bang. K. Gjellerup, who has abandoned realistic poetry, has brought out a great dramatic poem in two parts, "The Struggle with the Muses" and "Helicon," together with a comedy, "The Wedding Present." A. Ipsen's "Mephistopheles," a kind of Faust, is moderately praised by the critics. Several of the younger novelists are striving to portray life nowadays. V. Stuckenberg is one of these, and gives promise also of progress. The critics, however, have nothing favorable to say of the younger dramatic and lyric poets, such as E. Gad, N. Larsen, Sophus Clausen, and J. Becker.

France.—Political excitements and uncertainties as to the future have hindered the progress of literature in France this year in vari-

ous ways. Nevertheless, authors have written and publishers have brought out books in poetry, history, the drama, fiction, etc. M. Sully-Prudhomme's "Le Bonheur," is a didactic poem of more than average merit, but not of the highest order. M. André Lemoyne, in his "Fleurs des Ruines," is sharply criticised by reviewers. The work of Jean Rameau, "The Song of the Stars," is pronounced the most interesting volume of verse published this year, though the critics find in it much to condemn. Numerous other contributions in verse have appeared, such as M. C. Fuster's "Les Tendresses," Eugène Manuel's "Poésies du Foyer et de l'École," Émile Peyrefort's "La Vision," and G. Khan's "Les Palais Nomades"; but these are not reckoned to be of the first, perhaps hardly of the second quality. M. d'Hérison undertakes to defend Marshal Bazaine in his "Legend of Metz," not very successfully, and M. Darimon gives valuable information and judicious criticisms in his "Notes on the War of 1870," on the responsibility attaching to the chief actors in a disastrous drama, viz., Prince Napoleon and the Empress Eugénie. This so-called prince has entered the field against M. Taine, who published last year "Studies respecting Napoleon I," by putting forth a volume entitled "Napoleon and his Slanderers." Several monographs are worthy of mention: M. Welschinger's "Le Duc d'Enghien" is exhaustive and impartial; E. Lockroy's "Ahmed Le Boucher," better known as Djeddar Pasha, presents a lively picture; and the feats of arms of French soldiers in Africa, is the theme of M. Camille Rousset's work, "L'Algérie de 1830 à 1840," not yet completed. Germany fills considerable space in the thought of France, as is shown by various publications, such as M. E. Lavisse's "Essay on Germany under the Empire"; M. O. Grad's "The German People, their Forces, and their Resources"; M. Grand-Carteret's "France judged by Germany," an ably arranged compilation; and a translation of M. J. Janssen's excellent work, "Germany at the End of the Middle Ages." Renan is as busy as ever, and his peculiar mode of dealing with Scripture history is exhibited in his "History of the People of Israel," of which Vol. I. was published last year. His skeptical proclivities fully display themselves in all that he does. M. J. Menant has published an excellent, conscientious work on "Nineveh and Babylon." In the history of manners and ideas, two books of M. Alfred Rambaud are particularly noticeable. The one is "The History of Civilization in France, from its Origin to the Present Day"; the other is "The History of Contemporary Civilization in France"; both are able and well-timed contributions. In the drama there is little worth noting. "Much Ado About Nothing," has been adapted to the French stage, with success. M. Ludovic Halévy brought out a charming comedy, "The

Abbé Constantin," and Zola dramatized one of his novels called "Germinal." This latter was a failure, and the critics predict that Zola and his school, with their so-called naturalism and its abominations, have reached the end of their popularity. Just now there is a strong disposition to furnish psychological and analytical novels, of the former of which style Madame Malot's "Folie d'Amour," M. Hector Malot's "Conscience," and M. P. Bourget's "Mensonges," are good specimens, and much praised. M. O. Mirbeau's "L'Abbé Jules," and M. E. Gonideau's "Le Froc," profess to portray the French clergy; but they are pronounced to be one-sided and unfair. M. G. Ohnet is the author of "Volonté," which has reached its hundredth edition, and he has had equal success on the stage with his "Grande Marnière." Other amusing novels are "Vallante," by J. Vincent; "Ohonchette," by M. Prévost; "La Petite Fée," by M. A. Cim; "Les Fantaisies d'une Amazone," by M. J. Chassa; and "Les Seducteurs," by Gyp. The journals of Michelet, the well-known historian, have been published by his widow, and are very instructive and useful. A work entitled "The Great French Writers," is under way, and promises to be a gratifying success. M. E. Des Essarts's "Portraits de Maîtres" is highly spoken of as an excellent work. A capital biography of Victor Cousin is contained in it. In philosophy, M. Paul Janet's contributions are valuable, as set forth in "Les Passions et les Caractères dans la Littérature du XVII^e Siècle," and "Les Lettres de Madame de Grignan." The critics speak of these books in the very highest terms. In biography M. E. Sergy's book on Fanny Mendelssohn, is admirably done, and M. Gabriel Ferry's "Balzac et des Amies," is said to be very agreeable and successful. Social and moral science has received considerable attention in Arsène Houssaye's "Le Livre de Minuit," M. du Camp's "Paris Bienfaisant," and "La Vertu en France," M. C. Féré's "Dégénérescence et Criminalité," and Dr. A. Piéchaud's "Les Misères du Siècle." Lack of moral training is noted as something greatly needing a speedy remedy. Books of travel are, for the most part, written in healthy tone and spirit, calculated to benefit as well as instruct and amuse, such as Guillaumet's illustrated volume on Algiers; M. H. France's work about Spain, and M. H. Imbert's conscientious "Quatre Mois au Sahel." There seems to be a disposition to have regard to English works in the way of education, if one may judge from the titles of a number of books published this year, e. g., M. L. Carran's work on religious philosophy in England from the time of John Locke to the present day; M. P. de Coubertin's "L'Éducation en Angleterre," and M. O. Gérard's series of papers on "Education and Instruction." Posthumous works of Victor Hugo continue to be issued, and the "Mémoires," of M. Désiré Nisard (recently

deceased) well deserve to be consulted. Jurisprudence is but slightly represented this year. One solid work may here be mentioned, viz., M. E. Beaussire's "Les Principes du Droit," which is supplementary to previous publications on this subject.

Germany.—Political changes and probable or possible results have had considerable influence upon the course and progress of literature in Germany during the year. Poetical contributions have been quite numerous, chiefly in the line of lyrical sentiment, bursts of socialism, and sturdy intolerance of authority. The names of A. Forney, Fr. Beck, and Marie Janitschek, occur in this connection, but their productions do not need special mention. In honor of Walther von der Vogelweide, the greatest lyric poet of the middle ages, a volume of poems has appeared (edited by A. Mayer) on the unveiling of the poet's statue at Botzen, his supposed birthplace. The "Tirolersagen," by the Countess Wilhelmine, and the powerful ballads on the struggle for freedom, by Count A. Wickenburg, form part of the book just named. "The Song of Humanity," by Heinrich Hart, claims to be an epic in the loftiest style, like the "Nibelungenlied" and Klopstock's "Messias." Judging from the first canto, which is all that has yet appeared, the critics give praise to the conception and optimistic views of the author, but doubt as to the ultimate result. R. Hamerling's "Homunculus" is said to combine universal mockery and burlesque satire. The form and meter of the poem remind one of Heine's "Atta Troll," only the satire is social instead of literary. Plutocracy and Judaism in its several forms are mercilessly chastised, and the poem ends, the critics tell us, "in shrill discord." The aged A. F. von Schack, the translator of Firdusi, though nearly blind and almost threescore years and ten, retains his mental vigor, as is shown in an attractive volume of memoirs entitled "Half a Century." George Ebers, the novelist, also appears for the first time as a poet in a romance entitled "Elifün"; but the critics do not find much in it to praise. The dramatic results of the year are inconsiderable, though coming from the pens of Anzengruber, R. Voss, M. Greif, P. Heyse, and H. Lingg. Anzengruber's play, "Stahl und Stein," is a national drama well wrought out; R. Voss's "Bregitta" is remarkable for delineation of character; and M. Greif's "Die Pfalz am Rhein," Paul Heyse's "Die Weisheit Salomonias," and H. Lingg's "Die Bregenzer Klausen" (a subject taken from the Thirty Years' War), are duly praised by the critics. Novels of the year have shown about the usual tendencies in the way of pessimism, realism, and discussions of social and psychological problems. There is a pessimistic tendency in Marie von Ebner-Eschenbach's "Das Gemeindeglied," while C. Schwarzkopf's "Lebenskünstler" and H. Heiberg's "Der Januskopf" are expressly directed against pessimism. K. Fränzel's novel, "Dunst,"

is devoted to socialistic matters. F. Spielhagen has brought out a new story, "Noblesse Oblige"; T. Storm, the Nestor of German novelists, shows in his latest productions, "Es waren zwei Königskinder" and "Bei kleinen Leuten," incomparable freshness; and the pleasant story-teller Hans Hoffman gives some "Neue Corfugeschichten," which well deserve commendation. In the literature of "memoirs" special mention is to be made of the work of Duke Ernst II, of Saxe-Coburg-Gotha, who has played an important part in German politics and prefers to be his own biographer. The work is highly commended by the critics. Montgelaß, a former Bavarian minister, and Gen. von Natzer, military instructor of the late Emperor William, have added their contributions to this department. To these may be added Jakob Ph. Fallmerayer's letters and memoirs, as showing a man who was the friend of light and high principle in knowledge and religion. Schmeding has produced an excellent work on "Victor Hugo," which is of the nature of a message of peace from Germany to France. German art has received due attention in A. Rosenberg's "Die Münchner Malerschule seit 1871" in R. Dohme's encyclopædic book, "Geschichte der Deutschen Kunst," and in A. and F. Eggers's biography of Rauch, the sculptor of the Friedrichsdenkmal. Note also is made of the issue of the fourteenth and last volume of the "Fall of the House of Stuart," by Onno Klopp, a very able writer. Ranke's "Universal History" is continued by the hand of A. Dove, and will soon reach its end. In philosophy, the centenary of Schopenhauer has given rise to a number of publications relating to his rank and position as well as the true worth and value of his contributions to philosophic literature. Activity in this department is very considerable, and displays the usual drift of German writers and thinkers on questions of psychology, religion, morals, etc. We may mention, in conclusion, Roeder's "Die Philosophie Schopenhauer's"; Nietzsche's "Genealogie der Moral," according to which mankind is "wholly sunk in the mire"; Dilthey's "Einleitung in das Studium der Geisteswissenschaften"; and R. Encken's "Einheit des Geisteslebens in Bewusstsein und That der Menschheit," both directed against materialism; and, finally, J. H. Witte's "Das Wesen der Seele," which controverts earnestly the materialistic tendency toward "psychology without a soul."

Greece.—Literature, on the whole, is well represented in Greece this year. In theology Nicephorus Calogeras has printed from a Roman MS. a work of Euthymius Zygabenus, i. e., a commentary on the "Letters in the New Testament." Prof. A. D. Kyriakos has issued a collection of "Studies of Church History"; the orator Moschakis has published a series of "Ecclesiastical Speeches," delivered on various occasions; and Bishop Dorotheus has brought out Part I of the "Treasury of

Patrology," which promises to be useful as well as important. Love of philosophy is shown in bringing out editions of ancient Greek writers, by D. Semitelos and Dr. Bernardarkis. The editorial work is said to be excellent. A good contribution to the study of the dialects of modern Greece has been made by A. Paspatis, favorably known by his studies on the gypsies, etc. The glossology and folk-lore of the Morea are treated of in the "Collection of Linguistic Material and Usages of the Greek People," by S. Papazaphiropoulos. A lecture by J. Balabanis gives an interesting sketch of the dialect and customs of the Greeks of Pontus. An excellent report, by A. P. Kerameus, has been printed respecting palæographic and philological researches in Thrace and Macedonia. In history and biography the contributions have been few, and of no great moment. Two works relating to the history of Cephalonia have appeared, originally written in Italian, but translated into Greek, with annotations. M. Dimitas has published an elaborate biography of Olympias, the mother of Alexander the Great. Dr. A. Kephallinos, Sanskrit instructor in the University of Athens, has undertaken to prove the strong influence of the Greek drama on the Indian, and N. Parisisis has published an interesting book on Abyssinia. Dr. D. Chassiotis, in his "Essays and Addresses on Epirus," deals with politics and statistics. A. P. Kerameus (named above), in his "Contributions to the History of Neo-Hellenic Literature," has printed valuable epistles from Greek men of letters of the sixteenth and seventeenth centuries. Archaeology occupies much attention, as is shown by Dr. Th. Sphulhis, in a volume on "The Ancient Athenian School," and by Dr. P. G. Papandreou, in a work entitled "Azanias, an Account of the Ancient Cities of the Arcadian Azanias." The venerable A. Rhangabé, Nestor of Neo-Hellenic literature, has brought out the first parts of an "Archæological Dictionary," and Dr. Costomoiris has devoted a monograph to the ancient Greeks as aurists and oculists. Fiction holds its own in the newspapers, but only a few stories and tales appear in book-form. The drama and poetry are but poorly represented this year. The satirist, G. Suris, has published two new volumes of "Poems." Some good verse is found in J. Polemis's "Winter Blossoms"; and the poems of Marietta Betsu, now collected in a volume, "Laurels and Myrtles," are touching and impressive.

Holland.—There has been a large production of novels and novelettes in Holland this year; only a few, however, deserve mention here. Nessuno's "Jonkheer Beemsen" is of the psychological type: "Neven en Nichten," by the brothers Van Durl, is remarkably free from conventionality; Van Loghem's "Victor" deals with idealism and realism in a rather unsatisfactory way; and L. Van Deyssel, in his "Eene Liefde," follows the Frenchman

Zola's offensive naturalism. A fairy tale, "Kleine Johannes," comes from Frederik Van Eeden; it abounds in poetic sentiment and is well worked out. In poetry little has been done worth mentioning. Beets's "Winterloof" is amusing; W. Prins's poetry, "Liefde's Erinnerung," is good in parts, but unequal; and Marie Bodaert's "Aquarellen," evince feeling and taste. A translation of Shakespeare, by Burgersdyk, is now nearly completed, and is much praised by the critics. Translations from the English and Hungarian have met with favor. In the drama, Van Meerbeke's little comedy, "Eene Ministerieele Crisis" is amusing, as is also Van Maurik's "Françoise's Opstel"; but neither is of a very high order. Mr. Emant's tragedy, "Adolf van Gelre," is in blank verse, and is highly spoken of by the critics. This same Adolf is the hero of a historical novel by Mr. Huf van Buren. Colonial history has been well cultivated this year by several good writers. We may name Annie Foore's sketches, "Uit het Indisch Familie-leven"; Eckart's "Indische Brieven aan een Staatsraad"; and Van Deventer's instructive "History of the Dutch in Java," which is now complete. Various registers and documents from archives have been brought out, and P. M. Netscher has written a good history of the Dutch colonies in the West Indies. The history of Holland itself in the latter half of the seventeenth century is well illustrated by Dutch writers, specially Sypestein and the author of the "Journalen Van C. Huygens," the younger, the secretary of William III. The fourth volume of G. K. Van Hogendorp's letters and memoirs (during 1767) has appeared; and the memoirs of his brother, Gen. Dirk Van Hogendorp, which are full of interesting adventures, have been published. Prof. Ten Brink is bringing out a new series of biographies, which are well written and valuable. Prof. Pierson has published the first of a series of essays, "Geestelyke Voorouders," the purpose of which is to illustrate the chief sources of civilization and spiritual life. Dr. Kuiper's "Euripides" is an earnest effort to defend that poet against Aristophanes's charge of atheism. He holds that the author of "Alcestis" was an honest skeptic, if nothing more. Two notable scholars, Mr. Rau and Mr. Vosmaer, have died during the year.

Hungary.—Literary production this year in Hungary offers a similar record to that of 1887. The Crown Prince has acquired reputation in ethnography and natural philosophy, and the Archduke Joseph has shown himself to be an excellent philologist, in a grammar of the gypsy language, if there be really such a language. The book is spoken of in high terms by the critics, and appears to be a valuable contribution to comparative as well as special philology. Prof. E. Thewrewk has added an appendix to the grammar, giving a very full account of the origin, language, history, etc., of the gypsies. Ural-Altaic studies have met

with favor, but the question is still unsettled as to the origin of the present Hungarian language; whether it be of Turco-Tartar character, or one of the Ugrian or Ugro-Finnic languages. In connection with this point it may be mentioned that able scholars are making a special study of divers dialects, such as the Lapp, the Votyak, and Vogul. Prof. I. Budenz has finished his comparative grammar of the Ugrian languages. As belonging partly to philology and partly to history, honorable mention should be made of M. L. Réthy's "Origin of the Roumanian Nation and Language," a work of undoubted merit; and of M. Fred. Pesty's book on the topographical nomenclature of Hungary. In history proper there have appeared A. Szilagyi's "Transylvanian Parliamentary Records," Vol. XII, reaching to 1861; the "Diplomatarium Ragusanum"; and Prof. Marczali's third and concluding volume of his "History of Hungary in the Time of Joseph II." This last-named work gives universal satisfaction. We may note also "Old Hungary," by M. B. Grünwald, which is said to be a really fascinating book; Prof. G. Ballagi's "Hungarian Political Literature until 1825," a mass of curious and interesting documentary matter; and a clear and satisfactory account of the war of independence in 1848-'49, wherein the somewhat famous Görgey surrendered to the Russians. The critics hold that Görgey's character is fully vindicated in the book. Memoirs and biographies have received large attention. Among the workers in this line we name M. A. Zichy, who has edited all that relates to Count Stephen Széchenyi, the real founder of modern Hungary, whose speeches have been published through the care of the academy; N. Kubinyi, who has prepared an excellent biography of Emeric Thurzó (1598-1621); and D. Angyal, whose "Life of Emeric Tököly" is learned and valuable. A history of Hungarian agriculture and a history of the Hungarian theatre have appeared. The prolific M. Jókai continues to write novels in abundance, and M. A. Varády, in his "Doctor Faust," seems to be trying to introduce what is called naturalism into Hungary. M. A. Baksay, a Protestant minister, furnishes a collection of pleasant novelettes entitled "Foot-path." In lyric and epic poetry the posthumous work of the great national bard, John Arany, is especially noteworthy. Various translations have been successfully made of Tennyson's "Idylls of the King," of Burns's "Songs," of Petrarch's "Sonnets," etc., all said to be marked by fidelity and vigor of language.

Italy.—Nothing striking or out of the usual order has occurred in literary matters during the present year in Italy. The founding of a chair in Rome, in 1886, for the exposition of the "Divina Commedia" of Dante has not resulted in what was hoped for and expected, viz., an increase in the study of the great poet's works. Carducci, a distinguished poet himself, was appointed professor, and began

a course of lectures; G. Bovio also lectured on Dante in Naples; a Roman priest, G. Poletto, has brought out a Dantean dictionary, in seven volumes, with notes and illustrations drawn, in part, from St. Thomas Aquinas; and a Jesuit father named Cornoldi has published a commentary on the "Divina Commedia," in which he shows much enthusiasm for his author; but, in general, the movement is regarded as a failure by those most competent to pronounce judgment on the subject. As connected with Dantean literature, mention may be made of a commentary of L. de Biase, with notes by G. da Siena, and a reprint of the commentary of Stefano Talice di Ricaldone. Failure has also attended the attempt to revive the memory of and do justice to Giordano Bruno (burned by the Inquisition in Rome in 1600). An edition of the works of the philosopher of Nola is under way, it is true, but only three volumes have been published in nine years. The period most studied just now is the fifteenth and sixteenth centuries. A. Graf's "Attraverso il Cinquecento" relates to this portion of the past, and consists of various studies on Petrarchism and anti-Petrarchism, on Pietro Aretino, on Veronica Franco, etc. C. Gioda's book on Girolamo Morone (1470-1529) is well worth reading. A book by Salvagnini on St. Anthony of Padua has met with warm appreciation. E. Musatti is reprinting his work on Venice, the Doge, etc., with additions and corrections. F. Calvi has brought out a monograph on Bianca Maria Sforza Visconti. A work of superior merit comes from the pen of L. Obiappelli, commemorating the eighth century of the Bologna University. Bartoli is working on his full and elaborate "History of Italian Literature," of which (as noted last year) the sixth volume has been published. G. Diaconis has brought out Vol. I of a new biography of Dante, and V. Crescini gives the public the benefit of his careful studies on Boccaccio. Reprints of the ancient classics meet with favor, as do also those of standard Italian authors. The "Biblioteca di Autori Italiani" is well under way, and promises well for the future. In the history of art may be named a work by Pietro Calari on Paul Veronese. A periodical devoted to art has been begun, and it is hoped may meet with full success. The historical societies have not been idle, but have published from their archives valuable documents, such as the "Gesta" of Frederick Barbarossa, the "Secondo Registro della Curia Arcivescovile di Genova," and the "Statutum Potestatis Communis Pistorii Anni MCCLXXXVI." G. Stocchi's history of the first conquest of Britain by the Romans and Castelli's second volume of the history of the Jews are praised by the critics, as are also E. Parri's "Vittorio Amedeo II ed Eugenio di Savoia" and E. Masi's volume, containing new facts about Napoleon's two wives. The critics aver that literature in Italy, whether in poetry or novels,

has not been more brilliant than in other years, but rather less so. The best novelists, Farina, Matilde Serao, and Capuana have produced nothing new or remarkable, and novels by Rovetta, Giuriati, Caponi, and Martini are hardly above the average. In poetry, Carducci brought out last year a volume of "Rime Nuove," which contains some new pieces, with others before printed. He ranks among the best of the Italian poets.

Norway.—Literature in the larger sense of the word does not seem to have flourished in Norway this year. The social and ethical questions as to the relations of the sexes have aroused much discussion, and a number of volumes have been published advocating frequently very strange and even immoral doctrines. Bjørnstjerne Bjørnson has entered the field against Bohemian doctrines and practices, and during the first half of the year he traveled over Norway, Denmark, and Sweden, lecturing on "Monogamy and Polygamy," with great success. Jonas Lie has published "Married Life," which is much praised as being, on the whole, sound in principle and capably worked out. It abounds in genial humor, and is widely read in Norway. A. Kielland bases his stories on the newest political development, but they are not esteemed to be of much account. Other works of fiction are Amalie Skram's "Two Friends," Per Sivle's "Bundle of Stories," A. Balle's "Young Ladies," K. Janson's "Norwegians in America," Mrs. Janson's "A Young Girl," K. Winterhjelm's "Countess Sissi," and Kristofer Kristofersen's new story, "Toilers of the Soil." He is now settled in Copenhagen, and in this story describes the hard conditions of life under which the crofters labor. Numerous tales and sketches have been published, mostly relating to home topics and of average merit. A few poems have been published, viz., K. Rander's "Norwegian Scenery, Impressions, and Pictures," N. C. Vogt's "Poema," and Sigurd Bødker's erotic verse, entitled "Elskov"—i. e., "Love." These two latter have made promising *débuts*, and it is hoped that they will in time enrich the scanty lyric poetry of Norway. Several important historical works have appeared, among which we note Prof. Ernst Sars's "History of Norway" (1819–1882), interesting, well written, and valuable; and Prof. A. O. Bang's "History of the Norwegian Church under Catholicism," instructive and fairly wrought out. J. B. Halvorsen's excellent "Dictionary of Norwegian Authors" is making steady progress, and has reached half-way into the letter H. Art criticism has been enriched by Prof. L. Dietrichsen's history of the origin and growth of the National Picture Gallery, and literary history has been increased by H. Jaeger's pleasant picture of the literary life and work of "Henrik Ibsen," on the sixtieth anniversary of the poet's birth. This distinguished son of Norway, Bjørnson's twin-brother, stands in the very front rank of the authors of his native

land. A cheap popular series of standard authors has recently appeared under the title "Library for the Thousand Homes." Periodical literature does not flourish in Norway, two of its chief representatives having failed for want of support.

Poland.—Polish literature has suffered much during the past year and a half by death among men of letters. The great humorist, Jan Lam, has passed away, as have also the historian, W. Kalinka, leaving his masterpiece, "The Diet of Four Years," incomplete, and J. L. Kraszewski, renowned as a voluminous writer of romances, poems, dramas, etc. A number of books, novels, a sort of autobiography, and a popular history of Poland, by the aged writer, have been published since his death. T. T. Jez, a contemporary of Kraszewski, still remains, and is very industrious. Madame Orzesko, H. Sienkiewicz, and B. Prus are in their prime, and are expected to do good service to literature. A new writer, Adam Szymanski, gives promise of large success, judging from his "Sketches," which are taken from the life of the Polish exiles in Siberia. Two historical novels have appeared, viz., "The Knights of King Albert," by S. Kaczkowski, and "M. Wolodyjowski," by Sienkiewicz. Humorous literature seems to flourish in Poland in the hands of Jordan, Junosza, Wilczynski, and Baluoki. Historical stories and tales have been published by Bykowski, Rawita, and Rapacki. Rogosz's stories, "Upon the Waves of Destiny" and "Richard Gozdawa," are well written and interesting; Gawalewicz's tales are much admired, as are also Dygasinski's studies, in story form, of the character of the Polish peasantry. Madame Orzesko's new novel, "On the Niemen," is pronounced to be one of her very best. A few other contributions in this line may here be named: "By Sunlight and Gaslight," by W. Gomulicki; "Heroes of Today," by F. Lentowski; and "The Mistake," by B. Prus. In the drama something, but not much, has been done. K. Zalewski's comedy, "Apfel, the Wedded Couple," is very popular; Mankowski's comedy, "The Eccentric," has been applauded; and J. Blizinski's two farces are very laughable. In poetry Madame Maria Konopnicka has published a third series of "Poems," and Gomulicki has made his first collection on an important scale. Some new names may be mentioned: Otawa, Orłowski, and Londynski, men of ability, the critics say. The fine productions of Adam Asnyk, the first lyric poet of the day, have been translated into German. Historical studies have been prosecuted with zeal. T. Korzon has brought out the concluding volume of his monumental work on the internal condition of Poland under its last kings. M. Semkowicz obtained a prize from the Polish Society of Paris for a monograph subjecting J. Długosz's "History of Poland" to a thorough critical analysis. Several other volumes have been published, among which may be named here W. Zakrzewski's

work on the reign of King Stephen Bathory. The critical "Essays" of P. Ohmielowski deserve mention, as do also the lectures, delivered in Florence, by the distinguished poet, T. Lenartowicz, on "The Character of Slavo-Polish Poetry." Translations also, into German and Spanish, of eminent writers are worthy of record. In conclusion, note must be made of a volume of economics, entitled "Galicia's Poverty," by S. Szczepanowski. It is very able, and the sad story told in it has made a profound impression in Poland.

Russia.—Death has left its mark on Russian literature this year in the removal from earth of V. Garshin, only thirty-three, and yet a writer worthy of being ranked with Tourguéneff and Tolstoi. He put an end to his own life, in a state of partial insanity, and his literary remains consist of two small volumes of "Tales." These are mournful records of what he saw, felt, and suffered. In this connection we may note also the death of Rosenheim, eminent as a writer of satirical and other poetry. In the way of novels, tales, and sketches of various sorts, the production has been quite abundant, and in the main satisfactory. Korolenko, who excels in drawing the Siberian runaway, presents another picture, in his latest novel, "During the Journey"; it is highly praised for its power and skill. A lady, signing herself Krestovski, furnishes a new novel, "The Duties," which belongs to the order of psychical analysis, and has met with much favor. Another novel has appeared from the same author, entitled "After the Deluge." Madame Shabelskaya, called the poet of the peasant life of Little Russia, published a novel, entitled "Three Currents," describing in one the new religion of Count Tolstoi, under the name of "Religion of Buddha." Matchett has brought out a volume of "Silhouettes," which have been well received. Other novels and stories that may be named here, are: Karonin's "My World," Mrs. Dmitrieva's "The Prison," Shiloff's "After a Long Separation," Muravlin's "Not Quite Love," Volski's "The Wife," and Tchehoff's "Steppe." Several interesting books have appeared, undertaking to discuss important topics among the peasantry, like the "Woman Question," and various economical conditions of affairs. X. G. Uspenski's "A Ticket" and "Figures in Life" are of this kind. Engelhardt's "Letters from the Country" and Lineff's descriptions of prison-life are good specimens of what the critics call "artistic ethnography." Nadson, the poet, died last year (as noted); the posthumous edition of his verses is very popular. In the field of memoirs the crop is rich. Gontcharoff's "In the Mother Country" takes the lead in giving various types from Russian provincial life half a century ago. Antokolski's "Memoirs," though deficient in literary form, furnish a heartrending picture of the great sculptor's sad and deplorable career. The memoirs of Count Sollogub, Danilevski, Polevoi, Ghilaroff-Platonoff, may be noted.

VOL. XXVIII.—32 A

Literary criticism is well illustrated in Orest Miller's "Russian Authors since Gogol"; the third volume is taken up with Aksakoff, Melnikoff, and Ostrovski, with articles on modern authors. Arsenieff has brought out two volumes of "Critical Studies of Russian Life," and Skabitchevski deals with "The Folk Novelists." Pypin continues his studies of Russian literature before Pushkin and in Pushkin's time, and Timoféeff has published a volume on the undeniable "Influence of Shakespeare on the Russian Drama." Tolstoi's "War and Peace" is discussed by Prof. Karyéeff very ably. Other publications in this line are valuable. In history, Stasulevitch's "History of Mediæval Times," Vol. III, brings the story down to the end of the thirteenth century. Mention also is proper here of Prof. Bulitch's "History of the Earlier Years of the Kazan University," of Vol. IV, of Andrievitch's "History of Siberia," in time of Catherine II; and the "Exterior Policy of Nicholas I" during the Crimean War. Sukhomlinoff has finished his "History of the Russian Academy." In philosophy, P. Lavroff has begun the publication of his "History of Thought." It is the life-work of a veteran laborer and very able expositor of the subject, and is to be published in four volumes. Kavelin's "Problems of Ethics" have appeared in a separate volume, and are remarkably well written. In archæology, Count Bobrinsky has published "The Kurgans around Smyela," and Ptashitaki has brought out a "Description of the Lithuanian State Archives." Prof. Tagantseff makes public his "Lectures on Criminal Law," which contain among other things Drill's exhaustive study of "Juvenile Offenders in Russia and Western Europe." In natural science great interest is manifested, and scientific periodicals are flourishing.

Spain.—Progress in science and letters continues unchecked in Spain, and education and culture are spreading throughout the kingdom. The number of books published in 1888 exceeds by far the sum total of other years. Poetry of every description, lyric, epic, or dramatic, including works of fiction in prose, is being abundantly supplied. Although the master poets, Núñez de Arce, Campoamor, and Zorrilla, have done little or nothing this year, yet there is a large number of younger and enthusiastic men striving to supply the deficiency. Among these may be named J. de las Cuevas, in his "El Espejo del Alma"; Cubillo, in his "Ensayos Poéticos"; Iglesias, in his "Al Fin de la Jornada"; and Bustillo, in a collection of satirical romances revealing superior talent, entitled "El Ciego de Buenavista." In the drama light, short pieces, or *sainetes*, operettas, and the like, are more popular than the classical tragedy or modern melodrama. Novel-writing keeps pace with the progress noted last year, as is shown by publications of Garcia Nieto, Palacio Valdés, Emilio de la Cerdá, Ramon Ortega, Gabriel Moreno, and Carlos

Maria Ocantos. Angelon has brought out a charming novel, "Espinass de una Flor" (Part II of "Flor de un Dia"), and Doña E. P. Bazan sustains her high reputation (noted last year) in her "Los Pazos de Ulloa," Vol. II, and "Mi Romeria," or pilgrimage. Several other ladies are active in this line. In general literature, criticism, and bibliography, improvement is visible. Juan Valera shows this plainly in his "Apuntes sobre el Nuevo Arte de Escribir Novelas," as do also Miguel Alvarez, in "Tentativas Literarias," and Leopoldo Alas, in "Folletos Literarios." Historical science is also making rapid advance, and numerous students and explorers are busily occupied in searching old libraries for rare manuscripts, unpublished documents, etc. M. Fuente's general History of Spain (1850-'62) in twenty-six volumes, is being reprinted, with a continuation by Juan Valera. Balaguer, whose "History of Catalonia" was noted last year, has brought out the eleventh, twelfth, and thirteenth volumes of his complete works; V. Lafuente is steadily occupied in critical studies of the history of Aragon; and Pella y Forgas has reached the seventh volume of his archaeological and topographical description of Ampurdan in Catalonia. Provincial and local history is cultivated with spirit and success. The number of publications is too great to allow of naming them here, save only Ciriaco Vigil's "Asturias Monumental, Epigrafica y Diplomática," three large volumes, with illustrations; O. y Rubio's "Investigaciones sobre la Historia de Valladolid"; and Vol. XV of the richly illustrated work, "España y sus Monumentos." The Geographical Society's "Boletín," two volumes, shows that considerable impulse has been given to this study. Two works on Morocco have appeared; the Philippine Islands have been described by Captain Moreno, and "La Isla de la Paragua," by Captain Canga-Arguelles, both of the royal navy. A volume on the Nicaragua Inter-oceanic Canal by Sepulveda, and further "Noticias de Christoval Colon," by Fernandez Duro, are worthy of note here, as of special interest to Americans. In the way of reprints, or continuations of important works, much has been done, such as Lopez de Gomara's "Conquest of Mexico," M. Pelayo's "La Ciencia Española," Vols. I and II; Arteche's "War of Independence," and Bethencur's "Anales de la Nobleza Española," Vol. VIII. On the whole, the outlook in regard to Spanish literature is decidedly encouraging.

Sweden.—As noted last year, women in Sweden continue to occupy a foremost place in literature. Mrs. Benedictson's "Fru Marianne" was noted in the record of 1887 as one of the best novels published. We may add that it carried off a prize from the Swedish Academy and attained great popularity. Mrs. Benedictson writes under the pen-name Ernst Ahlgren. Another lady, Madame A. Agrell, furnishes a collection of tales, "In the Country," which are pleasing and have been well

received. A. Strindberg, the Zola representative in Sweden, writes with his usual vigor and ability in "The Inhabitants of Hemsö"; but his invectives against family life, and his attacks on the female sex, especially married women, are offensive and discreditable in a high degree. Two of Strindberg's adherents have written comedies, viz., Per Staaff and G. af Geijerstam. The former's, entitled "Svea's Banner," is severe on what is called the boulevard press, and the latter's, named "Father-in-law," ridicules young officers' intrusions into families to catch prizes in marriage. The drama is weak this year. Fiction, on the other hand, is flourishing. This is shown by the large number of novels and tales published in 1888, among which we may name Ernst Arpi's "From a Plebeian Borough," Anna Wahlenberg's "With our Neighbors," Hilma Strandberg's "Westward," i. e., life on the west coast, and a new series of tales by Tor Hedberg, son of the veteran Frans Hedberg. O. D. af Wirsén, both rival and once friend of Count Snoilsky, and champion of the altar and the throne, has published a volume of poetry displaying much ability; and A. U. Bååth has given a long description in verse of persecutions for witchcraft and sorcery in Sweden in the seventeenth century. A work on sociology, entitled "Om Nationernas Sammanväxning," by G. Björklund, has attracted much attention, especially with reference to the dispute between free trade and protection. Political history has been enriched by a new volume of O. S. Rydberg's "Sweden's Treaties with Foreign Powers," 1534 to 1560. The same writer has brought out an essay on the meeting at Kalmar, 1397. A. Blomberg supplies a popular work on Charles XIV (Bernadotte). A. Nyström is very busy on his work (noted in last year's record) respecting the history of civilization and culture. S. J. Boëthius has completed his history of the French Revolution; and J. Thyrén gives a documentary history of the armed neutrality and the peace under Napoleon, including also the European policy from the peace of Amiens (1802) to the rupture between France and England (1803). Prof. G. Ljunggren has added a new volume to his great work, "The Annals of the Polite Literature of Sweden (1809-'14)"; and H. Schück is continuing his history of Swedish literature. The distinguished poetess, Anna Maria Lenngren, is handsomely dealt with in a monograph by Karl Warburg; and L. Loström's "The Swedish Academy of Art during the First Century of its Existence," is much praised by the critics. A few volumes in general literature may be noted in conclusion. Dictionaries in that phenomenon of the day, Volapük, have been published by G. Liedbeck. C. Lundin has brought out a description (splendidly illustrated) of modern Stockholm. In a volume for young people the historian Victor Rydberg tells the story of "The Myths of our Fathers." E. Dahlgren addresses book-

lovers in a volume entitled "The Public Libraries of Sweden"; the Norwegian professor L. Dietrichsen, after lecturing on the subject, has published a book on "Fashions and the Reform of Drees"; and the writer whose pseudonym is Sigurd, has issued a new volume of his popular humorous tales.

LOUISIANA. State Government.—The following were the State officers during the year: Governor, Francis T. Nicholls, Democrat; Lieutenant-Governor, James Jeffries; Secretary of State, Leonard F. Mason; Treasurer, William H. Pipes; Auditor, Ollie B. Steele; Superintendent of Public Education, Joseph A. Breaux; Attorney-General, Walter H. Rogers; Chief-Justice of the Supreme Court, Edward Bermudez; Associate Justices, Felix P. Poohé, Samuel D. McEnery, Charles E. Fenner, and Lynn B. Watkins.

Finances.—The following statement exhibits the condition of the State treasury during the years 1887 and 1888, till April 30:

GENERAL FUND, 1887.	
Receipts during 1887.....	\$247,965 40
Receipts during 1888.....	158,950 18
Total revenue tax and licenses.....	\$506,915 58
Expenditures in 1887.....	\$320,313 17
Expenditures in 1888.....	192,233 96
	518,577 13
Amount overdrawn, April 30.....	\$11,661 57

The overdraft was caused by taking up loans of various public institutions in anticipation of settlements of tax-collectors that were expected to reach the treasury in April. There remained but \$32,264.56 of warrants against the general fund of 1887 unpaid May 1, 1888, and about twenty settlements to be completed. All the loans made by public institutions for the year 1887 have been paid, except that of the State Normal School.

CURRENT SCHOOL FUND, 1887.	
Receipts during 1887.....	\$34,301 04
Receipts during 1888.....	160,356 01
Total receipts.....	\$194,657 05
Expenditures during 1887.....	\$10,391 16
Expenditures during 1888.....	147,299 15
	\$157,690 31
Cash balance, April 30, 1888.....	\$36,966 74

INTEREST TAX FUND, 1887.	
Receipts during 1887.....	\$92,632 23
Receipts during 1888.....	851,560 57
Total receipts.....	\$944,192 80
Expenditures during 1887.....	\$92,307 46
Expenditures during 1888.....	373,398 10
	465,705 56
Cash balance, April 30, 1888.....	\$9,487 24

All advances made by the banks on coupon account have been repaid, except about \$30,000. The State can secure any advances required for cashing coupons promptly at a rate not exceeding four per cent. a year, and arrangements can be made for loans to public institutions as required at a rate not exceeding five per cent. a year, provided the tax levy is

adequate for interest requirements, and the general fund appropriations are confined strictly within the estimated revenues.

GENERAL ENGINEERS' FUND.	
Receipts during 1887.....	\$163,925 63
Receipts during 1888.....	102,184 22
Total receipts.....	\$266,109 85
Expenditures during 1887.....	\$162,545 10
Expenditures during 1888.....	86,630 10
	\$249,175 20
Cash balance, April 30, 1888.....	\$16,934 65

GENERAL FUND, 1888.	
Receipts to April 30, inclusive.....	\$229,106 49
Expenditures to April 30, inclusive.....	169,722 79
Cash balance, April 30, 1888.....	\$59,373 70

The total amount of general fund warrants outstanding May 1 for 1888, was \$26,831.64.

Legislative Session.—The Legislature was convened at Baton Rouge on May 14, and adjourned on July 11. The Governor-elect, Gen. Francis T. Nicholls, was inaugurated on May 21. Randall L. Gilson was elected by the Legislature on May 22 to succeed himself, and on May 29 Edward D. White was chosen U. S. Senator to succeed James B. Eustis.

Revision of the Laws.—In pursuance of an act of 1884, authorizing a committee selected by the General Assembly to revise the general statutes of the State, and to incorporate them into the Revised Statutes, and to complete and arrange a code of criminal practice and a penal code, the committee arranged the laws into one volume. No arrangement or codification of the code of criminal practice and a penal code was made. The Revised Statutes were presented to the General Assembly at its session in 1886, but no action was then taken on the report of the committee. The revision will be continued so as to include the civil code and code of criminal practice and penal code.

The Swamp-Land Decision.—The Court of Claims in Washington, D. C., on January 30, rendered a judgment in favor of the State of Louisiana for about \$43,000, being the five-per-cent. funds and swamp-land indemnities that had been applied as a credit by the U. S. Treasury Department on the interest on Louisiana bonds held by the U. S. Treasurer as part of the Indian trust funds.

The court held that the United States was a trustee to ascertain and pay over to Louisiana the amount of both funds, and it is also held that Louisiana then became a trustee of the fund to apply it to the building of post-roads and redemption of swamp-lands in accordance with the acts of Congress, and, therefore, it was not applicable to any State debt. The interest that had accrued was not equal to the amount of the fund due the State, and the Treasury Department had, therefore, credited a part which would not mature till 1894, and held about \$12,700 until interest should accrue. It is presumed that this decision will not be appealed from by the United States, since this

is the logical outcome of a former decision for \$71,000 which was affirmed by the United States Supreme Court, and this case turned on that decision.

Levees.—During 1886-'88 there were 118 contracts for levee work, involving 69 miles of new levee, and the enlargement and raising of 49½ of old levee, at a cost of from ten to twenty-nine and a half cents a cubic yard, averaging eighteen and a half cents a cubic yard. The total quantity of earth-work under these contracts amounts to 3,872,828 cubic yards, at a cost of \$618,622. Besides this work the Fifth Levee District has constructed 15½ miles of new levee, and has raised and enlarged 30 miles of old levee, amounting to 1,655,000 cubic yards, at a cost of \$362,590. The Fifth Levee District has also contributed \$9,500 for levee work in the lower part of Chicot County, Ark. The Tensas Basin Levee District has also contracted for work in Desha and Chicot Counties, Ark., involving the building of 6 miles of new levee, and 8½ miles of old levee, amounting to 592,184 cubic yards of earth at a cost of \$150,000. The Mississippi River Commission, in consideration of the work done in Arkansas by Louisiana, consented to close all gaps between Amos Bayou and the Louisiana line, that had not been provided for. The work is nearly complete. It involves the raising and enlargement of 20 miles of old levee and the building of 17 miles of new levee, 1,500,000 cubic yards, at an expenditure of \$320,000.

The work thus accomplished and in progress, with that done by the local levee boards, should, before another high-water season, give a continuous line of levees from the highlands south of Arkansas river to the upper limits of this State, and cut off the overflow from this source that has heretofore inundated the parishes lying between the Ouachita and the Mississippi rivers, and that was without remedy by any work possible within the boundaries of the State. The creation of the corporations of the Fifth Louisiana and the Tensas Basin Levee Districts by the General Assembly in 1886, has been the most important levee legislation of recent years. It enabled the districts to do essential work outside of the State's boundaries. The Tensas Basin Levee District has entered into agreement with the Louisiana, Arkansas and Missouri Railroad Company to construct an embankment on the west side of Bayou Macon and across the streams and lowlands known as Bœuff Cut-off. The construction of this work, if it has the proper height and strength to confine the floods, will cost a large sum. It will give additional security against overflow, and protect a greater portion of the district independently of levees on the front. The commission has also assisted, within the past two years, in the construction of the Kemp and Deer Park Levees in the Fifth District, and allowed \$40,000 for the construction of the Morganza in consideration of Louisiana contributing the balance

necessary to the completion of the levee, and has also expended \$75,000 in the repair of other levees. The aggregate work undertaken by the State, the Fifth District, the Tensas District, and the levee districts in the State in the past two years, is 90 miles of new levee, and 70½ miles of old levee raised and enlarged, requiring 5,684,126 cubic yards at a cost of about \$1,162,696.

Sugar.—Efforts have been made to secure the location of the sugar-experimental station at Audubon Park. If successful, it is intended to devote fifty acres for a model sugar-farm, where a laboratory will be fitted up and all improvements in sugar-culture and methods in agriculture will be demonstrated. The experiments on the diffusion process conducted by the Department of Agriculture created considerable interest and were closely watched by the planters. The proposed reduction of 50 per cent. in the tariff of sugar by Congress, led to a delegation being sent to present the claims of sugar before the Finance Committee of the United States Senate, and protest against the proposed reduction, claiming that the sugar-producing and refining interests of the country give employment to several millions of our population, hence they should not ruthlessly be destroyed, particularly as they are rapidly progressing and promise to supply a large portion of the entire needs of the United States.

Against the claim that the sugar industry was non-progressive, and that, as the sugar-cane had never become thoroughly acclimated in this country, the domestic product could never be raised to a plane of successful competition with that of foreign countries, it was shown that, in spite of the destruction of the sugar industry by war, it was promptly rehabilitated, and from 5,000 tons at the date of resumption, the production has been increased to nearly 200,000 tons. This great progress has been made in the face of extreme depression in prices, lack of adequate capital, and frequent disasters from river floods. That sugar-cane had not become adapted to the climate, was also conclusively denied by the recital of the fact that the sugar-crop has never failed, while nearly every other crop in the country has frequently met with disaster. Besides, the productiveness of the cane has been steadily increased by careful cultivation, and has been demonstrated to be susceptible of still greater improvement. The progressive spirit of the sugar-planters was proved by the fact that, in spite of scant means, such improvements have been made in extracting machinery as have up to date resulted in almost doubling the output of many sugar-houses. The planters' memorial sets forth the fact that many millions of capital were invested in sugar-culture, and that the annual output averaged in value fully \$20,000,000. Of the proceeds of the crop, fully 70 per cent. is consumed by labor, about 500,000 persons, more than half the population of Louisiana, being supported by the industry.

Political.—The Democratic State Convention was held in Baton Rouge on January 10, and the following ticket was nominated: For Governor, Francis T. Nicholls; Lieutenant-Governor, James Jeffries; Auditor, O. B. Steele; Treasurer, W. H. Pipes; Secretary of State, L. F. Mason; Attorney-General, W. H. Rogers; Superintendent of Education, Joseph A. Breaux. The platform included the following:

That the levee system of the State is a necessity for the protection of the lives and property of our citizens, and we pledge ourselves to develop, maintain, and protect the same to the fullest extent consistent with the finances of the State as absolutely essential to the happiness and prosperity of our people.

We are opposed to the employment of the penitentiary convicts of the State in such manner as to bring the convict labor in competition with free labor.

We invite to the fertile fields of Louisiana immigrants from all lands, with the assurance that they shall find here a hearty welcome and a happy home.

The Republican State Convention was held in New Orleans on January 28. The following ticket was nominated: For Governor, H. C. Warmoth; Lieutenant-Governor, Andrew Hero, Jr.; Secretary of State, John F. Patty; Treasurer, B. F. Flanders; Attorney-General, Robert Ray; Auditor, James Forsythe. The platform contained the following:

We condemn the free-trade tendencies of President Cleveland's Administration and the organization of the House of Representatives at Washington, whereby a free-trader was made Speaker, who has in turn constituted the committee of ways and means in such manner as to insure an attack upon all the protected industries of the country, and especially those of our State—sugar and rice; and we see with amazement that our representatives in Congress consorted with and voted for the organization which we condemn.

Believing it to be the duty of the National and State governments to foster and protect the agricultural and manufacturing interests and industries of the State, we pledge our cordial endeavors to assist in adequate legislation for the safety and security of the American principle of protection to all of our industries, without regard to time, place, or location, to the end that labor and capital shall be secure in their rights and privileges from foreign competition and interference.

We declare our approbation of the legislation of Congress, wherein appropriation of \$15,000 per annum is made for agricultural stations in the different States; and we recommend our Legislature to supplement said appropriation, so that we may have the intent of the law carried out, to the end that we may ascertain the best practice of agriculture for our various products.

We invite *bona-fide* immigration to our State, but we condemn the importation of contract labor, which tends to debase the labor of our own people and deprive them of the employment which they would otherwise enjoy.

We condemn the use of convict labor outside of public works, and demand that it shall not be allowed to come in competition with free labor.

The Young Men's Democratic Association held a meeting in New Orleans on March 28, and adopted the following platform:

That we call on the citizens of New Orleans to assist this association in its honest endeavors to bring about an era of good government, and we declare our principles to be that we pledge ourselves to have clean streets, good drainage, better pavements, and the best of levee and shipping facilities; to insist that proper drainage-machines, with a full supply of coal and

faithful and skilled men to work them, shall save this city from such overflows as have lately made lakes of the lands in the rear parts of this city, and have brought desolation to these districts and bred pestilence and fever among the dwellers therein. To strike from the pay-rolls political dead-heads, and give employment to those who can and are willing to work, so that for each dollar spent there shall be a dollar's work done, and that those who do a dollar's work shall get a dollar's pay, and that no city official shall draw two salaries. To have the police force purged and remodeled and so fairly paid that proper men may be induced to serve. To have good schools provided and competent teachers given full pay. To insist that the taxes shall be honestly and closely collected, but fairly and without oppression; and to see that the public funds derived therefrom shall be so appropriated to legitimate expenditures and within legal limits that city warrants shall be worth par, and city employés be enabled to cash their warrants every month without discount. To insist that the taxes we pay shall be applied to giving us that protection to life and property to which we are entitled, and that they shall be expended in making this city a clean, healthy, and attractive abode, where real estate shall be worth owning, and where for every store, office, or residence there shall be a satisfied tenant and a contented landlord; and where for twelve months of the year those seeking employment may find it at remunerative wages or salaries. To have vice and corruption suppressed and all legitimate enterprises fostered and encouraged; and to have that efficient and honest administration of public affairs that will engender confidence in the community and bring capital and immigration to this locality. To have the polls so guarded that good citizens will be afforded every facility to cast their votes, and that they will be protected from any indignity or molestation while so doing; to have as our commissioners at the ballot-boxes to represent this association men of integrity and force, who will see that all fair ballots are counted and all fraudulent votes rejected, and to insist that in the exercise of their duties they will receive proper protection.

They also issued the following ticket: For Mayor, Joseph A. Shakspeare; Treasurer, Joseph N. Hardy; Comptroller, Otto Thomann; Commissioner of Public Works, Gen. G. T. Beauregard; Commissioner of Police and Public Buildings, Thomas Agnew.

The election was held on April 18, and Gen. Nicholls and the other candidates on the Democratic ticket were elected by a majority of 85,786 in a total vote of 188,728.

The Reform ticket in New Orleans received the support of the Republicans, and defeated the regular Democratic ticket by 7,000 majority. Gen. Beauregard resigned his office on July 28, and was succeeded by E. T. Leche.

In the presidential election, Mr. Cleveland received 85,082 votes; Gen. Harrison, 30,484; Gen. Fisk, 160; and Mr. Streeter, 39—a Democratic majority of 54,548. A Republican Congressman was returned from New Orleans. The five other members of the Congressional delegation are Democrats. The State Legislature contains 38 Democrats and 2 Republicans in the Senate, and 86 Democrats and 12 Republicans in the House.

LOZIER, CLEMENCE SOPHIA, physician, born in Plainfield, N. J., Dec. 11, 1818; died in New York city, April 26, 1888. She was the youngest daughter of David Harned, and was

educated at Plainfield Academy. Subsequently she removed with her parents to New York city, and in 1829 married Abraham W. Lozier, an architect. Her husband's health soon began to fail, and she established a school for young ladies, which she conducted for eleven years. During this time she was associated with Mrs. Margaret Pryor in visiting the poor

est in all that pertained to the elevation of her sex, and was an intimate friend of Susan B. Anthony, Elizabeth Cady Stanton, and other well-known woman-suffragists. For thirteen years she was President of the New York City Woman-Suffrage Association, and for four years of the National Woman's Suffrage Association. She also held office in other reform and philanthropic associations, and was an occasional contributor to medical journals.

LUTHERANS. The year 1888 was memorable to Lutherans in the United States, since it was the two hundred and fiftieth anniversary of the organization of the first Lutheran congregation among the Swedes at Christina (now Wilmington), Del. In 1638 there were on the shores of the Delaware fifty Swedish and Finnish Lutherans, with one pastor, using Fort Christina as their church, and a few Dutch Lutherans, without pastor or church, on Manhattan Island (New York); in 1888 there were more than 1,033,000 Lutherans scattered throughout every State and Territory of the United States and the provinces of Canada, having 57 synodical organizations, more than 7,500 properly organized congregations, ministered to by more than 4,000 pastors, supporting numerous educational and benevolent institutions, and carrying on extensive home, foreign, and immigrant missions.

The statistics for 1888 show a large increase, as well in the number of ministers as in congregations and members. According to the best authorities, the Lutheran Church now numbers 4,426 clergymen, 7,415 congregations, and 1,033,846 communicants, a net increase over the figures of last year of 204 clergymen, 250 congregations, and 38,872 communicants. The membership here given does not include the baptized membership of the church, which, if given, would increase the aggregate to nearly 4,000,000. The various institutions are: Twenty-three theological seminaries or theological departments in colleges, 25 colleges, 28 academies, 10 ladies' seminaries, and 48 benevolent institutions. More than a hundred periodicals are published, in the English, German, Norwegian, Danish, Icelandic, and Finnish languages. The following is a brief *résumé* of the more important events during the year within the general bodies, and of matters that deserve to be put on record. Only two of the general bodies held conventions—the general council and the synodical conference.

General Synod.—This body, organized in 1821, embraces the following 28 district synods (almost exclusively English): Maryland, West Pennsylvania, Hartwick (N. Y.), East Ohio, Franckean (N. Y.), Allegheny, East Pennsylvania, Miami (Ohio), Wittenburg (Ohio), Olive Branch (Ind.), Northern Illinois, Central Pennsylvania, Iowa, Northern Indiana, Southern Illinois, Central Illinois, New York and New Jersey, Susquehanna, Pittsburg, Kansas, Nebraska, German Wartburg, and Middle Tennessee, numbering 957 clergymen, 1,346 con-

CLEMENCE SOPHIA LOZIER.

and abandoned under the auspices of the Moral Reform Society. From her mother she had inherited a strong liking for medicine, and, under the direction of her brother, Dr. William Harned, introduced into her school studies on physiology, anatomy, and hygiene. Five years after the death of her husband she went to Albany, and for a time was at the head of a private school. She then determined to study medicine, and in 1849 attended lectures at the Rochester Eclectic Medical College. Subsequently she entered the Syracuse Medical College, where she received her degree in 1853 with the highest honors. Dr. Lozier then returned to New York city and at once began to practice as a homœopathist. Her success was unusual, and her income is said to have exceeded \$20,000 a year in her best days. In the surgery required by the diseases of women she showed remarkable skill, and performed many capital operations. In 1860 she began a course of lectures on medical subjects in her own parlors, the outcome of which was the formation of a ladies' medical library association, and this in 1868 was merged into a medical college association. The latter through her efforts became the New York Medical College and Hospital for Women, of which she was clinical professor of diseases of women and children and also for more than twenty years dean of the faculty. This institution was the first distinctively woman's medical college established in New York State. She took an active inter-

gregations, and 146,871 members. There are within its bounds 5 theological seminaries, 4 colleges, 8 academies, 2 ladies' seminaries, and 2 orphans' homes. The thirty-fourth biennial convention of this body will be held at Allegheny, Pa., June 12, 1889. For the report of the last convention see "Annual Cyclopædia" for 1887, p. 447.

General Council.—This body, organized in 1867, is composed of ten district synods (English, German, and Scandinavian), as follows: Ministerium of Pennsylvania, ministerium of New York, synods of Pittsburg, Ohio, Swedish Augustana, Canada, Texas, Indiana, Norwegian Augustana, and Iowa (the two latter being merely advisory members), embracing a membership of 1,120 clergymen, 1,949 congregations, and 292,964 members. The Michigan synod severed its connection with the Council, and the Danish synod, a body consisting of 88 ministers, 88 congregations, and 5,200 members, made overtures for membership in the near future. The educational and benevolent institutions within the bounds of this general body may be summarized as follows: Four theological seminaries, 7 colleges, 6 classical seminaries, 1 ladies' seminary, 2 conservatories of music, 15 orphans' homes, 9 hospitals, 1 deaconess institution at Philadelphia, and 1 immigrant mission (Swedish, German, and Danish) at New York. The General Council held its twenty-first annual convention for the first time west of the Mississippi river, in St. John's English Lutheran Church, Minneapolis, Minn. The convention was opened with the full communion service of the Lutheran Church. The opening sermon was delivered by the president, the Rev. A. Spaeth, D. D., of the theological seminary at Philadelphia, based on Gal. iii, 9, "The nations and the Gospel." After the close of divine service the council was organized for the transaction of business. The district synods were represented by 64 clerical and 39 lay delegates, the Texas synod not being represented by delegates. The Rev. Joseph A. Seiss, D. D., LL. D., pastor of the Church of the Holy Communion, Philadelphia, was elected president. The work of the convention consisted of the consideration and action on the reports of standing committees on missions, education, liturgies, etc.

Home Missions.—This work is intrusted to three committees—English, German, and Scandinavian—which have charge of mission stations and missionaries, independent of the district synods. The English committee reported 5 missionaries and 10 missions, as follows: Illinois, 2; Ohio, 1; Minnesota, 6; Dakota, 1. The receipts for the year were \$4,763.64; the expenditures, \$3,892.50. The German committee reported 6 missionaries in their employ in Texas, Nebraska, and Dakota. Seven young men have been received from Kropp, Germany, and 27 students in the same institution have received aid from the committee. The receipts were \$4,364.80, of which \$1,225 were

spent for missionary work in America, the remainder for the institution at Kropp. The Council decided that it was impracticable to enter into organic connection with the Rev. J. Paulsen's institution at Kropp. The following action was taken:

1. That it is not expedient for the General Council to have a theological seminary in Germany to which the entire theological education of our future German pastors should be committed.

2. That the chief source of supply of laborers in the German, as in our other mission fields, should be found in our own congregations; and that such persons should be trained, as far as possible, in our own institutions.

3. That, for this end, our pastors should be delegated to find devout young men in their congregations who are willing to enter the ministry; and that Wagner College, in Rochester, be strongly recommended as a proper institution to prepare them for the seminary in Philadelphia.

4. That, nevertheless, under the present circumstances it is highly desirable and necessary that young men should be secured from Germany, and that for this end the committee shall be empowered to enter into arrangements with one or more institutions in Germany; provided, first, that these arrangements receive the approval of the General Council; and, second, that such institutions have only a preparatory character.

The Swedish committee's report was read by the Rev. S. P. Lindahl. The work is chiefly carried on by the conferences of the Swedish synod, and this committee has charge of the territory outside of these. The committee reported missionaries and missions in nearly all the States and Territories of the United States, as well as in Canada. The receipts of the general committee amounted to \$5,977.79; those of the entire synod for its numerous missions, \$14,588.22; and for the Utah mission, \$2,914.70; an aggregate of \$18,822. The report was so full of interesting and gratifying facts, that it called forth the following action:

Resolved, That we have heard with great gratification the report of the Swedish Augustana synod's missionary work, and express our gratitude to God for the marked blessing he has laid upon its faithful efforts and the honor he has conferred upon it in calling it to a task so great in its proportions and so rich in its promises.

Efforts were made at this convention to centralize all the missionary operations of the General Council and appoint one or more missionary secretaries, who shall devote their whole time to this important and ever-increasing work. The following is a summary of all the home missionary operations in the Council—English, German, and Swedish—not including, however, a number of important missions carried on and entirely supported by individual congregations: 270 missionaries, 392 congregations, for which were contributed \$48,686.98.

Foreign Missions.—The report, read by the secretary of the committee, gave the following as to the affairs of the mission among the Telugus, in India: The mission, which has Rajahmundry for its principal station, has 5 foreign missionaries, 4 wives of missionaries, 2 native pastors, 7 evangelists, 10 teachers at Rajahmundry and

52 at the other stations. The pupils in the various districts number 525. There were baptized during the year, 235; the number of Christians is 2,087. The receipts for the year amounted to \$10,288.20; the expenditures were \$10,307.89. The Rev. I. K. Poulsen, who had been laboring in India since January, 1871, returned to his home in Denmark, on account of impaired health. The missionary operations are extending so widely and rapidly that missionaries are needed at once. The mission now has a printing-press, which is doing excellent work in disseminating religious tracts and books. A Telugu edition of "Bible History," with illustrations, is shortly to be issued.

Immigrant Mission.—The annual reports of the Rev. W. Berkenmeyer and Mr. A. B. Lilja, the German and Swedish missionaries at New York, showed that 59,248 Swedish and 11,771 German emigrants passed through the Emigrant House, at 26 State Street, New York. Of Germans, 1,192 were aided out of the benevolent funds of the mission. The receipts for the year were \$17,285.11; the expenditures, \$16,084.66; and for the chaplain on Ward's Island, \$408.50. The money deposited for emigrants amounted to \$84,612.94.

Church-Book Committee.—The committee's report embraced: 1. The remainder of ministerial acts not completed last year, i. e., forms for the visitation of the sick, communion of the sick, commendation of the dying, and burial of the dead. 2. The common service for the use of all English-speaking Lutherans, prepared by the joint committee of the General Council, the General Synod, the United Synod of the South. It has already been published by the latter two bodies, and the edition of the Council is to be published as soon as possible. 3. The standard English translation of the "Augsburg Confession," and Luther's "Small Catechism." For the former, the Latin *editio princeps* of 1530 has been made the basis, and Richard Taverner's English translation of 1536 the standard of the English edition. For the use of the committee, the English edition of 1536 has been republished by the Lutheran Publication Society, Philadelphia, under the title "The Augsburg Confession, translated from the Latin, in 1536, by Richard Taverner, edited by Henry E. Jacobs, D. D." Richard Taverner, the translator, was a celebrated lawyer and classical scholar, educated at Oxford and Cambridge. He was chief clerk to Thomas Cromwell, the distinguished minister of Henry VIII, who was a faithful and zealous Lutheran. All of Taverner's fine attainments were devoted to the cause of the restored Gospel. In 1552 he was licensed to preach, and in this capacity did good service. He will always be remembered for his excellent and idiomatic translation of the Bible in 1539. He also supplied the people with "postils" or sermons to be used in churches where no other provision could be made for the preaching of the Gospel, and in many ways rendered efficient service in bring-

ing before the people the writings of the reformers. For the standard English translation of the catechism, Luther's last edition of 1543 has been adopted, and Dr. Philip F. Mayer's translation has been made the basis of the new translation. In addition to the three general bodies uniting in securing a uniform English edition of these Lutheran standards, the Joint Synod of Ohio has decided to take part. Closely allied to the Church-book Committee are the Committee on Sunday-School Work, who presented an elaborate schedule for a seven years' course of lessons, covering the infant, intermediate, and advanced departments in Sunday-schools, and furnishing lessons from the Old and New Testaments, from the latter for the festival, and from the former for the non-festival portion of the Church year. The committee was instructed to issue a graded series of lessons for the schools, and have it ready for use as soon as possible. During this convention, services were held in the interest of home and foreign missions, education, benevolent operations, and the work of deaconesses, besides a special service, in the Exposition Buildings, on Friday, Sept. 14, in honor of the quarto-millennial anniversary of the settlement (in 1638) of the Swedes on Delaware river. The next convention of this body will be held in Pittsburg, Pa., Oct. 12, 1889.

Synodical Conference.—This general body, organized in 1872, embraces the following four, exclusively German, district synods: Joint Synod of Missouri and other States, Wisconsin Synod, Minnesota Synod, and English Conference of Missouri—numbering 1,238 clergymen, 1,740 congregations, and 341,387 members. There are within its bounds 3 theological seminaries, 3 colleges, 7 academies, and 14 orphan's homes, hospitals, and immigrant missions. This general body held its twelfth convention in Trinity (German) Lutheran Church, Milwaukee, Wis. The opening sermon was delivered by the Rev. A. Ernst, Professor in the Northwestern University, based on Eph. iv, 3-6. Nine sessions were held, of which five were devoted to the discussion of the doctrinal subject unity of faith, and four to the transaction of business. The following officers were elected: President, Rev. John Bading; Vice-president, Rev. M. Tirmenstein; Secretary, Rev. O. Gausewitz; Treasurer, H. A. Christiansen. The home missionary work of the body is carried on by the district synods. Missionary work is carried on by the conference among the colored people of the South, seven missionaries being located in Arkansas, Louisiana, Virginia, and Illinois. The contributions for this work for two years amounted to \$21,308.02, and the expenditures to \$20,722.21. The next convention will be held in St. Paul, Minn., in 1890.

United Synod in the South.—This general body, organized in 1886, held its second convention in Savannah, Ga., Nov. 24-29, 1887. (See "Annual Cyclopædia" for 1887, p. 449.) It

embraces the following eight district (exclusively English) synods: North Carolina, Tennessee, South Carolina, Virginia, West Virginia, Mississippi, Holston (Tenn.), and Georgia, numbering 186 clergymen, 873 congregations, and 88,641 members. There are within the bounds of this general body, 1 theological seminary, 5 colleges, 18 academies and ladies' seminaries, and 1 orphans' home. The next convention will be held in Wilmington, N. C., Nov. 14, 1889.

Independent Synods.—The following twelve synods carry on their church, educational, mis-

wife of John D. Lankenau and the daughter of the late Francis M. Drexel and sister of Francis A. Drexel. The building, erected on the grounds of the German Hospital, at Girard and Corinthian Avenues, was begun Sept. 20, 1886, and the corner-stone was laid Nov. 11, 1887. It has a frontage on Girard Avenue of 250 feet, with wings running south 800 feet, and an open court between the wings of 120 and 140 feet. The main entrance is in the center of the Girard Avenue front, having an archway 15 feet high directly under the chapel, which forms the center of the building and is

THE MARY J. DREXEL HOME, PHILADELPHIA.

sionary, and benevolent operations independent of the four general bodies and of each other: Joint Synod of Ohio, Buffalo, Norwegian, Michigan, Norwegian-Danish Conference, Hauge's Norwegian Synod, German Augsburg, Maryland (German), Danish, Danish Lutheran Union, Icelandic Synod, Immanuel's Synod, numbering 925 clergymen, 2,007 congregations, and 219,188 members, 9 theological seminaries, 4 colleges, 8 academies, and 4 benevolent institutions.

Deaconess Institution.—A notable event in the history of the Lutheran Church in America was the erection and dedication of the Mary J. Drexel Home and Mother-House of Deaconesses in Philadelphia. This is a memorial of the lady whose name it bears, who was the

surmounted by a steeple 175 feet high. The building is of brick, with cut-stone trimmings, and is three stories high. It cost \$500,000, and is the gift of Mr. Lankenau to the Lutheran Church. It is to serve a threefold purpose: 1. As the mother-house for and the training-school of Lutheran deaconesses, where Christian women will be trained for hospital, school, and parish work as deaconesses, an office of high repute in the Lutheran Church of Europe, which has been adopted by the various denominations in Europe and America; 2. A well-equipped children's hospital; 3. An asylum for the aged and infirm. On Dec. 6, 1888, this building was formally consecrated, according to the liturgical form of the Lutheran Church, and set apart for its special mission of

benevolence. Mr. Lankenau, the founder of this institution and of the German Hospital, in a few well-chosen words presented the building to the trustees. The following are the concluding words of his address: "I hereby surrender into your hands the building in which we are here assembled. I do this from my own free will and without any other wish or influence than the desire to be of service to my adopted country and for the good and benefit of mankind. A deed I have none to give you. Be satisfied with my word and this hand for the seal. I hope the many witnesses before you will not object to testify to these proceedings and approve my act. I do not wish you to become alarmed at the magnitude of the trust. I will therefore promise you that I will maintain the institution as long as I live; then let the institution take care of itself." The solemn service was concluded with the formal installation of the Rev. Augustus Cordes, the new rector of the Mother-House of Deaconesses, by the Rev. Dr. Spaeth.

Union among Norwegians.—For several years the Norwegian Lutherans in the United States have been divided into parties, so that hitherto there have been four separate synods carrying on their works independently and not unfrequently in opposition to each other and maintaining separate educational institutions. Conferences have been held from time to time with a view of effecting harmony of thought and union of action, and these conferences brought about a better understanding among the majority of the synods and made a union of the conflicting elements possible. In February, 1888, a meeting was held by representatives from four of the different synods, and an overture was made to the Norwegian Augustana Synod (organized in 1860), Norwegian-Danish Conference (1870), Hauge's Norwegian Synod (1875), and the Anti-Missourians of the Norwegian Synod (1853), the oldest and strongest Norwegian body, with a view of merging all the synods into one body; and a joint committee of seven members from each synod was appointed to formulate a basis of union. The committee met in August at Eau Claire, Wis., and prepared the following plan of union for adoption by the respective synods: 1. A doctrinal basis, having special regard to their previous disagreements; 2. A new synodical constitution, to take the place of existing synodical constitutions; 3. A plan for the consolidation of institutions, periodicals, and publication interests. The plan includes the consolidation of the four seminaries—two at Minneapolis, Minn., one at Beloit, Iowa, and one at Red Wing, Minn., and the raising of an endowment fund of \$135,000 for the support of the six theological professors of the institutions as at present existing. A joint meeting of these synods was held at Scandinavia, Wis., Nov. 15 to 22, 1888. About 300 members were present. The threefold report of the joint committee was ratified in all its essential

features; but before the union can be finally consummated it must be ratified by the respective synods at their conventions in 1889. The prospects are very promising for a new united body in 1890 under the adopted title, "The United Norwegian Lutheran Church in America." The various synods concerned in this movement now number 250 clergymen, 800 congregations, and 70,000 members.

Swedish Quarto-Millennial.—The two hundred and fiftieth anniversary of the Swedes was celebrated on Sept. 14, 1888, in the Exposition Buildings at Minneapolis, Minn. The audience, which numbered more than 20,000 Scandinavians, was addressed by Hans Mattson, Secretary of State of Minnesota, Hon. W. W. Thomas, of Maine, late United States Minister to Norway and Sweden, J. A. Enander, editor of "Hemlandet," of Chicago, and others. The kingdom of Sweden was represented by Consul Sahlgaard. In May, 1638, two vessels sailed up the Delaware, bringing the first Swedish colony to America. The Swedes purchased from the Indians a large tract of land on the west bank of the river, extending from Cape Henlopen to the falls near Trenton, and westward without any bound or limit, embracing nearly the whole of the present State of Delaware and a large portion of Pennsylvania. The colonists immediately built a fort, to which they gave the name Christina, in honor of their queen, and erected their church and their humble dwellings in its immediate vicinity. The city of Wilmington now occupies the site of the ancient fort. The Swedes prospered and established new settlements along the Delaware. The fertile soil returned to them its increase in bountiful measure, and they lived in peace and friendship with the Indians, whom they endeavored to convert to Christianity. They came with their pastor, Reorus Torkillus, and one of their earliest pastors, John Campanius (Holm), was the first Protestant missionary among the Indians, antedating John Eliot by several years. Before long they had flourishing congregations in various parts of their territory; but the Dutch at New Amsterdam (New York) looked with jealousy upon this thriving colony, and in various ways sought to subjugate or drive away their neighbors. In 1655 the Dutch suddenly appeared in Delaware Bay with a large force, surprised the Swedes, and subjugated the colony. Many of the settlers were sent back to Sweden and the rest were held as subjects of Holland. This continued for nine years, when New Netherland, with all its possessions, passed under the control of the English crown. As a distinct political organization under the Swedish flag the colony continued only seventeen years; but its influence for good has continued down to the present through the descendants of those pioneers, many of whom are among the most honored citizens of Pennsylvania, New Jersey, and Delaware, and some of whom have occupied high places in

the Church and state. Said Hon. W. W. Thomas, in his historical address:

The man who, as a member of the Continental Congress, gave the casting vote of Pennsylvania in favor of the Declaration of Independence, was a Swede of the old Delaware stock, John Morton, the worthy ancestor of the great war Governor, Morton, of Indiana; and when civil war burst upon the land it was a descendant of New Sweden, the gallant Gen. Robert Anderson, who with but a handful of men calmly and bravely met the first shock of the rebellion at Fort Sumter. And New Sweden will ever be illustrious from the principles of true humanity which distinguish its founding. The idea of New Sweden originated in the mind of Gustavus Adolphus, although it was not until after his death that the plan was carried out by his great chancellor, Oxenstierna. It was the intention of the Swedish King that this colony should be an asylum for the oppressed of all nations—a free State where all would have equal rights and enjoy to the fullest extent the fruits of their own labor. Slavery should never exist within its borders, for, said Gustavus, "Slaves cost a great deal, labor with reluctance, and soon perish with hard usage." William Penn arrived on this continent in 1682, forty-four years after the Swedes, and landed within the limits of New Sweden. It was the Swedish settlers and their children who received the good Quaker, welcomed him to the New World, and entertained him with kindness and hospitality. It was the Swedes also who acted as Penn's interpreters with the Indians. How could it be otherwise than that so keen an observer as Penn should learn from his hosts and interpreters their manner of dealing with the red man and be impressed with its success? Precisely as the Swedes had done before him, Penn acquired land of the Indians by purchase, treated them kindly, and

kept faith with them. Penn has been justly praised for his peaceful and humane policy toward the red man. I would not pluck a leaf from the laurels with which America has crowned the great Quaker; but, honor to whom honor is due. Impartial history records that the honor of originating this policy on this continent is due not to William Penn, but to the Swedes of New Sweden. Penn, in a letter, mentions his kind reception by the Swedes, and praises their industry and their respect for authority. He says: "As they are a people proper and strong of body, so they have fine children, and almost every house full; rare to find one of them without three or four boys and as many girls, some six, seven, and eight sons. And I must do them right, I see few young men more sober and industrious."

With the acquisition of the country by the English, Swedish immigration began to diminish, and for nearly two centuries was insignificant; but about twenty-five years ago it took a fresh start, and since then immigration from Sweden has assumed immense proportions and constitutes one of the marvels in the migration of nations. Taking into consideration only the later years, we note that in 1880 there arrived on these shores more than 40,000 Swedes; in 1881, 50,000; and in 1882 more than 64,000; and, during the first half of the year 1887, more than 80,000 at the port of New York alone. The great majority of these have settled in the West and Northwest. Minnesota has a Swedish population of nearly 200,000, and may justly be called the New Sweden of the great Northwest.

M

MAINE. The following were the State officers during the year: Governor, Sebastian S. Marble (Republican); Secretary of State, Ormandal Smith; Treasurer, Edwin O. Burleigh, who resigned on July 14 and was succeeded by George L. Beal; Attorney-General, Orville D. Baker; Superintendent of Public Schools, Nelson A. Luce; Railroad Commissioners, Asa W. Wildes, Roscoe L. Bowers, and David N. Mortland; Chief-Justice of the Supreme Court, John A. Peters; Associate Justices, Charles W. Walton, Charles Danforth, William W. Virgin, Artemus Libbey, Lucilius A. Emery, Enoch Foster, and Thomas H. Haskell.

Finance.—The following is a summary of the receipts and disbursements of the State during the year:

Cash in treasury, Jan. 1, 1888.....	\$312,288 08
Total receipts for 1888.....	1,087,898 90
Total.....	\$1,399,676 98
Total expenditures for 1888.....	\$1,197,898 52
Cash in treasury, Dec. 31, 1888.....	272,288 41
Total.....	\$1,399,676 98

The resources of the State, Jan. 1, 1889, are \$2,289,073.88; liabilities, \$5,881,502. Of this last-named amount \$1,748,000 is war-loan bonds due Jan. 1, 1889; and \$2,187,400 is bonds of loan for the assumption of municipal

war debts, due Oct. 1, 1889. Expenditures under the different departments of the State have exceeded the appropriations by \$104,025.62.

The fifty-six savings-banks in the State have paid a State tax of \$272,128.42; the different railroads of \$109,760.66, the telegraph companies of \$6,350, the telephone companies of \$1,387.50, the express companies of \$1,293, and the insurance companies of \$22,833.57, making a total from these sources of \$412,803.15.

The condition of the sinking-fund of the State is shown by the following detailed exhibit:

Creditor, by balance, Jan. 1, 1888.....	\$949,660 64
Amount received for interest on funds invested in securities outside the State of Maine.....	40,080 00
Total.....	\$989,600 64
Debtor to amount State of Maine bonds purchased during the year 1888, and canceled as follows:	
Issue, June 1, 1864 (registered).....	\$10,000 00
" " " (coupon).....	4,000 00
" Oct. 1, 1869 (registered).....	1,000 00
" " " (coupon).....	3,600 00
To amount paid for premiums on same.....	584 50
" accrued interest on same.....	209 81
Balance, sinking fund, Dec. 31, 1888, par value.....	965,296 38
Total.....	\$989,600 64

Concerning the bonded debt, the Treasurer says: "The refunding of our public debt between this date (Jan. 1, 1889) and the 1st of October is an imperative duty and of the amount now outstanding, \$1,748,000 fall due on the first day of June and \$2,187,400 on the first of October: against this aggregate amount of \$3,935,400 and available for its payment, we have securities in the sinking-fund whose market value is about \$1,200,000; there is to be paid from the estate of Hon. Abner Coburn \$150,000, of which the State has accepted the trust, and we may possibly have an additional sum of \$357,702 from the National Government as a refund of the direct tax of August, 1861. The debt to be refunded can not, I think, exceed \$2,600,000 in amount, and may possibly be as low as \$2,200,000."

The sinking-fund is wholly composed of United States 4 and $4\frac{1}{2}$ per cent. bonds, and Massachusetts and New Hampshire 5 and 6 per cent. bonds. More than 70 per cent. of the fund is invested in United States bonds; these securities will not shrink in value and they bear an average interest in excess of 4 per cent., and can profitably be maintained for the last payment. The refunding act of 1887 fixes the date for the issue of the new bonds at Oct. 1, 1889.

The State College has on deposit with the State Treasurer, under the provisions of certain resolves and acts of the Legislature, various State bonds, amounting to \$118,300. This whole sum now stands in bonds which become due in 1889, and for the purpose of refunding them the Treasurer suggests that he be authorized to issue a registered bond for the full amount in favor of the State College of Agriculture and Mechanic Arts bearing interest at the rate of 5 per cent. per annum.

The Maine Insane Hospital fund has been increased by the trustees paying into the treasury \$50,000 which they received from the estate of Hon. Abner Coburn. This has been accepted in trust, for which the annual interest is to be paid as authorized by resolve of the Legislature of 1887, which directed the Treasurer to issue to the hospital an unnegotiable registered bond for \$50,000, bearing interest at the rate of 4 per cent. per annum, payable semi-annually.

Savings-Banks.—The fifty-five savings-banks in Maine have assets amounting to \$5,081,497.44 in excess of all liabilities, and during 1888 paid a State tax of \$268,868.06. The total number of depositors on Nov. 1, 1888, was 124,562, of which number 99,298 represent a deposit of less than \$500 each. During the year there has been an increase of 5,333 in the number of depositors, with an average balance to each of \$328.91, an increase over that of 1887. The amount deposited Nov. 1, 1888, was \$40,969,663.05—a total increase for the year of \$2,150,019.83. Every bank in the State has paid its regular semi-annual dividend, the total amount of dividends paid being

\$1,479,785.68, and at the close of the year there remained in the banks \$1,024,867.61 of undivided profits. There are in Maine also six trust companies and fifteen loan and building associations, which are represented in a most healthy, prosperous condition.

Education.—The Maine State College has continued to flourish. The State experimental station at the college was abolished on Oct. 1, 1887, and was then transferred to and became the property of the college. Meteorological observations are regularly made there. A new building for the use of the department of agriculture and natural history was completed during the year. The State apportionment of the school-fund and mill-tax amounted to \$372,708.89, which was divided among the different counties according to the number of pupils in each. The total number of pupils was 211,968, a decrease of 590 for the year. The report of the State Superintendent of Schools indicates that there are fewer pupils in the State than in 1886, yet there were 444 more attending school; the registered attendance in the summer and autumn terms was increased by 1,807 and the average daily attendance by 1,844; the registered and average daily attendance for the winter and spring terms was increased by the numbers 1,315 and 682 respectively.

The reports of the Madawaska Training School, normal department of the Maine Central Institute, and Lee Normal Academy, are very satisfactory, as are also the reports of the trustees of the three State institutions.

Railroads.—The commissioners report that during 1887 the York Harbor and Beach Railroad has been wholly constructed and was opened to public travel on August 8. This railroad extends from the Boston and Maine Railroad depot in Kittery to York Beach, about $11\frac{1}{2}$ miles.

The Penobscot and Lake Megantic Railroad, now known as the International Railroad, is being constructed from the west line of the State easterly by the southern side of Moosehead Lake to a connection with the European and North American Railroad at Mattawamkeag station.

The Somerset Railroad Company contemplates the extension of its railroad from the present terminus at North Anson, northerly and easterly to the village of Bingham, about sixteen miles, and has graded a large portion of the road-bed.

Notwithstanding the multiplicity of railroad charters granted by the Legislature during the last session, three railroad corporations have been organized under the general law, viz.: Harmony and Wellington Railroad Company; Rumford Falls, Andover and Rangeley Lake Railroad Company; and Boston and Quebec Air Line Railroad Company.

There is at the present time (January, 1889) a total of 1,182.22 miles of railroad in the State of Maine.

Labor Statistics.—In May, 1887, Samuel W. Matthews was appointed labor commissioner, and his first report was not issued until 1888. He finds the average rates of wages derived in twenty Maine towns: Agricultural laborers, a month, \$18.87 and board; in haying season, with board, \$1.75 a day; barbers, \$1.50; blacksmiths, \$1.75; boiler-makers, \$2.15; cabinet-makers, \$1.75; carpenters (house), \$1.75; carriage-makers, \$1.50; coopers, \$1.50; engineers (stationary), \$1.75; engineers (locomotive), \$2.43; harness-makers, \$1.60; laborers (common), \$1.40; masons, \$2.75; machinists, \$2.50; millers, \$1.65; painters (house), \$2.00; plumbers, \$3.50; printers (male), \$1.62; printers (female), \$1.10; shoemakers, \$1.62; teamsters, \$1.60; teachers, \$1.41; wheelwrights, \$2.00.

The fishing industry is represented as being in a very depressed condition. The following table shows the number and tonnage of vessels engaged in the cod and mackerel fisheries in Maine as compared with other States in 1885:

STATES.	Number.	Tons.
Maine.....	586	90,735-18
New Hampshire.....	18	614-75
Massachusetts.....	840	42,402-92
Rhode Island.....	60	1,946-06
Connecticut.....	112	3,196-50
New York.....	108	4,209-88
New Jersey.....	1	17-38
Virginia.....	1	22-26
North Carolina.....	1	38-23
Florida.....	18	391-10
California.....	6	61-96
Oregon.....	1	30-70
Total.....	1,739	90,704-81

Complete returns for 1887 show the number of vessels in Maine engaged in the fisheries to be 448; tonnage, 15,857-64; a decrease of about 25 per cent. since 1885. Fifteen factories have been engaged in lobster-canning during the season, putting up from eight to ten million pounds. Each factory employs from 40 to 50 hands, about one half men and boys and the other half women and girls. The price paid for lobsters has been \$1.25 per one hundred pounds.

Returns are compiled from 72 manufacturing establishments, covering 29 industries. Though few compared with the whole number in the State, and defective in many particulars, yet they are among the most important. Those reporting employ 14,695 hands. Sixty-five establishments report capital invested, \$16,867,900, and 7,578 male employés over 15 years of age; 17 report 412 male employés under 15 years; 31 report 6,529 female employés over 15 years, and 12 report 176 female employés under 15 years. Twenty-five industries report the average weekly wages paid men, \$10.27; 16 industries the average annual earnings of men, \$477.81; and 8 the average annual earnings of women, \$336.96. Forty-four establishments report their "gross product," \$11,273,514.

Holidays.—In Maine, the first observance of Labor Day occurred Sept. 5, 1887. In Portland, the city Government officially recognized the day by hoisting the national colors on the City Hall, closing the city offices, and suspending public work. A large meeting of working men and women was presided over by the Mayor. The day was observed in other cities and towns in the State.

The Legislature passed the following act, approved March 10, 1887:

That the Governor shall annually set apart a day in the spring as Arbor Day, and shall issue a proclamation recommending that it be observed by the people of this State in the planting of trees, shrubs, and vines, in the adornment of public and private grounds, places, and ways, and in such other efforts and undertakings as shall be in harmony with the general character of a day so established.

In accordance with this the Governor designated May 1 as the Arbor Day.

Indians.—The annual report of John H. Stowe, agent of the Penobscot Indians, gives the annual census of the tribe as 385, an increase of five over the report of 1887. The appropriations for the year were \$8,819.70. Twelve deaths occurred during the year. A. O. Munson, agent of the Passamaquoddy Indians, gives the population of that tribe as 525, against 515 last year. During the year there have been twenty deaths, including three members of the tribe who died at an age exceeding one hundred years, the oldest being one hundred and seven.

Prisons.—The prison inspectors report 150 convicts in confinement, of whom five were women, in the Maine State Prison. They find that the act of March 17, 1887, abolishing the death penalty and providing that those convicted of murder in the first degree shall not be associated or employed with other convicts, can not be carried out without incurring great or continued expense for buildings and disciplinarians. Those who have been so committed since the passage of the act, have been kept locked in the cells, deprived of the privilege of attending divine service or working at a trade, through lack of means to carry out the provisions of the law. The jails were also inspected, and several were found that were badly kept and in need of repairs. The report of the Industrial School for Girls and that of the State Reform School at Cape Elizabeth, showed that these institutions were in a satisfactory condition. Twenty-three girls were committed at the former during the year, while at the Reform School the number of boys increased from 118 at the beginning of the year to 133 at its close. The adoption of the "family system" was recommended, on the ground that it admits of more thorough classification and separation of juvenile offenders according to their ages, character, and conduct. The boys are separated into families of about fifty each, who eat, sleep, attend school, work, and play in a college by themselves. Each family is in charge of a man and his wife and a teacher.

By this system the worst boys, brought under the influence of the family, are educated and taught habits of industry.

Fisheries and Game.—The biennial report for 1887-'88 of the State commissioners shows that the game has exhibited an almost phenomenal increase, while by fish-planting and protection a bountiful return of resources that had been crippled is assured. The run of salmon in Penobscot river has been large in both years, but in 1888 it far exceeded that of 1887, both in size and numbers. It is deemed necessary for the protection of the fisheries to have the river patrolled. In 1887, 104,000 sea-salmon eggs were sent to Grand Lake and put into St. Croix waters. There were hatched at Orland and put into Craig's brook 25,000. These eggs were presented to Maine by the United States Fish Commission in 1888. In 1888 Maine purchased 282,000 eggs; and the United States Commission presented the State with 148,000. Of this number 60,000 were put into the St. Croix at Vanceboro, and 320,000 into the Penobscot and Mattawamkeag rivers.

The introduction of landlocked salmon has been advanced in 1888; 50,000 were hatched at Orland and distributed.

A wonderful increase of venison game animals is reported. Moose have been more numerous than can be accounted for, unless by immigration from the provinces. This has likewise been the case with deer. Wherever the law against dogs has been enforced, deer, moose, and caribou have made their appearance.

The commissioner of sea and shore fisheries finds that, owing to the protective law, lobsters have been cheaper and more plentiful than before in ten years. The yearly catch is estimated at 25,000,000. Mackerel have been scarce, and the yield was only 25,511 barrels in 1888, against 56,919 in 1887, which is the lowest catch in fifty years. The menhaden or porgy, which disappeared ten years ago, reappeared in 1888, and one or two menhaden-oil factories started up. Alewives are diminishing, and the herring-sardine business is on the increase. The product of 1888 was 450,000 cases, each case containing 100 boxes, and each box ten or twelve little fish. The commissioners have control of 35,000 square miles of territory, to cover which is an appropriation of 18½ cents per square mile, or a total of \$6,500. From this sum has to be paid \$2,000 for sea and land-locked salmon eggs.

Ship-Building.—During 1888 this branch of industry steadily improved and was better than it had been for years. There were built 18 schooners, 1 bark, 1 steam-bark, 2 steam-yachts, 1 steamboat, and 1 steam-tug—24 vessels; total tonnage, 10,035-82. Perhaps the two most notable craft constructed during the year were the five-masted schooner "Gov. Ames" and the steam-tug "H. F. Morse"—the former the largest and only five-masted schooner on salt water, and the latter the largest tug-boat in this country. There is one larger schooner

than the "Gov. Ames"—"The Golden Age," king of the Great Lakes.

Political.—The Republican State Convention was held in Portland on June 12, and Edwin C. Burleigh, then State Treasurer, was nominated for Governor. The following are the chief declarations of the platform:

That free trade as taught by the British Cobden Club and supported by Grover Cleveland and the Democratic party, is hostile to the industrial and business interests of the United States, and that the Mills Tariff Bill should be opposed by all the honorable and effective influences which the friends of American labor can exert, both in Congress and among the people.

That it is the duty of Congress to reduce the national revenue to the amount which shall equal, as nearly as possible, the annual expenditures of the Government, including therein a liberal provision for our veteran soldiers and a proper means of national defense, and that this should be done in a way not to impair our Republican protective system, which has proved of inestimable value to American labor and our home markets.

That, for its surrender of American rights and interests in the recently negotiated fishery treaty, the present national Administration deserves the emphatic censure of all patriotic Americans, and that the Republican Senators are entitled to the thanks of their countrymen for their able and effective efforts against its ratification.

That the prohibitory law against the terrible evils of the liquor traffic, after many years of trial, has become the fixed policy of the State, to which the Republicans of Maine are firmly pledged, and we demand that its provisions shall be faithfully enforced according to their terms and spirit.

The Democratic State Convention was held in Augusta on May 22, and nominated William L. Putnam, who was Mayor of Portland in 1869, for the governorship. These are the principal declarations of the platform adopted:

That unnecessary taxation is unjust extortion, and that the immediate and constantly increasing surplus now accumulating in the United States Treasury is a menace to the business interests of the country and to economical government. We believe that our tariff is so arranged as to foster wealthy monopolies at the expense of the common people, and we sincerely approve of the Democrats in Congress to pass a bill which will, in the language of President Cleveland, "relieve the people from unnecessary taxation, having a due regard to the interests of capital invested, and workmen employed in American industries." We do not advocate free trade, but favor and desire a revision of the present unjust and burdensome tariff laws.

That reform in the administration of the affairs of the State is urgently demanded. Needless and extravagant expenditures have come largely to absorb our State revenues, thus postponing the payment of the State debt, upon which more than the original amount has already been paid for interest. Salaries have been unnecessarily increased, in some cases at their request and with a population nearly stationary, with no State enterprises requiring outlay, the expenditures for State purposes have nearly quadrupled under the rule of the Republicans.

That we view with alarm the growing evil of intemperance in our State, and in the interest of good society and temperance demand the repeal of the prohibitory liquor law, and the enactment of a stringent high-license law.

The official count of the presidential election showed a Republican majority of 23,253 votes,

as follows: Gen. Harrison, 78,784; Mr. Cleveland, 50,481; Gen. Fisk, 2,691; and Mr. Sweetser, 1,844. Four Republican Congressmen were re-elected. In the Legislature the Republicans elected every one of the 81 members of the Senate, and 125 members of the House, leaving the Democrats 26. Of 99 county officers, sheriffs, probate judges, county attorneys, etc., the Republicans have elected 96 and the Democrats 3.

The official count of the votes on the two amendments at the September election resulted as follows: For lengthening the term of the State Treasurer, yes, 12,974; no, 10,249. For annual sessions of the Legislature, yes, 5,776; no, 89,820.

MANITOBA. The agitation in the province on the question of railway monopoly (see "Annual Cyclopædia" for 1887, page 455) brought about the downfall of the Norquay Government in January, 1888. An attempt by the Conservatives to retain power by forming a ministry under the leadership of the Hon. Thomas Harrison, failed. The Hon. Thomas Greenway then formed a Government, which is composed as follows: Premier and Minister of Agriculture, Thomas Greenway; Attorney-General and Railway Commissioner, Joseph Martin; Provincial Treasurer, Lyman M. Jones; Minister of Public Works, James S. Martin; Provincial Secretary, J. E. Prendergast. On July 2, John Schultz was sworn in as Lieutenant-Governor. At the general elections, July 11, the Greenway Government (Liberal) carried 84 out of 88 constituencies.

Railway Monopoly.—In March, Messrs. Greenway and Martin went to Ottawa to consult the Dominion Government with reference to the abandonment of its policy of disallowance. The deputation at first met with no encouragement, the attitude of the Dominion Government on this question being defined in a memorandum, prepared by a sub-committee composed of the Ministers of the Interior and of Justice, which was transmitted to London on January 4. But finally Mr. Greenway obtained a promise that the disallowance policy should be abandoned, and the Dominion Government entered into an agreement with the Canadian Pacific Railway for the abandonment of the monopoly clause of its charter, in consideration of the Government guaranteeing three and one half per cent. interest on its land-grant bonds to the extent of \$15,000,000 for fifty years. Sir Charles Tupper, on May 11, moved resolutions in the House of Commons sanctioning this agreement, which was carried. The Government justified its change of base, on the ground that the enormous wheat-crop of 1888, resulting in a blockade of the Canadian Pacific Railway, had wrought a material change in the condition of affairs. The Opposition insisted that the conversion of the Government was due to the threatening attitude of the people of Manitoba, and to the growing sympathy with them in other parts of the Dominion.

Although the Canadian Pacific Railway had relinquished its monopoly privilege in May, it contrived, by a process of systematic obstruction and litigation, to prevent the construction of the Red River Valley Railway during 1888.

Grain-Crop.—The annual report of the Winnipeg Board of Trade for 1888 gives the following particulars of the grain crop of the Province in 1887:

The returns show an aggregate of 2,600,000 bushels reduced to flour, of which nearly 2,000,000 left the province. In wheat 8,500,000 bushels were exported. The refusal of the Canadian Pacific Railway Company to give traffic figures made it impossible to obtain close returns of the barley and oats sent out, but it is established that not less than 850,000 bushels of the first and 1,000,000 bushels of the last named were exported. The exports of flax, oatmeal, potatoes, vegetables, wool, hides, fish, and dairy products were large. The total value of the farm produce and fish sent out of the province was over \$7,000,000 at local market prices to the producer. The census shows that 16,000 farmers cultivated the soil in 1887. These farmers raised 14,000,000 bushels of wheat. The wheat-land area under crop was 432,000 acres.

MARS, RECENT STUDIES OF. The map of the planet Mars accompanying this article is a reproduction of that presented by Prof. Edward S. Holden in the New York "Herald" of Nov. 28, 1888, entitled "Mars as seen through the Lick Telescope." The canals it represents are either natural or artificial, due, upon the one hand, to the forces that accompanied the geological formations of the surface, or, upon the other, to a system of engineering projected by beings like ourselves and designed for the purpose of establishing a means of communication between the inhabitants of the entire planet. If they are due to the latter cause, then a discovery has been made of the highest importance to the development of cosmical science; and for this reason it would seem wise on our part to pass it carefully in review before the best efforts of logic we can summon to our assistance. The writer, therefore, submits for consideration the conclusions he has drawn from a careful study of the map, and begs to explain that his earliest experience in the science of engineering was the construction of "water-ways" in the primitive forest for the purpose of making every available stream navigable for floating down timber and for passing small vessels up and down stream. To one having such experience the markings on the map of Mars present peculiar analogies.

One of the prominent features of our system of engineering was to avail ourselves of every natural water-way that would save labor and expense, such as lakes, long, deep stretches of streams, rivers, etc. If the reader will look on the map at a place on the thirtieth parallel of north latitude, named Lake Nillacna, he will observe that six of those canals enter this sheet of water from different directions. The lake is nearly as broad as it is long, and covers more than eighteen degrees of both latitude and longitude, which, at the thirtieth parallel of latitude upon Mars, means that the lake is

about 812 miles across. Therefore, if this is a system of Martial engineering, here is a case where the engineers gained 812 miles of natural water-way for each canal. This is just what terrestrial engineers would have done under the same circumstances. Look again at a place marked A, between the fortieth and fiftieth parallels of north latitude. It is about three degrees of latitude in width and sixteen of longitude in length, which makes it about 90 miles broad and 500 miles long. Four canals, from different directions, enter the western end of this long, narrow sheet of water; and three, from different directions also, enter its eastern end; none enter upon its sides. Lake Nillacus is practically a round lake, and its canals enter on all of its sides; but this is a long, narrow lake, and its canals enter its ends. Here, then, is another example of what a skillful engineer upon our own world would have

extremity it is entered by two canals, at its eastern end by two (here we encounter a little uncertainty, growing out of the fact that the original draughtsman was not sufficiently skilled in map-drawing to make the verges of the two hemispheres coincide), on its southern shore by the canal that we followed from B to C. This canal trends nearly due north, and a continuation of its course would carry a vessel through the western strait between the island and the mainland into the extension of the polar sea, still keeping up the character of engineering design hitherto referred to; and it is curiously corroborative of design when we find by the maps given that this system of canals has been pushed as far north as the eightieth parallel; for, as the axis of Mars is inclined to the plane of its orbit seven degrees more than that of our earth to its orbit, it follows that the sun moves seven degrees farther poleward

MAP OF THE PLANET MARS.

done under like circumstances, simply because, by entering a long stretch of water-way at its ends, he gains both the water-way of its length and breadth. If he entered at its sides he would only gain the water-way of its width, 90 miles. The true engineer enters at the ends, because he gains 500 miles of water-way and the 90 besides.

Moving eastward from A to the position B, we come to what is either a section of a widening of the canal system or a natural water-way about 800 miles in length; but, whichever it may be, the same order is observed; it is entered at one end by two canals coming from different directions, and at the other by four, all of which have the same divergent character. Moving northward along one of those canals that lead from its eastward end, we come to a sound of the northern sea formed by the coast of the mainland and that of a large island. This sound, or long, narrow sea, has a length of somewhat over 600 miles and an average width of about 100. At its western

in the summer than on our planet, from which fact there is due to the eightieth parallel of latitude on Mars a mean temperature equivalent to the seventy-third degree on our world, or about the latitude of the North Cape of Norway, which is inhabited to its extreme point. In other words, the canal system of Mars seems to come to an end where the population begins to grow sparse before the influence of polar desolation.

In a general way, we invite attention to the points of convergence D and E on the western hemisphere, near the twentieth degree of north latitude, as they seem to partake of the nature of the water-ways we have been considering, and also F on the eastern hemisphere and the same latitude. But let us take a glance at that great estuary running northward up into the land from the southern ocean, lying near the eastern verge of the eastern hemisphere. Its mouth opens southward at the tenth degree of south latitude, and it penetrates above the fortieth parallel of north latitude; at the point

G, which is suggestive of a possible terminus of its navigable waters, it is entered by three canals coming, as usual, from different directions, one of them suggesting by its crookedness that it may have been a river flowing into the estuary and forming its head-waters. Following this great water-course about 800 miles southward, we see two canals converging to a point on its southern bank; and, directly opposite, a single one, pursuing the general direction of both, starts from its northern bank, as if there were design in securing a continuous direction of the canal-journey on both sides of the great estuary. Some hundreds of miles still farther southward, we find two other canals entering on the northeastern shore; that at the tenth degree of north latitude being remarkable for first entering a lake from the northward and then, by a short canal, entering the gulf of the estuary from the lake.

If we now follow the coast-line, examining carefully as we go, we shall find many of the water-ways that enter the ocean growing wider as they approach the coast-line, precisely as do our own rivers, great and small, and that every one of those natural water-ways has been connected with the canal system. We again find examples of two canals converging to a place of junction and then continuing, in the general course of both, toward an objective point farther on, as pointed out by the arrows. This is so striking a feature of the economy of skillful engineering that it is very difficult to reconcile it with any other origin. If now we retrace our wanderings over the land, we can hardly help noticing that several canals radiate from common centers, some of those centers having as many as seven radiating water-ways, others six, others five, and so on, down to three. But it is also obvious, so far as we can read from the map, that they are not the locations of lakes or other natural water-ways to which an engineer might be induced to converge a system of canals for the purpose of economizing labor by gain of water-way, as in the cases already examined, and we are left to the conclusion that they are centers of population. Of this character is the point marked H, about thirteen degrees south of the equator, near the verge of the western hemisphere, and also I and J, lying between the equator and ten degrees north; and with those as guides others of similar character may be readily distinguished. Let us direct our attention to one of them, K, at the sixty-seventh parallel of north latitude, on the western hemisphere; then let us recall the fact that the sun moves seven degrees farther poleward on Mars in its summer-time than it does on our earth; then, in relation to the climatic condition of these two planets, the assumed center of population at the sixty-seventh parallel of north latitude on Mars is exactly the same as that of St. Petersburg at the sixtieth parallel on our earth, so that, assuming this point of convergence of this canal system to be a populous center upon Mars, is merely suggesting that

there may be a large city on that world bearing the same relations to its climatic conditions that St. Petersburg does to ours, and that it also is the most northerly of the great cities.

Having then passed in review this canal system of our neighboring planet, and found it replete with evidences of design, such as characterize the science of skillful engineering on our own planet, let us assume, for the sake of argument, that we have overdrawn the testimony, and that the markings have resulted from forces that accompanied the creative events of that globe. These two planets have their axis of rotation so inclined to the planes of their orbits about the sun that the alternations of their seasons are practically alike. When the sun moves northward on one or the other, the snow-line recedes toward the north pole. When the sun retires from its northern summer solstice, the snow-line advances down the northern latitudes, just in proportion as the source of heat recedes. The analogy between these concurrent phenomena of the two worlds is complete, and both, also, are divided into land and sea. So far, then, as the logic of facts can reach, the links of analogy are unbroken. This warrants us in assuming that the creative events of both worlds were equally analogous, for "like causes produce like effects," from which it follows that the primal waters of Mars came down upon that globe from an enveloping cloud of vapor covering its molten mineral substances, and thereby hardening them into the rock forms due to their composition, as the granite of our world hardened into its present form under like conditions. But whatever may be the mineral composition that assumes upon Mars the same geological relations that the granite does to our world, it was the primal sea-bottom of that globe, and, as sea-bottom, was covered with water long before its upheaval above the surface occurred, as in the case of our own primal sea-bottom. That this underlying Martial sea-bottom was genuine rock-formation, a glance at the facts will demonstrate. Rocks and clays are all combinations of metallic elementary matter with oxygen or the other five elementary forms of "the oxygen group," but the oxygen far exceeds in the quantity of its combinations all the other four. The presence of water on Mars proves the abundant presence of oxygen, for it is an oxide of hydrogen. Metals are all forms of matter in its elementary condition, and most, if not all of them, will decompose water by setting the hydrogen free and combining with the oxygen it contains; therefore the metallic elementary forms of matter upon Mars must have entered into combination with oxygen, even if no oxidizing agent were present but water. Hence the crust of the planet Mars is rock. The cooling of this rock sea-bottom, as in the case of our own world, caused it to contract or expand, as the case may have been, and therefore to wrinkle; the portions that bent upward rose above the surface of the overlying sea, and

those that bent downward drained the displaced waters into the depressions thus formed, and they became seas, and the mandate was fulfilled in that world also, "Let the waters under the heaven be gathered together unto one place, and let the dry land appear." Forces so generated could not act with equal potency at every point, and there must be locations of greater and less resistance; therefore parts of the wrinkling rock sea-bottom would sink deeper than others beneath the normal level, while other parts would be elevated above it to a correspondingly unequal altitude. Hence Mars has its deep and shallow seas, its sea-level marshes, and mountains, with all sorts of intermediate relations, and the curves in several of the canals indicate that the engineers were flanking the difficulties that interposed between them and their objective point. There is nothing in the nature of the forces that upheave the land of a world from its waters that could leave such markings on its surface as those shown by the map; nor is it conceivable that Nature, in her methods of world-making, could leave upon her land-surfaces such markings as would bear the interpretation of engineering economy without a broken link in the chain of evidence.

It has already been asserted that these assumed canals can not be artificial, because they are eighty miles wide; but it is equally inconceivable that the forces of nature could, by the laws of accident, have constructed such an intricate system of markings, and observed an equal width in every case. The map given with the report has reduced them to forty-three miles wide, and a little investigation will show that this is still greatly in excess. If, when our observer is measuring their width with his micrometer, the water should be disturbed by the slightest breeze, the light would be reflected from them at all sorts of angles, and therefore it would be spread over the micrometer-lines to a much greater extent than the real width of the object under observation. But let us assume that no breeze is stirring the water. The surface then becomes a section of a polished ball, analogous to a polished glass ball, and as such its action upon light is dispersive; it therefore arrives at the earth in the character of divergent light, and must consequently occupy a width upon the micrometer greater than that actually due to an object at that distance. Hence we have probably not yet obtained the actual width of these canals.

Assuming that the weight of the evidence is in favor of the belief that the markings on the maps show a great system of engineering which connects by water-ways every part of the continent of the planet with its ocean-navigation, let us glance at the logical significance of such a state of things. Those who produced such a comprehensive system were not merely great designers, but they must have had instrumental means of "running their

lines," "making and plotting field-notes," "taking levels on the surface of a globe," and "correcting them," as we do; which implies that they are familiar with the science of mathematics. The construction of those canals implies the necessity of locks. Locks could not be constructed without a knowledge of architecture, which, of course, would not be confined within the limits of lock-building. We have an axiom that architecture is the mother of art; both architecture and engineering require the most absolute accuracy of drawing, and merge too naturally into art to permit us to doubt that a people who could conceive such a comprehensive system of engineering would neglect the cultivation of the picturesque. That they are navigators is proved by the fact that their entire canal system is interoceanic; for nowhere do we find a single instance of a canal that is not in direct communication with its great southern ocean or the less expansive seas of its northern hemisphere. Look at Lake Nilacus, three of its six canals run southward, one taking the most direct route to the ocean, and two diverging to the right and left, on their way there, just enough to serve the economic purposes of the great sections of country that they traverse. Two others run direct from the lake to popular centers, one of which is in direct canal communication with the northern sea, while the sixth canal from the lake makes a long stretch westward, but a few hundred miles from the lake forms a junction with another canal, which thence proceeds in the most direct route to the northern sea. It is also worth our while to observe the fact that the system is not based on financial economy. A glance at the map will show that the original engineering scheme was the interpenetration of their entire circumplanetary continent with navigable water-ways, swerving from an equal division of land-sections only where they could utilize natural water-ways or communicate with populous centers, which seems to prove that Mammon is not worshiped on that planet, but has been banished to this. For this great system of navigable water-ways interpenetrates every part of their world alike, making a unit of the social relations of its entire people and precluding the possibility of barbaric conditions existing on any part of their planet. Let us change its name, for it is evidently a world where "Peace on earth, good will to men" is a realization, and it should no longer be called after the God of War.

MARYLAND. State Government.—The following were the State officers during the year. Governor, Elihu E Jackson, Democrat; Secretary of State, E. W. Le Compte; Treasurer, Stevenson Archer; Comptroller, L. Victor Baughman; Attorney-General, William P. Whyte; Secretary of State Board of Education, M. A. Newell; Tax Commissioner, Levin Woodford; Chief-Justice of the Court of Appeals, Richard A. Alvey; Associate Justices,

James M. Robinson, James McSherry, Lewis T. H. Irving, William S. Bryan, Frederick Stone, George Yellott, and Oliver Miller.

Finances.—The following statement exhibits the condition of the treasury during the year:

Total receipts for year ending Sept. 30, 1887....	\$1,860,106 50
Balance Sept. 30, 1887.....	692,028 20
Total	\$2,552,135 70
Disbursements for the fiscal year	2,010,060 24
Balance Sept. 30, 1887.....	\$542,075 46

The reduction of the receipts, as compared with the previous year, is due to the apparent increase of that year by the operation of the refunding act of 1886 and the reduction of the State levy in 1888.

The receipts on account of the free-school fund during the fiscal year were \$69,860.63. This sum added to the balance standing to the credit of the fund Sept. 30, 1887, \$8,836.81, makes an aggregate to the credit of the fund during the fiscal year 1888, of \$78,697.44. The disbursements from the fund during the same time were \$67,080.29, leaving a balance to the credit of the fund, Sept. 30, 1888, of \$11,617.15.

The receipts of the several sinking-funds for the fiscal year were as follow:

To the general fund	\$3,230 14
To treasury relief loan fund.....	12,798 85
To the fund for redemption of defense redemption loan	431,773 89
Making an aggregate of.....	447,802 87

In this aggregate is included the sum of \$866,000 received from the Baltimore and Ohio Railroad Company for the bonds of the company held by the State to the credit of the sinking-fund for redemption of the defense redemption loan. There was invested on account of these sinking-funds during the past fiscal year the sum of \$310,127.13, and there remains to the credit of the several sinking-funds in cash the sum of \$182,679.74. The bonds of the State bearing 8-65 interest were quoted as high as 110 on the market in the month of December, 1888.

The total indebtedness of the State at the close of the fiscal year 1888 was \$10,370,535.56, being less than the amount at the end of the fiscal year 1887, by the sum of \$590,000, that amount of debt having been canceled during 1888. The State holds productive assets and cash to the credit of the sinking-funds to the amount of \$4,715,181.84. There are also unproductive assets to the amount of upward of \$28,000,000, investments authorized by the Legislature from time to time by way of experiment in works of internal improvement, and the interest thereon for many years, some of the items of which perhaps still have a possibility, but the majority of such investments are simply wrecks strewed along the pathway of the State's progress and prosperity.

The receipts from the oyster fund amounted to \$53,236.69, and the expenditures were \$67,918.13, which included the purchase of two new sailing-vessels for \$6,000. The amount

standing to the credit of the oyster fund at the close of the fiscal year 1888 was \$115,627.49. The receipts of the State school-tax during the fiscal year was \$526,993.98, and the disbursements \$520,200.37. The receipts during the fiscal year 1888 from State tobacco inspections were \$82,414.70, and the disbursements \$74,865.85, showing net receipts to the amount of \$8,049.85, which, added to the balance to the credit of tobacco inspections at the close of the fiscal year 1887, made a total of \$18,721.91.

Legislative Session.—The Legislature met on January 4, and adjourned on August 8. The Senate consisted of 21 Democrats and 4 Republicans, and the Lower House contained 68 Democrats and 23 Republicans. One of the most important measures passed was the abolition of compulsory inspection of tobacco. This restriction, it was contended, had long kept down the price of tobacco, especially in southern Maryland. The following are among the important bills that were passed during the session:

- To authorize the Baltimore and Powhatan Railroad Company to use storage electricity as a motive power.
- To protect diamond-back terrapin, and regulate the catching of the same.
- To protect wild turkeys in Frederick County.
- To protect fish in Blackwater river, Dorchester County.
- Relating to jurisdiction liens of execution by justices of the peace.
- To incorporate the town of Barnesville, Montgomery County.
- To sanction bequests of various persons to societies.
- To incorporate the village of La Plata, Charles County.
- For the reorganization of the Board or Managers of the Agricultural College.
- To incorporate the Industrial Educational Society of Baltimore.
- To regulate fishing in Patuxent river with trap and purse seines.
- Amending the charter of the Emattaburg Railroad Company.
- To amend the oyster law in Somerset County.
- Amending the law relating to husband and wife.
- To incorporate the town of Stevensville, Queen Anne's County.
- To change the name of Broad creek, Queen Anne's County, to Broad Harbor.
- To authorize the Downsville and Hagerstown Turnpike Company to construct a turnpike.
- For the protection of fish in Howard County.
- For the protection of game and water-fowl in Charles County.
- To define the oyster-grounds in the Choptank river in which scraping shall be allowed.
- To prevent fishing with nets and seines in the waters of Cecil and Harford Counties.
- For the catching of water-fowl.
- Prohibiting the use of any other instrument than rakes or tongs by tongmen in Talbot, Queen Anne's, Anne Arundel, and Dorchester Counties.
- To incorporate the town of Hampden, Carroll County.
- Granting a new charter to the town of Port Tobacco.
- To amend acts relating to larceny.
- To amend general laws relating to proof of open accounts.
- To incorporate Loudon County and Frederick County Bridge Company.
- For building a bridge across the Potomac at Point of Rocks.

To add a new section to the code relating to pleading, practice, and process.

To add a section to the general laws relating to specific enforcements of contracts.

Relating to setting of pound nets in Elk, Sassafras, and Bohemia rivers and their tributaries, in Cecil County.

To add a section to the general laws, title, "Pleadings," sub-title "Judgments in detinue and replevin."

To amend general laws relating to insolvents.

To provide for the further publication of the archives of Maryland by the Maryland Historical Society.

Relating to compensation of witnesses.

To add a new section to the general law relating to crimes and punishment.

To amend charter of Agricultural and Mechanical Association of Washington County.

To protect game in Cecil County.

To provide for payments of wages and salaries due employes of insolvent employers.

To protect pheasants and partridges in Frederick County.

To incorporate the Church of the United Brethren in Christ.

Amending and re-enacting the liquor-law relating to licenses.

To prohibit the use of car-stoves on steam railroads after May, 1890.

To incorporate the town of Berlin, Worcester County.

Authorizing Dorchester County Commissioners to build a bridge on Transuekin river.

Abolishing distress for rent in Baltimore city, and substituting ejectment in lieu thereof.

To make valid deeds, mortgages, bonds of conveyances, and bills of sale.

Providing for punishment of minors guilty of felony.

Regulating the practice of medicine.

Requiring insurance companies to have \$5,000 stock and to bond financial officers.

To permit creditors of insolvents to be represented by attorneys at creditors' meetings.

To punish false pretenses in obtaining certificates of registration of cattle and other animals.

To protect fish in the waters of Washington County.

To repeal the charter of the Baltimore and Ohio Relief Association.

To authorize the Mayor and City Council of Baltimore to subscribe to the erection of a monument to Francis Scott Key.

To incorporate the Cremation Company of Baltimore.

Appropriations.—Among the items in the general appropriation bill are the following: Militia, 1889, \$50,000; 1890, \$40,000; pensions, \$520; schools, \$500,000; school fund, \$34,069; schools, academies, and colleges, \$44,500; Deaf and Dumb Asylum at Frederick, \$25,000; St. Mary's Industrial School, \$15,000; Female House of Refuge, \$3,000; Maryland Institute for Deaf, Dumb, and Blind, \$7,000; Maryland Agricultural College, \$5 (equal to no appropriation); indigent blind, \$15,000; House of Correction, \$25,000; House of Refuge, \$15,000; House of Reformation and Institution (colored children), \$10,000; Insane Hospital, \$20,000; additional buildings for same, \$7,500. Total for 1889, \$1,535,917; for 1890, \$1,670,692, against \$1,607,582 for 1887 and \$1,711,892 for 1888, which shows a reduction of \$112,865 in the appropriations for 1889 and 1890 compared with 1887 and 1888. The

militia, which received \$50,000 in 1887 and \$30,000 in 1888, will receive in 1889 \$50,000, and in 1890 \$40,000. The interest on the public debt in 1887 and 1888 was \$600,000 each year, while in 1889 and 1890 it will be but \$575,000 each year.

Changes in Tax-Laws.—The Maryland Tax Commission, in its report to the General Assembly, says:

The most undue burden and severest inequality suffered by the people of this State are those which arise from the unjust discrimination made in favor of the railroad corporations. Unfortunately, \$250,000 of the \$400,000 a year which the railroads ought justly to pay to the State, are entrenched behind charter and contract exemptions claimed to be irrevocable. The charter of the Baltimore and Ohio Railroad Company provided that "the shares of capital stock of the said company shall be deemed and considered personal estate, and shall be exempt from the imposition of any tax or burden by the State assenting to this law." Our Court of Appeals subsequently enlarged this exemption by holding that the exemption of the shares of stock from taxation carried with it the exemption of the property and franchises of the company, and that, under the Constitution of the United States, this exemption is irrevocable. It seems peculiarly unfortunate that an exemption which, by its terms, applied to the shares of stock in the hands of the individual stockholders was thus held to extend to the franchises and property, including real estate, held by the corporation in its capacity as a legal entity. The case of the exemption of the Northern Central Railway is still more flagrant than that of the Baltimore and Ohio, and has less show of legality or right. The part of this road which lies in Maryland was formerly the Baltimore and Susquehanna Railroad, which was chartered in 1827, with the same exemption, word for word, as that contained in the charter of the Baltimore and Ohio. We recommend that a gross-receipts tax be imposed upon telegraph companies at the rate of 2 per cent.; and 3 per cent. upon telephone, express, title-insurance, safety deposit and trust companies, parlor-car and sleeping-car companies; and 1 per cent. on domestic insurance companies, leaving the tax as at present, 1½ per cent. on the gross receipts of foreign insurance companies. These taxes will, of course, be in addition to the tax measured by the companies' dividend.

A new bill, drawn by Prof. Richard T. Ely, was submitted with this report to the Legislature.

Chesapeake and Ohio Canal.—The management of this canal was the subject of much discussion in the Legislature. A delegation from Baltimore, including representatives from the commercial organizations, urged the passage of a bill permitting its lease. The Western Maryland Railroad Company has offered to take it at a rental of \$45,000, and a bill was presented to the Legislature to that effect, but it failed to pass.

Political.—The Democratic State Convention was held in Baltimore on May 11, and after choosing electors adopted a platform, of which the following are important items:

National taxation ought to be limited to the aggregate annual sum needed for the following purposes, namely: The interest on the public debt, with adequate annual provision for the payment of the principal of that debt at maturity; for the payment of pensions granted by the United States, and to provide the means for all necessary expenses of an economically administered government.

The accumulation each year of a large surplus in the National Treasury, after the payment of all such charges, is in itself conclusive proof that the taxing system fastened upon the country by the Republican party requires complete revision. The resolutions of the Democratic National Convention in 1884 clearly indicate the principles upon which such revision ought to be made.

The Republican Convention was held at Easton on May 17, and the platform adopted contained the following resolutions:

That in the free-trade movement inaugurated by the Democratic party, we recognize a renewed effort to aid foreign manufacturers to displace the products of American workmen with those of pauperized labor. We believe that the protective system, which has made this nation great and its people prosperous, is the best means for maintaining that greatness and prosperity, and denounce and oppose the unpatriotic assault upon the independence and prosperity of the American workmen.

That, recognizing the undesirability of a large surplus revenue, we favor the abolition of the internal taxes on tobacco and alcohol used in the arts and sciences, and the modification of the duty on sugar, and we declare that, in justice to the American interests involved, any necessary readjustment of the tariff should be made by its friends, and not by its enemies.

That we commend the course of the Republican Senate in the matter of pensioning the disabled veterans of the Union armies and those dependent on them. We urge the representatives of this State in the National Convention to favor greater liberality in dealing with the just claims of these defenders of the Union.

That we are in favor of an unqualified franchise and equality of men before the law.

The presidential election resulted in the casting of the following votes: Cleveland, 106,172; Harrison, 99,761; and Fisk, 5,358, which shows a plurality of 6,411 for Cleveland, against 11,118 in 1884. Two Republican and four Democratic Congressmen were elected, and one seat is to be contested—a gain of at least one Republican. In Baltimore the City Council, by Republican gains, became tied. The Legislature contains 22 Democrats and 4 Republicans in the Senate, and 68 Democrats and 28 Republicans in the Lower House.

MASSACHUSETTS. State Government.—The following were the State officers during the year: Governor, Oliver Ames, Republican; Lieutenant-Governor, John Q. A. Brackett; Secretary of State, Henry B. Pierce; Auditor, Charles R. Ladd; Treasurer, Alanson W. Beard; Attorney-General, Andrew J. Waterman; Railroad Commissioners, George G. Crocker, Edward W. Kinsley, and Everett A. Stevens; Chief-Justice of the Supreme Court, Marcus Morton; Associate Justices, Walbridge A. Field, Charles Devens, William Allen, Charles Allen, Oliver W. Holmes, Jr., and Marcus P. Knowlton.

Legislative Session.—The Legislature met on January 4, and adjourned on May 29. The question of dividing the town of Beverly was again a prominent subject of discussion; but the bill for division, after passing the Senate, failed in the Lower House. Several acts restricting the liquor traffic were among the note-

worthy features of the session. One of these defines intoxicating liquor to be any beverage containing more than 1 per cent. of alcohol (instead of 8 per cent. as formerly), the object of the bill being to render easier a conviction for illegal selling. Another act forbids the sale of liquor on Fast Day, Memorial and Thanksgiving Days, and Christmas. Still another limits the number of places that may be licensed to sell liquor, to one for each one thousand of population, except in the city of Boston, where there may be one for every five hundred people, and another raises the fees to \$1,000 for first-class licenses, \$250 for second and third class, \$200 for fourth-class, and \$150 for fifth-class licenses. Lastly, the following amendment to the State Constitution was proposed and referred to the next Legislature: "The manufacture and sale of intoxicating liquors to be used as a beverage are prohibited. The General Court shall enact suitable legislation to enforce the provisions of this article."

An act regulating child labor, provides that no child under thirteen years of age shall be employed at any time in any factory, workshop, or mercantile establishment, and no such child be employed in any other indoor labor for wages during the sessions of the public schools, unless during the year preceding he has attended school for at least twenty weeks. No child under fourteen years of age shall be employed in any factory, workshop, or mercantile establishment, except during the vacation of the public schools, unless a certificate is obtained from school officials stating that the child can read and write, and has attended school twenty weeks during the preceding year, or is attending the public evening schools; and no such child shall be employed in any other indoor work for wages, except as aforesaid. No child who has been continuously a resident of a city or town, since reaching the age of thirteen years, shall be entitled to receive a certificate that he has reached fourteen years until he has attended school twenty weeks in such town or city since reaching the age of thirteen, unless exempted by law from such attendance. Truant officers are charged with the enforcement of the law, and fines are imposed on parents or guardians that disobey.

A new ballot act, modeled on the Australian system, provides for the printing and distribution of ballots at the public expense, and regulates the form of such ballots, the method of voting, and the arrangement of polling-places. Entire secrecy is secured to the voter by this method, and the possibility of fraudulent balloting reduced to a minimum.

More efficient supervision of schools in the smaller towns is secured by permitting two or more towns to unite in obtaining the services of a trained and salaried superintendent.

In order to provide for contemplated addition to the State House, which for a long time has been unable to accommodate all depart-

ments of the State Government, it was voted to take a parcel of land adjoining, known as the "Reservoir" lot, and a sum not exceeding \$500,000 was appropriated for payment of damages to the owners. This sum is to be raised by an issue of four-per-cent. scrip, payable in July, 1901.

Two new cities, Quincy and Woburn, were incorporated at this session. The population of the former, by the census of 1885, was 12,145; of the latter, 11,750.

A woman-suffrage bill and a resolution for biennial elections of State officers were defeated in the Lower House.

The following general laws were also passed:

Authorizing the Boston and Providence Railroad corporation to lease its road to the Old Colony Railroad Company.

Erecting the town of Avon out of a part of the town of Stoughton.

Increasing the number of associate justices of the Superior Court from eleven to thirteen.

Increasing the range of legal investments for savings-banks.

Providing for the registration and licensing of plumbers.

To authorize the incorporation of labor or trade organizations.

To cause proper sanitary provisions and proper ventilation in public buildings and school-houses.

Prohibiting railroad corporations from requiring women and children to ride in smoking-cars.

Extending to the first day of October the time in which persons may apply for assessment of taxes, and providing for evening sessions of the assessors.

Regulating the sale and purchase of poisons.

Providing for the free instruction of deaf mutes or deaf children.

Authorizing the Boston and Maine Railroad to purchase the franchise and property of the Eastern Railroad Company, and the Eastern Railroad in New Hampshire, and the Portsmouth, Great Falls, and Conway Railroad.

Providing a bounty of one dollar each for the destruction of seals.

To regulate the sale of commercial fertilizers.

Requiring the equipment of fire departments with apparatus for the saving of life at fires.

To punish the sending of women and girls to houses of ill-fame and their detention therein.

Requiring the plans of all public buildings, and of private buildings more than two stories in height, having above the second story accommodations for ten or more employes, or having ten or more rooms for guests above the second story, to be submitted to the inspector of factories and buildings of the district and approved by him, and making certain rules to be observed in the construction of such buildings.

To prevent encroachment upon or obstruction of the waters of great ponds.

Authorizing towns to regulate the catching of pick-erel.

To establish a naval battalion to be attached to the volunteer militia.

To protect the purity of inland waters, and to require consultation with the State Board of Health regarding the establishment of systems of water-supply, drainage, and sewerage.

Authorizing cities to indemnify police officers for injuries received or expenses incurred in the discharge of their duties.

To provide for the final determination of contests concerning the election of electors of President and Vice-President of the United States.

To provide armories for the State volunteer militia.

Regulating mortgage, loan, and investment companies.

Amending and codifying the statutes relative to the collection of taxes.

Raising the age of consent in females from thirteen to fourteen years.

To prevent the desecration of graves by the removal therefrom of flowers, flags, or other memorial tokens.

Providing for the appointment of a State agent whose duty shall be to assist citizens of the State in the presentation and settlement of pension, bounty, or back-pay claims against the Federal Government.

Defining the duties and liabilities and regulating the business of safe-deposit, loan, and trust companies.

Regulating the weight and measure of cider-apples, beans, and peas.

Making an appropriation to be expended in aiding discharged female prisoners.

Changing the procedure in poor-debtor matters.

Making further regulations as to means of egress and of escape from fire in buildings.

Providing for the organization of fraternal beneficiary organizations.

Providing for a new division of wards in cities.

Providing for the public support, in cases of necessity, of soldiers or sailors of the late war and their dependent families, without requiring them to go to an almshouse.

To regulate the holding of caucuses or public meetings of voters in cities or towns for political purposes.

Finance.—The general financial statement of the Treasurer for the year is as follows: Cash on hand Jan. 1, 1888, \$3,748,586.59; securities on hand, \$27,845,158.85; receipts, \$23,546,078.11; securities purchased, \$2,496,225.15; total, \$57,630,993.20; payments, \$22,970,003.17; securities withdrawn and sold or paid, \$4,468,981.95; cash on hand, \$4,319,611.53; securities on hand, \$25,872,446.55; total, \$57,680,993.20.

On Dec. 31, 1887, the funded debt was \$31,429,680.90; the reduction for the year amounted to \$2,578,061.25, leaving \$28,851,619.65 on Dec. 31, 1888. During the same period the sinking-fund was reduced from \$25,151,516.78 to \$23,235,608.84, a decrease of \$1,915,907.94. The following loans composed this debt at the close of the year: Boston, Hartford, and Erie loan, \$3,618,729.40; county fund loan, \$8,402,148.90; coast-defense loan, \$6,000; Danvers Hospital loan, \$1,500,000; harbor improvement loan, \$300,000; State House loan, \$500,000; State Prison loan, \$1,299,355.50; Troy and Greenfield loan, \$11,219,966.95; war loan, \$1,505,418.90; Worcester Hospital loan, \$1,100,000. The total amount paid for interest on these loans was \$1,458,729.46.

During the year the United States Supreme Court decided the law of the State taxing the stock of national banks to be constitutional, and the sum of \$465,181.41, which had been paid by the banks under protest and was held by the Treasurer to await the decision, was distributed to the various cities and towns entitled thereto.

The actual expenses of the State Government for 1887 were \$5,028,385.98; for 1888, \$4,985,135.47. For 1889 the estimated revenue is \$5,087,606.82, and the expenditures \$5,930,606.16, leaving a deficit of nearly \$850,000.

The limitation of time for the payment of

State aid to invalid pensioners and their dependent relatives will expire on Jan. 1, 1890. The payment of State aid began with the civil war, and has continued without interruption ever since. During 1887 the sum of \$391,678.02 was expended by the State on this account for the relief of 8,650 beneficiaries.

Assessments.—For 1888 the total assessed valuation of property in the State was \$1,992,804.101, of which \$532,284,079 was the assessment of personal property, and \$1,460,520,022 of real estate. The total assessed valuation of 1887 was \$1,932,548,807; of 1886, \$1,847,531,422. In this valuation are included 4,497,123 acres of land and 330,541 dwelling-houses. There were also assessed in 1888, 166,152 horses, 51,539 sheep, 187,994 cows, 65,609 of other neat cattle, and 84,749 swine.

Education.—The following summary of public-school statistics is given for the year 1887-'88: Number of public schools, 6,918; children of school age, 359,504; number of all ages enrolled, 353,000; average attendance, 264,723; number of male teachers, 1,010; number of female teachers, 8,887; average monthly pay of male teachers, \$119.84; average monthly pay of female teachers, \$44.88; average school year in months, 8-9. All these figures exhibit an increase over the previous year.

The high-schools, numbering 230, exhibit an increase of one school, 36 teachers, and 379 pupils. These schools were materially aided by the passage of the free text-book law, which was immediately followed by a large increase in attendance. In the past five years the number attending the high-schools has increased by 3,862. Evening schools have been maintained in 50 cities and towns. The number of schools is 214, an increase of 60; the number of teachers 919, an increase of 289; the number of pupils 24,725, an increase of 9,044; the average attendance 12,833, an increase of 4,837. This large increase is due to the act of 1887, which prohibits the employment of illiterate minors unless they are regular attendants of day or evening schools. The whole amount of money raised by taxation for the support of schools, this including only wages of teachers, fuel, care of fires and school-rooms, was \$5,114,402.41, an increase of \$54,462.98. The amount received from all sources and expended for the schools, exclusive of money spent for building and repairing school-houses, was \$5,984,198.59, an increase of \$76,877.59, and equal to \$16.50 for each child in the State between 5 and 15 years of age. The whole amount expended for all public-school purposes was \$7,087,206.42, an increase of \$87,222.90, and equal to \$19.71 for each child of school age.

At the various normal schools the attendance during the year was as follows: At Bridgewater, 419; at Framingham, 155; at Salem, 274; at Westfield, 250; at Worcester, 198; at the Normal Art School, 187; total, 1,408. The school at Framingham suffered the loss of its main building by a fire on Dec. 24, 1887.

Charities.—For the fiscal year ending September 30, the Danvers Lunatic Hospital received 402 patients, and discharged 427, having at the close of the year 715 remaining. Of those discharged, 121 were transferred to other hospitals. The receipts for the year were \$145,611.08; payments, \$151,637.65. At the Northampton Hospital there were 469 patients at the beginning of the fiscal year, and 481 at its close, 166 persons having been admitted and 154 discharged. The receipts for the year were \$97,873.46; payments, \$87,522.13. At the Worcester Hospital there were 694 patients on Sept. 30, 1887; there were admitted during the year 389, discharged 813, leaving 770 patients on September 30 of this year. The receipts were \$166,570.86; expenses, \$147,445.68. At the Worcester Asylum for the Chronic Insane, the statistics are as follow: Patients at the beginning of the fiscal year, 392; admitted, 59; discharged, 56; remaining on September 30 of this year, 395; receipts, \$79,977.93; expenses, \$72,466.83. At the Westborough Hospital 333 persons were admitted and 236 discharged during the year, leaving 406 inmates on September 30. At the same date in 1887, there were 309 patients. The receipts were \$93,886.61; expenses, \$92,171.70. The Taunton Hospital had 634 patients at the beginning of the year; 260 were received, and 270 discharged, leaving 624 at the close of the year. The receipts were \$125,180.65; expenditures, \$125,605.97.

There were also 352 insane patients at the State almshouse at the close of the fiscal year. The total number of persons admitted to this institution during the year was 2,006; discharged, 2,018. On Sept. 30, 1887, there were 877 inmates; on Sept. 30, 1888, 865. The school for the feeble-minded had 195 pupils at the close of the fiscal year; 38 were admitted during the year, and 36 discharged. The present buildings in South Boston are inadequate, and the Legislature has made provision for better accommodations. An act passed in 1887 enabled the trustees to purchase a tract of land in Waltham, and another act, passed this year, appropriates \$200,000 for buildings thereon.

Prisons and Reformatories.—The average number of prisoners at the State penal institutions for the year ending Sept. 30, 1888, was as follows: State Prison, 556; Massachusetts Reformatory, 792; Reformatory Prison for Women, 21. The cost per week per capita was: Massachusetts Reformatory, \$3.80; State Prison, \$2.52; Reformatory Prison for Women, \$4.25.

The State Prison at Boston is the only State institution in which the prisoners have been employed under the act of 1887, requiring all prison labor to be done upon the account of the State, and not under contract with individuals. The results shown during the year to December 31 are as follow: Expenses of the business, \$116,516.72; salary of general superintendent and other necessary expenses for the work, \$20,645.26; total, \$137,161.98. Receipts from the industries, \$71,698.24; excess

of expenditures, \$65,468.74. The Governor says upon this topic:

The only difficulty in the practical working of the law governing prison labor is that of establishing industries. It is provided by section 5 of chapter 447 of the acts of the year 1887 that "no new machinery to be propelled by other than hand or foot power shall be used in any institution." This provision prevents the maintenance of the varied and improved conditions of employment which the future advantage, if not the present well-being, of the prisoners would seem to require. The law should be so amended that the prisoners may have the advantage of employment with such improved machinery as the nature of the business in which they are engaged may demand. Satisfactory pecuniary returns are not to be expected from prison labor, but the "public-account" plan gives to the prison officials more complete control of those who are committed to their charge, and in this way it is to the community a decided gain.

At the State Primary School at Monson there were 316 inmates on Oct. 1, 1887, and 314 at the same date this year. The total number in the school during the year was 538. The Westborough Reform School contained 118 boys at the beginning of the fiscal year, and 142 at its close. The Industrial School for Girls at Lancaster cared for 157 girls during the year, of whom 58 were in the school at the beginning of the year, and 68 at its close.

Savings-Banks.—In the saving-banks and institutions for savings there were, in deposits, at the end of their fiscal year, \$315,185,070.57, an increase for the year of \$12,286,446.49, the number of open accounts being 983,202.

The Public-School Controversy and Woman Suffrage.—Early in May, the Rev. Father Metcalf, of Boston, in a public letter, complained that a teacher of history in the city high-school, Charles B. Travis, was misrepresenting in his instruction the position of the Catholic Church with reference to the sale of indulgences, and that William Swinton's history, the text-book used in the schools, unfairly stated the facts of history in this regard, inasmuch as it did not give the whole truth. After consideration of this complaint, the school board, which was largely composed of Catholics, voted, on June 19, to dispense with the obnoxious text-book, and, after censuring Mr. Travis, transferred him to another department of history in the same school. This proceeding was looked upon by many Protestants as an attempt of the Catholics to control the public schools in the interest of their Church. They argued that the objections to the book were unfounded, that the history was truthful, even if the facts stated were unpleasant, and they considered such interference of the Church in temporal affairs as unjustifiable. A large indignation meeting was held in Faneuil Hall, on July 18, at which the action of the school committee was denounced in strong terms, stirring resolutions were adopted, and a committee was appointed to protect the interests of the public schools. The whole subject of the attitude of the Catholic Church toward the State and of parochial schools *vs.* public schools was a matter of earnest discussion throughout the summer and autumn, during

which efforts were undertaken to defeat all retiring members of the school board who had voted in favor of the Catholics. For this purpose the aid of a law passed a few years before, permitting women to be assessed and to vote for members of the school committee, was invoked by the Protestants. Hitherto only a handful of women had exercised their right under the law, but, so great was the feeling aroused by this question, that in Boston not far from 28,000 women applied for assessment, while in the adjacent cities, to which the discussion had found its way, there was a female registration of from 1,000 to 2,000 or more, Catholics as well as Protestants being among the applicants. The result was that in Boston, at the December municipal election, every candidate suspected of favoring the Catholic side of the controversy was defeated, and in the adjacent cities the same result was reached. It is estimated that in Boston nearly 17,000 women went to the polls, of whom the majority were Protestants.

Political.—The State Democratic Convention met at Springfield on September 5, and nominated without a contest the following ticket: For Governor, William E. Russell; Lieutenant-Governor, John W. Corcoran; Secretary of State, William N. Osgood; Treasurer and Receiver-General, Henry O. Thatcher; Attorney-General, Samuel O. Lamb; Auditor, William A. Williams. The platform adopted ratified the nominations of the St. Louis Convention, commended the national Administration, and contained also the following:

Believing that all unnecessary taxation is simply robbery from the people under the forms of law, we desire and demand the reduction of the present war rates of taxation to such a point as will leave in the pockets of the people over \$100,000,000 per year that is now being taken therefrom without reason or justice and locked up in idleness in the Treasury vaults at Washington.

We cordially approve the provisions of the Mills Bill as well adapted to promote industry, to protect labor, and particularly benefit the manufacturing interests of this commonwealth. The placing of wool on the free list will unquestionably give a valuable stimulus to the woolen-mills of this State, and, by reducing the cost of materials, will enable the woolen-manufacturer to compete with all foreign rivals for the trade of the world, and thus give more work and better wages to woolen-workers.

Believing that taxes should be lifted first from the common articles of necessary consumption, and last from the articles of luxury, we indorse and commend President Cleveland's proposition to take the duty off wool, salt, lumber, and such staples as, being thus made cheaper, will make lighter the task of every workingman who has a family to provide for; and we denounce the policy proposed by the Republican party of abolishing the internal-revenue taxes which bear on liquors and tobacco, thus offering the people cheap whisky instead of cheaper necessities of life.

Believing that trusts, those creatures of the exorbitant war tariff, are iniquitous combinations, hostile alike to the legitimately employed capital and the honest labor of the country, we demand such tariff legislation by Congress and such other legislation, by the General Court of this State, as will effectually curb the power and arrest the growth of these dangerous monopolies.

We demand now, as always, the most liberal treatment of Union veterans, and of the widows and families of those of them who are dead; and promise our support to all well-considered laws for the promotion of temperance, and announce our hostility at the same time to prohibitory legislation as violating the cardinal democratic doctrine of personal liberty.

The Republican Convention met in Boston one week later, and renominated the existing State officials, except Treasurer Beard, who had refused to be a candidate for re-election. George A. Marden was nominated as his successor.

Resolutions were adopted favoring protection, condemning the system of undervaluation and false invoicing of imported goods, and recommending, as a means of checking this evil, the imposition of specific duties wherever practicable, instead of the present ad-valorem duty. Other resolutions were as follow:

We approve the action of the Legislature, and repeat the resolution of the Republican Convention of last year, "That, believing that the great question has reached a position where it demands settlement, we favor the submission to the people of an amendment to our Constitution prohibiting the manufacture and sale of alcoholic liquors as a beverage," and, in order to accomplish this, we call upon all who are opposed to the political control of the grog-shop to unite with the Republican party in securing the election of Senators and Representatives who will vote for the submission of this amendment, and further legislation in accord with this declaration of principles.

We pledge ourselves to such wise expenditures for the public schools as to render them the best places for the instruction of our youth, and to steady resistance to any plan of public aid to sectarian schools. We believe in the equal rights of all men under the law; in the same restrictive legislation for monopolies, corporations, and trusts of every description as govern and control the humblest citizen; in the immediate reform and better enforcement of the immigration and naturalization laws; in an honest ballot the country over, as the only interpretation of the popular will; in an impartial suffrage; in the payment of every honest debt of the Government, wherever contracted; in an honest, liberal, and just pension law, embodying in statute the generous gratitude of a warm-hearted people to the veteran soldier; in the exemption of the civil service from partisan spoliation. To the solution of these great questions, in which they will bear so large a part, we welcome the young men of this State to an increasing share in the honors and responsibilities which citizenship ought to confer.

We thus heartily approve and most cordially commend the platform adopted by the national Republican party at its national convention in Chicago, in June of this year, and pledge our earnest support to the national candidates of the party.

The nominees of the Prohibition party, which held its convention at Worcester, on the same date as that of its Republican opponents, were: For Governor, William H. Earle; Lieutenant-Governor, John Bascom; Secretary of State, Henry C. Smith; Treasurer and Receiver-General, John M. Fisher; Auditor, Edmund M. Stowe; Attorney-General, Allen Coffin. The most important portion of its platform is as follows:

It has been found in the experience of our courts that the mingling of civil and criminal business in the hands of district attorneys, and the making of these offices elective, operate to the disadvantage of the commonwealth. We therefore demand that said officers

be appointed by the judges of the Supreme Court, and be required on entering upon duty to relinquish all civil business and devote themselves exclusively to the interests of the State.

We demand the unconditional abandonment of revenue, municipal, State, and national, from the manufacture and sale of intoxicating drinks, not with reference to the surplus in the Treasury, nor for the relief of the liquor manufacturer, dealer, or drinker, but for the readier suppression of the traffic, and to put an end to the political scandal of deriving a revenue from the poverty, degradation, and vices of the people.

We demand the preservation of our free public-school system in all its integrity; reform in the civil service; suppression of polygamy; the establishment of uniform laws governing marriage and divorce; a more generous and just distribution of the products of labor; arbitration as a means of settling international strife and local business difficulties between employers and employed; the preservation and defense of one day in seven as a day of worship and spiritual elevation; the improvement and better enforcement of our immigration laws; just and liberal provision for our surviving soldiers and families; the penalty of disfranchisement for buying or selling votes; the reservation of the public lands for actual settlers; the sacred fulfillment of our treaty stipulations with the Indian races; equal wages to men and women for equal service; the prohibition of trusts and combinations of capital to enhance prices on articles of popular consumption; and more than all, and above all, the utter destruction of the saloon, by which the laborer is robbed of his earnings, and is morally, physically, and socially burdened.

There was also a Labor ticket, with Charles E. Marks, the candidate of last year, at its head. At the election in November Ames received for Governor 180,849 votes; Russell, 152,780; Earle, 9,874; Marks and others, 111. Russell ran about 8,000 votes ahead of his ticket. There were 38 Republicans and 7 Democrats elected to the State Senate, and 181 Republicans, 58 Democrats, and 1 Independent to the House. Ten Republican and 2 Democratic Congressmen were chosen.

Municipal Elections.—Nineteen of the twenty-five cities of the State held their annual election on Tuesday, December 4. Party lines were not strictly drawn in most cases, the license question being of paramount interest. Twelve cities voted in favor of license, and seven against it. In 1887 ten voted for license and nine against it. One week later Boston and the five remaining cities held their election, all of them voting for license, as in 1887. In Boston, Thomas N. Hart, the nominee of the Republicans, was elected over Mayor O'Brien by a majority of 1,876, in a total vote of 68,548. The majority for license was 17,915.

MELIKOFF, Count LORIS, a Russian general born in 1826; died in Nice, France, Dec. 24, 1888. He was one of the numerous Armenians that joined Gen. Paskievich's army in the Caucasus, obtaining his first commission in 1848. He participated in several expeditions against the mountain tribes, and gained his first decoration for gallantry in 1848. He rose rapidly, served under Gen. Mouravieff in the Crimean war, and attained the rank of major-general on being appointed Russian Governor of Kars, having taken part in the capture of that stronghold. In 1865, when the pacifica-

tion of the Caucasus was completed, he was appointed aid-de-camp to the Emperor, and after ten years of further service in the Caucasus was made a general. He was the trusted lieutenant of the Grand Duke Michael, Prince-Governor of the Caucasus, and when the Turkish war began he assumed the chief command of the army that was raised to invade the Asiatic provinces of Turkey. He crossed the frontier with a smaller force than he expected to mobilize, and, although he displayed great energy, he was unable to cope with the active strategy of Mukhtar Pasha, who, fighting on the inside line and resting on his fortresses, checked the Russian advance. Gen. Melikoff, understanding the risk of attempting to hold the extended position in the face of the victorious Turkish army, retired within the Russian frontier in order to restore his troops and receive supplies before resuming the offensive. By the middle of August, 1877, he was able to take the field with a stronger and better prepared army. Mukhtar Pasha, whose forces had been reduced by disease, forced on a general engagement at Aladja Dag. Failing to make the most advantageous dispositions, he was defeated by Melikoff after eleven hours' fighting, notwithstanding the desperate courage of the Turkish soldiers. Gen. Melikoff waited for re-enforcements, and in October resumed the advance, and after several stubbornly fought battles, compelled the Turkish commander to evacuate his advanced line. He conducted the remaining operations of the campaign including the turning of the main position of the enemy by Gen. Lazareff's flank march on Ordok, and while the other generals pursued Mukhtar's shattered forces, he laid siege to Kara, the chief objective point of the campaign. When he had carried a part of the outer works, he concluded that the place might be captured by assault, which was accomplished on the night of November 18. For this striking feat of arms, Gen. Melikoff was decorated with the cross of St. George and at the close of the war he was made a count.

In 1879, when the Nihilists were at the height of their activity, and through the murder of Prince Krapotkina, Solovieff's attempt on the life of the Czar, and other deeds, had created a general panic, Count Melikoff was called away from Tiflis to take a place in the Central Government. The Czar had always decided to make political concessions, and Melikoff urged that these should be definite and substantial. In February, 1880, he was appointed president of a supreme executive commission, and issued a proclamation calling on all friends of order to support him in his efforts to preserve national security and tranquillity when he assumed the office, which was practically that of dictator. Alexander II was converted by him to the idea that he could win the affection of the Russian people by granting a large measure of social and individual freedom. Melikoff's relaxations of tyrannical restrictions

actually caused the cessation of Nihilistic outrages for twelve months. The Czar had been persuaded by Gen. Melikoff, who was his Minister of the Interior, to sign a constitution granting representative institutions, when his assassination on March 18, 1881, put an end to all hope of liberal reforms, and caused Gen. Melikoff, who was head of the police department and was therefore held responsible for the Czar's safety, to be discarded as well as his policy. He was nevertheless retained as a member of the Council of the Empire by Alexander III. His health began to fail about 1883, and since then he has lived much of the time in the south of Europe.

METALLURGY. Iron and Steel.—In his presidential address before the Iron and Steel Institute, Mr. Daniel Adamson spoke of the falling off that had taken place in the manufacture of iron in Great Britain since 1884, and the large increase in the production of steel during the same period. Thus in 1884 about one and a quarter million tons of Bessemer steel ingots were produced, and in 1887 about two million tons, being an increase of about 60 per cent.; in 1884 nearly half a million tons of Siemens' open-hearth steel ingots were cast, and nearly a million tons in 1887, the actual increase during the period being over 106 per cent.; and a plant is in course of erection estimated to produce another quarter of a million tons annually. There has also been an enormous increase in the application of steel to ship-building purposes. Thus, whereas in 1878 less than three thousand tons of steel were employed in the manufacture of steamers and sailing-vessels built under Lloyd's survey, and over three hundred thousand tons of iron, in 1887 more than two hundred and ten thousand tons of steel were employed, and about fifty-two thousand tons of iron. The proportional increase in the use of steel in the last three years had been about cent. per cent., and the falling off in the use of iron during the same period 350 per cent.

It has been difficult to produce pig-iron with a high percentage of chromium, on account of the very high temperature that is required, for complete fusion of the metal takes place only at a temperature at which the best graphite crucibles soften—that is, probably above the melting-point of platinum. Such iron has been produced in Sweden in small quantities by modifying the composition of the slag, but at a cost too high to make it compete successfully with the poorer chrome iron produced elsewhere in blast-furnaces using coke as fuel. With regenerative crucible furnaces, this iron could not be obtained in a thoroughly fused condition, but the reduced metal is always intimately mixed with slag. A pig-iron can be produced containing 70 per cent. of chromium. It contains less carbon than the metal poorer in chromium, and acts less as a carbonizing material when added to the steel-bath than would a metal containing,

say, only 45 per cent. of chromium. By the use of this chromium pig-iron and open-hearth steel can be produced which will compete in every respect with the best English crucible steel, and in many cases even excel it. Chromium steel is harder than ordinary steel with the same percentage of carbon, but it is more difficult to harden. If the carbon is kept 0.2 per cent. lower than would be used if no chromium were present, and that amount of chromium is added which will give the requisite degree of hardness, a steel can be obtained that will stand a much greater welding heat than ordinary carbon steel, and will be at the same time both tougher and harder. The percentage of carbon in a chrome steel should never exceed 0.9. The percentage of chromium need rarely exceed 1.5 per cent. If it is desired to produce a harder steel than that containing 0.9 per cent. of carbon and 2 per cent. of chromium, 0.2 per cent. of silicon must be present to insure freedom from blow-holes, and the phosphorus, on account of the presence of silicon, should be kept below 0.3 per cent.

A new direct method, applied by the Carbon Iron Company of Pittsburg, for making wrought-iron from the ore, is based upon the use, as a reducing agent, of a new kind of graphite from Rhode Island, which also protects the iron from reoxidation. This, having been ground very fine and mixed, previous to roasting, with water, is mingled with the ore in the proportion of one to four by weight.

In Huchavel's method of producing wrought-iron and steel direct from the ore, the main feature of the furnace consists of a movable hearth fitted to a blast-furnace constructed partly of cast-iron and partly of wrought-iron plates, the latter of which form a double skin to the body of the furnace, while the space between the skins is used to heat the blast. The furnace, the inventor represents, has been gradually developed from the simplest form of cold-blast furnace, under the stress of difficulties which were from time to time encountered. The fuel used is wood charcoal. From magnetic ore containing 58 per cent. of iron, the author obtains 52.4 per cent. of steel; and the loss in producing wrought-iron is said to be no greater than it is in a puddling-furnace.

In a paper on "Silicon and Sulphur in Cast-Iron," Mr. T. Turner reaches the conclusion that, in the blast-furnace, three chief agencies are at work tending to eliminate sulphur, of which in Cleveland practice not more than one twentieth passes into the iron: 1. A high temperature tends to prevent the absorption of sulphur by iron; 2. A slag rich in lime readily combines with sulphur; and 3. The amount of sulphur actually retained by the metal is influenced by the proportion of silicon, and probably certain other elements present in the iron—the more silicon the less sulphur.

The "rapid" steel-making process of B. H. Thwaite and A. Stewart is intended to combine the best features and avoid the defects of

the Bessemer and Siemens-Martin processes. The pig-metal is melted in a "rapid" cupola and collected in a receiver, from which it is run into a vertical converter, and thence drawn off in the ladle. In its passage through the converter the mass is subjected to the blast from the cupola-blower. As soon as the iron is collected in the ladle, the latter is raised from its trunnions and rapidly revolved. Stirrers effectually mix the metal, and the steel is then ready for the mold. The system can be applied to existing open-hearth furnaces.

A practical demonstration has been given at the Lambeth works of Messrs. Brin of the direct conversion, by a new process, of iron into steel containing two per cent. of aluminum. The charge consisted of about forty pounds of broken cast-iron, which was smeared with clay—the source of the aluminum—and a special flux. This charge was placed in a small foundry-furnace, and was speedily transformed into excellent steel. Other metals can be similarly treated, and any percentage of aluminum can be alloyed with them. The plating of iron with aluminum by means of the blow-pipe was shown on the same occasion.

A second report has been made by the committee appointed by the British Association to investigate the influence of silicon on the properties of steel. While in the series of experiments previously reported upon the committee had used specially pure iron, in the present series it had taken ordinary basic iron, in the condition in which it would be sent into commerce, added definite quantities of silicon, and examined the product chemically and mechanically. The general results of the investigation are summarized as follow: On adding silicon to ingot iron containing manganese the metal rolls well, and does not show any signs of red-shortness; it welds perfectly well with all proportions of silicon, and (with one somewhat doubtful exception containing 0.5 per cent.) is not brittle when cold. With less than about 0.15 per cent. of silicon, the limit of elasticity, the breaking load, the extension, and reduction of area are but little, if at all, appreciably affected by the presence of silicon; but with more than 0.15 per cent. of silicon the limit of elasticity and breaking load are increased, while the extension and reduction of area are distinctly decreased by the presence of silicon. The effect exerted by silicon in increasing the tenacity of ingot iron is not nearly so great as that of carbon. The relative hardness is very slightly affected by the proportions of silicon used in these experiments. On account of the small scale on which the experiments were conducted, it was not practicable to perform tests with reference to resistance to shock.

The Carlsson modification of the Bessemer process is employed in Sweden in the treatment of a charcoal pig-iron—about 1.5 per cent. of silicon, 0.1 to 0.15 of manganese, 8.9 of graphite, and 0.1 of combined carbon. The slag resultant from the production of this pig-

iron approximates more closely to a tri-silicate than to a bi-silicate, alumina being regarded as a base. After the pig-iron has been charged into the converter, it is blown for a few minutes, till the blue flame appears that marks the beginning of the combustion of the carbon. The blow is then stopped, and a definite proportion of the charge—the slag being removed, containing usually 4.15 per cent. of carbon, 0.05 of silicon, and 0.07 of manganese—is poured into a measured ladle. The portion of metal remaining in the converter is then blown until most of the carbon has been eliminated and the bath converted into malleable iron. The metal previously removed, and what more may be needed, is then added to the bath. When the reaction that ensues is ended, the metal is ready for pouring.

A number of improvements, designed to secure increased economy and greater efficiency in working, in the production of basic Siemens steel, have been introduced in a new furnace recently erected at Bilston, South Staffordshire. A rectangular furnace with rounded ends takes the place of the old round furnace, producing a longer flame, which seems to have a less destructive cutting power upon the lining and upon the gas and air ports. The roof and part of the internal side-walls are built of silica bricks, and the bottom is lined with basic bricks of exceptional density, which are separated from the silica work with a chrome brick. The roof is fixed instead of being movable as before, the movable roof having been designed, in the first place, to enable the repairs to the interior of the furnace to be more easily made; but it was found in practice that this advantage was more than lost by the destruction that ensued to the roof by removals. The repairs are now provided for by building the case of the furnace, instead of solid steel plates, of lattice-work, with silica brick-work inside, which can be removed when repairs are necessary. Three doors are provided in front, and one at the back, over the tapping-hole. The regenerative capacity of the furnace is doubled, in the same space, by making the regenerators rectangular, with rounded ends. This is effected by the lengthening of the flame, whereby the heat that formerly passed into the chimney and was lost, is now all absorbed; besides which, it is possible to work with less gas while obtaining a greater amount of heat.

Mr. W. Shimer, of Easton, Pa., uses for determining phosphorus in steel the filtrate obtained in the nitric and sulphuric method for determining silicon; it has the desirable qualities of being easily and quickly obtained and always free from silica. In order, however, to get all the phosphorus in a precipitable form, the solution must be made under conditions more strongly oxidizing than simple solution in boiling nitric acid. It is found that in a solution thus made the presence of a moderate amount of free sulphuric acid does not prevent complete precipitation of the phosphorus.

In H. Haupt's process for protecting iron against corrosion, the pipes having been lowered into the retorts, the retorts are closed until the contents are heated to a proper temperature. Steam from a boiler at 60 pounds pressure is then introduced into the superheater, which it traverses, and from which it escapes at the temperature of the iron upon which it acts for about one hour. A measured quantity of some hydrocarbon is then admitted with a jet of steam, which completes the process. The protection afforded by this method is not a mere coating, like paint, but is said to be an actual conversion, to a greater or less depth, into a new material. When properly treated, this material does not seem to be detachable by pounding, bending, rolling, or heating. The process is claimed to possess advantages over the Bower-Barff process in that it makes a coating that does not crack, and is more resisting.

Prof. A. Ledebur has made a series of experiments upon the effect of acidulated waters in producing brittleness in malleable iron. The brittleness arises from the absorption of hydrogen by the iron causing a change in its mechanical properties, whereby, while the modulus of tensile strength remains unaltered so long as the metal is not sensibly corroded, the extension under stress and the capacity of resisting bending strains are notably diminished. The author also finds that an action similar to that of weak acid is produced by the atmosphere when iron is exposed to it in an unprotected condition. Contact of the iron with zinc, which renders the former electro-negative, proved to have a notable effect in increasing the influence of the acid on the unprotected portion of the surface, so that a very much shorter time sufficed to produce brittleness than without such contact. The brittleness produced by pickling or rusting is removed by annealing, and also disappears, or is considerably diminished, by allowing the brittle metal to rest for some time in a perfectly dry place. It can not, however, be removed by mechanical treatment in the cold. Cast-iron is not sensibly, or is only slightly, affected by pickling. Some direct determinations were made of the hydrogen present in the brittle wires. It was found to be so very minute as to raise a possible question whether it was sufficient to produce the remarkable changes in mechanical qualities demonstrated by the experiments. In considering this point, the author suggests that the influence of a foreign substance upon iron may be determined not so much by the weight as by the number of the atoms present, and therefore that hydrogen, whose atomic weight is only $\frac{1}{8}$ that of phosphorus, the element which it most nearly simulates in effect, may be sufficient to produce very decided brittleness, even when present in scarcely appreciable quantity.

Alumina.—Comparative tests of aluminum and magnesium have been made at the labora-

tory of the Charlottenburg High-School, Berlin. The physical properties determined were:

PROPERTIES.	Aluminum.	Magnesium.
Specific gravity.....	2.67	1.75
Tensile strength, pounds per sq. inch.....	271 to 286	331
Expansion, per cent.....	2.5	1

Magnesium can be best worked when heated to 212° Fahr., at which temperature it can be easily pressed, rolled, and drawn. More difficulty is encountered with this metal when casting or soldering, as the melting and boiling points are only a few degrees apart, and the loss by oxidation is large. The molten metal does not fill the molds so perfectly as aluminum, and the castings obtained are always rough-surfaced, and have air-holes. The difficulty in soldering magnesium comes from the fact that it can not be easily kept free from oxidizing, and even the slightest layer of oxide renders the soldering more difficult. The same difficulty is also encountered, and has not yet been wholly surmounted in the case of aluminum. The two metals show little dissimilarity in their susceptibility to atmospheric influence—provided the magnesium is pure. Magnesium can be easily worked in the lathe. It can be engraved and polished, and rolled in complicated sections. The alloys of magnesium are beautifully bright and of fine color, but are easily affected by atmospheric influences, and brittle. Hence they are ill-adapted for technical purposes.

The experiments of W. J. Keep upon the influence of aluminum on cast-iron have determined several important points. It is known that fused iron of any kind that would make castings that would be full of blow-holes, will make solid homogeneous castings if as small a quantity of aluminum as 0.1 per cent. is added just before pouring, and that such addition causes the iron to remain fluid long enough to allow of its being cast into molds. The measure of the improvement is represented by a gain of about 44 per cent. in resistance to weight, and of 6 per cent. in resistance to impact. The castings appear of slightly finer grain, and the character of the crystallization is somewhat different, but "the secret of the strength lies in the closing of the spaces between the grains—or, in other words, in the increased solidity of the casting." It had been a question whether the aluminum remains in the iron to exert an influence when the iron is remelted. To this the experiments gave an affirmative answer. As to the effect upon the grain of the changing of the carbon from the combined to the graphitic state, "aluminum allows most of the carbon to retain its natural combined form until the metal is too thick for the separated carbon to escape, but at the instant of solidifying aluminum causes the iron to drop a portion of its carbon from the combined state. This liberated carbon takes the graphitic form, and is imprisoned in the otherwise solid iron. The

advantages arising from a change of carbon from the combined to the graphitic state, at the instant of crystallization, are that all of the carbon thus liberated is imprisoned uniformly throughout the casting, and is not accumulated in pockets, forming soft and hollow spots, as would be the case if liberated while the casting was yet fluid. Aluminum, more than any known element, accomplishes this. Aluminum takes away the tendency to chill, prevents the formation of sand-scale, and modifies the hardness of the iron by refining its grain so that it may be more easily cut than iron of coarser grain. It increases the resistance, or strength to sustain a constant load, and in a greater degree the resistance to impact. A gain is observed in elasticity, while the fineness and compactness of iron alloyed with aluminum gives less permanent set than iron equally soft when such softness is produced by silicon. Aluminum—when a sufficient quantity is added—takes off or reduces shrinkage; but the first additions of it seem to cause shrinkage, through the closing of the blow-holes. The tests for influence upon fluidity gave less definite results. The experiments were made separately with a white iron, in which the carbon is combined, and with a Swedish gray iron, in which the carbon is in the form of graphite. The results were modified according as these different qualities of iron were dealt with, but mostly in degree, and not essentially in nature.

Copper.—For extracting copper from its pyrites, Mr. M. J. Perring dispenses with the unpleasant and tedious roasting of the pyrites, and finds an excellent substitute for it in the property possessed by ferric nitrate of oxidizing, at temperatures between 122° and 302° Fahr., the copper sulphide of the ores direct to copper sulphate. The pulverized copper pyrites is intimately mixed with ferric nitrate, and the mixture is exposed to a temperature of 105° Fahr. Nitrous fumes at once begin to be evolved, and copper sulphate to be formed. When the temperature is gradually increased to 212° and 302°, there results, after washing with water, pure copper sulphate, without a trace of iron, while the residue consists of unaltered iron sulphide, silver sulphide, and the ferric oxide produced from the ferric nitrate. From this the silver may be extracted by means of Russell's process, and the subsequent residue used for sulphuric-acid manufacture, and finally for iron-smelting.

Copper-wire has special adaptations for telegraphic service in its great mechanical strength when it is hard drawn and pure and its virtual freedom from those effects of electro-magnetic inertia that tend to throttle the flow of electricity through iron-wires. Several wires have been put up on the line from London to Dublin, with results that exceed the most sanguine expectations of the projectors. So much depends on the care and accuracy with which copper-wire is erected, that an entirely new mode of putting it up has been adopted, in

which the tension is exactly measured by means of specially designed dynamometers or draw-vice. Copper-wire requires very careful handling. Flaws, indentations, scratches, and kinks, act very much in the same way as diamond scratches on glass. The continued application of heat must be avoided, for it softens and weakens the wire; therefore, quick soldering is essential. In consequence of its freedom from magneto-electric inertia, or self-induction, the speed on a copper aerial line should be at least three times that on an iron one. The phosphor and silicon bronzes, also, when of high conductivity, are nearly pure copper, and may be classed with copper.

The Sudbury copper-deposits in Canada occur, according to Mr. J. H. Collins, in Huronian rocks. The ore exists in three distinct forms, viz., as local impregnations of siliceous and feldspathic beds of elassic origin, in the form of patches and strings of cupreous pyrrhotite; as contact-deposits of the same material lying between the impregnated beds and large masses of diorite; as segregated veins of chalcopyrite and of nickeliferous pyrrhotite, filling fissures and shrinkage-cracks in the ore-masses of the second class. The author considers the first original, or of high antiquity, while the latter two are due to segregation, produced either by intrusion of diorite or by internal movements. The copper can not be extracted so cheaply by the wet method as from the Rio Tinto ore, and the ore is of no avail as a source of sulphur. Nickel is everywhere present in the cupreous pyrrhotite, and is of no advantage to the smelter.

Tin.—The tin-mines of Kwala Kawsar, the capital of Perak, cover an area of several square miles, and are worked wholly by Cantonese in the most primitive manner. After washing the sand, one man takes up the minute portions of tin, which have the appearance of points of black-lead, and which sink at once to the bottom of the trough; others pick out stones from the gravelly mixture; others, again, push up the heavier portion of the mud from which the lead is not yet completely separated, so that it may pass through the water again and nothing be lost. The ore is then washed once more in special washing-houses, and is thrown, with charcoal, into a simple furnace like a barrel standing on end, and made chiefly of clay. The molten lead oozes down through the charcoal and escapes through a hole in the bottom into a pit hollowed out of the ground, while the tin is left. The tin-molds are simply holes pressed into the sandy floor by circular wooden rollers, each consisting of half a section, with broad, wooden lips, which have indentations similar in shape to the blocks of tin shipped abroad. The tin is left here for several days to cool, when it is hauled out with a long iron rod and dashed with water. It is curious that the only tin-mine in Perak supplied with adequate machinery and worked by Europeans fails to give

a profit, while the Chinese, with their primitive methods, can turn the most unpromising mine to advantage.

In a recently patented process for the manufacture of tin plates of great length, the substratum is of steel, which, first rolled hot and then cold, is gradually reduced to the required thickness. The surface of the metal is next scoured, and then, in the form of a continuous plate, it is fed into a bath of molten tin. After the metal has in this way received a coating of tin on both sides it is passed between highly polished rolls under immense pressure, by which means the tin and steel are so consolidated together that the finished plate is superior in every respect to the ordinary article.

Argentine is a name given to tin precipitated by galvanic action from its solution. It is usually obtained by immersing plates of zinc in a solution of tin containing six grammes of the metal to the litre. In this way tin-scrap can be utilized. To apply the argentine a bath is prepared from argentine and acid tartrate of potash rendered soluble by boracic acid. Pyrophosphate of soda, chloride of ammonium, or caustic soda may be substituted for the acid tartrate. The bath being prepared, the objects to be coated are plunged therein, having first been suitably pickled and scoured, and they may be subjected to the action of an electric current; but a simple immersion is enough. The bath for this must be brought to boiling, and objects of copper or brass, or coated with those substances, may be immersed in it.

Gold.—A specimen of the mineral called "black gold" or maldonite, from the "Nuggety Reef," Maldon, Victoria, has been analyzed by R. W. MacIvor. It is described as being without crystalline character and malleable, and having a bright silvery white luster when freshly broken, which slowly tarnishes on exposure to the air till it ultimately becomes nearly black. The composition of the mineral was found to be:

Gold	64.211
Bismuth	84.296
Siliceous matter	1.991
Total	100.000

If the silica be omitted and the metals calculated to make 100, the results would indicate for the mineral the formula Au_2Bi .

Several advantages are gained by extracting gold from its ore with a dilute solution of calcium chloride mixed with an equal amount of dilute acid, instead of with chlorine gas, as in Plattner's process. The chlorine apparatus and the labor employed for generating the gas are dispensed with. The solutions employed being much diluted, there are no noxious fumes to affect the health of the workmen. The gold is dissolved uniformly and completely. The method is applicable when the ore contains silver in addition to the gold. It has been in use since 1885 at the Falun copper-works in Sweden.

The special feature of Mr. J. Holme Pollok's process for the extraction of gold is the manner of chlorinating under hydraulic pressure, which, it is represented, enables the chlorine to extract the gold more completely, in a shorter time, and at less expense than by any other mode of treatment. In trials with refractory ores and tailings which, when treated by the ordinary processes, have yielded only a small proportion of their gold, almost the whole of the gold is said to have been extracted in nearly every case. The earliest attempt to use chlorine in gold extraction, about 1864, was found to be so expensive that the process never came into use. An improvement on this was made by Mr. Mears, of America, who pumped chlorine gas into the cylinder. A later invention is that of Messrs. Newbery and Vautin.

Gold is described by Mr. R. W. MacIvor as occurring in quantities in a matrix of serpentine at Gumdagai, in New South Wales, where it exists as fine flakes distributed irregularly through the rock. The appearance is as if the metal had been painted on the rock-surfaces by the hand. The yield of gold ranges from a few pennyweights to several ounces per ton.

Ores of auriferous tellurium are analyzed by F. M. Horn by gently heating them, finely powdered, in a current of dry chlorine. The author succeeded equally well by treating the mineral with hydrochloric acid, with the addition of a little nitric acid. Besides silver, gold, arsenic, antimony, tellurium, copper, and lead, there are generally quantities of iron, zinc, lime, magnesia, sulphur, and sulphuric acid, which are determined by the usual methods.

Silver.—In a paper at the Australasian Association on silver-smelting, rich silver mattes and their treatment, and on "kernel roasting," Mr. Edgar Hall showed that the main object of the smelter was to get clean slags. He did not consider that the dissemination of matte globules satisfactorily explained the losses of silver; for he had detached perfectly pure crystals from the very heart of the pot from slags of every kind, which yet often contained more silver than the main body of the slags. He thought that "high" silver slags might be due to the property possessed by silver of passing from already solidified portions of a body in which it is present into any portions which still remain liquid.

Silver has been detected by J. W. Mallet in the ash of the volcano of Ottopaxi, in the proportion of one part in 88,600 of the ash, or about two fifths of a troy ounce per ton of 2,240 pounds. This seems a small proportion, but it must represent a very large quantity of silver ejected during the eruption (July 22, 1885), when ash fell at Bahia de Caraguez to the depth of several inches.

Mr. Gowland, of the Japanese mint, has found that when small quantities of bismuth are present in silver, as is often the case when silver is obtained from copper containing bis-

muth, the metal is brittle and lacks uniformity, the parts which solidify last being richer in silver. The coinage bars prepared from this silver can not be rolled without special treatment, and even then are hard and unsuitable for mintage.

Alloys.—The following results were reached in Prof. E. J. Houston's experiments on the magnetic relations of palladium alloys in watches: A watch whose balance-wheel, hair-spring, and escapement are made of the Paillard palladium alloys can not have its weight sensibly affected by the influence of any magnetic field into which it is possible to bring it while on the person of its wearer. Experiments showed that the palladium alloys are destitute of paramagnetic properties. As far as the amount of the alloys at the author's disposal permitted, experiments failed to show that they possessed any diamagnetic properties. In four of the alloys described by Mr. Paillard the complete masking of the paramagnetic properties of some of the ingredients would seem to indicate a true chemical union of their constituents. The most interesting results of these experiments, however, were those in which it was established that no matter of what materials the balance-wheel or hair-spring may be made, provided they are conductors of electricity, their movements through a magnetic field, when the moving masses properly cut the lines of force, must result in a change in the rate of their movement, and consequently in a change in the rate of the watch; or, briefly, it was established that a watch placed in a magnetic field acts like a dynamo-electric machine. The fact that the watch subjected to this experiment, after its removal from this powerful field, did not manifest any sensible change in its rate, shows the extent of the protection the palladium alloys give it against the effects of external magnetism.

The experiments of T. H. Norton and E. H. Twitchell with alloys of calcium and zinc had in view a clear examination of the alloys and an inquiry into their availability for the production of metallic calcium. Some of them were made with the proportions indicated by Caron, who claims to have made alloys containing from 10 to 15 per cent. of calcium; and in others the amount of zinc was reduced by one half. An alloy containing 2.28 per cent. of calcium was very hard to distinguish from pure zinc. Two alloys formed from preparations containing half of Caron's proportions of zinc, contained respectively 5.44 and 6.06 per cent. of calcium. In the two succeeding experiments, Caron's proportions were restored, and the resulting alloys contained 4.97 and 6.36 per cent. of calcium. In all efforts to obtain alloys richer in calcium, although zinc was driven off in notable amounts, there was still a proportionate loss of calcium. The residual alloy rich in calcium was left in so spongy a condition that it oxidized immediately in contact with the air, and the crucibles showed traces

of being attacked. The results of the experiments tend to show that it is exceedingly difficult, if not impossible, to obtain by Caron's method zinc-calcium alloys containing more than from 6 to 7 per cent. of the latter metal.

It has been shown in papers read at the Institution of Civil Engineers that whereas from 2.5 to 7.5 per cent. of manganese in steel makes it as brittle as glass, so that it will break under a much less transverse load than iron, from 12 to 14 per cent. of manganese in the metal secures high carrying power with great elongation. Thus, a bar of the composition, carbon, 0.85 per cent.; silicon, 0.23 per cent.; sulphur, 0.08 per cent.; phosphorus, 0.09 per cent.; and manganese, 13.5 per cent., carried a load of 57.02 tons to the square inch, and took a permanent set at 29½ tons, with an elongation of 89.8 per cent. This metal is toughened by heating it to a high temperature and plunging it into water at a temperature of 72° Fahr., but it is difficult to machine.

In the process of R. N. P. Richardson, of Pittsburg, for coating iron or other metallic surface with lead, the sheets, having been pickled and cleaned, are placed in the solution-vat containing various chemicals in dilute hydrochloric acid. They are then passed through the molten lead, from which they come out the first time with a clean, bright, even, and pure coating of lead. The secret of the process, according to the author, after the pickling and washing of the sheets, is simply in the solution to which the sheet is subjected before its immersion in the molten lead. The solution also forms the flux for the sheet, bone-ash mixed with charcoal being used to prevent the oxidation of the metal.

Processes.—The process of electric welding discovered by Prof. Thomson several years ago has recently been greatly developed. Having started with the welding together of small wires of iron and copper, the operators are now able to weld bars of a very large size and of almost any shape or metal. The principle of the process is that of forcing through a conductor an amount of current that it will not carry without heating. The resistance in conductors being greatest at their point of abutment or contact, heat is first generated, and this heat increases the resistance at that point so greatly that more heat is developed at a remarkably rapid rate. A great advantage of the method arises out of the localization of the heat at the points or point where it is desired, whereby an enormous amount of energy is saved which is usually wasted in welding with the forge or flame. It is possible by it to weld any metal, including both those that melt at very low temperatures—such as lead, zinc, and tin—and those that melt at enormously high temperatures, as iridium, platinum, etc. Almost absolutely perfect automatic control of the current is obtained. The time required to weld metals depends upon the power of the apparatus and the skill of the operator. Strong

and practically perfect welds have been made in one-half-inch round wrought-iron in six seconds; in inch round wrought-iron in forty-five seconds. The power required to weld appears to be nearly proportional to the cross-section of the piece. The authors are able, by the same process, to solder, braze, anneal, temper, and do other heating that can not be done economically by present methods.

A mixture of compressed oxygen, as prepared by Brin's cheap process with coal-gas, has been successfully applied by Thomas Fletcher to brazing and welding. With a half-inch gas-supply, a joint could be brazed in a two-inch wrought-iron pipe in about a minute, and without heating to redness more than one inch on each side of the joint. A good weld was obtained on an iron wire one eighth of an inch in diameter with a blow-pipe having an air-jet of about one thirty-second of an inch in diameter. The surface of iron heated to welding-heat by this means comes out clean and free from scale.

Carbon in steel, pig-iron, and other ferro-carbon alloys is usually determined by methods in which the carbon is first separated in a state of proximate purity, and afterward burned in a current of oxygen. To effect the separation, the particular ferro-carbon alloy is treated with some salt, whose base can either be substituted entirely, or which can be reduced to some lower compound by the iron that is present in the alloy, the carbon not taking any part in the reaction. For this purpose a neutral solution of cupric chloride has hitherto given the most satisfaction; but its use is attended by the inconvenience that the cupreous chloride that is produced is comparatively insoluble, and its precipitation has to be provided against. This inconvenience is entirely obviated in the new mixture proposed by Mr. T. W. Hogg—a solution of ferric chloride and cupric chloride. When these substances are brought together an immediate change takes place, and cupric chloride and ferrous chloride are formed.

In M. A. Levy's process for depositing thin sheets of metal upon other metals, batteries and dynamos are dispensed with, and a double decomposition is depended upon. In depositing a layer of nickel upon either copper or iron, a solution of salt of the metal is prepared—preferably the acidulated chloride—and, after the object has been scoured, it is suspended in the solution at the extremity of a zinc wire, which partially enters the bath. The zinc is attacked by the salt, and it replaces the nickel in the chemical constitution of the solution, whereby the object is covered with a layer of nickel. In copper-plating cast-iron, an alkaline bath is employed in place of the acidulated one.

A process for tempering spring wire and ribbon, by introducing a current of electricity as the heating power, has been invented by Mr. Frederick Sedgwick, of Chicago. The greatest difficulties met with in tempering a

fine piece of steel by any other process are the oxidation of the surface of the metal by contact when heated with the air, and the buckling and twisting of the ribbon in the oil-bath. Both of these troubles are avoided in Mr. Sedgwick's process.

Apparatus.—The advantages of magnesite as a refractory material in furnace-linings are thus summarized by Herr K. Sorge: The charge may be dephosphorized without difficulty to the extent of 98 per cent. of its total phosphorus; magnesite bottoms allow of the addition to the charge of 30 per cent. and upward of iron-ore, and thereby facilitate the use of every kind of said material; magnesite bricks may be made of very regular shape, so that the building of the hearth in an accurate and durable form is much facilitated; magnesite may be built up in direct contact with silica brick-work, which is not possible with any other basic material; the durability of a magnesite lining far exceeds that of any other basic substance, and it is therefore less costly for repairs; magnesite, when exposed to the action of the basic slags and metallic oxides, resists corrosion better than any other known substance; the absolute indifference of bricks and burned magnesite to the action of the air makes it possible to preserve them in quantity for any time without fear of alteration. The danger of using a partially altered material, and therefore one of small durability, as may happen with dolomite, is completely avoided with magnesite.

The difficulty of supporting the ore and fuel in the furnace, as is done in ordinary furnaces by the coke, which was the chief obstacle to the making of pig-iron by natural gas, is met in Mr. J. T. Wainwright's furnace by a series of pipes protected with fire-clay tiles. The pipes are kept cool by turning a portion of the blast into the space between them and the tiles. The furnace is fitted with a combination chamber, into which the gas and air furnished from an ordinary cupola are admitted through separate pipes. Ordinary cupolas may be easily altered to use the new fuel.

A naphtha refuse-burning furnace, acting both as a calciner and a smelting-furnace, has been introduced at the Radabeksky Copper Smelting Works of Messrs. Siemens Brothers. In a thirty-days' run it smelted 2,076,911 pounds of 7-per-cent. ore, consuming 408,835 pounds of naphtha refuse, at 42s. per ton, and yielded 810,737 pounds of regulus, containing 25 per cent. of copper; or to produce 2,000 pounds of regulus required 1,008 pounds of refuse, costing 21s. 8d. This is said to work 8.5 times faster than the ordinary ore-furnace, and to be cheaper at these works than when wood is used.

An important improvement in puddling, introduced by the North Chicago Rolling Mill Company, includes taking the molten iron directly from the blast-furnace to the puddling-furnace. The results are very satisfactory,

both as to the quality of the puddled bar and in a considerable saving that is effected in fuel, time, and other items.

The composition of the Dinas fire-bricks and cement, which have gained an excellent reputation, is shown by the analysis of Mr. James S. Merry to be silica, 98.10; alumina, 1.04; oxide of iron, 0.56; lime, 0.53; magnesia, a trace; and water, 0.1.

The Lash open-hearth furnace, which is peculiarly adapted to the use of gas, is largely employed at Pittsburg, where twelve furnaces, varying in capacity from 40 to 15 tons, are actually at work and four others are building.

By the use of the new foundry ladle of Goodwin & How, Westminster, the ordinary method of skimming molten metal by hand is dispensed with, scoria and ashes are prevented from entering the mold, the densest and cleanest metal can be poured from the bottom, and the metal can be kept hot in the body of the ladle by the usual covering of sand while pouring.

Miscellaneous.—The Director of the United States Mint, in his report on the production of the precious metals in the United States during 1887, states that the production of gold amounted to 1,596,500 fine ounces, of the value of \$33,000,000. The production of silver amounted to 41,269,240 fine ounces, of commercial value about \$40,450,000, and of the coining value of \$58,857,000. The gold production fell off from that of the preceding year, when it was \$35,000,000. The production of silver increased over that of the preceding year, when at coining value it was \$51,000,000. The production was contributed by States and Territories as follows, in coining values:

STATE OR TERRITORY.	Gold.	Silver.	Total.
Alaska	\$675,000	\$800	\$675,800
Arizona	580,000	2,800,000	4,680,000
California	13,400,000	1,500,000	14,900,000
Colorado	4,000,000	15,000,000	19,000,000
Dakota	2,400,000	40,000	2,440,000
Georgia	110,000	500	110,500
Idaho	1,900,000	3,000,000	4,900,000
Montana	5,200,000	15,500,000	20,700,000
Nevada	2,500,000	4,900,000	7,400,000
New Mexico	500,000	2,800,000	2,800,000
North Carolina	225,000	5,000	280,000
Oregon	900,000	10,000	910,000
South Carolina	50,000	500	50,500
Utah	220,000	7,000,000	7,220,000
Washington	150,000	100,000	250,000
Texas	250,000	250,000
Alabama, Tennessee, Virginia, Vermont, Michigan, and Wyoming.....	3,000	2,500	5,500
Total	\$33,093,000	\$58,408,800	\$91,501,800

The property which the electric current possesses, said Mr. W. H. Preece, in the British Association, of doing work upon the chemical constitution of bodies so as to break up certain liquid compounds into their constituent parts, and marshal these disunited molecules in regular order, according to a definite law upon the surfaces of metals in contact with the liquid where the current enters and exists, has

led to immense industries in electro-metallurgy and electro-plating. The extent of them may be gathered from the fact that there are 172 electro-platers in Sheffield and 99 in Birmingham. The term electro-metallurgy was originally applied to the electro-deposition of a thin layer of one metal on another; but this is now known as electro-plating. In 1839, Jacobi in St. Petersburg and Spencer in Liverpool laid the foundation of all we know of these interesting arts. Copper was deposited by them so as to obtain exact reproductions of coins, metals, and engraved plates. The fine metals, gold and silver, are deposited in thin layers on coarser metals, such as German silver, in immense quantities. Christoffe, in Paris, deposits annually six tons of silver upon articles of use and of art. The whole of the copper-plates used in Southampton for the production of the Ordnance Survey maps are deposited by current on matrices taken from the original engraved plates, which are thus never injured or worn and are always ready for addition or correction, while the copies may be multiplied at pleasure and renewed at will. Nickel-plating, by which the readily oxidizable metals like iron are coated with a thin layer of the more durable material, nickel, is becoming a great industry. The electro-deposition of iron, as devised by Jacobi and Klein, in the hands of Prof. Roberts-Austen, is giving very interesting results. The designs for the coins which were struck at the mint on the occasion of the Jubilee of the Queen, were modeled in plaster, reproduced in intaglio by the electro-deposition of copper, and on these copper molds hard, excellent iron in layers of nearly one tenth of an inch was deposited.

Attention has been given by Prof. W. Chandler Roberts-Austen to the allotropic states of metals. Joule and Lyon Playfair showed, in 1846, that metals in different allotropic conditions possessed different atomic volumes. Matthiessen came to the view in 1860 that in certain cases when metals were alloyed they underwent allotropic changes. Instances of allotropy are observed in Bolley's lead, which oxidizes readily in air; Schutzenberg's copper; Fritsche's tin, which falls to powder when exposed to an exceptionally cold winter; Gore's antimony; Graham's palladium; and allotropic nickel. Joule proved that when iron is released from its amalgam by distilling away the mercury, the metallic iron takes fire on exposure to the air, and is therefore clearly different from ordinary iron or an allotropic form of the metal. Moissan has shown that similar effects are produced in the case of chromium and manganese, cobalt, and nickel, when released from their amalgams. Allotropy also appears in metals released from solid alloys. Certain alloys may be viewed as solidified solutions, and when they are treated with a suitable solvent it often happens that one constituent metal is dissolved and the other is released in

an insoluble form. If a certain alloy of potassium and 10 per cent. of gold is thrown upon water, the potassium takes fire, decomposing the water, and the gold is released as a dark powder. One form of this black or dark-brown gold appears to be an allotropic modification of the metal as it combines with water to form auric hydride. If this dark gold be heated to dull redness it readily assumes the ordinary golden color. The Japanese produce with this gold, by the aid of certain pickling solutions, a beautiful patina on copper which contains only 2 per cent. of gold, while even a trace of the latter metal is sufficient to alter the tint of the patina. An alloy of zinc and rhodium is described by Debray in which a simple elevation of temperature induces allotropic change in the constituent metals. This property of metals and alloys of passing into allotropic states and the possibility of changing the mechanical properties of metals by apparently slight influences may have considerable industrial importance.

A new mineral, an arsenide of platinum, $PtAs_2$, discovered by Mr. Sperry at Sudbury, Ontario, and named Sperryite by Prof. Wella, is of interest as being the first mineral other than natural alloys with metals of the platinum group of which platinum is an important constituent. It occurs in the form of a heavy, brilliant sand composed of minute well-defined crystals. After removing impurities, the Sperryite sand appears of a remarkably increased brilliancy, with every grain showing extremely bright crystal faces of a tin-white color, resembling that of metallic platinum itself. It is very heavy, possessing a specific gravity of 10.6. Yet, although it is so heavy, the sand shows a marked tendency to float on water owing to its not being easily wet, and even when the grains do sink they almost invariably carry down bubbles of air with them. A certain similarity in behavior when treated with *aqua regia* with that of pyrites is rendered all the more important in view of the fact that the platinum and iron groups both occur in the same vertical row (the eighth) in Mendelejeff's periodic classification.

A process by which wood is made to take on some of the special characteristics of metal has been turned to practical account in Germany. By this process the surface becomes so hard and smooth as to be susceptible of a high degree of polish, and it may be treated with a burnisher of either glass or porcelain. The wood then presents the appearance of polished metal and has the semblance of a metallic mirror, with the advantage that it is not affected by moisture. To produce this property the wood is steeped in a bath of caustic alkali for two or three days, according to its degree of permeability, at a temperature of between 164° and 197° Fahr. It is then placed in a bath of hyposulphite of calcium, to which, after some twenty-four or thirty-six hours, a concentrated solution of sulphur is added. It is then treated

for from thirty to fifty hours in a bath of acetate of lead at a temperature of from 95° to 120° Fahr. After being thoroughly dried it is in a condition for being polished with lead, tin, or zinc, as may be desired, and finished with a burnisher.

METEOROLOGY. Temperature.—The distribution of heat over the surface of the earth has been studied by Dr. Zenker. The amount of heat that reaches the earth's surface is dependent on the distance of the sun, and is greater at perihelion than at aphelion in the inverse ratio of the square of the sun's distance. The varying ellipticity in outline of the earth in its various positions is not of enough extent to have an influence on the amount of heat received. If any one point of the earth's surface is alone considered, then the heat received is determined by the sine of the sun's altitude or the cosine of its zenith distance. From these relations it follows, leaving the air out of account, that the heat received by the pole on a summer day is greater than that which falls on a point at the equator. Thus taking as unit the heat received during twenty-four hours by a place at which the sun is in the zenith, the north pole receives an amount of heat represented by 0.397, and a point on the equator an amount represented by 0.292. But the air absorbs a large part of the sun's heat. The estimation of the height of the atmosphere from the amount of heat absorption can not be relied upon, because the chief absorption takes place in the deeper layers of the air. For the determination of the coefficient of absorption, the author accepts the values obtained by Langley from his bolometric experiments, with a reservation regarding the absorption taking place in its highest layers, which he does not admit. One factor of great importance is the diffusion of heat, already described by Clausius, from the small particles of water, dust, and air in the atmosphere, which are calculated under other definite assumptions. Another factor that must not be lost sight of is the reflection of heat at the earth's surface. This is calculated for the three cases of a surface of land, water, and snow. In his calculations for the sea, Dr. Zenker started with the temperature of a point on its surface which was quite uninfluenced by the neighboring continents, and unaffected by warm or cold currents. In basing the calculations for the land surface, the conditions were first determined under which the influence of the neighboring sea is either nothing or minim in amount. A region of purely continental conditions was found in the neighborhood of the east coast of Asia; while all other points were affected to a greater or less extent by the neighboring sea. The observed temperature on the land was therefore only partly dependent upon the position of the place on any given parallel, for other influences make themselves felt. Hence the real and "accessory" temperature can be calculated for

each parallel. The amount of heat radiated from the sun, when compared with these temperatures, was about the same for each 10° C. of difference. Comparison of the temperatures that really exist with those thus deduced showed that the climate on the sea of the southern hemisphere is colder than calculation would make it—a result attributable to the oceanic currents of cold water; while, in consequence of the disturbance introduced by the Gulf Stream, the continental climate in the northern hemisphere is slightly too warm.

Data regarding the average time of the first killing frost in the United States have been published in the "Monthly Weather Review." They were collected from four hundred and thirty-two rural stations, and embody the results of observations ranging in duration from two to forty-nine years, of which thirty-six stations have records of fifteen years or more. From them it appears that killing frosts occur throughout the year along the northern border of Minnesota and Dakota. In California they are very unusual in the eastern and northeastern parts, but light frosts occasionally occur in the western part. Hard frosts come about the first of September, in the middle of the upper lake region; September 15 in the lower lakes and the south end of Lake Michigan; October 1 along the New England sea-coast and southern Ohio; October 15 in the Carolinas; and from November 1 to December 15 in the States farther south, to central Florida. The observations involve an average error of about eighteen days; and will therefore have to be continued through many years to obtain an approach to reasonable accuracy in fixing the date.

According to Von Tillo's "Researches upon the Distribution of Air-Pressure and Temperature over the Earth," the mean temperatures, centigrade, of the continents are as follow:

CONTINENTS.	Year.	January.	July.
Asia and Europe.....	10.0	- 8.0	22.1
North America.....	4.7	- 8.7	19.7
South America.....	22.0	25.1	20.9
Africa.....	26.4	22.7	27.1
Australia.....	22.8	29.4	16.4
Continents altogether.....	15.0	7.8	22.9

The mean of the air-pressure of the whole northern hemisphere is, in January, 761.7 mm.; in July, 758.5 mm.; or about 3.2 mm. less. The corresponding values for temperature are 8.8° and 22.6°; difference, 14.8°; so that a change of 1 mm. in pressure is equivalent to one of 4.5° in temperature.

The greatest winter cold known to exist upon the globe prevails at Werkojansk, in Siberia, which is situated in the valley of the Jana, about nine feet above the level of the river, in latitude 67° 34' N., longitude 133° 51' E., and at a height of about 350 feet above the sea. Monthly means of -58° Fahr. occur in December, and minima of -76° are usual for the three winter months, December to February. In

1886 March had also a minimum of -77° , while in January, 1885, the temperature of -89° was recorded. The yearly range of cloud is characteristic of the climate; in the winter season the mean amounts only to about three tenths in each month.

The results of studies concerning the relations of pressure and temperature in high and low conditions of the barometer, and at different elevations, have not been harmonious. M. Dechevrens concludes that, while a high temperature accompanies a low pressure at sea-level, the fluctuations are reversed at some height above. Mr. H. Allen has arrived at a nearly opposite result. He tries to remove the disagreement by showing that the minimum pressure on a mountain does not coincide with the passage of a storm-center over the station, but lags behind it to an extent that corresponds with the height of the mountain and the surrounding topography, and which, on the summit of Mount Washington, 6,279 feet, is from ten to eleven hours. A like rule prevails with the maximum. He also concludes that the temperature change at the base precedes very slightly the pressure change, but at the summit the change occurs nearly twenty-four hours earlier; that the temperature change appears to be a very little earlier at the summit than at the base, and varies much more rapidly at the former; that in a low, the difference in temperature between base and summit is less than the mean before the storm, but that it rapidly increases after the center has passed. Just the contrary is true in a high.

A research by Supan on the mean duration of the principal temperature periods in Europe is based on observations at four hundred and seventy-one stations of the length of the frost-period (temperature of 0° C., or below), the warm period (10° C. and above), and the hot period (20° C. and upward), the results of which are presented graphically. The lines sharply mark the contrast between ocean and continental climates. The lines of equal duration of the frost-periods, like the winter isotherms, run northward into the interior of the continent in the eastern part, sometimes inclining to the south and southeast; those of the warm periods usually keep to the parallels of latitude; while those of the hot periods run decidedly to the northeast.

Hans Fischer's charts of the equatorial limits of snowfall of the northern hemisphere likewise bring out the difference between land and sea climates. The limit on the land runs nearly along the thirtieth degree of latitude, while on the sea it recedes to the thirty-fifth degree.

The question of aperiodic variations of temperature has been investigated by Dr. Perle-witz, on the basis of observations made during the forty years 1848-1887, at Berlin, and during the ninety-three years 1790-1883, at Breslau. If a year is divided into halves, the first half is characterized by a normal curve of rising temperature, and the second half by a simi-

larly normal curve of falling temperature. Both curves, however, show negative irregularities, the number of which may be very considerable in any one month. On the whole, the number of these irregularities is greater in the first half of the year than in the second, so that the heat of the second half is greater than that of the first.

Clouds.—The British Association's Committee on the Ben Nevis Observatory reported that the work done there during the year had been mostly directed toward obtaining a wider knowledge of halos on clouds, St. Elmo's fires, and other natural phenomena. St. Elmo's fire was observable at definite phases of the weather. The usual difference in temperature between the summit and base of Ben Nevis is about 16° Fahr., but in the driest season of 1887 it was as low as 7° Fahr. It appears that when a cloud is resting upon the mountain the telegraphic wire which makes communication between the base and summit has an earth-current passing through it in one direction, but that after the cloud has passed over, the direction of the earth-current changes. "Sky-colored" or illuminated clouds have been remarked by several observers in the northern sky at night, during about six weeks near the summer solstice—from June 2 to July 20. They are not usually colored, but shine with a pearly or silvery luster. They have been seen at midnight at an altitude of about 80° , but are more usually confined to about the first 10° above the northern horizon. They are supposed to be very high cirrus clouds illuminated by the sun; or, by Jesse, as consisting of small crystals, originating from the condensation of gases under the low temperature of the upper regions of the air.

Some light may possibly be cast upon the method of formation of hail, by Mr. O. C. Wilson's observation of the drops that fell from a pine-tree during a cold fog. A part of them reached the ground in a liquid state, while another part had been converted into pellets of ice. The author believes that the ice-drops came from the upper part of the tree, having been frozen during their traverse of the greater distance by the greater loss of heat which they suffered from the more rapid and longer-continued evaporation. An instance is mentioned in which a railway-train became coated with ice, in traveling through an atmosphere above the freezing-point, and laden with mist.

After continued studies of the "red sunsets" which were prominent features of the skies from the end of August, 1883, to June, 1886, Kiessling has concluded that they were due to no other cause than the vapors mingled with combustion-products which were thrown up into the atmosphere by the volcanic explosion of Krakatoa on the 27th of August of the former year. He is convinced, from experiments with mechanically produced dust, that the solid ejecta—the finely powdered pumice-stone, constituting a large part of the volcanic ash—had

no part in intensifying the coloring. The long continuance of the matter in the atmosphere agrees with experimental determinations of the rate at which smoke settles in atmospheric air. This conclusion is in substantial harmony with the conviction expressed by Mr. A. W. Claydon in the "Journal of the Royal Meteorological Society," that vapor played the principal part, and the other eruption-products only a subordinate one, in the coloration. The phenomenon called Bishop's Ring (see "Annual Cyclopædia," 1885, article "Meteorology") is also ascribed by Ricco to the eruption of Krakatoa. He supposes that it was caused by the refraction produced by a peculiar condensation of vapors into extremely minute particles. The red twilight phenomena differ from this ring in that they were not the effect of refraction, but of a selective transmission, by a well-known and common property of the atmosphere, of the less refrangible rays.

Storms.—The storm of the 11th, 12th, and 13th of March, commonly known as the "New York Blizzard," was one of the most severe ever experienced on the Atlantic coast of the United States. As described by Prof. Winalow Upton, in the "American Meteorological Journal," it was peculiarly characterized by the rapidity with which its energy was developed, and by the extreme precipitation that accompanied it, principally as snow. West of the seventy-second meridian, the precipitation was almost wholly snow, piled up in immense drifts, while east of this meridian it was rain and snow mixed. The region in which it prevailed extended, on land, from the neighborhood of Cape Hatteras to the southern part of Massachusetts. The district in which it raged with unmitigated violence included New Jersey, southeastern New York, Block Island, and southern New England. Through the latter territory snow fell to an estimated average depth of forty inches, while it was massed so irregularly in immense drifts that it was almost impossible to measure it; railroads were blockaded; telegraphic communication was stopped; shipping along the coast was exposed to great danger; many lives were lost from exposure; and the city of New York was cut off from all communication with other places, except through the Atlantic cables. According to Gen. Greely's summary of the history of the storm, the storm-center was first noticed in the North Pacific on March 6, whence it passed southeast from the Oregon coast to northern Texas by the 9th. An extended trough of low pressure, having two distinct centers, was gradually formed, which covered the Mississippi and Ohio valleys on the 10th; and on the 11th, according to Prof. Hayden, extended from the west coast of Florida up past the eastern shore of Lake Huron, and far northward toward the southern limits of Hudson Bay. The northern center moved northeastward and disappeared, while the southern center moved slowly eastward, passing off the Atlantic coast near Cape Hat-

teras. The "cold wave," which followed upon the track of the great trough, as it approached the coast, as explained by Prof. Hayden after examining the reports of sailing-vessels on the ocean at the time, met the warm currents of air from the south, and that accompanying the Gulf Stream, now trending northwardly after a winter interval of comparative quiet; and the difference in temperature of the two air-streams being very great, excessive precipitation was the result. The storm, Prof. Hayden says, so far as it has been possible to study it from the data at hand (which need to be re-enforced by fuller ocean reports), furnished a striking and instructive example of a somewhat unusual class of storms. Instead of a more or less circular area of low barometer at the storm-center, there was here a great trough of "low" between two ridges of "high," the whole system moving rapidly eastward, and including within the arc of its sweep almost the entire width of the temperate zone. "The trough phenomena, as an eminent meteorologist has called the violent squalls with shifts of wind and change of conditions at about the time of lowest barometer, are here illustrated most impressively." One thing to which attention is particularly called is the fact that storms of only ordinary severity are likely, upon reaching the coast, to develop increased energy. This is especially so in a storm of this kind, where the isobars are elongated in a north and south direction.

A relation between the velocity of a storm's progress and the extent of the accompanying rain area has been established by Loomis, who found also that the chief part of the rain area was in advance of the storm-center. His observations are confirmed, as to their principal features, by Ley and Abercromby. The last author has shown that the heaviest rain and cloud areas are massed toward the front of rapidly advancing cyclones, while immediately after the passage of the line of minimum pressure the sky begins to show signs of clearing. It is remarked that in the United States, when the cyclones are moving with unusual rapidity, all the rain and almost all of the cloud area are confined to the front half of the cyclone. Loomis first regarded the rapid advance of cyclones as the effect of excessive rain, but later investigations have shown that the rainfall is not an essential feature; and certain European observations recorded by Hann suggest that unequal distribution of rain around rapidly moving cyclones is not the cause but the result of the cyclone's advance. H. Helm Clayton supposes that, in cyclones which move very slowly, the air ascends almost uniformly around the center; but when the storms have a more rapid progressive motion, the air in the rear, which has not only to enter but to follow the cyclone, is more retarded by friction than the air in front, and hence does not enter the cyclone so freely, so that the formation of cloud and rain in the rear is retarded; while

a larger volume of new air enters the progressing cyclone in front, and increases the amount of precipitation. Espy showed many years ago that, on account of mechanical heating by compression, no descending air can be accompanied by precipitation; and an explanation is thus afforded why there are no, or but little, cloud and precipitation in the rear of rapidly moving cyclones. On the other hand, in order that a cyclone may advance rapidly, there must be a rapid decrease in pressure, and consequently a rapid removal of the air, in front of the advancing depression. Since, according to the normal circulation of a cyclone, there are an inward movement near the earth's surface, and an upward and outward movement near the top, the upward and outward movement is necessarily increased in unusually rapidly moving cyclones, and with it also the cloudiness and precipitation are increased. Observations at Blue Hill Observatory indicate that velocity of storm movement, and especially variability of weather, are intimately connected with the velocity of movement of the general atmosphere. Hence, the author concludes that the main cause of rapid cyclone progression is an unusually rapid drifting of the atmosphere over large regions; and the unequal distribution of rain around the cyclone is due to its rapid progress.

An attempt has been made, by Mr. E. Douglas Archibald, to find a basis of reconciliation between Faye's theory of storms and the theory to which it is thought to be opposed. M. Faye's theory, to express it in brief, considers that air-whirls around a vertical axis, including cyclones, typhoons, tornadoes, and water-spouts, originate in the upper currents of the atmosphere, and are propagated downward by a descending motion, accompanied by gyration round a vertical axis. The opposite theory is not, as M. Faye describes it, that the movements rise from the ground in an ascending current that borrows a gyration from that of the earth itself; but, as developed by Ferrel and Sprung, it makes the action begin in a slight upward motion in unstable air, usually near the lowest cloud-stratum, and possessing a gentle gyratory motion relative to some central point, "which is never wanting in a cyclonic area." Once the motion is started, and the air that feeds it is nearly or quite saturated, the action will go on and be propagated downward, not by a descent of the air, but by the transference of the physical conditions which favor the continuance and maximum development of the ascending current. The increasing rapidity of gyration of the air as it approaches the axis, however gentle it may be at starting, only allows it partially to feed the initial and continuously reproduced vacuum, which is thus compelled to draw its supplies chiefly from the non-gyrating air at the lower end of the aerial shaft. As this is drawn upward, the centrally aspiring surrounding air is made to gyrate more rapidly

(partly by the friction of the superjacent rotating layer), and thus the gyratory and other conditions are propagated downward until a balance is struck between supply and demand.

Thunder-Storms.—The Council of the Royal Meteorological Society has appointed a committee to collect volunteer observations on British hail- and thunder-storms. The objects sought are: A knowledge of the nature and causes of the different kinds of thunder-storms; a discovery of the localities where hail and thunder are most frequent and destructive; and, if possible, to obtain an increased power of forecasting hail and thunder, whereby it is hoped that eventually damage to persons, stock, and property may be lessened.

As one of the most certain prognostics of thunder, Mr. B. Woodd-Smith mentions the formation of parallel streaks or bars, in cirrus and cirro-stratus, and on the surface, apparently, of nimbus clouds. In cirrus they give often almost the first intimation of coming change after settled weather, and are most usually followed within twenty-four or thirty-six hours by thunder. When they appear on nimbus the interval is much less, but they have not been seen on the thunder-cloud itself. These small patches of definitely marked "parallel bars" should be distinguished from the more general parallel arrangement which is often seen on a much larger scale, but is not known to have any very distinct value as a weather prognostic.

The typical course of the meteorological instruments at the advent of a thunder-storm has been studied by Ferrari on the basis of the records at Bern, Santia, and Rome. Previous to the storm, the pressure and relative moisture diminish, while the temperature increases, so that, at the outbreak, the first two have reached a minimum and the last a maximum. At this moment pressure and moisture increase very rapidly, and the temperature falls at a corresponding rate, so that at the end of the storm the first two elements have reached a maximum and the last a minimum. The force of the wind, which was slight before the storm, augments very speedily when it begins, and is quickly stilled after it. The minimum of pressure and relative moisture and the maximum of temperature are thus simultaneous with the beginning of the storm, and the course of the temperature is opposite to that of the two other elements. The same course continues in the after-storm, but is less pronounced. The force of the accompanying wind and the violence of the shower increase with the velocity of advance. The storms seem to originate in a limited region, whence they spread on one side. The ordinary form of the depression is an ellipse, the major axis of which is perpendicular to the axis of the shower. The same is the case with the depression of temperature that follows the storm. Storms of short course, or local showers, are accompanied by light winds, extensive storms usu-

ally by stronger winds. The rain-tract is nearly parallel to the line of progress of the storm, as is also the narrow hail-tract.

Rainfall.—The results of investigations into the influence of forests on rainfall are thus far adverse to the supposition that, in respect to the yearly average, it is material. But the records are still too limited and imperfect, and the conditions are too complicated, to allow a final conclusion to be drawn. Prof. George F. Swain describes the present condition of the question as one in which the assumption is not proved, but observes that practically, in considering the effects of a removal of the woods, we have not to compare regions where they are replaced by bare ground, but by growths of underbrush, second growths, or fields of grain or grass, the influence of which, as regards rainfall, may be like that of the forest itself. A gradual increase in the tillable quality of the soil and in capacity to hold moisture in the plain regions west of the Mississippi river, which has been observed since the lands came under cultivation, has been assumed to indicate an increase of rainfall. The most direct evidence on the subject should be sought in the meteorological records, where they have been kept, at military posts. Some of these extend for many years back previous to the settlement of the country—they having been kept at Fort Leavenworth and Leavenworth City, for instance, since 1837. Prof. Harrington has concluded, from the comparison of the rainfall charts, based on the recent Signal Service observations, with the charts contained in Blodgett's "Climatology of the United States," that the isohyetal lines have advanced westward over the plains. Gen. Greely has expressed the opinion that the rainfall has increased in this region; while, on the other hand, it is claimed that the records at certain military posts within it or near it, going back in some cases as far as 1847, show that there has been no increase. A comparison of the records kept at Fort Leavenworth from 1837 to 1873, with those of the Signal Service at Leavenworth City since 1873, shows an apparent average increase of seven inches during the past twenty years; but the observations, having been made upon different systems, are hardly commensurable. Mr. Henry Gannett has compared the observations from twenty-six stations, covering a large part of the region in question, for periods ranging from six to twenty-six years, and giving a total of three hundred and ten years of record. Cutting the series for each station in the middle, he has added the earlier halves and the later halves separately, assuming that the totals would represent respectively the rainfall of an earlier and later term. The footings thus made show an apparent increase of sixty inches, or a mean of 0.4 inch per year for the later term—a difference that is hardly appreciable. Other series of observations compared by Mr. Gannett—in the prairie regions of the central States, where the forest area has been

considerably increased, running from ten to forty years back; in Ohio, where most of the forests have been removed, ten to forty-eight years; and in New England, where the forests having been removed, have been restored over nearly half of the territory—concur in indicating that if there be any difference in the amount of rainfall, as affected by the forests, it is too slight to be of material importance.

H. F. Blanford's observations in India indicate that the forests, particularly in the hot zone, promote an increase of rainfall.

The observations of Studinka upon the effects of altitude and other conditions, made at seven hundred stations in Bohemia, in which the amount of rain that should be expected at each step of altitude has been computed, apparently point to an excess over the theoretical amount in the neighborhood of densely wooded regions. In Australia, where the soil in the forests is bare and hard in dry weather, it has been observed by Lendenfeld that the cutting down of the trees is followed by a growth of permanent grass that holds the water and renders the soil permeable, and by an increase of humidity in the air.

While the average yearly amount of rainfall may not be visibly affected by the presence or absence of forests, there is still room for the inquiry whether the distribution of precipitation through the year may not be affected by it. Forests tend to equalize the temperature, making the air cool and moist in summer, and warding off extremes of cold in winter. What influence this fact may exert upon the relative amounts of rain in summer and winter remains to be investigated. Some light is thrown on this subject by Hann's comparisons of the mean temperature of the environs of Vienna, in the open country, with that of the forest station of Hadersdorf, in the *Wiener Wald*. They indicate that the temperature in the *Wald* is very sensibly lower than in the open country around the forest. The difference is, in January, 0°5 C.; in April, 0°9; in July, 1°8; in October, 0°8; and for the whole year, 0°9. The influence of the forest is therefore at its minimum in winter, and at its maximum in summer. In the daily course, the cooling effect of the forest is at the maximum in the evening and early morning, and at the minimum during the warmer hours.

According to W. C. Dolberck's comparisons, the rainfall on Victoria Peak, Hong-Kong, for the past ten years, exceeds the record at the observatory, about 1,700 feet below it, by about one sixth. The fact seems to be the result of the mountain presenting an obstacle to the wind from whatever side it blows, in consequence of which the air is forced to rise, and, being thereby cooled, precipitates more moisture. Even when the air is moderately dry at sea-level, its temperature may, in rising, be brought below the dew-point. The comparatively greater rainfall in hilly districts may be similarly accounted for.

The relations of variations of underground water to precipitation and to fires caused by lightning have been studied in Bavaria by O. Lang. He finds that the height of the water underground varies according to the amount of precipitation. This influence is somewhat obscured by the fact that the increase corresponding to a certain increase of precipitation is greater in the spring and autumn than it is in summer. When the number of recorded fires caused by lightning was plotted together with the record of the variation of underground water, the maximum of one curve was found to coincide with the minimum of the other.

Mr. Blanford has found indications of a periodical recurrence of droughts since 1799, at intervals, in southern India, of from nine to twelve years, but usually about a year before the sun-spot minimum. In northern India they sometimes occur in years of maximum sun-spots.

A study of the rainfall of Paris for the last two hundred years has been made by M. Renon, beginning with observations made by Lahine in 1688. At the time of Lahine there was a maximum in July; now there are two less marked maxima in June and September. The average number of rainy days per year is 169. Snow occurs very irregularly, but is never entirely absent in any winter. During the period covered by the observations the character of the situation has essentially changed; and what was a suburban tract some distance south of the city is now in the midst of a district surrounded by high buildings.

Electricity.—In the observations upon the aurora borealis made by Mr. Carlheim-Gyllenskiöld at the Swedish station in Spitzbergen, 1882-'88, the diversion of the culminating point of the auroral arch from the magnetic meridian was found to be $11^{\circ} 27' W.$, while the corona was nearly in the magnetic zenith. The breadth of the arches varies with their elevation above the horizon; and they consist of rays running in the direction of the breadth, and converging toward the magnetic zenith. The greatest breadth appears to be at a height of 45° , while in the neighborhood of the zenith the arches are very narrow, stretching as a luminous band across the heavens. Sometimes the light also formed a spherical zone parallel with the earth, floating in space as a horizontal ray of light. Sometimes the zone was broken, with dark spots or irregular spaces. The movements of the arches did not prove to be subject to as regular laws as had been supposed: the phenomena of the waves of light running along the arches—"the merry dancers"—took place nearly equally in the west to east and reverse directions. The light of the aurora was yellow, monochromatic, showing in the spectrum the yellow lines of Angström; or crimson or violet, resolvable into several rays and bands. No sound was ever heard from the light, or "smell of sulphur" observed. The light was

never seen to descend below the mountains or the lower clouds. Measurements by parallax gave average heights of from about 55 to 60 kilometres. No annual variation in the frequency of the auroras could be detected, but daily ranges in frequency and form were observed.

It was shown, by a collection of more than fifty photographs of flashes, from different parts of the world, at the Royal Meteorological Society's exhibition in March, that lightning does not take the zigzag path depicted by artists, but usually a sinuous and often erratic one. Sometimes it had a perceptible breadth, and resembled a piece of tape waved in the air. One photograph illustrated a dark flash. According to the committee's report, the evidence is to the effect that lightning assumes various typical forms, under conditions at present unknown. These forms may be classified provisionally, as stream, sinuous, ramified, meandering, beaded, or chapleted, and ribbon lightning. Inviting photographs to be sent to the society, the committee explains that the taking of them does not present any peculiar difficulties. "If a rapid plate, and an ordinary rapid lens with full aperture, be left uncovered at night during a thunder-storm, flashes of lightning will, after development, be found in some cases to have impressed themselves upon the plate. The only difficulty is the uncertainty whether any particular flash will happen to have been in the field of view. A rapid single lens is much more suitable than a rapid doublet; and it is believed that films on paper would effectually prevent reflection from the back. The focus should be that for a distant object, and, if possible, some point of landscape should be included to give the position of the horizon. If the latter is impossible, then the top of the picture should be distinctly marked. Any additional information, as to the time, direction in which the camera was pointed, and the state of the weather, would be very desirable."

A periodicity has been remarked by M. Moureaux in the disturbances of magnetic declination and horizontal force at Parc Saint-Maur Observatory during the years from 1883 to 1888. The monthly values of both these elements exhibit two maxima at the equinoxes, and two minima at the solstices. While the monthly variation of the number of disturbances appeared to follow a general law, the diurnal variation seems to be subject to complex laws.

In his observations on English thunderstorms, which, though made in 1857 to 1859, were only reported upon to the Royal Meteorological Society in 1888, Mr. G. J. Symons found that in sheet-lightning the most prevalent color is white, and after it follow yellow, blue, and red. In forked lightning the order is nearly reversed, blue being more than twice as frequent as any other color, then red, white, and, most rarely, yellow. Sheet-lightning was seen about twice as often as forked.

Winds.—The results of observations on the daily periodicity in the velocity of the wind extending over two years have been communicated by Dr. Vettin. From direct determination of the movement of smoke coming from a chimney and from observations with a home-made anemometer, the author found that, in addition to the well-known maximum velocity of the wind which occurs at midday, there is a second maximum just after midnight. The latter maximum is very small in summer, but in winter it is much greater. It is, however, not very marked as an average over the whole year.

Falling winds—that is, winds that blow down from the heights of mountain crests into the valleys and depressions—may evidently have different characters. Two classes of them are usually distinguished, warm and cold falling winds. To the former class belongs the Föhn of the Alps, on the northern slopes of the Pyrenees, of the Ferral in Spain, etc.; to the latter the Mistral of the French Mediterranean coast and the Bora of Istria and Dalmatia. H. Meyer has shown, from the labors of Hann and Von Wrangell, that these winds are not intrinsically different from one another. A vapor-bearing mass of air is warmed by compression about 0.97° C. for every hundred metres of descent, while the temperature of the still atmosphere descends about 0.5° for every hundred metres of ascent.

The phenomenon of the Föhn is supposed by Hann and Wild to be simply a kind of gust or eddy which, blowing down from mountain-heights, is warmed by compression. This explanation is confirmed in a popular essay published by Erk in a Bavarian journal by descriptions of certain marked examples of Föhn winds that had been observed in 1885 and 1888. On two of these occasions a marked east Föhn blowing over the southern side of the Alps was regarded as the effect of a high pressure in Eastern and a low in Western Europe.

Prof. F. Waldo has determined that too high a factor of multiplication—3, when it should be 2.15—has been used in deducing wind-pressures from velocity-anemometers; and, consequently, that the pressures thus deduced have been greatly exaggerated.

Salke's observations at Tarnople on the daily periods of wind-velocity indicate, in harmony with the theory of Espy and Koppen, that the period is more sharply defined according as the conditions are favorable to a vertical circulation of air, and, consequently, to its descent from above to the surface of the earth. The difference between maxima and minima velocities diminishes with increasing strength of wind, and the daily period becomes indistinct in very strong winds. The duration as well as the velocity is influenced by the temperature; and the maxima of frequency swerve around the horizon, following the sun at a distance of about 90° , with a regularity corresponding with the warmth of the periods.

The records of the stations of the English Royal Meteorological Society for the eight years 1878-'85 show that the southwest wind is the most prevalent, and blows on the average seventy-four days in the year, while the west wind occurs almost as frequently, blowing for sixty-five days. The least dominant winds are the southeast and north, which occur on twenty-seven days, and the northeast on thirty-two days. Thunder-storms are most frequent in the eastern and midland counties, and least frequent in the north of Wales.

The name *derecho*, or "straight blow," has been proposed by Dr. Gustavus Hinrichs, of the Iowa Weather Service, to designate a kind of storm on the prairies which has been classed with tornadoes, but is distinguished from them by the absence of spirality in the motion. It is described by him as "a powerfully depressing and violently progressing mass of cold air, moving destructively onward in slightly diverging straight lines (in Iowa), generally toward the southeast, with its storm-cloud front curving as the storm-lines diverge. The barometer bounds upward and the thermometer falls greatly under the blow of this cold air of the upper strata suddenly striking the ground. The *derecho* will blow a train of cars from its track, unroof, overturn, and destroy houses; but it does not twist the timbers into splinters and drive these firmly into the hard soil of the prairie," as does the tornado. The latter is described as "a powerfully lifting column of violently revolving air, describing a narrow path of destruction as it moves along the earth's surface in a northeasterly direction; it is surmounted by a cloud from which the column seems to hang down. Its track is generally marked by stakes driven into the ground beyond where it has destroyed buildings, these stakes being the longer fragments into which the tornado has torn such buildings." As the storm-front of the *derecho* sweeps onward and spreads laterally over the prairies, it is plainly the more extensive of the two storms; but the tornado in its narrow track is by far the more destructive. The annual period of the two storms is very marked. Neither of them occurs in the cold months. In Iowa, the rising tornado season, beginning with the sudden heated and moist spells in April, continues for three months, till early in July, and is most intense in June. *Derechos* may also occur at this season, and in midsummer are the only storm forms by which the unstable equilibrium of the atmosphere is suddenly restored to stable equilibrium. Tornadoes may again occur in September and October, but have not been observed from November till April. While the *blizzard* is a winter storm, bringing the surface air of colder regions, the *derecho* is a summer storm, in its mode of progress and in some other features resembling the blizzard, but more restricted in extent, confined to definite limits, and supplied with cold air coming down from higher strata of the atmosphere.

In preparing a paper on "Synoptic Charts" for the French Meteorological "Annales," M. G. Rollin has examined day by day the movements of the atmosphere, with the view of determining the possibility of predicting the arrival of storms reaching France from the Atlantic. He has found, as has also been the case in England, that the American telegrams can not at present be turned to practical use in weather prediction. He has, however, attempted to make them useful in the future, by establishing certain types which connect the weather of the Atlantic with that of adjacent continents; and he finds that many conditions, without being actually identical, are sufficiently alike to be classified together. But he shows that much further investigation is necessary before any definite rules can be laid down, and that the atmospheric changes are often so rapid that the difficulties of weather prediction on the exposed coasts of Europe are likely to remain very great for a long time to come.

Apparatus.—The maximum pressure anemometer of W. H. Dines is so arranged that a quantity of shot equivalent in weight to the whole pressure upon the wind-receiving disk falls from the upper to the lower part of a vessel, after which the machinery is automatically readjusted.

W. N. Shaw has described an apparatus for determining the temperature by the variation of electrical resistance, which, it is claimed, will measure to within one three-hundredth of a degree centigrade.

M. Brassard has devised a recording rain-gauge, by which the fall of each tenth of a millimetre of water is registered.

M. Bertelli, of Florence, has described an apparatus for the protection of telephones from lightning.

The spring vane attached to the window of Dr. Vettin's house in Berlin indicates the direction of a wind blowing up or down the street, or over the house at right angles to this, or at any other angle. It is specially adapted for observations in narrow mountain valleys, where the direction of the wind can not be ascertained by any other means. It is observed that the wind that blows over the houses gives rise to ascending and descending currents along their walls.

Bibliography.—A selected list is appended of the more important and those possessing a more general interest among the numerous meteorological publications of the year:

Zenker, Wilhelm, "Distribution of Heat over the Earth's Surface." Berlin.

METHODISTS. I. Methodist Episcopal Church.

The following is a summary of the statistics of this Church as they are tabulated in the minutes of the annual conferences for 1888: Number of annual conferences, 110; of itinerant preachers, 12,832; of preachers "on trial," 1,784; of local preachers, 14,082; of lay members (including probationers), 2,154,849; of Sunday-schools, 24,941, with 277,764 officers and teachers and 2,060,080 pupils; of churches, 21,361, having a probable total value of \$84,979,481; of parsonages, 7,858, having a probable value of \$12,567,034; of baptisms, 72,805 of children, and 91,506 of adults.

Book Concern.—The Book Committee, which has the charge of the publishing interests of the Church, reported to the General Conference that the net capital of the two "book concerns" and the depositories connected with them was \$2,392,866, of which \$1,653,197 were accredited to the New York house and its depositories, and \$739,169 to the house in Cincinnati and its depositories, the whole showing a total increase of \$774,916 in four years. The total sales (net) of publications had been \$6,577,525. Dividends from the profits of the business had been made to the annual conferences of \$85,000. The receipts and expenditures on account of the Episcopal fund had been balanced at \$252,802.

Sunday-School Union.—The board of managers of the Sunday-School Union reported to the General Conference that there were in the Church 24,225 Sunday-schools, with 268,391 officers and teachers, and 2,006,828 pupils, showing an increase during four years of 2,772 schools, 88,826 officers and teachers, and 312,708 pupils. There were in foreign fields: In Europe, 710 schools, with 4,364 pupils; in Asia, 835 schools, with 31,752 pupils; and in Mexico and South America, 61 schools, with 2,784 pupils. Sunday-schools had been established among German and Scandinavian immigrants, of which 1,080 were returned, with 11,089 officers and teachers, and 57,783 pupils. The receipts of the union during the past four years from collections in the churches had been \$78,714. Grants of aid had been made to 8,500 schools, and grants of money to foreign mission fields for Sunday-schools amounting to \$10,000. The total circulation of the publications of the union (journals and "helps" for Sunday-schools) for the year 1887 had been, of English publications, 24,910,547, and of German, 1,287,550 copies. In Sweden, Germany, Italy, Switzerland, India, Japan, and Mexico, 1,109,868 volumes had been published. The report of the union gives as the statistics of Sunday-schools connected with the German conferences (aside from the schools among immigrants already mentioned) 1,288 schools, with 11,403 officers and teachers, and 72,195 pupils.

Church Extension.—The General Committee of Church Extension met in Philadelphia, November 22. The report showed that 507

churches had been aided during the year. The receipts had been: To the general fund, \$168,657; to the loan fund, \$108,289; giving for use, \$206,896. Fifty special gifts of \$250 each for frontier churches had been available during the year, of which forty-three had been placed, accompanied with loans of \$9,400. The full number (400) of such gifts contemplated in the original call for them had been received and placed. The continuance of the system was recommended. The churches were asked to contribute the sum of \$245,600 for the purposes of Church extension during the ensuing year.

Board of Education.—The receipts of the Board of Education for four years had been \$228,516, and the disbursements \$199,569. The market value of its endowment investments on the 1st of April, 1888, was \$196,000. The educational institutions of the Church, as reported to the General Conference, include 12 theological institutions, 56 colleges and universities, 54 classical seminaries, 9 colleges and seminaries for young women, and 66 foreign mission schools, with which are connected 1,595 teachers and 82,277 pupils. They possess buildings and grounds that were valued at \$10,088,725, and endowments to the amount of \$11,079,682.

Freedmen's Aid.—The Freedmen's Aid Society—now the Freedmen's Aid and Southern Education Society—reported to the General Conference that it had received during the past four years \$610,647, and had expended \$689,862. Its total receipts since its organization had been \$2,018,082, in addition to which its endowment fund had been increased by \$180,000. The institutions aided by the society include 7 universities and colleges, 18 normal schools and seminaries, 1 theological school, 4 biblical departments, and 1 medical college, with which were connected 127 teachers and 4,632 pupils.

Missionary Society.—The General Missionary Committee met in the city of New York, November 14. The treasurer reported that the cash receipts of the society for the year ending October 31 had been \$1,000,581, of which \$935,121 were from conference collections, \$41,984 from legacies, and \$23,476 from other sources. Appropriations were made for the support of missionary work for the ensuing year as follow:

I. FOREIGN MISSIONS:

1. Africa	\$4,800
2. South America	52,960
3. China (four missions)	105,019
4. Germany	80,800
5. Switzerland	9,840
6. Scandinavia (8 missions)	47,480
7. India (3 missions)	110,806
8. Malaysia	6,500
9. Bulgaria and Turkey	19,220
10. Italy	47,000
11. Mexico	32,000
12. Japan	60,166
13. Korea	16,104
14. Lower California	1,000

Total for Foreign Missions \$564,139

Total for Foreign Missions.....	\$566,189
II. MISSIONS IN THE UNITED STATES, NOT IN ANNUAL CONFERENCES, TO BE ADMINISTERED AS FOREIGN MISSIONS.....	81,722
III. DOMESTIC MISSIONS:	
Welsh missions.....	\$1,500
Scandinavian missions.....	87,470
German missions.....	89,869
French missions.....	7,550
Chinese missions.....	9,500
Japanese missions.....	5,545
American Indian.....	4,500
Bohemian and others.....	9,450
English-speaking.....	268,064
Total.....	373,448
IV. Miscellaneous.....	96,000
V. For outstanding drafts.....	77,691
Grand total.....	\$1,200,000

The foreign missions returned in 1887, 135 American missionaries, 130 assistant missionaries (wives of missionaries), and 62 missionaries of the Women's Foreign Missionary Society; 2,257 native agents, of all kinds, male and female; 44,255 members, 16,013 probationers, and 50,742 adherents; 5,223 conversions during the year; 2,409 adults, and 8,099 children baptized; 15 theological schools, 32 high-schools, and 647 other day schools, with a total of 22,458 pupils, and 1,712 Sunday-schools, with 83,945 pupils. The domestic missions returned 2,893 missionaries, 2,259 assistant missionaries, 5 agents of the Women's Foreign Missionary Society, 60 other agents, 3,442 local preachers, 250,787 members, 44,644 probationers, 15,289 adults, and 16,172 children, baptized; 34 day-schools (in New Mexico and Utah), with 1,613 pupils; and 5,067 Sunday-schools, with 250,304 pupils.

General Conference.—The General Conference of the Methodist Episcopal Church met in the city of New York, May 1. The quadrennial address of the bishops, after reviewing the growth of the Church and its interests during the past four years, called attention to some important questions that had never been decided, which would come before the Conference for solution. One of these questions was, whether a lay electoral conference has the right to send as its representative a person who has no membership in the bounds of the conference represented. A second was, whether women were eligible as lay delegates to the General Conference. Five women had been chosen by as many lay electoral conferences to represent them, and were expected to be present to claim their seats. In view of the novelty of the question which this action raised, and of the reception of protests against the admission of the women-delegates, it had been determined not to place their names upon the roll until the validity of their claims could be decided upon by an organized conference composed of delegates whose titles were not questioned. The Conference decided that lay delegates must be members within the conference which they represent; and that "under the constitution and laws of the Church as they now are, women are not eligible as lay delegates in the General Conference." It ordered,

however, that a vote be taken in November, 1890, at every place of public worship, and in 1891 at all the annual conferences upon an amendment to the restrictive rules, providing that the lay delegates "may be men or women." The term for which a preacher may be allowed to remain in the same station (previously three years) was extended to "not more than five years, after which he shall not be appointed to the same place for five years"; and the presiding elder's term was extended to six years, with a similar interval of six years before he can be appointed again to the same district. The status of a missionary bishop was defined as that of an officer having full episcopal powers, but with jurisdiction limited to the foreign field to which he was elected; not subordinate to the general superintendents, but co-ordinate with them in authority there; and receiving his support from the episcopal fund. Provision was made for the recognition and administration of self-supporting missions, of which two have been organized—in South America and Africa—and defining their relations to the Church and the Missionary Society. Consent was given to the organization of an autonomous Methodist Church in Japan, by the union of Methodist missions in that country, whenever the missions concerned shall determine to take the step. An article concerning deaconesses defines their duties and the form of Christian labor to which they may devote themselves; declares that no vow shall be exacted from them, and that "any one of their number shall be at liberty to relinquish her position as a deaconess at any time"; institutes a board for the control of their work, which is empowered to issue licenses to them. A constitutional commission of seven ministers and seven laymen was appointed to revise certain paragraphs in the discipline, in such a way that they shall define and determine the constitution of the General Conference; state of whom it shall be composed and by what method it shall be organized; declare its powers and how they shall be exercised; provide the process by which the constitution may be amended; and report to the next General Conference. Provision was made for holding in the United States an Ecumenical Conference of Methodism in 1891, the particular arrangements for which were intrusted to a committee of five ministers, five laymen, and three bishops. It was ordered that no annual conference should be organized with less than twenty effective members. A Board of Conference Claimants was instituted, to have charge of funds contributed for the benefit of superannuated preachers, and the widows and orphans of preachers; auxiliary to which boards may be organized in the annual conferences. Five new bishops were elected, to wit: The Rev. John H. Vincent, D. D., LL. D.; the Rev. James N. Fitzgerald, D. D.; the Rev. Isaac W. Joyce, D. D.; the Rev. John P. Newman, D. D., LL. D.; the Rev. Daniel A. Goosell, D. D.;

together with the Rev. James M. Thoburn, D. D., as missionary bishop in India. An invitation was offered to other evangelical denominations to co-operate in the formation of a National Sabbath Committee. In response to the resolutions of the House of Bishops and the House of Deputies of the Protestant Episcopal Church on the subject of the organic unity of the Church, the Conference expressed itself ready to fraternize and co-operate with that Church as with all other churches of the Lord Jesus Christ, and to extend to it and accept from it Christian courtesies; and appointed a commission of three persons—one bishop, one member of an annual conference, and one layman to confer with other bodies on the increase of Christian and Church fraternity.

II. Methodist Episcopal Church South.—The whole number of traveling preachers in this Church on May 1, 1888 was 4,580; whole number of preachers and members, 1,107,456, showing an increase of 41,079 from the previous year; number of churches, 11,864, having a total probable value of \$15,204,888; of parsonages, 2,199, valued at \$1,269,784. The year's receipts for home missions had been \$92,426; for foreign missions, \$219,649. Appropriations were made for missions for 1888-'89, of \$208,820, with \$25,610 additional as contingent. The receipts of the Woman's Foreign Missionary Society for the year ending April 1 had been \$69,729, and its expenditures \$68,088. The Colored Methodist Episcopal Church has, by the last published reports, 1,729 itinerant ministers, 4,024 local preachers, and 165,000 lay members.

III. African Methodist Episcopal Church.—The Church includes, according to its latest published statistical reports, 2,550 itinerant ministers, 9,760 local preachers, and 405,000 lay members.

The report of the Publishing House to the General Conference showed that the business of the quadrennial had amounted to \$229,014, or \$49,159 more than the business of the previous quadrennial. The indebtedness had been diminished by more than \$5,000; and the house made a return of \$28,088 of assets, against which were \$3,946 of liabilities.

The quadrennial educational report represented that the educational institutions of the Church were increasing in number and power. Wilberforce University had been granted by the Legislature of Ohio an appropriation of \$10,000 for an industrial department. Allen University, Columbia, S. C., returned 200 students, and a debt of \$4,000. Paul Quinn College, Waco, Tex., had in four years enrolled 272 students. It had a fine industrial school. Morris Brown College, Atlanta, Ga., a young institution, had made a fine start, and now registered 200 students. Funds had been raised for it to the amount of \$13,000.

The collections and contributions for the Missionary Society in four years since the last General Conference were nearly \$40,000.

General Conference.—The General Conference of the African Methodist Episcopal Church met at Indianapolis, Ind., May 7. The proclamation which had been made since the last General Conference of the accomplishment of a union between the African Methodist Episcopal Church in the United States and the British Methodist Episcopal Church in Canada and the West Indies, was ratified and confirmed; and the present Conference was declared to be the legitimate successor of both the uniting bodies. Delegates from the conferences of the British Methodist Episcopal Church were present and were received as members of the General Conference. Questions relating to property and the state of individual churches were referred to the annual and quarterly conferences. Bishop Payne announced that the church history authorized by the General Conference of 1848, upon which he had been engaged for forty years was completed. Four new bishops were elected, viz., W. J. Gaines, B. W. Arnett, D. D., B. T. Tanner, D. D., and A. Grant.

IV. African Methodist Episcopal Zion Church.—The latest published statistics of this Church give the number of itinerant ministers as 2,110; of local preachers, 7,710; and of lay members, 814,000.

The expenditures of the Book Concern during the past four years were reported to the General Conference to have been \$8,368. The amount of its indebtedness was returned at \$3,980.

A rapid growth was reported for Livingstone College, Salisbury, N. C. While six years previously it had had only three teachers and the same number of students, it had been attended during the term just closed by 210 students, in whose instruction 11 professors were employed. The institution occupies an estate of 50 acres, with several buildings, and returns a total valuation of property and funds of \$100,000.

The African Mission returned—at Brewerville, Liberia, 1 elder, 3 deacons, 1 exhorter, 100 members, 67 pupils in the Sunday-school, and church property valued at \$800; at Cape Palmas 50 persons, with 2 local preachers, who have called upon the missionary superintendent to be admitted into the connection. The missionary, the Rev. Andrew Cartwright, was empowered by the General Conference, to select six native African boys and girls to be educated at Livingstone College at the expense of the conferences. A plan was approved by the General Conference for sustaining one or more woman teachers in connection with the African missions by means of contributions to be taken in the Sunday-schools. The Ladies' Home and Foreign Missionary Society returned to the General Conference receipts amounting to \$914.

General Conference.—The General Conference of the African Methodist Episcopal Zion Church met in Newbern, N. C., May 2. The

bishops in their quadrennial address, reviewing the condition and growth of the Church during the past four years, represented the progress of the conferences and churches in the United States and Ontario as having been very encouraging. Two new conferences—the Texas and South Georgia—had been added. A still more favorable report was made of the improvement in the spiritual and temporal interests of the churches. There had been a marked advance in the addition of energetic and working young men to the ministry; also in the increase and improvement of places of worship and a manifestly greater interest in the collection of the general fund. The ministers seemed to be seeking the fullest qualification for their offices. A special report was made by the bishops on the subject of the negotiations for union with the African Methodist Episcopal Church, lamenting that the scheme had received a serious check, and that the basis that had been agreed upon by the committees at Washington had gone no further than to receive their approval. But the Church could wait till its sister-church should be ready to consummate a union. The report was adopted.

A board of commissioners having been appointed by the Colored Methodist Episcopal Church on the organic union of the two churches, a like board was appointed to meet them and arrange terms. A provision was made, for the first time in the history of the churches, for sending fraternal delegates to the General Conference of the Methodist Episcopal Church South. The bishops were authorized to appoint delegates to the Ecumenical Conference of Methodist Churches, which is to be held in the United States in 1891.

Resolutions were passed approving the action of various temperance societies and urging ministers to organize local societies and in every way to practice and teach temperance in the communities where they may be called upon to labor; and to preach several sermons on the subject during each year. A financial plan was adopted, which is based upon the assessment of fifty cents a year upon adult members, with encouragement to children under fifteen years of age to contribute according to their ability to the general fund. The "Handbook of the Discipline," which the General Conference had authorized Bishop Jones to prepare, being submitted, was approved, and an edition of it was ordered published. A course of study for candidates for the ministry, to occupy four years, was adopted. A committee was appointed to visit the Book-Rooms in New York and select the best and cheapest works on theology, church history, and other subjects pertaining to the work and qualifications of the ministry. To the question presented to it, whether a class-leader, conductor of a prayer-meeting, and a superintendent in the Sunday-school may, in the absence of the minister, pronounce the benediction, the Conference replied "Yes; if he is fit to

open the meeting, he is fit to close it." The bishops were made a committee on criticism to pass upon all literary work intended for publication by the Church, their decision to be final. Two additional bishops were elected—the Rev. Charles Calvin Pettey, who was General Secretary of the Connection, and the Rev. Prof. C. R. Harris, of Salisbury, N. C. A collection was called for of one cent from each member in the several pastoral charges, for the support of the General Conferences.

V. Methodist Protestant Church.—The statistics of this Church, as returned to the General Conference in May, show the whole number of members to be 145,500; value of church property, \$3,342,500; net increase of members during four years, 12 per cent.; of property, 13 per cent.

The Book Directory at Pittsburg returned the net value of its assets as \$31,492. The receipts for the last four years had been \$183,708, and the disbursements \$127,116. The periodical publications include the "Methodist Recorder" (weekly) and six papers for children and Sunday-schools. The "Methodist Protestant," Baltimore, is also under the control of the Board of Publication.

Adrian College reported to the General Conference that it had been attended during the last four years by an average of 200 students; that its endowment funds amounted to \$97,500; that its property was valued at \$118,000; its museum, at \$15,000; and that its indebtedness was \$21,765.

Missions.—The receipts of the Board of Missions for the year ending April 30 had been \$14,900, and the expenditures \$12,158. The receipts for the four years had been \$84,130, and the disbursements \$29,388. Eight home missionaries had been employed; seven missionaries had been sent abroad; three churches were returned in Japan, having in all 159 members, with 565 pupils in day and Sunday schools. The property of the mission was valued at \$12,000, while \$30,000 had been spent upon it. A chapel was in course of erection at Yokohama.

General Conference.—The fifteenth quadrennial General Conference of the Methodist Protestant Church met in Adrian, Mich., May 18. The Rev. David Jones, of Pittsburg, Pa., was chosen president. The commission appointed at a previous General Conference to confer with a similar commission of the Cumberland Presbyterian Church, reported that no difference of creed or polity stood in the way of the organic union of the two bodies. A report was also presented of a conference that had been held with the Congregational Methodists of Alabama, on the subject of union, which had been attended with no practical result. Both reports were referred to a special committee, which subsequently made an adverse report on the subject, in which, while recognizing the fraternal character of the communications as a favorable indication, it affirmed

that the Methodist Protestant Church claims, as a reason for distinct denominational existence, "certain distinct fundamental principles, from which a departure in the least degree would involve interests and questions of vital importance, not only within our denominational lines but also with our common Methodism throughout the world. To abandon, or even to show a want of confidence in these principles, at a time when there is a strong sentiment in the Methodist Episcopal Church now leading them to the adoption of the views of our fathers upon the subject of church polity, would be to commit a grievous blunder, that in effect would be equivalent to blotting out our history in the past, and a tacit acknowledgment that the early reformers were in part mistaken, if not entirely wrong, in the position they had announced and defended." The committee was further of the opinion that, so long as the question of organic union was under the consideration of the General Conference, the Church would be in continual confusion and unrest, and the church-work would be hindered; and that, in case any changes in the fundamental laws or doctrines of the Church should be required and attempted for the sake of union, causes would be opened for litigation in regard to Church property and the disposition of trust funds, which would be destructive of the very object for which organic union is proposed. It therefore recommended that further overtures on the subject should cease. The report was adopted by the Conference. A proposition to authorize women to preach was disposed of by declaring that the proposed action involved a change in the constitution of the Church which the General Conference had no power to make. Ministers were forbidden to celebrate the marriage of divorced persons who had violated their marriage vows. The marriage ritual was amended by inserting provisions for the use of rings, and for responses by the parties. It was ordered that transfers of ministers, though signed by the president, should not entitle the person transferred to membership in another annual conference without a vote of that body accepting the transfer. The phraseology of the Apostles' Creed was modified by striking out the words "Holy Catholic Church," and inserting in their place "Universal Christian Church." A Board of Home Missions was constituted, with a traveling secretary to be supported by the conferences, for the purpose of assisting in the support of weak churches and founding new ones. On the subject of temperance, the Conference resolved: "That we are unalterably opposed to any form of license, high or low, as being wrong in principle and pernicious in practice; that any minister or any member who makes, buys, sells, or signs a petition for license to sell, or gives to others as a beverage any spirituous or malt liquor, is guilty of immorality, and shall be dealt with accordingly. We believe that the time has fully come when

Christian men should rise above party prejudices and sectional jealousy, and give their suffrage to any party which has for its object the protection of our homes by the destruction of the unholy traffic." The Conference refused to empower pastors of churches when unordained to administer the ordinances, and to allow supernumerary and superannuated ministers to be represented by laymen in the annual conferences. A committee was appointed to formulate from the articles of religion, as found in the "Discipline" of the Methodist Protestant Church for 1880, and from the recognized standards of doctrine known as Wesleyan Arminianism, articles of faith, its work to be completed by June 1, 1890, referred to the annual conferences at their next ensuing meetings for acceptance or rejection, with criticisms by the rejecting conferences; returned to the committee for revision and perfecting; and referred to the ensuing General Conference. A cheap edition of the "Discipline" was ordered printed, copies of it to be given to members when they join the Church. Arrangements were ordered for the representation of the Methodist Protestant Church in the "Ecumenical Conference of Methodists," to be held in the United States in 1891. The Conference resolved to be represented in the National Convention on Sabbath Observance which was proposed by the General Conference of the Methodist Episcopal Church. An overture was approved, to be sent to the annual conferences, contemplating such a change in the constitution as would grant the power to the annual conferences to license women to preach.

VI. Primitive Methodists in the United States.—The Primitive Methodists are represented in the United States by two conferences—the Eastern and the Western Conferences—which maintain fraternal relations with each other, and with other Primitive Methodist bodies, but are substantially independent. The Eastern Conference met in its sixteenth session at Tamqua, Pa., May 1, the Rev. J. A. McGreaham presiding. Its statistical report gave the following numbers: Ministers, 35; local preachers, 110; full members, 2,626; probationers, 477; class-leaders, 69; Sunday-schools, 58, with 940 officers and teachers, and 6,607 pupils; valuation of church property, \$195,215; debt on church property, \$54,578; valuation of Sunday-school property, \$4,006; amounts raised toward improvements, etc., \$13,913. The business of the Book-Room was balanced at \$4,247. The Western Conference met at Dodgeville, Wis., May 23, the Rev. John Ralph presiding. The following is a summary of the statistics: Number of ministers, 20, with 1 superannuate; of local preachers, 64; of class-leaders, 78; of approved members, 1,707, with 140 on trial; of churches, 40, with 25 other preaching-places; of Sunday-schools, 40, with 389 teachers and 2,820 pupils; value of church property, \$62,620; indebtedness on the same, \$3,112; contributions for mission fund, \$752.

VII. Methodist Church of Canada.—This Church comprises a General Conference, which meets every three years, and eleven annual conferences. The statistics for 1887 gave it 1,558 traveling preachers, 1,162 local preachers, 194,761 members, and 16,847 probationers. The statistics of 1888, not completed in time for this publication, indicated, so far as they had been made up, an increase of more than 15,000 members, and a total of 2,871 Sunday-schools, with 27,209 officers and teachers, and 197,538 pupils.

VIII. Wesleyan Connection.—The summaries published with the minutes of the Conference for 1888 give the following totals of members (including those on trial) and ministers (including probationers and supernumeraries) in the British and affiliated Conferences:

CONFERENCES.	Members.	Ministers.
Great Britain.....	448,056	1,983
Ireland.....	25,951	284
France.....	1,541	30
South Africa.....	84,929	166
West Indies.....	46,588	87
Foreign mission stations.....	87,176	358
Total.....	594,241	2,852

The numbers of ministers and members in the Australasian Wesleyan Methodist Church and the Methodist Church of Canada are given in the minutes of their respective conferences. The whole number of declared Wesleyans in the regular army, militia, and Royal Navy, at home and abroad, is given at 16,660. The whole number of day scholars in 843 school departments was 178,918, with an average attendance of 138,813; total income of day schools (from school-pence, Government grants, subscriptions, etc.), £240,760; total expenditure, £246,377. There were also 223 students in the two training colleges, the Westminster for young men (114) and the Shortlands for young women (109). The number of Sunday-schools in Great Britain was 6,851, with 128,752 officers and teachers and 908,719 pupils. The whole number of children received at the Children's Home and Orphanage up to the end of March, 1888 was 2,300, of whom 1,472 had been provided for and 64 had died. The Temperance Committee returned 3,344 Bands of Hope, with 339,065 enrolled members, and 520 adult temperance societies, with 32,389 members.

A tendency was, however, noticed to ignore the principle on which the Wesleyan Methodist Temperance Society is founded—the co-operation of abstainers and non-abstainers.

Missionary Society.—The annual meeting of the Wesleyan Missionary Society was held in London, April 30. Mr. Isaac Hoyle, M. P., presided. The total income of the society for the year had been £131,867, and the total expenditure, £137,967. The reports from the mission fields showed that the increase in the number of chapels had been 114; of missionaries, 9; of paid agents, 175; of unpaid agents,

208; of full members, 1,037; of members on trial, 577; and of pupils, 1,508. Favorable accounts were given in the report of the European missions—in France, Germany, Bavaria, Bohemia, Italy, Spain, Portugal, and Malta. A Moslem mission had been established in Cairo, Egypt. Reviews of the missionary work in Ceylon, India, China, the Transvaal, the west coast of Africa, and the West Indies, were also given in the report.

The following general summary was given of the missions under the immediate direction of the Wesleyan Missionary Committee and British Conference, in Europe, India, China, West Africa, the Transvaal, British Honduras, and the Bahamas:

Central or principal stations, called circuits.....	236
Chapels and other preaching-places.....	1,238
Missionaries and assistant missionaries, including supernumeraries.....	288
Other paid agents (catechists, interpreters, day-school teachers, etc.).....	2,000

Conference.—The Wesleyan Conference met in its one hundred and fifteenth session at Camborne, July 24. The Rev. Joseph Bush was chosen president. A committee to which the subject had been referred by the previous Conference made a report in which it recognized that various causes, some of them pertaining to social life, militated against enforcing the rule making attendance upon class-meetings a test of membership, and suggested certain modifications in the system. A committee was appointed to continue the inquiry during the year. A proposition was discussed for changing the order of the sessions of the Conference, so that the "representative session," in which lay members participate, and which has charge of the general business, shall precede the "pastoral session," which is composed wholly of ministers, and conducts the ecclesiastical and disciplinary proceedings. The subject was referred to a committee representing the two orders, and to the district meetings of ministers and laymen. The reports from the district meetings held in May showed that the greater number of the thirty-five districts had united in protest against the "compensation clauses" of the local government bill. The committee of the Conference had united with the "Central Committee for the Prevention of the Demoralization of the Native Races by the Liquor Traffic" in inviting the attention of Parliament to the "persistent efforts made by civilized countries to introduce the sale of vile and pernicious spirits and intoxicating liquors, under Government sanction, into our colonies and dependencies." The Conference referred back to the Committee of Privileges the question of the introduction into Parliament of a bill to relieve non-conformists from the presence of the registrar at marriages celebrated in their places, with instructions to consider the

whole question and act accordingly. The committee was further authorized to secure the introduction of a bill to enable non-conformists to acquire sites for places for worship where such sites can not be obtained otherwise than by the exercise of compulsory powers. The principle was approved of that all needful facilities should be given for the compulsory enfranchisement of chapels erected on leasehold sites. The committee was further directed to take the necessary steps to secure an alteration of the burial laws amendment act, 1880, by which the length of the necessary notice of intention to bury may be reduced, if possible, to twelve hours. It was also authorized to seek such an amendment in the law, or in its administration, as shall secure, within reasonable limits, the uninterrupted right of preaching in public thoroughfares and open spaces. Provision was made for considering, during the year, the electoral disadvantages to which Wesleyan ministers are subject in consequence of the itinerancy, and for taking such action as may be advisable for having them removed. A committee was appointed to consider general legislative measures affecting Wesleyan day-school education, and to take such action as may be deemed desirable. Favorable reports were received from several "middle-class" schools, and efforts were decided upon to increase the number of such schools.

IX. Primitive Methodist Church.—The statistical reports of this Church in 1888 give it 1,041 itinerant ministers, 16,219 local preachers, and 192,874 members.

The whole amount of gifts for the year to the Connectional funds, was returned to the conferences as £9,000. The Book-Room returned a year's business of nearly £41,500, with clear profits of more than £9,000. The Connectional Insurance Society had invested £12,794.

The Primitive Methodist Conference met in Liverpool, June 6. The Rev. Thomas Whittaker was chosen president. The subject of Methodist union was favorably considered, and the Conference decided to inquire whether organic union could not be secured with one or the other Methodist bodies. The General Connectional Committee was instructed to appoint representatives to assist in arranging for the "Ecumenical Methodist Conference" which it is proposed to hold in the United States in 1891. The Committee of Privileges reported upon the steps which it had taken to arrange with other Methodist bodies to secure co-operative action on public questions in which their common rights and privileges should be involved. The care of the Connectional missionary enterprises was taken from the General Connectional Committee and given to a distinct committee of fifty members, which will hold meetings fortnightly in London and quarterly in such large towns as may be appointed from time to time, with local district committees. Steps were taken for the prepa-

ration of a systematic method for training native missionaries in Africa, and for the definition of their relation to the Conference.

X. United Methodist Free Churches.—The following is a summary of the statistics of this Church as they were reported to the Annual Assembly in June, 1888; number of ministers, 874; of local preachers, 8,846; of class-leaders, 4,014; of members, 76,786; of persons on trial for membership, 8,476; of chapels, 1,871; of Sunday-schools, 1,858. The income of the Chapel Relief fund had been £841, and its expenditure £470. During the past twelve months 18 chapels had been completed, 75 enlarged, and 15 school-rooms has been built; while debts had been reduced by £23,606. The receipts from the Commemorative fund for the year had been £3,723, making the total raised by this fund for Connectional and local objects of £26,422. The sales from the Book-Room had amounted to £6,062, and its profits to £340.

The Annual Assembly met at Manchester, July 10. The Rev. Thomas Wakefield was chosen president. A resolution was adopted expressing a desire that the question of union might still engage the attention of the various Methodist bodies, and that friendly feeling might be cultivated in every way. The Connectional Committee was authorized to take such steps as might seem expedient to give effect to the resolution. A scheme was adopted for the organization of a Connectional fire-insurance society. A resolution bearing upon the report of the Royal Commission on Education deprecated sectarianism in the schools supported from national funds, and expressed the opinion that all public elementary schools should be under the control of the parents and rate-payers.

The annual meeting in behalf of the United Methodist Free Churches' Home and Foreign Mission was held in London, April 28. The income of the missions for the year had been £21,876, and the expenditures, £21,498. Report was made of the condition of the missionary work in East and West Africa, Jamaica, China, and the colonies.

The Rev. T. Wakefield was present, after having served for twenty-five years in the East African missions, and reviewed their progress during the seven years since he had last visited England. Three new mission-stations had been opened in East Africa, and the number of adherents had been more than doubled. A printing-office had been established, and a book containing three hundred hymns had been translated into one of the African dialects. The gospel of St. Matthew had been translated into the Kanika language. Most important of all, the original purpose of the society had been carried out in the founding of a mission to the Gallas.

XI. Methodist New Connection.—The statistical reports of this body, as presented to the Conference in June, show that, without the Australian churches, it has 512 chapels, 189 minis-

ters, 1,270 local preachers, 30,878 members, with 5,096 persons on trial for membership, and 475 Sunday-schools, with 11,821 teachers and 85,872 pupils.

The income of the Mission fund was £5,873, or £225 less than the income of the previous year, while the expenditure had been £6,405. The receipts of the Paternal fund had been £3,189. The capital of the Trustees Mutual Insurance fund stood at £3,188; that of the Chapel and Loan fund, at £6,855. The receipts for the Beneficent fund had been £2,478; for the College, £778; for the Contingent fund, £665; and the total net amount raised for Connectional funds was £13,888.

The ninety-second Methodist New Connection Conference, met in Hanley, June 11. The Rev. T. T. Rushworth was chosen president. A scheme was approved for establishing a General Committee of Privileges, representing all the Methodist bodies in the country, for the purpose of watching over the interests of Methodism as they are affected by social and political influences and events; of taking common counsel; and of acting, when desirable, with combined authority with reference to such matters. Provision was made for having the Connection represented in such a committee, should it be formed. In reply to a communication from the United Methodist Free Churches, the Conference expressed its desire to co-operate in every possible form of recognition and action that can strengthen the bonds of brotherhood, and recommended joint celebration of ordinances, interchange of pulpits, and the improvement of other opportunities of intercourse and fraternal greeting. A proposition submitted by the previous conference for setting apart a minister as an evangelist had been approved by a majority of the circuits, and was carried into effect. The approval of the Conference was given to the Non-Conformist Marriage Bill; and its objections were expressed against any recommendations of the Royal Commission on Education that would strengthen the denominational use of public moneys, or weaken the "Conscience Clause" in public elementary schools. A resolution was passed remonstrating against the publication of sporting reports and demoralizing serial stories by the newspapers. The committee of the Connectional Temperance Union reported that it included 268 bands, with nearly 40,000 members.

XII. Bible Christian Connection.—The statistics of this denomination, as presented to the Conference in July, showed that there were on the home stations, 145 itinerant preachers, 1,471 local preachers, 588 chapels, 41 preaching-places, 24,574 full members, 574 members on trial, 248 juvenile members, 7,191 Sunday-school teachers and 38,525 pupils in Sunday-schools, and that 3,496 members had been added during the year. The receipts of the chapel fund had been £24,695. The receipts for missions had been £7,012, and the expen-

ditures £7,539. A favorable report was received from the missions in Australia, where the first conference in Victoria had been held in February. The missions in China were prosecuted vigorously.

The seventy-ninth Conference met in London, July 31. The Rev. J. O. Keen, D. D., was chosen president. A motion relaxing certain limitations by which the power of the Conference to appoint a minister for more than four years to the same circuit was now restricted, was defeated, and the Conference decided that it would be unwise to interfere with the existing rule in view of the recent decision of the whole denomination against the "extension of the time limit."

XIII. Wesleyan Reform Union.—This body has 18 itinerant ministers and 8,574 members. The Conference met at Bakewell, July 21. A net increase of 237 members and 714 pupils in Sunday-schools was reported.

XIV. Australasian Methodist General Conference.—This body, which is composed of the New South Wales, Victoria and Tasmania, and New Zealand Conferences, returned for 1888, a total of 580 ministers and 79,477 lay members, of whom 7,892 were "on trial." The General Conference met in Melbourne, May 9. The Rev. J. O. Symons was chosen president. The most urgent question to be considered was that of the difficulties in Tonga. In consequence of certain personal and political difficulties, the Church in Tonga had been divided about three years before, and an independent church had been formed, still Methodist in doctrine and policy, but rejecting the control of the Australian (New South Wales) Conference, carrying with it about 16,000 members of the original body, and having the royal influence on its side. The separation had been accompanied by a serious persecution of the adherents of the original organization. In all attempts to negotiate for a settlement of the difficulty, the Government had insisted upon the removal of the official representative of the Conference, the Rev. J. A. Moulton. Compliance with this condition had been refused. The debate in the General Conference showed that a considerable difference concerning the proper course to be adopted existed within that body. A decision was reached to send the Rev. George Brown as a commissioner to Tonga, with instructions to inquire and report upon the best means of securing honorable and lasting reunion with the "Free Church," and generally to draw up a scheme for the permanent settlement of affairs there; the result of his efforts to be submitted to a committee on Tongan affairs, and through it, "and with such modifications as it may deem necessary," to the annual conferences next ensuing, and, if approved by a majority of them, to be accepted by the General Conference. Application by the New Zealand Conference for an independent organization was refused. The law with reference to attending class-meetings

was amended by substituting the words "are strongly advised" for "are required" in the direction of the discipline upon the subject.

XV. West Indian (Wesleyan) General Conference.—This body is composed of the Eastern and Western Annual Conferences. The reports presented to the General Conference showed that it included 52,598 members, of whom 6,005 are junior members, and 2,087 are "on trial," the rest being "full members." The triennial session of the General Conference was held beginning March 20.

XVI. South African Conference (Wesleyan).—This Conference met at King William's Town, in April. The Rev. William Tyndall presided. The statistics for the year showed the number of itinerant preachers to be 89; of local preachers, 560; and of members, 45,124.

MEXICO, a confederated republic of North America; area, 761,640 square miles. It is divided into twenty-seven States, one Federal District, and one Territory (Lower California). The population is about 11,000,000, 19 per cent. being whites, 38 pure Indians, and 43 per cent. of mixed races. The cities of over 20,000 inhabitants were in 1888: Mexico, 850,000; Puebla, 112,000; Guadalajara, 95,000; Leon, 60,000; Guanajuato, 52,000; Mérida, 40,000; San Luis Potosí, 35,000; Zacatecas, 30,000; Querétaro, 30,000; Oajaca, 28,000; Colima, 26,251; Saltillo, 26,000; Morelia, 25,000; Aguas Calientes, 22,000; Vera Cruz, 21,000; Orizaba, 20,500; Pachuca, 20,200; and Durango, 20,100.

Government.—The President is Don Porfirio Díaz, whose term of office will expire on Dec. 1, 1892. His Cabinet is composed of the following ministers: Foreign Relations, Señor Ignacio Mariscal; War, Gen. Pedro Hinojosa; Public Works, Gen. Pacheco; Justice, Señor Joaquín Baranda; Finance, Señor Manuel Dublán; Interior, Señor Manuel Romero Rubio. Congress will be called upon at its next session to establish a new Cabinet office, that of Minister of Posts and Telegraphs. The Minister to the United States is Señor Matías Romero; the United States Minister at Mexico is Edward S. Bragg; the Consul-General at Mexico Elawson C. More; at Matamoras, Warner P. Sutton; the Mexican Vice-Consul at New York is Don Antonio Laviada y Peon; the Consul at Brownsville, Don Manuel Treviño; the Consul-General at San Francisco, Don Alejandro K. Coney; at New Orleans, Don Manuel G. Zamora.

Proposed American Acquisition of Lower California.—Mr. Vanderveer, of California, introduced, on Jan. 21, 1889, a joint resolution in the House of Representatives at Washington, requesting the President to open negotiations with Mexico for the cession of Lower California to the United States. When asked about the chances of consummating such cession, Mr. Romero, the Mexican minister, replied that his Government had no disposition or inclination to sell any portion of Mexican territory, and

that, even if it should be inclined to do so, the transaction could not be carried out, because there is no power under the Constitution authorizing the transfer of national property.

Treaty.—The Japanese minister, Mr. Mutsu, and the Mexican minister, Señor Romero, signed, at Washington, early in December, 1888, a treaty of amity and commerce between their respective countries, subject to ratification by their governments. Heretofore there have been no diplomatic relations between the two countries.

Finance.—The proceeds of the £10,500,000 6-per-cent. loan, negotiated at Berlin, have been applied in part to buying up, at 40 per cent., the bonds issued under the English conversion debt arrangement, the remainder, over \$16,000,000 in gold, being applied to canceling the debt the Government owed the National Bank. The American debt has meanwhile been canceled, so as to leave only \$300,000 unpaid. The consolidated internal debt, on June 30, 1888, amounted to \$16,052,000. The floating debt was of equal amount, bearing no interest. The budget for 1888-'89 estimated the income at \$37,900,000, and the outlay at \$38,537,239.

The report of the Minister of Finance for the fiscal year ended June 30, 1887, was published on Feb. 18, 1888, and reads as follows:

The Federal revenues were \$32,126,509. Deducting \$958,166 of the part collected in credits of the public debt through the purchase of waste lands and nationalized properties, there results as the net amount received \$31,168,352, or \$3,357,443 more than the collection of the previous year, when the net income only reached \$27,810,909; and, even comparing this product with the most favorable one of the last quinquennium, which was the fiscal year 1882-'83, it still exceeds that by \$532,678. The principal causes of this increase of receipts may be found (1) in the collection of import duties, which in this fiscal year rose to \$17,368,650, while in the previous year they did not exceed \$14,852,980; (2) in the receipts from stamps, which reached \$7,538,150, when in the previous year they only produced \$5,877,458; (3) in the new tax on salaries, which yielded \$885,560.

The official Government organ, in its issue of Dec. 5, 1888, contained a decree of November 30, through the provisions of which the import duties were to be raised 2 per cent., the proceeds to be set aside toward defraying the cost of harbor improvements.

A 7-per-cent. £400,000 loan was floated in London for account of the city of Mexico, to provide means for the finishing of the Tequisquiatic tunnel for draining the valley of Mexico. The net profits realized by the National Bank in 1887 were \$1,288,864, against \$1,123,758 netted in 1886, the dividends declared being \$880,000, against \$800,000.

Army and Navy.—The army of the republic consisted, on June 30, 1888, of 19,466 infantry, with 1,110 officers; 6,095 cavalry, with 465 officers; 1,688 artillery, with 128 officers; and 2,768 gendarmes, with 247 officers—together, 31,967. The navy consisted of five gun-boats.

Postal Service.—The number of post-offices of the first class in 1877 was 300; minor ones,

724. In the interior 22,885,092 letters and postal-cards were handled in that year, while the number of international letters forwarded was 1,845,720. The service employed during the year 1,528 persons, the receipts amounting to \$749,967, and the expenses \$857,424. Arrangements were nearly completed in January, 1889, for a packet-post between France and Mexico.

About the success of the foreign parcel-post between the United States, Mexico, and other American countries, Mr. Bell, the Superintendent of Foreign Mails in the United States, reports as follows: "The effect of these conventions has been to remove the restrictions which previously existed; and there can be no doubt that it will continue to augment largely the trade relations with those countries without imposing additional burdens on the postal revenue of the United States. The conclusion of the parcel-post convention with Mexico is of special importance, as that country, with its large population and with rapidly developing industries, naturally looks to the United States for every possible aid in strengthening the bonds of commercial relations between the two great sister republics whose interests are the same; and it will be found that new and hitherto almost inaccessible markets have been opened to American merchants."

Commerce.—During the fiscal year 1886-'87 exportation was distributed as follows, reduced to thousands of dollars:

COUNTRIES.	Merchandise.	Silver.	Total.
United States	11,007	14,576	25,583
England	2,397	11,122	13,519
France	717	4,401	5,118
Germany	891	1,290	2,181
Spain	499	104	603
Other countries	125	68	193
Total	15,636	32,561	48,197

The products shipped during the year were (in thousands of dollars): Sisal hemp, 3,901; coffee, 2,627; hides and skins, 2,211; cabinet and dyewoods, 1,849; tobacco, 851; vanilla, 694; istle-fiber, 349; cattle, 471; argentiferous lead bullion, 828; other merchandise, 2,360; silver, 33,561.

The export of merchandise from Mexico from January 1 to June 30, 1888, reached the sum of \$10,169,485, showing an increase of \$1,146,192 over the corresponding period of the previous year, or 11 per cent. The United States' share therein was 68 per cent.; that of England, 21; that of France, 9; and that of Germany, 5 per cent.

The American trade (merchandise) with Mexico exhibits these figures:

FISCAL YEAR.	Imports into the United States.	Domestic exports from the United States.
1886	\$10,687,972	\$6,856,077
1887	14,719,540	7,267,129
1888	17,829,389	9,242,188

Mexican spinners imported, in 1888, 33,203 bales of cotton from the United States against 40,774 in 1887.

Vanilla.—Mexican vanilla chiefly grows in the vicinity of Misantia and Papantia, in the State of Vera Cruz. Papantia has a population of 10,000, and is in the Indian District of Toco-naso. The vanilla is a creeping plant, growing on trees and shrubs in the forests. The pods mature in November and December, and are gathered by women and children, who carry them to market, where American and Mexican dealers buy them, paying from \$10 to \$12 a pound for them. About 1,000 green pods weigh 60 pounds, reduced to 10 pounds by drying. In 1887 the price for select pods was \$15, but an abundant crop brought the price down to \$10 and \$12 in 1888. Papantia exports on an average 60,000,000 pods annually.

Competition in Mexican Trade.—German houses, which nearly control the wholesale trade of Mexico, owe their supremacy to the system of long credits given to customers in the interior of the country, and to economical management. They have driven out the English houses, with only two or three exceptions. Failures are very rare, although large amounts are constantly due. The French have monopolized the dry-goods trade in the larger cities. Both the German and the French houses, in their operations in Mexico, have their rights clearly and particularly defined in commercial treaties. The English are endeavoring to bring about negotiations for a comprehensive commercial treaty, and hope to gain a foothold. American interests, although now amounting to \$200,000,000, are without treaty protection, as the treaty defining the status of Americans in business in Mexico has lapsed.

VESSELS ENTERED IN 1886-'87.

CLASS.	Steam-ers.	Tonnage.	Sailing-vessels.	Tonnage.
Sea-going	658	877,518	567	155,307
Coastwise	1,680	680,714	4,397	163,836
Total in 1886-'86	2,338	1,558,232	5,484	319,043
Increase	1,904	1,548,557	4,975	277,847
	429	14,675	509	41,686

The maritime movement increased during the fiscal year 1886-'87. The Mexican merchant marine was composed, in 1888, of 421 sea-going vessels and 847 coasting-craft.

Railroads.—The Mexican Central Railroad threw open to traffic, on May 21, the line from Irapuato to Guadalajara, 259 kilometres in length. On the line from Tampico to San Luis Potosi, 188 kilometres were put in running order, up to the banks of the Gallinas river, where a bridge is being built, and beyond which the embankments have been finished a distance of 232 kilometres. On the Aguas Calientes, San Luis Potosi line, the locomotive reached Salinas del Peñon on September 9, 110 kilometres distant from Aguas Calientes, being half the distance intervening between the two

cities. The National Mexican Company was actively at work in 1888 to finish the section of the line that separates Saltillo from San Miguel Allende, a distance of 565 kilometres, and on August 31 the portion of the track coming from the north reached San Luis Potosí; the junction of the two portions of the track took place at the Boquillas Viaduct, thus linking together two important cities, and opening a third line of railway from the capital to the American frontier. The Hidalgo Railroad Company finished five kilometres on the Tepa-Tulancingo line, and the thirty kilometres, which complete the line from San Augustin to Teoloyucan; these works constitute a new track connecting Pachuca with the capital on the one hand, while joining the Central and National Railroads on the other. Of the Interoceanic Railroad, twenty kilometres were finished of the Yantepec and Amacuzac section, and twenty kilometres of the one between Mazapa and San Martin Texmelucan. The Yucatan lines have not been behind hand in completing their system. Between Mérida and Calkini, six kilometres have gone into operation, and between Mérida and Valladolid seven. The aggregate length of lines of railway in running order in Mexico was 7,500 kilometres on Sept. 16, 1888.

Tehuantepec Ship-Railway.—A meeting was held on June 7, 1888, at Jersey City, of those interested in the project to build a ship-railway across the Isthmus of Tehuantepec. The Eads Concession Company is the organization that secured possession of all rights in the concessions made to Capt. Eads by the Mexican Government in 1881. About six months prior to the date of this meeting a construction company was organized in New York, under the title of "Atlantic and Pacific Ship-Railway Company." The English civil engineer Benjamin Blake, is to superintend the construction, and it is believed it will not be difficult to procure the \$50,000,000 of capital that will be necessary. The contract stipulates that the work shall begin within a year, dating from June, and be completed in five years. The scheme is to carry loaded ships across the isthmus in cradles. The distance is about one hundred and fifty miles.

Telegraphs.—During 1888 there were in operation 21,458 kilometres of Government lines, 6,887 kilometres of lines belonging to individual States of the confederation, 6,143 the property of railroad companies, 4,098 of private lines, and 2,926 of Mexican cable; a grand total of 41,507 kilometres. The Federal Government had 839 offices in operation. In December, 1888, the Mexican Telegraph Company declared a quarterly dividend of 2½ per cent.

The Government has declared free of duty everything entering into the construction of telegraph and telephone lines.

The steamer "Faraday" arrived at Coatzacoalcos on Jan. 18, 1889, having on board over 900 miles of the most improved heavy cable,

which was to be laid immediately between that port and Galveston, Tex., for the Mexican and Central and South American Telegraph Companies. This will duplicate the Gulf systems of these two companies, providing increased facilities, and insuring rapid communication by the American route *via* Galveston, with Valparaiso, Buenos Ayres, and other places in South America.

American Steamship-Line.—The sale of the entire plant of the Alexandre line to the New York and Cuba Mail Steamship Company, in the spring, increased the number of steamers running between New York and Mexico *via* Havana to five, so that since then a steamer has left New York every Wednesday.

Land Purchases.—In January, 1888, Señor M. Gonzalez, agent for several residents of Coahuila, closed the sale of 500,000 acres in the State of Coahuila to the representatives of an English syndicate, which already owns 2,000,000 acres in that State. The consideration was \$125,000, or twenty-five cents an acre. The purchase comprises much mountain land. English capitalists now own one quarter of the State of Coahuila. A large tract in northern Chihuahua, known as "Las Palomas," owned by George H. Sisson, of New York, and Louis Huller, of Mexico, was sold in January, 1889, to a syndicate of Chicago and Nebraska capitalists. The consideration was \$1,000,000. These lands are to be colonized with Germans, under the Huller colonization concession from the Mexican Government. George Hearst, a California capitalist, while in the city of Mexico in May, bought over 2,000,000 acres in the State of Vera Cruz, all lying in the "Tierra Caliente," and adapted to the raising of coffee, sugar, and tobacco.

In July it transpired that a French company had purchased the San Lorenzo estate, one of the best known in northern Mexico. The business will be managed in Paris and by two directors in the city of Mexico.

The Mormons have for some years past been quietly buying large tracts of agricultural lands in northern Chihuahua, principally in the valley of the Casas Grandes river, and in 1888 they were negotiating for more. There are several flourishing villages in that neighborhood, the principal one being called Porfirio Diaz; the colonists (who are probably precursors of much greater bodies in the future) are very quiet and unobtrusive.

American Enterprise.—Before the Mexican Congress adjourned, on Dec. 15, 1888, the Union Light, Fuel, and Gas Company, of America, organized under the laws of Illinois, in which St. Louis, Chicago, New York, and Detroit capitalists are largely interested, obtained a concession from the Mexican Government for the introduction of water, fuel, and gas into the cities and Government buildings throughout the republic. Among the items mentioned in the concession is the free importation for fifteen years of all materials necessary for the plant.

Mining.—There were being worked in Mexico, at the close of 1888, 824 silver-mines, employing over 100,000 miners. Eleven of the mines produced in 1888 \$25,000,000 of pure silver. Mexico produced, between 1821 and 1880, \$900,000,000 in silver, and only \$4,800,000 in gold. A rich pocket of silver was discovered in August, in the Concepcion, one of the Matchuala mines. Reports were received on July 24 at Mexico from Las Cruces, Lower California, that gold was being found in excellent ore-bodies. Fourteen ounces of amalgam gold were taken from a ton and a half of rock at the Santa Clara mine, in Las Cruces Canon. The vein at this mine is reported to be four feet in width, and a true fissure vein. There were, at last accounts, thirty tons of ore on the dump. This mine is owned at Ensenada. The vein at the Bonanza mine, in the Valladores district, has widened from eight inches to two feet six inches. Expensive machinery had been erected at the Fronteriza, whence they were to begin shipping the metal in pigs about January 1. The nearest shipping-point to the mines is Baratorano station, on the Mexican International Railroad. An influx of miners in great numbers and prospectors had begun. Many of these mines were originally worked by the Spaniards, and were destroyed and filled up by them when they were driven off by the native Mexicans during the revolution of 1810. News was received on September 20 from the Santa Rosa mining region in Mexico to the effect that a great mining excitement had set in. Persons who own the larger mines, like the Cedral, the Fronteriza, and the San Juan, were said to be trying to keep the richness of the ore from the knowledge of the public; but it transpired that these and others were taking ore that yields \$105 of silver to the ton, besides a large percentage of lead. The rapid rise of quicksilver in London has given an impetus to the working of quicksilver mines in Mexico, and efforts have been made to work several newly discovered deposits in the northern States. The Government is about to assume the control of all its mines, which are now under lease.

Ascent of the Iztaccihuatl Volcano.—In April two German travelers, Lenk and Topf, undertook the ascent of the volcano Iztaccihuatl, the neighbor of Popocatepetl, whose summit has an elevation of about 17,000 feet. They failed to reach the very top, but the expedition fully rewarded their efforts, as they report the existence of a glacier. It has not been supposed hitherto that there were any glaciers in this part of the American continent.

Earthquakes.—On Jan. 2, 1888, a sharp shock of earthquake was felt in the city of Mexico, at 7.30 a. m. During the last quarter of 1887 there had been seismic disturbances throughout the country. A slight shock was felt there on July 18, about midnight, and a high wind sprang up simultaneously. Another slight earthquake visited the capital at 16 minutes to

9 p. m., on September 6. The oscillations were from the northeast to southwest, and lasted 24 seconds; at Orizaba 9 seconds; and in the State of Guerrero 15 seconds, the oscillations being from west to east.

Education.—A bill was introduced in the Mexican Chamber of Deputies to make gratuitous elementary school instruction compulsory throughout the republic. For every 20,000 inhabitants, two schools are to be founded, one for boys and one for girls, and parents that do not send their children to school are to be punished with fine or imprisonment. Higher education is to be at the expense of the Federal Government.

MICHIGAN. State Government.—The following were the State officers during the year, all being Republican: Governor, Cyrus G. Luce; Lieutenant-Governor, James H. Macdonald; Secretary of State, Gilbert R. Osmun; Auditor-General, Henry H. Aplin; State Treasurer, George L. Maltz; Attorney-General, Moses Taggart; Superintendent of Public Instruction, Joseph Estabrook; Member State Board of Education, Bela W. Jenks; Commissioner of State Land-Office, Roscoe D. Dix; Chief-Justice of the Supreme Court, Thomas R. Sherwood; Associate Justices James V. Campbell, John W. Champlin, Allen B. Morse, and Charles D. Long. The principal appointees of the Governor were: Private Secretary, Milo D. Campbell; Commissioner of Railroads, John T. Rich; Commissioner of Insurance, Henry S. Raymond; Labor Commissioner, Alfred H. Heath; Commissioner of Mineral Statistics, Charles D. Lawton; State Librarian, Harriet A. Tenney; Oil Inspector, H. D. Platt; Salt Inspector, George W. Hill; Game Warden, William Alden Smith; Adjutant-General, D. B. Ainger; Quartermaster-General, S. B. Daboll; Inspector-General, F. D. Newberry.

Political.—The State officers were chosen at the general election in November for the two years beginning Jan. 1, 1889. There were four parties in the field: Republican, Democratic-Greenback (Fusion), Prohibition, and Labor. For Governor the Republicans renominated Cyrus G. Luce; the Democratic-Greenback party, Wellington R. Burt; Prohibition, Amherst B. Cheney; Labor, Wildman Mills. The officers above named were re-elected, except in two instances where the incumbents had served two terms. The new officers elected were: Stephen V. R. Trowbridge, Attorney-General, and Perry F. Powers, member State Board of Education (Republicans). The votes cast for the respective candidates for Governor were as follow: Cyrus G. Luce, Republican, 238,595; Wellington R. Burt, Fusion, 216,450; Amherst B. Cheney, Prohibition, 20,342; Wildman Mills, Labor, 4,388.

The principal State issues in the campaign were upon questions of temperance and increasing taxation. The last Legislature passed a local-option law permitting the several counties, by a vote of their electors, to prohibit the

manufacture and sale of liquor within their limits. The Supreme Court of the State declared the law unconstitutional by reason of defective title, after thirty-five counties had voted for prohibition and two counties had given a majority against it. Certain provisions also of the high-license law passed by the last Legislature had been declared unconstitutional by the Supreme Court.

The Republican platform included the following:

We cordially indorse the progressive temperance legislation enacted by the last Legislature, and regret that its full fruits were not realized, owing to the technical defects in the law held by the Supreme Court to be in conflict with the Constitution. We record ourselves as in favor of an impartial enforcement of the temperance laws of the State, and recommend to the next Legislature the re-enactment of a local-option law that shall be free from constitutional objections.

The Democratic platform included the following:

That the multiplication in this State of petty boards, commissions, and officials, with such powers and surroundings as insure neither official responsibility nor the respect of the Legislature or the people, leaves the matter of appropriations for State institutions to be largely controlled by log-rolling combinations; and to this, as well as to the lack of system, we attribute great and constant increase of appropriation. Therefore we submit that the case is one demanding the election of a Legislature and State officials free to make the changes which economy and good business methods may dictate.

These two planks presented the principal State issues during the canvass. The fight centered mainly upon the Legislature and Governor. Governor Luce, being an uncompromising temperance man, was opposed, for this reason, by some within his party, but he gained strength from other sources. As a result of the election, 24 Republicans and 8 Democrats were chosen to the Senate, and 70 Republicans and 80 Democrats to the House of Representatives.

On the assembling of the Legislature, Hon. James McMillan, of Detroit, was elected to represent the State in the United States Senate for six years from March 4, 1889, receiving the unanimous support of the Republicans in both houses, in his nomination and election.

Educational.—The Superintendent of Public Instruction, in his forthcoming report, will show the school population of the State to be 629,923, between five and twenty years of age, and the enrollment for the year to have been 425,318. The total number of districts in the State is 7,087, and the average length of school taught in them 7.6 months. There are 7,428 school-houses, and the estimated value of school property is \$12,857,108. The whole number of districts not having school during the year, from various causes, was only 81, being 37 fewer than during the previous year. The State has now four strictly educational colleges. The State University at Ann Arbor, during 1887-'88, enrolled 1,675 in its various departments. The State Normal School at Ypsilanti enrolled 948, the Agricultural College

at Lansing, 812, and the Michigan Mining-School at Houghton about 100. The colleges of the State were flourishing in 1888.

The principal educational questions being agitated in the State, other than those affecting the institutions, are: Uniformity of text-books, free text-books for public schools, and a change from the school-district plan to the township-unit system. These questions are not new in the State, but bills are being introduced in the Legislature, and their enactment vigorously urged.

Prisons.—The State has two prisons completed and in operation, and a third one, costing about \$300,000, is being finished at Marquette, in the upper peninsula. On Dec. 1, 1888, the total prison population of the State was as follows: State House of Correction and Reformatory at Ionia, 382; State Prison at Jackson, 754. The prison population of the State decreased since Dec. 1, 1884, from 1,354 to 1,086, Dec. 1, 1888, while the population increased about 850,000 during the same period. Most of the labor performed in the two prisons is under the contract system, although during the past two or three years the State-account system has been in operation, to a certain extent, in the House of Correction at Ionia. The manufacture of furniture and knit goods is under the State-account plan there, and all contracts with outside parties have expired, except one for the manufacture of cigars. Although the State-account system can not be said to have proved a failure, yet it has failed to meet the most sanguine expectations of those who advocated the change from the contract plan. Four pardons were granted during the year and two sentences commuted by the Governor.

Insane Asylums.—The State has four asylums for the insane, in which are 2,400 patients. During the past two years it has been deemed the better policy to meet the increasing demands for asylum room by the erection of cottages, instead of establishing new plants. During the year five cottages were thus erected, with a capacity to accommodate fifty patients each, and the plan seems to give general satisfaction, at a much less expense per patient than by the establishment of new institutions.

Other State Institutions.—The Reform School for boys, at Lansing, had an average attendance during the year of 444; the Industrial Home for girls, at Adrian, 213. The State also has a blind school at Lansing, in which it cares for 88; and the deaf and dumb school at Flint, 298. These two institutions are entirely free in board, care, and instruction. The Soldiers' Home at Grand Rapids is entirely free to dependent soldiers. During the year, 450 dependent soldiers of the State were supported and cared for.

The State Public School at Coldwater, a home for dependent children and orphans established many years since, has for its object the taking of children out of poor-houses and other places

where they are dependent upon the public for support, and caring for them, securing homes, and exercising guardianship over them until they become of age. During the year, 194 children were thus received into the school, and as many found homes. Since the school was established in 1874, 2,512 children have thus been cared for and educated while in the school, indentured into homes, and otherwise received the guardianship of the State during their minority.

Mineral Resources.—During the year the State produced 4,243,264 barrels of salt. The number of tons of iron shipped from the mines of Michigan during the year was 3,934,839 tons. The land-plaster produced during the year was 28,794 tons; stucco, 170,145 barrels. The amount of gold produced was \$32,388; silver, \$2,592.03. Valuable deposits of gold were discovered at and near Ishpeming, in the northern peninsula. The total number of tons of refined copper produced in the State during the year was 38,112.

Militia.—The State militia consists of 2,376 men. An encampment was held for two weeks in the summer of 1888 at Mackinac Island, with an enrollment of 2,062. The militia is supported by a tax that is levied upon the property of the State, and is equal to three and a half cents for each person in the State according to the last census.

Railroads.—Of the 85 counties in the State, only five are now without railway connections. During the year, 275 miles of road were completed and put in operation. The State now has 6,043 miles of railway, and 24,057,719 passenger fares were paid during the year, at an average rate per mile of 2.39 cents. Freight to the amount of 41,209,880 tons was moved, and the average charge for carrying a ton a mile was 1.09 cent, the rates being higher than at any time since 1875. By accidents to passengers during the year, two persons were killed and 82 injured. In accordance with the law of 1887, many of the roads have put in steam-heaters connected with the engine, and others are complying with the statute as rapidly as possible. The total tax paid by the railway companies of the State during the year was \$715,680.24. The total costs of railroads in the State, as reported to the present time, has been \$240,000,000.

Insurance.—The Legislature of 1887, by statute, prohibited the contract system of fire insurance in the State. During the year the Supreme Court declared the law constitutional. But in effect the contract system of rating remains intact, and the old rates are virtually unchanged. A commission, appointed by the Governor for the purpose, has established a uniform policy for all fire companies doing business in the State. The so-called grave-yard insurance companies were also, by the Legislature of 1887, prohibited from doing business in this State, and during the year Michigan has been freed from them.

Crops and Stock.—The principal crops in 1888 are shown by the following table:

CROPS.	Acres.	Bushels.	Average.
Wheat.....	1,504,411	23,581,504	15.67
Corn.....	889,646	24,029,026	31.00
Oats.....	865,813	31,846,674	31.00
Barley.....	40,860	1,168,310	28.60
Hay.....	1,350,000

The number of horses was 365,300; milch cows, 889,405; other cattle, 410,611; hogs, 456,436; sheep, 1,975,562; pounds of wool, 11,898,047.

The average rainfall in the State during the year was 28.68 inches.

MINING LAW. Under the common law of England, the owner of the surface of land under which minerals existed was entitled, *ex jure natura*, to everything beneath it, down to the center of the earth, except the minerals of gold and silver. In the case of mines under high-ways and non-navigable streams, the minerals belonged, as a matter of right, to the owner of the adjacent soil. All mines subjacent to navigable streams, and all gold and silver mines, belonged, by *prima-facie* right, to the crown. Where the precious metals were intermingled with a baser metal, if the gold and silver were worth more than the cost of extracting them, the mine belonged to the crown. But in certain cases the owner was permitted to work the mine on payment of a royalty. The thirteen States that formed the original Federal Union adopted the English common law, as a body, as a part of their inorganic law. But the greater part of the lands in all of the Eastern States were patented to settlers at an early period, and all minerals passed as a matter of right to the owners of the surface or soil, as the doctrine of crown reservations did not obtain in this country except in the State of New York. Such questions as have arisen in the various Eastern States in relation to mines and mining concern chiefly title-deeds, rights of support, drainage, administration, transfer of mining properties, etc., and have nothing to do with what is technically known as mining law. By virtue of title xi, chapter 9, of Part I of the Revised Statutes of New York, certain mines of gold and silver are, under certain conditions, reserved to the people of the State. In the States and Territories that are of Spanish origin the law is different. At the time of the cession to the United States of the territory originally Spanish or Mexican the Spanish or Mexican law as to mines was in force with the same, and became a part of the inorganic law of the United States, so far as that territory was concerned. The Mexican law was naturally of Spanish origin, and found its root in the code of Francisco Gamboa (1761). This code was modified in 1783, by the so-called code of Galvez, entitled "Mining Ordinance of New Spain," which left all parts of the code of Gamboa still in force, except where it was expressly repealed. These codes

were elaborate and voluminous. The code of Gamboa allowed to the discoverer of mineral lands a length of 160 varas or yards, and 80 varas in width on the vein, and upon relocation of a previously discovered mine, 120 varas in length and 60 varas in width on the vein. In the case of mines or "streamworks" of gold, original locators were allowed 80 varas in length and 40 varas in width; and in case of a second location 60 varas in length and 30 in width on the vein. This code required denunciation, working, and registry of the claim, in order to perfect title. The code of Galvez treated, among other subjects, judges and deputies of mining districts, jurisdiction of mining causes, ownership of mines, drainage, laborers, and mining generally. It created a fund and bank of supplies, and provided for the establishment of mining-schools. It contained many curious provisions, among others the privilege of nobility to the scientific profession of mining, relieved mine-owners and many of their subordinates from imprisonment for debt, and created a preference in favor of mining laborers as against other persons for their wages. It allowed the original discoverer 200 varas or yards in length on the length of the vein, and a hundred level yards measured on either side of or divided on both sides of the vein. Where the vein was inclined, an increase in width was allowed, in proportion to the degree of inclination. Under this code, minerals of every sort belonged to the crown, but could be acquired by any person other than aliens, members of religious orders, and certain high civic dignitaries, upon discovery followed by location, denunciation, and working in the manner prescribed.

The Mexican statutes modified certain provisions of the code of Galvez, and extended certain privileges to miners of quicksilver, and by decree of Oct. 7, 1823, the disabilities of foreigners were removed so far as to enable them to contract with mine-owners needing capital, and as a consequence to hold shares in such mines.

On March 16, 1848, the treaty of Guadalupe Hidalgo was ratified, by virtue of which California, Arizona, New Mexico, Texas, and a part of Colorado were ceded to the United States. That year gold was discovered in California, and the law that sprang up and grew to be the inorganic law of the self-constituted mining districts of these newly acquired Territories was a fusion of the old Spanish law as modified by Mexican decrees, and the common law of England as it existed in the Eastern United States. For a review of the mining law of foreign countries, see article by R. W. Raymond in Williams's "Mineral Resources of the United States, 1883 and 1884" (Washington, 1885.)

Federal Legislation.—From 1795 to 1865 the United States Government adhered to the policy of reserving the public mineral lands from sale. In 1805 an act was passed author-

izing the President to lease lead-mines for a limited period. Throughout the East there were, even at the time of the Federal Union, practically no public lands, and in the West few or no lands had been occupied by miners. Nevertheless, at an early period Congress discussed the question of the undivided public lands, and even in 1785 it passed an act by which it reserved one third of all gold, silver, lead, and copper mines. In many instances thereafter, lead-mines were reserved from the sale of certain portions of the public domain, and the general pre-emption law excludes from its provisions "all lands on which are situated any known salines or minerals." In the various acts admitting the later States to the Union, mineral lands were not expressly reserved, except so far as they were included in what are termed "lands generally reserved." The reservation of lead-mines under certain local acts relating to pre-emption has led to at least one important case in the Supreme Court.

In the Eastern States the English doctrine of royal mines has never been established, with the single exception of the State of New York. The States granted their public lands to settlers at an early date, and there never was any reservation of the minerals; hence the title to all mines became inseparably vested in the owner of the soil, and the ordinary rules of the law of real property have always applied to them. No record is found of litigation on any questions growing out of location of mines in the Eastern States, by virtue of any State or Federal law, except in so far as the cases are found in Morrison's "Mining Reports."

From 1849 until 1866 Congress did practically nothing toward the promotion of mines and mining, and the seekers for precious metals in the new West were left to their own devices. The result was a rapid encroachment upon the public domain, and the passage of a vast number of statutes and regulations by the local legislatures and tribunals of the mining districts of the Territories, based upon the local mining code of old Spain, if the Territory was of Spanish origin, or upon the common law of England if it was of British origin.

Recent Legislation.—After the civil war it was proposed to promote the sale of the public domain then undisposed of, with a view to diminishing the public debt. In 1865 a joint resolution of Congress was passed, reserving all mineral lands from any grants made by them in the previous sessions to States or corporations. On July 26, 1866, Congress passed the first federal mining law which conceded to first discoverers of mineral deposits most of the privileges granted by the Spanish codes, and by the earlier district laws. This act was the first attempt of Congress to deal practically with the question of mining-titles on the public domain. It recognized many of the local mining customs to an extent that made it full of uncertainties. Under it the discovery of any part of the lode was made a basis for a claim.

The lode was what was claimed and subsequently acquired by patent. The locator was entitled to claim along the lode the number of feet that the local laws permitted. The surface was not conveyed to the locator; he merely acquired an easement to occupy it with structures necessary for the working of his mine.

On July 9, 1870 a new act was passed relating more particularly to water-rights and placer claims; and on March 3, 1873, one relating to coal-lands. On May 10, 1872, the general mining act was passed, which repealed sections 1, 2, 3, 4, and 6 of the act of 1866, and was subsequently codified as title xxxii, chapter 6, of the Revised Statutes of the United States. But a single act of any importance has been passed since then, and this is the act of Feb. 11, 1875, relating to tunnels on mining-claims.

The Existing Law.—The act of 1872 is now a part of the organic law of the United States, and is the only specific mining law existing therein. It supersedes all local customs, rules, and regulations, and all State or Territorial laws in conflict with it, but is expressly limited to claims located after May 10, 1872, and makes no attempt to interfere with any mining claims theretofore granted. It ingrafted upon the jurisprudence of the country the so-called "doctrine of the apex," which is totally foreign to all known systems of jurisprudence and of doubtful expediency. This innovation has led to much litigation and uncertainty and has made the working of the law generally unsatisfactory. The following are some of the more important provisions of the law:

Title xxxii of chapter 6 of the Revised Statutes of the United States contains twenty-eight sections, and embodies parts of the acts of 1866 and 1872, chiefly the latter. The first section expressly reserves mineral lands from sale under pre-emption, and the second gives all citizens of the United States, or those intending to become citizens, full privilege of free and open exploration and purchase of mineral lands belonging to the Federal Government under the rules prescribed by law and the local rules and customs of the mining districts not inconsistent with the laws of the United States. The third section limits the size of the claim to 1,500 feet along the vein or lode, and prohibits the location until a "discovery" of the vein or lode is made within the limits of the claim located, and it limits the width to 300 feet on each side of the middle of the vein at the surface. It also provides that no mining regulation shall so limit any claim as to be less than twenty-five feet on each side of the middle of the vein at the surface except where adverse rights existing at that date render such limitation necessary. The fourth section defines what is proper proof of citizenship. The fifth provides that locators shall have the right of possession and enjoyment "of all the surface included between the lines of their location, and of all veins, lodes, and ledges, throughout their entire depth, the top or apex of which lies inside of such surface lines extended downward vertically, although such veins, lodes, or ledges may so far depart from a perpendicular in their course downward as to extend outside the vertical side-lines of such surface locations." It confines the right of possession of such extra-lateral portions to such parts of the vein or lode as lie between vertical lines drawn downward through the end-lines of the location so continued in their own direction that such planes will intersect such exterior parts of such veins or ledges. This is the famous

"apex" section, and is a departure from the rule of the common law and of the Spanish codes. By it the lode is made the principal thing; hence, as the location seldom covers the apex from one end-line to the other, and as deposits constantly vary in character, and are seldom or never continuous, the uncertainty of this section is obvious. For a full discussion of the legal aspect of this section, see Dr. Raymond's "Law of the Apex" ("Transactions: American Institute of Mining Engineers," vol. xii), various articles by the author of this article, in the "School of Mines Quarterly," vols. vii and viii, and Morrison's "Mining Rights in Colorado" (Denver, 1887). The sixth section regulates the location of tunnels, and the seventh provides for the location of mining claims and the annual labor necessary to hold them, defining certain specific prerequisites, such as distinctly marking the location on the ground, what the record shall contain, reference to some natural object or permanent monument, etc. It provides that one hundred dollars' worth of annual labor must be expended upon each claim for each 100 feet along the vein until the patent is issued. It allows the various mining districts to make further rules and regulations not in conflict therewith, and it gives a remedy to one co-owner for the failure of another to contribute his proportion of the expenses required by the act.

The eighth section concerns the formalities necessary for obtaining a patent, and vests the administration of the law, so far as the granting of patents is concerned, in the hands of the General Land-Office. An appeal lies therefrom to the Secretary of the Interior (see LANDS, PUBLIC).

The ninth section relates to adverse claims to a particular location, and defines what proceedings are necessary for an adverse claimant to take, in order to determine his claim. It requires the adverse claimant, within thirty days after filing his claim with the register of the particular mining-district in which it is situated, to begin proceedings in a court of competent jurisdiction to determine the right of possession. Failure to do this works a forfeiture of the adverse right. After judgment, the law provides for the issue of the patent or patents to the proper party (or parties, if there be such who are entitled to separate and different portions of the claim), on their filing with the register of the Land Office a certified copy of the judgment-roll of the court, and a certificate of the Surveyor-General, that the requisite amount of work has been done upon the claim, and upon payment of five dollars per acre, as required by law. The tenth and eleventh sections refer respectively to the way in which vein or lode claims shall be described, and to the prosecution to final decisions of applications made prior to the act, provided no adverse rights then existed. The next five sections, taken partly from the act of July 9, 1870, and partly from that of May 10, 1872, relate solely to placer mines. The first of these sections, No. 2,329, defines placers, and subjects them to entry and patent as other mineral lands. The next, No. 2,330, limits all placer claims to 160 acres, to two or more persons or associations of persons, and provides for subdivision of legal subdivisions of forty acres, into ten-acre tracts, and permits joint entry to two or more persons or associations having contiguous claims of any size, reserving all rights of *bona-fide* pre-emption or homestead claims upon agricultural lands. The next section, No. 2,331, requires that, where placer claims are located upon unsurveyed lands, they shall be located as nearly as possible in conformity with the general system of public lands, and shall not include more than 20 acres for each individual claim, and provides also certain limitations in cases where the claim can not be laid out to conform to the legal surveys. Section 2,332 is in effect a statute of limitations in favor of such persons or associations as have held and worked their claims prior to the act, and gives them the benefit of the local statute of limitation of the State or Territory where the claim is situated on giving evidence of their posses-

sion, but without prejudice to any liens that have already attached prior to the issue of the patent. The last of the five sections, No. 2,333, refers to the patenting of placer claims where a lode or vein is found within the boundaries. If the application for the patent includes this vein or lode, then the applicant must pay five dollars an acre for such vein or lode claim, and twenty-five feet of surface on each side thereof; the remainder of the placer claim to be paid for at the rate of two dollars and a half an acre, together with all costs of the proceeding. It also provides, that, where a vein or lode is known to exist within the bounds of a placer claim, an application for a patent not including the vein or lode claim is construed to amount to a waiver of all right to possession of the lode claim. The rule is otherwise if the lode claim is not known to exist. In such case, the placer claim carries with it all subsequently discovered valuable mineral deposits. The remaining sections of the title other than sections 2,336, 2,337, and 2,338 refer to the appointment, duties, and fees of deputy surveyors, the form of affidavits and proofs, reservation of homesteads, segregation of agricultural lands, creation of land districts by the President, and exemption of minerals from all State and railroad grants, and all vested rights then existing. Section 2,336 provides that priority of title shall govern when two or more veins intersect or cross each other, and gives the prior locator all ore or mineral contained within the space of intersection, but grants sublocators a right of way for exploitation, and where two veins unite, the vein below the point of union is given to the prior locator. Section 2,337 provides for the acquisition by the owner of a claim in a manner similar to that provided for the location of the claim of adjacent lands not to exceed five acres for the purposes of a mill-site, at the same price per acre that was paid for his claim, and gives owners of quartz-mills or reduction-works not owning a mine in connection therewith, a similar privilege. Section 2,338 provides that the local legislatures, in the absence of Federal legislation, may provide suitable regulations for working-mines, involving easements, drainage, and other means for their development to be fully expressed in the patent.

State Legislation.—After the incorporation of the mining laws into the Revised Statutes, various States and Territories, in conformity with the privilege granted them by section 2,338, passed laws relating to the working and drainage of mines, and also to such matters as are necessary to their complete development and preservation. Laws were also passed relating to the management of mines, transfer and mortgage of mining rights, formation of mining companies, etc. So far as the location of mines is concerned, most of the acts are mere re-enactments of the Federal statutes. Among the States and Territories that possess such local legislation are Arizona, California, Colorado, Dakota, Idaho, Minnesota, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. A convenient compilation of these laws is found in Copp's "American Mining Code" (Washington, 1886) and in Wade's "American Mining Law" (St. Louis, 1882). A complete compilation, by Clarence King, is found in vol. xiv of the tenth census (Washington, 1885). Certain of the States have appointed executive officers or commissioners to look after the mining interests in those States, and the Constitutions and revised statutes of certain States provide for the exercise of the general police power of the

State over all mines. Pennsylvania has a general regulative act, passed in 1870. But all acts of Congress are of paramount authority, supersede local laws and regulations upon the same subject, and abrogate all those in conflict therewith, so far as they concern mineral lands upon the public domain. This has been distinctly held by the United States Supreme Court, in *Basey vs. Gallagher*, 20 Wallace's Reports, 670. Miners' customs and regulations, once adopted, are presumed to be in force until the contrary is proved. A compilation of the various laws of eastern States relative to mines and mining is found in Day's "Mineral Resources of the United States for 1886," published by the U. S. Geological Survey (Washington, 1887).

Construction of the Law.—The principal sections of the existing laws under which controversies have arisen, calling for a construction of the same by the courts, are as follow: 1. Section 2,320, relating to the dimensions of claims. 2. Section 2,322, the apex section. 3. Section 2,324, relating to location and annual labor. 4. Section 2,338, relating to placer claims containing veins or lodes within their boundaries. The remaining sections have received judicial interpretation.

Location and Discovery.—The status of locators and patentees of lodes, as far as their rights of possession and enjoyment are concerned, is practically the same that it was formerly, with all claims other than placer claims. The law requires locations to be made along the lode or vein lengthwise of its course, at or near the surface. Each locator is entitled to follow the dip of the lode or vein to an infinite depth, within the planes passing vertically downward through his end-lines, provided his claim contain the apex of the lode or vein. These end-lines must necessarily be parallel to each other.

A location of a mining claim can not be made by a discovery shaft upon another claim that has been previously located and is a valid location. The weight of Federal and State authority is in favor of the validity of locations where the work required by statute has been performed, even if there are irregularities in the location papers, and actual possession is not essential to the validity of the title obtained by a valid location; and until such location is terminated by abandonment and forfeiture, no right or claim to the property can be acquired by an adverse entry thereon with a view to the relocation thereof. Mere possession, however, not based upon a valid location is valueless as against a subsequent valid location. Where a location notice fails to state the number of feet claimed on each side of the lode, the location is limited to an equal number of feet on each side of the discovery, and to an equal number of feet on the course of the lode or vein in each direction from that point. A failure to record a certificate of location of a mining claim within the time prescribed by law will not render the location invalid, provided the other necessary

steps be complied with. The tendency of the decisions of the Federal courts has been to support, as far as possible, locations made in good faith, notwithstanding existing informalities; and hence claims for more than the statutory length upon the lode have been held good to the extent of the number of feet allowed by law, but void as to the remainder; but the location of a mining claim upon a lode or vein of ore should always be made lengthwise of the course of the apex, at or near the surface; otherwise, it will only secure so much of the lode or vein as it actually covers. Thus, where a location is laid crosswise of a lode or vein, so that its greatest length crosses the lode, instead of following the course thereof, it will secure only such surface as lies within it, and its side-lines will become its end-lines for the purposes of defining the rights of the owner.

The Apex Section and Rights under it.—The law of 1872 ingrafted upon the old common-law right, which included primarily the surface and everything beneath it, the additional right of following certain veins, under certain conditions and limitations, into adjacent territory. This is the so-called right of "extra-lateral pursuit," which is met with only in American jurisprudence. This right carried with it the liability of being intruded upon by an adjoining owner in the exercise of the same right. The old right of discovery, which was originally the foundation of the miner's title, is no longer of importance; for the right to follow a vein outside of the side-lines of the claim depends solely upon the possession of the apex within the surface survey. Thus the original discovery may prove valueless; but the right of extra-lateral pursuit may make a claim of extreme value. This has several times occurred in the mining-camps of the West. For full explanation of this, see "The Emma-Durant Case," "School of Mines Quarterly," vol. viii. The terms "veins," "lode," and "ledge," and the expressions, "top of the vein," and "apex of the vein," appear to be synonymous, but they have not yet been judicially settled. A vein or lode, in order to be followed outside of the side-lines of the claim, must be continuous. Continuity is a question of fact, but as yet there is no case that squarely defines the evidence of continuity. In one case, however, it has been held that a vein or lode must be a continuous body of mineralized rock, lying within any well-defined boundaries on the earth's surface or under it. Each locator is entitled to follow the dip of the lode or vein to an indefinite depth, though it carries him beyond the side-line of his claim, provided that these side-lines substantially correspond with the course of the vein at the surface. A locator working subterraneously into the dip of the vein belonging to another who is in possession of his location, is a trespasser; and, as between two locators, the boundaries of whose respective claims include common territories, priority of location confers the better title, provided a vein

in place was discovered in the discovery shaft, and provided also that it extended to the ground in controversy. No location can be made upon the middle part of a vein, or otherwise than at the top or apex, which will enable the locator to go beyond his line. While the common law never recognized extra-lateral rights as they exist to-day, it did provide, under certain conditions, for the separation of the minerals from the surface under which they lay.

Annual Labor.—The law requires, as above stated, a certain amount of work to be done annually upon each claim, in order to preserve the location. As a rule, the law in this particular has been strictly construed, and financial embarrassment and threats to deter resumption of labor, have been held not to be sufficient excuses for non-performance of the work. It has also been held that, where work was done upon one of several adjoining claims held in common, it could only count for the other claims within the meaning of the statute where it actually inured to the benefit of all of them, and was of equal beneficial value to all.

Placer Claims.—In the case of placer claims, the owner of the claim holds everything covered by his patent, except such lodes as were known to exist within the placer claim, prior to the granting of the patent. In this respect, placer claims differ from lode claims. The courts have held that by "known to exist" is meant a vein duly located or recorded and owned by a third party before the placer claimant applied for the patent, and that the mere existence of the lode by geological inference, general rumor, or belief, did not serve to exempt it from the placer claim. The requirements of the Federal statute in regard to labor performed have been held to apply to placer claims also. There are no extra-lateral rights in connection with placer claims.

Bibliography.—The literature of mining law is not large. All mining cases of general importance, both English and American, are reported in Morrison's "Mining Reports" (Chicago, fourteen volumes). This series contains reports of many cases that in no wise form a part of the general body of the American mining law. Morrison's "Digest of American and English Decisions," found in the reports from the earliest times to the year 1875 (San Francisco, 1875) is of great value to the practitioner and is the best book for the practical wants of attorneys. For definitions of technical terms, see Rossiter W. Raymond's "Glossary of Mining Terms," in vol. ix of "Transactions of the American Institute of Mining Engineers." Rockwell's "Spanish and Mexican Mining Law" (New York, 1851) is a most learned and valuable treatise, but is now antiquated. Blanchard and Weekes on "Mining, Minerals, and Mining Water-Rights" (1887) is valuable, but is no longer up to date. So are also Sickles's "United States Mining Laws and Decisions" (1881), and Wade's "American Mining Law" (Denver, 1882). A convenient work is Harris's "Titles to Mines in

the United States" (London, 1877), which is to be particularly recommended to laymen on account of its brevity and thoroughness. The principle English text-book is MacSwiney's "Mines and Minerals," and the American is Bainbridge, on the "Law of Mines and Minerals" (First American Edition from Third London Edition, 1878).

MINNESOTA. State Government.—The following were the State officers during the year: Governor, Andrew R. McGill, Republican; Lieutenant-Governor, Albert E. Rice; Secretary of State, Hans Mattson; Auditor, W. W. Braden; Treasurer, Joseph Bobleter; Attorney-General, Moses E. Clapp; Superintendent of Public Instruction, D. L. Kiehle; Railroad and Warehouse Commissioners, Horace Austin, John L. Gibbs, George L. Becker; Chief-Justice of the Supreme Court, James Gilfillan; Associate Justices, John M. Berry, William Mitchell, Daniel A. Dickenson, and Charles E. Vanderburgh.

Finance.—The report of the State Treasurer for 1888 gives the following statement of finances for the year ending July 31, 1888: Receipts, \$3,097,610.25; balance in treasury Aug. 1, 1887, \$648,860.66; total, \$3,746,470.91. Disbursements, \$2,404,108.42; balance in treasury July 31, 1888, \$1,342,362.67; total, \$3,746,470.91. Of this balance, only \$189,990.72 stands to the credit of the revenue fund available for general expenses. The estimated receipts and disbursements for such expenses for the ensuing three years are as follow:

FISCAL YEAR.	Receipts.	Disbursements.
1889.....	\$1,854,690 73	\$2,175,249 66
1890.....	1,747,500 00	1,513,850 00
1891.....	1,818,000 00	1,614,850 00
Total.....	\$5,420,190 73	\$5,103,949 66
Estimated surplus.....		\$316,241 06

The deficiency for 1889 is thus \$320,558.94. The State debt consists of but one class of bonds, viz., Minnesota, 4½-per-cent. adjustment bonds, bearing date July 1, 1881, due in twenty years, and redeemable at the State's option after ten years. The amount outstanding is \$3,965,000; the State holds of her own bonds as follows: Invested school fund, \$1,981,000; invested university fund, \$288,000; total, \$2,269,000. It will be noted that the total debt is \$3,965,000; from this should be deducted \$1,994,209, which represents the accumulation in the internal improvement land fund, which is by law set apart as a sinking-fund. The State debt, less the available sinking-fund, is then reduced to \$1,970,791.

Education.—The permanent school fund now amounts to \$8,258,096.70, having increased from sales of land \$954,930.56 during 1887 and 1888. It is expected that this fund will eventually amount to \$18,000,000 or \$20,000,000. The whole amount expended on the public schools for the year ending June 30, 1888, in-

cluding new buildings, was \$4,383,695.41. The number of enrolled pupils, high and normal schools included, for the year 1888, was 259,835, and the number of persons in the State between the ages of five and twenty-one is estimated at 416,550. The average daily attendance has been 126,468, and the average length of school during the year has been 6.1 months. There have been 1,884 male teachers employed at an average monthly salary of \$40.10, and 5,671 female teachers at an average monthly salary of \$30.52. The number of teachers that have taught in the same district three or more years is 727 for 1888, which is an increase of 46 per cent. over 1887, and 120 per cent. over 1886. The number of normal graduates teaching in 1888 was 571, an increase of 60 per cent. over 1886; while that of teachers attending normal school in 1888 was 1,427, an increase of 40 per cent. over 1886. The amount paid to teachers in wages for the year was \$1,942,665.73, and \$1,121,804.83 was paid for new school houses and sites. The law requiring the teaching of temperance hygiene in the public schools has been generally complied with. Under a recent law granting aid to schools in purchasing libraries, there have been furnished by the State 811 of these libraries. "The growth of the schools has been further enhanced," says the Governor, "by the recent amendment to the State Constitution permitting the State school funds to be loaned to school districts for building purposes in providing new and better school-houses. The amount so loaned in the twenty-one months the law has been in operation is \$291,124.91. One of the greatest stimulants and benefits ever received by our common schools comes through the law of 1887, which levies a straight one-mill tax annually on the taxable property of the State and devotes the proceeds, based on the enrollments of the schools, to the various school districts of the State. This levy, as extended on the tax rolls of 1888, amounted to \$486,670.03."

Through an appropriation made by the last Legislature, a handsome new building has been erected at Moorhead for the fourth normal school, which is now in operation. The establishment of this school probably supplies the last demand in the State, in the way of new normal schools, for many years to come.

During the year schools of law and medicine have been organized in the State university. The school of medicine embraces a college of medicine, a college of homeopathic medicine, and a college of dentistry. The course of instruction covers three years. The schools will use the medical college building in St. Paul, and the hospital college building in Minneapolis. A school of agriculture with a two-years' course has also been opened for practical instruction in farming. The president of the university reports that the large science hall and museum, which were begun in 1887, are nearly completed.

Soldiers' Home.—The last Legislature made provision for the establishment of a home for honorably discharged soldiers and sailors, and appropriated \$50,000 for that purpose. The city of Minneapolis gave a site therefor, consisting of fifty-one acres of land at Minnehaha Falls, to be eventually connected with the park system of that city. Temporary quarters were rented on grounds adjacent, and in November, 1887, the home was opened. The full capacity of these quarters was soon reached, and at the date of the annual report of the trustees (August 12), 81 soldiers had been admitted, and 65 others had applied. During the present winter fully 200 will have to be provided for. The appropriation of \$50,000 for purchasing a site and erecting new buildings did not become available until 1888. This appropriation has been expended in the erection of two commodious and comfortable dwellings and it is expected that with these buildings and the temporary quarters all applicants now entitled to admission will be accommodated. But this number is constantly increasing.

State Prison.—The last Legislature abolished the contract-labor system, and appropriated \$25,000 to put in motion the public-account system. This amount was considered by the prison inspectors too small to warrant them in undertaking the work, and nothing has been

Aid to Settlers.—The Legislature of 1887 appropriated \$40,000 for the relief of farmers whose crops had been destroyed by hail in 1886. The cities of St. Paul and Minneapolis were repaid \$10,000 advanced by them for distribution in Marshall County. Of the balance, \$20,315.59 was distributed, more than half of which went to Marshall County where the greatest loss occurred. The sum of \$25,177.60 was also loaned to these farmers, to purchase seed-grain. Under the first appropriation much actual want was relieved and suffering averted, and when the season of 1887 opened, farmers who had lost their all by hail the previous year, and but for the aid extended by the State would have been in absolute want, were ready with their teams for work. Good crops were raised where, but for the means furnished by the State to purchase seed, nothing could have been planted. The benefits conferred under this law are well illustrated in the case of Marshall County, which, although the most impoverished by the losses inflicted, has already paid back \$5,584.91 of the \$11,625 apportioned it, besides providing comfort and plenty in the homes of a desolated portion of the State.

Valuation.—The following table shows the increase in value of the taxable property of the State in 1888:

ITEMS.	1888.	1887.	Increase.
Acres of land assessed.....	27,360,821	28,820,691	2,439,680
Value of land with structures	\$188,614,809	\$190,888,548	\$2,268,734*
Value of city property.....	261,455,567	200,889,817	60,515,750
Value of taxable personal property.....	106,126,015	94,846,804	11,279,211
Total.....	\$556,196,491	\$486,669,964	\$69,526,527

* Decrease.

done. The prisoners have been idle, and the inspectors recommend the repeal of the law.

High License.—Gov. McGill says in his message to the Legislature:

While no official data have been gathered, information of a character to be relied upon shows a decrease of fully one third in the number of saloons, and an increase of one quarter in the revenue derived from licenses. The consumption of liquor has been lessened, and the cause of temperance materially promoted. There is not so much intoxication as existed before the law was enacted; the saloon is no longer a dominant power in the politics of the State; public opinion for a thorough control of the liquor traffic has strengthened, and in many ways, directly and indirectly, good has resulted to our State and its people from the high-license law of 1887.

From unofficial statistics gathered by a State journal in August, at the beginning of the second year of the law, the reduction in the total number of saloons appears to be from 2,806 under the old, to 1,597 under the new system. In Hennepin County the reduction is from 346 to 242; in Ramsey County, from 688 to 352; in Winona County, from 165 to 40; in St. Louis County, from 113 to 72; and in Stearns County, from 109 to 51.

Agriculture.—The Commissioner of Statistics reports for 1887 a total product of 39,070,159 bushels of wheat, raised on 8,053,887 acres; 37,659,199 bushels of oats, on 1,325,810 acres; 17,234,422 bushels of corn, on 642,477 acres; 5,216,391 bushels of barley, on 322,612 acres; and 1,318,121 bushels of flax, on 167,264 acres. The amount of wheat for 1888 is estimated at 3,019,919 acres; oats, 1,538,134 acres; corn, 687,069 acres; barley, 370,075 acres; flax, 166,206 acres.

Decisions.—On November 22 the State Supreme Court rendered an important decision, annulling the mechanics' lien law of the last Legislature, on the ground that many of its provisions were unconstitutional. The act aimed to give labor a first lien upon property created by it, and the furnisher of materials a second lien; but its provisions were so unskillfully drawn that procedure under it was impossible. As a result, men could not appeal to the old law, for that was presumptively superseded, nor could they appeal to the new, for the ablest lawyer whom they might employ could make nothing of it. The only effect of

the new law has been to suspend for a year the operation and safeguards of the former act of 1870, which by this decision is now restored.

The Legislature of 1885 passed a law regulating the removal of county seats, which provided among other things for the removal by a majority vote of the electors, excepting in counties where the question had previously been submitted to a vote, and the county seats therein had been fixed by such vote, and in this class of counties a three-fifth vote should be required. In the case of *Nichols vs. Walter* this act was declared by the Supreme Court to be contrary to that part of the Constitution which requires all laws to be uniform in their operation throughout the State. There is, therefore, no law at present providing for county-seat removals.

Political.—The Prohibitionists met in State Convention at St. Paul on July 25, and nominated the following ticket: For Governor, Hugh Harrison; Lieutenant-Governor, Theodore S. Reimstad; Secretary of State, Peter Thompson; State Treasurer, John H. Allen; Attorney-General, Charles E. Shannon. The platform contains the usual prohibitory resolutions, demands a law of Congress prohibiting the importation of liquor into those States that forbid liquor-selling, and concludes with the following resolution:

That it is the duty of the State Legislature to require each railway company doing business in the State to provide suitable and adequate stock-yards, at such stations as may be designated by the railroad commissioners, for the handling and shipping of grain, cattle, and other products, under such rules and regulations as will insure to every shipper equal rights, facilities, and privileges.

The Chief-Justice of the Supreme Court, F. L. Claffey, was later placed in nomination, and for Associate Justice, George S. Livermore.

On August 15 the Democratic State Convention was held at St. Paul, and nominated the following candidates: For Governor, Eugene M. Wilson; Lieutenant-Governor, Daniel Buck; Secretary of State, W. C. Bredenhagen; Treasurer, Hans Nelson; Attorney-General, O. D'Autremont; Chief Justice of the Supreme Court, Seagrave Smith; Associate Judge of the Supreme Court, George W. Batchelder.

In addition to commending the National Administration and policy, the resolutions denounce the grain-inspection laws of the State, deprecate the multiplicity of offices, accuse the State Government of extravagance, and reflect upon the State Executive in the following language:

We particularly arraign the present Executive of the State, for he has persistently refused to interpose his veto for the protection of the public treasury against the extravagant schemes of an extravagant Legislature. We commend to his consideration the example of Grover Cleveland, as evidence of the wholesome influence upon vicious legislation which an intelligent Executive can exercise by a judicious and resolute exercise of the veto power. He has debased the civil service of the State by removing officers of mature experience in order to pay the debts and

discharge the obligations of a political campaign. Under him the judiciary of this State, for the first time in our history, has been prostituted for the purposes of factional partisanship, and men of acknowledged incompetency have been clothed with the judge's ermine as a compensation for their political services in the caucus and upon the stump. We submit that the time has come for the decisive overthrow of the politicians who have so long directed the affairs of our State.

On August 28 a conference of farmers and labor organizations, under the name of the "Farm and Labor Party," met at St. Paul for the purpose of nominating a State ticket to represent the interests of organized labor. This conference nominated: For Governor, Ignatius Donnelly; Lieutenant-Governor, James McGaughy; Attorney-General, William Welch; State Treasurer, W. G. Jebb; Secretary of State, J. P. Schonbeck. The platform favors a revision of the tariff, governmental control of telegraphs, and further restriction of railroads, and also demands:

That the money needed for exchanges be issued direct to the people, without the intervention of banks.

The adoption of a system of voting embodying the principle of the Australian law, which abolishes the caucus system and secures to each voter an opportunity to cast a free and untrammelled ballot.

That the right to vote is inherent in citizenship, without regard to sex.

The reduction of freight and passenger rates on railroads to a sum sufficient to pay only the operating and maintaining expenses, when economically administered, and a fair rate of interest on the actual cost of the roads, thus saving to the producers of the State several millions now wrung from them to pay interest on fictitious stock.

The enactment of a law allowing the mortgagor to deduct from the amount due the mortgagee, the amount of all taxes paid upon that part of the assessed valuation of the estate taxed, represented by the mortgage.

The enactment of a factory-inspection law for the protection of the health and safety of employes in mines, factories, workshope, and places of business.

The enactment of a law defining the liability of employers for injuries sustained by employes in cases where proper safeguards have not been used, in occupations dangerous to life, limb, or health.

That eight hours shall constitute a day's work in all towns and cities on State and municipal work, and all such work shall be done by the day, and not by contract.

The enactment of a law regulating the employment of detectives and peace-officers, and forbidding the employment of secret or private detectives by other than the State or municipal governments.

The enactment of a law to enforce the payment of weekly wages in lawful money by the employers of labor in cities, and by railroad companies and other corporations, and at the hands of Congress.

Whereas, Any rate of interest above the average increase of wealth of the nation is robbery, therefore we demand a reduction of interest in this State to a reasonable rate.

A few weeks later, Mr. Donnelly, the gubernatorial candidate, announced his refusal to accept the nomination and his purpose of supporting the Republican ticket as the surest way of securing the demands of the laboring man. J. H. Paul was then nominated to fill the vacancy.

The Republicans met in convention on September 5, and after four formal ballots nomi-

nated William R. Merriam for Governor. The other principal candidates before the convention were Gov. McGill and Arthur Scheffer. The Secretary of State, Auditor, Treasurer, and Attorney-General were renominated. For the Supreme Court, Chief-Justice Gilfillan was renominated, and L. W. Collins was made the candidate for Associate Justice. The platform pledges the party to maintain the high-license system, commends the administration of Gov. McGill, approves civil-service reform, the interstate commerce law, and liberal pensions, and condemns the fishery treaty and the refusal of Democrats to admit Dakota as a State. It further declares that the party adheres to the repeated declaration of State and National platforms, in favor of the modification, readjustment and reduction of the tariff. It declares that all measures of tariff adjustment should be framed and conceived in a cautious and conservative spirit, so as not to disturb and impair interests which have grown up under existing revenue laws, and, as far as possible, to relieve the people from unnecessary taxation upon articles which do not enter into competition with American industry. It declares its hostility to trusts so called, and to all monopolistic combinations, of every form that seek to limit the production or the price, or in any way control the commodities of the country. It approves the reform of the voting system called the Australian system. In view of the recent revelations showing the abuses to which the immigration and naturalization laws have been subject, it demanded of the National Congress a thorough revision of those laws; and, in the mean time, a more efficient execution by the National Administration of such laws as we have, especially that prohibiting the importation of contract labor.

At the November election, Merriam received 134,355 votes for Governor; Wilson, 110,251; Harrison, 17,150; and Paul, 385. Merriam ran over 5,000 votes behind his ticket. Of the legislative candidates, 31 Republicans and 16 Democrats were elected to the Senate; and 89 Republicans, 9 Democrats, and 5 Independents to the Lower House. Five Republican Congressmen were chosen, and the National Republican ticket received a large majority.

At the same election, a constitutional amendment declaring combinations to monopolize or restrict the market for food-products to be criminal conspiracy, was adopted by a vote of 104,932 in its favor, to 13,064 against. Another amendment adding to section 12 of Article I the following words:

Provided, however, that all property so exempted shall be liable to seizure and sale for any debts incurred to any person for work done or materials furnished in the construction, repair, or improvement of the same. And, provided further, that such liability to seizure and sale shall also extend to all real property, for any debt incurred to any laborer or servant for labor or service performed,

was adopted by the following vote: Yeas, 153,908; nays, 48,649. A third amendment,

extending the legislative session to ninety days, new bills not to be introduced in the last twenty days, was also adopted by a vote of 150,008 yeas to 52,946 nays.

MISSIONS, PROTESTANT, INTERNATIONAL CONFERENCE OF. An International Conference of Foreign Missions was held in London in June. It has become usual to hold such conferences once in ten years; and the present meeting was also associated with the centenary of the institution of missionary work. The call for the Conference was addressed to Christians of all Protestant communions engaged in missionary service of whatever kind, "to confer with one another on those many and important and delicate questions which the progress of civilization and the large expansion of missionary work have brought into prominence, with a view to develop the agencies employed for the spread of the Gospel of the grace of God." One hundred and twenty-nine societies were represented in the Conference; fifty-four British societies, by 1,254 delegates; fifty-two societies in the United States, by 140 delegates; six in Canada, by 27 delegates; and seventeen on the Continent of Europe, by 22 delegates. Of the whole number of societies, twenty-two were women's societies or boards. The opening meeting, for the reception of delegates and interchange of greetings, was held June 9, under the presidency of the Earl of Aberdeen. It was addressed by the Rev. Dr. Underhill, chairman of the Executive Committee, who gave an outline of the history of the missionary conferences, from the first, which was held by the Rev. Dr. Duff, in New York, in 1854; by the Rev. Dr. Thompson, of the American Board, who spoke of the work of the women's boards, of which there were, he said, thirty-five in the United States, with thousands of auxiliaries; and by speakers representing societies of Continental Europe. Forty-five meetings were held, which are described as sectional meetings, for members only; open meetings for conference; and public meetings in the afternoons and evenings. At the sectional meetings were discussed such topics as missionary methods and agencies, medical missions, women's work; the place of education in mission work; the organization and government of native churches, their training and support; the missionary and his relation to literature, Bible and tract societies; home-work for missions; missionary coinity, union, and co-operation; and commerce and diplomacy in relation to missions. The purpose of the open conferences was described to be not so much to awaken sympathy for any particular branch of mission work, as to inquire into the weak points of missionary labor with a view to future improvements. The subject of the first one was "The Increase of Islam, and the Social, Political, and Religious Influences of Mohammedanism." The chairman, Sir William W. Hunter, remarked that, after carefully going over the figures, he was convinced that while

during the past ten years Islam had increased 10½ per cent., Christianity had gained 64 per cent. Another like session was devoted to the discussion of "Buddhism and other Kindred Heathen Systems; their Character and Influence, compared with those of Christianity." The subject of a third session was "The Missions of the Roman Catholic Church to Heathen Lands; their Character, Extent, Influence, and Lessons." On this subject the Rev. Principal MacVicar, of Montreal, represented that while the increase of Roman Catholic converts in India was 8½ per cent., the United Protestant missions were able to show an increase of 9 per cent. The fourth subject was "Missions and Commerce." The fifth and last open conference was devoted to the discussion of "The Intimate Relations between Home and Foreign Missions and the Reaction of the Foreign Missionary Spirit on the Life and Unity of the Church." Among the subjects considered at the public meetings were "Christianizing China," "Japan and China," "Missions One Hundred Years Ago," "Medical Missions," "Missions in Turkey," "The Nile and the Niger," "The Work in Oceania," "East and Central Africa," "Women's Mission to Women," "North and Central India," "South India and Burmah," "Missions and Bible Societies," "Material Agencies at Home," "The Church's Duty," "The Missionary in Relation to Literature," and "Missionary Comity."

Resolutions were passed denouncing the opium-trade in China—which, it was asserted, had prejudiced the people of that country against all missionary efforts—and the manufacture of opium in India; demanding the entire suppression of the trade; condemning the carrying on of the traffic in strong drink by merchants belonging to Christian nations among native races, especially in Africa; expressing "grateful appreciation" of what His Majesty, the King of the Belgians had done in the cause of humanity and religion in Central Africa, especially in founding the Congo Free State; and deploring the extension of "state-licensed vice" in India. A committee was appointed to present a memorial to the King of the Belgians, urging him to use his influence in the Congo Free State to secure the suppression of the liquor-traffic there.

Protestant Missionary Assembly in Mexico.—A General Assembly of Protestant Missionary Workers in Mexico was held in the city of Mexico, beginning January 31, at which the missions of the Methodist Episcopal, Methodist Episcopal South, Northern Presbyterian, Southern Presbyterian, Cumberland Presbyterian, Baptist, Congregational, and Episcopal Churches and the Society of Friends were represented. Discussions were held upon the questions of the attitude to be borne toward the Roman Catholic Church, a revision of the Spanish version of the Scriptures and translation into the Indian dialect, the means of combating skepticism in Mexico, comity and co-operation be-

tween the different missions, and special topics of ministerial qualification and agencies. An agreement was adopted for the purpose of securing harmony in the workings of the several missions and avoiding interferences between them; and a committee was constituted with authority to provide for another assembly at some suitable time in the future.

MISSISSIPPI. State Government.—The following were the State officers during the year: Governor, Robert Lowry, Democrat; Lieutenant-Governor, G. D. Shands; Secretary of State, George M. Govan; Auditor, W. W. Stone; Treasurer, W. L. Hemingway; Attorney-General, T. M. Miller; Superintendent of Public Instruction, J. R. Preston; Chief-Justice of the Supreme Court, J. A. P. Campbell; Associate Justices, J. M. Arnold and Timothy E. Cooper. In January, the Legislature in joint session chose J. F. Sessions, J. C. Kyle, and Walter McLaurin, to be Railroad Commissioners, to succeed J. F. Sessions, J. C. Kyle, and William McWillie.

Legislative Session.—The regular biennial session of the Legislature began on January 8, and ended March 8. Early in the session Edward C. Walthall was re-elected, without opposition, to the United States Senate, for the term beginning in March, 1889. The most important legislation of the session relates to the State finances. An act was passed authorizing the issue of \$500,000 of bonds payable in thirty years, and bearing 4 per cent. interest, the proceeds to be applied to the payment of \$80,000 deposited by insurance companies with the State under an act of March 14, 1884; to the payment of bonds issued in March, 1880, to the amount of \$246,000; and of bonds issued in March, 1884, to the value of \$153,500. Another act provides that the rate of interest payable by the State upon the Chickasaw school fund shall be 7 instead of 8 per cent. after May 1. Over \$8,000 will annually be saved to the State by this reduction. The former railroad law was amended by giving the railroad commissioners additional power, and an act was passed requiring all steam railroads to provide equal but separate accommodations on each train for the two races, giving conductors power to eject passengers who refuse to ride in the car provided for their race, and imposing a fine on roads that do not comply with the act. Another law provides for the organization and equipment of an active militia of the State, to be known as the Mississippi National Guard. An act for equalizing assessments separates the counties into classes, and fixes the valuation of different qualities of land in each class. In a majority of counties, popular election of county superintendents of education is provided for, instead of appointment by the State Board of Education. The sum of \$30,000 is appropriated annually for the relief of disabled Confederate soldiers and of the widows of those who were killed in the war. Payments from this sum are awarded

by a State board of inquiry to such as it shall select from those certified to it by county boards of inquiry as needing assistance. Refusal to pay the poll-tax was made a misdemeanor, punishable by fine and imprisonment. In accordance with the recommendation of the Governor, it was enacted that the trial of misdemeanors may be assigned by the grand jury to justices of the peace, by directing them on information to inquire into them. This will relieve the State circuit courts of a large number of small cases which hitherto have occupied much of their time at great expense to the State and to the exclusion of more important business. The State tax for 1888-'89 was fixed at 3½ mills for the general fund, and ½ mill for the payment of interest on the bonds of 1886. A resolution for submitting to the people the question of calling a constitutional convention passed both Houses, but was vetoed by the Governor. An attempt to pass the bill over the veto failed to secure the necessary two-third vote in the Senate, the vote standing 19 to 16 in its favor. Other acts passed at the session were as follow:

Repealing the act of 1886 imposing a tax upon commercial travelers.

To provide for obtaining and publishing reports of banking institutions doing business in the State.

To abolish the present boards of trustees of the several charitable institutions of the State, and to provide for the appointment of new boards.

Providing for the assessment and collection of past due and unpaid taxes on railroads that have escaped payment thereof.

Authorizing the State Board of Health to purchase and distribute vaccine virus free to regular practicing physicians during 1888, and every three years thereafter.

To provide for the prevention and suppression of contagious and infectious diseases among live-stock.

Accepting the provision of the act of Congress contemplating the establishment of agricultural experiment stations in the several States.

Apportioning to the counties the number of free students allowed each at the State Agricultural and Mechanical College and at the Industrial Institute and College.

To prohibit and prevent the sale of liquor to minors.

To punish false pretenses in obtaining the registration of cattle and other animals.

To prevent purchasers of cotton from deducting two or any number of pounds, known as scalage, from the actual weight.

Appointing commissioners to readjust the boundary-line between the State and Arkansas.

Authorizing the payment of salaries to superintendents of education in certain counties.

Authorizing the Board of Mississippi Levee Commissioners to issue \$200,000 of its bonds.

To remove obstructions to free navigation of the Big Black river.

Setting apart a portion of the Capitol grounds as a site for a monument to the Confederate dead.

Authorizing the city of Natchez to issue bonds not exceeding \$100,000 for public improvements.

Revolving the charters of corporations that have not organized or shall not organize within one year from the date of this enactment.

Finances.—The receipts from all sources for the year 1887 amounted to \$1,069,568.88, of which the sum of \$215,782 was realized from the sale of bonds, leaving as the total receipts

from usual sources \$853,786.88. The disbursements on all accounts for the same time were \$1,029,688.06. Deducting from this money borrowed and returned with interest, the disbursements on ordinary accounts for 1887 were \$844,575.42, the receipts on usual accounts thus exceeding the disbursements by \$9,210.06. The Treasurer gives the entire indebtedness of the State on Jan. 1, 1888, at \$3,752,904.01, of which the sum of \$1,088,266.40 is a floating debt, paying no interest. This part of the debt was increased during 1886 and 1887 by \$317,560.17. A part of this deficiency is due to the diminution of revenue by reason of the operation of the local-option law, by which, from 1883 to 1887, there was an aggregate decrease in the receipts from liquor licenses to the amount of \$178,795.88, an average of \$35,759.18 per annum. Another cause was the low tax-rate that was in force up to 1887. The Legislature in 1886 raised the rate from 2½ to 3 mills, and in the present year from 3 to 3½ mills, for general purposes.

Charities.—At the Jackson Insane Asylum, at the close of the fiscal year, there were 459 patients; at the East Mississippi Asylum, 230; and at the Asylum for the Deaf and Dumb, 76. These institutions are supported by a liberal annual appropriation from the State.

Convicts.—A special report was made to the Lower House of the Legislature in February by a committee appointed to examine the prison system of the State. Of the lease system generally, and of the treatment of prisoners by the lessees, the Gulf and Ship Island Railroad Company, the report says:

The system of leasing convicts to individuals or corporations, to be worked by them for profit, simply restores a state of servitude worse than slavery, in this, that it is without any of the safeguards resulting from ownership of the slave; and if the leasing system is objectionable, that of sub-leasing is doubly so. The treatment of convicts under sub-lessees we find to have been generally harsh, if not positively cruel, and this is shown by the evidence taken by the Board of Control. The average number of convicts for 1886 and 1887 was 738; of these 67 died in 1886, showing a death-rate of 9.08 per cent. The number of deaths in 1887 was 114, a death-rate of 15.44 per cent. Statistics also show that the average death-rate for six years among the negroes is more than double that of whites, and, as there is no special reason why negroes should die faster than whites, the fact is significant of different and worse treatment suffered by them. We find that the condition of convicts is improved since they were remanded to the immediate control of the railroad company and placed under the supervision of the State Board of Control and the superintendent. Within the Penitentiary we find, after diligent inquiry, no cause of complaint. The walls are the refuge for all cases of chronic disease, and for feeble and disabled convicts, and the death-rate is very low under the circumstances. In 1886 there were treated in the walls 567 convicts, of whom 12 died. This is a death-rate of about 2 per cent. In 1887 there were treated 671 convicts, of whom 16 died, a death-rate of 2.08 per cent. These deaths are included in the aggregate number of deaths for the two years, and, if the rate in the walls is deducted from the average death-rate, we find the death-rate in the camps for 1886 about 7 per cent., and in 1887 12.4 per cent. Such a low rate in the general hospital of the

Penitentiary, where convicts are usually sick, as compared with that in the camps, where convicts are supposed to be well, is very significant of the treatment of prisoners in the latter.

The work of the State Board of Control and Supervision, created by the Legislature of 1886, was found by the committee to be altogether beneficial. Several important recommendations were made by this committee, but the Legislature took no action upon the subject.

Later in the year complaints were made of further ill-treatment of the convicts, and on July 1 the lessees failed to pay to the State the salary and expenses of the superintendent of the Penitentiary, according to their contract. In fact, the lessees were themselves dissatisfied, and wished to cancel their agreement. The Board of Control investigated various complaints, and early in December found sufficient cause to declare the contract forfeited. The reasons given were non-payment of money, inhuman treatment, subletting without authority of the board, failure to make monthly reports, failing to care for sick convicts, and other offenses. By this order 248 men were released and brought back to the Penitentiary on December 15; 155 others, having been sublet by the lessees on a contract expiring January 1, were allowed to remain. Before the end of the year the board had negotiated a new lease of 170 of the returned men. The total number of State convicts was 526.

State Capitol.—The Legislature provided for a committee to examine the Capitol building and report upon its condition. In May this committee published its findings, which showed the building to be insecure and in need of immediate repairs to render it safe. For these repairs the sum of \$4,650 was needed, and for other necessary repairs the sum of \$112,300 was deemed requisite.

Immigration.—Pursuant to a proclamation of Gov. Lowry, a large number of citizens met in convention at Jackson on May 24 for the purpose of organizing a movement to attract settlers to the State. The convention organized itself into an immigration association, whose objects were stated as follow:

The objects of this association shall be to collect and disseminate accurate and reliable information as to the soil, climate, and resources of our State, to the end that immigration may be fostered and encouraged and good people of our own and all other countries induced to identify themselves with us and contribute their capital, labor, and enterprise to swell the tide of the returning prosperity of our great State; and we hereby extend a cordial invitation to all such persons to cast in their lot with us, with the assurance that they will be treated justly and fairly and on a perfect equality in all respects with our own people.

Officers were chosen and an executive committee appointed to put in operation the proper machinery to secure these results. The formation of subordinate associations in the various towns and counties was recommended, and such associations were formed in many places.

Confederate Monument.—A bill was introduced into the Legislature in January, appropriating

\$10,000 to the Confederate Monumental Association, for aiding in the erection of a monument to the Confederate dead, and also setting apart a portion of the Capitol grounds as a site therefor. The Legislature granted the site, but refused an appropriation, whereupon the association determined to raise the necessary amount by popular subscription. Largely through the efforts of women, the sum of \$10,000 had been raised before the end of May, and on the 25th of that month the corner-stone was laid at Jackson. A letter of regret was read from Jefferson Davis, who had been invited to be present, and a notable feature of the occasion was the presentation to Miss Winnie Davis, his daughter, who was present, of a silver crown for her father. The monument is designed to be forty-five feet in height, and will cost \$14,000. A statue of Jefferson Davis is to form a part of the memorial.

Yellow Fever.—On September 20 three well-defined cases of yellow fever were discovered at Jackson, among laborers engaged upon a new passenger-station of the Illinois Central Railroad. On the following day four additional cases were found, and one death occurred from the disease. An exodus from the city began at once, and in a few days only a small portion of the population, consisting largely of negroes, was left. Quarantine regulations were speedily established at all points. The Howard Citizens' Association, which had taken control of a former epidemic, was revived, and arrangements were made for a long struggle with the disease. Largely through these efforts, the infected area was confined to its original limits. Up to September 27, there were fifteen cases and five deaths. No new cases occurring after that date the excitement gradually subsided, and before the middle of October many refugees had returned and business was resumed.

Political.—Party conventions for the selection of delegates to the National Conventions were held early in the year. At the Republican Convention, in Jackson, April 4, the following arraignment of the State Government was embodied in the resolutions passed:

The present State Government, according to reports made by legislative committees, is not only weak, inefficient, and incompetent, but extravagant. It is well known that our present State Government was brought into existence through a fraudulent and violent suppression of free suffrage. Popular elections are nothing more than farcical formalities. Those who are in control of the State machinery seem to have no regard for laws and no respect for the rights of citizens.

When the city of Jackson, just preceding the last municipal election, was taken possession of by an armed mob, "for the open and avowed purpose of suppressing free suffrage and preventing a free and fair election," the State Administration was as dumb as an oyster, and could not be induced to take any notice of what was going on. Whenever mob law breaks out in any part of the State, even if it results in the death of innocent persons, as at Carrollton, Copiah, and Yazoo City, the State Administration takes no more notice of them than if they occurred in Germany or Great Britain.

Our penitentiary system is a disgrace to the State and to the civilization of the age.

The Legislature recently assembled in this State did nothing that deserves commendation; on the contrary, it passed a number of bills which merit the condemnation of every one.

The act in relation to poll-taxes is not only cruel and unjust, crudely and carelessly drawn, evidently the product of incompetent persons, but is clearly and unmistakably unconstitutional.

The act making it obligatory upon railroad companies to provide separate accommodation for white and colored persons is one of the most barbarous and disgraceful acts of that extraordinary Legislature. We believe it to be unconstitutional and void, and that the enforcement of it should be resisted by the public in every lawful way that is possible.

The Judicial District bill is also crude and carelessly drawn.

The privilege-tax law is one of the most unjust and oppressive that could be conceived.

Under the hollow pretense of economy and reform, it has crippled the humane institutions of the State, and sought to destroy the higher institutions of learning by withholding proper appropriations for their support while expending large sums on other and less important objects, and has been so unmindful of its duties to the citizens and the public of the State as to adjourn and leave the Capitol building in which it assembled in such an unsafe condition as to be now unfit for occupation, and pronounced so, in less than one month after they adjourned, by a competent and experienced architect.

There was no election for State officers or members of the Legislature during the year. At the presidential election in November, the Democrats were successful by the usual large majority. Seven Democratic Congressmen were elected at the same time.

MISSOURI. State Government.—The following were the State officers during the year: Governor, Albert G. Morehouse, Democrat, elected Lieutenant-Governor, but succeeding the late Governor Marmaduke in December, 1887; Secretary of State, Michael K. McGrath; Treasurer, James M. Seibert; Auditor, John Walker; Attorney-General, D. G. Boone; Superintendent of Public Schools, William E. Coleman; Register of Lands, Robert McCulloch; Railroad Commissioners, John B. Breathitt, James Harding, William G. Downing; Chief-Justice of the Supreme Court, Elijah H. Norton; Associate Justices, Thomas A. Sherwood, Robert D. Ray, Francis M. Black, Theodore Brace.

Finances.—On Jan. 1, 1885, the bonded State debt, not including the common-school and seminary indebtedness, amounted to \$11,803,000; on Jan. 1, 1889, it was \$9,525,000, a reduction of \$2,278,000 in four years. The debt in 1885 was drawing interest at 6 per cent per annum, amounting to \$708,180. Since Jan. 1, 1885, \$9,278,000 of this debt has matured, of which \$7,000,000 has been funded in 5-20 bonds bearing interest at 3½ per cent., and the remainder has been paid.

The \$7,000,000 in bonds sold for a premium of \$86,321.43. The interest on the public debt proper is now \$396,500 per annum, or nearly one half less than it was four years ago. The school-fund indebtedness consists of one 6-per-cent. certificate of \$2,909,000 and three

5-per-cent. certificates aggregating \$225,000. The seminary fund consists of one 6-per-cent. certificate for \$122,000 and one 5-per-cent. certificate for \$407,000. The annual interest payable on these certificates is \$218,460. The Governor says in his annual message: "Missouri needs no financial policy in the future. If the present rate of taxation is maintained, of 20 cents on the \$100 valuation for the purpose of paying the public debt and the interest thereon, the State debt proper will be paid in eight or nine years. Every obligation will be paid at or before maturity. There was in the treasury to the credit of the interest fund on the first day of the present year, after paying all interest and due obligations, the sum of \$325,000. The net receipts to this fund the present year will be at least \$1,450,000, which, with the amount in the treasury, will make \$1,775,000 applicable to the payment of interest and principal of the public debt for the year 1889. Our public debt may be reduced the present year \$1,100,000. The next general assessment of taxable property in the State will probably aggregate \$900,000,000, when by provisions of the Constitution the tax levy for the purpose of paying the public debt and the interest thereon will be reduced to fifteen cents on the \$100, which will be ample to meet all obligations of the State for this purpose. In fact, within the next four years the State interest tax can be reduced to ten cents on the \$100, and meet every obligation at maturity."

Education.—The Governor says upon this subject, in his annual message: "During the past four years more than 100,000 children have been added to our public schools, and the number is now 865,750. Our permanent interest-bearing school fund on July 1, 1888, was \$10,588,125.08, and the sum actually paid out by our people in the support of our public schools for the year ending June 30, 1888, was \$4,843,323.15. The thirty-fourth General Assembly appropriated to the common schools one third instead of one fourth of the general revenue as had been done by former legislatures. This cost the State over \$50,000 and only benefited the school-children 7½ cents each. It is doubtful if this small amount benefited the schools as much as it depressed the finances of the State."

Charities.—The State supports three asylums for the insane—one at Fulton, one at St. Joseph, and one at Nevada. The construction of the last named was authorized by the Legislature of 1885, which appropriated \$200,000 therefor, to which the Legislature of 1887 added \$150,000. A further appropriation will be needed to finish and furnish the building. The State institute for the deaf and dumb at Fulton suffered the destruction of its building by fire in February, causing a loss to the State of over \$100,000, partially covered by an insurance of \$65,000. There were 185 pupils in the institution, who were accommodated temporarily in the town, so that the work of the

school was not seriously interrupted. The trustees expended the insurance in beginning the erection of a new building, which the State will be asked to finish.

Militia.—The strength of the State militia aggregates 24 companies with 1,800 men of all arms.

State Banks.—The following is a financial statement of the State banks and bankers at the close of business, April 30, 1888. The statement shows an increase of \$1,500,000 over the statement on Dec. 31, 1887, as returned to the Secretary of State:

RESOURCES.	
Loans on personal securities	\$49,194,789
Loans on real estate	3,573,838
Overdrafts	941,109
United States bonds	623,980
Other bonds and stocks	4,738,561
Due from banks	12,882,707
Real estate	2,407,959
Furniture and fixtures	408,172
Checks and cash items	2,112,629
Currency	7,741,948
Gold coin	1,587,628
Silver coin	868,701
Exchange	3,187,802
Total	\$89,704,818
LIABILITIES.	
Capital	\$12,866,295
Surplus	7,845,038
Undivided dividends	110,118
Deposits, sight	47,799,788
Deposits, time	11,544,638
Bills payable	446,697
Due banks	8,068,154
Expenses	8,680
Total	\$89,704,818

Prisons.—The cost of the Penitentiary for the past two years to the State has been \$167,000, but if credit is given for the increased value of the property by way of new buildings, it will not exceed \$50,000 or \$25,000 a year. The actual cash earnings for the past two years have been nearly \$350,000. The average number of prisoners worked by contractors during this time has been about 950, while the average number confined has been over 1,600.

By acts of the thirty-fourth General Assembly, in 1887, much needed and long delayed legislation was begun looking toward the restraining, reforming, and educating juvenile offenders. By the provisions of those acts, an industrial home for girls has been established at Chillicothe, and a reform school for boys at Boonville. For the Chillicothe institution the Legislature appropriated \$5,000 for the purchase of grounds, \$30,000 for the erection of suitable buildings, \$5,000 for furnishing such buildings and incidental expenses, and \$10,000 for current expenses. Besides the appropriations by the State, the citizens of Chillicothe contributed \$5,000 to secure the location of the home at that place. The board of control adopted the cottage or family plan, and have erected and completed beautiful and substantial buildings west of and adjoining the city of Chillicothe at a cost of \$30,025. The buildings will accommodate fifty inmates.

For the location of the reform school, the

city of Boonville offered the best inducements, and a tract of 165 acres, adjoining the city proper, was secured. The Legislature appropriated \$5,000 for the purchase of grounds, for erection of buildings \$40,000, for furnishing building \$2,000, for maintenance and incidental expenses \$5,000. A building four stories high, and an attached boiler-house, kitchen, dining-room, and laundry, have been erected at a total cost of \$31,525. When completely furnished these buildings will accommodate from 180 to 200 boys. The committee has furnished them for the occupancy of 75 boys, within the appropriations allowed to them.

Liquor Laws.—The Governor says in his message to the Legislature: "At present we have the 'Downing law,' fixing the maximum State and county tax on license for dramshops at \$1,200 per annum. The law also requires a petition signed by two thirds of the tax-paying citizens of cities, towns, and townships before it is mandatory on the county court to issue license. We have also the 'Wood local-option law,' under which elections have been held in eighty-seven counties 'submitting the question of prohibiting the sale of intoxicating liquors.' Fifty counties have adopted this law, which is virtually prohibition in those counties. The laws of the State are such that any county or any city of 2,500 inhabitants may have prohibition or they can tax the license of the liquor-dealer as high as they please, so that it does not amount to absolute prohibition, as a majority of the voters may prefer. In fact, the liquor-traffic is left to the control of the citizens of each county and city. Some communities are opposed to prohibition or high license and only collect the minimum State, county, and municipal tax on license. In such places saloons are more numerous and not as respectable as where high license prevails."

In April the State Supreme Court rendered an important decision on the question of Sunday liquor-selling. A State law forbade the sale of liquor on Sundays and closed all saloons on that day. There was opposition to the enforcement of the law in St. Louis, which claimed exemption by reason of an old city ordinance that allowed the sale of wine and beer on Sunday. A local judge sustained the ordinance when a test case was brought before him; but the Supreme Court held that the city government had no authority to pass such an ordinance, and that therefore St. Louis must obey the law in common with all other cities in the State.

The Bald-Kneeborn.—The trial of the leaders of this organization for the murder of William Edens and Charles Green in March, 1887, was not held in August following, at the time when their followers were brought before the Christian County Circuit Court and fined or imprisoned for their connection with the organization, but was postponed until March and April of the present year. William Walker, son of David Walker, the chief, and two

men named Matthews were first tried and convicted, receiving the death sentence on March 28. The Knobber chief was tried early in April, and was sentenced to death on April 12, at which time three other leaders, having confessed their guilt, were sentenced to prison, one for twelve years and two for twenty-one years each. The execution of the four condemned men was set for May 18; but, an appeal being taken to the State Supreme Court, the date was postponed to December 28. In October the Supreme Court affirmed the decision of the lower court. Seeing that no hope was left, the Bald-Knobber friends of the condemned leaders determined to have vengeance, and on the night of November 14 visited the homes of five of the witnesses against the prisoners, seized them, and hanged them together. A large number of men were engaged in this raid, none of whom were discovered. Emboldened by this, on December 28 (a second postponement of the execution having been had) they attempted a rescue of their friends from the county jail. The two Matthews and other prisoners escaped; the Walkers refused to accept the opportunity. Two days later one of the Matthews was captured.

Bevier Troubles.—The Governor says in his message: "There has been for several years a bad state of affairs existing at Bevier, in Macon County, where are located some of the best coal-mines in the State. Labor strikes have been frequent, riots have occurred, and deaths and murders have been the result. The civic authorities have been unsuccessful in bringing the offenders to justice, although strenuous efforts have been made in that direction. The last strike at Bevier occurred the last of September. The mine-owners brought in new men to take the place of strikers. One of the operators, Thomas Wardell, was killed, it is to be supposed, by the miners on the night of December 7. The strikers and the employes of Messrs. Loomis & Snively's mine engaged in a fusillade of firearms, in which several hundred shots were fired, endangering the lives of the citizens of Bevier. One of Loomis & Snively's men was wounded, from the effects of which he died. On December 9 I visited Bevier and found a deplorable state of affairs. The people were alarmed, fearing that at any time the town would be the scene of riot and bloodshed. I therefore ordered some forty members of the National Guard at Kansas City to Bevier. I believed that all parties feared that they would be injured in their person or property by the other side, and that if they were afforded protection for a short time they would adjust their difficulties; but I am not prepared to say that my hopes have been realized or that the feeling is much better between the contending elements than before the troops were ordered there." Before the end of the year, by order of the Governor, the troops were withdrawn.

Political.—The Republican Convention was held at Sedalia on May 15, and the following State ticket was nominated without a contest: For Governor, E. E. Kimball; Lieutenant-Governor, George H. Wallace; Secretary of State F. W. Mott; State Treasurer, A. P. Frowein; State Auditor, George W. Martin; Attorney-General, L. L. Bridges; Register of Lands, John H. Chase; Railroad Commissioner, B. W. Vedder; Supreme Judge, J. S. Botsford. Delegates to the National Republican Convention and State electors at large were chosen at the same time. The following is from the platform adopted:

Monopolies and trusts oppressing the people, or unfairly discriminating against local interests, are wrong in principle, and should be restrained by law.

We demand a free vote and an honest count of every legal ballot; that one vote in the South should count as much as one vote in the North, East, or West, and no more; that one vote in the North, East, or West should count as much as one vote in the South, and no more. And we do especially denounce the frauds in the ballot-box in the Southern States as publicly admitted by the leaders of the Democratic party.

While we at all times favor a proper revision and adjustment of the tariff so as to give legitimate encouragement to commerce, we demand that such revision shall be made on the basis of protecting American industries and labor and of preserving the home market to the home producer, and we are unalterably opposed to the doctrine proclaimed by President Cleveland in his annual message and to the fruit thereof, known as the Mills Tariff Bill.

The placing of wool, lead, zinc, and iron on the free list is a direct blow at the material interests and prosperity of the State of Missouri.

The Union soldiers are entitled to the gratitude of the nation. It was their heroic services that made freedom national and preserved the Government. Relief for disabled veterans should be extended, not as alms to paupers, but as a partial compensation for services rendered, and we condemn the action of President Cleveland in indiscriminately vetoing the pension bills passed by Congress.

We approve of equitable taxation, reaching corporations as well as individuals, as a correct system which should be perfected and enforced throughout the State.

We arraign the Democratic party of Missouri for its refusal to adopt means whereby litigants in the Supreme Court may have a speedy determination of their case. Delays for years are suffered by them, which work great hardships upon the people, and in many instances amount to a denial of justice.

A Democratic convention for the nomination of a candidate for Supreme Judge and for district judges met at Springfield on August 15. Judge Shepard Barclay was nominated for the former office after eighteen ballots. One week later a second convention met at Jefferson City, and nominated the following Democratic candidates for executive offices: For Governor, David R. Francis; Lieutenant-Governor, Stephen H. Claycomb; Secretary of State, Alexander A. Lesueur; Auditor, James M. Seibert; Treasurer, Edward T. Noland; Attorney-General, John M. Wood; Register of Lands, Robert McCulloch; Railroad Commissioner, James Hennessy. The platform contains the following:

Confident of the integrity and wisdom of the Democratic party in conducting the affairs of this State, we invite the closest scrutiny, and we congratulate the people upon the prospect of an overwhelming approval of the State and National administrations as conducted by the servants of the people and the representatives of the Democratic party.

We approve the action of the Democratic House of Representatives of the present Congress in passing the Mills Bill, and declare it to be in obedience to the terms of the Constitution, limiting taxation to the purpose of raising the revenue for the payment of the necessary expenses and obligations of the Government.

The Democratic party, as the special champion of the people, condemns all trusts and rings, and favors such wise legislation as will secure to both producers and consumers prices based on the laws of supply and demand.

The Union Labor Party placed in the field the following candidates: for Governor, — Manning; Lieutenant-Governor, J. O. Seabourn; Secretary of State, Roswell Fox; Auditor, William H. Noerr; Treasurer, Warren Vertrees; Attorney-General, L. L. Bridges (the Republican candidate); Register of Lands, G. B. De Bernardi; Railroad Commissioner, William H. Bell; Judge of the Supreme Court, Corbin D. Jones. The nominees of the Prohibition party were: for Governor, Frank M. Lowe; Lieutenant-Governor, William O. Wilson; Secretary of State, Herman P. Farris; Auditor, James S. Cobban; Treasurer, William H. Craig; Attorney-General, George T. Bowling; Register of Lands, John F. McMur-ray; Railroad Commissioner, D. H. Lancy; Judge of the Supreme Court, Loren G. Rowell. At the election in November, the Democratic State and national tickets were successful, after a spirited canvass. For Governor, Francis received 255,764 votes; Kimball, 242,531; Manning, 15,438; and Lowe, 4,389. But Francis ran about 5,000 behind his ticket. On the basis of the vote for Auditor, the party strength was as follows: Seibert, 261,775 votes; Martin, 236,696; Noerr, 19,069; Cobban, 4,885. The Legislature of 1889, elected at the same time, will stand: In the Senate, Democrats, 24; Republicans, 9; Labor, 1; in the House, Democrats, 78; Republicans, 51; Labor, 11. Democratic Congressmen were elected in the first seven and in the Eleventh, Twelfth, and Fourteenth Districts. A Republican was elected in the Thirteenth District, and the fusion candidates of the Republican and Union Labor parties in the other three districts.

MOHAMMEDANS. *The Faith of Islam.* — The reign of Sultan Abdul Hamid has been marked by considerably more zeal in spreading the creed of Mohammed than was exhibited under those of any of his immediate predecessors, and, according to the lists published in the journals of Constantinople, an unusually large number of accessions from among Christians and Jews to the Mohammedan faith occurred during 1887. For the most part the converts were men of little note; but among the number were Ohaphaz Effendi, a judge and member of an old Armenian family, and a foreigner

who was identified with Mr. Schumann, a man of letters residing in Hanover, the latter gentleman having applied to the Sheikh-ul-Islam, Ahmed Ersead Effendi, for a statement of the conditions on which he could be received as a Mussulman. The reply of this officer, which was published in French in the "Levant Herald," may be accepted as a clear statement for foreigners of the orthodox Mohammedan faith. It points out, first, that it is not necessary to ask permission to become a Mussulman, "for Islam does not admit of any mediators like the clergy between God and his servants," and consequently conversion to its faith entails neither religious formality nor any person's authority.

In short [it continues] the basis of the religion of Islam is belief in the unity of God and in the mission of his servant, the most beloved Mohammed (upon whom may God confer his blessings and grant salvation!), and only requires that one confirm that belief in his heart and avow it in word, as is expressed by the phrase (written in Arabic), "There is but one God, and Mohammed is his prophet." Whoever makes this profession of faith becomes a Mussulman without having to obtain the consent and approbation of any one. If, as you premise in your letter, you so make this profession of faith—that is, if you declare that there is but one God and Mohammed is his prophet—you become a Mussulman without needing any acceptance by us; and we shall proudly and joyfully felicitate you on your having been touched with divine grace, and we shall bear witness in this world as in the next that you are our brother in religion (the faithful are all brothers).

Concerning the mission of Mohammed and the inspired character of the Koran, the Sheikh declared:

Man, who is superior to the other animals by reason of his intelligence, was produced from nothing to adore his Creator. His adoration may be described as obeying the commands of God and having compassion on his creatures. This double adoration exists in all religions. In its practice, religions differ in regard to the regulation, the form and number, whether it be large or small, of the rites, the times, places, and conditions of performing them, and with regard to their ministers; but human intelligence is not adequate to knowing the manner of praying most worthy of the divine glory. Hence God, in his clemency, by granting to some human beings the gift of prophecy, by sending to them through the angels and inspiration writings and books, and thus revealing the true religion to them, has loaded his servants with his benefactions. The book of God which came down last from Heaven is the Holy Koran, whose invariable precepts, preserved from the first day in written volumes and in the memory of thousands of reciters, shall endure till the day of final judgment. The first of the prophets was Adam and the last Mohammed (to whom may God grant salvation!). Between these two prophets many others have passed over the earth; the number of whom is known by God alone. The greatest of all is Mohammed. After him come Jesus, Moses, Abraham, and then Noah and Adam (to whom may God grant salvation!).

Concerning the future state and the day of judgment:

All the actions of every one in this world shall be on that day examined one by one, and while all the acts of soldiers who have fought in the holy war, even their sleep, are considered as a prayer, they also will be obliged, on the day of the last judgment, to render account of themselves. There are no exceptions except in the case of those who die for the holy cause;

that is, the martyrs, who will go into paradise without being questioned.

Of the origin of good and evil :

It is required, as an article of faith, to attribute good and evil to the providence of God. To say that the creator of good is the angel, and the author of evil the devil, is one of those prejudices that must be avoided. Consequently, the believer should have faith in God, in his angels, in his books, in his prophets, and in the last judgment, and should attribute both good and evil to the divine will. Whoever professes these truths is a true believer. But to be a perfect believer, it is necessary to perform one's duties, to pray to God, and to avoid falling into such sins as assassination, theft, adultery, and sodomy.

After describing the religious duties of prayer, charity, fasting, and pilgrimage, the paper continues :

If a believer does not conform to these commands of God and avoid the acts which he forbids, he does not thereby become an infidel ; but he will be regarded as a sinner, that is, as a believer who has gone astray, and he will merit a provisional punishment in the other world. He remains at the divine disposal. God pardons him or condemns him to pass in hell a lapse of time proportioned to his sins. Faith annuls all sin. Whoever is converted to Islam becomes as innocent as one newly born, and is responsible only for the sins which he commits after his conversion.

Islam, the Sheik explains, has no clergy, the doctors of the faith being simply instructors and guides ; for it holds that a man does not need the priest's aid to approach God in prayer, nor his presence at social duties—the naming of children, burial, and the like :

In a word, in all religious acts, there is no intermediary between God and his servants. It is necessary to learn the dispositions revealed on the part of the Creator by the Prophet, and to act in conformity with them. Only the performance of certain ceremonies, like the prayers of Friday and the Basm, is subordinated to the permission of the Khalif of the Prophet and Sultan of the Mussulmans, because the keeping of the ceremonies of Islam is one of his holy attributes. Obedience to his orders is one of the most important religious duties.

MONTANA. Territorial Government.—The following were the Territorial officers during the year: Governor, Preston H. Leslie; Secretary, William B. Webb; Treasurer, William G. Preuitt; Auditor, James Sullivan; Superintendent of Public Instruction, Arthur O. Logan; Chief-Justice of the Supreme Court, N. W. McConnell; Associate Justices, Thomas C. Bach, W. J. Galbraith, succeeded by Stephen De Wolfe, and James H. McLeary, succeeded Moses B. Liddell. Chief-Justice McConnell resigned at the close of the year. The office of Attorney-General was created by the Legislature at its extra session in 1887, and a nomination was made thereto by the Governor, but the nominee was rejected by the Council, and the session adjourned without filling the vacancy. On December 31 the Governor appointed William E. Cullen to hold the office during 1888 and until the close of the next Legislative session.

Finances.—The following is a statement of the finances of the Territory for 1887: Balance in the general fund on Jan. 1, 1887, \$57,-

269.18; licenses and property tax, \$182,642.58; from insurance companies, etc., \$3,743.77; total, \$243,655.48. Disbursements for the year, \$207,628.61. Balance on Jan. 1, 1888, \$36,026.87. Of the disbursements, about \$60,000 was for the care of the insane, and \$40,000 for maintenance of convicts. The unfortunate bounty law passed by the Legislature of 1887 cost the Territory, during the few months of its existence, \$61,721. Its prompt repeal at the extra session of that year saved the treasury from bankruptcy. In the various stock funds, the balances on Jan. 1, 1887, were \$17,687.97; the revenue for the year was \$18,084.87; and the balances on Dec. 31, 1887, were \$12,389.65. At the close of 1888 the balance in the general fund had risen to \$114,840.48, and in the stock funds to \$15,852.28. There is no Territorial debt.

General Development.—The Governor says in his annual report :

This Territory, containing more than 145,000 square miles, is divided into sixteen counties, and in each of fourteen of these there is a good court-house, and the necessary public buildings to facilitate the transaction of all public business. The city of Helena is the central point of legislative, judicial, financial, commercial, and educational affairs in the Territory, and is also the railroad center. This city has a population of more than 15,000, and is rapidly growing. The city of Butte, in Silver Bow County, is the largest and most populous city west of Denver, between the Mississippi River and the Pacific coast, and is the largest mining-camp in the world. The annual output of the mines ten years ago was estimated at \$7,000,000; now it is over \$31,000,000. The total value of taxable property in the Territory then was \$12,000,000; now it is \$69,600,000 (not counting the value of the mining property). The number of cattle in the Territory then was 220,000, now it is 1,500,000; the number of sheep then was 120,000, now it is over 2,000,000; the number of horses then was 40,000, now it is 200,000; the number of acres of land then under cultivation was 265,000, now there are over 2,000,000 acres appropriated and settled for farming purposes; then the commerce of the whole Territory was \$20,000,000, now it is \$40,000,000; then there were but a dozen miles of railroad, now there are over 2,000; then the population was 80,000, now it is 140,000; then the Territory was in debt \$112,000, now it is out of debt, and there is plenty of money in the treasury.

Mining.—This industry continues to be the leading pursuit of the people of Montana. The mines are more productive than ever. Improved methods in working and the better order of machinery used enable men to prosecute this branch of industry to a greater extent and with more success. Many mines that would not pay twenty years ago, on account of the primitive mode of working, together with the high price of labor, are now being worked at good profit. The amount of dividends declared by mining companies during 1888 was greater than ever. The product of gold and silver in 1887 was: Gold, \$5,778,536.28; silver, \$17,817,548.95; total, \$23,796,085.23.

Convicts.—The Governor says in his message:

The Territory has never yet built or owned a State prison. The United States has a Penitentiary at Deer Lodge, and ever since the beginning of 1874 the Ter-

ritory has secured the confinement, care, and support of its convicted criminals in that prison. No prisoner is required to work one hour of the time for which he is there confined. The institution is a slightly, well-provided, and well-kept home. There are but seventy cells, and this limited provision has necessitated the putting of two convicts in each cell, and in addition to that number, there are periods of time when ten to fifteen others have to be accommodated and guarded. The Territory has thus paid for boarding in idleness the convicted criminals since January, 1874, \$270,000, and the Auditor's office shows that these annual outlays are increasing from \$3,000 to \$7,000 every year.

Mineral-Land Convention.—Early in February a Territorial convention of citizens interested in mining met at Helena to devise means for preventing the mineral lands of the Territory from being taken by the Northern Pacific Railroad Company under its grant from the Government of certain sections of the public lands. Although the railroad was obliged to make its selections out of non-mineral surveyed lands, yet, by procuring surveyors to make return of mineral land as non-mineral, it might acquire title to very valuable property. Oases had already happened in Deer Lodge County and Silver Bow County, near the city of Butte, in the richest mineral region of the Territory, where land returned as non-mineral had been certified to the company, which, in fact, contained valuable deposits of metals. The means adopted by the convention to prevent the company from acquiring full title to such land consisted in the appointment of a central executive committee of five persons, with power to appoint sub-committees and employ professional assistance, to forward to the Department of the Interior, with the least possible delay, proofs setting forth the mineral character of the lands heretofore designated and selected by the Northern Pacific Railroad Company in the Territory of Montana, and likewise of all other lands included within the land-grant to said railroad company. Means were also taken to bring the subject before Congress.

Indian Reservation.—By an act of Congress, passed and approved in the early months of this year, a large tract of land, covering more than 20,000,000 acres, heretofore reserved and set apart to the use of the Piegan and other Indians, was redeemed from Indian ownership, and is soon to be surveyed and offered for purchase and occupancy.

Political.—On April 19 a mass-meeting of Prohibitionists of the Territory was held at Helena to form a Territorial Prohibition party. An organization was duly effected and delegates chosen to the National Prohibition Convention. The Democratic Convention to nominate a candidate for Territorial delegate was held at Butte on September 11, and resulted in the choice of William A. Clarke. A platform was adopted approving of the St. Louis platform, the President's message, and the Mill's Bill, favoring free coinage of silver, opposing Chinese immigration, demanding the admission of the Territory, urging a diminution of Indian reservations, and favoring the

allowance to citizens of the Territory of the free use of timber on the public domain. The Republican Convention was held at Helena on September 17, and nominated Thomas H. Carter for delegate. The resolutions contain the protectionist doctrines of the National party, whose platform and nominees they ratify, complain of the non-admission of the Territory, attack the Canadian fishery negotiations, and repeat the Democratic declaration against Chinese immigration. The Prohibition party placed in the field, as its first candidate for delegate, Davis Willson. At the November election the Republican ticket was successful, polling 23,482 votes, to 17,360 for the Democratic nominee, and 148 votes for the Prohibition candidate. At the election in 1886, Toole (Democrat) was chosen delegate by 3,718 plurality. Seven Republicans and 5 Democrats were elected to the Council, and 19 Republicans and 5 Democrats to the Lower House of the Legislature.

MONTENEGRO, a principality in Southeastern Europe. The reigning Prince is Nicholas I, born Oct. 7, 1841. (For description of the Government see "Annual Cyclopædia" for 1884, page 536). The area, including the district of Dulcigno, ceded by Turkey in 1880, is about 8,680 square miles, and the population 236,000. The boundaries on the south and east of the annexed district were agreed upon in November, 1887, and the delimitation was not completed till August, 1888. The uncertainty as to the boundary has led to frequent fights between the Kutchi tribe on the Montenegrin side and the Albanian tribes of Hoti and Grudi. Prince Nicholas receives subsidies from the Russian Government, and endeavors to promote Russian policy in the Balkan Peninsula. Montenegrins have taken part in all the revolutionary attempts in Bulgaria and in the guerilla warfare against the Austrians in Herzegovina. On the occasion of the promulgation of the new civil code, Prince Nicholas issued a ukase in which he expressed deep gratitude to the Czar as the "protector of all Slavs," an expression against which the official organs of Austria strongly protested.

The Montenegrins live to a great extent under the communistic and patriarchal institutions of the early Slavs. The inhabitants are divided into forty tribes, each governed by elders, who are elected. The Prince is represented in each of the eighty districts by a *kujas* or captain, who acts as a magistrate in time of peace, and a military commander in war. The inhabitants raise live-stock of all kinds, and export hides, cattle, goats, smoked mutton, and cheese, besides smoked sardines, skins and furs, sumac, and insect-powder. Grain is grown in insufficient quantities, and much of the food must be imported from Russia. When the crops fail, there is much suffering, as was the case in the Zeta valley in the winter of 1887-'88. The Government owes 700,000 florins

to Russia for grain supplied in 1879, besides 1,000,000 florins borrowed in Vienna at 6½ per cent. in 1881.

The Civil Code.—The Montenegrins, like the rest of the Balkan Slavs, have heretofore contented themselves with laws adopted from European jurisprudence that often conflict with their traditional customary law. Balthazar Bogishich, a scholar and jurist, who is widely known in Slavic countries, was commissioned by Prince Nicholas to elaborate a body of laws in which the peculiar institutions and customs of the land should be confirmed as they could be brought into harmony with modern jurisprudence. The civil code was promulgated by the Prince with great ceremony on May 8, 1888, and went into force on July 1. It is the first attempt to formulate in scientific terms the customs and conceptions of justice existing among the South Slavs. The collective family, with the principle of the solidarity of all the family members, is preserved from extinction; though in certain cases the responsibility of individuals is affirmed. Since many Montenegrins now seek their fortunes abroad, it was found necessary to modify the old law by relieving families of responsibility for the debts and taxes of absent members, which in the past has brought financial ruin on many families. Several paragraphs are devoted to international private laws, regulating and limiting the operation of the laws of other states within the principality. In order to preserve the land of the people from falling into the hands of usurers, restrictions are placed on the acquisition of real estate. Land can be alienated, but the new owner only acquires the right to the commons in wood, water, and pasture, belonging to the property, in case he cultivates it himself, a restriction which is expected to prevent the acquisition of large estates. Foreigners are not permitted to own real estate, except by gift of the Prince. The law of contracts is worked out with careful application of legal theories to the conditions of the people. Definitions and elucidations are given at the end of the code. Prof. Bogishich has published in Paris a *brochure* explaining his method of codification, and is writing a work on the principles of the system of laws that he has collected.

MORAVIANS. The following are the general statistics of the Church of the United Brethren, commonly known as the Moravian Church:

PROVINCES.	Communicants.	Total members.
American Northern, 60 congregations.	9,819	15,064
American Southern, 6 congregations.	1,647	2,518
British, 88 congregations, including home missions	8,211	5,647
German, 27 congregations, including Bethel	6,141	3,874
German Diaspora laborers	115	150
Bohemia	256	400
Mission, 107 stations	29,707	84,201
Missionaries and their families, about	886	480
Total	50,732	116,769

Whole number of teachers in Sunday-schools, 2,748; of pupils in the same, 26,687; number of boarding-schools, 41, with 1,842 pupils; of day-schools, 253, with 21,477 pupils. The Moravian Church throughout the world is under a single organization, which is called the Unity's Elders' Conference, and forms also the Provincial Elders' Conference for Germany. The other provincial synods are responsible to it, and are dependent upon it for the ratification of their principal acts. Its residence and offices are at Herrnhut, Saxony.

The American Province comprises a northern and a southern division, each of which has its separate synod, and the northern division is divided into five districts, each including a convenient number of congregations geographically related to one another. In the ecclesiastical nomenclature, the congregations comprise, generally speaking, the older settlements, to which are added from time to time the new flocks resulting from home missionary labors. This happens whenever a home mission is able to satisfy the conditions required for the support of a regular ministry; and then, and not till then, it is entitled to representation in the Provincial Synod. The four schools of the American Province, at Bethlehem, Litiz, and Nazareth, Pa., and Salem, N. C., date from toward the close of the last or the beginning of the present century, and return, in all, 50 teachers and 500 boarding pupils. The Moravian College and Theological Seminary, at Bethlehem, Pa., includes three classes, provides a six years' course of study, and returns about 40 students. The Theological Seminary has an endowment fund of about \$75,000. The annual expenses of sustentation (of retired ministers and the widows of ministers) in the Northern Province average about \$9,000. The "Malin Library" at Bethlehem, Pa., possesses the most valuable collection of Moravian literature that exists. The synod of the northern division of the American Province met in Bethlehem, Pa., September 19; Bishop A. A. Reinke was chosen president. The most important business was the designation of three bishops; six candidates were nominated. Their names were submitted by ocean telegraph to the Unity's Elders' Conference in Herrnhut, Saxony, with the request that in making the selection the "apostolic lot" be used. Brethren H. T. Bachman, J. M. Levering, and A. A. Reinke were thus chosen, and were duly consecrated during the session of the synod. Resolutions were adopted welcoming any effort put forth in good faith to secure closer fellowship and communion between the churches; and a committee was appointed to confer with committees of other bodies on this subject.

The peculiar European home mission called the Diaspora has been carried on under the direction of the German Provincial Elders' Conference since 1729. It seeks not to make proselytes, or to draw members from other Protestant communities, but to excite and fos-

ter spiritual life by means additional to those provided by the established churches. Its agents are itinerant in wide circuits and hold meetings in their chapels at hours not interfering with those of the parish church; and they form societies of persons who incline toward Moravian views, but do not feel called upon to leave the established church. The Diaspora work is carried on in Germany, Russia (chiefly the Baltic Provinces and Poland), Switzerland, and Palestine.

The Unity's work in Bohemia is carried on around two centers—Pottenstein Landskron, the northeastern district, among the Bohemian speaking population; and Danba, the northern district, among people speaking German.

The Church has sustained a mission among lepers for sixty-seven years. It was begun in 1822, at the hospital erected by the Cape Colony, which remained under the care or partial care of the Moravians till 1867, when the Government's chaplain took charge of it. In the same year the Moravian missionaries assumed the care of the asylum for lepers that had been established by the Baroness von Keffenbrinck Ascheraden, at Jerusalem, where three agents are now stationed.

The income for missions among the heathen during 1887 was \$84,015, and the expenditures were \$100,966. The sum raised annually at the various stations toward the support of this work is estimated at about \$125,000; and including the interest of capitals left for the support of particular missions, Government aid, etc., the actual expenditure for the whole mission work reaches a total of about \$250,000. The number of brethren and sisters employed in this service from its beginning, in 1782, is about 2,800. The missions, which constitute by far the most important division of the Moravian Church work, are conducted in Greenland, Labrador, Alaska, among the North American Indians, in the West Indies, the Mosquito Coast, Surinam, South Africa, Australia, and Central Asia (British Tibet). They are served by 386 missionaries, of whom 48 are natives, and 1,618 native assistants, and return, besides communicants and members, already enumerated, 228 day-schools, with 18,280 pupils, and 98 Sunday-schools, with 14,099 pupils.

MOROCCO, an empire in Northern Africa. The Sultan is the unrestricted spiritual ruler, having no Ulema to guide him, such as exists in other Mohammedan states, and the absolute head of the state, although, in civil affairs, the predecessors of the present Sultan have usually taken the advice of the Vizier and other ministers. The reigning Sultan is Muley-Hassan, belonging to the Hachan family, Sherifs of the Tafilali tribe, of the Aliweein branch of the Shereefian family, being the direct descendant, in the thirty-fifth generation, of Ali, uncle of the Prophet, and of Fatima, the Prophet's daughter. He succeeded his father, Sidi-Mohammed, in 1873, at the age of forty-two. He holds his court alternately at Fez and Morocco,

and sometimes resides for a few months at Mequinez, Marakish, or Rabat. He has an army of 10,000 infantry and 2,400 cavalry, which is quartered in the city where he happens to reside. The present Grand Vizier is Mohammed el Arbi ben el Moghtar, whose brother is Minister of War. The Vizier for Foreign Affairs is Mohammed el Mofdel Garrit, while Mohammed ben el Arbi el Torres is the minister charged with the foreign relations of the Sultan at Tangier. Muley-Hassan, a more energetic ruler than his ancestors, decides all matters of policy without consultation.

Area and Population.—The area of the empire is estimated at 812,800 square kilometres or 260,000 square miles, of which 197,100 square kilometres consist of mountainous districts and large, fertile plains, 67,700 square kilometres are poorly watered tablelands, and 547,500 square kilometres, including the province of Twat, lie within the borders of the Great Sahara Desert. The population has been variously estimated at from 6,000,000 to 10,000,000, and by Dr. Gerhard Rhofls as low as 2,750,000. Two thirds of the people belong to the Moorish or Berber race, while the remainder are Bedouin Arabs, negroes, and Jews, of whom there are 340,000. About 50,000 of the people are slaves.

Commerce.—The total value of the imports in 1885, exclusive of specie, was 33,724,000 francs, against 21,432,000 francs in 1884; of the exports, 30,015,000 francs, against 19,211,000 francs. In 1886, the cargoes landed at the ports were valued at 36,418,000 francs, and those taken away at 32,316,000 francs. The imports of cotton and cotton goods in that year were valued at 15,593,000 francs; of sugar, 5,798,000 francs; of silver money, 3,153,000 francs. The chief exports were beans and peas of the value of 5,465,000 francs; maize, 4,084,000 francs; olive-oil, 3,855,000 francs; wool, 2,756,000 francs; goatskins, 2,648,000 francs; cattle, 2,450,000 francs; almonds, 1,861,000 francs. The export of silver coin was 1,578,000 francs. Of the total imports in 1885 Great Britain furnished 21,630,000 francs worth, and the exports to that country were 14,582,000 francs in value, while the share of France in the imports was 8,298,000 francs, and in the exports, 6,675,000 francs. The trade in cotton cloths has, till recently, belonged exclusively to England, but Swiss muslins and grenadines are replacing Manchester goods. Belgium supplies iron goods, Germany and Austria cloths, and France loaf-sugar, which is the usual article sent in Morocco as a complimentary present. Chemicals and matches also come from France, and candles and various other manufactures that Great Britain used exclusively to furnish are imported in increasing quantities by the Germans. The total number of vessels entered at all ports in 1886 was 1,989, of 587,619 tons, of which 854, of 256,062 tons were English, and 863, of 238,126 tons were French.

Natural Resources.—Morocco has been always closed to European commerce, except the port of Tangier, owing to the jealousy of its rulers and the fanaticism of the inhabitants. Even travelers and explorers have been excluded, and not till recently have the great natural resources of the country been even suspected. The climate, cooled by the snow-capped Atlas in the south and by the breezes of the Atlantic, is mild and genial. The soil, especially in the southern part of the country, is exceedingly fertile. Large navigable rivers flow through the land, the Azamoor and the river of Rabat being the most important.

Political and Economic Conditions.—Although descended from the Moors, who for four centuries governed Spain and built the cities of Cordova, Seville, and Granada, and although possessing now one of the finest countries in the world, the inhabitants of Morocco have been reduced to misery and barbarism by oppression. The Sultan, as the successor of the Caliphs of Cordova, does not acknowledge the superiority of the Sultan of Turkey, but considers himself the head of the faithful. His spiritual character enables him to exercise absolute despotic power over the Berbers and Arabs, which the present Sultan and his predecessors have so abused that the laws are simply instruments of pillage and oppression, and every person seeks to hide his property lest he should lose both it and his life or liberty. The authorities of the state, from the Sultan down, plunder those beneath them. Muley Hassan is said to have amassed enormous wealth. There is no Minister of Finance or Treasurer, and the key of the treasury, which is supposed to be in Mequinez, is kept by the Sultan. It often happens that the meanest slave is raised to the highest office of state, and as often that the most upright official is ordered to execution. The Sultan is consecrated by the Grand Sherif of Wazan, who exercises a power only second to that of the Sultan, and is held in such fear and veneration that his mere presence in battle has often decided the fortunes of the day. Education in Morocco is usually confined to learning by rote a few chapters of the Koran. Justice is administered daily in the residence of the pasha of each province. Stealing is punished by cutting off the hands or feet. The officials receive no pay, but are at liberty to extort as much as they like from those under them, while they are obliged to deliver large sums to the Sultan. Every officer, from the Minister of State down to the sheikh of a village, pays for his appointment, and must pay to continue in office. Their exactions and arbitrary assessments are the cause of frequent revolts. No one takes pains to make the ground more productive, because its produce would be seized by the Government. The merchants are compelled to carry on their trade secretly, to conceal their stock, and to bury their savings. When a pasha is suspected of having

amassed great wealth, it is no uncommon occurrence for the Sultan to invite him to the capital and after his arrival cast him into prison and load him with chains until he parts with his gains. The inmates of the prisons die in great numbers, from foul air, cruel treatment, and starvation. The law requires every man to give a tenth part of his goods to the poor, but the tithes are collected by the Sultan's officers, and the greater part of them is retained in their hands or diverted into the imperial treasury. Slavery exists without restrictions, and slave markets are held in the public streets. The slaves are brought from the Soudan, having originally been kidnapped or taken in war. They are well treated by their masters as a rule, and some are set free. There are no roads in Morocco. Wheat is often sold in the interior for one fifth of the price that it would bring at the seaboard. The difficulties of transportation are such that only one half of the land is cultivated, and even under these circumstances the grain is often left to rot in the fields. The Sultan sometimes forbids the exportation of grain, even in years of abundance. The regular sources of the public revenue are the tithe on agricultural produce, a tax of 2 per cent. on domestic animals, a tax on *shebbel* (a kind of fish caught in the rivers), the monopoly of tobacco and hash-eesh, a poll-tax on Jews, and 10 per cent. duty on all goods imported or exported, and on all produce brought to the towns. Fines are levied on every pretext, and the scale of the regular imposts is frequently raised or lowered according to the impulse of the Sultan. Fines are simply a method of extortion. A quarrel between two members of a kabyla may deprive both of half their possessions, and when a robbery is committed it is a common thing to fine every inhabitant of the village double the amount of the stolen property. Besides beating and imprisonment many forms of torture are used. The Sultan alone can condemn a criminal to death; yet the pashas order punishments that result in more cruel forms of death than decapitation by the Sultan's decree. The tobacco and hasheesh monopolies were recently abolished by a Shereefian decree forbidding the use of those narcotics, to which the Moors were greatly addicted, and are still, for notwithstanding the severe punishments inflicted they continue to indulge their habit of smoking, and now the officials have become less vigilant in enforcing the decree. In 1888 the Sultan issued a decree against intoxicants of all kinds. The Jews in Morocco are objects of detestation and contempt, and are subject on all hands to indignities and cruelties, such as the fanatical Moors would inflict as eagerly on Nazarenes or Christians if they were not restrained by the Government.

Treaty Negotiations.—The Sultan has been able to persevere in his policy of isolation and non-intercourse only through the jealousy of the European powers. Great Britain, being in

possession of two thirds of the existing foreign trade, has been anxious to prevent any power from gaining a commercial footing, which might lead to political ascendancy, and thus weaken her position at Gibraltar. The power most distrusted by others has been France. She was the first to establish her rule on the Mediterranean coast of Africa, and is the only land neighbor of Morocco, and in recent years has attempted to push the frontiers of her West-African colonial possessions northward so as to inclose Morocco on every side. Italy feels the deepest interest in preventing France from realizing her dreams of an African empire that would in the natural course of events swallow up Tripoli, the special object of Italian ambition. Austria, as a Mediterranean power, also takes a watchful interest in Morocco, and is encouraged by Germany, which has an eye on the commercial possibilities of the country. Spain is the only power that has definite and acknowledged aspirations toward Morocco, which she regards as her heritage, not only on account of geographical proximity, but by reason of a historical title based on the expulsion of the Moors from Spanish ground.

In 1884 the intrigues of the Frenchman De Chavagnac, who endeavored to stir up rebellion in Morocco, and secure a footing for France in Riff, aided as they were by the French minister in Tangier, Ordéga, aroused alarm in Madrid, and were regarded with anxiety in the foreign offices of other capitals. The French Government manifested the loyalty of its intentions by recalling M. Ordéga after he had attempted to extract a secret treaty from the Sultan. Germany began to cultivate relations with Morocco about 1876, and gradually obtained such influence that, in 1885, she pressed for a revision of the commercial treaties on the basis of a considerable reduction of the import and export duties, the opening of the whole country to the free circulation of foreigners, and the right of foreigners to acquire lands and to engage in commercial, mining, and railroad enterprises. The proposals were rejected by the Sultan, but they were renewed when England, and later France, joined in the demands. The existing treaty was made in 1856 by Sir John Drummond Hay, who still represented Great Britain at Tangier, and had undergone no alteration except the addition of stipulations of minor importance at the conclusion of the Spanish war against the Moors in 1860 and changes in the port dues made at the Madrid Convention of 1880. France endeavored to remove the obstacles to a new arrangement by sending M. Ferrand as minister to Tangier with directions to reform the abuses connected with the French consular service, of which the Sultan had often complained. Neither the Sultan nor his subjects could expect any advantage from throwing open the country to European enterprise, for it would not only hasten the day of political annexation, but would raise the prices

of the means of life to the natives, while the profits arising from the development of the resources of the country would all accrue to strangers, who would eventually become the owners of the land.

Foreign Protection.—The principal objection of the Sultan to enlarging the commercial privileges of foreigners was, that under the existing arrangements the allegiance of a considerable section of his subjects was alienated, and that with closer commercial relations with European countries he would be deprived of his power over the rest. The legations have the right in Morocco, as in several other Mohammedan countries, of granting protection to persons employed in any capacity in the consular service, or acting as commercial agents for firms belonging to the country giving protection. Such *protégés* are no longer subject to the jurisdiction of Moorish courts. All complaints or suits against them, or that they bring against others, are adjudicated in the consular courts of the country of which they become *quasi*-subjects. They not only escape taxation and the exactions of native officials, but are able to practice extortions themselves by making false claims or accusations, which will lead to imprisonment by order of the consuls if their blackmailing demands are not satisfied. The incumbents of diplomatic and consular posts in Morocco are often men who are open to the temptations of the great bribes that are offered for consular protection and for the support of the *protégés* in their dishonest schemes; and even those who are honorable, being usually ignorant of the language of the country, are easily misled by dragomans and interpreters. The Madrid Convention limited the number of *protégés* to two for each commercial house; yet some of the diplomatic representatives issued fifteen and twenty protections to pretended agents of the same firm, and the Moorish authorities allowed the others to do the same for the sake of avoiding disputes under the most-favored-nation clause. So great is the fear of the Moorish Government of foreign complications, leading possibly to the annexation of the country, that the authorities were ordered to obey implicitly all foreigners or persons protected by foreigners. For many years the French Government more than the others laid itself open to blame for protecting unworthy persons and supporting fraudulent claims. Afterward the representatives of the United States were the chief offenders. A wealthy American citizen, Ion Perdicaris, with the assistance of his secretary, Captain Rolleston, an Englishman, made it his task to unearth consular abuses and defend the victims of revenge or cupidity who were chained in dungeons, and often allowed to die of starvation, on account of debts that they had never owed, or had already paid in full or in part. There were more than 150 native Jews or Moors who enjoyed the protection of the United States flag, and who claimed debts

amounting to \$100,000, for which many unprotected natives were cast into prison and were unable to obtain a trial in order to prove the fraudulent character of the claims against them. A Jew money-lender named Reuben Tergeman, enjoying American protection, procured the imprisonment of nearly a score of persons in one province alone, some of whom were kept in chains for two years, although they had paid their debts two or three times over. Mr. Perdicaris, in attempting to right such wrongs, came into conflict with the American consul, and by the latter's order was himself committed to prison. He succeeded in bringing the matter to the attention of the United States Government, which recalled the consul and sent out Reed Lewis, who dismissed all the old employés of the consulate. The evidence that Mr. Perdicaris had collected condemned the system of consular protection so thoroughly in the eyes of Congress, that it passed an act in the early part of 1887 abolishing the extension of American protection for commercial purposes to natives in Morocco and in other countries. All persons incarcerated for debts due to American citizens and *protégés* were released by order of Mr. Lewis, and usurers suspected of having made false claims were arrested.

The present system of foreign protection has existed since 1767, when it was secured in a treaty of peace and commerce with France for persons in the service of consuls, secretaries of political agents, interpreters, and representatives of foreign commercial establishments. The Madrid Convention of 1880 contained provisions that were intended to restrict the number of protections, while it added to the privileges and immunities of those who were protected. The restrictions were evaded, and the traffic in protections, which were made more valuable by the convention, was conducted on a larger scale. Every wealthy Moor sought the protection of a foreign power. Even the Sheriff of Wazan became a French *protégé*, and by that act sacrificed a great part of his prestige, which was already impaired through his marriage to an English woman. The convention of Madrid limits the number of protected persons to the employés of the legations and consulates, *simsars* or commercial agents of foreign traders, two being allowed for each firm, and Moorish subjects who accept foreign allegiance. The powers claimed the right to protect the last-named class by right of custom, but agreed to limit the number to twelve for each of the thirteen signatory powers. The protection extends, however, to all the children and the numerous dependents of the protected persons. The representatives of the powers were desirous of securing as *protégés* the wealthiest and most powerful of the Sultan's subjects as a means of extending their own influence. The Moors whose wealth was sufficient to attract the cupidity of the Sultan or his officers sought foreign protection as a means of self-

preservation, and were willing to pay high premiums for the appointment of *simsar* to a foreign commercial firm. Many of them established Europeans in some ostensible commercial business in Tangier, really paying them salaries for the privilege of acting as their pretended agents. The latter arrangement was more secure and permanent, since the immunities of the *simsar* terminate with the agency. M. Ferraud reduced the number of Moors claiming French protection from 800 to 60. There is, however, a large number of French subjects, born in Algeria, who practice usury and extortion under cover of their French protection, while the British Government is called upon to protect the misdeeds of many Barbary Jews whose birthplace was Gibraltar. The Sultan is led to believe that the number of protected Moors is much greater than it really is, because often when he gives directions to confiscate the property of some person of whose wealth he hears, the kaid of the district is bribed by the man to report that he is under foreign protection.

The Submarine Cable.—The British Government has for twelve years past sought the permission of the Sultan to lay a cable from Tangier to connect with the European telegraph system at Gibraltar. The French and Spanish governments objected to the concession being granted unless they too should have the privilege of laying cables. Sir William Kirby Green, who succeeded Sir John Drummond Hay as British minister at Tangier in 1886, wrote to the Sultan for his final consent. The British legation is the only one that communicates directly with the court by means of couriers, the other ministers being compelled to present their communications through the Moorish Foreign Minister in Tangier. When no answer came to the letter of the British representative, he wrote again, saying, that if the Sultan did not reply within a certain time he would take his consent for granted. This and a third letter remained unanswered, and at the time indicated the cable was put down, in February, 1887. Then the Sultan sent word that he would pay all expenses if it were taken up again. This the British Government refused to do, and when the Sultan, in a communication conveyed through the Foreign Minister to the diplomatic body at Tangier, formally protested against the cable, and demanded the suspension of its use until the matter was diplomatically regulated, no attention was paid to his remonstrances.

Rebellion of the Beni Zemour.—In 1887 the Beni Zemour, a powerful tribe dwelling between Marakish and Mequinez rebelled against the exactions of the Sultan, who was then at Marakish, where his presence was manifested as usual by wholesale pillage. Muley Hassan sent word that if they would submit themselves and bring tribute in token of subjection, he would pardon them and leave their territory in peace. The Beni Zemour complied at once, and more than 70,000 men and women carried baskets

of supplies on their heads to Marakish. The Sultan, after he had received their offerings, turned his soldiers loose on the tribe to plunder and murder as they pleased for two days, in order, he said, to teach the rebels to respect his authority. The Beni Zemour in retaliation poisoned all the wells, with the result that the Sultan's favorite wife and many members of his household died. He himself was taken very ill, it was supposed from the same cause.

Naval Demonstration.—The prospect of a change of rulers is regarded with consternation by all the inhabitants of Morocco, the foreigners doing business there not excepted. The death of Muley Hassan would be followed inevitably by a conflict among all the tribes, each of which would fight for the candidate for the throne with whom it is most nearly connected. A new Sultan is supposed to be selected by his predecessor, but he must be accepted by the majority of the people before he is permitted to take his seat under the Sherreefian Umbrella. The present Sultan, in the beginning of his reign, killed off his two uncles and the most prominent member of the Drissian branch of the Sherreefian family, and then banished all his male relatives to the oasis of Taflet, where they have been kept in penury and solitude. His sons are so young that none of them is likely to be accepted as his successor. There are, however, several descendants of both the Aliweein and the Drissian dynasties who have powerful tribes at their back, ready to defend their claims to the succession. The jealous powers, whose mutual distrust has prevented the introduction of civilizing agencies, regard the situation with watchful anxiety. In September, 1887, when the news of the probably fatal sickness of Muley Hassan was brought to Madrid, the Spanish Government at once got its fleet ready and moved an army corps to the ports nearest the Moorish coast. On October 1 Señor Moret advised the governments of Germany, England, Austria, France, and Italy of Spain's intention to send troops to the Spanish fortresses on the coast of Morocco. Great Britain was prompted by the Spanish armaments to dispatch a naval force to Morocco, and France and Italy were equally alert. These powers, in their replies to the Spanish dispatch, which was amplified on October 5 in a circular to all the signatories of the Madrid Convention, expressed approval of the steps taken by Spain, and declared their intention of sending ships to Tangier to protect the lives and property of their subjects. A few weeks later, powerful war-ships of the various nations anchored in the bay of Tangier, and remained to watch events until the recovery of the Sultan and the progress of diplomatic negotiations removed the cause of their presence there.

Proposed Morocco Conference.—The Morocco crisis impelled the Spanish Cabinet to urge the elevation of the representatives of the great powers at Madrid to ambassadorial rank, in

the hope that Spain as a great power would be able to press her historical claims to Morocco with more weight. When the Madrid statesmen perceived that the right of their country to dispose of the fortunes of the Moorish empire was disputed by all the powers, they resorted to another method of placing Spain in the lead. On October 2 Señor Moret suggested the advisability of reassembling the conference of 1880. In the note of October 5 he dwelt upon the reasons for Spain's taking the initiative and uniting with the powers in demanding in Morocco the reforms demanded by civilization, declaring that the policy of Spain is opposed to any idea of territorial aggrandizement. The Spanish interest in the fate of Morocco was recognized in 1880 by the powers to the extent of an understanding that the views of Spain should be heard in the first instance on all questions affecting Morocco. The powers assented in principle to the proposed conference. France, however, in order to close the way to any further assertion of the pretensions of Spain, insisted that the business of the conference should be restricted to the revision of the Madrid Convention. This limitation, which was supported by Great Britain, Spain was finally forced to accept. The English Government made the suggestion that the powers should guarantee the integrity of the Sultan's dominions in return for concessions of facilities for commerce and of improved government. The various cabinets accepted the invitation to take part in the conference, which was to meet at Madrid before the end of January, 1888. The countries represented in the Madrid Conference of 1880 were Germany, Great Britain, Austria, Belgium, the United States, France, Italy, Holland, Portugal, Sweden and Norway, and Morocco itself. The Spanish minister resident at Tangier, Señor Diosdado, was instructed to inform the Sultan of the circumstances that had occurred in consequence of his illness, and to urge upon him the necessity of granting the commercial rights demanded by the powers. Muley Hassan had himself requested the Spanish Government in August to reopen some of the questions that were discussed, but not finally settled, at the previous international conference. The Spanish minister at Paris sounded the French Government, and found it willing to consider the subject, whereas in 1880 it had categorically refused to acquiesce in a modification of the rights of protection. At the suggestion of M. Flourens, the Spanish Government directed its political representatives in Morocco to collect evidence regarding the inconveniences and abuses of the protection system. The Sultan had reason to suspect the French of aggressive designs on his western frontier, because they had very recently engaged in expeditions against the Fignig and Twat tribes, whose lands lie within the borders of Morocco, and had established military posts and fortifications close to the boundary, if they did not encroach

upon the Sultan's dominions. The Spanish Government was the only one whose dealings with the Sultan had been marked throughout with sincerity and justice. The conference at Madrid was rendered practically abortive by France's refusal to accede to the proposals on behalf of Morocco made by Spain, and then supported by Great Britain. The Spanish legation at Tangier is the only one that has kept itself entirely clean from the illegitimate use of the right of protection, and the Spanish Government has consistently urged the justice of the Sultan's demand that foreign protection should be done away with. England acknowledged the evils of the system, but refused to consider proposals for remedying them, except in return for substantial commercial concessions, and in this position was supported by several other powers. The Spanish minister to Morocco then endeavored to persuade Muley Hassan to concede the demands of the powers, the meeting of the proposed conference being postponed from time to time, but could not induce him to throw the country open to foreign capital and enterprise. A new rebellion of more formidable dimensions than that of 1887, followed by a recurrence of the Sultan's sickness, interrupted the negotiations, and caused the conference to be indefinitely postponed.

Outrages on Europeans.—Owing to the failure of the conference negotiations and the exhibition of discord among the Christian powers, or to the unsettled condition of the country resulting from rebellions and the precarious health of the Sultan, the Moors were more insolent toward Christians in 1888 than they had been for many years. British *protégés* were stripped of their possessions, imprisoned, and tortured by order of the kaida. An American *protégé* was arrested at Rabat, and the American Consul-General demanded his release, which the Moorish authorities refused to grant, on the ground that a suit was pending against him when the protection was issued. The matter was finally submitted to the decision of arbitrators. Numerous other outrages were reported.

Revolt of Berber Tribes.—The warlike mountaineers inhabiting the Beni M'Gilol hills on the northern slope of the Atlas, have never been subdued. They boast that eleven sultans have entered their territory, and that only two of them returned alive. The Sultan Muley Hassan, who had extended the boundaries of his dominions in some directions, and aims at a confederation of the Mohammedan states of the Western Soudan as far as Timbuctoo, resolved to conquer this troublesome tribe, which still clings to the Drissian dynasty, having in its midst a pretender, and became aggressive when the ferment pervaded Morocco that was caused by the Sultan's illness. Muley Hassan, who was at Mequinez, took the field with his army in the summer, and after two months of almost daily fighting, during which his army was twice nearly cut in two, he succeeded, as

he supposed, in putting down the revolt, visited cruel vengeance on the kabylas that were reduced to submission, placed governors over the conquered districts, and marched toward the seacoast with the intention of making a promised visit to Tangier, which he had never seen. Kaid Maclean, the English officer who instructs his troops and commands the cavalry, was left at Fez with a part of the army, in order to quell any fresh outbreak. In September the Sultan, who had reached the borders of the Zimouri and Beni Hassan country, received intelligence of a fresh rising of the tribes, and of the massacre of his cousin Muley Souro, who had been entrapped in an ambush and, with 800 of his followers, was put to the sword. Muley Hassan immediately set out upon an expedition to avenge his cousin's death. The tribes rose in the rear of the Sultan's army, exasperated by the taxes he had levied on them to maintain his army of 70,000 men, the troops, perishing of starvation, deserted in large numbers, the enemy attacked him in front, and at last Muley Hassan found himself far in the hills, with neither food nor ammunition. Kaid Maclean was shut up in Fez by the Beni M'Gilol tribe, who were joined by others in that region. The Sultan had excited general indignation by ordering all the members of a certain tribe to be beheaded, on the mistaken supposition that they were concerned in the massacre of his cousin's force. Messengers reached Tangier at last, and Sir William Kirby Green, the British minister, obtained from the Governor of Gibraltar 150 rounds of ammunition, which he sent to Fez. Kaid Maclean broke through the Beni M'Gilol tribe who besieged Fez, and reached the Sultan's camp with the ammunition. Muley Hassan then abandoned the expedition.

MORTON, LEVI PARSONS, Vice-President of the United States, born in Shoreham, Vt., May 16, 1824. His first ancestor was George Morton, who came in the ship "Ann" from England, and landed at Plymouth in 1628. The Morton family afterward settled at Middleborough, Mass. Mr. Morton's father, the Rev. Daniel Oliver Morton, was a Congregational minister, and his mother, Lucretia Parsons, was the daughter of the Rev. Justin Parsons, while her brother, for whom the Vice-President was named, was the first American missionary to Palestine. The Rev. Mr. Morton sent his eldest son to college, but even the marvelous economy of a New England minister's family could not make the few hundred dollars of salary stretch far enough to cover the second boy's expenses, and after partly preparing Levi for Middlebury College, the father reluctantly consented to let him go as clerk into a store at Enfield, Mass., where he remained for two years. He was then sixteen years old, and returning to his home, which had been removed to Bristol, N. H., he taught a district school for a while, and then, at the age of seventeen, entered the store of a Mr. Esterbrook, in Concord. His

employer was so pleased with his aptitude for business that he established him in a branch store in Hanover, N. H. (the seat of Dartmouth College), giving the young proprietor an interest in the business. He soon became a favorite with the students, and remained there six years, and then went to Boston, where, in 1849, he entered the house of James M. Beebe

of L. P. Morton & Co., one member of which was Charles W. McCune, afterward of the Buffalo "Courier." In 1868 Mr. McCune withdrew, while the remaining partners established the banking-house of L. P. Morton & Co., at No. 85 Wall Street. A London branch was soon established under the title, L. P. Morton, Burns & Co., but in 1869 that firm was dissolved, Sir

LEVI PARSONS MORTON.

& Co. Two years later, the firm made him a partner, opened a branch in New York known as J. M. Beebe, Morgan & Co., and placed him in it. In 1854 Mr. Morgan (father of Pierpont Morgan, of Morgan, Drexel & Co.) went to London, and Mr. Morton soon afterward organized the firm of Morton & Grinnell, which continued in business until the beginning of the civil war. In 1856 Mr. Morton had married Miss Lucy Kimball, daughter of Elijah H. Kimball, of Flatlands, Long Island. Late in 1861 Mr. Morton founded the mercantile firm

John Rose, Finance Minister of Canada, becoming Mr. Morton's partner in London, under the firm-name of Morton, Rose & Co. At the same time George Bliss entered the New York firm. At home the house of Morton, Bliss & Co. rendered material aid to the Government; and abroad, Morton, Rose & Co. became the fiscal agents of the United States, and were active in the negotiations that ended in the Geneva and Halifax fisheries awards. In 1876 Mr. Morton was nominated for Congress by the Republicans of the Eleventh New

York District. In accepting the nomination he wrote: "It is a distinction which I have not solicited, and I am not sure of my fitness for the place. I have never been a politician, have never sought or contemplated holding office, and am by training and tastes simply a man of business. If, however, in your judgment, I can serve the district and protect its interest in Congress, I shall feel constrained to regard your nomination as a plain call to public duty, which I have no right to shirk. I believe the Republic has a right to command the services of its humblest citizen, and in obedience to that conviction I accept the nomination." His opponent was Col. Benjamin A. Willis, a forcible speaker and able politician. Mr. Morton, although defeated, reduced Willis's majority from 2,500 to 400. In 1878 he was renominated, and defeated Col. Willis by 7,000 majority. In 1880 he was again successful against James W. Gerard, Jr. The New York "World," opposed to him in politics, said: "Against Mr. Morton's individual character and his fitness to represent his district in Congress, no one who knows him can have a word to say."

In 1881 President Garfield appointed Mr. Morton minister to France, and he remained such under President Arthur. In 1871 Mrs. Morton had died in their country home, Fairlawn, Newport, R. I. She was noted for her benevolent nature, and, carrying out her feeling, as well as his own, Mr. Morton gave a park of twelve acres to the people of Newport, and built in her memory in Fourth Avenue, New York, contiguous to Grace Church, the beautiful building known as Grace Memorial Chapel. Among his other benefactions was the first contribution of one quarter of the cargo for the ship "Constellation," which was sent by our Government to the sufferers from the Irish famine.

In 1878 Mr. Morton was honorary commissioner to the Paris Exposition, and he was American commissioner-general to the Paris Electrical Exposition, and representative of the United States at the Submarine-Cable Convention. He publicly received, in the name of the people of the United States, the Bartholdi statue of "Liberty enlightening the World." In 1882 and 1887 he was candidate for a United States Senatorship, from New York. Middlebury College, where he has recently founded a professorship, and Dartmouth, conferred upon him the degree of LL. D. He married Miss Street, of Poughkeepsie, whose accomplishments and amiability did much to render his foreign mission successful and his home memorable for its hospitality. They have five children, and a few years ago selected as their summer home a beautiful place called Ellerslie, at Rhinebeck, on the Hudson.

In July, 1888, Mr. Morton was unanimously nominated for Vice-President by the Republican National Convention, on the ticket with Gen. Harrison, which was successful, and he was inaugurated March 4, 1889.

MUSIC, PROGRESS OF, IN 1888. To the novel productions brought out on the operatic stage in 1887 are to be added: "Faust," a musical drama, in a prelude and four acts, by Heinrich Zöllner (Cologne, Stadttheater, December 14), *succès d'estime*; the third act found the most favor. "Die Camisarden" (formerly "Jean Cavalier"), by Anton Langert, entirely rewritten (Coburg, Hoftheater, December 15), conducted by the composer, and received with great applause. "Per Svinaherde" (Peter, the Swineherd), in three acts, by Ivar Hallström; libretto by Christiernson (Stockholm, December 29); with success, repeated to full houses eleven times. The music is graceful, at times characteristic, the libretto contains several striking scenes, and the *mise-en-scène* was magnificent. "Don Pedro dei Medina," an operetta by Lanzini, libretto by Ovidi (Rome, Teatro Oostanzi, October), with great success, in which the libretto has no small share, being one of the happiest conceptions of its kind.

During 1888 the dramatic-musical movement did not rise above the average. No great accomplishment is to be recorded, no event of significant augury fall to its share. The number of new grand operas produced in France, Belgium, and Germany was scant; England furnished only one; and even Italy was more reserved than usual. Nor was the field of comic opera worked very extensively. On the other hand, the production of new operettas was fairly overwhelming. In the following we record the facts in chronological order, grouped according to their national origin:

Operas.—"La Dame de Monsoreau," in five acts, by Gaston Salvayre, libretto by Auguste Maquet, Paris, Opéra, January 30, was a complete failure, in spite of the gorgeous *mise-en-scène*, and the creditable performance on the part of the artists; the displeasure of the public was aroused as much by the libretto as by the music. "Jocelyn," in four acts, by Benjamin Godard, libretto by Armand Silvestre and Victor Capoul (Brussels, Théâtre de la Monnaie, February 25), obtained a brilliant success on this occasion, but it remains to be seen how much of it was due to the influence of the friends of the composer and the librettists, who had flocked over from Paris; to the impartial, the weaknesses of both the musical score and the libretto are evident; the representation, including the *mise-en-scène*, was excellent. The opera was subsequently given in Paris, at the Théâtre Lyrique du Château-d'Eau, October 13, with no particular effect; the representation was insufficient, and the *mise-en-scène* paltry. "Le Roi d'Ys," in three acts, by Edouard Lalo, libretto by Edouard Blau (Paris, Opéra-Comique, May 7), was given with decided success; singers, orchestra, and stage-managers deserved great credit. "Le Roi Lear," in four acts, by Armand Raynaud, text by Henri Lapierre (Toulouse, Théâtre du Capi-

tole, June 1), met with a favorable reception. "Renaud," by Gilbert des Roches—Baroness Legoux (Boulogne-sur-Mer, during the summer). "Richilde," in four acts and ten tableaux, by Émile Matthieu, who also wrote the libretto (Brussels, Théâtre de la Monnaie, December 19), was given with great success; the work, whose subject is from the mediæval history of Flanders, shows dramatic skill and much inventive power; the instrumentation is excellent, and a gorgeous *mise-en-scène* contributed to the result. "Hertha," a romantic opera in four acts, by Franz Curti (Altenburg, in February). "Aphrodite," by Nicolaus Milan (Agram, Croatia, in February), with considerable success. "König Arpad," by Verhey, libretto by Van Loghem (Rotterdam, German Opera, end of February). "Dido," in three acts, by Otto Neitzel (Weimar, March 18), obtained a fair success. "Harold," by Eduard Nápravník, the first time outside of Russia (Prague, National Theatre, in April), was well received; the music is not very original, but appears throughout to be the product of a refined musician. "Satanella," by Reznicek (Prague, Deutsches Landestheater, May 18), met with a very favorable reception. "Der Sturm," in three acts, by Anton Urspruch, text by Emil Pirazzi, freely after Shakespeare's "Tempest" (Frankfort, Stadttheater, May 17), was rewarded with great applause. "Murillo," in three acts, by Ferdinand Langer, libretto by E. Henle (Mannheim, Hoftheater, September 16); the opera had been given last year, but appeared entirely remodeled, and obtained a complete and well-deserved success. "De Geuzenbruid," by Melos, libretto by Marnix (Amsterdam, in October); "Katherine und Lambert," by Van der Linden (Amsterdam, in November). "Nelly," in three acts, by Carl Bouman (Dordrecht, in November). "Aladdin," by Emil Horneman, who also wrote the libretto, after the "Arabian Nights" (Copenhagen, Royal Theatre, November 19). "Eugen Onégin," in three acts, by Tchaikowsky, the first time outside of Russia (Prague, National Theatre, early in December), conducted by the composer, and very successful. "Die Gletscherjungfrau," by Franz Curti (Altenburg, Hoftheater, December 25). "Das steinerne Herz," a romantic opera, in four acts, by Ignaz Brüll, libretto by J. V. Widmann, after Hauff's tale (Prague, Deutsches Landestheater, December 19), was brought out with signal success, taking immediate hold with its popular strains and dance rhythms, which never fall below the high standard of the composer's refinement; the first and third acts are the most attractive. It is a genuine example of the good old-time folk-opera, as produced by Dittersdorf and Weigl, modernized. "The Corsican Brothers," by George Fox, libretto by Charles Bradberry (London, Crystal Palace, September 25). Among Italian operas may be mentioned Verdi's "Otello," as having been produced for the first time on this side of the Atlantic, in New

York, Academy of Music, April 16, by the Campanini troupe, with great artistic success. The novelties in Italy were: "Asraël," by Alberto Franchetti, libretto by Fontana (Reggio d'Emilia, Teatro Municipale, in February, with brilliant success. "Diana d'Almeida," by Raffaele Ronco (Genoa, Teatro Carlo Felice, February 22), met with a favorable reception. "Il Saggio," by Alfredo Soffredini (Lucera, Collegio Reale, February) had great success. "Nestorio," by Galignani (Milan, Scala, April 8), with indifferent result. "Carmosina," by João Gomes de Arango, a Brazilian composer, libretto by Ghislanzoni (Milan, Teatro Del Verme, in April), was received with applause. "Don Pedro," by Castagnaro (Vicenza, June 21), was very successful. "Ivanhoe," by Ciardi (Prato, Teatro Metastasio). "Don Prospero," by Garzia (Naples, Teatro Rossini, in September). "Bice di Roccaforte," by Giacomo Medini (Savona, Politeama, in October). "Medgè," by Spiro Samara (Rome, Teatro Costanzi, December 12), met with a most favorable reception. There were also two Italian operas given in Portugal: "La Donna Bianca," by Alfredo Keil, and "Ribelli," by Marino Mancinelli (both at Lisbon, Teatro San Carlos).

Comic Operas.—"Die Drei Pintos," in three acts, by Carl Maria von Weber (Leipsic, Stadttheater, January 20), based upon the sketches and manuscripts left by the composer and upon the libretto by Theodor Hell, the opera was compiled and finished, the musical part by Kapellmeister Gustav Mahler, the dramatic part by Capt. Carl von Weber, grandson of the composer. This work occupied the master before the composition of the "Freischütz" was completed, and as late as the end of 1824 he had not given up his intention to finish it, although the last note of the existing sketches was written in November, 1821. Meyerbeer proposed to complete the opera, but desisted; Jules Benedict, Weber's pupil and biographer, declined to undertake the task, which has now been very creditably achieved by the able orchestra leader of the Leipsic Stadt-theater and Capt. Weber. Both were recipients of ovations on the night of the first performance, which was unusually brilliant, the house being crowded to its utmost capacity by a most enthusiastic audience, among whom were to be seen many foreign musical and dramatic celebrities. The director, Herr Stagemann, who had taken charge of the entire *mise en scène*, and the artists, shared largely in the generous applause. The opera was subsequently given at Hamburg (April 5), Munich (April 10), Dresden (May 10), Prague (August 18), Coburg (November 6), Breslau and Bremen (also in November). "Turandot," by Theobald Rehbaum, text freely after Gozzi's tale (Berlin, Royal Opera House, April 11). The work, which was very favorably received, contains many pleasing melodies; composer and performers were called after each act. "Im Namen des Gesetzes," in three acts, text and

music by Siegfried Ochs (Hamburg, Stadttheater, November 8), met with a kindly reception. "Die Königin von Leon," romantic-comic opera, by V. E. Becker (Nuremberg, November 15), obtained a fair success. "Le Diable à Yvetot," by Gessler, libretto by Paul Stark (Rouen, Théâtre des Arts). "La Fauvette du Temple," by André Messager (Brussels, Alhambra, January 26); the work is very attractive, and received much applause for its *mise en scène* as well as its clever interpretation. "La Perle de Brimborio," by Castelain and Coupin (Marseille, in February), with great success. "Les Réservistes," by Félix Boisson, libretto by E. Le Roy (Châlons-sur-Marne, in February). "Le Dîner de Madelon," by Maurice Lefèvre, libretto by Désaugiers (Brussels, Théâtre de la Monnaie, March 6); the audience found the "*dîner*" much to its taste, especially as it was extremely well served by the artist waiters. "Le Bossu," in four acts, by Charles Grisart, libretto by Bocage and Livrat, after Paul Féval's novel (Paris, Théâtre de Gaîté, in March), was a fair success. "Le Puits qui parle," by Edmond Audran, libretto by Nutter, Beaumont, and Burani (Paris, Théâtre des Nouveautés, middle of March), found great favor, and will probably continue on the repertory. "Une Aventure d'Arlequin," by Paul and Lucien Hillemaacher, libretto by Judicis (Brussels, Théâtre de la Monnaie, March 22), was fairly successful, the music being fine and spirited, while the libretto proved rather dull, and the performance was only moderately good. "Le Dragon de la Reine," by Leopold Wenzel, libretto by Pierre Decourcelle and François Beauvallet (Brussels, Alhambra, March 23), was given with signal success, well deserved by the attractive music and the interesting libretto, which is frequently amusing; the time of action is 1736; *mise en scène* and ballet were above reproach. "Le Baiser de Suzon," by Herman Bemberg, text by Pierre Barbier (Paris, Opéra-Comique, June 4), *succès d'estime*. "L'Amour au Village," by Émile Camys, libretto by Albert Réandel (Paris, Menus-Plaisirs, in July). "Le Bouquet," by Chaulier, libretto by V. Duleron (Boulogne-sur-Mer, in August) was well received. "L'Héritage de Chaudébec," by Baggers, libretto by Riese (Vichy, in August), with fair success. "Nella," by Sudessi (Bagneres-de-Luchon, Théâtre du Casino, in August). "L'Escadron volant de la Reine," by Henry Litolf, libretto by D'Ennery and Brévil (Paris, Opéra-Comique, December 14), had only a *succès d'estime*. "Isline," fairy opera, by André Messager, libretto by Catulle Mendès (Paris, Théâtre de la Renaissance, last week in December), afforded much pleasure to connoisseurs. "The Yeomen of the Guard," in two acts, by Arthur Sullivan, libretto by Gilbert, after Victor Hugo (London, Savoy Theatre, October 4), conducted by the composer, who, with the librettist and the representatives of the principal rôles, was called at the close

of the performance and overwhelmed with applause. As the work was soon after given in this city at the Casino, and held that stage for several months, New Yorkers are sufficiently familiar with its subject and music to need no commentary. "Babette," by Gustave Michiels, libretto by Ordonneau and Verneuil (London, Strand Theatre, Jan. 26). "Carina," by Julia Woolf, libretto by F. L. Blanchard (London, Opéra-Comique, in October), met with a friendly reception. "La Sérénade," by J. Batcheler and O. Gagg, libretto by Lucke M'Hale (Manchester, Prince's Theatre). "The Grand Duke," by Tito Mattei, libretto by Farney and Murray (London, Avenue Theatre). In Italy appeared "Il Grembiolino rosa," by Dr. Azzo Albertoni, who also wrote the libretto (Castelfranco, Venetia, in spring), with great success; "I Cernetani," in three acts, by Rinaldo Caffi (Cremona, Teatro Ricci); "Papà Martin," by Cagnoni (Rome, Teatro Nazionale, in June); "Gli Studenti," by Rota (Bologna, Teatro Contavalli, in October) was very favorably received; "Una Tazza di Tè," by Scarno, libretto by Ugo Flores (Turin, Circolo Artistico), met with considerable applause.

Operettas.—"Mam'zelle Crénom," by Léon Vasseur, libretto by Jaime Duval (Paris, Bouffes-Parisiens, January 19), pleased particularly because of its amusing subject. "La Volière," by Charles Lecocq (Paris, Théâtre des Nouveautés, February 8). "La Belle Sophie," by Edmond Missa, libretto by Paul Burani and Eugène Adenis (Paris, Menus-Plaisirs, April 11), with moderate success. "Le Valet de Cœur," by Raoul Pugno, libretto by Paul Ferrier and Charles Clairville (Paris, Bouffes-Parisiens, between April 15 and 22), was much applauded. "Le Masque de Velours," text and music by Prosper Morton (Laval, May 18). "Miette," in three acts, by Edmond Audran, libretto by Maurice Ordonneau (Paris, Théâtre de la Renaissance, in September), with an indifferent result. "Oscarine," by Victor Roger, text by Nutter and Albert Guinon (Paris, Bouffes-Parisiens, October 16), with fair result. "La Gardense d'Oies," by Paul Lacome, text by Leterrier and Vanloo (Paris, Théâtre de la Renaissance, October 26), was well received. "La Petite Fronde," by Audran, libretto by Bisson and Duru (Paris, Folies-Dramatiques, middle of November). "La Veillée des Noces," by Frédéric Toulmonche, libretto by Bisson and Bureau-Jettiot (Paris, Menus-Plaisirs, end of November), earned much applause. "Le Mariage avant la Lettre," by Olivier Métra, libretto by Jaime and Duval (Paris, Bouffes-Parisiens, December 5), was given with doubtful success; the music of the popular dance composer, to which the Parisians had looked forward with great expectations, pleased only partially and was powerless to elevate the disreputable libretto. "L'Entr'acte," by André Martinet, libretto by Maxime Boucheron (Paris, Cercle de la Presse, last week in December), was received with ap-

plause. "Der Königspage," by Franz Soucoup (Baden, near Vienna, February 4), was favorably received. "Der Sänger von Palermo," by Alfred Zamara, Jr., text by Bernhard Buchbinder (Vienna, Carl-Theater, February 14), with signal success; composer and librettist were repeatedly called before the footlights; the music is distinguished by great wealth of melody and a certain bearing of dignity; a charming love-duet, a terzet in waltz form, and a Sicilian folk song, were particularly applauded. "Der Fürst von Sevilla," by Fritz Baselt, text by Mordtmann (Nuremberg, Stadttheater, April 8), met with a very favorable reception; the music is full of life and melody. "Pagenstreiche," by Carl Weinberger, text by Hugo Wittmann, after Kotzebue's comedy (Vienna, Theater an der Wien, April 28), was very successful, and bore testimony to the young composer's talent and skill. "Der Feldwebel," in three acts, by J. Bartz, text by H. Rockstroh (Moscow, German Club, April 19), conducted by the composer, who received much applause for his skillful production. "Marrázzevi," text and music by Adolf Wilt (Hamburg, Carl-Schultze Theater, May 15), met with success. "Der Savoyarde," by Ottokar Feyth, text by Franz Josef Brackl and Victor Léon (Munich, Gärtnerplatz-Theater, June 9), was kindly received. "Madelaine," by Ludwig Engländer, text by Carl Hauser (Hamburg, Carl-Schultze Theater, June 26). "Liebesdiplomaten," in three acts, by Carl Dibbern, text by Heinrich Kadelburg and the composer (Carlsbad, Stadttheater, August 1), was received with applause. "Der Freiheiter" (first given in Paris under the title "Robert Surcouf"), by Planquette, libretto by Ohivot and Duru (Vienna, Carl-Theater, September 1), had decided success. "Der Schelm von Bergen," by Alfred Oehlschlegel, libretto by Conrad Loewe and Carl Lindau, freely after Julius von der Traun's tale of the same title (Vienna, Theater an der Wien, September 29), met with a kind reception. "Gräfin Wildfang," by Wilhelm Behre, text by Ludwig Ordemann (Berlin, Friedrich-Wilhelmstädtisches Theater, October 5), received only limited applause. "Satanien," in three acts, by Adolph Ferron (Brann, Stadttheater, October 26), was successful. "Die Jagd nach dem Glück," by Suppé, text by Richard Genée and Zappert (Vienna, Carl-Theater, October 27), conducted by the composer, with brilliant success, fully deserved by the melodious music and the amusing libretto; the performance was admirable, and composer and actors were repeatedly called before the footlights. "Simplicius," by Johann Strauss (first given in Vienna last year), completely remodeled (Prague, Deutsches Landestheater, November 10), conducted with great success by the composer. "Der Liebeshof," by Adolf Müller, Jr., text by Hugo Wittmann and Oscar Blumenthal (Vienna, Theater an der Wien, November 14), obtained a fair success. "Der Zaunkönig," by Bernhard

Triebel, libretto by Sigurd Ring and Sigward Roche (Frankfort, Stadttheater, November 16), was received with much applause. "Miroilan," by M. Fall, libretto by M. Helderan (Olmütz, Stadttheater, in November), won a complete success in spite of the deficient performance. "Ein Deutschmeister, romantic-comic operetta, by Carl M. Ziehrer, libretto by Genée and Zappert (Vienna, Carl-Theater, November 30), was given with brilliant success. The truly Viennese dance and march rhythms of the music electrified the public, whose merriment was roused at the same time by the amusing libretto. "Karin," by Hermann Zumpé, text by Fr. Willibald Wulff and Eduard Pochmann (Hamburg, Carl-Schultze Theater, December 1), conducted by the composer, who was rewarded with generous applause; most of the musical numbers had to be repeated, and the interesting subject, based upon historical facts, contributed essentially to the effectiveness of the skillfully elaborated libretto. "Die Bonifaciusnacht," a romantic-comic operetta, by Friedrich von Thul, text by Ludwig Sendlach (Prague, Deutsches Landestheater, December 8), was very successful. "Der Posaunist von Scherkingen," by Franz Beier, text by Otto Ewald (Cassel, Hoftheater, December 17), a parody of Nessler's "Trompeter von Säckingen," which put the audience in the merriest frame of mind. "Die Royalisten," by Manas, text by A. Philipp (Magdeburg, Wilhelm-Theater, December 27), was given with fair success. In England we find only "Quits," by John Crook, libretto by Hugues (London, Avenue Theatre); and in Italy we gather from among a score the following, which were reported as having won fair success: "Le Nozze sospirate," by Oreste Carlini (Florence, Teatro Alfieri, in January). "Ercole ed Euristeo," by Virgilio Galleani (Milan, Teatro Foscari). "Lorenzino," by Lanzini (Rome, Teatro Metastasio, in June). "La Mandragola," by Achille Graffigna, and "Raffaello e la Fornarina," by Maggi (both at Turin, Teatro d'Alfieri). In Spain and Portugal appeared a few operettas and zarzuelas, among which may be mentioned, for the sake of the curious title more than for any other reason, "O Imperador Alchim Fã XVIII," by Rio de Carvalho (Lisbon, Teatro do Rato).

The Ballet.—No notice has hitherto been taken of a theatrical composition closely connected with the operatic stage which, if answering the proper artistic conditions, may possess as much merit and claim as great prominence as any drama or opera—the scenic representation, through pantomime and dance, of a dramatic or comic action, accompanied by music—the ballet. Although its origin may be traced back to the pantomimes of the ancient Romans, it was developed, in its modern form, in Italy, toward the end of the fifteenth century, when it appears as a theatrical performance, enacted by dancing, but accom-

panied by speech and often also by singing. These entertainments were devised in the service and for the pleasure of the courts; and princes, princesses, and courtiers took part in the performances, which from that time forth counted among the most brilliant festivities of the splendor-loving courts of Europe, and often were executed with an extravagance surpassing all reasonable limits. The ballet reached its true artistic development at the court of France, for which Baltazarini, one of the foremost violinists of his time, composed his famous "Ballet Comique de la Reine," in 1581, for the wedding of the Duc de Joyeuse. More than eighty grand ballets were performed at court during the reign of Henry IV, and in the beginning of the seventeenth century the ballet was essentially improved by Ottavio Rinuccini, whom Maria de Medici patronized with royal liberality. Under Louis XIV, who often, and as late as 1699 took part, with his courtiers, in the performances, the ballet attained to great perfection. A new epoch began for it with the foundation of the grand opera through Lully and Quinault, when dance and pantomime were required to heighten the sumptuousness of their operas. The first attempt of this kind, which the author called a *pastorale*, was "Les Fêtes de Bacchus et de l'Amour," given with extraordinary success in 1671, and these ballet-operas, in which the dance was entirely subordinate to the lyric part, were much admired, until Antoine Houdart de la Motte reformed it in 1697, by expressing the dramatic action through the ballet itself. The first work of this kind was "L'Europe Galante," which, with the music by Campra, was performed in 1697, and served as a model for the time following. Through several modifications, the most important of which was made by Cahussac in 1747, the ballet reached its dramatic independence about the middle of the eighteenth century, when Jean Georges Noverre became its true creator as a special branch of histrionic art, by separating it entirely from the opera, and raising it to an independent performance enacted by dance, pantomime, and music, divided into several acts. A most peculiar and brilliant feature were, in the beginning of this century, the great pantomimic ballets of Vicenzo Galeotti, royal ballet-master at Copenhagen, who, following in Noverre's path, went a step further, subordinating the dance to the dramatic-plastic principle, in the spirit of the antique pantomime. These gorgeous and ingenious creations became very little known outside of Denmark, and ceased there with Galeotti's death in 1817. In a similar manner they were continued longest in Milan, which in the representation of the grandest tableaux and the daring attempts in pantomimic expression had no equal. As regards the music to the ballet, its function is not merely that of ordinary dance music, to support the rhythmical motions, but it has to interpret situations, and

lends a sort of language to the mimic and pantomimic exhibition; ample scope is therefore given it for characteristic instrumentation, and the description of various sentiments, and even great musicians, like Gluck, Cherubini, and Beethoven, have not deemed it beneath their dignity to write ballet music, and have achieved important results in this field. In the following we enumerate the new ballets that have made their appearance since 1876:

1876: "Sylvia ou La Nymphede Diane," mythological ballet in three acts (four tableaux), by Jules Barbier and Louis Mérant, music by Léo Delibes (Paris, Opéra, June 14); the fundamental idea of this work is borrowed from Tasso's pastoral "Aminta," which in the Italian poet's florid language created such a sensation (1572), but whose barren subject, transformed and amplified in "Sylvia," could scarcely have aroused great interest in its stale mythological apparatus, if the composer had not succeeded in producing such music as would not only assume a more prominent part than usual in the ballet, but hold its own even if severed from the latter. Among the numbers that pleased particularly were the waltz in the first act, the introduction to the second, and the pizzicato polka in the third act. "Madeleine," pantomimic ballet by Taglioni, music by Peter Ludwig Hertel (Berlin, Royal Opera House, in March); there is much dramatic life and action in this ballet, which in scenic effects, *ensemble* dances, and grouping must satisfy the most fastidious taste. The music contributed much to the success of the new work. "Les Fumeurs de Kiff," by Gaston Berardi, music by Émile Matthieu (Brussels, Théâtre de la Monnaie).

1877: "Loreley," by Monplaisir, music by Dall'Argine (Milan, Teatro della Scala, in January), won great applause. "Le Fandango," by Meilhac and Halévy, music by Salvayre (Paris, Opéra, November 26).

1878: "La Stella di Granata," by Marzgora (Rome, Teatro Apollo, in March). "Ein glückliches Ereigniss," by Taglioni, music by Hertel (Berlin, Royal Theatre, in October), introduces us to the circle of the famous Dutch artists Jan Steen, Jan van Goyen, Rembrandt, Hals, and Van der Helst, telling of merry and interesting episodes in their lives; the composer has again successfully displayed his charming talent as the great ballet-master's musical accompanist.

1879: "Yedda," music by Metra (Paris, Opéra, January 17). "Djellah oder die Touristen in Indien" (Vienna, Opera House).

1880: "Morgano," by Taglioni, music by Hertel (Milan, Teatro della Scala). "Sieba," in twelve tableaux, by Manzotti, music by Venanzi and Marcuso (Trieste, Teatro Comunale, in March); the subject is taken from the Edda; Sieba is a Valkyria who falls in love with Arnolfo, the young king of Thule, and in consequence is renounced by Odin and loses her immortality, but in the end finds her

earthly happiness in the union with Arnaldo. "Der Stock im Eisen," in three acts, by Pasquale Borri, after an old Vienna legend, music by Franz Doppler (Vienna, Opera House, in October); the extremely popular subject of the old mysterious Vienna landmark secured at the outset a favorable reception for this choreographic product, successfully accompanied by the composer's music, which reaches its climax in a waltz in the first act, and in the spirited march of the finale. "La Korrigane," a fantastic ballet in two acts, by François Coppée, music by Charles Widor (Paris, Opéra, December 1); the libretto is based upon a popular legend of Brittany, where Korrigane is the name of some fairies who compel the belated wanderer to dance with them in the moonlight, and otherwise exert great magic power. The *mise-en-scène* by Louis Mérante, deserves much credit, but the great success is mainly due to the composer's poetic score, which rises far above the level of ordinary ballet music.

1881: "Excelsior," a fantastic-allegorical ballet, in six acts (eleven tableaux), by Manzotti (Milan, Scala, in January); was greeted with enthusiastic applause by the Milanese public and critics; the fundamental idea of the contest between the spirit of light and that of darkness runs through the six acts of this spectacular curiosity, in which several modern inventions and discoveries play a part, carrying the spectator into various countries, and ending in a most brilliant apotheosis, intended to represent the union of all nations through modern science. "In Versailles," a lyric-choreographic tableau in one act, by Louis Frappart, music by Franz Doppler (Vienna, Opera House, March 9); the scene of this charming conception being the court of Louis XIV, ample opportunity was offered for the display of gorgeous costumes, which, added to the pretty dances and the graceful music, secured for the novelty, a most favorable reception. "Der Spielmann," by Telle, after a sketch of Gauthier, music by J. Forster (Vienna, Opera House, in June); the subject is modeled partially after the well-known legend of the rat-catcher, the music, especially of the first part, has a good deal of merit, and was much applauded. "Pygmalion," in three acts, libretto and music by Prince J. Trubetzkoi (Vienna, Opera House, November 22); the end of the pretty fable in Ovid's narrative is the starting-point in the ballet. The sculptor is given a palm-branch, whose touch imparts life to his creation, but which, when broken, changes the living again into a statue; an Egyptian king, who is present at the miracle falls in love with the maiden, and carries her off to make her his queen, but Pygmalion appears with the palm-branch, breaks it, and life vanishes from the blooming form. She is revived by the goddess, who, rejecting the cruel artist, ascends heavenward with the beauty; the music, though pleasing, can hardly be called original.

1882: "Namouna," by Nutter and Petipa, music by Edouard Lalo (Paris, Opéra, March 6); the subject is borrowed from the charming poem of Alfred de Musset, in which the beautiful slave Namouna appears repeatedly as the guardian angel of her benefactor Ottavio, who had given her her freedom; neither libretto nor music did justice to the poet's conception. "Melusine," by Carl Telle, after Moritz von Schwind's well-known pictorial cycle, set to music by Franz Doppler (Vienna, Opera House, October 4), met with immediate and great success. The music of this composition is very attractive and melodious, including many spirited dances, and describing the situations very characteristically.

"1883: *Les Poupées Électriques*," music by Frédéric Barbier (Paris, Palace Théâtre, middle of March). "La Vague," by Justament, music by Victor Roger (Paris, Palace Théâtre, April 9). "Endymion," by Louis Gallet, music by Albert Cohen (Paris, Cirque d'Hiver). "Die Assassinen," by Archduke Johann, music by J. Forster (Vienna, Opera House, November 19); the scene is laid in the time of Frederick II of Hohenstaufen, and the whole work, for which the royal author had even made the drawings for all the decorations, was greeted with unanimous applause. "La Farandole," music by Théodore Dubois (Paris, Opéra, early in December), obtained full and well-deserved success; the action is simple and easily comprehensible, at the same time having its poetic charm, and the music contains much that is fine and ingenious.

1884: "Nurjahd," in two acts, by Ch. Guillemin, music by Eichelberg (Berlin, Royal Opera House, end of February). "Der Vater der Debütantin," anonymous, after the farce with the same title, music by A. M. Willmer (Vienna, Opera House, March 26). "Harlekin als Elektriker," by Julius Price, music by Josef Hellmesberger, Jr., (ibid.). "Die Rheinnixe," by Annetta Balbo, music by Josef Miroslav Weber (Wiesbaden). "Un'Avventura di Carnevale," by Borri, music by Giorza (Milan, Teatro dal Verme). "Sakuntala," by Friedrich Uhl, after Kalidasa's drama, music by S. Bachrich (Vienna, Opera House, in October), met with tolerable success; the music, abounding in reminiscences, offers here and there an independent trait, moving in piquant rhythms. In the waltz and csárdás the composer is at his best, and it was altogether a happy thought to associate the gypsy music, on this occasion, with its Indian home.

1885: "Wiener Walzer," in three tableaux, by Louis Frappart and Franz Gaul, the music adapted by Josef Bayer (Vienna, Opera House, January 10), was a successful attempt to give in these tableaux a sketch of the history of the Vienna waltz; the intermediate music consisted of waltzes by Schubert, Josef Lanner, and Johann Strauss (father and son), and the public greeted its old favorites with enthusiastic applause. "Messalina," by Luigi

Danesi, music by Giaquinta (Milan, Scala, in January), was given with great success. "La Tzigane," by Edmond Cattier, music by Stoumon (Brussels, Théâtre de la Monnaie.

1886: "Amor," by Manzotti, music by Marenco (Milan, Scala, in February), had great success, and was immediately accepted for performance at the Opera House of Vienna, the Théâtre Eden of Paris, the Victoria Theatre in Berlin, the Teatro Costanzi of Rome, and the National Theatre in Prague. "Uriella," a fantastic *ballet-divertissement* after Maziellier (Frankfort, Stadttheater, March 16). "Pierrot Macabre," by Hannot and Hansen, music by Lanciani (Brussels, Théâtre de la Monnaie, in March). "Fata Morgana," lyric-choreographic drama in four acts, by Mosenthal, music by Josef Hellmesberger, Jr. (Vienna, Opera House, March 30), an attempt to blend opera and ballet; the work is well equipped musically, and was heartily applauded. "Les Deux Pigeons," in two acts (three tableaux), by Henry Régnier and L. Méranthe, after La Fontaine's fable, music by André Messager (Paris, Opéra, October 18), was eminently successful; the scene is on the coast of Thessaly, and presents a series of brilliant pictures and surprising effects, well accompanied by the composer's easily flowing music. "Deutsche Märsche," in three acts (four tableaux), by Alfred Holzbock and Louis Frappart, music by Josef Bayer (Berlin, Royal Opera House, October 23), received cordial applause. "Viviane," by Gondinet, music by Raoul Pugno and Clément Lippacher (Paris, Théâtre Eden, October 28), met with decided success. "Dreadina," by Hansen, music by M. Jacobi (London, Alhambra Theatre, in November), in which the finest products of German ceramic art in the last century are impersonated upon the stage; the exquisite figures, created by the industry of Dresden, Meissen, and Ludwigsburg were represented faithfully after the models, the unique combination of colors of that art period producing a dazzling effect. "Myosotis," by Saracco, music by Flon (Brussels, Théâtre de la Monnaie, December 11). "Ein Märchen aus der Champagne," an allegorical-fantastic ballet, by Willmer, music by Ignaz Brüll (Vienna, Opera House, December 14), met with a complimentary reception; the music, without showing prominently characteristic qualities, is pleasing and elegant.

1887: "Der Blumen Rache," by August Reissmann (Weisbaden, Hoftheater, February

5); the subject is borrowed from the well-known poem by Freiligrath, and was most skillfully interpreted by the composer. "Nedjira," by Nutter, music by Paul Gennevray (Monte Carlo, Monaco, in February), was given with great success. "Die verwandelte Katze," by Zell, music by Josef Hellmesberger, Jr. (Vienna, Opera House, February 14), earned cordial applause, especially for the composer's refined music, which includes several charming dances. "Orphée et les Bacchantes," by D'Alexandri and Felix Galey, music by the latter (Toulouse, Théâtre du Capitole, in March), was successful. "Les Gitanos," by G. Adrien, music by Marius Carman (Paris, Folies-Bergères, in March). "Narenta," by Manzotti, music by De Giorza (Milan, Scala, in March). "Le Lion amoureux," in one act, with choruses, by Cosseret and Agoust, after La Fontaine, music by Felix Pardon (Brussels, Théâtre de la Monnaie, about the middle of March). "Lauretta," comic ballet by Gighini, music by Bernhard Triebel (Frankfort, Opera House, April 21). "Le Château de Mac-Arrot," music by Cieutat (Paris, Folies-Bergères, in April). "Les Constellations," music by Laffont (Marseille, Grand-Théâtre, in April), met with decided success. "Die Harlemer Tulpe," music by Scheel (St. Petersburg, in October).

1888: "Teodora," by Grassi, music by Marenco (Naples, Teatro San Carlo, in January). "Au fond des Bois," by Léopold Roux, music by Gustave Mack (Nantes, in March). "Calirrhoe," by Elzéar Rougier, music by Mlle. Chaminade (Marseille, Grand Théâtre, in March). "Fleur de Neiges," by Ricard, music by Albert Cahen (Geneva, Grand Théâtre, April 6). "Rolla," by Manzotti, music by Angeli (Paris, Théâtre Eden, May 24). "La Rose d'Amour," by Kathi Lanner, music by Hervé, and "Diana," by the same authors (London, Empire Theatre, the first in July, the second in December). "Antiope," by Casati, music by Georges Jacobi (London, Alhambra Theatre, in July). "La Recluta," comic ballet, by Le Grassi, music by Herbin (Palermo, Circo Universale, in July or August). "Die Puppenfee," pantomimic *divertissement*, in one act, by J. Hassreiter and Franz Gaul, music by Josef Baier (Vienna, Opera House, October 4). "Il Saltimbanco," by Pogna, music by Bonicioli (Milan, Teatro dal Verme, in October). "Milenka," music by Jan Blockx (Brussels, Théâtre de la Monnaie, first week in November).

N

NAZARENES. The Nazarenes are a denomination composed of persons who seceded from the Christadelphians in 1873, on account of dissent from the doctrines of that sect on the depravity of the human race and their ascription to Christ of a share and inheritance in

that depravity, as expressed in the article of the Christadelphian "Statement of First Principles," "He (Christ) inherited the consequences of Adam's sin, including the sentence of death." This doctrine the Nazarenes vigorously oppose, and teach that Jesus Christ

was God's only begotten son, that he was "holy, harmless, undefiled, and separate from sinners," by virtue of this divine begetting; and thus possessing an unforfeited life, he was in a position to give that life as a ransom for the race of which he was not a member. The Nazarenes are looking for the early second coming of Christ, when he and "his immortal brethren" will rule the whole earth in righteousness from Jerusalem. They are believers in conditional immortality, regard sin as the only devil, hold that the fourth commandment is abrogated, and disbelieve in the unity of God and Christ. Their churches are in England.

NEBRASKA. State Government.—The following were the State officers during the year: Governor, John M. Thayer, Republican; Lieutenant-Governor, H. H. Shedd; Secretary of State, George L. Laws; Treasurer, Charles H. Willard; Auditor of Public Accounts, H. A. Babcock; Attorney-General, William Leese; Superintendent of Public Instruction, George B. Lane; Commissioner of Public Lands and Buildings, Joseph Scott; Chief-Justice of the Supreme Court, M. B. Reese; Associate Justices, Samuel Maxwell, Amasa Cobb.

Finance.—The financial condition of the State is highly satisfactory. The receipts and expenditures of the treasury for the past two years are as follow: Balance in treasury, Nov. 30, 1886, \$944,352.76; receipts, Dec. 1, 1886, to Nov. 30, 1888, \$4,236,528.94; total receipts, \$5,180,881.70; disbursements, Dec. 1, 1886, to Nov. 30, 1888, \$4,244,582.98; balance in treasury, Nov. 30, 1888, \$936,298.72. Of the total receipts, \$2,287,093.43 was raised by taxation, and \$1,681,186.45 was revenue from land and other sources. The levy of 1888 will yield the following amounts: General fund, \$871,668.63; school fund, \$66,004.80; capital fund, \$132,009.60; sinking fund, \$27,596.49; with other funds making a total of \$1,325,887.79.

For the next two years the Legislature is asked to appropriate \$2,890,294.57 for the expenses of the State Government and public institutions. This is an increase of \$846,725.84 over the estimates of two years ago.

The assessment of 1888 gave the value of the property of the State for taxation at \$176,012,820.45, a total increase for two years of \$32,080,249.94. The rate of taxation for State purposes for 1887 was 8½ mills, and for 1888, 7½ mills on each dollar valuation. The Governor, in his message, says the valuation rests on a fictitious basis, and, if property had been assessed at its true value, the amount given above would have been ten times as large. This seems to be due to a desire of the counties to escape taxation for State purposes. The Governor gives the following table, compiled from official sources, showing the assessment value of the principal kinds of property in Nebraska and the adjoining States to prove that the assessment valuation in Nebraska is far below the actual value.

PROPERTY,	Minnesota.	Kansas.	Iowa.	Nebraska.
Land, per acre.....	\$7 46	\$4 24	\$7 98	\$3 53
Horses.....	67 80	31 61	31 56	19 67
Cattle.....	23 21	9 50	10 97	5 58
Mules.....	63 68	36 07	23 01
Hogs.....	9 47	1 60	1 91	1 07

Education.—The report of the State Superintendent of Public Instruction shows the schools to be in a prosperous condition. The total amount contributed for public education for the year just closed was \$4,057,274.66, an increase of \$934,659.84 over the amount of the previous year. The value of school property is reported at \$5,123,179 for 1888, \$4,779,116.22 for 1887, and \$3,821,317 for 1886. The total number of school-children is 298,006. Of these, 215,889 are enrolled as pupils in the schools. This is an increase of nearly 50,000 children in two years. The total number in average attendance for the year was 129,628. The following table, giving the number of teachers employed and the amounts paid in salaries to teachers, shows the rapid increase in school accommodations:

ITEMS.	1886.	1888.
Number of males.....	2,605	2,752
Number of females.....	5,884	7,124
Days employed, males.....	217,741	256,152
Days employed, females.....	494,766	642,856
Wages paid, males.....	\$464,629 78	\$557,119 87
Wages paid, females.....	\$856,644 46	\$1,142,670 74
Average monthly wages, males.....	\$42 68	\$49 18
Average monthly wages, females.....	\$34 70	\$35 54

One of the most striking features of the growth in education is the increase in graded schools. In 1886 there were 248 such schools in the State, while two years before there were but 188. The schools in the rural districts are making progress, and a united effort is being made to bring a large percentage of all children into the schools and give them a systematic course of instruction. The State University has grown rapidly in all departments except the medical school, which was suspended in 1887. There were, in the autumn term of 1888, 186 students in the colleges, 126 in the preparatory department, and 94 in the School of Fine Arts. Graduates of high-schools in the State are admitted to the university on the presentation of their diplomas.

The tabulated statement shows that the number of acres granted and confirmed to the State for educational purposes is 2,884,398 acres; 162,051.66 have been deeded, leaving 2,722,346.84 acres, title to which is still vested in the State. There are now under contract of sale 639,454.16 acres, and under lease contract, 1,427,460.19 acres, and 655,481.99 acres that have not been leased or sold. The increase in the permanent school fund in the past two years has been about 18½ per cent. There is now invested \$1,807,142.35; unpaid principal on sales, \$4,432,048.51, and cash on hand in the treasury, \$298,602.10, making a grand total of the permanent fund of \$6,532,792.96.

Pursuant to an act of the Legislature approved March 31, 1887, the Board of Educational Lands ordered a reappraisal of the unsold educational lands in about thirty counties. More than double the value by the former appraisal is shown.

Soldiers' Home.—The main building in this institution was completed in July, 1888, and opened for the reception of inmates, 52 in number. The home is on a tract of 640 acres given by the citizens of Grand Island. The main building is to be occupied by unmarried men, as the plan contemplates the erection of cottages on tracts of from two to five acres each, where soldiers having families may live. Nebraska is one of the first States to establish a home for soldiers where families are not separated. The Legislature is asked to appropriate \$189,500 for the home during the ensuing two years.

Insane Asylums.—The hospital at Lincoln has been overcrowded during the year, its accommodations being only for 300 patients. There were in the hospital, Nov. 30, 1888, 392, and there have been present at one time as many as 414. A new asylum at Norfolk was opened in February, 1888, and a portion of the patients were transferred from Lincoln, but already this is filled. Two new wings are being built to the latter hospital, and an asylum for incurables is approaching completion at Hastings; but even after these buildings are completed and filled there will be a large number of insane in poor-houses and jails.

The institution for feeble-minded children, at Beatrice, was opened in May 1887, and the capacity of the building has already been reached, 70 pupils being accommodated. A large addition to the building has just been completed; but this will not provide for all the applicants. The superintendent estimates that there are over 700 feeble-minded children in the State. The law gives a preference for admission to the institution to the "most improvable cases," thus practically debarring the most helpless and unfortunate.

Other Charities.—In the Institute for the Deaf and Dumb at Omaha during the past two years, 150 children have been cared for and instructed. There have been admitted to the blind institute during the biennial term ending Nov. 30, 1888, 31 blind children, and the total enrollment has reached 56. The number remaining at the close of the period was 41.

At the State Home for the Friendless there were 72 inmates in December, 1888. Since that time 375 have been admitted and 381 have been surrendered to friends, placed in homes, or otherwise cared for, leaving at the close of this year 116 inmates.

Penitentiary.—There have been received into the Penitentiary since its establishment 1,465 convicts. The number of those discharged or pardoned is 1,118, and the number of deaths 9, leaving in prison, Nov. 30, 1888, 338, an increase of ten in two years. The number re-

ceived by commitment during the two years ending Nov. 30, 1888, was 816. The number discharged in the same period under the good-time act was 269.

Reform School.—This institution is now known as the Industrial School, and is operated on the open or family system as distinguished from the prison system. There are no high walls or fences or grated windows, but the school, reading-room, and workshops are resorted to as aids in the work of reformation. The attendance of 184 boys and 61 girls shows an increase of 109 over that in 1886.

Normal School.—The aggregate attendance for the past two years at the State Normal School at Peru was 645. There were graduated 111 teachers, nearly all of whom are now engaged in the schools. The attendance for 1887 was 458, and for 1888 492. There were 310 students in the normal classes at the end of this year, besides 40 in the training classes.

Cattle Diseases.—Thorough quarantine regulations have been established and efforts have been made by the live-stock agents and veterinarians to stamp out all cattle diseases. Eight hundred and thirty horses and mules were destroyed by the Live-Stock Commission from Nov. 30, 1886, to Dec. 1, 1888. The indemnity allowed was \$86,071.50, averaging \$43.50 a head. At the present, forty counties report freedom from disease among cattle.

National Guard.—Since July 1, 1887, one regiment of infantry and one troop of cavalry have been organized, so that the militia of the State now numbers 1,200. New uniforms have been purchased for the whole command, with new arms and equipments. An encampment was held in Lincoln in 1887, and in Wahoo in 1888.

New Counties.—During the past two years five new counties have been organized—Box, Butte, Thomas, Grant, Perkins, and Rock. Four more will complete their organization early in 1889—Banner, Deuel, Scotts Bluff, and Kimball. The last four are being organized out of Cheyenne County.

New State Buildings.—The following is a list of the State buildings erected by virtue of appropriations made by the last Legislature and the cost of each, most of them being additions to buildings previously erected: Asylum for Incurable Insane at Hastings \$68,900; Industrial Home at Milford, \$13,700; Soldiers' and Sailors' Home at Grand Island, \$28,000; Institute for Deaf and Dumb at Omaha, \$10,000; Industrial School at Kearney, \$29,975; Hospital for Insane at Norfolk, \$84,292; Home for the Friendless, \$5,651.20; Penitentiary, \$39,200; Feeble-Minded Institute at Beatrice, \$18,218; Institute for Blind, \$30,700; Grant Memorial Hall, \$19,100; Industrial College building (Nebraska Hall), \$41,000.

Political.—A full set of State officers and members of the Legislature and of Congressmen, as well as presidential electors, were to be chosen at the election this year. The first ticket for State officers in the field was nomi-

nated by the Prohibitionists in convention at Omaha on August 16, and was as follows: For Governor, George E. Bigelow; Lieutenant-Governor, John Dale; Secretary of State, John E. Hopper; Auditor, John F. Holin; Treasurer, James H. Stewart; Attorney-General, John Barud; Commissioner of Public Lands, Armas Roberts; Superintendent of Public Instruction, Horatio S. Hilton. The usual prohibitory resolutions were adopted.

A week later the Republicans met at Omaha and renominated Governor Thayer, Secretary of State Laws, Attorney-General Leese, and Superintendent of Public Instruction Lane. For Lieutenant-Governor, George D. Meiklejohn was nominated; for Auditor, T. H. Benton; for Treasurer, J. E. Hill; and for Commissioner of Public Lands, J. Steen.

The Democrats nominated the following ticket: For Governor, John A. McShane; Lieutenant-Governor, Frank Folda; Secretary of State, Patrick A. Hines; Auditor, W. A. Poynter; Treasurer, James M. Patterson; Attorney-General, W. H. Munger; Commissioner of Public Lands, P. H. Junesen; Superintendent of Public Instruction, Marion Thrasher.

The Union Labor party held its convention at Hastings on September 4 and nominated: For Governor, David Butler; Lieutenant-Governor, C. W. Potter; Secretary of State, I. Henther; Auditor, H. S. Alley; Treasurer, D. C. Nash; Attorney-General, M. F. Knox; Commissioner of Public Lands and Buildings, W. F. Wright; Superintendent of Public Instruction, Mrs. M. F. Wood. The resolutions denounce the national banking system, call for free sugar, free wool, and free woolen goods, free lumber, coal, and salt; favor the fixing of local freight-rates on the same scale with through rates, with proper allowance for terminal facilities; demand the suppression of trusts; and condemn the Chicago, Burlington and Quincy road in its action toward the Brotherhood of Engineers.

The canvass was unmarked by features of special note. At the November election the Republican national ticket was successful, and Gov. Thayer was re-elected, receiving 103,983 votes to 85,420 for McShane, 9,511 for Bigelow, and 8,941 for Butler; but Gov. Thayer ran about 4,000 votes behind the rest of his ticket. The Legislature, elected at the same time, will contain 27 Republicans and 6 Democrats in the Senate, and 76 Republicans, 22 Democrats, 1 Union Labor, and 1 Independent in the House. Republicans were elected in the three congressional districts.

NETHERLANDS, a constitutional monarchy in western Europe. The Constitution adopted on the re-establishment of the kingdom in 1815 was revised in 1848, and in 1887 it was amended by a law extending the right of suffrage to all male citizens, twenty-three years of age, who pay ten guilders in taxes on real estate or a personal tax of similar amount, that passed the Second Chamber on October 14, and was

proclaimed on November 30. The States-General, as the national legislature is called, consists of a First Chamber of 50 members elected by the provincial states for nine years, one third retiring every three years, and a Second Chamber of 104 deputies elected directly by the people for four years. The Government and the Second Chamber have the right of introducing legislation, but the First Chamber possesses only a veto power.

The reigning sovereign is Willem III, born Feb. 19, 1817, whose second wife is Queen Emma, daughter of Georg Victor, the reigning Prince of Waldeck-Pyrmont. Their only child is the Princess Wilhelmina, born Aug. 31, 1880, who will succeed her father under the Netherlands law of succession which admits female heirs in default of males. In case there is no legal heir the King can appoint his successor with the consent of a specially elected legislature, and if he dies without an heir being nominated the States-General, consisting of twice the usual number of members, elects a king by a joint vote of both Chambers.

The following ministers were in office at the beginning of 1888: President of the Council and Minister of the Interior, Dr. J. Heemskerk Az, appointed April 22, 1888; Minister of Foreign Affairs, Jonkheer A. P. C. van Karnebeek; Minister of Finance, J. C. Bloem; Minister of Justice, Baron du Tour de Bellinchave; Minister of the Colonies, J. P. Sprenger van Eyk; Minister of Marine, F. C. Tromp; Minister of War, General A. W. P. Weitzel; Minister of Commerce, J. N. Bastert.

Area and Population.—The area of the kingdom is 33,000 square kilometres or 12,648 square miles. The population on Dec. 31, 1887, was computed to be 4,450,870, as compared with 4,012,693 in 1879, when a census was taken. The population of 1887 was divided into 2,204,259 males and 2,246,611 females. The number of marriages in 1887 was 30,924; births, 156,906; deaths, 94,842; excess of births, 62,064. The largest cities are Amsterdam, having 390,016 inhabitants on December 31, 1887; Rotterdam, with 193,658; and the Hague, with 149,447.

Finance.—The revenue is estimated in the budget of 1888 at 118,966,686 guilders, of which 26,705,100 guilders are derived from direct taxes; 42,725,000 guilders from excise duties; 22,003,500 guilders from stamps, registration, and succession duties; 5,010,500 guilders from customs; 5,850,000 guilders from the post-office; 2,210,000 guilders from railroads; 2,585,000 guilders from domains; 1,120,800 guilders from the telegraphs; 1,050,000 guilders from pilotage dues; and 9,726,786 guilders from other sources. The total expenditures are estimated at 136,039,594 guilders, of which 36,353,966 guilders are for the debt; 24,048,701 guilders for the expenses of the ministry of Waterstaat, commerce, and industry; 24,045,212 guilders for financial administration and worship; 20,274,391 guilders for military expenses; 12,656,786 guild-

ers for the navy; 10,287,497 guilders for the Department of the Interior; 5,108,789 guilders for the Department of Justice; 1,269,691 guilders for the central administration of the colonies; 692,766 guilders for the diplomatic service; 651,795 guilders for the Cabinet; and 650,000 guilders for the civil list of the King. The Government has authority, when the expenditures exceed the revenue, to emit treasury bills for not more than 18,000,000 guilders.

The capital of the public debt in 1888 amounted to 1,072,021,650 guilders, including 15,000,000 guilders of paper money, showing a reduction in twelve months of 2,110,700 guilders. The expenses of the debt in 1888 were 30,589,555 guilders for interest and 5,164,400 guilders for amortization.

Change of Ministry.—The first elections for the Second Chamber under the new Constitution took place on March 6, 1888, and those for the First Chamber a few days later. The new Second Chamber was composed of 45 Liberals, 27 Anti-Revolutionaries or Calvinist Clericals, 26 Roman Catholics, 1 Conservative, and 1 Socialist. The Socialist member is Nieuwenhuis, the leader of the party, who was elected in Schoterland by 1,167 out of 2,208 votes. The members of the First Chamber were divided into 35 Liberals, 10 Ultramontanes, 4 Conservatives, and 1 Calvinist. Since the Liberal ministry was left without a majority in the Lower House, Heemskerk and his colleagues handed in their resignations to the King. The new Cabinet was not constituted till April 19. It is composed of the following members: Minister of the Interior, Baron A. E. Mackay; Minister of Justice, Jonkheer G. L. M. H. Ruys van Beerenbeek; Minister of Finance, Jonkheer K. A. Godin de Beaufort; Minister of Foreign Affairs, Jonkheer C. Hartzen; Minister of the Colonies, Dr. L. W. O. Keuchenius; Minister of War, Col. J. W. Bergansius; Minister of Waterstaat, Commerce, and Industry, J. P. Havelaar; Minister of Marine, Capt. H. Dyserinck. The new ministers, of whom Hartzen and Ruys van Beerenbeek were High Conservatives, the former being a Protestant and the latter a Catholic, Dyserinck a Liberal, and Keuchenius a Radical, were pledged to the principle of confessional education. They were in favor of introducing universal obligatory military service, of which Col. Bergensius was an advocate, and the Minister of the Colonies was anxious to purify and reform the colonial administration. Otto van Rees, the Governor-General of India, resigned at once, anticipating removal. The Minister of the Interior unfolded the ministerial programme in the States-General on May 1, the opening day, the chief feature of which was the removal of hindrances to the development of denominational schools. The inquiry regarding social reform in both the agricultural and the industrial branches of labor was to be pursued further, and a commission was appointed with instructions to prepare new laws for the national defense.

Legislative Session.—The serious illness of the King made it necessary for the States-General to come together on July 12 for the purpose of considering the question of the guardianship of the Princess Wilhelmine. Queen Emma is made guardian of her daughter, but in respect to her sojourn at any time outside the country, as also in respect to the persons to whom her education shall be confided, the advice of a council, consisting of five high officials, designated in the law, and four persons nominated by the King, must be followed. If the Queen marries again her guardianship ceases, unless it is continued by a special law. The regular session began on September 18. Baron Mackay read the speech from the throne, in which an amendment to the Constitution, a new law on elementary education, the division of the large cities into separate electoral districts, an act to restrict child labor in factories, and a change in the sugar-tax summed up the ministerial programme.

Commerce.—The total value of the special imports in 1886, inclusive of the precious metals, was 1,091,488,000 guilders, and that of the special exports 949,489,000 guilders. The imports from Dutch colonies amounted to 92,490,000 guilders, the share of Java being 90,188,000 guilders and that of the Dutch West Indies 2,302,000 guilders, while the value of the exports to the colonies was 47,624,000 guilders, 44,826,000 guilders representing the exports to the East Indies and 2,798,000 guilders those to the West Indian possessions. The commerce with foreign countries in 1886 is shown in the following table, which gives the value in guilders:

COUNTRIES.	Imports.	Exports.
Germany Zollverein.....	295,818,000	306,708,000
Great Britain.....	362,128,000	355,408,000
Belgium.....	157,940,000	187,569,000
United States.....	65,978,000	45,754,000
Russia.....	74,716,000	4,894,000
Hanse Towns.....	20,160,000	17,545,000
British India.....	84,423,000	89,000
France.....	17,976,000	10,811,000
Sweden and Norway.....	10,594,000	7,664,000
Spain.....	15,819,000	577,000
Italy.....	4,575,000	10,864,000
Peru.....	8,127,000
Denmark.....	984,000	4,968,000
Japan.....	4,762,000	323,000
Portugal.....	1,454,000	1,274,000
Austria.....	542,000	1,442,000
Other countries.....	81,069,000	6,843,000
Total.....	1,102,628,000	949,489,000

Navigation.—The number of sailing-vessels entered at Dutch ports in 1887 was 2,302, of 1,799,181 metric tons, of which 2,060, of 1,751,858 tons, had cargoes. The total number cleared was 2,327, of 1,833,616 tons, and of these 1,481, of 956,354 tons, shipped cargoes. Of the total number entered 883, of 538,676 tons, and of those cleared 911, of 582,710 tons, were registered in the Netherlands. The steam-vessels entered numbered 6,840, of 11,667,436 tons, of which 6,029, of 11,269,718 tons, were with cargoes; the number cleared was 6,296,

of 11,451,874, of which 4,332, of 7,180,327 tons shipped cargoes. Of the steamers entered 1,657, of 8,428,661 tons, carried the Dutch flag, and of those cleared 1,734, of 8,567,297 tons. The mercantile navy of the Netherlands on Jan. 1, 1888, comprised 516 sailing-vessels, of 440,430 metric tons, and 105 steamers, of 284,927 metric tons.

Railroads.—There were 2,550 kilometres or 1,584 miles of railroads in operation on Jan. 1, 1887. The state owned 1,390 kilometres. The earnings of all the lines in 1885 amounted to 25,319,000 guilders, and the expenses were 14,466,000 guilders. The earnings of the State railroads were 11,876,000 guilders, and the expenses 7,210,000 guilders. The capital invested in railroad construction up to 1885 was 213,651,089 guilders.

Telegraphs.—The State had 4,908 kilometres of telegraph lines and 17,238 kilometres of wires on Jan. 1, 1888. Of 657 stations in the country 358 belonged to the State and 299 to companies. The number of messages that passed over the wires in 1887 was 3,784,065, of which 1,996,628 were internal, 1,706,396 international, and 81,041 official. The receipts were 1,176,146 guilders; the expenses, 1,519,028 guilders for ordinary, and 28,689 guilders for extraordinary purposes.

The Army.—The war strength of the European army in 1887 was 2,342 officers and 63,891 men, exclusive of the active schutteryen, numbering 41,217 men, and the territorial militia, numbering 76,467 men. The Vitali system of converted rifle has been adopted for the infantry.

The Navy.—The fleet of war in July, 1888, consisted of 24 iron-clads, 12 monitors, 6 river gun-boats, 28 cruisers, 8 paddle-wheel gun-boats, 30 coast-guard gun-boats, 81 torpedo-boats, 5 batteries, and 21 other vessels.

Colonies.—The Dutch possessions in the East Indies are divided into the colony of Java and Madura, where there is a settled government, and the so-called outposts, which include Sumatra, Borneo, the Riouw-Lingga Archipelago, Banka, Billiton, Celebes, the Molucca Archipelago, and the Sunda Islands. Java has been governed since 1832 on the culture system, under which the labor of the natives is officially superintended and directed so as to produce food crops sufficient for the population and as much colonial produce for the European market as is possible. Under this system coffee, indigo, sugar, pepper, tea, tobacco, and other articles have been cultivated for the Government by the forced labor of the natives. Forced labor has been abolished except in the cultivation of coffee and sugar, and will cease in connection with the latter crop after 1890 in accordance with a law that was passed in 1870. The culture system has not been introduced in the outposts except in the tobacco districts of the west coast of Sumatra and in the residency of Menado on the island of Celebes, where it is applied to the cultivation of coffee. The Government, by monopolizing the trade, derives a

large profit from the privately grown tobacco of Java, which is purchased at one fifth or one sixth of the price for which it is sold in the auction sale at Amsterdam. The opium monopoly adds to the revenue of the Government, although the introduction of the narcotic has tended to impoverish the people. The natives of Java were formerly submissive and satisfied, but of late years the failures of the coffee-crop, the crises in the sugar and indigo trades, and the irregularities that have crept into the colonial administration have produced widespread discontent. In 1888 an insurrection took place in the spring in the district of Bantam, which was put down with difficulty by the prompt and energetic action of the military authorities, who sent a large force into the disturbed district. A pretender appeared who falsely claimed to be a descendant of the former sultans, and obtained a large following, but was finally arrested and proved to be an impostor, and was condemned to four years' imprisonment. In the summer the rumor of a general insurrection spread through the eastern part of the island, and the Europeans were plunged into a state of extreme anxiety. At Soerabaya the civic guard had orders to take up arms at the first alarm, and the whites who lived outside brought their families into the town. The expected uprising was prevented by the timely action of the police. There was a conspiracy extending through central and eastern Java. In Surakarta, where nightly meetings took place in various places, the authorities seized the principal ringleaders, who confessed that their object was to establish a new Javan empire. In the residencies of Kediri, Madiun, and Pasuruan the head conspirators were caught in time and brought behind bars. In Vorstenlanden a nocturnal assembly was surprised by the police, and in the house of one of the leaders was found a seal of state on which was engraved the name Mangku Negoro IV, as the prospective ruler of the restored empire was called.

The island of Sumatra is divided into a number of districts, provinces, or kingdoms, some of which are directly under Dutch rule, whereas others continue under the native rulers aided by Dutch advisers. The latest official statements give the population at 2,792,561 natives, 105,823 Chinese, and 8,847 Europeans.

The military authorities were no nearer mastering the rebellion in 1888 than they had been in previous years. A falling out between the Sultan and one of his vassals, who was a formidable enemy of the Dutch, was a favorable circumstance. Yet the strongest foe that they had to encounter, the berri-berri disease, was worse than ever before. It attacked European women, who had previously been spared. A medical commission that was sent to study the nature of the plague and means of prevention, suggested preventive measures that reduced the ravages among the soldiers. The

hospital doctor made the discovery that the soldiers were able to simulate the disease very perfectly in order to be transferred and thus escape the real sickness. In the budget for 1888-'89 a sum is appropriated for a body of troops composed of the soldiers who are sent back to Holland on account of temporary sickness, and who will serve as *cadres* of instruction for the new troops that are raised for India. The Government is now attempting to bribe the Acheenese chiefs into submission. In the Indian budget the sum of 45,000 guilders is set down for pensions to those who have ceased their hostilities. The plan of restoring the Sultanate, evacuating Acheen and retiring to Oleh-leh is contemplated by the present Government.

NEVADA. State Government.—The following were the State officers during the year: Governor, Christopher C. Stevenson, Republican; Lieutenant-Governor, Henry C. Davis; Secretary of State, John M. Dormer; Treasurer, George Tuffy; Comptroller, J. F. Hallock; Attorney-General, John F. Alexander; Superintendent of Public Instruction, W. O. Dovey; Chief-Justice, of the Supreme Court, Orville R. Leonard; Associate Justices, Charles H. Belknap, Thomas P. Howley.

Finances.—The total State expenditures for 1887 were \$523,412.84, of which \$130,980 represents interchanges between the various State funds, leaving the actual State expenses \$392,532.84. These expenditures exceeded the income for the year by about \$50,000. Of the above amount \$41,498.07 was expended for the support of the State Prison, \$50,938.44 for the State Insane Asylum, \$13,022.90 for the Orphan's Home, \$18,164.25 for completion and improvements of the State University, and \$11,112.55 for its support. The legislative session cost \$52,487.84, and \$53,682.37 was paid for the support of schools.

Concerning the State debt, the Comptroller says in his report at the close of 1888: "The reduction of the rate of taxation in 1879, from ninety cents to fifty-five cents on each \$100 of property valuation and the net proceeds of mines, resulted in a loss of revenue of about \$240,000 for the years 1879-'80, and was the means of creating a bonded debt for general expenses, the interest on which has already amounted to \$39,688.55, and will probably amount to much more before the debt can be disposed of, as \$106,000 of the principal is still unpaid, and the necessities of this year will probably increase this amount by \$80,000 or more. In view of these facts, and with the knowledge that the revenue has fallen off in the last two years in the sum of about \$16,000 a year, through loss of the drummer tax and the reduction of poll taxes; that the State is now almost entirely dependent upon the tax on property, for revenue; and of the strong probability that appropriations from the general fund, largely in excess of those for past years, will be found necessary for the ensuing

two years for exigencies that have arisen; it is hoped that the Legislature at this session will not make the mistake of reducing the tax rate, without discovering some compensating source or sources of revenue."

In addition to the debt above mentioned, the State holds in the school fund an irredeemable bond for \$380,000, on which it pays 5 per cent. interest annually.

Education.—The number of children of school age in the State for the school year 1887-'88 was 9,716, a decrease of 112 from the previous year. The amount apportioned by the State from its school funds to the public schools was about \$68,000.

The second year of the State University since its removal to Reno has proved prosperous. At its opening in the autumn of 1887, after being closed six months for extensive repairs, the number of students in attendance was only 86; but before the close of 1888 there were 115 on the rolls, outside of the normal course. An agricultural experiment station is established in connection with the University, which receives annually \$15,000 from the General Government for its support. A school of mines, a school of agriculture, a school of liberal arts, a business department, and a normal school are all organized under the university.

The Insane.—By an act of 1887 the Governor, Comptroller, and Treasurer were created a board of commissioners for the care of the indigent insane. The board at once took control of the State asylum, and made a thorough examination of its condition. Grave charges having been made against the superintendent, the board in May instituted an investigation, which resulted in the exoneration of that official. An attempt to provide a supply of water for the asylum from Truckee river, has led the board into an expensive litigation, not yet ended. The number of inmates during the year has averaged 162.

Mining.—The bullion-product of Nevada for 1888 amounted to about \$12,305,608; for 1887 it was \$10,232,458; for 1886, \$9,169,920.

Silver Coinage.—The Governor says in his annual message: "This question is one of the most important to the people of Nevada, and it may be said to be paramount to all others. The difference in the price paid for silver by the Government and the price at which it pays it out would make a good profit for the miner. For the past year the price paid for silver has averaged about ninety-three cents a fine ounce, while it is paid out at \$1.2928. Thus the Government makes in seigniorage about thirty-six cents on every ounce of silver purchased, and this is taken from the comparatively small number of miners in the United States, compared with the entire population interested in silver money. The low price paid by the Government for silver has closed down hundreds of mines that would to-day be in active operation, giving employment to thousands of men, if silver were on the same footing in regard to

coinage at our mints as gold. The gold-miner can take his gold to the mint and receive the coin value in gold, which is virtually free coinage to him; but the silver-miner must sell to the mint at a price regulated by the London market. It is believed, as the silver question is better understood, we shall have free coinage of the white metal. When that is brought about this State will become prosperous."

Decisions.—The Legislature of 1887 passed an act making it necessary to subscribe to an oath against Mormonism, in order to qualify as a voter. By a decision of the State Supreme Court, early in October, this act was found to be unconstitutional.

Political.—The Republican State Convention was called to meet at Winnemucca on May 15. It selected delegates to the National Convention and presidential electors, and the following ticket for State officers: For Justice of the Supreme Court, M. A. Murphy; Regents of the State University, T. H. Wells, H. L. Fish, and E. T. George. As candidate for Congress, H. F. Bartine was selected. The platform adopted contains the following:

A financial policy whereby both gold and silver shall form the basis of circulation, whether the money used by the people be coin, or in certificates redeemable in coin, or both, as convenience may require, is imperatively demanded.

The attempt to substitute National bank-notes, costing the Government millions of dollars annually, for free silver, costing nothing, is an outrage upon the people; that the money ring or trust, which has usurped the sovereign power of the Government to issue money, and which has fraudulently demonetized silver and seized the revenues of the Government for private speculation, shocks the moral sense of the people and destroys respect for Government and law.

We are in favor of the protection of home industry, and that the laborers of this country have a right to all the work required to supply the people of the United States, and that we are in favor of high wages in this country, and to that end will protect the wage-workers' competition with the cheap labor of other lands.

We are in favor of the absolute exclusion of Chinese, and the restriction of immigration, by which the present overcharged condition of the labor market is made worse, and also favor legislation by which a revision of our naturalization and land laws may be accomplished.

We demand, in behalf of our various industries, the retention of the duties on lead, borax, soda, hides, and leather, and to restore the tariff of 1867 on wool.

We recognize the right of labor to organize for its lawful protection.

We favor the submission by the Legislature to the people of an amendment to the Constitution giving the Legislature the power to regulate the liquor-traffic.

We favor liberal appropriations by Congress for hydrographical and topographical surveys in this State to the end that the waste waters may be preserved for the purpose of irrigation.

We favor the reduction of the Treasury surplus by the payment of pensions to Union soldiers, their widows and orphans, the improvement of rivers and harbors, the building of defenses for our sea-coasts, the erection of public buildings, the creation of a navy, the purchase of bonds, and the repeal of the internal-revenue laws taxing tobacco.

It is the duty of the State to maintain free non-sectarian schools in the rural and sparsely settled districts as well as in towns and thickly settled sections, and such a division of the school money should be

made as will furnish the means of education to all children in the State.

We are in favor of reopening the Carson Mint for coinage, and raising the wages of its employes to the standard paid by the last Republican Administration.

The Democratic State Convention met on May 16, at Reno, and nominated for Congress, George W. Cassidy; for Justice of the Supreme Court, William M. Sewell; for Regents of the State University, M. S. Bonnifield, S. D. King, and F. M. Edmunds. Presidential electors and delegates to the National Convention were also chosen. The platform adopted strongly urges the free coinage of silver, opposes Chinese immigration, and approves civil-service reform. The National Administration is commended. At the election in November, the Republican State and National tickets were successful. For Congressman, Bartine received 6,921 votes, and Cassidy 5,682. The vote for Justice of the Supreme Court was: Murphy, 6,467; Sewell, 6,122. The State Legislature, elected at the same time, will stand 15 Republicans and 5 Democrats in the Senate, and 26 Republicans and 14 Democrats in the House.

At the same election a vote was taken on the question whether a convention to revise the State Constitution should be called, and also on eleven proposed constitutional amendments. The proposition for a constitutional convention was rejected by a vote of 1,644 in its favor to 2,740 against. Of the amendments, ten were adopted and one, which had been irregularly adopted two years before, providing that constitutional amendments may be submitted to the people after passage by one Legislature, was rejected. The successful amendments change the time of meeting for the Legislature from the first to the third Monday of January; empower each branch of the Legislature to expel a member for disorderly conduct; enable the Legislature to establish and regulate the compensation and fees of county and township officers, and to regulate the rates of freight on railroads incorporated within the State; prohibit "salary-grab" bills; abolish the office of Lieutenant-Governor; provide that the President of the Senate shall be elected by its members and succeed to the governorship in case of vacancy, and that in case of his death or disability the Speaker of the House shall succeed to the governorship; regulate the impeachment of public officers by the Legislature; regulate the revenues for educational purposes and prohibit the transfer of school moneys to any other fund; authorize the levy of a special tax for the maintenance of the State University; and make it obligatory upon the State, instead of the counties, to support indigent infirm or otherwise unfortunate citizens needing aid. A question, however, soon arose as to the legality of the procedure by which these amendments were adopted. An act of the Legislature of 1897 upon this point provided that publication of proposed amendments should be

made "for a period of ninety days next preceding any general election held in this State, when any proposed amendments are pending." There had been publication of the amendments two years before prior to a general election, and through a misapprehension of the terms of the new act, a second publication this year was not deemed necessary; but the State Supreme Court, by a decision rendered late in December, decided that such publication should not have been omitted, and that the election was therefore illegal and of no effect.

NEW BRUNSWICK. There were no changes in the Executive Government of the Province of New Brunswick in 1888. Three members of the Legislative Council died during the year, viz., Hon. William Hamilton, who was the last surviving member of the Council appointed directly by the Crown, Hon. John Lewis, and Hon. W. M. Kelly. Dr. Lewis, a member of the Assembly, resigned during the year, and H. R. Emmerson was elected in his stead.

Agriculture.—The year was remarkable for excessive rainfall and early frosts. At St. John the rainfall during the twelve months was 55.675 inches, against an average of 41.959 inches for the preceding eight years. The autumn freshets were unusually high, and considerable damage was done to bridges and to the crops stored on low lands. Nearly all crops were below an average, owing to the wet harvest and early frost.

In 1886 the Provincial Government imported from Europe and the United States a number of pure bred stallions, retaining the ownership and leasing the animals at public competition annually. In 1888 a further importation was made, and, in order to encourage the raising of pure bred stock, an importation of pure bred mares was also made. The latter were sold at public auction, subject to the restriction that they should be kept in the province and bred to pure bred sires of their respective breeds. The sale was very successful. An importation of pure bred sheep was made at the same time, and the animals were sold under restrictions.

The Legislature in 1888 passed an important act relating to agriculture. The Board of Agriculture, which formerly supervised the expenditures for this service, was abolished, and a Department of Agriculture was created, presided over by a member of the Executive Government, who is known as the Commissioner for Agriculture. Hon. David McLellan was appointed commissioner. Under the new law the province is divided into sixty districts, and in each district an agricultural society may be established. A membership of fifty and a subscription list of \$100 is necessary to constitute a society, which will receive a charter and also an annual appropriation from the provincial treasury. The object of establishing this new department is the promotion of improved husbandry and stock-raising, the holding of exhibitions, and the dissemination of information in regard to agriculture.

Legislation.—The principal other acts of general interest passed by the Legislature in the session of 1888 were: An act relating to mines and mining-leases, providing for the forfeiture of leases under which no minerals have been raised for twelve months continuously, or in case of breach of conditions, and exempting limestone and gypsum from crown royalty. An act prohibiting the killing of moose, deer, or red deer for three years.

Shipping.—The following shows the number, description, and tonnage of vessels registered in New Brunswick on Dec. 31, 1880:

CLASS OF VESSELS.	Number.	Tonnage.
Ships.....	146	66,344
Barks.....	183	109,819
Barkentines.....	18	5,848
Brigs.....	9	499
Brigantines.....	83	10,084
Schooners.....	605	38,035
Wood-boats.....	88	5,345
Sloops.....	6	116
Steamers.....	85	6,056
Total.....	1,109	227,078

There was a loss on tonnage of 81,796 tons from the previous year.

Commerce.—The foreign trade of New Brunswick during the year ending June 30, 1888, was as follows:

MOVEMENT.	Dutiable goods.	Free goods.	Total.
Imports.....	\$3,783,928	\$2,274,261	\$6,058,084
Exports.....			6,929,568
Total foreign trade..			\$12,987,647

The principal countries with which this trade was carried on and the value of the trade with each were as follow:

Imports from Great Britain.....	\$2,142,694
Exports to Great Britain.....	2,709,532
Imports from the United States.....	3,029,221
Exports to the United States.....	2,648,825
Imports from the West Indies.....	305,775
Exports to the West Indies.....	24,065

The largest item in the export trade is composed of products of the forest, which were valued at \$4,891,832, of which a little more than half was sent to Great Britain. The United States imported \$981,235 worth of provincial lumber, and \$1,202,538 worth cut in the United States was manufactured in and exported from the province to the United States.

Railways.—The following new lines of railway, in whole or in part in New Brunswick, were opened for traffic during the year: The Riviere du Loup and Temisconata Railway, from Edmundston on the New Brunswick Railway to Riviere du Loup on the Intercolonial Railway, 90 miles, of which 18 miles are in New Brunswick; the Fredericton Railway, connecting the Northern and Western and New Brunswick Railways, 1 mile long. The following lines were under construction during the year: The Central Railway, from Norton on the Intercolonial Railway to the head of Grand Lake, 40 miles; the Albert Southern Railway, 12 miles; the Fredericton and Woodstock Railway, 66

miles; the Tobique Railway, 28 miles. The following is the mileage of railway in operation in the province during the year: Intercolonial and branches, 374 miles; New Brunswick, 443 miles; Northern and Western, 121 miles; Grand Southern, 80 miles; Albert, 48 miles; Kent Northern and St. Louis, 38 miles; Elgin, 14 miles; Chatham, 9 miles; St. Martin's and Upham, 30 miles; Havelock, Elgin, and Petitcodiac, 12 miles; Caraquet, 66 miles; New Brunswick and Prince Edward Island, 80 miles; Mondon and Buctouche, 40 miles; St. John Bridge and Railway, 2 miles; Riviere du Loup and Temisconata, 13 miles; Fredericton Bridge, 1 mile—total, 1,317 miles. The increase since 1886 is 297.

FINANCES.—The revenue of the province during the year was as follows: From Dominion subsidies, \$487,306.53; territorial revenue, \$134,604.17; other sources, \$67,968.98—total, \$689,879.68. The principal items of expenditure were: Education, \$165,676.38; roads, bridges, and public buildings, \$218,432.81; interest, \$95,187.50; agriculture, \$30,599.17; executive and legislative expenses, \$50,912.70; care of the insane, \$35,000. The minor items swell the expenditure for the year to \$676,093.22. The provincial debt on Dec. 31, 1888, was \$768,000 at 6 per cent.; \$143,200 at 5 per cent.; \$280,000 at 4½ per cent.; \$910,000 at 4 per cent.—total, \$2,106,200. The average interest is 4.86½ per cent., entailing a future charge of \$102,490.

Ship-building was at a comparatively low ebb in New Brunswick in 1888; only 2 steamers and 20 schooners, aggregating 1,967 tons, were built in the province during the year ending June 30, 1888. The additions to the shipping register of the province in the same period included 39 vessels, aggregating 3,865 tons, and there were sold to other countries 5 vessels, aggregating 4,638 tons and valued at \$55,643.

The arrivals and departures at New Brunswick ports during the same period including vessels engaged in the foreign and coasting trade were:

MOVEMENT.	Number.	Tonnage.
<i>Arrivals.</i>		
Steamers.....	739	252,017
Sailing-vessels.....	4,903	263,767
<i>Departures:</i>		
Steamers.....	566	235,969
Sailing-vessels.....	4,722	210,876

NEW HAMPSHIRE. *State Government.*—The following were the State officers during the year: Governor, Charles Henry Sawyer (Republican); Secretary of State, A. B. Thompson; Treasurer, Solon A. Carter; Attorney-General, Daniel Barnard; Superintendent of Public Instruction, James W. Patterson; Insurance Commissioner, Oliver Pillsbury, who died on February 22, and was succeeded by Henry H. Huse; Railroad Commissioners, Henry M. Putney, Edward B. S. Sanborn, Benjamin F. Prescott; Chief-Justice of the Supreme Court, Charles Doe; Associate Justices, Isaac W.

Smith, William H. H. Allen, Lewis W. Clark, Isaac N. Blodgett, Alonzo P. Carpenter, and George A. Bingham.

FINANCES.—The annual report of the State Treasurer, for the fiscal year ending May 31, 1888, shows the following facts:

RECEIPTS.	
Cash on hand, June 1, 1887.....	\$240,616 11
Total receipts during the year.....	1,170,990 48
Total.....	\$1,411,606 59
DISBURSEMENTS.	
Total disbursements during the year.....	\$1,310,850 67
Cash on hand, June 1, 1888.....	100,756 92
Total.....	\$1,411,606 59
STATE DEBT.	
Liabilities, June 1, 1888.....	\$2,966,263 94
Assets, June 1, 1888.....	107,709 67
Net indebtedness.....	\$2,858,600 57
Liabilities, June 1, 1887.....	\$3,079,161 30
Assets, June 1, 1887.....	247,560 51
Net indebtedness.....	\$2,831,600 79
Increase of debt during the year.....	\$7,559 78

The total receipts of the Treasury from ordinary revenue were \$584,523.36, and the total State expenses \$561,883.14. Among the larger receipts were: From State tax, \$400,000; from railroad tax, \$99,757.61; from insurance tax, \$6,980.22; and from charter fees, \$15,088.50. The disbursements include \$322,288 for ordinary State expenses, \$63,998.24 for extraordinary charges, and \$175,596.90 for interest on the State debt.

Education.—The report of the State Superintendent for the school year of 1887 shows that, under the recent law permitting town management of schools, five school districts gave up their special organization during the year, and went into the town system, leaving only 270 districts reported in the State.

The average length of the schools in weeks, for the whole State, was 22.9. For 1885, under the old system, it was only 19.95. Thus the new law gives on the average three weeks additional to every school of the State. The whole number of enrolled scholars for 1887 was 61,826. The whole number in 1877 was 68,035. This is a decrease of 6,209 in ten years. The whole number reported in private schools in 1887 was 7,652. The number reported in 1877 was 1,493. This shows an increase of 6,159 in ten years, and measurably to what extent children have been drawn into parochial schools in that time. It does not vary materially from one tenth of the entire school population of the State. As yet this movement has been confined to the cities and larger towns.

There has been an increase of twenty-two graded schools resulting from a union of small schools. Twenty-eight new school-houses have been built, and the average attendance upon the schools was 45,877.72, an increase of 2,738.72 over the previous year. Of the town system, the Superintendent says:

Towns that have abolished their unnecessary schools have given to the children more schooling than ever

before for the same money, and in towns that have not the only practical effect of the law has been to give an improved system of supervision, a less burdensome method of providing and maintaining school property, and more equitable educational privileges. In putting the system into operation there may have been cases of hardship. There were under the old law, and will be under any system in a sparsely settled locality.

State Prison.—The report of the warden of the State Prison for the year ending May 1 contains the following statistics: Number of prisoners, May 1, 1887, 121; committed during the year, 38; discharged, etc., during the year, 44; number in prison, May 1, 1888, 115; earnings for the year, \$15,190.98; expenses for the year, \$19,450.30; deficit, \$4,259.32.

Savings-Banks.—The total number of depositors in the savings-banks on April 1 was 139,967—an increase of more than 7,000 within the year. The average amount due each depositor was \$385.86, and the average to each person in the State, estimating the population at 355,000, was \$151.94. The total number of savings-banks was 69—an increase of three. Three trust companies were reported, and one additional has been organized since April. Twenty-five of the banks paid a 5-per-cent. dividend in 1887, thirty-two paid 4 per cent., five paid 4½ per cent., two paid 4 per cent. and an extra, one paid 3½ per cent., one paid 3 per cent., and three were recently organized. The total earnings of the banks for the year 1887 was \$3,645,504.71, and the total amount of dividend paid was \$2,861,888.95.

Insurance.—The annual report of the Insurance Commissioner for 1887 shows the following facts with reference to the business of the fire-insurance companies of the State: Cash capital, \$1,255,000.70; gross assets, \$2,595,067.87; liabilities, except capital, \$1,351,803.91; net assets as to policy-holders, \$3,850,067.97; surplus as to capital, \$304,044.28; cash income, \$1,544,369.95; cash expenditures, \$1,314,074.66; dividends paid stock-holders, \$49,350; fire risks written, \$133,088,758.86; premiums received, \$1,710,804.32; fire losses paid, \$809,568.09.

There are twenty-three life-insurance companies doing business in the State.

Statistics.—According to the report of the State Board of Equalization for 1887 there were in the State 59,285 horses, 22,419 oxen, 94,329 cows, 47,476 other cattle, 155,685 sheep. Comparison with the report for the previous year shows a gain of 2,445 horses, 862 oxen, 3,866 cows, 2,474 other cattle, and 5,172 sheep—increasing the value of the live-stock of the State \$499,606.

Political.—A State convention of the Prohibition party met at Concord, on June 19, and nominated Edgar L. Carr, for Governor. The convention adopted resolutions, of which the following are the more important:

We regard the system of taxation by which the traffic in liquors is used to support the revenues of the Government as a virtual partnership of the United States in the crime and iniquity of that traffic. We

believe that the Government is thus made a bulwark to protect and perpetuate it, and we therefore demand the abolition of the system.

We approve the enactment by the Legislature of this State of the so-called nuisance law, calculated to make prohibition more effective, and we call upon the officials elected for that purpose to continue the enforcement of this and other features of the prohibitory law, until the liquor-traffic is exterminated in New Hampshire. We hold that the party in power in the legislative and executive departments of the State is responsible for the making and execution of the laws; and we therefore affirm that the Republican party of New Hampshire is guilty of the evils of the liquor-traffic in this State. With an efficient law on the statute books, with all the executive and judicial force of the State in their control, they have suffered the existence among us of a lawless institution, which they might at any hour overthrow. We arraign that party as faithless to the interests of the people, and unworthy to be continued in power. We also affirm that the record of the Democratic party in this State is a record of opposition to temperance in legislation and in practice, and that it is equally unworthy the suffrages of temperance men.

We believe in the right of the people to the enjoyment of a quiet Sabbath, and we request the railroad companies of the State to discontinue the running of Sunday trains. We oppose the publication and circulation of Sunday newspapers, and we call upon the Legislature to pass such laws as shall be best adapted to secure the people of the State from all forms of Sabbath desecration.

The Republican State Convention met at Concord, on September 4. Several candidates for gubernatorial nomination were before the convention, receiving upon the first ballot the following support: Hiram A. Tuttle, 209 votes; John B. Smith, 187; David H. Goodell, 121; Woodbury L. Melcher, 68; Albert S. Twitchell, 28; John A. Spalding, 14. Six ballots were taken without a choice, although on the fourth Tuttle received 306 votes, or within seven votes of the number necessary for the nomination. On the seventh ballot Goodell received 355 votes; Tuttle, 205; Melcher, 22; Smith, 17; and Goodell was declared the nominee. The platform contained the following:

We heartily approve of the declaration in the National Republican platform in favor of temperance and morality; of such laws as will best protect our people from the evils of strong drink, and of the suppression of its illegal sale.

We invite the co-operation of all who believe in the enactment of laws for the protection of our industries from the competition incident to the free importation of the products of the pauper labor of the Old World; of our laborers, from unjust exactions of employers; of our property-owners, from the attacks of anarchy and communism, and of all classes from the evils of illiteracy and immorality.

Two days later, the Democratic State Convention met at Concord, and, on the first ballot, nominated Charles H. Amsden for Governor. At the November election, the Republican National ticket was successful, but there was no election of Governor by the people. Goodell received 44,809 votes; Amsden, 44,093; Carr, 1,567. A majority of all the votes cast being necessary to elect, the choice of Governor will fall upon the next Legislature, which will meet in June, 1889. In this Legislature, as chosen at the same election, the Republicans

will have 18 Senators and 169 Representatives, and the Democrats 6 Senators and 144 Representatives. Republican Congressmen were elected by narrow majorities in both of the congressional districts, a gain of one seat for that party. At the same election, delegates were chosen by the people to a constitutional convention appointed by the Legislature to meet on Jan. 2, 1889. This, the sixth constitutional convention in the history of the State, will consist of 321 members, of which the Republicans elected 180 members and the Democrats 140, one member being ranked as Independent.

NEW JERSEY. State Government.—The following were the State officers during the year: Governor, Robert S. Green (Democrat); Secretary of State and Insurance Commissioner, Henry C. Kelsey; Treasurer, John J. Toffey; Comptroller, Edward L. Anderson; Attorney-General, John P. Stockton; Superintendent of Public Instruction, Edwin O. Chapman, succeeded by Charles W. Fuller; Chief-Justice of the Supreme Court, Mercer Beasley; Associate Justices, Manning M. Knapp, Alfred Reed, Edward W. Scudder, Bennet Van Syckel, David A. Depue, Jonathan Dixon, William J. Magie, and Charles G. Garrison. Judge Garrison succeeded Joel Parker, deceased, being nominated by the Governor and confirmed by the Legislature in January. Chancellor, Alexander T. McGill, Jr.; Vice-Chancellors, Abraham V. Van Fleet and John T. Bird.

Legislative Session.—The one hundred and twelfth Legislature was in session from January 10 to March 30. Its action on the liquor question was noteworthy. A local-option law was passed, providing for special elections as often as once in three years, if desired, in any county, on petition of one-tenth of the legal voters, and by the same act the license fees of inn-holders were increased to \$100 in places of fewer than 3,000 inhabitants, \$150 in places of from 3,000 to 10,000, and \$250 in places of over 10,000. This act was vetoed by Gov. Green, and passed again over the veto by a vote in the House of 34 to 24, and in the Senate of 18 to 8. The governing boards of incorporated towns were also given power to license, regulate, or prohibit liquor-selling within their jurisdiction. Another act provides that no honorably discharged soldier or sailor holding a salaried place under any city or county, whose term of office is not fixed by law, shall be removed from office for political reasons, but only for good cause shown after a hearing.

A new election law was passed, requiring, among other things, the closing of the polls at sunset and personal registration in Newark and Jersey City. The welfare of convicts is provided for by an act requiring persons under sixteen years of age, confined in county institutions, to be kept separate from older prisoners. The sum of \$15,000 was appropriated for the erection of a monument at the Princeton battle-ground, provided an equal sum be

raised by private subscription, and a commission was created to erect such monument. A home for the care and training of feeble-minded women was established, and the sum of \$10,000 appropriated for the purchase of buildings. An appropriation of \$50,000 was made for the construction and equipment of buildings for the Soldiers' Home, as provided by an act of 1886, and \$30,000 was devoted to additions and improvements at the asylum for the insane at Morristown. Other acts of the session, which exceeded the work of its predecessors by passing 386 general measures, were as follow:

Providing a penalty for mutilating books, magazines, etc., in an incorporated library.

Providing for the appointment of a vice-ordinary or vice-surrogate general of the prerogative court.

Authorizing incorporated towns and township committees to borrow money and issue bonds to provide for the construction of sewers or drains.

Authorizing towns to widen private streets in certain cases.

Regulating the construction, care, and improvement of the public ways, parks, and sewers in all cities except those of the first class, and providing for a street commissioner therein.

Enabling cities to purchase lands for public parks or squares, and to improve the same, and to issue bonds for the cost of such purchase and improvement.

Empowering corporations to diminish the number of their directors.

Providing for the further relief of the poor in cities.

Providing a penalty for selling liquors in a boarding-house without license.

Providing for the condemnation of lands held by any school district the title to which is defective.

To provide for the erection of armories for the National Guard in incorporated towns, boroughs, etc.

To promote manual training by contributing to every school district that maintains a manual-training school a sum equal to the amount raised by such district for such purpose.

To secure the certification of births, marriages, and deaths, and of the vital facts relating thereto, and to provide for the record thereof.

To take for public use a tract of land at Sea Girt, in the county of Monmouth, to vacate the streets and ways thereon and certain easements therein.

For the better protection of homing pigeons.

Authorizing the abolishment of the office of surveyor of highways in cities.

Ratifying and confirming the agreement made between the commissioners of the State of New York and those of New Jersey locating and marking the boundary-line between the two States in lands under the waters of Raritan Bay.

Providing that taxes and assessments levied by boards of trustees shall be a first lien on real estate, and that the same may be sold to pay such taxes and assessments.

Authorizing cities and township committees to borrow money in anticipation of taxes.

Requiring savings-banks not having a capital stock to pay an annual tax of one half of one per cent. on the amount of their deposits not otherwise taxed or exempt.

Increasing the salaries of the State Treasurer and the Comptroller to \$6,000 each.

Declaring that if any person in possession of a building or buildings, and not the owner thereof, shall burn or cause to be burned, or aid, counsel, or procure the burning of such buildings, whereby a dwelling-house is burned, such person shall be guilty of arson.

Providing that tangible personal property used in any business shall be taxed at the place where such business is carried on, shipping excepted.

Empowering assignees to sell land of their insolvent assignor at private sale, on obtaining leave of the court.

To enable the boards of commissions and improvement commissions in towns and villages, or within townships, to employ police.

Permitting registered physicians to practice in any part of the State.

Providing for the election of an assessor, collector, and commissioners of appeals at each annual borough election.

Proving for the support of certain indigent and feeble-minded women in suitable homes selected by the Governor.

Authorizing the issue of bonds for building public bridges in counties.

Enabling counties to acquire and improve lands for public parks.

To provide for vacating dedicated streets, roads, and alleys.

Regulating the procedure in selling lands for unpaid taxes or assessments.

Providing for the extension of borough boundaries.

Punishing the sale or circulation of obscene papers, books, or periodicals, or those having indecent pictures therein, or three or more pictures purporting to illustrate criminal acts.

Declaring bicycles and tricycles to be carriages, and regulating their use on public ways.

To provide for the preservation and protection of State boundary marks and monuments.

To prevent the shooting, trapping, or hunting of English hare for three years.

Authorizing any city, town, or borough to establish and maintain a fire department.

To provide for the temporary custody of dangerous lunatics.

Giving dyers a lien upon goods dyed by them.

Providing for armories in cities of the first and second class.

Providing for the retirement and pensioning of firemen.

To establish standard packages for cranberries.

Making valid instruments in which a scroll or ink or other device is used instead of a seal.

Providing for the appointment by the Legislature of commissioners of juries for each county.

Providing for descriptive indexes of land-records in counties having over 200,000 inhabitants.

Regulating the consolidation of any city with another city, or with a borough, town, or township, or any portion thereof.

To prevent persons from unlawfully wearing the insignia of the Military Order of the Loyal Legion of the United States.

To provide for the support of the New Jersey School for Deaf Mutes.

To prevent adulteration of vinegar and deception in its sale, and providing for the appointment of inspectors of vinegar.

Authorizing any municipal corporation to contract for a supply of water, or for a further or other supply of water therefor.

Dividing the counties of the State into sections, known as game-sections, and fixing the time for shooting certain game birds and animals therein.

Appropriating \$2,000 for stocking the waters of the State with food-fishes.

Authorizing the board of chosen freeholders of any county, upon the approval of the electors thereof, to lay out, construct, and maintain a public road therein.

Requiring savings-banks to report and publish lists of unclaimed deposits.

Authorizing cities to construct public docks and piers, and to purchase necessary land under and near thereto.

Providing for the incorporation of library associations.

To provide for the construction of a State laboratory for the Agricultural Experiment Station.

To encourage the formation of associations for the improvement of public grounds in any city, town, township, in borough in the State.

Providing for the formation and government of towns.

Enabling cities to pay past due improvement certificates out of their general funds.

Authorizing the appointment of a commission to locate and mark out the boundary between the State and New York, in Hudson River, New York Bay, Kill von Kull, and Arthur Kill or Staten Island Sounds.

Consolidating with the city of Trenton the borough of Chambersburg and the township of Millham.

FINANCES.—Of the bonded State debt, the sum of \$100,000 becomes due and payable by law on January 1 of each year, but the reduction of the debt for the fiscal year ending October 31 was but \$98,000, as \$2,000 of bonds becoming due were not presented for redemption. The total bonded debt on the latter date was \$1,298,800. The total receipts of the sinking-fund for the last fiscal year were \$206,960.31, and the payments \$179,635.57. The fund itself on October 31 amounted to \$645,885.93. The revenue and expenses of the State for general purposes for the fiscal year were as follow:

RECEIPTS.	
State tax on railroad corporations	\$290,263 86
Tax on miscellaneous corporations	209,874 08
State Prison receipts	51,284 43
From other sources	106,246 35
Total revenue	\$1,256,518 77
Balance on hand Oct. 31, 1887	206,429 43
	<hr/> \$1,561,948 20
EXPENDITURES.	
On account of public debt	\$90,000 00
Charitable and reformatory institutions	431,498 91
Courts, State Prison, etc	534,216 27
State Government, including Legislature	258,951 73
Military	114,983 41
Printing laws, etc., in newspapers	73,779 35
Printing and binding reports, etc	80,994 57
Blind, Deaf-Mute School, feeble-minded	58,086 86
Scientific, sanitary, etc	76,028 80
Miscellaneous	55,583 13
Total disbursements	\$1,542,007 73
Balance on Oct. 31, 1888	\$19,940 43

During the year, in order to meet urgent demands, the Treasurer was obliged to obtain a temporary loan of \$150,000, so that the actual cash in the treasury on October 31 was \$169,940.48. It will be seen from the above statement that the expenses of the year exceeded the actual income, exclusive of the balance on hand at the beginning, by nearly \$200,000, and in consequence the balance of \$208,429.43 existing on Oct. 31, 1887, was nearly wiped out. In addition, there remained unpaid on Oct. 31, 1888, of appropriations already made, which are a charge on the general receipts, \$352,775.16. Before the end of December the demands upon the treasury were such that a second temporary loan, of \$100,000, was necessary. The estimated receipts for 1889 are \$1,478,161, and the estimated expenses for ordinary purposes \$1,250,000, leaving a balance of \$228,161, to apply to the temporary indebtedness of \$250,000. This estimate omits extraordinary expenses, which may be incurred

by the Legislature of 1889, and which will materially reduce the amount applicable to payment of the temporary debt. The Governor says in his message, in January, 1889: "The restoration of the State Capitol and the addition to the Trenton asylum have made imperative demands upon the treasury during the last two years, and the amounts paid for these purposes, as well as the appropriations and payments for the Soldiers' Home, Gettysburg Monuments, Reform and Industrial School, Home for Feeble-Minded Women, and State Prison improvements, all extraordinary expenditures, have not only exhausted the annual revenues for those years, but some of the anticipated receipts of the next."

Education.—The amount raised by State tax and appropriated to the public schools during the year was \$1,870,055, to which was added the \$100,000 annual appropriation from the school fund, making an increase of \$418,395 of receipts over those of the preceding year. The operation of the law of last winter, raising the State school-tax from four to five dollars to each child, has proved satisfactory. The amount of township school-tax ordered to be raised was \$48,992.01. The amount received from the interest of the surplus revenue fund was \$32,084.49. The amount of district and city tax for teachers' salaries was \$474,298.45. The total amount devoted during the year to the maintenance of the schools was \$2,525,424.95. In addition to this amount \$590,016.46 was ordered to be raised for building and repairing school-houses. The school accommodation has been increased, and the buildings improved; there were 30 new school-houses erected and 45 enlarged or remodeled. The total value of the school property in the State is \$7,837,706, an increase of \$351,500 during the year. Nine hundred schools have established libraries. There were at the close of the school year 1,615 public schools, employing 4,121 teachers, and giving instruction to 387,847 pupils. There have been in attendance at the Normal School during the school year ending in 1888, 241 pupils. The average attendance was 189. The number graduated from the advance course, 22; the number graduated from the elementary course, 18; total graduates, 35. The whole number in attendance at the Model School during the year was 471, and the average attendance, 390; graduates, 18. The attendance at the Farnum School, Beverly, amounted to 139; the average attendance, 129.

Charities.—The number of patients under treatment at the Trenton Insane Asylum during the year was 905, and there remained there on October 31, 761. The total amount of receipts, including balance on hand, Oct. 31, 1887, was \$219,908.29. The amount disbursed was \$186,954.43. At the Morristown asylum there were 1,111 patients, of whom 904 remained on Oct. 31, 772 being public, and 131 private. The receipts for the year were \$241,494.86, and the expenditures, \$229,764.08.

The Legislature at its session this year appropriated \$10,000 to the establishment of a home for feeble-minded women, with an additional \$2,000 for its maintenance. The managers purchased a property in Vineland, and report that they require additional accommodation.

There were under instruction at the School for Deaf Mutes during the year 117 pupils, with an average daily attendance of 96. The amount expended in the maintenance of the school has been for the fiscal year \$26,162; for improvements and repairs, \$5,000. This school is in that part of the city of Trenton which was formerly Chambersburg, and consists of a large building which was erected for other purposes, and is not especially well adapted to the use of this institution.

The blind children who are supported at the expense of the State are placed in institutions in the city of New York and Philadelphia, 31 being in New York and 8 in Philadelphia. The amount paid during the year for the former was \$8,704.73; for the latter, \$2,410.83.

There have been 108 feeble-minded children provided for by the State during the year, 82 of these being at the Pennsylvania Training-School for Feeble-minded Children at Elwyn; 5 at the Connecticut Institution for Imbeciles, and 21 at the Educational Home for Feeble-minded Children at Vineland, N. J. The amount expended for the maintenance and support of these children was \$24,821.87.

By the report of the managers of the Soldiers' Home, it appears that there were 367 inmates on Oct. 31, 1888. There were admitted during the year, 266; discharged, 190; expelled, 11; died, 26. The average number of inmates was 349 per day. Since the home was opened there have been 15,818 inmates cared for by the institution. The total receipts for the year, including the balance on hand Oct. 31, 1887, was \$37,769.58. The expenses for the same time were \$36,837.78. The balance on hand Oct. 31, 1888, \$981.85.

The commissioners appointed to erect a suitable home for the disabled soldiers, report that their work has been substantially completed, and that in October the inmates of the old home were removed to their new quarters.

Prisons.—There were in confinement at the State Prison on Oct. 31, 1888, 881 prisoners. The total number during the year was 1,305, and the daily average 874, of whom 835 were males and 39 females. There was expended for maintenance the sum of \$67,000.76, and the total expenditures were \$151,048.81, a per capita cost of 47 $\frac{1}{2}$ cents per diem and \$172.82 per annum. The earnings for the year were \$57,387.13.

Concerning prison labor the Governor says: "The contracts made to put the piece-price system in operation will expire during the year 1889. The supervisor reports that, in his opinion, the trial of the system has not been en-

couraging. I can not but think that these contracts were made under disadvantageous circumstances. It is difficult to understand why, under a system which throws the whole risk on the State and none on the contractor, contracts less advantageous to the State were secured than under a system which reverses the conditions and the liabilities of loss, and throws the risk upon the contractor."

At the State Reform School the whole number of persons confined during the year was 424. There remained, Oct. 31, 1888, 298. There were received during the year, on account of maintenance, \$42,817.24 from the State; from the farm and other works, \$7,028.60, which, with a balance on account Oct. 31, 1887, of \$2,088.37, in all amounting to \$51,488.20 received, is chargeable to the maintenance account during the fiscal year. The amount of expenditures and expenses during the same period was \$50,664.49, leaving a balance on hand, Oct. 31, 1888, of \$823.72.

The State Industrial School for Girls had, at the close of the fiscal year, 76 girls under its charge, an increase of 9 over the number one year previous. Of these, 26 are out at service and 50 at the home. As this institution was intended to provide for only thirty-five girls, an enlargement of its buildings is needed.

The Governor, in his message, strongly urges the need of a State reformatory to secure the separation of young offenders from the class of old and hardened criminals. The Legislature of 1888 made a step forward in prison management by enacting a law requiring those in charge of the jails to keep all persons under the age of sixteen, who are sent to such jails for any purpose whatever, separate and apart, so that no communication can take place between them and other persons above such age; but reports at the close of the year showed that in only two counties had the law been fully complied with, while four counties had entirely disregarded it.

MILITIA.—From the report of the Inspector-General of the last annual muster and inspection, the strength of the National Guard is shown to be 316 commissioned officers and 8,719 enlisted men, a total of 4,085. Two new companies have been added, the force now consisting of 55 companies of infantry and 2 Gatling-gun companies. Negotiations to secure a tract of land at Sea Girt, Monmouth County, for the use of the militia have not yet met with success.

Riparian Commissioners.—The grants, leases, and leases converted into grants during the year, amount to \$104,479.89. The rentals paid to the State during the past year on leases heretofore made by legislative acts and by the commissioners amount to \$59,754.48. The amount, which represents the principal for land disposed of by grants or leases from April 4, 1884, to Oct. 31, 1888, is \$8,182,847.56.

Railroad Taxation.—The Attorney-General reports that the formidable combination, em-

bracing over thirty-five corporations, which has contested every point from the constitutionality of the law to the minutest element which constitutes valuation, has entirely disappeared during the past year, and that the representatives of the various railroad companies now manifest a desire to assist in the arduous labor of settling up the arrears of taxation, as well as aiding the Board of Assessors in arriving at proper results in its valuation. Of the State tax payable in 1888, nearly 97 per cent. has been collected, and of the State tax payable in 1887, nearly 95 per cent. has been received.

Decisions.—The local-option and high-license act of the Legislature this year was speedily brought before the State Court of Errors and Appeals in order to test the constitutionality of its provisions. In the two test cases brought before it, the court rendered a decision about August 1, by which the high-license features of the act were unanimously sustained, and the local-option portion upheld by a majority of the court, eight judges being in favor of, and seven against its constitutionality.

Political.—On May 9 a Republican State Convention was held at Trenton for the selection of delegates to the National Convention of the party. A platform was adopted, of which only the following portion refers directly to State questions:

We favor protection to the homes of the people by the due restriction of vice and intemperance, and we congratulate the Legislature of this State on their honest, earnest, and courageous efforts to restrain the evils of the liquor-traffic, and indorse their action.

On the following day a Democratic Convention for the same purpose was held at the same place. The platform adopted contains the following:

The party confidently directs the attention of the people of the State to the administration of State affairs by Governor Green. The system of railroad taxation devised and inaugurated by his Democratic predecessor has been placed upon a firm foundation and given the authority of Executive and judicial approval; the dignity of the Executive has been zealously defended against the most bitter and dangerous encroachments; the qualified power of the veto has been exercised against legislation, which, in its extravagance, attacked alike economical government and the inherent and constitutional rights of the people.

It denounces as subversive of the principle of our representative government the caucus legislation practiced by the Republican Legislature at its last session, by which the votes of the Republican members of each House were massed, directed, and controlled by the decision of a secret caucus, for or against laws of general import upon which the individual judgment and responsibility of each member was due to the State.

It demands such legislation as will check the growing evil of combined corporate power, and that shall make it unlawful to maintain an armed band or drilled and uniformed army in private hands for hire as a menace to the people.

On September 27 another Democratic Convention was held to nominate presidential electors, and on October 4 the Republicans in convention nominated their candidates for the same office. Similar conventions of the Pro-

hibition party were also held. There was no general election for State officers this year, but six members of the State Senate and all members of the Lower House of the Legislature were chosen. The Democratic National ticket was successful at the November election. Four of the six State Senators elected were Democrats (there will consequently be 10 Republicans and 11 Democrats in that body in 1889), and the Assembly will have 32 Democrats to 28 Republicans, giving the Democrats a majority of 5 on joint ballot. In the Legislature of 1888 the Republicans had a majority of 17 on joint ballot. For members of Congress, Republicans were elected in the First, Second, Fifth, and Sixth Districts, and Democrats in the Third, Fourth, and Seventh, the Democrats gaining a member in the Third District.

NEW JERUSALEM CHURCH. The General Convention of this body is composed of the Canada Association, 7 societies; the Illinois Association, 11 societies; the Maine Association, 5 societies; the Maryland Association, 5 societies, and individual members; the Massachusetts Association, 19 societies; the Michigan Association, 5 societies; the Minnesota Association, 2 societies; the New York Association, 14 societies; the Ohio Association, 12 societies; the General Conference of Pennsylvania, 12 societies; 8 single societies; and four members by election. The list of ministers of the General Conference includes the names of 8 "general pastors"; 100 "pastors and ministers"; and 9 "authorized candidates and preachers." The number of members is not given in the reports.

The General Convention of the New Jerusalem Church in the United States met in Boston, Mass., May 19. The Rev. Chauncey Giles presided. The treasurer gave the amounts of the capital investments of the funds of the General Convention as follow: Simpkins fund, \$20,000; Wales fund, \$5,000; Jenkins fund, \$2,000; Wilkins fund, \$3,750; White fund, \$4,500; Richards fund, \$1,000; in all, \$36,250. The Board of Publication reported that the collections for the "Fifty-Thousand-Dollar fund" to date amounted to \$42,065, \$421 having been added during the year. The property of the publishing house was valued at \$9,274. The year's business showed a net loss of \$1,009. The Endowment fund of the Theological School was returned at \$81,870; and the whole amount of funds the income of which is applicable to the support of the institution was \$99,810. Eight students for the ministry had attended the school during the year. The course of instruction includes Latin, Greek, and Hebrew, Swedenborgian theology, Church history, and homiletics and pastoral duties, the younger pupils beginning with the "Athenasian Creed." The New Church Building fund amounted to \$1,269. The amounts of other special funds and legacies were returned as follow: Rice legacy, \$8,519; Rotch legacy, \$24,864, with \$8,507 invested in plates, books, etc.;

Iungerich fund, \$86,696; fund for photo-lithographing Swedenborg's manuscripts, \$2,400 subscribed, \$191 paid. The committee of this fund was authorized by the Convention to make arrangements for the publication of the manuscripts as soon as the amount raised in the United States and in England for the work should warrant beginning it. The trustees of the Iungerich fund had distributed during the year 5,508 copies of Swedenborg's works, making the whole number of copies distributed under this fund since its institution 88,816. The receipts of the Board of Home and Foreign Missions had been \$3,888, and its expenditures \$3,304. It expected also to receive a legacy of \$1,000. Report was made of mission work in Nova Scotia, Canada, Southern and Western States and Territories of the United States, Sweden, Denmark, Italy, France, and Switzerland. The Swiss Union of the New Church having indicated a desire to be received into the Convention as an association, the Convention responded, that on account of the inconvenience with which such a position would be attended by reason of distance, it seemed better that the Union should act as a sister body, having a position in Switzerland corresponding with that of the Convention in America, with which annual messages should be exchanged, "to be conveyed personally whenever it can be done." In the address adopted by the General Convention to the General Conference in Great Britain, reference is made to the growing strength of the State Associations, which were becoming less dependent upon the general body. With some of them there was a desire for more latitude in the choice of a General Pastor and in the rules in regard to his continuance in office. The general body had shown a willingness to leave to the State associations the particular arrangement and classification of their ministers, so far as their rules did not conflict with the order of the general body. By the observance of this principle the freedom of the local bodies would be recognized, and the general order of the Church at the same time preserved. The relation between the organized bodies of the New Church and those of other churches had engaged the attention of a portion of the New Church people in the United States. How much, if any, affiliation and co-operation could or ought to exist could not well be determined by any formal action; and only a single instance of such action—in which members of the New Church were excluded because they were not regarded as orthodox—was mentioned. An address was received from the Australian Conference.

The British Church.—The whole number of New Church societies in association in Great Britain was reported to the Conference in August to be 70, and the whole number of members 5,920. The number of churches had increased by three, and the number of members by 200, during the year.

The British Annual Conference met at Acorington, August 14. About 120 delegates were present. The Rev. Richard Sterry presided. Reports were received from the Students' and Ministers Aid Committee, of New Church work on the Continent, and concerning the support of "Weak Societies."

The seventy-eighth annual meeting of the Swedenborgian Society was held in London, June 12. Mr. Samuel Teed presided. The income for the year had been £1,155. The report of the committee represented that 2,854 volumes of the society's publications had been delivered during the year, and 700 volumes had been presented to free libraries and other institutions and individuals.

NEW MEXICO. Territorial Government.—The following were the Territorial officers during the year: Governor, Edmund G. Ross; Secretary, George W. Lane; Treasurer, Antonio Ortiz y Salazar; Auditor, Trinidad Alarid; Attorney-General, William Breeden; Commissioner of Immigration, Henry C. Burnett; Chief-Justice of the Supreme Court, Elisha Van Long; Associate Justices, William H. Brinker, William F. Henderson, and Reuben A. Reeves.

Population.—As estimated by the Governor in his annual report, the number of people in the Territory in October was about 175,000, an increase of 10,000 or 12,000 during the year preceding. Fully one quarter of the immigration has been to the southeast portion of the Territory, and largely from Texas.

Finances.—At the convening of the twenty-seventh Legislative Assembly, Dec. 27, 1887, the funded debt of the Territory was \$350,000, and the amount of outstanding warrants or floating debt \$208,117.92, making a total of \$558,117.92. Since that date the public debt has increased to \$762,192. The face value of warrants issued during the same time was \$512,162.72, and the cash receipts of the Treasurer (general fund) \$357,162.72, leaving a deficit of \$155,631.09.

In 1887 the total expenses of the Territory were \$265,255.42, of which the expenses for courts alone amounted to \$164,384.25. In 1888 the expenses, up to Dec. 15, 1888, were \$247,538.39, and the expenses at the courts amounted to \$156,042.64.

Assessments.—The rate of taxation prescribed by law for Territorial revenue is one half of 1 per cent. for ordinary revenue, one fourth of 1 per cent. for county revenue, and for school purposes three mills on the dollar. The assessments for 1888 show an aggregate valuation of taxable property of \$43,151,920. Of this amount \$15,370,960 is on live-stock, \$7,466,869 on lands, and \$6,858,350 on houses and improvements. These amounts are exclusive of \$300 exemption to each property owner, of poll-taxes, and of a specified extent of tree-culture. The proper aggregate of taxation is greatly diminished by the ineffectiveness of the revenue system. Large areas of

land pay little or no taxes for lack of proper definition. Another serious source of loss of revenue is in the fact that 7,000,000 acres of taxable lands are included in Spanish and Mexican grants, patented and unconfirmed. If these lands were assessed, the tax rolls would be increased by several million dollars.

Penitentiary.—The only public building of the Territory, besides the Capitol, is the Penitentiary, constructed in 1884-'85. The number of prisoners confined there has steadily increased since its opening, and in March of this year had reached 114. In consequence of defects in its construction a large number of guards are needed, thereby increasing the cost of its maintenance.

Railroads.—The only railway construction during the year was the Denver and Fort Worth, about eighty miles across the northeast corner of the Territory. The construction of this line has been the means of establishing three thriving towns in eastern Colfax County—Folsom, Clayton, and Texline. The addition of this line makes the aggregate mileage of railway in operation in the Territory 1,130 miles, 182 of which is narrow-gauge.

Stock-Raising.—This industry was not as prosperous during the year as previously, losses of cattle during the winter and low prices contributing to this condition. As a result of low prices, the appraisement for taxation was reduced, at the request of cattle owners, from \$12 to \$10 a head for the year; so that, though the assessment rolls for 1888 show an increase of 135,000 head over the rolls of 1887, the assessments show a diminution of \$1,200,000. The assessment rolls of the sheep-stock of the Territory show 1,750,000 for 1887, and 1,500,000 for 1888, a loss of 250,000, with a corresponding reduction on the tax rolls, they being uniformly assessed for taxation at \$1 a head each year.

Mining.—The gold-product of the Territory was greater during 1888 than in any previous year. In addition to the old mines, an important gold deposit recently discovered is being operated at Elizabethtown, in the mountains of Colfax County, with a fair output; another valuable lead in central Santa Fé County is developing into a producing mine; while in the Jicarilla mountains in Lincoln County, in the Organ mountains in Doña Ana County, and other portions of the Territory, gold finds have been numerous.

Iron-ore has lately been discovered in large quantities in the Guadalupe and Sacramento mountains, in Lincoln County. It is found in considerable quantities in different portions of the Territory; but this latter discovery is very extensive. The total mineral product of the Territory for 1888 is estimated at \$3,821,871, and for 1887 at \$4,229,234.

An indication that the great mineral wealth of this district was known to the early Spanish colonists is the discovery within the last few years of fully developed silver-mines con-

taining many hundred feet of drifts, tunnels, and shafts, but the openings of which had been filled up and all surface trace of them obliterated at the time of the Pueblo Indian insurrection two hundred years ago, when the Spanish residents were all slaughtered or driven out of the country and permitted to return several years later only on condition that the mines should never again be worked. Several of these have been rediscovered, and some of them are being redeveloped with profit.

Coal.—The Gallup mines, in the western part of Bernalillo County, on the line of the Atlantic and Pacific Railroad, are the most extensive coal-mines in the Territory. These mines are supposed to be on the southern point of a coal deposit about 10 miles wide from east to west, and widening northward into Colorado, a distance of 200 miles. The output for the year was 800,000 tons. The Monero and Amargo mines, in Rio Arriba County, on the Colorado border and near the Denver and Rio Grande Railroad, also produce an excellent quality of coal. Excellent bituminous coal is also found in Lincoln County, in the vicinity of White Oaks. The output of the Blossburg mines, near the Colorado border, was 156,000 tons, and of the San Pedro Coal and Coke Company in Socorro County, 59,000 tons, the latter rendered into 14,000 tons of coke. Coal has been found also in other portions of the Territory.

Irrigation.—The Governor, in his last annual report, says it has become evident that the present system of independent ditching must be abandoned, and that in its stead the State must assume jurisdiction of the water-supply and its distribution by a carefully devised and adjusted system that shall economize the water-supply and guarantee equal rights in it.

Political.—On May 7 a Democratic Territorial Convention met at Santa Fé and nominated delegates to the National Convention. The platform adopted at that time, after approving of the administration of President Cleveland, continues as follows:

That we approve of that portion of the Democratic platform which promised that Territorial offices should be filled by *bona-fide* residents of the Territories, and believe that the only method of securing Democratic success is by a fair, honest, and manly fulfillment of that promise.

That we feel that no prosperity can come to this people until the titles to our lands are finally settled and determined, and that we approve the bill introduced by our delegate for that purpose, and most respectfully request all of our friends in Congress to aid him in the passage thereof, calling to their attention the fact that under the existing laws, which have now been in force for forty years, not one twentieth of the claims presented have been passed upon, and there are now unsettled and undetermined more than 1,000 claims, the greater number of which, though small and insignificant as to the quantity of land claimed, constitute the homesteads of fully 10,000 of our people, not one of whom can sell or dispose of his land at its reasonable value on account of the uncertainty of the tenure of title which has during all of this time rested upon it, and that there is a multitude of small

claims involving from twenty to forty acres that have never been presented, owing to the fact that the prosecution thereof under the present law involves the expenditure in costs and fees of more than the value of the land, thereby virtually working a confiscation thereof.

The Republican Territorial Convention met at Santa Fé, on May 15, to elect delegates to the Chicago Convention, and adopted a long series of resolutions, of which the following are the more important:

We earnestly denounce the wholesale and unwarranted action of the Administration in procuring to be brought hundreds of indictments against respectable and honest citizens of this Territory for alleged violations of the land and timber laws, and assert that such action was taken for political purposes, and for the obtaining of fees by the different court officials and the smirching for political effect of the characters of good and reputable citizens.

That we denounce the administration of the Governor of this Territory, Edmund G. Ross, appointed by President Cleveland, as characterized by corruption, imbecility, and a total disregard of the laws of the Territory of New Mexico.

That, it being the plain intent of the act of Congress creating the office of surveyor-general to submit the inquiry as to the existence, validity, nature, and extent of our Mexican land-titles to a learned, honest, and impartial tribunal, we view with indignation and disgust the action of the President in forcing upon our Territory as surveyor-general such an embodiment of stilted vanity and mendacious partisanship as George W. Julian, who, coming hither in the guise of a fair-minded judge, has devoted himself to the vandal work of overturning long-settled titles granted by Spain and Mexico, fully recognized by those Governments and guaranteed by the treaty of Guadalupe Hidalgo, and in this criminal work of destruction has prostituted an office judicial in nature to personal and political ends.

That we condemn the action of Gov. Ross in the exercise of the pardoning power, by which he has released from the Territorial Penitentiary large numbers of the most atrocious criminals, who had been convicted at great expense.

Early in July the Prohibitionists placed in nomination J. C. Tiffany as delegate to Congress, and, a few weeks later, a Republican convention nominated M. S. Otero for the same office. The Democrats renominated Delegate Joseph. At the November election Joseph received 17,525 votes, and Otero 15,775. But the Republicans elected a majority of the Legislature for 1889, which will stand: Senate—Republicans, 6; Democrats, 5; House—Republicans, 14; Democrats, 9.

NEW YORK (STATE). State Government.—The following were the State officers during the year: Governor, David B. Hill, Democrat; Lieutenant-Governor, Edward F. Jones; Secretary of State, Frederick Cook; Comptroller, Edward Wemple; Treasurer, Lawrence J. Fitzgerald; State Engineer and Surveyor, John Bogart; Attorney-General, Charles F. Tabor; Superintendent of Public Instruction, Andrew S. Draper; Superintendent of Prisons, Austin Lathrop; Superintendent of Insurance Department, Robert A. Maxwell; Superintendent of Bank Department, Willis S. Paine; Superintendent of Public Works, James Shanahan; Chief-Judge of the Court

of Appeals, William O. Ruger; Associate Judges, Charles Andrews, Robert Earl, George F. Danforth, Rufus W. Peckham, Francis M. Finch, and John Clinton Gray. Judge Gray was appointed by the Governor on January 22 to fill the vacancy caused by the death of Judge Rapallo in 1887 until his successor should be elected.

Legislative Session.—Laws were passed amending the Revised Statutes so that inventories shall be filed more accurately; authorizing a compromise by executors and administrators of debts due their testators relative to the sale of doubtful claims; extending the time for the payment of capital stock in certain corporations; providing that in making assignments the nature and place of business shall be stated; providing that dealers in grave-stones shall have a lien upon the property; exempting railroad equipment or rolling-stock, sold, leased, or loaned under a contract, from the law requiring the filing of contracts for the conditional sale of personal property on credit. The Legislature made scant appropriations for the State prisons, which will probably result in keeping the prisoners in idleness for a part of the year. A law was passed providing that, whenever it can be so arranged, the sentences of convicts shall expire during the summer months. Several bills were introduced as the result of an investigation by the Senate Committee on General Laws into the working of those combinations known as "trusts." But none of these bills were passed.

The Governor vetoed a bill for the prevention of bribery at elections; also a bill, based upon the Australian system, providing that ballots shall be printed at the expense of the city or county; that voters shall have separate compartments in which to prepare their ballots; and that no electioneering shall take place within one hundred feet of the polls. The factory-inspectors were required to see that the obligations of employers to their apprentices are enforced; and mechanics' liens were extended to cover gas and electric fixtures.

A bill passed the Senate, but was adversely reported in the Assembly, providing that every adult citizen, irrespective of sex, shall hereafter be entitled to vote at any municipal election, or at any election for supervisor or excise officers; and that no poll-clerk or inspector of election shall refuse to register or receive the vote of any adult citizen at such election on account of sex. Another bill providing that there shall be no discrimination on account of sex at any election was not reported from the Senate Committee. A third bill, killed in the Committee of the Assembly, provided that at all municipal elections, for five years and no longer, all females who pay taxes on property, or lease a whole building or premises in which they reside or carry on business, may vote for municipal officers; and that at elections where only male tax-payers can now vote, female tax-payers can vote under the act; and that, if

registered, every female voter shall describe the property which she leases for business. The Governor vetoed a bill to amend the act of 1887 so as to give half-holidays during only June, July, August, and September.

A law was passed providing that, instead of taking fees variously estimated at from \$50,000 to \$100,000, the health officer of the port of New York should hereafter give the fees to the State, and receive a salary of \$10,000. The Governor vetoed a bill providing that quarantine commissioners should be elected by a joint ballot of the two Houses of the Legislature, instead of being nominated by the Governor and confirmed by the Senate, as at present.

A concurrent resolution for amending the Constitution was passed, and, having passed a previous Legislature, will now be submitted to the people, which provides that the Governor shall select seven justices of the Supreme Court to act as associate justices, and to form a second division of the Court of Appeals, for the relief of the latter. Another concurrent resolution was passed (but must pass another Legislature before it is submitted to the people), which prohibits the manufacture and sale of intoxicating liquors as beverages. A bill was introduced (but not passed) providing for a convention to revise and amend the Constitution of the State. It was similar to the bill vetoed by the Governor the year before.

A law was passed appointing a committee of five assemblymen to investigate all the reservations within the State, and report to the next Legislature what should be done in regard to civilizing the Indians. Another bill was passed allowing a commissioner to investigate the claims of that branch of the Cayuga Indians which has lived in Canada since the war of 1812 because it fought against the United States at that time. The Canadian Cayugas claim a portion of the annuity that is paid by the State to the nation.

A bill was passed appropriating \$570,000 to continue the work of lengthening the locks and improving the canals. A law was passed providing that in New York, Brooklyn, and Buffalo, the charges for elevating, receiving, weighing, and discharging grain shall be five eighths of one cent a bushel. The former rate, including five days' storage, was three fourths of a cent.

A bill was passed appropriating \$143,260 to finish the State Library and the Law Library, and to remove the books, the work to be in charge of the Capitol commissioner and three of the officers of the Senate and Assembly. Another bill appropriates \$287,000 to repair the Assembly staircase, and to replace the stone ceiling of the Assembly Chamber with a ceiling of wood, the work to be in charge of a committee composed of the speaker and four members of the Assembly whom he should appoint; \$20,000 was appropriated to lay out the park in front of the Capitol.

Laws were enacted amending former acts

to facilitate the formation of agricultural and horticultural societies; amending the acts relating to contagious diseases among animals; incorporating the Western New York Horticultural Society; authorizing the State Agricultural Society to borrow money for the erection of new buildings; for the destruction, at the expense of the State, of animals afflicted with glanders; appropriating \$2,500 to extend dairy knowledge throughout the State; allowing the State dairy commissioner to appoint five extra butter-and-cheese-makers to inspect butter and cheese throughout the State.

A bill was passed which substitutes electricity for hanging, to take effect in the execution of sentences for crimes committed after Jan. 1, 1889.

It was provided that the thin paper used on type-writers shall hereafter be classed as legal paper.

The following became laws: For the incorporation of societies for providing play-grounds for children; providing for police matrons in cities of the State, who shall serve in places of detention, no more than two to be appointed in any city; permitting the burial without a coroner's inquest of persons dying suddenly without medical attendance, in case of accident or organic diseases, where no suspicion of foul play can exist; requiring all plumbers in Albany to be registered; providing schools for nurses; providing that the remains of persons dying at the Quarantine Hospital in New York shall be cremated unless taken away by relatives; amending the act to protect owners of bottles by including those used for medical preparations, perfumery, etc. Provision was made for supplying water to Albany, Syracuse, Schenectady, Watkins, and Little Falls.

An extra session was held on July 17-20. The Governor did not give his reasons for calling the session, as had been the custom heretofore. When the Legislature convened, his first message said that the convicts in the State prisons were in idleness, and recommended legislation applying to all State institutions. The Legislature passed a bill the main points of which were as follow: No motive-power machinery for manufacturing shall be placed or used in any of the penal institutions of the State; and no person in such institutions shall be required or allowed to work, while under sentence thereto, at any trade or industry where his labor, or the production or profit of his labor, is farmed out, contracted, given, or sold to any person or persons whomsoever; the Superintendent of State Prisons, and all other officers having in charge the management of the penal institutions of the State, shall hereafter cause to be manufactured therein, by the inmates thereof, such articles only as are commonly needed and used in the public institutions of this State, for clothing and other necessary supplies of such institutions and the inmates thereof; and all the articles manufactured in such penal institutions, not

required for use therein, shall be furnished to the several institutions, supported in whole or in part by the State, for the use of their inmates, upon the requisitions of the trustees or managers thereof upon the Superintendent of State Prisons, and no article so manufactured shall be purchased for the use of such inmates unless the same can not be furnished upon such requisitions. The Comptroller, the Superintendent of State Prisons, and the President of the State Board of Charities shall constitute a board whose duties shall be to determine the price at which all articles manufactured in such penal institutions, and furnished for use in the several institutions of the State, shall be so furnished, which price shall be uniform to all institutions; the comptroller shall devise and furnish to the several institutions a proper form for such requisitions, and also a proper system of accounts to be kept for all such transactions. All moneys received for such articles so furnished upon requisition shall be paid into the treasury, as now required by law in case of sales of the products of State prisons. There was appropriated \$250,000 to purchase materials and to carry out the provisions of the act. The Governor signed the bill. The Governor sent in a message advising that the conspiracy laws of the State be so amended that workmen might gather for peaceful discussion with less embarrassment than at present; but the recommendation was not acted upon. Another message by the Governor called attention to alleged irregularities in the work of the commission appointed to construct the new aqueduct for New York city. The Legislature immediately passed a bill legislating the old commissioners out of office and making the new commissioners the Mayor, the Comptroller, and the Commissioner of Public Works, together with four citizens (two Democrats and two Republicans), to be appointed by the Mayor. The Governor signed the bill, and the board was appointed.

Finance.—The State debt was reduced \$601,650 during the year by the payment at maturity of \$100,000 Niagara reservation bonds; by the purchase and cancellation of canal stock, forming part of the canal debt, to the amount of \$408,250; and by the redemption of canal stock that matured on July 1, 1887, amounting to \$98,400. On Sept. 30, 1888, the total funded debt was \$6,965,354.87, classified as follows: Indian annuities (general fund), \$122,694.87; canal debt, \$6,142,660; Niagara reservation bonds, \$700,000; canal debt sinking-fund, \$4,076,289.89. Total debt unprovided for but not yet due, \$2,889,065.48. The latter sum is about one twelfth of 1 per cent. of the valuation of the State. On Sept. 30, 1887, the total debt was \$7,567,004.87, and the sinking-fund \$4,061,188.84, leaving as the net debt \$3,505,816.03. The increase of the sinking-fund during the year was \$15,100.55. Valuing investments at par, the capital of the more

important trust funds held by the State on Sept. 30, 1888, was as follows:

FUNDS.	Securities.	Money in the treasury.	Total.
Common-school fund.....	\$3,967,176 09	\$16,464 08	\$3,973,640 77
United States deposit fund.....	3,973,478 78	87,748 98	4,011,220 71
Literature fund.....	280,000 00	4,301 86	284,301 80
College land-scrip fund.....	415,400 00	59,009 13	474,409 13
Total.....	\$3,632,058 42	\$117,418 48	\$3,749,471 90

The capital of the same funds on Sept. 30, 1887, was: Securities, \$3,498,045.49; money in treasury, \$208,445.23; total, \$3,706,488.52.

The canal debt sinking-fund, as above stated, contained on Sept. 30, 1888, securities and cash to the amount of \$4,076,289.89. The total amount, therefore, of cash and securities held by the Comptroller for the principal funds, Sept. 30, 1888, was \$12,825,761.29.

For the current year the State tax is \$9,089,-308.86, the rate being two and sixty-two one hundredths mills, and the valuation \$3,469,-199,945, the tax to be devoted as follows: School purposes, \$3,469,199.95; canals, including canal debt, \$2,254,979.96; general purposes, \$3,865,123.95. The direct school-tax for the last fiscal year produced \$3,697,240.99. The total expenditure from the State treasury for education was \$4,192,814.92. The total expenditure, State and local, for the maintenance of schools was \$15,696,012.89.

The balance in the treasury on Oct. 1, 1887, amounted to \$5,222,256.68. There was paid into the treasury from all sources during the fiscal year \$17,800,755.42. There was drawn therefrom for all purposes \$17,626,557.35, leaving on Oct. 1, 1888, a balance of \$5,396,-454.75. The balance in the general fund on Oct. 1, 1887, was \$3,326,127.06; the receipts for the year were \$9,855,472.75, and the payments \$10,061,718.49, leaving \$3,119,881.32. Among the receipts of the general fund were: From State tax, 1887, \$5,005,500.78; from tax on corporations, \$993,677.82; from tax on organization of corporations, \$181,888.27; from tax on collateral inheritances, \$736,084.88; from salt duty, \$52,115.69; and from State-Prison earnings, \$2,110,042.84. Among the expenses of the same time are: For the State Capitol, \$167,957.60; for normal schools, \$71,-481.24; for legislative expenses, \$410,981.07; for the militia, \$546,105.67; for the Utica Lunatic Asylum, \$57,373.20; Willard Asylum, \$47,425; Buffalo Asylum, \$92,414.88; Homœopathic Asylum, \$35,729.20; Hudson River Asylum, \$173,747.78; St. Lawrence Asylum, \$133,338.10; Binghampton Asylum, \$101,-358.20; institutions for the blind, \$87,812.61; institutions for deaf and dumb, \$265,369.05; Soldiers' and Sailors' Home, \$143,000; State Reformatory, \$195,000; State Industrial School, \$217,300; Asylum for Insane Criminals, \$161,516.63; State prisons, \$1,967,315.-74; for canal purposes (canal tax), \$2,305,-

738.93. The canal receipts for the year were \$3,246,552.68; expenditures, \$2,788,046.71.

Assessments.—The Comptroller says in his annual report: "Our taxing system is in many respects glaringly defective. Real estate is overburdened, while personal property escapes its due proportion of liability. The total assessed valuation of the property of the people of the State for the purpose of taxation for 1887 was:

Personal.....	\$335,998,359
Real.....	3,025,229,788

Total.....\$3,361,128,177

"The assessed valuation of the same for 1886 was:

Personal.....	\$346,611,861
Real.....	3,122,568,064

Total.....\$3,469,199,945

"This shows an increase in one year on

Real estate.....	\$97,358,296
Personal estate.....	10,713,473

Total increase.....\$108,071,768

"These valuations clearly exhibit the unjust proportion of the burdens of taxation borne by the real over the personal property. It can not be that the personal property amounts to less in value than the real, and in that case we have within the State to-day over \$2,500,000,-000 of personal property that is not but ought to be subject to taxation."

Education.—For the school year ending Aug. 20, 1887, the total amount expended for public education was \$14,461,774.94, which was greater than ever before by nearly half a million dollars. Of this sum, the amount paid directly for common schools was \$13,760,669.-57, an increase of \$475,682.98 over the preceding year. The sum expended in the cities was \$3,340,117.77, and in the towns \$5,420,-551.80. The total valuation of school buildings and sites is reported at \$36,876,553, of which \$24,217,240 is in the cities and \$12,159,318 in the towns; in this item the increase was \$714,-469, of which \$708,729 were in the cities and but \$5,740 in the towns. There were paid for teachers' wages during the year, \$9,306,425.88; for libraries, \$39,722.45; for apparatus, \$360,-208.08; for new buildings, sites, repairs, etc., \$2,394,004.35. The total number of teachers employed during the year was 31,318, and the number employed for terms of twenty-eight weeks or more, 22,708. Of the whole number of teachers employed, 5,821 were males and 25,497 females. The average annual salary paid was \$687.12 in the cities, and \$262.44 in the towns. The amount paid for teachers' wages was greater last year than ever before by \$204,157.11. The number of children of school age (between five and twenty-one years) was 1,763,115. There are 173,173 more children of school age resident in the cities than in the towns. The total number enrolled in the schools during the year was 1,037,812, and the average daily attendance 625,610. For the

year ending Aug. 30, 1888, out of a total of \$15,686,012.89 expended for education, the sum of \$14,980,841.47 was paid for support of common schools, which is an increase of over \$1,000,000 over 1887. Of this sum, \$9,309,464.14 was expended in cities and \$5,771,377.33 in towns. The total number of teachers employed during the year was 31,726, of whom 5,651 were males and 26,075 females. Their average annual salary in cities was \$702.92, and in towns \$266.75. The total amount paid for teachers' wages was \$9,676,091.93. There were 1,772,958 children of school age, 997,155 in the cities, and 775,803 in the towns. Of these 1,033,269 were enrolled, and 630,595 were in average daily attendance. The State Superintendent says in his annual report: "We have a compulsory education law upon our statute books, but it is a law which does not compel. It has never been acted under to any considerable extent, and, this being so after fourteen years of trial, it is fair to presume that it never will be."

Normal Schools.—In the nine normal schools of the State there was a total enrollment during the school year 1887 of 5,995 pupils, and during 1888 of 6,328. The total enrollment in the normal departments proper for 1887 was 2,884; for 1888, 3,012. The value of normal-school property is estimated at \$1,327,775.84. The cost of the schools for 1888 was \$243,181.71. A tenth school, at Oneonta, established in 1887, will be opened in 1889.

For many years the State has recognized that these schools would not be able to train teachers in sufficient numbers to meet the needs of the common schools. It has undertaken therefore to supply the deficiency by organizing teachers' classes in the academies and union schools. During the school year 1887-'88 there were 195 of these classes organized in 142 different schools. The number of students that received instruction for ten consecutive weeks or more, was 3,258. The number completing the course of study, and for whom tuition was allowed from the State appropriation, was 2,676.

Prisons.—Superintendent Lathrop, in his report for the year ending Sept. 30, 1888, announces that "the prisons have distinctly and positively receded in condition and in their tendency during the last year. In the previous year there had been much difficulty and embarrassment, which were incident to the change of the labor system in the prisons and the establishment of new industries, or the change from the contract system to public account of the same industries formerly pursued. But at the opening of the last fiscal year these changes had become far advanced, the system of public account had been generally introduced and put into practical operation, and any other change was not anticipated, at least until the new system had had a fair trial. The prime factor on which the solution of the problem of successful operations in the prisons then depended, so far

as the public-account system was concerned, was the sufficient appropriation of money to carry on that system, which was the only system then permitted by statute, in an effective way. This was withheld, and the effect has been in every sense discouraging and detrimental, in spite of the greatest diligence and most assiduous energy of the officers who have conducted the prisons."

The report attributes the causes of the change to the legislation of 1888. The million-dollar prison appropriation bill, introduced early in the session, was reduced to \$250,000 and passed. In a month this sum was exhausted, and a further appeal was made, which procured \$500,000 additional. The Legislature thus appropriated in all only \$750,000 to provide for the employment of 2,600 men, when during the previous year the preceding Legislature had furnished \$1,800,000 for the employment of an average number of 1,300 men, then engaged on the prison industries. Before the year was half completed the money was exhausted, and on July 1 the superintendent looked forward to six months or more of idleness and the attendant evils. At his request the Governor convened the Legislature in July to provide for the emergency. The passage of the Yates bill at that session overthrew the public-account system, as well as every other system of productive labor. It introduced idleness instead of industry, withdrew the convicts from the shops and put them into their cells. The change in the law wrought a great decline in the material and moral conditions that have existed in the State prisons. As a result, the deficit is more than twice as large as in any other year since the reform prison system was established. In 1888 the cost of maintenance was \$404,509.94 and the deficit \$153,924.46.

On September 30 the number of convicts in the prisons was as follows: at Auburn, 1,248; at Clinton, 755; at Sing Sing, 1,405; total, 3,408. This total is an increase of 129 over 1887. At the same date there were confined in the several penitentiaries in the State 622 State convicts, 828 in the State Reformatory at Elmira, and 108 in the House of Refuge for Women at Hudson.

The Insane.—The following was the number of patients in the several asylums at the close of the fiscal years ending Sept. 30, 1887 and 1888:

LOCATION.	1887.	1888.
Utica.....	578	611
Willard.....	1,812	1,963
Poughkeepsie.....	419	476
Middletown.....	455	459
Buffalo.....	386	368
Binghamton.....	1,069	1,077
Total.....	4,669	4,953

On September 30 there were 450 patients in the Idiot Asylum at Syracuse, and 194 in the Custodial Asylum at Newark.

Banks.—On October 1 there were 180 banks of deposit and discount in active operation, an increase of 25 banks and \$2,285,000 capital in one year. The aggregate resources of the State banks on September 22 were \$217,898,717, an increase over 1887 of \$26,440,170. Of the 25 new banks, 2 were converts from the national system and 7 are in New York city and have a capital amounting to \$950,000. Of the total increase in banking capital, \$250,000 represents the increase of existing institutions and \$1,985,000 the capital of new associations. As evidence of the prosperous condition of the State banks, it is noted that there has been no reduction in the capital of any of the number during the year, and not a single suspension or failure has occurred in that period. There are 25 trust, loan, and mortgage companies in operation, which show total resources of \$224,018,183.68 and liabilities amounting to \$224,554,324.51. The total amount of interest-bearing deposits was \$165,817,864.07, an increase of \$18,685,900.50. Three new trust companies, with a capital of \$1,500,000, were organized during the year. The total capital employed by the trust companies operating under the State laws shows an increase of \$3,498,000 in the same period. At the close of the fiscal year there were 17 safe-deposit companies in operation in this State, with an aggregate capital of \$3,123,900, an increase during the year of \$294,000.

Railroads.—The following statistics show the work of the railroads of the State during the past two years: Gross earnings, 1888, \$152,122,705.73; 1887, \$148,724,490.62. Net earnings, 1888, \$50,517,648.94; 1887, \$51,284,516.02. Taxes, 1888, \$5,252,224.10; 1887, \$5,018,907.21. Surplus, 1888, \$5,362,202.58; 1887, \$8,284,408.60. Miles of road built in New York State, 1888, 7,487.85; 1887, 7,388.88. The increase in tons of freight carried one mile is 5.27 per cent. It will be seen that there has been a distinct reduction in the net earnings, although a greater amount of business has been done than previously. This result is attributed by the railroad commissioners to several causes, among them the clause in the Interstate Commerce act prohibiting pooling; the reckless efforts of some railroad managers to procure business at any rates, however unprofitable; the building of new roads in advance of any necessity; strikes, and the deliberate reduction of rates to unprofitable points for stock-jobbing purposes.

The Indians.—From a report of a committee appointed by the Legislature of this year, it appears that there are still in the State tribal reservations having the following population: Onondaga, 450; Oneida, 178; Tuscarora, 439; Tonawanda, 500; Shinnecock, 150; St. Regis, 1,044; Cattaraugus, 1,805; Allegany, 834; total, 4,900. The Onondaga reservation, near Syracuse, is reported to be in a deplorable condition, the Indians defying all attempts to educate them or to induce them to till the soil.

Similar reports come from nearly all the other tribes, except the Oneidas, Tuscaroras, and St. Regis, where the land is generally held in severalty. The committee recommend that all lands of the Indians be allotted in severalty, and that they be admitted to the rights of citizenship and subjected to the general laws of the State. On the several reservations there are 1,546 Indian children of school age. Of these, 1,082 were enrolled in the 30 reservation schools during the school year 1887-'88, but the average daily attendance was only 420.

The Erie Canal.—In 1888 the number of tons of freight carried was 4,942,948, or a decrease of 610,857 over 1887. The figure for 1888, however, is somewhat in excess of the average for the past five years. Among the reasons assigned for the falling off are these: 1. The contracts made with railroads centering at Buffalo with vessels of deep draught loaded with coal and other freight for the ports of the northern lakes, their return cargoes being in grain (the chief reliance of the boats on the Erie Canal), which is turned over by the large vessels to the railroads that furnish the western-bound freight; 2. Short crops, causing a decreased export trade; 3. The corner in grain, which overturned the markets in Chicago and New York for several weeks; 4. The insistence of the canal boatmen for higher rates, in consequence of which much of the freight was sent by rail. During the past year the work of lengthening the locks so as to allow the passage of two boats tandem has progressed until now there are only fifty-one miles on the Erie Canal containing single-tiered locks to interfere with the navigation of "double-headers." Other locks are now in process of lengthening, and many of them will be completed before the season of 1889 opens.

The Erie Canal was completed in 1825. Its dimensions were 40 feet wide on the surface, 28 feet wide at the bottom, with single locks 90 feet long and 12 feet wide, and a waterway at the aqueducts of 19 feet. The capacity of boats was 100 tons. In 1833 the increased business on the canals exceeded all public expectation, and the Legislature of 1834 passed an act authorizing the construction of a second set of locks to increase the facility of transportation. This was supplemented in 1835 by the passage of an act directing the canal commissioners to enlarge and improve the canal, giving them discretionary powers as to its dimensions, location, etc., to alter, arrange, and construct new feeders and other works, as they might deem necessary, for supplying the enlarged canal with an additional supply of water. At a meeting of the canal board, June 30, 1835, it was resolved to make the canal 60 feet wide, with 6 feet depth of water. At a subsequent meeting, in October, the board decided to increase its capacity to 70 feet wide and 7 feet depth of water, to build the locks 110 feet long and 18 feet wide, thus giving boats a carrying capacity of 240

tons. The engineers made a survey for the enlargement, following, or using, as far as practicable, the line of the old canal, and in many places building a portion of it new, or on a more direct line than the old canal. The work was immediately put under contract, thousands of men were employed, and the Legislature of 1838 authorized the commissioners of the canal fund to borrow \$4,000,000 to carry on the work. The canal commissioners were directed to prepare and put under contract, with as little delay as possible, such portions of the work as would complete the entire enlargement. The work progressed rapidly until 1842, when what is known as the "stop law" was enacted, suspending further expense on public works. The canal remained in an unfinished condition for five years following, until 1847, when the Legislature made an appropriation to continue the work. Other annual appropriations were made up to 1862, when the enlargement was completed.

Insurance.—The latest reports of the insurance department show that the aggregate assets of the fire and fire marine companies of this country doing business in the State of New York is \$163,041,841.82, classified as follows: New York joint-stock companies, \$60,939,147.70; joint-stock companies of other States, \$99,645,876.83; New York mutuals, \$1,961,934.58; mutuals of other States, \$504,882.76. Compared with 1886, these figures show an aggregate decrease of \$1,372,808.66. Excepting scrip and capital, their liabilities are: New York joint-stock companies, \$24,945,447.25; other State joint-stock companies, \$35,578,322.53; New York mutuals, \$668,994.39; other State mutuals, 286,646.19; total, \$61,474,910.36, an increase of \$3,159,661.65. The total amount of scrip liabilities is \$701,017, and of capital, \$60,542,620. The fire premiums received were \$18,425,955.69; fire losses paid, \$13,419,011.99; fire losses incurred, \$13,987,470.98. The estimated amount of expense for the transaction of this business is \$5,527,786.72, which, if added to the incurred losses, make a total of \$19,465,357.70; showing, as compared with the premium receipts, an apparent loss of \$1,089,302.01. At the close of 1887 the marine and fire insurance companies doing business in the State of New York were possessed of \$227,702,323 of admitted assets, not including assets held abroad or premium notes of mutual companies, a loss of \$146,223 as compared with 1886. The liabilities of these companies, excepting scrip and capital, were \$90,263,202, an increase of \$4,861,148 over the return of the preceding year. The income was \$444,506 and the expenditures were \$108,957,528, an increase, as compared with 1886, of \$1,504,841 in income and \$5,534,517 in expenditures. The whole number of companies reporting in 1887 was 182, being four less than in 1886. In the last annual report there were pointed out some of the objectionable features of the statute, which

provides for licensing agents to do fire-insurance business in this State, through unadmitted companies of other States or countries. The experience of one more year in observing its practical operation confirms the impression, on the part of the insurance department, that the incorporating of this act into the insurance laws of the State, makes them, in a very material respect, anomalous, illogical, inconsistent, and radically bad. The theory on which the law was enacted, that the insurance thus authorized could be kept strictly within the limit of "surplus line"—in other words, could be confined to such insurance only as could not be obtained from duly authorized companies—has proved fallacious, and the superintendent is disposed to think that most of the insurance written under the provisions of this statute could have been obtained in duly authorized companies if the policy-holders had made reasonably diligent efforts to obtain it, which, however, the statute does not require them to make. He thinks the statute ought to be repealed, and that the penal provisions of the statutes enacted with special reference to the prevention of unauthorized fire insurance need some material amendments to give them wider scope and practical effect.

In March, 1888, an important decision was made in regard to insurance law in the State of New York. It was on an appeal taken by defendant from an order of the Supreme Court, sustaining plaintiff's exceptions, taken at the trial in the Monroe circuit, and ordered to be heard in the first instance at General Term and directing a new trial. The trial justice had directed a verdict for the defendant. The property insured was a merchant's stock of goods in Phelps, Ontario Co., and it was destroyed by fire May 8, 1884. The policy was for \$1,500, and plaintiff asserted a loss value of over \$3,000. The answer was that plaintiff had effected subsequent insurance without notifying defendant's agent, in violation of the terms of his policy. The trial justice held that this vitiated the policy, and directed a verdict for defendant, to which ruling plaintiff excepted. On the hearing of the exceptions at the General Term the Supreme Court held that the clause in the policy reading: "If the assured shall have, or shall hereafter make, any other insurance on the property hereby assured, or on any part thereof, without the consent of the company written thereon, then the policy shall be void," is a part of a contract that requires the written consent of the assured to render valid and obligatory, and that, as no written indorsement to that effect appears on the policy the clause is of no binding effect. It was, therefore, held that the question of fact for a jury to pass upon was whether the defendant's agent had or had not orally consented to the subsequent insurance. The defendant, instead of going back to the circuit for a new trial, took a direct appeal to the court of last resort, to have the matter fully and finally de-

terminated, stipulating, as the rule requires, that if the principle was found against the defendant judgment absolute should be rendered for plaintiff. It was accordingly argued in the Court of Appeals, and the court handed down its decision, unanimously affirming the judgment of the General Term, and ordering judgment absolute for plaintiff with costs. No opinion was written, that of the justice in the Supreme Court being adopted as fully covering and deciding every point at issue.

New Cities.—In 1888 Hornellsville, Ithaca, and Middletown were incorporated as cities. This makes the total number of cities in the State 80. The other 27 are Albany, Amsterdam, Auburn, Binghamton, Brooklyn, Buffalo, Cohoes, Dunkirk, Elmira, Hudson, Jamestown, Kingston, Lockport, Long Island City, Newburgh, New York, Ogdensburg, Oswego, Poughkeepsie, Rochester, Rome, Schenectady, Syracuse, Troy, Utica, Watertown, and Yonkers.

Hornellsville, in Steuben County, secured a charter on March 2, 1888. The city is divided into six wards. The mayor, chamberlain, overseer of the poor, recorder, sealer, game-constable, and three commissioners of excise are to be elected on the general ticket. All other officers are elected on ward tickets. The city contains about 12,000 inhabitants. It is on Canisteo river which runs southward into the Alleghany. Hornellsville is at the junction of several railroads. A short railroad to Bath, in the same county, connects that village with Hornellsville and with the Delaware, Lackawanna and Western Railroad. There are planing-mills and shoe-factories; but the chief industry is in the shops of the New York, Lake Erie and Western Railroad, and its employes form a large part of the population. There are six churches, five schools, and a free public library. The city is known as a tri-shire town, the remaining public buildings of the county being in the villages of Bath and Corning. Hornellsville is the center of a large agricultural interest which is shown in the farmers' clubs and in what are claimed to be the largest county fairs in any rural city of the State.

Ithaca became a city by an act of the Legislature on March 2, 1888. The city is divided into four wards. The mayor, recorder, and two supervisors are the only officers elected on a general ticket. The charter is considered a marvel of brevity and thoroughness, by those who have paid attention to the charters of cities. This city is at the southern end of Cayuga Lake. As a village it was founded in 1796 by Simeon De Witt, who was then surveyor-general of the State of New York. The opening of the Erie Canal and the second railroad built and operated in the State from Ithaca to Owego, connecting the waters of Cayuga Lake with Susquehanna river, gave a rapid growth to the village, and it became an important distributing point. The lower tier of counties in New York and the northern tier in Pennsylvania brought many of their

supplies through the Erie Canal, Cayuga Lake, and Ithaca. Binghamton and Elmira were tributaries to Ithaca at that time; but they have since distanced her, owing to largely improved railroad facilities. It was necessary in the early days to reach Ithaca in order to take steamboats on Cayuga Lake to go to Albany or to the West, and a large territory was dependent upon Ithaca for cheap and rapid transportation. The turnpike was used by early stages to Catskill, Geneva, and Buffalo. A ship-canal was devised to Lake Ontario; and the price of property in Ithaca rose very high. But when the Erie Railway was constructed, in 1849, the whole territory southward of Ithaca became tributary to Elmira and Binghamton. The late Ezra Cornell removed to the village in its day of distress, and by his wealth and enterprise restored much of its former prosperity. The university bearing his name was but a part of the great work that he accomplished. The city has 12,000 inhabitants. The railroad connections are the Delaware, Lackawanna and Western, the Utica, Ithaca and Elmira, and two smaller roads. There are many factories producing clocks, stoves, agricultural implements, steam-engines, organs, and rifles. The city is an important center for the distribution of coal from the mines of Pennsylvania. There are 14 churches, 8 schools, a public library, 8 banks, 8 hotels, 2 daily and 4 weekly newspapers. The city is lighted by the electric light and by gas; and it has a fine system of water-works.

Middletown became a city on June 9, 1888. The number of wards is four. The officers elected on the general ticket are the mayor, treasurer, alderman-at-large, recorder, two justices of the peace, two constables, nine members of the board of education, three excise commissioners, five water commissioners, and three assessors. The city lies on Walkill river, nearly seventy miles northwest of New York city. The New Jersey Midland Railroad, the New York, Lake Ontario, and Western, the New York, Lake Erie, and Western, the Susquehanna and Western, and the Middletown and Crawford Railroads, all center at this point. The population is about 15,000. The city is a large manufacturing center, more especially for nails, files, farming-implements, saws, condensed milk, and iron castings. It is also the center of a large dairy and agricultural interest. It has water-works and gas-works. There are twelve churches and a graded high school, with twelve other public schools. Middletown is the site of the Homoeopathic Asylum for the Insane. The buildings have been erected on what is known as the hospital system of treatment; but new ones will be erected according to the cottage system.

Political.—On May 15 a Democratic State Convention met in New York city and elected delegates to the St. Louis convention, who were instructed to vote for the renomination of President Cleveland. Presidential electors

were also selected. The resolutions of the convention approve the National and State Administrations, and strongly condemn trusts. The Saxton electoral-reform bill, which was passed by the Legislature but vetoed by the Governor, was also condemned. The Republican Convention met at Buffalo on May 16, and chose as delegates at large to the Chicago convention the four leaders of the party in the State, Senator Hiscock, ex-Senators Platt and Miller, and Chauncey M. Depew. The delegation was uninstructed. Resolutions on State and National issues, as well as the nomination of electors at large, were referred to a subsequent convention for the nomination of State officers. This latter convention was held at Saratoga on August 28. It nominated ex-Senator Warner Miller for Governor by acclamation, and selected as candidates for Lieutenant-Governor and for Judge of the Court of Appeals, to fill the vacancy caused by the death of Judge Rapallo, S. V. R. Cruger and William Rumsey, respectively. The platform included the following:

The Legislature of 1888 gave proof of the purpose and effort of the Republican party to enact laws for the best interests of the people. The reduction in the rate of State taxation bears witness to the spirit which guided legislation. The investigation into trusts and combinations, by making their evils known, points the way to effectual remedies. The examination into the conduct of affairs in connection with the New York aqueduct, still in progress, has already exposed abuses which call for reparation, and has given warning how the campaign expenses of a Democratic governor may be met out of contracts paid by the taxpayers.

The Republican party favor the payment by the State of the legitimate expenses for ballots and their distribution, and the punishment, by disfranchisement and other severe penalties, of bribery and fraud at election. The efforts of the last Legislature in this direction deserve commendation, while Gov. Hill merits censure and rebuke for his veto of a measure aiming to purify the ballot and to assure absolute independence to vote at the polls.

In view of the recent revelations, showing the abuse of our naturalization and immigration laws, we desire and urge a thorough revision of said laws, in order that our country and fellow-citizens may be protected from the pauper and criminal classes of other countries.

The Democratic convention for nominating State officers met at Buffalo on September 12, and renominated Gov. Hill and Lieut.-Gov. Jones by acclamation. For Judge of the Court of Appeals John Clinton Gray was nominated. The platform contained the following:

We oppose all sumptuary laws, needlessly interfering with the personal liberties and reasonable habits and customs of any part of our citizens. We believe in the regulation and restriction of the liquor-traffic by just and equitable excise laws rigorously enforced, without unjust discrimination, throughout the State. Local excise revenues raised by State law, like other proper local revenue laws, should be applied in lessening the burdens of local taxation. We favor a revision of the excise laws and approve the recommendation of a Democratic governor to that effect, made to the last Legislature, and adopted by it, whereby a commission was appointed to make such revision, and we trust that the work of the commission will be such as

to merit the approval of the people of the State. We denounce the variable, defective, and hypocritical legislation of the Republican Legislature upon the liquor question in the last few years, much of which was clearly inconsistent, not honestly designed or calculated to aid the cause of temperance, but intended only to mislead the people and for political effect.

The Democratic party, now as ever, earnestly favors the presentation of the purity of elections, the protection of the ballot, and of honest returns. It believes that these conditions are the safeguards of our free institutions, and that all good citizens should cordially unite in promoting such conditions and in promoting all adverse and fraudulent influences. We favor all reasonable and practical measures which may conduce to these ends, and of all changes in our election laws which will then more effectually preserve to every citizen the right of free ballot, fairly counted and honestly returned. We favor any practical and properly framed measure, however stringent and severe, which will more surely prevent and punish bribery and fraud, as well as intimidation and coercion at elections. We approve the veto of the so-called Saxton electoral bill, because it contained provisions which were unconstitutional, grossly defective, clearly impracticable, and otherwise objectionable, and which would, therefore, have failed to accomplish the reforms desired.

The Prohibitionists, at their State convention held in Syracuse, June 27, nominated W. Martin Jones for Governor, George F. Powell for Lieutenant-Governor, and Charles W. Stephens for Judge of the Court of Appeals. The United Labor party, at their convention in New York city, September 20, accepted Warner Miller, the Republican nominee, as its candidate for Governor, and nominated John H. Blakeney for Lieutenant-Governor, and Lawrence J. McParlin for Judge of the Court of Appeals.

On September 23 the Socialists of New York city, at a public meeting, resolved to nominate candidates for national, State, and municipal offices, and at a subsequent meeting Edward Hall was made a candidate for Governor, Christian Pattberg for Lieutenant-Governor, and Francis Gerau for Judge of the Court of Appeals. The canvass was one of great interest, but of no unusual excitement. As in 1884, the decision of the national contest was considered to depend on the vote of New York, and largely also upon the vote of New York city. At the election in November, while the Republicans carried the State on the national ticket, their candidates on the State ticket were defeated. For Governor, Hill received 650,464 votes; Miller, 631,298; Jones, 80,215; and Hall, 8,848. Gray, for Judge of the Court of Appeals, was elected by only 8,425 plurality, receiving 634,878 votes to 631,458 for Rumsey, 31,178 for Stephens, 8,841 for McParlin, and 8,523 for Gerau. The Republicans elected 20 members of the State Senate, and 79 members of the House; the Democrats securing 11 Senators and 49 members of the House. Democratic Congressmen were elected in the first fourteen congressional districts (except the Third), and in the Nineteenth and Thirty-third Districts; the remaining nineteen districts elected Republicans. At the same election an amendment to the State Constitution, providing that

the Governor may select seven Supreme Court judges for service at Albany as a second court of appeals, to visit the regular court, was adopted by a vote of 498,114 yeas to 55,822 nays.

NEW YORK (CITY). Government.—The following is the list of officers during the year: Mayor, Abram S. Hewitt, Democrat; President of the Board of Aldermen, George H. Forster; Register, James J. Slevin; Sheriff, Hugh J. Grant.

Debt.—The following table gives the condition of the finances:

FUNDED DEBT.		Outstanding Dec. 31, 1887.	Issued during 1888.	Redeemed during 1888.	Outstanding Dec. 31, 1888.
1. Payable from the sinking-fund, under ordinances of the Common Council.....		\$4,671,900 00		\$78,500 00	\$4,593,400 00
2. Payable from the sinking-fund, under provisions of chapter 388, section 6, Laws of 1878, and section 176, New York City Consolidation act of 1882.....		9,700,000 00			9,700,000 00
3. Payable from the sinking-fund, under provisions of chapter 388, section 8, Laws of 1878, and section 192, New York City Consolidation act of 1882.....		19,960,887 96	\$3,707,315 15		23,667,556 11
4. Payable from taxation, under provisions of chapter 490, Laws of 1883.....		445,000 00			445,000 00
5. Payable from the sinking-fund, under provisions of the constitutional amendment adopted Nov. 4, 1884.....		16,750,000 00	4,150,000 00		20,900,000 00
6. Payable from taxation, under the several statutes authorizing their issue.....		72,388,481 49		3,900,389 14	68,888,142 35
7. Bonds issued for local improvements after June 9, 1880.....		3,768,000 00	380,000 00		4,098,000 00
8. Debt of the annexed territory of Westchester County.....		600,000 00		25,000 00	668,000 00
Total funded debt.....		\$128,268,719 45	\$8,187,315 15	\$4,010,889 14	\$132,445,095 46
TEMPORARY DEBT.—Revenue Bonds.					
1. Issued under special laws.....		196,746 70	895,180 49	196,746 70	895,180 49
2. Issued in anticipation of taxes of 1887.....		4,857,600 00		4,857,600 00	
3. Issued in anticipation of taxes of 1888.....			17,210,475 00	14,802,875 00	2,907,600 00

By the new constitutional amendment, the city is forbidden to increase its indebtedness beyond an amount equal to ten per cent. of the valuation of the real estate within its limits. The assessed valuation for 1888 was \$1,302,818,879. An examination of the above statement will show that the gross bonded indebtedness is \$132,445,095.46, while the amount held by the sinking-fund for the redemption of the city's debt is \$44,424,690.12. The net indebtedness of the city, therefore, amounts to \$88,010,405.34. For the purchase of new parks, for the improvement of the river-front, and for the discharge of other obligations already imposed upon it, says the Mayor, the city will be compelled to issue additional bonds amounting to about \$19,561,000. The city's net income accruing to the sinking-fund for 1889 is estimated at over \$9,000,000. It is fair, therefore, to assume that during the current year the city will be compelled to increase its indebtedness by about \$10,000,000. As by the provisions of the constitutional enactment

the borrowing capacity of the corporation is limited to about \$180,000,000, and as the liabilities which it has already incurred amount to over \$98,000,000, it follows that the amount of money which the city may raise by pledging its credit for further improvements can not exceed the sum of \$82,000,000.

Schools.—The president of the Board of Education is J. Edward Simmons, and the superintendent is John Jasper. There are 84 grammar schools and 39 primary schools and also

a school-ship, the "St. Mary's." The average attendance at the grammar schools during the year was 114,710; at the primary schools, 19,588; total 184,248. The total number taught at the grammar schools during the year was 214,461; at the primary schools, 40,328; total, 254,789. At the evening schools the average attendance was 7,357, and the total number taught was 21,839. According to the financial statement of funds down to Jan. 1, 1889, the total resources were \$5,589,525.59; total expenditure, \$4,503,797.71; total sum relinquished, \$18,508.55; total balance of all funds, Dec. 31, 1888, \$1,067,224.33. The chief details of the expenditures were: Salaries of teachers in grammar and primary schools, \$2,824,327.69; salaries of janitors in grammar and primary schools, \$124,282.68; salaries of professors *et al.* in Normal College, \$74,468.94; salaries of teachers in training department, \$19,185.62; salaries of janitor and engineer in Normal College, etc., \$3,999.99; salaries of teachers and janitors in evening schools, \$109,661.69; salaries of officers and clerks of Board of Education, \$39,490.56; salary of counsel to the board, \$3,000; salaries of city superintendent and assistants, \$34,558.47; salaries of truant agents, \$11,781.79; support of nautical school, \$27,541.86; depository—books, maps, supplies, etc., \$144,709.19; rents of school-buildings, \$40,664.24; fuel, \$93,021.84; gas, \$18,381.89.

Vital Statistics.—The president of the Board of Health is James C. Bayles. According to

the report made under his direction, the total number of deaths during the year was 40,175; of these, 17,360 were of children under five years of age. Classified according to diseases, the more important were: Small-pox, 81; typhoid fever, 488; whooping-cough, 578; scarlet fever, 1,861; diphtheria, 1,914; diarrhoeal diseases, 3,489; pneumonia, 4,288; consumption, 5,280. The death-rate was 26.33 in a thousand. There were 36,136 births during the year, including 3,289 that were reported as still-births; 14,533 marriages were recorded, and 4,890 coroners' certificates were issued, indicating the necessity of an inquest. The statistics of the deaths are very perfect, as no burial can take place without a permit; but the information concerning the marriages and births is necessarily defective. The estimated population of New York city on July 1 was 1,526,081. This was determined from the proportional increase between the State census taken in 1875 and the national census of 1880. Prior to July 1, the weekly increase of the population was estimated at 845, and since that time at 872.

Police.—This department is controlled by four commissioners, of whom Stephen B. French is president. The superintendent is William Murray, and the force under his command numbered on Jan. 1, 1889, 8,351, of whom 2,253 are patrolmen. These were distributed among 85 precincts and 1 sub-precinct, each of which was under the special supervision of a captain. There were 85,049 arrests during the year, for the following offenses: Assault and battery, male, 4,709, female, 521; disorderly conduct, male, 40,850, female, 7,180; intoxication, male, 14,282, female, 6,461; petty larceny, male, 2,843, female, 418; suspicious persons, male, 3,279, female, 298; violations of corporation ordinances, male, 4,942, female, 77; violations of health law, male, 14,040, female, 150; violation of excise law, male, 5,810, female, 120.

Fires.—The fire department is managed by a board of three commissioners, of which Henry D. Purroy is president. Charles O. Shay is chief of the department, and the force includes 1,028 men. During 1888 there were 3,422 alarms of fire, and 3,217 actual fires. Of the latter, 2,888 were confined to the point of starting, 200 were confined to the building where the fire originated, 49 extended to other buildings, 28 were vessels, and 54 were of places other than buildings or vessels; 2,078 fires were extinguished without an engine-stream; 686 with one engine-stream; 347 with two or three engine-streams; and 106 required more than three engine-streams. The following table gives the damage to structures:

STRUCTURES.	Slight.	Considerable.	Destroyed.
Brick, iron, or stone	892	72	9
Wooden	142	84	9

Political.—In addition to the excitement incidental to a presidential canvass, the local politics were somewhat complicated by the nomination by Tammany Hall of Hugh J. Grant for Mayor. Abram S. Hewitt two years previously had been the nominee of Tammany, but by his independence while in office he incurred the ill-will of the politicians and consequent repudiation by that local faction of the Democratic party. But he was promptly nominated by an independent convention, and his candidacy was accepted by the County Democracy. At the election, Hugh J. Grant (Tammany) received 114,111 votes; Joel B. Erhardt (Republican), 78,087; Abram S. Hewitt (County Democracy), 71,979; James J. Coogan (United Labor), 9,809; William T. Wardwell (Prohibition), 882. George H. Forster (Tammany) was elected President of the Board of Aldermen, but his death before his inauguration led to the selection of John H. V. Arnold for that place. The Board of Aldermen consists of 16 Tammany, 2 County Democrats, and 7 Republicans. Besides the foregoing, James A. Flack was elected sheriff, Edward F. Reilly county clerk, and Ferdinand Levy, Daniel Hanly, and Louis W. Schultze coroners. The presidential vote in New York city was: Mr. Cleveland, 162,735; Gen. Harrison, 106,922; Gen. Fisk, 1,848.

Mayor's Message.—This document contained the following paragraphs of general interest:

The parks of the city have been established for the use and enjoyment of the whole people. Everything that they contain should therefore be freely accessible to the citizens. The closing of the Museums of Art and Natural History on Sundays is a practical exclusion of the industrial masses from all opportunity to visit them. I hope that some means will soon be devised by which these museums will be made accessible to the public on Sunday.

At present there is little or no classification of shipping at our docks. Ferry-boats, sea-going vessels, and the smaller craft which ply between this city and adjacent towns are crowded indiscriminately together. Passenger-boats and freight-vessels sail from the same piers. Lines of trucks laden with merchandise render the streets in the neighborhood of the freight depots impassable to foot-passengers. The pavements along the streets fronting on the river are in such wretched condition that travel upon them is dangerous to vehicles. Great ruts and holes act as traps for heavily laden trucks, and it is no uncommon sight to see the entire traffic of the street suspended while a driver vainly urges his team to pull from a break in the street-bed a load which would tax the full strength of his horses to draw upon an even payment.

The pavements of the city are in such pressing need of repair and improvement that attention should be immediately devoted to them. I have already mentioned the inexcusable condition in which I have found the streets fronting on the rivers, and I venture to say that there are few thoroughfares which are in the condition that befits the trade and commerce of this city. Under the law the public authorities are limited to an expenditure of \$500,000 annually for the repavement of the highways, which sum is utterly inadequate to the extensive alterations and improvements which are now absolutely essential.

With proper pavements an effective system of street-cleaning could be easily maintained. At present it is generally conceded that our street-cleaning system fails properly to provide for the public comfort. Sub-

stantial sums are appropriated annually from the public treasury for the cleaning of the streets, but their filthy condition is the cause of universal and well-founded complaint.

For many years this city has been compelled to pay an unjust proportion of the expenses of the State Government. The State Board of Assessors has fixed the valuation of taxable property within this city at a sum almost equal to 45 per cent. of the entire valuation of the State, and the city is consequently compelled to bear 45 per cent. of the entire State tax-

the harbor, telegraph lines were torn down, for two days an almost total suspension of business occurred, and for a week from the beginning of the storm its effects were still felt in the stagnation of business interests. Articles of food became scarce, milk was not to be had in the city, and condensed milk had to be used by all. The price of all provisions began to rise, notably that of meat and poultry.

WEST ELEVENTH STREET, AFTER THE BLIZZARD.

tion. The injustice of this distribution of the burden of government between this and other counties is apparent from the mere statement of it. Notwithstanding the unjust proportion of State taxation which is imposed upon us, the city has no representation in the Board of State Assessors. Were such representation afforded it is probable that the injustice from which we now suffer would be to some extent lessened, and the burden of our taxation sensibly reduced.

Notwithstanding the general demand for the burial of electric wires and for the removal of the poles which disfigure our streets, the nuisance remains unabated. Laws have been enacted which were intended to afford the city relief from this imposition, but either on account of imperfections in the law or remissness of the officers charged with its execution, the poles and wires continue to obstruct our thoroughfares. All the provisions of the existing law should be invoked to remedy this evil; and, if they prove inadequate, we should ask the Legislature for additional powers.

The Blizzard.—A snow-storm of great severity, preceded by rain, visited New York city and vicinity on March 11, 12, and 13. For over forty-eight hours a very heavy northwest wind prevailed and caused the snow to drift in all directions. Railroad communication was cut off, vessels were detained from reaching

In the suburbs, where many business men reside, thousands were detained either in their houses or on trains of cars. On all the roads the morning trains of the 12th were stopped by the storm, and in some cases two nights were spent by passengers on board the trains. The New Jersey railroads, and those running from the Grand Central Depot toward the north and east, suffered greatly. Where the trains were delayed at stations the capacity of the neighboring country was taxed to its utmost to provide food for the passengers. At some places long lines of cars and engines, representing ten or more separate trains, were snow-bound. The suspension of mail facilities was absolute for over forty-eight hours.

The immediate effect of the storm was to suspend all traffic on the surface street-roads. The elevated roads, it would be supposed, would be free from trouble; but, owing to the position of their rails, on each side of which two heavy wooden guard-rails are bolted down, they experienced much difficulty. The rain coated the rails with ice, snow was deposited

upon the ice, and the increasing fall of snow rapidly filled up the space, burying the rail completely, and preventing transit over the road. In some instances the cars were all day in going the length of the road. The people, in many cases, came down on ladders, the trains being detained between stations.

The fire department set to work to build sleighs and hire all suitable ones in order to use them for the transportation of engines, hose, and ladders to fires. The telephone company, finding its wires were in many instances crossed by the electric-light wires, it became necessary as a precaution against conflagration to shut off the light currents, so that the city was for one or two nights practically without illumination. Coal was delivered with great difficulty to many private residences. The Steam Supply Company supplied steam without interruption to all its customers. The gas companies supplied gas without trouble, while coal and all objects that had to be transported on the surface were only with great delay and at the cost of great efforts delivered to those requiring them.

To dispose of the masses of snow, fires were built against the heaps, and in other places jets of steam were used to melt the accumulation. Carting the snow to the docks and dumping it into the river was the most efficient of the methods adopted. The East River Bridge was operated at a disadvantage, the cable transport having stopped. In the midst of the blockade thus occasioned an ice bridge formed across the East river, and several thousand people crossed upon it. A very sad feature was the loss of life. Owing to the exposure, several persons perished in the city and suburbs.

NICARAGUA, a republic in Central America; area, 51,600 square miles; population in 1886, 262,372. The capital is Managua, population, 18,000.

Government.—The President is Don Evaristo Carazo, whose term of office will expire on March 1, 1891. The Cabinet is composed of the following ministers: Foreign Affairs, Don Adrian Zavala; Finance, Don Bernabé Portocarrero; Interior, Don David Osorno; Public Works, Don Osoé Chamorro; War, Gen. J. Elizondo. The Nicaraguan Minister at Washington is Don Horacio Guzman; the Consul-General at New York, Alexander Cothel; the American Consul at Managua is Charles H. Wills.

Finances.—The income in 1885 was \$1,479,098; the outlay, \$2,191,076; in 1886 the former was \$1,594,286, and the latter, \$1,998,667. The foreign debt is represented by £285,000, bearing 6 per cent. interest, and the home debt, including paper money in circulation, amounted to \$491,128 on Oct. 31, 1886. In September, 1888, the Minister of Finance made a contract with the Banco de Nicaragua by virtue of which the Government engaged to withdraw and cancel all the paper money in circulation on November 15 of that year, with

the exception of \$200,000, which are to be withdrawn gradually; to provide for which, 10 per cent. of the duties on imports at the seaports are to be set aside until the amount is canceled. The bank bound itself to take at par in silver coin all such paper money on presentation. In this manner specie payment has virtually been resumed.

Army.—The effective strength of the permanent army is 1,258 men, commanded by 88 officers; and of the militia 14,000, officered by 581.

American Arbitration.—The President of the United States, in his message of December 8, expressed himself in the following terms: "The long-pending boundary dispute between Costa Rica and Nicaragua was referred to my arbitration; and by an award made on March 22 last, the question has been finally settled to the expressed satisfaction of both of the parties in interest." A dispute having arisen afterward between the two republics, in relation to the site of the proposed Nicaraguan Canal, the American minister to Guatemala was instructed to use his good offices to bring about an understanding between the two governments. The following dispatch from him was received at the Department of State on Jan. 17, 1889: "The convention between Nicaragua and Costa Rica to arbitrate questions affecting the Nicaraguan Canal was signed on the 10th instant. The President of the United States is named the arbitrator."

Annexation of Corn Island.—The "Gaceta Oficial" of Sept. 22, 1888, announced the taking possession of Corn Island by the Government on August 30. This small island lies off the Nicaraguan coast, on the Atlantic side, thirty-six miles east of Bluefields. It has a population of 500, and a good port with a depth of forty feet. The island is fertile, and exports a large amount of cocoanuts. There is also a ship-yard, where sloops of twenty tons capacity are built.

Postal Service.—During 1885-'86 the number of items of mail matter handled was 2,480,153, while the expense involved was \$71,406; the receipts did not exceed \$22,717.

Telegraphs.—The number of telegrams sent during 1885-'86 was 261,116, 87,010 being Government dispatches and 174,106 private messages. The latter were 91,607 in 1884, 88,580 in 1885, and 85,526 in 1886; the cablegrams numbered 9,267. The receipts during 1886 were \$49,101, and the expenses \$88,800. There were in operation in 1887 808 miles of telegraph and 82 of telephone. In October several new telegraph offices were opened. A line went into operation a distance of forty miles between Eteli and Sauce, to be soon followed by one between Matagalpa and Jui-galpa, which will connect the former with the Department of Chontales.

Electric Light.—The municipality of Leon made a contract in October for the lighting of the city during twenty-five years, at the end of which time the city has the option of buy-

ing the plant or extending the privilege for another equal period, on the expiration of which the plant becomes city property without compensation.

Railroads.—There are in operation two lines of railway, one between Corinto and Momotombo *via* Chinandega and Leon, and one between Managua and Granada *via* Masaya, measuring together 159 kilometres in length.

Lake Navigation.—In July the Government made a contract for the establishment of a new line of steamboats to ply on the lake between Managua and Momotombo; the first steamer to begin its trips in eighteen months, and no steamer of the line to register less than 150 tons burden.

Commerce.—During four biennial periods the total foreign trade of Nicaragua was as follows:

1879-'80.....	\$6,644,816	1882-'84.....	\$8,699,680
1881-'82.....	7,884,668	1885-'86.....	8,410,188

The imports and exports during the last two were distributed as follow:

MOVEMENT.	1883-'84.	1885-'86.
Import.....	\$8,794,981	\$8,684,178
Export.....	4,904,649	4,726,015
Total trade.....	\$8,699,680	\$8,410,188

During the last two years the products exported were: India-rubber, 28,007 quintals; gold, 19,785 ounces; coffee, 142,472 quintals; cattle, 406 head.

The American trade with Nicaragua has been as follows:

FISCAL YEARS.	Import into the United States.	Domestic export to Nicaragua.
1888.....	\$1,486,171	\$861,156
1887.....	1,662,162	701,151
1886.....	1,067,909	471,671

Education.—In 1887 there were 238 common schools, attended by 9,033 pupils, who were taught by 256 teachers, and 10 colleges, attended by 998 students, taught by 64 professors. The painter, Don José Maria Ibarra, is about to open a school of arts at the capital; simultaneously a young ladies' educational institute is to be established. Dating from May 1, the academies at Leon and Granada were changed to national universities. The Government in 1888 spent \$1,940 monthly in aid extended to colleges and universities, and \$5,362 per month for common schools; adding thereto other subsidies for education, the monthly state aid aggregated during the year \$14,046.

Nicaragua Canal.—The apparent collapse of the Panama Canal and the slight interest taken in the Tehautepec Ship-Canal, bring into prominence the Nicaragua Canal. The Maritime Canal Company of Nicaragua, which had already received a charter from the State of Vermont, received also a charter from the Congress of the United States in February, 1889. After debates and investigations in both houses of Congress, of the most exhaust-

ive nature, continued at intervals throughout a period of more than a year, this act of incorporation was signed by President Cleveland in the same month, after careful examination by himself and cabinet of the constitutionality of the measure, and of the claims and objections of previous concessions. This measure is in line with the joint resolution of the Senate Committee on Foreign Affairs that the ship-canal should not be under European control. It requires the president, vice-president, and a majority of the directors of the company to be citizens of the United States.

The first concession to build a ship-canal by the route now proposed was granted by Nicaragua in 1849 to the Atlantic and Pacific Ship-Canal Company. The original company was succeeded by the Central American Transit Company. This organization is still in existence, and its members claim that it has rights prior to those of any other concern, which must be respected by any company that attempts to construct a canal on the route covered by the concessions. These claims have been frequently denied by the Government of Nicaragua, and the action of the United States Congress and President in granting national approval to the present company confirms this denial. A report was made giving the cost and description of the route of a ship-canal from the harbor of San Juan Del Norte, or Greytown, on the Atlantic, to the harbor of Brito on the Pacific, in Nicaragua. Two other lines were surveyed, but were deemed impracticable. The estimated cost of the entire work was \$31,500,000. The undertaking was carried on for several years with considerable energy. It was purely an American enterprise; and it therefore encountered considerable opposition through representatives of foreign governments. Complications with political intriguers led to assurances by the Government at Washington, in 1858-'59, that the interests of citizens of the United States would be protected. The Bulwer and Clayton treaty was negotiated partially in behalf of the company's interests. In 1862 the Government of Nicaragua confiscated the property of the company. Through the intervention of the United States minister, the property was returned. Owing to the civil war in this country the company was left to protect its own interests, and in 1863 the Government of Nicaragua took away the exclusive privileges held by the company, and ratified a contract with Capt. Pim, who represented an English company that proposed building a railroad across the Isthmus. After the exclusive right had been taken away and the charter of the company modified, it made a new contract with Nicaragua, and proceeded with its work. In 1868 the company's steamer on Lake Nicaragua was seized by the troops of the Government, the franchises of the company were declared forfeited, and all its property was seized for debt and sold. This last act drove the company's employees out of the coun-

INTEROCEANIC CANAL OF NICARAGUA.

try, and as further work was impossible, it was decided that the aid of the United States Government should be invoked. Accordingly, on Nov. 5, 1869, the company made a formal request to President Grant for intervention. Claims against Nicaragua for the amount of property seized and destroyed and the damages incurred, were filed with the Secretary of State.

In March, 1887, a contract was signed with Nicaragua, securing to the New York Association exclusive right of way through the territory of the republic, for the construction of a ship-canal between the Atlantic and the Pacific Ocean. The route chosen has been surveyed several times—twice by expeditions sent out by the United States Navy Department. During Gen. Grant's presidency it was approved as the most practicable and feasible route for a ship-canal through the American Isthmus, by a Government commission consisting of the Chief of Engineers of the Army, the Chief of the Bureau of Navigation, and the Superintendent of the Coast Survey, after a technical examination, extending over several years, of the whole subject of interoceanic communication. The detailed estimates of the cost of construction, amounting to \$65,000,000, were examined and accepted by eminent engineers in this country and Europe. Engineers and surveyors were sent to Nicaragua in 1887, and the work of survey has been carried on until the present time. The route is 169·8 miles in length, but only 28·9 miles can really be called a canal. It begins at Greytown, on the eastern side, follows the course of the San Juan river above Ochoa, through Lake Nicaragua, a distance of 129 miles, and thence to the harbor of Brito, the Pacific terminus. The surface of the lake, 110 feet above the sea, is the summit level. At the eastern end of the lake the San Juan river will be backed up and kept at the lake level by a dam for a distance of 64 miles, thus forming an extension of the lake, which will have a width of 1,000 feet and a depth of from

28 to 180 feet. There are 90 miles of lake-navigation, very wide and deep. From the point where the canal leaves the lake on the west to Brito, 17 miles, three locks are proposed. Over this portion of the route some rock-cutting and dredging will be necessary, though the difficulties are not formidable. The canal itself is to be 80 feet wide at the bottom in the deep cuts, and 120 feet wide in the enlarged sections. It is also proposed to enlarge the canal between the last lock and the sea at each terminus, so as to form extensions of the harbors at Greytown and Brito. It is further proposed to overcome the natural difficulties presented in the two harbors by the fluctuations and accumulations of sand by dredging and the use of jetties. The estimated cost of the canal, according to civil engineer Menocal's figures, is \$64,000,000, which includes also electric lighting and railroads for the transportation of canal supplies; and the time for its completion is fixed at six years. The probabilities as to business are estimated as follow by the projectors: "According to reports of the Bureau of Statistics, United States Treasury Department, prepared from official data, the vessels that would have made use of the canal if there had been one were, in 1879, of 2,771,886 tons, and in 1885 of 4,252,484, showing an increase in six years of 1,480,548 tons. From this it is estimated that at least 5,000,000 tons of shipping would be ready to seek transit through the canal by 1892. With a toll of \$2.50 a ton, this would yield a gross income of \$12,500,000. It is believed that \$500,000 will cover ordinary operating expenses, as those of the Suez, with much longer actual canal, are only about \$1,000,000 per annum. This would leave net receipts of \$12,000,000, or 6 per cent. on \$200,000,000." The length of the lock-chambers is 650 feet, and the width 70 feet—dimensions capable of admitting every ship afloat. Lock No. 8, which may be divided into two locks, will be cut out of solid rock, but the others are to have timber and concrete foundations, and the cavities as they may occur will be filled with concrete. The question to solve in regard to these locks is the gates, which are of exceptional size. Civil engineer Peary has invented a rolling gate, combining strength with lightness, as well as facility in opening and shutting. The lower part of the gate consists of a water-tight compartment, in which shifting water-ballast aids both in raising and lowering the gate, while the moving force employed is hydraulic. The gate moves on rails above the floor of the lock.

In May, 1887, the Government of Nicaragua granted important concessions, for which the company paid \$100,000 in American gold to bind the bargain. The Government binds itself, for a period of ninety-nine years, not to make any subsequent concession for the opening of a canal between the two oceans, and also to abstain from granting a concession for a railroad, such as might compete with the

canal for the transportation of merchandise during the same period. The canal is declared neutral during the term of the concession, and the transit through the canal in case of war between two powers, or between one or more and Nicaragua, shall not be interrupted for such cause. The transit of foreign troops and vessels of war will be subjected to the prescriptions established by treaties between Nicaragua and other powers or by international law; but entrance to the canal will be rigorously prohibited to vessels of war of such powers as may be at war with Nicaragua or with any other of the Central American republics. The Government of Nicaragua places at the disposal of the company all the lands that may be required, as well as the materials found thereon; and, in case of the appropriation of property, the company shall enjoy the same privileges as the State. Alternating plots of land will be deeded to the company as the work progresses. It is required that at least \$2,000,000 must be expended during the first year of construction. In consideration of the valuable privileges, franchises, and concessions granted to the company by this contract, it is provided that the republic shall receive in shares, bonds, certificates, or other securities which the company may issue, 6 per cent. of the total amount of the issue. The Government's share shall in no event be less than \$4,000,000. The Government, in its capacity of shareholder, shall have the right to appoint one director. From the receipts of the enterprise the company shall take, in the first place, the amount necessary to cover all the expenses for maintenance, operation, and administration; all the sums necessary to secure the interest, which shall not exceed 6 per cent., and the amortization of the obligations and of the shares; and what remains shall form the net profits, of which at least 80 per cent. shall be divided among the shareholders. It is agreed that, after the lapse of ten years after the completion of the canal, the company shall not divide among the shareholders in payment of dividends, directly or indirectly, by issue of shares or otherwise, more than 15 per cent. annually. or, in this proportion, from dues collected from the canal; and, when it shall appear that these dues yield a greater profit, they shall be reduced to the fixed limit of 15 per cent. per annum. On the expiration of the ninety-nine years stipulated in the concession, it is provided that the republic shall enter upon possession in perpetuity of the canal and all establishments used in its administration, with the exception of vessels, stores of coal, and other materials and mechanical works belonging to the company, its floating capital and reserve fund, as also the lands ceded to it by the State. But the company shall have the right, at the expiration of the ninety-nine years, to the full enjoyment of the free use and control of the canal in the capacity of lessee, with all the privileges and advantages granted by the said concession, for

another term of ninety-nine years, on condition of paying 25 per cent. of the annual net profits of the enterprise to the Government of the republic, beside the dividends due to it for its shares in the capital stock. All misunderstandings that may arise between the state of Nicaragua and the company will be submitted to arbitration. A valuable concession has also been obtained by the canal association from Costa Rica, on a basis similar to that mentioned above.

It is claimed that there are many points of advantage for the Nicaragua Canal. In the first place, it has no such bar to its way as the Culebra mountain, the cutting through of which, from the fact that there is danger of one side of the mountain sliding into the cut, is said to be a doubtful task. It has no such formidable difficulty to contend against as the Chagres river, the controlling of which for the rainy season is an unsolved problem. The San Juan river at Nicaragua is not comparable to it, for that river is known as the only river in the tropics not subject to sudden rises, and floods never occur either in the lake or in the San Juan for the first sixty-four miles of its course. At that point (San Carlos) a dam is proposed, which is said to be practicable. The river flows through a narrow valley, and has no large tributaries, and the heavy rains that fall on the Isthmus at Panama are unknown in this locality. The Chagres river runs beside the Panama Canal, and, though it is nothing more than a slow stream in the dry season, yet in the flood season it is 1,560 feet wide, 28 feet deep, and very rapid. Still another advantage claimed for the Nicaragua is, that the climate is much more healthful than on the Panama route.

NORTH CAROLINA. State Government.—The following were the State officers during the year: Governor, Alfred M. Scales (Democrat); Lieutenant-Governor, Charles M. Stedman; Secretary of State, William L. Saunders; Treasurer, Donald W. Bain; Auditor, William P. Roberts; Attorney-General, Theodore F. Davidson; Superintendent of Public Instruction, Sidney M. Finger; Commissioner of Agriculture, John Robinson; Chief-Justice of the Supreme Court, William N. H. Smith; Associate Justices, Augustus S. Merrimon and Joseph J. Davis.

Finances.—The receipts for 1888, including balance brought over, were \$897,644.09; the expenditures, \$824,611.88; balance, \$73,032.21. Of this balance, \$18,450.38 was deposited in the State National Bank of Raleigh, which suspended in March, 1888. The revenues applicable to general purposes were \$515,698.78 for 1888, a decrease of \$140,000 from 1887. This decrease is partly due to a lower rate of taxation in 1888, being twenty cents on \$100, against twenty-five cents in 1887, and to the suspension of the collection of the tax on commercial travelers, in consequence of a decision of the Supreme Court of the United States declaring the

tax an interference with interstate commerce. This tax had yielded an annual average of \$83,000. The Auditor and Treasurer concur in the opinion that, in order to meet the expenditures of the next two years, it will be necessary to raise the general tax rate to thirty cents on each \$100 worth of property. The chief items of expenditure for 1888 were: Departments of the State Government, \$22,607.84; judiciary, \$46,721.82; agricultural department, \$24,500; asylums and institutions, \$197,400; interest on State debt, \$267,687; Penitentiary, \$100,000; pensions to Confederate soldiers, \$29,583.80; university, \$27,500; public printing, \$13,139.16; State guard, \$4,583.82. The estimated resources for the same time are \$702,395. These estimates are based on a tax levy of thirty cents on \$100, on the assessed valuation of \$211,700,000.

The principal of the bonded debt recognized in the act of 1879 was as follows: Bonds issued before May, 1861, \$5,477,400; issued during and since the late war, by authority of acts passed prior thereto, \$3,261,045; issued in pursuance of the funding acts of March 10, 1866, and Aug. 20, 1868, \$3,888,600; total recognized debt, \$12,627,045. By that act this sum was to be refunded in 4-per-cent. bonds at a discount, and bonds have been surrendered and exchanged as follow: Class 1, at 40 per cent., \$4,925,900; class 2, at 25 per cent., \$2,591,045; class 3, at 15 per cent., \$3,197,000. Total exchanged, \$10,758,945. New 4-per-cent. bonds have been issued for these redeemed bonds as follow: Bonds at 40 per cent., \$1,970,860; bonds at 25 per cent., \$647,761.25; bonds at 15 per cent., \$479,550. Total new bonds issued, \$3,097,671.25. There is still outstanding of the old bonds, \$1,913,100; when the exchange is completed, the amount of the 4-per-cent. bonds will be \$3,613,511.25.

Exchanges have continued under the act of March 14, 1879, to adjust and renew that portion of the State debt incurred in aid of the construction of the North Carolina Railroad. The commissioners have received \$2,606,000 of the old bonds, and new bonds of the same amount, bearing 6 per cent. interest, maturing April 1, 1919, have been issued, and there remain \$189,000 outstanding, the larger part being held by the United States Treasury. The total debt of the State will thus be funded at \$6,408,511.25.

At the last session of the Legislature, the Treasurer was authorized, with the sanction of Governor and Auditor, to sell 4-per-cent. bonds, as many as may be necessary, at not less than par value, and to apply the proceeds to the payment of the 6-per-cent. construction bonds, wherever found. At the passage of the act, these 4-per-cent. bonds were at par, but they soon began to fall, and now command in the market about ninety-one cents.

Education.—The whole number of white and colored children between the ages of six and twenty-one years in 1887 was 566,270. The

white children, during the four years ending in 1887, increased from 321,561 to 353,481; the colored children from 193,843 to 212,789.

During 1887 there were enrolled in the white schools 57.2 per cent.; in the colored schools 57.8 per cent. The average daily attendance in white schools was 35.2 per cent., and in the colored schools 33.5 per cent. The total expenditure for schools in 1887 was \$653,037.33, and the average length of the school year sixty days.

For 1888, the average length of the school year was sixty-three days, the amount of money spent \$729,388.02, and the number of children of school age 580,810—whites, 363,982; colored, 216,827. The total enrollment in the schools was 58 per cent., the average attendance about 35 per cent. At the State University, owing to the reductions in the income made by the last Legislature, it has been found necessary to diminish the number of teachers. The new building for the College of Agriculture, at Raleigh, begun in 1888, is approaching completion. It is built of brick made at the Penitentiary.

State Institutions.—Over 400 convicts have been employed on the railroads and in the swamps, and have done much work also upon the Supreme Court room and other public buildings. There are 400 convicts under the age of twenty years.

The State asylums are insufficient for the accommodation of the insane patients. A large number are now confined in poor-houses and jails, and there are many others in private families. The State Asylum at Raleigh has 292 patients, and there is accommodation at the Morganton Asylum for about 500.

The Institution for the Deaf, Dumb, and Blind is well managed, and its pupils now number 287, an increase of 47 in two years.

Militia.—The State Guard, organized in March, 1877, began its existence without State aid, and continued to be supported by private individuals till 1883, when the Legislature granted an appropriation of \$150 a year to each company, limiting the number of companies to twenty-five. In 1887 this was increased to \$300. With this aid, and the Federal appropriation of \$10,000 per annum in arms, ammunition, equipment, and clothing, etc., the Guard is now on a good financial basis. It has increased from 1,043 officers and men in 1886 to 1,192 in 1887 and 1,459 in 1888.

Railroads.—There are 2,550 miles of railroad in the State owned by fifty-one companies. Two railroads are in great part owned by the State—the North Carolina and the Atlantic and North Carolina. The former is leased at a yearly rental of \$260,000, and the State is thus enabled to pay the interest on its 6-per-cent. bonds issued in aid of the construction of the road. The other road was built as an extension of the former road to the sea. The State is contemplating building branch lines as feeders to the roads thus owned.

Manufacturing.—During the past two years twenty factories have been established for canning fruit and vegetables, and have been uniformly successful. There is a marked activity in cotton and wool manufacture, forty-one new factories having been established in 1888. The only silk-factory in the Southern States has been established in North Carolina during the past twelve months by Northern capitalists, and is highly successful. A large amount of machinery has been put into the Sam Christian gold-mine. Water is conveyed five miles, and is forced by a 500-horse-power engine against the hill-sides.

Crops.—Unfavorable weather during the spring and summer injured the crops; the corn-crop is unusually short, and the cotton is below the average; so, also, the tobacco-crop is shorter than for several years. The culture of sorghum cane is increasing, and three times as much land is devoted to grape-culture as there was two years ago.

Oyster-Survey.—The oyster-survey has been completed with the aid of the Federal Government. An area of over 1,000,000 acres has been examined, and 583,000 acres are reported suitable for oyster-culture. Since May 1, 1888, 472 entries of oyster-ground have been made in Hyde, Carteret, and Dare Counties; the total area entered is about 53,000 acres.

Boundary-Lines.—The survey between North Carolina and Virginia, in the counties of Currituck, Camden, and Gates, has been completed, and the line permanently marked with stones. The line between North Carolina and Tennessee and South Carolina is in dispute, and reference to arbitration is proposed.

Pensions.—By the acts and amendments of 1885 and 1887, \$30,000 was appropriated to a certain defined class of soldiers and widows of deceased soldiers, in the expectation that each entitled would receive the sum of thirty dollars. So great has been the number of applications under these acts that the amount received by each applicant has been reduced to a mere pittance. The number of soldiers drawing pensions during the year was 1,083, and the number of widows, 2,625; total, 3,708; making the allowance for each soldier and widow, \$8.25.

Immigration.—A convention of delegates from nearly all the Southern States east of the Mississippi river met at Hot Springs on April 25, under the auspices of the Southern railroad and steamship companies, to promote immigration into these States. The Governors of Virginia, South Carolina, and Georgia were present. After a discussion it was resolved that an immigration association be established with headquarters in the city of New York, to be styled the Southern Immigration Association. The object of the association is to direct immigrants, immediately upon their landing in New York, to homes in the South.

Farmers' Convention.—The annual meeting of the Interstate Farmers' Association was held

this year at Raleigh, August 21. It brought together over one hundred delegates, representing nearly all the Southern States. Resolutions denouncing "trusts," asking for a repeal of the tariff on jute, and bespeaking encouragement for sheep-raising, were discussed and passed.

Political.—The Republican State Convention met at Raleigh on May 28, and nominated a complete State ticket as follows: For Governor, Oliver H. Dockery; Lieutenant-Governor, J. C. Pritchard; Secretary of State, George W. Staunton; Treasurer, G. A. Bingham; Auditor, C. F. McKesson; Attorney-General, Thomas P. Devereux; Superintendent of Public Instruction, James D. Mason; Judges of the Supreme Court, D. L. Russell, to succeed to the vacancy caused by the death of Judge Ashe, and Ralph B. Buxton and David M. Furches as the two Associate Judges provided for by the proposed constitutional amendment to be submitted to the people at the November election. The following resolutions, among others, were adopted:

We look upon the purity of the ballot-box as the best possible security against threatening evils, and we demand such reasonable State legislation as will fully protect the elector in the exercise of the elective franchise. Any denial of the free and just exercise of the elective franchise by fraud or violence poisons the springs of power.

As the means of preventing any further accumulation [of surplus in the United States Treasury] we demand the repeal of the internal-revenue system of taxation, and the passage of the Blair educational bill, as the best method of public education and of distributing the already accumulated surplus in the Treasury.

We are opposed to the present system of county government, and we demand the election of all county and township officers by the people.

We oppose the present system of hiring out convicts by the State, so as to bring other labor in competition with free labor.

The Democratic State Convention convened at Raleigh on May 30. There were three principal candidates for the gubernatorial nomination, Lieut.-Gov. Stedman, Daniel G. Fowle, and S. B. Alexander, each of whom received on the first ballot the following vote: Fowle, 374; Stedman, 331; Alexander, 245. Fowle was nominated on the twenty-third ballot by a vote of 523 to 435 for Stedman. The convention thereupon nominated Alexander for Lieutenant-Governor, but, upon his declining to accept the nomination, chose Thomas M. Holt. Secretary of State Saunders, Treasurer Bain, Attorney-General Davidson, and Superintendent of Public Instruction Finger were renominated. For Auditor, George W. Sanderlin was nominated; for Judge of the Supreme Court, to succeed Judge Ashe, Joseph J. Davis, and as additional judges, in case the constitutional amendment should be adopted, James E. Shepherd and Alphonso C. Avery. The platform approves the administration of Gov. Scales and President Cleveland, favors a tariff for revenue only, and contains the following:

That we, as heretofore, favor, and will never cease to demand, the unconditional abolition of the whole

internal-revenue system as a war tax not to be justified in times of peace, as a grievous burden to our people and a source of annoyance in its practical operations. We call the attention of the people of the State to the hypocritical pretensions of the Republican party in their platforms that they are in favor of the repeal of this onerous system of taxation enacted by their party while the Republicans in Congress are taxing their energies to obstruct all legislation inaugurated by the representatives of the Democratic party to relieve the people of all or a part of this odious system.

That to meet an existing evil we will accept for educational purposes from the Federal Government our *pro-rata* share of the surplus in its Treasury; *Provided*, that it be disbursed through State agents and the bill for the distribution be free from objectionable features.

That it is due to the people of our eastern counties, who have so cheerfully borne their share of our common burdens, that the present or some equally effective system of county government shall be maintained.

The Prohibition party also nominated a State ticket, with William T. Walker for Governor, Moses Hammond for Secretary of State, Hugh W. Dixon for Treasurer, James W. Winstead for Auditor, John W. Moody for Attorney-General, and Robert T. Bonner for Superintendent of Public Instruction. Before the election the name of W. A. Guthrie was substituted on the Republican ticket for that of D. L. Russell, the latter having declined the nomination. The November election resulted in the usual Democratic victory for both State and national tickets. For Governor, Fowle received 147,925 votes; Dockery, 133,475; and Walker, 8,116. Members of the Legislature of 1889 were elected as follow: Senate—Democrats, 37; Republicans, 18. House—Democrats, 38; Republicans, 35; Independents, 2. Democratic Congressmen were elected in the First, Third, Fourth, Sixth, Seventh, and Eighth Districts, and Republicans in the Second, Fifth, and Ninth, a gain of one seat by the Republicans. At the same election the constitutional amendment increasing the number of judges of the Supreme Court from three to five was adopted by 121,961 to 29,393.

NOVA SCOTIA. There were no changes in the Executive Government of the Province of Nova Scotia during 1888.

Legislation.—The session of the Provincial Legislature in 1888 was characterized by the passage of several statutes of great local importance. The Towns Incorporation act is a measure to provide for the local government of all towns already incorporated within the province, and for the incorporation of other towns, without necessity for special legislation. Its principal provisions are as follows: When fifty of the rate-payers of any unincorporated district desire incorporation, they may hand to the sheriff of the county a requisition for an election to test the sentiment of the district. On receipt of this, the sheriff shall proceed to define the boundaries of the proposed town; but on the application of ten rate-payers in the district the sheriff's conclusions in this regard will be reviewed by the Lieutenant-

Governor in Council, and altered by that body in its discretion. After twenty days' notice, the election is held, at which all persons entitled to vote in the district for members of the provincial Legislature may vote, and if the decision is in the affirmative, or if half of the votes are in the affirmative, the Lieutenant-Governor issues a proclamation declaring the town incorporated. The sheriff is the officer to hold the election. Every town already incorporated within the province, or becoming incorporated under the act, is declared to be a separate school district, and the schools are under the control of a board of five commissioners, two of whom are appointed by the Lieutenant-Governor in Council, and three by the town council. This board determines what amount shall be assessed upon the town for school purposes, and under certain conditions may pledge the credit of the towns for school loans. The towns are made distinct from the municipalities in which they are situated, but their liability for indebtedness incurred by the municipality previous to the incorporation of the town continues. Full provisions are made for the assessment and collection of taxes, the laying out of streets, the establishment of local courts of civil and criminal jurisdiction, the regulation of the procedure in such courts, the establishment of a local police force, and in general to meet all probable exigencies likely to arise in a town corporation.

The Assessment act of 1888 consolidates and amends all previous statutes on the same subject, and is very full in its provisions. Under it the incidence of taxation falls upon real and personal property and income. One fourth of the taxes in any year may be raised by a poll-tax, provided each individual poll-tax does not exceed fifty cents; but a municipal council may omit to levy a poll-tax if it deems it expedient to do so.

The Miners' Arbitration act, 1888, provides for the appointment of a board of arbitration to settle disputes between persons employed in mines and their employers. This board consists of five persons; two are appointed by the Lieutenant-Governor in Council, each of the parties to the dispute appoints one, and the two so appointed choose the fifth. The arbitrators are sworn, and have full powers to compel the attendance of witnesses, to administer oaths, and to examine documents. Their award may be made a rule of the Supreme Court on motion, and be enforced in the same manner as other rules of court.

The Public Health act, 1888, authorizes the Governor in Council to make all necessary orders to promote sanitary precautions, including such steps as are needed to prevent the spread of infectious diseases; to regulate burials; and to supply medical aid, medicine, and hospital accommodation in cases of epidemic, endemic, or contagious diseases. It provides for the annual appointment of boards of health in all the cities, towns, and municipalities, the ap-

pointment being vested in the city, town, or municipal councils, as the case may be; but in case the councils do not appoint, the Lieutenant-Governor in Council may do so. Each city, town, or municipality is made a health-district, and a sanitary inspector is to be appointed in each, whose salary and expenses, as well as all the necessary expenses of the board of health, are to be borne by the district. Provision is made for compulsory vaccination, which is to be gratuitous in the case of indigent persons. Houses in which persons are sick from any infectious disease are to be quarantined; children of families so inflicted must be detained from school. Heavy penalties are imposed for violation of the act or any of the regulations made under it.

Many important amendments were made in the details of the Liquor-License act, 1886; also in the County Courts act. All the statutes relating to trustees were consolidated and amended, and an act was passed to provide for the compulsory attendance of children at school; but the provisions of the latter statute only apply to Halifax.

Shipping.—Five steamers, aggregating 397 tons, and 101 sailing-vessels, aggregating 13,976 tons, were built in Nova Scotia during the year ending June 30, 1888. There were added to the Provincial Registry of Shipping during the same period, 126 vessels, aggregating 16,231 tons, and there were sold to other countries 13 vessels, aggregating 3,633 tons and valued at \$59,150. The arrivals and departures from Nova Scotia ports during the year ending June 30, 1888, were as follow:

MOVEMENT.	Number.	Tons.
<i>Arrivals:</i>		
Steamers.....	3,078	956,652
Sailing-vessels.....	14,227	749,165
<i>Departures:</i>		
Steamers.....	3,021	952,737
Sailing-vessels.....	13,855	798,928

Provincial Revenue and Expenditure.—The revenue of Nova Scotia for the year ending Dec. 31, 1888, was as follows: From dominion subsidies, \$504,382.32; mines, \$151,208.72; crown lands, \$14,258.15; other sources, \$53,002.80; total, \$712,951.49. The principal items of expenditure were: For education, \$212,000; road surplus, \$113,829; interest, \$49,377; agriculture, \$21,283; subsidies to steamers, \$36,923; legislative expenses, \$40,620; salaries, \$17,658; hospital maintenance, \$20,048; railway subsidies, \$28,088. A balance of \$44,551 was carried over to 1889.

Railways.—Following is a statement of the railways in operation in Nova Scotia in 1888: Intercolonial, 251 miles; Windsor and Annapolis, 84; Western Counties, 67; Eastern Extension, 80; Joggins, 14; Springhill and Parrsboro, 32; Sydney and Louisburg, 32.

The following roads were under construction during the year: Oxford and New Glasgow, 72 miles; Cape Breton, 98; Nictaux and Atlantic, 75.

OBITUARIES, AMERICAN. Sketches of some of the more noted Americans that died in 1888 will be found in their alphabetical places in this volume, accompanied by portraits.

Abell, Arunah Shephardson, publisher, born in East Providence, R. I., Aug. 10, 1806; died in Baltimore, Md., April 19, 1888. He learned the printer's trade, and, with two partners, issued the first number of the Philadelphia "Public Ledger," on March 25, 1836. In 1837 he went to Baltimore, and on May 17 brought out the first number of the "Sun." He retained his interest in the Philadelphia "Public Ledger" till 1864, and in the Baltimore "Sun" till death. Mr. Abell was associated with Prof. Morse in establishing the magnetic telegraph, published the first message sent over the wires between Washington and Baltimore in 1844, and received for publication the first presidential message ever transmitted by wire, May 11, 1846. At the time of his death he was believed to be the wealthiest citizen of Baltimore, and had an estate near the city that originally cost him \$500,000, and on which he subsequently expended \$1,000,000 in improvements.

Adam, John Johnston, railroad official, born in Paisley, Scotland, Oct. 30, 1807; died in Tecumseh, Mich., July 4, 1888. He was graduated at the University of Glasgow in 1826, removed to the United States, and was soon afterward appointed principal of Meadville, Pa., academy. In 1831 he removed to Michigan; in 1835 was a member of the convention that framed the first Constitution of the State; in 1836-'40 was Secretary of the State Senate; and, after a service in the State House of Representatives, was elected State Treasurer. He was appointed Auditor-General of Michigan in 1846, and in January, 1851, resigned the office to accept one with the Michigan Central Railroad. Two years afterward he became auditor of the Michigan Southern Railroad Company, with which he remained until 1868. Mr. Adam was a member of the two first boards of regents, under which the State University was reorganized.

Agnew, Cornelius Lea, surgeon, born in New York; Aug. 8, 1830; died there, April 18, 1888. He was graduated at Columbia College in 1849, and at the College of Physicians and Surgeons in 1852, and became connected with the New York Hospital. Subsequently he studied at the Lying-in Asylum in Dublin, attended Prof. Ferguson's Clinical Lectures in London, and applied himself to the study of diseases of the eye and akin in Paris. On his return to New York, he assumed the duties of surgeon to the Eye and Ear Infirmary and engaged in private practice. In 1868 Gov. Morgan appointed him Surgeon-General of the State of New York, and shortly after his reelection in 1869 made him Medical Director of the State Volunteer Hospital. He was one of the founders of the United States Sanitary Commission, and as a commissioner devoted almost his entire time to its service during the civil war. He joined three other gentlemen in establishing the Union League Club of New York. In 1866 he established ophthalmia clinics in the College of Physicians and Surgeons, and three years later was elected Clinical Professor of diseases of the Eye and Ear. In 1870 he organized the Brooklyn Eye and Ear Hospital, and the Manhattan Eye and Ear Hospital in New York; and he was one of the organizers of the School of Mines in Columbia College, and became a trustee of the college in 1874. He was a manager of the State Lunatic Asylum at Poughkeepsie, and secretary of the executive committee of its board; president of the Board of Education of New York; a governor of the New York Women's

Medical College; secretary of the first sanitary reform association organized in New York; and president of the New York State Medical Society in 1873. He was a popular and effective lecturer, and published, among many works, "A Contribution to the Surgery of Divergent Squint," "Trephining the Cornea to Remove a Foreign Body," and "Cautoplasty as a Remedy in Certain Diseases of the Eye."

Alexander, Edmund Brooke, soldier, born in Haymarket, Va., Oct. 6, 1802; died in Washington, D. C., Jan. 3, 1888. He was graduated at the United States Military Academy in 1823, assigned to the Sixth Infantry as brevet second lieutenant, promoted captain, and appointed assistant quartermaster in 1838, and transferred to the general staff. He resigned his staff appointment, and, as senior captain, commanded the Third Infantry through the Mexican War. His regiment carried the enemy's breastworks with the bayonet at Cerro Gordo; and he was brevetted major for this action, and lieutenant-colonel for gallantry at Contreras and Churubusco. After the war he served in New Mexico, was promoted major and assigned to the Eighth Infantry, and was selected by President Pierce for one of the new colonelcies on the enlargement of the army in 1855. He was in command at Fort Laramie at the beginning of the civil war, and was kept at remote frontier posts as chief mustering officer; was brevetted brigadier-general for faithful services; and retired, after forty-nine years of continuous service, in 1872.

Ayres, Esmaya Beck, soldier, born in East Creek, Montgomery County, N. Y., Dec. 20, 1825; died in Fort Hamilton, New York harbor, Dec. 4, 1888. He was graduated at the United States Military Academy in 1847, served in the Mexican War as second lieutenant in the Third United States Artillery, and after its close was on garrison duty at Fort Preble, Mexico, and on similar and frontier duty in the United States till 1859, when he was ordered to the Artillery School at Fort Monroe. With the exception of a three months' sick-leave, he was actively engaged through the civil war. He was promoted first lieutenant in March, 1862; captain in May, 1861; brevet-major, July 2, 1863; lieutenant-colonel, May 5, 1864; colonel, Aug. 18, 1864; brigadier-general and major-general, March 13, 1865; was mustered out the volunteer service as full major-general, April 30, 1866, and was promoted lieutenant-colonel, Twenty-eighth United States Infantry, July 28, 1866; transferred to Third United States Artillery, Dec. 15, 1870, and promoted colonel, Second United States Artillery, July 18, 1879. His brevets were conferred for gallant and meritorious services in the battle of Gettysburg, in the Wilderness, on the Weldon Railroad, at Five Forks, and during the war, and for conspicuous gallantry in the Wilderness, at Spottsylvania Court-House, Jericho Mills, Bethesda Church, Petersburg, and Globe Tavern.

Bacon, John William, jurist, born in Natick, Mass., in 1818; died in Taunton Mass., March 21, 1888. He was graduated at Harvard in 1843, admitted to the bar in 1846, elected a State Senator in 1859 and 1862, appointed chief-justice of the municipal court of Boston in 1866, and elevated to the bench of the Superior Court in 1871. He was suddenly taken ill while holding court. In the evening he was stricken with apoplexy, and died in a few minutes.

Baker, William Emerson, manufacturer, born in Boston, Mass., April 16, 1828; died there, Jan. 5, 1888. He began business life in a dry-goods store, and subsequently joined W. O. Grover in forming the Grover & Baker Sewing-Machine Company. Mr. Baker spent several years abroad, contesting patent suits, and on returning to the United States bought Ridge Hill farm at Wellesley, Mass., and spent the remainder of

his life in gratifying an extreme eccentricity for curious buildings, fantastic decorations, and mirth-provoking apparatus. His farm comprised over 500 acres, and on it he erected an immense stable which he decorated within and without with extraordinary paintings; a tall tower, whose successive floors constituted a combined museum, zoological cabinet, and kindergarten; several pavilions from the Centennial grounds; a chapel in which he placed a huge bronzed Buddha; a pig-pen of vast proportions and regal splendor, its interior covered with large oil-paintings; numerous costly mausoleums in which favorite departed pigs, restored by a taxidermist, were exhibited on magnificent pedestals; and many grotesque edifices, all gaudily painted. He constructed an artificial lake, and placed in it a curious steamboat that would go equally well on land or in water; tunneled a subterranean labyrinth through the rock; and filled his grounds with stuffed animals and all the extravagant, odd, and nondescript things he could make or buy. He was fond of entertaining distinguished people, and opened his grounds to the public every day but Sunday.

Baldwin, Charles H., naval officer, born in New York city, Dec. 23, 1822; died there, Nov. 17, 1888. He entered the United States Navy as a midshipman, April 24, 1839, was promoted passed midshipman July 2, 1845, was engaged in the operations in the vicinity of Mazatlan, from November, 1847, till June, 1848, was commissioned lieutenant in November, 1853, and resigned Feb. 28, 1854. At the outbreak of the civil war in 1861 he was appointed acting lieutenant. During Farragut's passage of Forts Jackson and St. Philip below New Orleans and the capture of the city he was in command of the steamer "Clifton," and at the first attack on Vicksburg in 1862 he rendered important service on the same vessel. He was commissioned commander Nov. 18, 1862, was on special service in command of the "Vanderbilt" in 1863-'64, was in charge of the ordnance bureau at Mare Island Navy Yard, San Francisco in 1864-'67, was fleet captain of the North Pacific squadron in 1868-'69, was commissioned captain June 12, 1869, commodore Aug. 8, 1876, and rear-admiral Jan. 31, 1883, and was retired Sept. 3, 1884. In the interval of his naval service he was captain of a mail steamship plying between New York and San Francisco. As commander of the "Vanderbilt," he chased the Confederate privateer "Alabama" half-way round the world, and as commander of the European squadron after his promotion to rear-admiral he represented the United States at the coronation of the present Emperor of Russia.

Barnard, Daniel P., lawyer, born in Hudson, N. Y., in 1812; died in Brooklyn, N. Y., Feb. 18, 1888. He removed to New York in 1824, and for a time was engaged in a banking-house. Subsequently he was admitted to the Baltimore bar, and became a Democratic member of the city council. In 1842 he settled in Brooklyn, in 1852 was elected a member of the council, and in 1855 was chosen president of the board of aldermen, to which office were then added the duties of city judge. He was one of the foremost advocates of the consolidation of Williamsburgh with Brooklyn, and of the introduction of water into the city, was a member of the Constitutional convention of 1867-'68, settled the famous Jackson Hollow litigation, and successfully defended Cortland Sprague, city treasurer, Isaac Badeau, collector, and Evan M. Johnson, comptroller, on charges of malfeasance.

Barnes, Alfred Smith, publisher, born in New Haven, Conn., Jan. 28, 1817; died in Brooklyn, N. Y., Feb. 17, 1888. He entered the bookstore of D. F. Robinson & Co. in Hartford, removed with the firm to New York, and in his twenty-first year associated himself with Prof. Charles Davies and began publishing his mathematical works. He personally canvassed every State in the country with their first publication, and pursued the same course for several years with subsequent ones. The firm opened a bookstore in Philadelphia in 1840, and removed their manufactory to that city in 1842; but Prof. Davies soon after-

ward retired, and Mr. Barnes returned to New York in 1855. In 1868 the firm erected the building on the corner of John and William Streets, New York, and in 1880 put up another large one on the corner of Liberty and Nassau Streets, Brooklyn, where all the manufacturing is done. The firm has confined itself almost exclusively to school-books. Mr. Barnes retired from the active management in 1880, leaving five sons in charge. He was president of the Brooklyn City Mission Society, and a director in several financial corporations. He gave the Faith Home \$25,000, and the Young Men's Christian Association of Cornell University, \$40,000; and bequeathed \$50,000 to various charities, churches, and schools.

Barnes, Demas, manufacturer, born in Gorham, Ontario County, N. Y., April 4, 1837; died in New York city May 1, 1888. He removed to New York when fourteen years old, learned the drug business, and established a store of his own four years afterward. At one time he had branch stores in San Francisco, New Orleans, and Montreal. In 1866 he was elected to Congress as a Democrat from the second Congressional District, which included the greater part of the city of Brooklyn, and in that body served as a member of the committees on banking and currency, education, and labor. He aided in procuring legislation for the construction of the East River Bridge, and became one of its first trustees, and ably supported the demand for a new post-office building in New York city. He was one of the founders of the Brooklyn "Eagle," but withdrew from it in 1878 and established the Brooklyn "Argus," from which he retired in February, 1877. Afterward he joined the independent movement in Brooklyn, and was appointed a member of the committee of one hundred citizens, who undertook to check municipal abuses. Mr. Barnes moved to New York city in 1882, but continued his relations with various financial, educational, and charitable institutions of Brooklyn till his death.

Barron, Samuel, naval officer, born in Hampton, Va., in 1802; died in Essex County, Va., Feb. 26, 1888. He was commissioned midshipman in the United States Navy when only three years old, being the youngest Government officer ever known in any country, except the scions of royalty, and when eight years old made his first sea-cruise, up the Mediterranean. He served with honor in various parts of the world, rendered efficient aid through the Mexican War, was commandant of the naval station at Norfolk during the yellow-fever epidemic, and was in command of the United States frigate "Wabash" at the beginning of the civil war. When his State seceded he resigned his commission in the United States Navy, entered that of the Confederacy, with the rank of commodore, and while on his first service, as commander of Fort Hatteras, at Hatteras Inlet, was captured with his entire command by the National forces. After a confinement of about a year in Fort Warren he was exchanged, and during the remainder of the war served the Confederacy in London, superintending the equipment of cruisers.

Belden, David, lawyer, born in Newtown, Fairfield County, Conn., Aug. 14, 1832; died in San José, Cal., May 14, 1888. He was apprenticed to a carpenter, and on attaining his majority removed to Marysville, Cal., where he worked at his trade. He there attracted the attention of James Churchman, a lawyer of Nevada City, who induced him to remove to that city and study law. In 1856 he was admitted to the bar of the Supreme Court; in 1858 was elected judge of Nevada County, and at the expiration of his term declined a re-election; and in 1865 was elected a State senator and served four years, during which he was first a member and then chairman of the judiciary committee. He settled in San José, and in 1871 was appointed judge of the newly created Twentieth Judicial District of the State, and on the expiration of his first term was unanimously re-elected. Under the new Constitution the judiciary system of the State was reorganized, and at the first election, in 1880, he was

chosen a judge of the Supreme Court, and was re-elected in 1884. Judge Belden was a Democrat until the civil war, and then became a strong Union man. He was an enthusiastic meteorologist, established an experimental horticultural garden on his estate, and constructed an instrument that registered automatically all the details of an earthquake.

Bellew, Francis Henry Temple, artist, born in Cawnpore, Hindostan, April 18, 1828; died on Long Island, N. Y., June 29, 1888. He was the son of a British officer, studied art in France, and in 1850 came to this country, where his immediate success as a caricaturist in John Brougham's "Lantern" led him to devote himself entirely to drawing. When this venture failed, he joined Thomas Strong in founding "Yankee Notions," and later joined William Levison in the "Picayune." He also wrote and drew for "Harper's Magazine" and "Harper's Weekly," and afterward founded various papers, among which were "John Donkey" and "Vanity Fair." In 1860 he returned to England, where, with George Augustus Sala and Blanchard Jerrold, he founded "Temple Bar," and also drew sketches for "Punch" and American scenes for the "Illustrated London News." He returned to New York in 1861, resumed work for publishers, and was correspondent for the New York "Tribune" and the "Illustrated London News" at the battle of Gettysburg. His later sketches and writings appeared in "Harper's Magazine," "Harper's Young People," "St. Nicholas," "Texas Siftings," and similar publications. He established a daily called "Dawn" in 1885, but it failed. His forte was writing and sketching stories for children. He published "The Characteristics of the Three Kingdoms" (1850) and "The Art of Amusing" (New York, 1865).

Bergh, Henry, born in New York city in 1823; died there, March 12, 1888. He was of German and English Puritan lineage, and the son of Christian Bergh, a ship-builder. Henry received a collegiate education, and began studying law in Columbia College, but before completing the course went to Europe. He married Matilda, daughter of Thomas Taylor, in 1848, and then traveled in almost every part of the Continent and in the East. In 1861 President Lincoln appointed him Secretary of the American Legation in Russia, and soon afterward United States consul at St. Petersburg. The failing health of his wife led him to resign in 1864 and return to New York. In London he made the acquaintance of the Earl of Harrowby, president of the Royal Society for the Prevention of Cruelty to Animals, became intensely interested in the work of that organization, studied its details thoroughly, and formulated a plan for a similar society in New York. In 1865 he founded the American Society for the Prevention of Cruelty to Animals, was chosen its president, and in 1866 secured the passage of an act giving the society, through its officers, the power of making arrests and carrying on prosecutions for violations of the statute on which the organization was instituted. From the day the society was formed until his death he remained its president and guiding spirit, living wholly in its work, and serving without salary. Through its efforts dog-fighting, cock-fighting, and rat-baiting were almost entirely suppressed, and branch societies were organized in thirty-six States. Mr. Bergh was an enthusiastic student of geology, and author of a drama, "Love's Alternative," produced at the Union League Theatre, Baltimore, in 1881, and several poems.

Bessels, Emil, naturalist, born in Heidelberg, Germany, June 2, 1847; died in Stuttgart, Germany, March 30, 1888. He was educated at the university of his native place, where he received the degree of M. D. He was made an assistant at the Royal Museum in Stuttgart, and there became interested in Arctic discovery. In 1869 he made the voyage into sea between Spitzbergen and Nova Zembla. By his observations on this journey he traced the influence of the gulf stream east of Spitzbergen, and added much to the scanty knowledge of that region. He was called

to the field as a military surgeon in 1870, and for his services in hospitals received public commendation from the Grand Duke of Baden. In 1871 he came to this country at August Petermann's suggestion, and was made naturalist and surgeon to the expedition sent to the polar regions under Capt. Charles F. Hall. Most of the scientific results of this voyage were the fruit of his personal efforts, and, after the rescue of the survivors, he was occupied for several years at the Smithsonian Institution preparing for publication the scientific results of the voyage, one of which was the proof, just advanced by him, of the insularity of Greenland, which he deduced from the tidal observations secured on the expedition. This work he issued as "Report on the Scientific Results of the Polar Expedition" (Washington, 1876). In 1879 he published a German narrative of the expedition, illustrated with his own sketches. Subsequently he undertook an ethnological voyage to the northwest coast of America, but it was terminated prematurely by the wreck of the vessel in Seymour Narrows, British Columbia. He returned to Washington, where he prepared several contributions to Arctic and zoological literature and projected a work on the Eskimo, but his material was destroyed by a fire at his residence in 1885. Dr. Bessels then went to Germany and settled in Stuttgart, where he was engaged in literary pursuits, the study of art, and geographical instruction until his death.

Birge, Henry Warner, soldier, born in Hartford, Conn., Aug. 25, 1825; died in New York city, June 1, 1888. He received a classical education, and at the beginning of the civil war organized the Fourth Regiment of Connecticut Volunteers, and was commissioned its major on May 28, 1861. After service in Maryland and Virginia, he was recalled by his uncle Gov. Buckingham and appointed colonel of the Thirteenth Regiment in November. In March, 1862, he took this regiment by sea to join Gen. Butler's army in New Orleans, and on reaching that city was placed in command of its defenses. In December he accompanied the army up the Mississippi to co-operate with Gen. Grant in the siege of Vicksburg, was appointed to the command of a brigade, which he held through the first Red River campaign and the siege of Port Hudson, and volunteered to lead a storming party against the works of the latter stronghold. He was promoted brigadier-general in September, 1863. During Gen. Grant's Virginia campaign he was assigned to the command of a division in the Nineteenth Corps, and was with Gen. Sheridan in his most brilliant movements in the Shenandoah valley. In February, 1865, he was placed in command of the defenses of Savannah, and held that post until the following November, when he resigned with the rank of brevet major-general. After the war he traveled considerably in the Southwest and on the Pacific coast.

Bittinger, William, merchant, born near Hanover, Pa., Nov. 21, 1820; died in Abbottstown, Adams County, Pa., March 3, 1888. He became a clerk in a store in Abbottstown when fifteen years old, and, with the exception of one year spent in teaching, was in mercantile business all his life. His will disposed of an estate valued at \$225,000, of which a farm worth \$45,000 was given to Pennsylvania College, in Gettysburg, which also was made residuary legatee to found the William Bittinger professorship of Intellectual and Moral Science; another farm, valued at \$40,000, to Lebanon Valley College, in Annville, to endow the Josephine Bittinger-Eberly professorship in that institution; and \$3,000 to the Lutheran congregation in Abbottstown for a new church-building.

Bobbett, Albert, wood-engraver, born in London, England, in 1813; died in New York city, Aug. 6, 1888. He learned to engrave on wood in London, removed to New York city about 1843, and was connected with nearly every effort to establish illustrated periodicals in this country. He engraved illustrations for P. T. Barnum, in Boston, for Gleason's "Pictorial," for Frank Leslie's early publications, for the

first issues of Harper's "Magazine" and "Weekly," and for publishers of educational works, and continued work till his death. He was a member of the American Water-Color Society, a man of extensive reading and artistic taste, and the instructor of many of the best engravers on wood of the present day.

Bodley, Rachel Littner, physician, born in Cincinnati, Ohio, Dec. 7, 1831; died in Philadelphia, Pa., June 15, 1888. She was educated at Wesleyan College in Cincinnati, and in 1860 was appointed preceptor in the higher collegiate branches in that institution. Subsequently she entered the Polytechnic College in Philadelphia as a special student in chemistry and physics, and after a two years' course was appointed Professor of Natural Sciences in the Cincinnati Female Seminary, and held the chair three years. In 1865 she was elected Professor of Chemistry and Toxicology in the Woman's Medical College of Pennsylvania, Philadelphia, being the first woman professor of chemistry on record. She was elected dean of the faculty in 1877, and held both offices till her death. In 1864 she became a corresponding member of the State Historical Society of Wisconsin; 1871 a member of the Academy of Natural Sciences of Philadelphia, and received the degree of M. A. from her *alma mater*; 1879 received the degree of M. D. from the Woman's Medical College of Pennsylvania; in 1882 was elected a school director in Philadelphia, and received many similar honors.

Bogart, William Henry, journalist, born in Albany, N. Y., in 1810; died in Aurora, N. Y., Aug. 21, 1888. He was graduated at the Albany Law School in 1831, but after practicing his profession a short time abandoned it for journalism. His first permanent employment was as legislative correspondent for the New York "Courier and Enquirer," then edited by Gen. James Watson Webb. He remained with that paper till it was merged into the New York "World," and then severed his connection with it, and established in Albany a legislative corresponding bureau for supplying newspapers with political news from the capital. While so employed he contributed to the "Atlantic Monthly" and other periodicals, and became clerk to the Senate, member of the Albany Institute, and one of the first trustees of Wells College. He traveled extensively in early life, and was well known as an accomplished after-dinner speaker.

Boggs, Charles Stuart, naval officer, born in New Brunswick, N. J., Jan. 28, 1810; died there, April 22, 1888. He was appointed midshipman in the United States Navy in 1826, and served in the Mediterranean squadron till 1830, was attached to the East India squadron from 1830 till 1832, was promoted passed midshipman in 1832, and was commissioned lieutenant on Sept. 6, 1837. While attached to the "Princeton," during the Mexican War, he took part in the siege of Vera Cruz, and commanded the boat expedition that destroyed the United States brig "Truxton" after her surrender to the Mexicans. He was executive officer of the frigate "Lawrence" at the World's Fair in London in 1853, served as light-house inspector on the Pacific coast, and was promoted commander in 1855. Assigned to command the "Varuna," of Farragut's fleet, in 1862, he distinguished himself in the attack on Forts Jackson and St. Philip, below New Orleans, by running ahead of the other vessels, attacking the Confederate squadron above the forts, and destroying six of its gunboats before his own vessel was sunk by two rams. The "Varuna" set both rams on fire, and discharged a parting shot when the water was nearly on a level with her last serviceable gun. He was made bearer of dispatches to Washington, promoted captain, and given command of the "Junia." During 1864-'65 he was on duty at the Brooklyn Navy-Yard, superintending the construction of steam picket-boats, and there designed and fitted out the torpedo-boat with which the Confederate ram "Albemarle" was destroyed. He was promoted commodore in July, 1866, commanded the "De Soto," of the North Atlantic

squadron, in 1867-'68, was on special duty in 1869-'70, and in July of the latter year was promoted rear-admiral. In 1871-'73 he commanded the European squadron, and then served as light-house inspector till 1873, when he was retired.

Booth, James Curtis, chemist, born in Philadelphia, Pa., July 28, 1810; died in West Haverford, Pa., March 21, 1888. He was educated at Hartsville Seminary and was graduated at the University of Pennsylvania in 1829, after which he spent a year at the Rensselaer Polytechnic Institute. During the winter of 1831-'32 he delivered a course of lectures on chemistry in Flushing, L. I., and in December, 1832, he went to Germany, where he entered the private laboratory of Prof. Friedrich Wöhler in Cassel. It is believed that he was the first American to study analytical chemistry in Germany. A year later he went to Berlin, and there studied under Gustav Magnus for a year, after which he devoted some time to the practical study of chemistry applied to the arts in the manufacturing centers of Europe. In 1836 he returned to Philadelphia and established a laboratory for instruction in chemical analysis and applied chemistry. This soon acquired considerable reputation, and students from various parts of the country came to him for instruction. His analytical practice increased, and he was assisted by Dr. Martin H. Boyé until 1845. Three years later, Thomas H. Garrett became his associate, and in 1881 the firm became Booth, Garrett, and Blair. He was made Professor of Chemistry Applied to the Arts in the Franklin Institute in 1836, and for nine successive winters he continued his lectures, making three full courses of three years each; also in 1842-'45 he was Professor of Chemistry in the Central High-School of Philadelphia. Soon after his return from Europe he was called on to take part in the geological survey of Pennsylvania, and during 1837-'38 he had charge of the geological survey of Delaware, in connection with which he issued the first and second "Annual Report of the Delaware Geological Survey" (Dover, 1839) and "Memoirs of the Geological Survey of Delaware" (1841). In 1844 he was appointed melter and refiner at the United States Mint in Philadelphia, which office he held until Jan. 7, 1888, when his resignation was accepted, to take effect on the qualification of his successor. In his official capacity Mr. Booth was frequently consulted by the Government on questions pertaining to chemistry, and his studies of the nickel ores of Pennsylvania led, in 1856, to the adoption of nickel as one of the components of the alloys used in the coinage of the cent issued in 1857. The degree of LL. D. was conferred upon him by the University of Lewisburg in 1867, and that of Ph. D. by the Rensselaer Polytechnic Institute in 1884. He was a member of the American Philosophical Society, and of other scientific associations, and in 1883-'84 was president of the American Chemical Society. In addition to scientific papers, he published "Encyclopedia of Chemistry, Practical and Theoretical," in the preparation of which he was assisted by Martin H. Boyé, Richard S. McCulloh, and Campbell Morfit (Philadelphia, 1850), and "Recent Improvements in the Chemical Arts," issued by the Smithsonian Institution (Washington, 1852). He edited, with notes, a translation from the French of Regnault's "Elements of Chemistry" (2 vols., Philadelphia, 1853).

Bovee, Marvin E., reformer, born in Amsterdam, N. Y., in 1827; died in Whitewater, Wis., May 7, 1888. He removed with his parents to Wisconsin in 1843, and after teaching for several years was elected State Senator from Waukesha County. As chairman of the select committee, one of his first acts was to report a bill for the abolition of capital punishment, which became a law. At the close of his term he delivered over 1,200 addresses to the Legislatures and people of half the States in the Union, and in several of them secured the passage of laws making the punishment for murder life imprisonment as well as death. His labors were self-imposed, and cost him many

thousands of dollars, besides his time and labor, as he would never accept money for his efforts or even hall-hire. About 1860 he established a State reformatory for boys at Waukegan on original plans. He believed that the only way to effect a permanent reform was to surround the youthful criminal with wholesome influences, treat him kindly, and teach him to be industrious. Accordingly he placed the boys in home-like cottages, gave them all judicious liberty, taught them trades, and sought to encourage a pride in elevated manhood. Mr. Bovee was an active Democrat, and spoke in the presidential canvass of 1884.

Boyce, James Pettigrew, educator, born in Greenville, S. C., Jan. 11, 1827; died in Pau, France, Dec. 28, 1888. He was graduated at Brown University in 1847 and at Princeton Seminary in 1851, and was ordained pastor of a Baptist church in Columbia, S. C. In 1855 he became Professor of Theology in Furman University, Greenville, S. C., and three years afterward was called to the same chair in the Southern Baptist Theological Seminary, then also in Greenville. In 1873, through the endowments of friends in Kentucky and a large donation from Prof. Boyce, the seminary was removed to Louisville, and he was chosen president, which office he filled until his death. He was a trustee of the John F. Slater educational fund, published numerous sermons, addresses, and periodical articles, and had received the degrees of D. D. and LL. D.

Brenner, Carl, artist, born in Lautereicken, Bavaria, in 1838; died in Louisville, Ky., July 22, 1888. He removed to the United States when a boy, settled in Louisville, and became a sign-painter. He studied drawing and landscape-painting, and soon obtained high proficiency. His first notable exhibition was at Philadelphia in 1876, and from that time his paintings were to be found in most of the large exhibitions in the country. He was very industrious, and found his favorite subjects in glimpses of scenery in which the beech-tree was conspicuous.

Brewster, Benjamin Harris, lawyer, born in Salem County, N. J., Oct. 13, 1816; died in Philadelphia, Pa., April 4, 1888. He was graduated at Princeton College in 1834, and admitted to the bar in Philadelphia in 1838. In 1846 he was appointed a commissioner to adjudicate the claims of the Cherokee Indians against the United States; in 1867 was appointed Attorney-General of Pennsylvania; and in December, 1881, was appointed Attorney-General of the United States by President Arthur. These were all the public offices he ever held, though he was twice a candidate for the United States Senate, and came very near election each time. He was wedded to his profession, and practiced it with great assiduity and success. Shortly after the death of President Garfield, he was formally retained by United States Attorney-General MacVeagh to assist in the prosecution of the Star Route conspirators. Prior to the civil war Mr. Brewster was a Democrat, but when Fort Sumter was fired upon he became one of the most zealous supporters of the Administration. He was widely esteemed for his literary and scholarly attainments; and was an impressive orator. He received the degrees of A. B., A. M., and LL. D. from Princeton College, and the latter also from Dickinson College. The disfigurement of his face was caused by burns received in early youth in attempting to rescue his sister from a fire into which she had fallen. (See portrait in "Annual Cyclopaedia" for 1882, page 812.)

Brigham, David, abolitionist, born in Westborough, Mass., Sept. 2, 1794; died in Bridgewater, Mass., April 18, 1888. He was graduated at Union College in 1818, took a private course in theology, was ordained a Congregational clergyman, and settled over the church at East Randolph, Mass., Dec. 29, 1819. Subsequently he held pastorates in Framingham, Bridgewater, Falmouth, and South Plymouth, Mass., and elsewhere. For many years he was a zealous friend and collaborer of Wendell Phillips and William Lloyd Garrison in the abolition movement, and was so outspoken in his

denunciation of slavery that he not only incurred the animosity of many people who otherwise admired him, but was subjected to insult and personal violence. His extreme language nearly cost him the fellowship of his Church twice. He was also an equally aggressive prohibitionist.

Brightly, Frederick Charles, author, born in Bungay, Suffolk County, England, Aug. 20, 1812; died in Germantown, Pa., Jan. 24, 1888. He passed his youth in the marine service of the East India Company, came to the United States in 1831, and was admitted to the bar in 1838. He practiced in Germantown and Philadelphia about fifteen years, and then applied himself exclusively to legal writing. He accumulated the most complete and valuable collection of works relating to the laws of Pennsylvania extant. His first work was a treatise on "Costs" (1852), which was followed by a treatise on "Equity," "Digest of United States Statutes," "Digest of New York Reports," "Federal Digest," "Digest of Pennsylvania Reports," "Digest of Forty Volumes of United States Reports," "Reports" (select cases), "On Bankruptcy," "On Nisi Prius Reports," "Election Cases," and editions of Binn's "Justice," Perden's "Digest of Pennsylvania Statutes," and Troubat and Halley's "Practice."

Brown, John Henry Hobart, clergyman, born in New York city, Dec. 1, 1831; died in Fond du Lac, Wis., May 2, 1888. He was graduated at the General Theological Seminary, New York, in 1854, was ordained deacon in the Protestant Episcopal Church, and priest on Dec. 1, 1855. He became assistant minister in Grace Church, Brooklyn, in 1854; and while there organized the Church of the Good Angels (now Emmanuel), of which he was appointed rector in 1855. In 1856 he became rector of the Church of the Evangelists (Old St. George's Chapel, in Beekman Street), New York, and he was actively engaged in the large missionary work of that parish several years. In 1863 he was chosen rector of St. John's Church at Cohoes, N. Y., in 1868 secretary to the Diocesan Convention of Albany, and in 1870 archdeacon of the Albany Convocation. While stationed at Cohoes he rendered efficient service in promoting the missionary work of the northern part of the diocese of New York, and in organizing the diocese of Albany. He was consecrated first Bishop of Fond du Lac on Dec. 15, 1875. Racine College gave him the degree of S. T. D. in 1874.

Bruce, Benjamin Franklin, born in Lenox, Madison County, N. Y., in 1811; died there, Dec. 20, 1888. He was a farmer, and an influential member of the Whig party. He was a member of the State Constitutional Convention in 1846; was brigade-major and inspector of the Thirty-fifth Brigade of New York State militia under Gov. Marcy, and Inspector-General under Govs. Hunt, Clark, and King; was appointed Canal Commissioner to succeed William H. Barnes in January, 1861, and elected to the office for a full term in November, 1868; was elected a member of the Assembly in 1867, and served as chairman of the Committee on Federal Relations. Through his efforts while Inspector-General New York city secured possession of the old Arsenal Building and ten acres of ground, all of which are now within Central Park.

Buddington, Sidney Oakes, explorer, born in Groton, Conn., Sept. 16, 1823; died there, June 13, 1888. He became a fisherman at an early age, and in his sixteenth year went into the whaling business and followed it with success till June, 1871. His skill as a navigator and his familiarity with the extreme northern waters led to his selection as sailing and ice master of the polar expedition fitted out for Capt. Charles F. Hall. The instructions provided that in the event of Capt. Hall's death or disability, Capt. Buddington should continue as the sailing and ice master, and control the movements of the vessel, with Dr. Emil Bessel (see page 623 of this volume) as chief of the scientific department. Also, that in the emergency of their non-agreement as to the course to be pursued, Capt. Buddington should assume sole charge and return with the expedition to the United States.

The disasters that overtook the "Polaris" expedition, the death of Capt. Hall, the crushing of the vessel in the ice, and the dispersion of the crew, have been described already. The emergencies for which Secretary Robeson made provision occurred, and Capt. Buddington succeeded to the sole command. Capt. Buddington and Mate Tyson reached home in 1872, and delivered all the books and papers belonging to Capt. Hall to the naval authorities. After the official investigation, Capt. Buddington returned to his home in Groton, and spent the remainder of his life there. Among several natives he brought to the United States at various times, was the late Eskimo Joe, who was pilot on the "Polaris" and "Era," and accompanied the Greely expedition.

Bulkeley, John Williams, educator, born in Fairfield, Conn., Nov. 3, 1802; died in Brooklyn, N. Y., June 19, 1888. He became a teacher in his native place, removed to Troy, N. Y., in 1832, and taught there till 1851, when he settled in Brooklyn, and was appointed principal of public school No. 19, in the Williamsburgh district. On the consolidation of Williamsburgh with Brooklyn in 1855, he was appointed Assistant Superintendent of Public Schools, and held the office till 1885. He was the first President of the New York State Teachers' Association, and a founder of the National Teachers' Association.

Ballard, Asa, clergyman, born in Northbridge, Mass., March 26, 1804; died in Cambridge, Mass., April 5, 1888. He was graduated at Amherst in 1828, and, after studying at the Andover Theological School, was ordained a Congregational clergyman at Portland, Me., in 1832. During 1831-'34 he was agent of the Maine Sunday-School Union, and in the latter year became Secretary of the Massachusetts Sunday-School Society, which was subsequently reorganized as the Congregational Publishing Society. He was editor of the "Congregational Visitor" three years; of the "Sunday-School Visitor" ten years; and of the "Wellspring" thirty-one years, and edited and published many books that have been familiar to Sunday-school children.

Bureau, Achille, foundryman, born in Lille, France, Dec. 3, 1835; died in Philadelphia, Pa., Feb. 2, 1888. He served an apprenticeship and worked several years in his uncle's foundry in Brussels, came to the United States previous to the civil war, was a private in the Eighteenth Pennsylvania Volunteers during the greater part of the war, established a foundry in Philadelphia in 1878, and was the first to engage in the casting of large statuary in bronze in the United States. Among his best-known castings are the statues of Gen. Thomas, in Washington, and Gen. Reynolds, in Philadelphia, the Indian group in Chicago, and the Shakespeare, in Central Park, New York.

Campbell, Bartley, dramatist, born in Allegheny City, Pa., Aug. 12, 1843; died in Middletown, N. Y., July 30, 1888. While following journalism in Pittsburg, he attained repute as a Democratic political speaker. In 1868 he established the "Evening Mail" in Pittsburg, in 1869 the "Southern Magazine" in New Orleans, in 1870 was elected official reporter of the Louisiana House of Representatives, and in 1871, on the suspension of his magazine, he returned to Pittsburg, and was appointed editor-in-chief of "The Paper." While so employed he wrote his first play, for J. Newton Gotthold, entitled "Through Fire," which was received with favor and had a run of four weeks. Under this encouragement he began writing plays regularly, producing about one every two years. He considered "Clio" his best composition, but "The Galley Slave" was the most successful financially. In 1885 he leased the Fourteenth Street Theatre, New York, and produced his "Paquita." Early in 1886 he developed signs of insanity, and on September 28 he was pronounced insane by a sheriff's jury and removed to Bloomingdale Asylum, whence, November 30, he was taken to the State Homeopathic Insane Asylum at Middletown, N. Y. His plays include "Peril," "Fate," "Risks," "The Virginian,"

"On the Rhine," "Heroine in Rags," "How Women Love," "The Vigilantes," "Fairfax, or Life in the Sunny South," "My Partner," "Matrimony," "My Geraldine," and "Siberia."

Campbell, Jacob Miller, legislator, born in Allegheny Township, Somerset County, Pa., Nov. 20, 1821; died in Johnstown, Pa., Sept. 27, 1888. He learned the printer's trade, was employed on a Mississippi river steamboat 1841-'47, and in gold-mining in California in 1850, removed to Johnstown in 1853, assisted in building the Cambria iron-works, and remained in the employ of that company till the outbreak of the civil war. In April, 1861, he became first lieutenant in the Third Pennsylvania Volunteers, and at the close of that year recruited the Fifty-fourth Regiment of three years' men, and was elected its colonel. He served meritoriously through the war, being promoted brigadier-general by brevet, June 5, 1864. In 1865 he was elected Surveyor-General of Pennsylvania (the office now known as Secretary of Internal Affairs) for three years; and at the expiration of the first term was re-elected. He was elected a member of Congress as a Republican from the Seventeenth Congressional District in 1876, 1880, and 1882, and served on the Committees on Manufactures and on the Alcoholic-Liquor Traffic. He was a delegate to the first National Republican Convention in 1856, was chairman of the Republican State Convention in 1887, and a trustee of the Pennsylvania State College many years.

Carll, David, ship-builder, born in New York city in 1826; died near Crescent City, Fla., Dec. 27, 1888. He learned the ship-building trade when a boy, and followed it all his life. In 1861 he removed from New York city to Long Island and established a ship-yard of his own on City Island. In 1870 he bought the old United States line-of-battle ship "North Carolina" at public auction, and from her timbers built the schooner yacht "Resolute" for A. S. Hatch, the yacht "Atlanta" for William Astor, and the bridge from City Island to Pelham. Subsequently he rebuilt the famous racing schooner "Sappho," and the "Magic," and built the "Ambassadors," "Nervana," "Vega," "Vesta," "Phoebe," and "Lurline," beside many smaller vessels. Some years before his death he bought a large estate, including many acres in orange-groves, in Florida.

Carney, Thomas, merchant, born in Delaware County, Ohio, Aug. 10, 1824; died in Leavenworth, Kan., July 28, 1888. He worked several years on a farm, studied in the evenings, and when eighteen years old attended a school in Berkshire, Ohio, six months. Soon afterward he went to Columbus and worked in a dry-goods store, then removed to Cincinnati, where he was employed by a firm that admitted him to partnership after six years, and in 1858 settled in Leavenworth. In 1861 he was elected to the Legislature, in 1862 became the second Governor of the State, and in 1864 United States Senator. Owing to a doubt as to the legality of the time of the election, he declined the seat in the Senate, and was chosen Mayor of Leavenworth. He rendered the national cause effective service during his gubernatorial term.

Cass, George W., engineer, born in Muskingum County, Ohio, in 1810; died in New York city, March 21, 1888. He was a nephew of Gen. Lewis Cass, was graduated at the United States Military Academy with special honor as a mathematician in 1832, and was assigned to the Corps of Military Engineers. After serving four years on topographical and engineering duty on the Northwestern frontier, he resigned from the army, and was shortly afterward appointed one of the engineers in charge of the construction of the Great National Road through Maryland, Pennsylvania, and Virginia. He held this office till the completion of the road, and during his service constructed over Dunlap's creek, a tributary of Monongahela river, the first cast-iron bridge ever built in the United States. On the organization of a company for improving the navigation of the Monongahela, he became first its engineer and afterward one

of its managers, and completed the work in 1844. He then organized the first steamboat-line on that river, and the first transportation-line across the mountains; consolidated all the Adams Express lines between Boston, Richmond, and St. Louis, and was elected president of the consolidated company in 1850; was elected President of the Ohio and Pennsylvania Railroad Company in 1856, and of the organizations that consolidated under the name of the Pittsburg, Fort Wayne, and Chicago Railway Company in 1857, holding the latter office twenty-six years; and was President of the Northern Pacific Railroad Company from 1872 till 1877.

Othoart, Charles W., farmer, born in the Island of Madeira, in 1809; died in Michigan City, Ind., Aug. 22, 1888. He followed the sea for several years, studied mechanics, settled in La Porte, Ind., in 1831, became a Government land-surveyor, and engaged in farming. After serving two terms in the State Legislature, he was elected a member of Congress in 1844 and 1846, and in 1849 was appointed United States Senator. He retained the office till 1863, and then resumed farming.

Oscever, Byron William, scientist, born in Ellisburg, Jefferson County, N. Y., Sept. 17, 1841; died in Ann Arbor, Mich., March 6, 1888. He was graduated at the University of Michigan with the degree of A. B. in 1863, and with that of M. D. in 1867. During the interval of his courses in arts and medicine, he applied himself to chemical work, partly in Philadelphia and partly in the West Indies. After receiving his medical diploma, he was engaged as an analytical and consulting chemist in Philadelphia two years, and was then employed in professional work in the Rocky mountain mining-region till 1872. He then returned to Ann Arbor, somewhat broken in health. Fearing the effects of further work in a chemical laboratory, he studied law, but still applied the greater part of his time to chemical work till 1878, when he became instructor in quantitative analysis in the chemical laboratory of the University of Michigan. In 1881 his duties were enlarged, and he was appointed to the chair of Metallurgy.

Obouteau, Berenice, pioneer, born in Kaakaskia, Ill., in 1801; died in Kansas City, Mo., Nov. 20, 1888. She was a daughter of Col. Peter Menard, first Territorial Governor of Illinois, received a good education, and when eighteen years old married Francis F. Chouteau, whose family were noted French fur-traders, and founded and managed for many years the American Fur Company. She made her wedding-journey on a flat-boat up the Missouri river to Black Snake Hills, afterward the site of the city of St. Joseph, and after living there two years accompanied her husband to the present Kansas City, where he established the first trading-post in that section and built a log-house in the woods where the Union Railroad station now stands. In 1826, and again in 1844, her husband lost nearly all his land and property, but, acquiring most of the valuable farming-land in the vicinity of the mouth of the Kansas river, he subsequently became wealthy. She was very liberal with the large fortune given her by her husband, was a devout Roman Catholic, and built the first church in Kansas City. The city is built upon a portion of her property, and other large tracts are occupied by people who derive their title from squatter settlers. A few years ago she brought suits of dispossession, involving more than \$5,000,000, and two weeks before her death the courts decided that she had lost all claim to the property, through the statute of limitation.

Christman, Joseph Alonso, lawyer, born in Evansburg, Montgomery County, Pa., Sept. 1, 1838; died in Paris, France, April 5, 1888. He was graduated at Yale in 1857, and afterward taught in the South till the beginning of the civil war. He served during the war on the staff of Gen. Samuel R. Curtis, and at the battle of Pea Ridge, Ark., was severely wounded. At the close of the war he removed to Louisville, Ky., was admitted to the bar, and began practice in St. Louis.

In 1867 he was appointed United States District-Attorney for California. He resumed practice in St. Louis at the expiration of his term, and remained there till 1876, when his health gave way. He then went to Paris, and with several acquaintances established a banking house, with which he was connected till death. He left a valuable estate, out of which he bequeathed \$60,000 to Yale University, and \$10,000 to St. James's Church at Evansburg.

Clarke, James Freeman, an American clergyman, born in Hanover, N. H., April 4, 1810; died in Jamaica Plain, Mass., June 8, 1888. He was a grandson of the Rev. James Freeman, the first clergyman in the United States that preached Unitarian doctrines, with whom he spent the first ten years of his life. He was graduated at Harvard in 1829, at the Cambridge Divinity School, in 1833, and accepted a call from the Unitarian Church in Louisville, Ky., where he preached till 1840, and edited the "Western Messenger." He returned to Boston in 1841, and became a founder and the pastor of the Church of the Disciples in April of that year, and (excepting an interval, 1850-'58) held that office continuously till his death. The pastor and his congregation made the church absolutely free to all, and combined in their service the forms of worship in the Protestant Episcopal and Congregational Churches with those of the Friends. Mr. Clarke was an intimate friend of Margaret Fuller, Ralph Waldo Emerson, and William Ellery Channing, an overseer of Harvard University for many years, and one of the first advocates of the movement for the admission of women to the full privileges of study there; an early promoter of the anti-slavery cause; a friend of every practical scheme to advance the moral and material welfare of humanity; a voluminous writer, apart from his sermons; and an eloquent pulpit and platform orator. During his long pastorate he also held the offices of Secretary of the American Unitarian Association, 1859-'62; Professor of Natural Theology and Christian Doctrine in Harvard, 1867-'71; lecturer on ethnic religion in Cambridge Divinity School, 1876-'77; and State Commissioner of Education, 1863-'70. His published works embrace a translation of De Wette's "Theodore" (Louisville, 1840); "Service and Hymn Book for the Church of the Disciples" (Boston, 1844); "History of the Campaign of 1812, and Defense of Gen. William Hull for the Surrender of Detroit" (New York, 1848); "Christian Doctrine of Forgiveness of Sin" (1852); "Christian Doctrine of Prayer" (1854); "Orthodoxy: its Truths and Errors" (1866); "Steps of Belief, or Rational Christianity maintained against Atheism, Free Religion, and Romanism" (1870); "Ten Great Religions" (1871-'83); "Exotics: Attempts to domesticate them" (1876); "Essentials and Non-Essentials in Religion" (1878); "Memorial and Biographical Sketches" (1878); "Common Sense in Religion" (1879); "Events and Epochs in Religious History" (1881); "Anti-Slavery Days in New York" (1884); "Manual of Unitarian Belief" (1884); "Every-day Religion" (1886); and "Vexed Questions" (1886). He received the degree D. D. from Harvard in 1868.

Coffin, Roland Folger, journalist, born in Brooklyn, N. Y., March 8, 1826; died at Prospect, Shelter Island Heights, July 16, 1888. He came of old English, sea-faring stock, and for more than two centuries his family had lived on Nantucket Island. At the time of his birth his father was captain of a large merchantman plying between Liverpool and New York. He became a clerk in New York; in 1846 he shipped before the mast, and after making several voyages was taken by his father aboard his own vessel, on which he became first mate. When the elder Coffin retired, the son took command of a merchantman and handled it so skillfully that he found steady employment afterward and succeeded his father as captain. At the outbreak of the civil war he enlisted in the United States Navy, served on the "Monitor" in her famous fight with the Merrimac, and was subsequently master of the "Ericsson." He returned to the

mercantile navy at the close of the war, and in 1869 retired to become a short-hand reporter and engage in journalism. In the following year he was appointed nautical editor of the New York "World," and held that place till death. Besides special reports on yachting events, he published "The Queen's Cup," "Old Sailors' Yarns," and "Archibald the Cat."

Collins, Richard Henry, historian, born in Maysville, Ky., in 1824; died in Louisville, Ky., Jan. 1, 1888. He was son of Judge Lewis Collins, the first historian of Kentucky, and was editor and publisher of the Maysville "Eagle" for many years. He revised and greatly enlarged his father's history of Kentucky. He led a very secluded life, if not one of actual want. He was an accomplished writer, excessively modest, and had received the degree of LL. D.

Olyer, Vincent, artist, born in Bloomingdale, N. Y., in 1825; died on Contentment Island, Conn., July 12, 1888. He studied painting with J. R. Smith, and in the school of the National Academy of Design, and began exhibiting at the Academy in 1848. His early work was on portraits and ideal heads in crayon, but these were soon superseded by portraits in oil. He remained in New York city till the outbreak of the civil war, then removed to Rowayton, Conn., originated the Christian Commission, and rendered valuable services to the soldiers at home, in hospitals, and on the field, till the close of the war. He was afterward appointed a member of the Board of Indian Commissioners, and elected a member of the Connecticut Legislature. He was elected an associate of the National Academy of Design in 1849, and was a founder of the Artists' Fund Society, and its first secretary. His paintings include "A Loyal Refugee" (1863); "A Soldier's Widow," "Darienshire, Conn.," "A Rainy Day on the Connecticut Shore," and "Winter on the Connecticut Shore" (1867); "Johnson Straits, British Columbia"; "Home of the Yalhamas, Oregon"; "Spring Flowers" (1885); "Moonlight on the Grand Canal, Venice," and "Valley of the Lauterbrunnen, Bridal Veil Fall, Switzerland" (1886); and "Lake Maggiore, Italy" (1888).

Corcoran, William Wilson, philanthropist, born in Georgetown, D. C., Dec. 27, 1798; died in Washington, D. C., Feb. 24, 1888. He received a collegiate education in his native place, and carried on a combined dry-goods, auction, and commission business, with two brothers from 1815 till 1833, when the stringency of the financial market led to their suspension. He then became a clerk first in a local bank of which Gen. John Mason was president, and in the Washington branch of the United States Bank, where he was placed in charge of its real estate. He began the banking business for himself in 1837, and formed a partnership with George W. Riggs, whose father, Eliza Riggs, had greatly aided both Mr. Corcoran and George Peabody in their first business efforts in 1840. In the following year he was appointed financial agent of the State Department, and laid the foundation of his great wealth by taking \$5,000,000 of Government bonds at 101 and floating them after other agents had failed to secure the money the Government then greatly needed. His success in this operation induced the Government to offer him the first opportunity to negotiate the bonds issued at the beginning of the Mexican War, and he quickly disposed of from \$45,000,000 to \$50,000,000 of them, in London. In 1848 he again went to London, and placed a large block of a further loan, and on his return was given a great reception by the bankers and capitalists of New York. In 1854 he retired from the banking business, with a large fortune, which was subsequently augmented by investments in real estate. In 1857 he conceived the idea of his first great and enduring public benefaction. He had presented to his native city a plot of ten acres on the Heights for the now beautiful Oak Hill Cemetery, together with a liberal endowment; had sent \$5,000 to Ireland to relieve sufferers by famine; and had furnished the means of transporting a large body of Hungarians from New York to homes in the West. He

now began erecting the grand art gallery bearing his name, and had scarcely finished the exterior when the civil war broke out, and the Government took the elegant building for military purposes, and converted his suburban residence into a hospital. After the war he resumed work on the art gallery, and it was opened to the public in 1874. The building cost him \$200,000; he endowed it with \$900,000, and began its priceless collections with statuary and paintings from his Washington mansion, worth \$100,000. His next work was the erection of a memorial to his dead wife and daughter, which took the form of the Louise Home for Indigent Gentlewomen, and cost him \$200,000 for the building and \$250,000 for an endowment, besides the ground. He gave \$250,000 to Columbian University, of Washington, richly endowed several chairs in the University of Virginia, and put William and Mary College on a solid financial basis; and had the remains of John Howard Payne, author of "Home, Sweet Home," transferred from Tunis to Oak Hill Cemetery, and erected a suitable monument over them. The value of his public, educational, and charitable benefactions was estimated at from \$3,000,000 to \$5,000,000; and he bequeathed \$100,000 to the art gallery, to which he had already given \$1,500,000; \$50,000 to the Louise Home, which had had \$500,000; \$5,000 each to three orphan asylums in the District of Columbia; and \$3,000 to the Little Sisters of the Poor.

Corliss, George Henry, inventor, born in Easton, N. Y., July 2, 1817; died in Providence, R. I., Feb. 21, 1888. He was the son of Dr. Hiram Corliss, and in 1825 removed to Greenwich, N. Y., where he attended school. After serving for several years as clerk in a cotton-factory he spent three years in the academy at Castleton, Vt., and in 1838 he opened a store in Greenwich. His mechanical skill was first shown in temporarily rebuilding a bridge that had been washed away by a freshet, after it had been decided that such a structure was impracticable; and soon afterward he devised a machine for stitching leather, before the invention of the original Howe sewing-machine. In 1844 he removed to Providence, R. I., where he organized the firm of Corliss, Nightingale & Co., and in 1846 began his improvements in steam-engines which he patented in 1849. In these inventions, uniformity of motion was secured by connecting the governor with the cut-off. The governor had previously been made to do the work of moving the throttle-valve, the result being an imperfect response and a great loss of power. By his improvement, the governor did no work, but simply indicated to the valves the work to be done. This arrangement also prevented waste of steam, and rendered the working of the engine so uniform that if all but one of a hundred looms in a factory were suddenly stopped, that one would continue working at the same rate. It is said that his improvements revolutionized the construction of the steam-engine. In introducing the new engines, the inventor and manufacturers adopted the plan of offering to take as their pay the saving of fuel for a given time. In one case, the saving in a year is said to have been \$4,000. It required a legal contest extending over fifteen years, and an expense of over \$100,000, to obtain a declaration that this invention was new and patentable. In 1856 the Corliss Steam-Engine Company was incorporated, and he became its president. The works erected during 1848-'50 occupy nine acres, and are the most extensive of the kind in the world. An order for an engine of 350 horse-power, including boilers and all the appurtenances, has been executed in sixty days. During the past twenty years Mr. Corliss patented many other important inventions connected with the steam-engine, including an improved boiler with an apparatus for condensing and using over again the waste steam, thus obviating the necessity of employing salt-water in marine engines. His greatest achievement was the mammoth steam-engine used in Machinery Hall at the World's Fair held in Philadelphia in 1876, of which he was the designer and builder. It was of 1,400 horse-power, and, although used

with entire success as the single propelling power of all the machinery of the exhibition, was furnished as a voluntary contribution by Mr. Corliss and as an exhibit from Rhode Island. The cylinders were forty-four inches in diameter, with a ten-foot stroke; the gear-wheel was thirty feet in diameter; and the whole engine weighed 700 tons. It was removed to the town of Pullman, near Chicago, and now drives the machinery in the Pullman Car-Works. Bartholdi, in his report to the French Government, said that "it belonged to the category of works of art, by the general beauty of its effect, and its perfect balance to the eye." Mr. Corliss was a member of the State Legislature in 1868-'70, and was a Republican presidential elector in 1876. He was appointed Centennial Commissioner from Rhode Island in 1873, and was one of the executive committee of seven to whom the responsibility of the preliminary work was intrusted. At the World's Fair held in Paris in 1887 he received a medal, and at the one held in Vienna in 1873 he received a grand diploma of honor. The Rumford medal of the American Academy of Arts and Sciences was given him in 1870; the Institute of France gave him the Montyon prize in 1878, its highest honor for mechanical achievement, and in 1886 the King of the Belgians made him an officer of the Order of Leopold.

Craig, James, lawyer, born in Pennsylvania, May 7, 1820; died in St. Joseph, Mo., Oct. 21, 1888. After his admission to the bar he removed to St. Joseph to practice. He was a member of the Missouri Legislature in 1846-'47, was captain of a volunteer company in the Mexican War, was Attorney for the Twelfth Judicial District of Missouri from 1852 till 1856, was a member of Congress from Dec. 7, 1857, till March 3, 1861, and served on the Committee on Post-Offices and Post-Roads. On March 21, 1862, he was commissioned brigadier-general of volunteers, and he had command of the Union forces at St. Joseph during the war. He was a friend and admirer of President Lincoln, though opposed to him politically. He negotiated the Platt purchase, which comprised all of northwest Missouri, and was the first President of the Hannibal and St. Joseph Railroad, the first line built across the State, and the first Comptroller of the city of St. Joseph.

Crane, Benjamin Franklin, civil engineer, born in Saratoga, N. Y., in 1817; died in New York city, Jan. 16, 1888. He removed to New York city in early life, studied civil engineering, and was subsequently connected with several noted public works, including the construction of the Croton Aqueduct, the Erie Canal, and the New York Central Railroad. The work of which he was always the most proud, however, was his large share in laying out Central Park, according to the plans of Frederick Law Olmsted and Calvert Vaux. He was admirably suited for this service. When the work was sufficiently advanced to permit its dedication to public use, he was appointed its first superintendent, and held the office many years. He retired from the public service in 1871.

Crocker, Charles, financier, born in Troy, N. Y., Sept. 16, 1822; died in Monterey, Cal., Aug. 14, 1888. He began selling newspapers for a living when twelve years old, removed with the family to northern Indiana in 1836, was turned out-of-doors by his father in 1839, became an apprentice in a forge in 1840, discovered a bed of iron-ore in Marshall County, Ind., 1845, and with the aid of his employer established a forge there soon afterward. In 1850 he crossed the Plains with two brothers; but, not meeting with the success he had anticipated in placer-mining, he abandoned it and opened a store for the sale of mining-supplies. In 1852 he established a similar store in Sacramento, and in two years was considered rich. He was elected a member of the Common Council in 1855, and of the Legislature in 1860, as a Republican. Associated with Leland Stanford, Mark Hopkins, and Collis P. Huntington, he furnished the means for a survey by Theodore D. Judah of a railway route across the Sierra Nevada Mountains, at a time when no bank or capitalist would risk a dollar on such an apparently chi-

merical scheme. On the passage of the Union Pacific Railroad bill by Congress, these four men constructed the Central Pacific Division, and he personally the most difficult section. He became General Superintendent of the Central Pacific Railroad in 1862, President of the Southern Pacific Railroad and second Vice-President of the Central Pacific Company in 1871, and superintended the construction of the Arizona, New Mexico, and Texas Divisions. In 1884 the two railroads, several laterals, and some coastwise and ocean steamship lines were consolidated under the management of a single company—the Southern Pacific—and of this he was elected second vice-president. He also acquired large banking and industrial interests. In 1885 he removed to New York city, and in 1886 met with an accident that indirectly caused his death.

Crosby, George Avery, physician, born in Lowell, Mass., Dec. 27, 1831; died in Manchester, N. H., Jan. 30, 1888. He came from a family of eminent physicians, and was graduated at Dartmouth in 1852, and in the Medical Department in 1855. In 1857 he went to Peru and practiced there till 1864, when he returned to the United States and settled in Manchester. He married a daughter of Hon. A. J. Bryant, of San Francisco, in 1877, was President of the New Hampshire Medical Society in 1886, spent 1886-'87 in hospitals on Deer Island and in New York city, and at the time of his death was a member of the Manchester Board of Health.

Curtis, Samuel Johnson, philanthropist, born in Meriden, Conn., Jan. 15, 1814; died there, Jan. 10, 1888. He was a director and stockholder in nearly every manufacturing company in Meriden, and was also interested to a large extent in the local fire-insurance, street-railroad, and other companies. He accumulated a large fortune, and gave liberally to charitable objects. A few years before his death he founded the Curtis Home for Aged and Indigent Women and Destitute Children, erected a building at an expense of \$40,000, and supported it until his death. He made this home the residuary legatee of all his property, which, it is believed, will amount to \$500,000.

Dahlgren, Charles G., lawyer, born in Philadelphia, Pa., in 1809; died in Brooklyn, N. Y., Dec. 18, 1888. He was a brother of the late Admiral John A. Dahlgren, United States Navy, removed to Natchez, Miss., to become cashier of a branch of the Bank of the United States in 1830, held the office till the liquidation of the bank in 1848, and then engaged in cotton-planting and acquired a large fortune. At the outbreak of the civil war he raised and equipped the Third Mississippi Regiment for the Confederate service, and received a brigadier-general's commission. During the first two days of the defense of Vicksburg he was virtually in command, and on the third day was incapacitated for service by a bullet-wound. Subsequently he took part in the battles of luka, Corinth, Chickamauga, Atlanta, and the operations of Gen. Hood's army against Gen. Sherman, and was promoted major-general. After the war he lived in New Orleans till 1870, when he removed to Brooklyn.

Darley, Felix Octavius Carr, artist, born in Philadelphia, Pa., June 23, 1823; died near Claymont, Del., March 27, 1888. He received a public-school education, and in 1836 was placed in a counting-house, but his taste for art led him to apply all his leisure to drawing. When eighteen years old he offered a collection of original sketches of city life and scenes to the "Saturday Museum," of Philadelphia, and when they were published and paid for he determined to become an artist. His first collection of sketches attracted the attention of New York and Philadelphia publishers. In 1848 he was engaged by the American Art Union to design a series of illustrations for Washington Irving's works, and, removing to New York city, he produced the familiar designs in the "Sketch-Book," "Rip Van Winkle," the "Knickerbocker History of New York," the "Life of Washington," and others. He also illustrated several of William Gilmore Simms's novels, and about this time com-

pleted the outline drawings to Judd's "Margaret," which was published in 1868. On the completion of the Irving series of illustrations, he received flattering offers from publishers to go to London, but declined on account of his many home engagements. His next great work was the series of five hundred sketches drawn to illustrate James Fenimore Cooper's novels, a series noted for originality, power of expression, and quaint humor. During the civil war he designed historical sketches in water-color, which were reproduced by the Government on the greenback bills, and at the close of the war went to Europe. On his return in 1868 he published "Sketches Abroad with Pen and Pencil." For several years thereafter he executed orders for book illustrations, but gave the

larger part of his time to work in water-color, and in 1879 produced what his admirers claim to be the crowning achievement of his career—a series of twelve "Compositions in Outline from Hawthorne's 'Scarlet Letter.'" These were followed by similar series illustrating Longfellow's "Evan-

geline" (1883), and Shakespeare's plays (1886). He was a member of the National Academy of Design, the American Water-Color Society, and the Artists' Fund Society.

Devidge, William Plaster, actor, born in London, England, April 17, 1814; died in Cheyenne, Wyoming Territory, Aug. 7, 1888. He appeared on the stage, when sixteen years old, at Drury-Lane Theatre, London, as James in "The Miller's Maid," and his first professional appearance was at Nottingham, on June 20, 1836, as Adam Winterton in "The Iron Chest." In September following he achieved success at the Queen's Theatre, London, as Baron Oakland in "The Haunted Tower," and afterward played in the chief theatres in London and in the provinces. In 1850 he made his first American appearance at the old Broadway Theatre, New York, on August 19, as Sir Peter Teazle. He followed that with the performance of Caliban in "The Tempest," and then for five years supported Edwin Forrest, Gustavus V. Brooke, Julia Dean, Mme. Celesta, Lola Montez, and other star actors. In 1855 he was attached to the Cleveland Athenaeum, and at the close of his engagement made a professional tour of the country. His next engagement was with the Wallack company in 1861. From that he went to Mrs. John Wood's company, and played at the Olympic Theatre in 1863-'64, and in 1869 he began an engagement with Augustin Daly at the Fifth Avenue Theatre, which continued eight years. He traveled with Fanny Davenport and Margaret Mather; in 1879 became the American originator of the part of Dick Dead-Eye in "Pinafore"; and in 1885 began an engagement with the Madison Square company, which lasted till his death. He had played more than one thousand parts, and was a founder of the American Dramatic fund.

Davis, Edwin Hamilton, archaeologist, born in Ross County, Ohio, Jan. 22, 1811; died in New York city, May 15, 1888. He was educated at Kenyon College, and was graduated at Cincinnati Medical College in 1832. While at Kenyon, he conducted a series of explorations among the mounds of the Scioto valley, and his work coming to the notice of Daniel Webster—then traveling through the West—he was urged to continue his researches. Mr. Webster, who regretted

the rapid disappearance of these antiquities, suggested the formation of a society to purchase and preserve some of the most remarkable works of the mound-builders. In 1836 he aided Charles Whittlesey in his explorations, and from 1845 till 1847, assisted by Ephraim G. Squier, he surveyed nearly one hundred groups of works, and opened two hundred mounds at his own expense. He gathered the largest collection of mound-relics ever made in this country, which, finding an American purchaser, was taken to England, where it now forms part of Blackmore's Museum in Saulsbury. A second collection, consisting of duplicates and the results of subsequent collections, is at the American Museum of Natural History, New York city. The fruits of his extensive explorations are embodied in "Ancient Monuments of the Mississippi Valley" (Washington, 1848), which formed the first volume of the "Smithsonian Contributions to Knowledge." This work was characterized by A. Morlot, the distinguished Swiss archaeologist, in a paper before the American Philosophical Society, in 1862, as being as "glorious a monument to American science as Bunker Hill is of American bravery." Dr. Davis followed the practice of medicine in Chillicothe, Ohio, until 1850, when he was called to the chair of Materia Medica and Therapeutics in the New York Medical College, and continued there for ten years. During the spring of 1854 he delivered a course of lectures on archaeology before the Lowell Institute, Boston, and subsequently repeated them in Brooklyn and New York. He was for a time one of the conductors of the "American Medical Monthly."

Davis, George Tarball Moore, lawyer, born in the island of Malta, May 24, 1810; died in New York city, Dec. 20, 1888. He was a son of George Davis, a surgeon and naval officer, who was United States Consul-General to the Barbary States, at the time of his son's birth; came to the United States when a boy; was admitted to the bar in Syracuse, N. Y., in 1831; and settled in Alton, Ill., where he practiced until the opening of the Mexican War. He became intimate with Lincoln, Douglas, Trumbull, Baker, Singleton, and other well-known men of the State, and gained a wide reputation by his spirited prosecution of the murderers of Lovejoy, the abolitionist, in 1837. At the beginning of the Mexican War he entered the army as a private, rose to the rank of colonel, served on the staff of Generals Shields and Quitman, and while Gen. Scott remained in command of the city of Mexico he was his secretary. At the close of the war he was appointed chief clerk in the War Department at Washington, and introduced woman clerks into the department. On resigning the office he removed to New York city, became an iron merchant, engaged in importing iron and building locomotives, and was elected to the directory of several railroads. He completed an autobiography a few months before his death for posthumous publication.

Dawson, Benjamin Frederick, physician, born in New York city, June 28, 1847; died there, April 2, 1886. He began studying medicine in the early part of the civil war, served as acting assistant surgeon in the national army during 1865, and was graduated at the New York College of Physicians and Surgeons in 1864. He settled in New York, and made a specialty of surgery, gynecology and the diseases of children; established the "American Journal of Obstetrics," in 1868, and edited it till 1874; invented a galvanic battery for galvano-caustic surgery; held the offices of assistant surgeon of the Woman's Hospital, attending physician of the New York Foundling Asylum, and Professor of Gynecology in the New York Post-Graduate Medical School; and was a member of the New York Obstetric Society.

Ditson, Oliver, publisher, born in Boston, Mass., Oct. 20, 1811; died there, Dec. 21, 1886. He received a grammar-school education, served an apprenticeship at the printer's trade, entered the employ of Col. Samuel Parker, the music publisher, and on attaining his majority formed a partnership first with Mr. Morti-

sey and afterward with Mr. Parker, under the firm name of Parker & Ditson. In 1840 Mr. Parker retired, and Mr. Ditson carried on the business alone till 1857, when he took Joseph C. Haynes, a clerk, as a partner, forming the firm of Oliver Ditson & Co. Branch houses were established by Mr. Ditson's sons in New York city (C. H. Ditson & Co.), 1867, and Philadelphia (J. E. Ditson & Co.), 1876, the father remaining in Boston. His was by far the largest

music-publishing business that ever existed in the United States. Mr. Ditson was for twenty-two years president of the Continental Bank of Boston, and was also a director of the Boston Safe-Deposit Company, the Franklin Savings-Bank, and the Old Men's Home. He bequeathed \$25,000 to be expended under the direction of trustees for the benefit of poor musicians.

Dornheimer, William, lawyer and journalist, born in Lyons, N. Y., Feb. 5, 1832; died in Savannah, Ga., March 28, 1888. He was educated at Phillips Academy, Andover, Mass., and spent two years at Harvard. He then settled in Buffalo, N. Y., and was admitted to the bar in 1854. Early in his legal career he attained considerable influence by winning a very complicated case, and became actively interested in politics. His first votes were cast for the Democratic ticket, but in 1856 he affiliated with the Republican party. At the opening of the civil war he offered his services to the Government, was appointed on the staff of Gen. John C. Frémont, with the rank of major, and served through the three months' campaign in Missouri. He then returned to Buffalo, and formed a law partnership with Spencer Clinton. In April, 1867, he was appointed United States District Attorney for the Northern District of New York, and at the expiration of his term, he reunited with the Democratic party, after a brief adhesion to the Liberal Republican party. In 1874 he was elected Lieutenant-Governor of New York on the ticket with Samuel J. Tilden, and in 1876 was re-elected. Between these periods he took an active part in the prosecution of Gov. Tilden's measures against the canal ring. At the expiration of his second term, he removed to New York city, whence he was elected to Congress in 1882, and served as a member of the Judiciary Committee. He supported Grover Cleveland for President in 1884, was appointed United States District Attorney for the Southern District of New York in July, 1885, but resigned in March, 1886, to assume control of the New York "Star," in which relation he continued till death. In 1868 he contributed two papers to the "Atlantic Monthly," a review of Parton's "Life of Aaron Burr" and one on a "Life of Jefferson"; in 1861 published a series of articles in the same magazine on "Frémont's Hundred Days in Missouri"; and in 1864 published a biography of Grover Cleveland. He received the degree of M. A. from Harvard in 1859.

Douai, Carl Daniel Adolf, educator, born in Altenburg, Germany, Feb. 22, 1819; died in Brooklyn, N. Y., Jan. 21, 1888. He studied in the Dresden Gymnasium, and was graduated at the University of Leipzig. Soon afterward he was appointed a lecturer in the University of Jena, and after two years' service there took a professorship in the Russo-German University at Dorpat. At the outbreak of the revolution of 1848, he returned to Germany to take part in it, proclaimed the republic in his native city, and aided in successfully defending the city against the assaults of a full brigade of the army. He was an active member

of the diet called to institute a reform government, and was elected a member of the provisional Landtag; but on the suppression of the new government he with others was arrested for high treason, imprisoned till 1852, and then pardoned and released. In that year he settled in San Antonio, Tex., and established the "Zeitung," a social-democratic paper. In May, 1854, he was one of the signers to a call for a convention, which declared that slavery was a political and moral evil, and shortly afterward he was compelled to give up his paper and leave the city. He then taught in Philadelphia and Boston till 1860, when he was a delegate to the National Republican Convention that nominated Abraham Lincoln, and an active speaker in the ensuing canvass. The same year he became editor of the "New Yorker Demokrat," but gave up that office to accept the principalship of the Hoboken, N. J., Academy. In 1866 he established another school of his own in New York city; in 1871 was appointed editor of the "Arbeiter Union," an organ of the German trades-unions in New York city, and espoused the French cause in the Franco-Prussian War; and in 1878 became editor of the "Volks Zeitung." He introduced Froebel's kindergarten system of instruction into the United States, and wrote numerous philosophical articles and treatises from a social-democratic and free-thinker standpoint.

Drew, Thomas, abolitionist, born in Plymouth, Mass., in 1819; died in Dorchester, Mass., Nov. 12, 1888. He entered journalism in Philadelphia, became associated with Elihu Burritt in publishing the "Christian Citizen" in Worcester, and afterward with John Milton Earle, and was editor and proprietor of the Worcester "Spy" for several years preceding the civil war. He had been an active anti-slavery advocate many years, and at the time of the Anthony Burns riot in Boston (1854), went there at the head of a train-load of Worcester friends and made a vain attempt to rescue him. After the inauguration of Gov. Andrew and the opening of the civil war, he was appointed military secretary to the Governor, and besides the duties of this office was frequently sent to the field to look after the sick and wounded soldiers of Massachusetts. For several years he was an editorial writer on the Boston "Herald."

Drexel, Joseph Wilhelm, banker, born in Philadelphia, Pa., Jan. 24, 1838; died in New York city, March 25, 1888. He was one of the three sons of Francis Martin Drexel, a native of the Austrian Tyrol, who established a banking-house in Philadelphia in 1837. Joseph entered his father's banking house as a clerk, and afterward was admitted to partnership. The firm established branch houses in several large cities, and Joseph became manager of the German branch. During his residence abroad he traveled extensively. In 1861 he returned to the United States and opened a banking-house in Chicago, where he attained such a degree of popularity that the authorities named two of the handsomest boulevards after him and his wife. On the death of his father, in 1863, he returned to Philadelphia. In 1871 he came to New York city, and with J. S. Morgan, of London, and his brother, Anthony Joseph Drexel, established the firm of Drexel, Morgan & Co. He retired from active business in 1876, but retained his interest in the houses of Drexel & Co., of Philadelphia; J. S. Morgan & Co., of London; Drexel, Harjes & Co., of Paris; and Drexel, Morgan & Co., of New York; besides a third interest, with George W. Childs and Anthony J. Drexel, in the Philadelphia "Ledger." He was also a trustee of the Knickerbocker Trust Company and of the American Bank-note Company, and a director in eleven national banks, including the Garfield, of New York city, of which he was a founder. After his retirement from business, he devoted his time and means to the advancement of the various literary, philanthropic, scientific, and musical organizations with which he was connected, and was particularly interested in an original scheme for assisting the worthy and industrious poor. He bought 13,000 acres of choice land in Maryland

and Michigan, divided it into farms of 100 acres, erected comfortable five-room dwellings, and sold them at cost, on twelve years' time, to people whom he thought worthy of such assistance. He offered Gen. Grant the use of his furnished cottage on Mount MacGregor, and after his death therein presented the building and grounds to the Grand Army of the Republic as a memorial of the great soldier. In 1887 he presented a \$2,000 oil-painting by Edward Gay to the State of New York, for the adornment of the new Executive mansion at Albany. It is estimated that he spent an average of \$50,000 a year in charitable work; and it was not known until his death that he had kept an agent at the city prison (Tombs) for many years to investigate the condition of the families of criminals confined there and relieve deserving ones. Mr. Drexel was a director of the Metropolitan Museum of Art, and gave it some early Italian paintings, a collection of Egyptian casts, and another of coins, the painting "Harpichord," and a cabinet of ancient musical instruments. He also was president of the New York Philharmonic Society and of the Sanitary League, a director of the Metropolitan Opera House, treasurer of the Cancer Hospital Society, and a member of the Philadelphia Academy of Natural Sciences, the Society for the Improvement of the Condition of the Poor, the American Geographical Society, and the New York and Saratoga Historical Societies.

Drumgoole, John C., clergyman, born in County Longford, Ireland, in 1828; died in New York city, March 28, 1888. He came to the United States with his parents when eight years old, entered St. John's College, Fordham, N. Y., in 1848, and studied there till obliged to leave to help support the family, and then became sexton of St. Mary's Church. While filling this office he made a vow to consecrate himself to the physical and spiritual improvement of the poor. He resumed his studies in St. Francis Xavier College, took the theological course in the Seminary of Our Lady of Angels, Niagara Falls, and was ordained a priest on May 24, 1865. For a time he was curate at his old church, St. Mary's, when he applied to Archbishop McCloskey for permission to establish a mission for the protection of homeless and destitute children. His plans were approved, and he was appointed director of St. Vincent de Paul's Newsboys' Lodging-house, and under his administration the enterprise soon attained prosperity. He took charge in 1871, was obliged to rent the adjoining building in 1872, and after ten years of devoted labor erected a large fire-proof building on the corner of Great Jones Street and Lafayette Place, which occupies four city lots and cost, with the ground, \$300,000. In 1883, the accommodations again proving insufficient, he purchased over 500 acres on Prince's Bay, Staten Island, and erected buildings there. The property represents over \$700,000, and when each part was opened it was free from debt. Nearly 1,500 children are housed, fed, clothed, and educated in the institution, the name of which was changed to Mission of the Immaculate Virgin for Homeless and Destitute Children.

Duffield, George, hymnologist, born in Carlisle, Pa., Sept. 12, 1816; died in Bloomfield, N. J., July 7, 1888. He was graduated at Yale College in 1837, and after a three years' course in Union Theological Seminary, New York city, was ordained a Presbyterian minister, Dec., 27, 1840. He held pastorates in Brooklyn, 1840; Bloomfield, N. J., 1847; Philadelphia, 1852; Adrian, Mich., 1861; Galesburg, Ill., 1865; Saginaw city, Mich., 1869; and Lansing, Mich., 1877-'80; and resided in Detroit, Mich., without a charge in 1884-'87, when he removed to Bloomfield. He was author of many hymns, of which "Blessed Saviour, thee I love" (1851); and "Stand up, stand up for Jesus" (1858), are the most widely known. The latter has been translated into French, German, and Chinese, and was written as the concluding exhortation to a sermon delivered by him on the death of the Rev. Dudley S. Tyng. He received the degree of D. D., from Knox College, Illinois, in 1872.

Dunkel, Aaron Kline, printer, born in Lancaster, Pa., May 20, 1837; died in Philadelphia, Pa., May 21, 1888. He learned the printer's trade in the office of the "Lancasterian," and removing to Philadelphia in 1856, was employed as a compositor on the old "Pennsylvania." In 1861 he enlisted in the second company of the State Fencibles, under the three-months' call, and on the expiration of this service re-enlisted in the Zouaves d'Afrique (Gen. N. P. Banks's body-guard), afterward attached to the Fourteenth Pennsylvania Volunteers. He attained the rank of captain, was wounded at Chancellorsville, in May, 1863, recovered, and commanded his company at Gettysburg, where he was taken prisoner in the second day's fight. He was confined in Libby Prison nine months, made his escape with others through the famous tunnel, and was recaptured three days afterward. After being exchanged he served on the staff of Gen. Patrick, as assistant adjutant-general. During his service he took part in the battles of Winchester, Cedar Mountain, Fredericksburg, Chancellorsville, Gettysburg, and the siege of Petersburg. After the war he resumed his occupation as a printer, and was employed on "The Press" till 1868, when, in association with three other printers, he established the "Sunday Republic," which he conducted successfully till 1886, and then retired on account of failing health. He was twice elected State Senator from Philadelphia, and was elected Secretary of Internal Affairs on the ticket with ex-Gov. Henry M. Hoyt.

Dunlop, George Kelly, clergyman, born in County Tyrone, Ireland, Nov. 10, 1830; died in Las Cruces, New Mexico, March 13, 1888. He was educated at the Royal College of Dungannon and at Queen's University, and came to the United States in 1852. He was ordained deacon in the Protestant Episcopal Church, Dec. 3, 1854, and priest, Aug. 7, 1856, and accepted a charge in St. Charles, Mo. Two years later he became rector of Christ Church, Lexington, Ky., and after a service of seven years, resigned to take charge of Grace Church, Kirkwood, Mo., which he held for sixteen years. He was a deputy from his diocese to the General Conventions of 1871, 1877, and 1880, a member of the standing committee, an examining chaplain, and dean of the St. Louis Convocation, and was consecrated second Missionary Bishop of New Mexico and Arizona, in St. Louis, Mo., on Nov. 21, 1880. He received the degree of S. T. D. from Racine College in 1880.

Dunster, Edward Swift, physician, born in Springfield, York County, Me., Sept. 2, 1834; died in Ann Arbor, Mich., May 3, 1888. He was graduated at Harvard in 1856, and at the New York College of Physicians and Surgeons in 1859, and began practice in New York in 1860. At the beginning of the civil war he entered the national army as an assistant surgeon, and served continuously on the field and in hospitals till February, 1866. He was appointed a medical inspector by Gen. Rosecrans, and the greater part of his service was in connection with that office. At the close of the war he returned to New York, where he edited the "New York Medical Journal" from 1866 till 1872, and was physician in charge of the Randall's Island Hospital from 1869 till 1873, in the mean time occupying the chair of Obstetrics and Diseases of Women and Children in the University of Vermont for three years, and the same chair in the Long Island Medical College for two years. In 1873 he became Professor of Gynecology in the medical department of the University of Michigan, at Ann Arbor, and held this office at the time of his death. He was the author of several works in his special branch.

Dwight, William, soldier, born in Springfield, Mass., July 14, 1831; died in Boston, Mass., April 21, 1888. He was appointed a cadet in the United States Military Academy, but resigned before graduation, and engaged in business. On May, 14, 1861, he was commissioned a captain in the Thirtieth United States Infantry, and in the following month lieutenant-colonel of the Seventieth Regiment of New York Volun-

teers, under command of Col. Daniel E. Sickles. He participated in the early movements in Virginia, and at the battle of Williamsburg was wounded three times and left on the field as dead. After a brief confinement he was released, and, on rejoining the army, was promoted brigadier-general for his gallantry in that battle, Nov. 29, 1862. In the final attack on Port Hudson, he led the advance troops, and so distinguished himself that he was appointed a member of the commission to arrange the terms of surrender. In May, 1864, when Gen. Banks set out on his Red river expedition, he was appointed chief of staff to that officer; in July he became commander of the First Division, Nineteenth Army Corps, and rendered efficient services in the campaign in the Shenandoah valley; and on Jan. 15, 1866, he resigned from the army.

Eckles, Delane R., lawyer, born in Kentucky in 1806; died in Greencastle, Ind., Oct. 29, 1888. He removed to Greencastle in 1838, studied law, and was admitted to the bar; was the first mayor of the city, served through the Mexican War, and reached the rank of captain; was a circuit court judge sixteen years, and was chief-justice of the United States courts in the Territory of Utah during the administration of President Buchanan, 1857-'61.

Eggleston, Benjamin, merchant, born in Corinth, N. Y., Jan. 3, 1816; died in Cincinnati, Ohio, Feb. 9, 1888. He removed to Cincinnati when quite young, engaged in mercantile business, and became interested in public affairs. He was a member and president of the city council for several years, member of the State Senate from 1862 till 1866, and member of Congress from the First Congressional District from 1865 till 1869. Subsequently he was president of the Cincinnati Chamber of Commerce, and proprietor of the "Cincinnati Times" for several years.

Elliott, Esakel Brown, statistician, born in Sweden, Monroe County, N. Y., July 16, 1823; died in Washington, D. C., May 24, 1888. He was graduated at Hamilton in 1844, and then taught for some years. On the development of telegraphy in New York State, he was called to its service, but soon resigned to become actuary of a life-insurance company in Boston. In 1861 he was invited to a similar office on the United States Sanitary Commission, which he held until the completion of its labors. He then entered the Government service, and in 1865 was secretary of the commission for revising the United States revenue laws. In 1871 he was associated with the civil-service reform commission, and later became Government actuary in the United States Treasury Department, which office he held until his death. Mr. Elliott was a member of the International Statistical Congress that met in Berlin in 1863, and 1882 was vice-president of the American Association for the Advancement of Science, presiding over the section of economic science and statistics. He was also a member of other scientific societies. He published papers on mathematical physics, but attained his highest reputation in connection with the many valuable statistical reports on coinage, weights and measures, and similar topics that he prepared for the United States Government. Several of these have appeared in the reports of United States census, especially in the volume on "Vital Statistics."

Elliott, Washington Lafayette, soldier, born in Carlisle, Cumberland County, Pa., March 31, 1821; died in San Francisco, Cal., June 29, 1888. He was a son of Capt. Jesse Duncan Elliott, United States Navy, accompanied his father on several long cruises, was educated at Dickinson Academy and the United States Military Academy, and became second lieutenant of United States mounted rifles in 1846. At the outbreak of the Mexican War he accompanied his regiment to the field, and served until the surrender of Vera Cruz, gaining a first lieutenantcy in July, 1847. He afterward served on the frontier and in Texas and New Mexico, and took part in the campaign against the Navajo Indians in 1858. He was promoted cap-

tain in July, 1854. His first service in the civil war was in the engagements at Springfield and Wilson's Creek, Mo., and from that time till the close of the war he was constantly on duty. He became colonel of the Second Iowa Cavalry in September, 1861; major in the regular army in November, 1861; brigadier-general of volunteers in June, 1862; chief of cavalry in the Army of Virginia in August, 1862; commander of the Department of the Northwest and of a division in the Army of the Potomac in 1863; commander of the Army of the Cumberland, chief of cavalry in the Army of the Cumberland, commander of a division in the Fourth Army Corps in 1865; brevet major-general of volunteers and brevet brigadier-general in the regular army; lieutenant-colonel in August, 1866; and colonel in April, 1878. He took part in the capture of Madrid and Ilesad No. 10, the siege of Corinth, second battle of Bull Run, the Atlanta campaign, pursuit of Gen. Hood, and the battles around Nashville, and was retired at his own request on March 20, 1879.

Fairbanks, Horace, manufacturer, born in Barnet, Vt., March 23, 1820; died in New York city, March 17, 1888. He was the second son of Erastus Fairbanks, war Governor of Vermont, and the sixth in descent from Jonathan Fairbanks, who came from England and settled in Dedham, Mass., in 1638. His father was the senior member of the firm of E. & T. Fairbanks, of St. Johnsbury, Vt., scale manufacturers. Shortly after attaining his majority Horace and his brother Franklin were admitted to the firm, which became E. & T. Fairbanks & Co. In 1874 it was incorporated under the same name and Horace became its president, and held that office till his death. In 1876 he was elected Governor. In early life he built the St. Johnsbury Athenæum, and provided it with a library of 10,000 volumes and an art gallery, which contains among other treasures Bierstadt's painting of the Yosemite valley, and presented the whole to the city. Afterward, in connection with his brother Franklin, he built the North Congregational Church and gave it to the congregation. He was president of the Portland and Ogdensburg Railroad and of the St. Johnsbury and Lake Champlain Railroad till it became a part of the Boston and Lowell system, was a director of the American Board of Commissioners for Foreign Missions, a trustee of the Fairbanks Educational Board, founded by his father and himself for educating young men for the ministry, and of the St. Johnsbury Academy and the University of Vermont.

Ferrer, Martha W., philanthropist, born in South Britain, Conn., in 1824; died in New York city, May 2, 1888. She was a sister of the late Ann S. Stephens, the author, and married Don Fermin Ferrer, ex-President of Nicaragua, in 1858. On the organization of the Workingwomen's Protective Union of New York, for the primary purpose of aiding and protecting women and girls who had been thrown upon their own exertions for support during the civil war, she was appointed its superintendent. She held this office continuously till her death, and proved an admirable executive and a sympathetic friend to all who came under her charge.

Fisher, Charles Henry, engineer, born in Lansingburg, N. Y., in 1835; died in New York city, Jan. 13, 1888. He was educated for the profession of civil engineering, and began railroad work when seventeen years old on the Racine and Janesville road, in Wisconsin. Afterward he was engaged for several years in repairing the Erie Canal. In 1860 he was attached to the engineering staff of the New York Central and Hudson River Railroad, and during the ensuing eight years rose through the various grades to the office of first assistant engineer. He resigned this office in 1868 to accept that of chief engineer of the projected Lake Ontario Shore road, and made the surveys and laid the lines on which it was built. On Jan. 1, 1869, he was appointed chief engineer of the New York Central and Hudson River road, and held the office till within three years, when he resigned.

Among his most noted works were the two additional tracks, the stations at Albany, Syracuse, and Buffalo, several costly bridges, and the elevation of the tracks and the new station in Rochester.

Foster, Joshua, educator, born near Holmesburg, Philadelphia County, Pa., July 10, 1813; died in New Brunswick, N. J., Nov. 20, 1888. He was educated at the University of the City of New York; in October, 1838, became a teacher in the Pennsylvania Institution for the Deaf and Dumb, and held that place till September, 1870, when he was appointed principal. After a service of forty-six years as teacher and principal, he withdrew from active labor in the institution in October, 1884, and took up his residence in New Brunswick, N. J. Before leaving the scene of his long labor he presented his large and valuable library and extensive and choice collection of pictures to the institution. He ranked high among the instructors of deaf mutes in the United States, was an enthusiastic student of, and lecturer on zoology, botany, ornithology, and English history, and had every available space in his school-room occupied with cages filled with singing-birds.

Foster, Melvin, billiard-player, born in Cavendish, Vt., Sept. 12, 1844; died in New York city, July 6, 1888. He was educated in Rutland, became interested in billiards in 1858, and played his first public match, in which he defeated the late Robert E. Willmarth by 1,000 to 821 points, in a full American game, in Boston, Mass., May 13, 1863. On April 6, 1864, he made his first appearance in New York city at Irving Hall, in a tournament for the benefit of the United States Sanitary Commission, in which he made the best average in a 500-point game of caroms, 15 20-32, against Dudley Kavanagh. In the same year he gained wide repute by defeating John Deery in a home-and-home game, his majority in New York city being 876 in 1,500, and in Washington, D. C., 55. His next great contest was in Montreal, Canada, July 19, 1865, when he was matched against Joseph Dion for \$2,000 a side in gold, and was defeated by Dion, who scored 1,500 points to Foster's 1,108. He then won the Memphis tournament, and followed it with a similar victory at Cincinnati in 1867, but in his first championship match at Chicago, April 8, 1868, he lost the game to John McDevitt, by a score of 1,288 to 1,262. On Dec. 23, 1868, he defeated Joseph Dion by 2,800 to 296, three-ball caroms, for \$2,000, in New York city. Jan. 28, 1869, Dion defeated him, 1,500 to 1,116, at the four-ball game in Montreal. April 23, Foster defeated Deery, 800 to 183, at the three-ball game in New York city; and June 19, 1871, he played his third championship match for the diamond cue, in New York city, and lost to Cyrille Dion, by 1,500 to 616. He introduced several novel features in playing, which others used to better advantage than he.

Pouratt, Enos, soldier, born in Piscataway, N. J., Sept. 19, 1827; died in New Brunswick, N. J., July 22, 1888. In 1861 he was chosen a captain in the First New Jersey Volunteers, and afterward became Colonel of the Thirty-third New Jersey Regiment. He was wounded in the head during the battle of Antietam, and left on the field for dead nearly two days. He was on court-martial duty in Nashville, Tenn., in 1864; accompanied Gen. Sherman's army on its march to the sea; and was mustered out of the service, after having taken part in twenty-six battles, in 1865. He then engaged in railroad business for several years, and in 1885 was appointed chief of police of New Brunswick, N. J.

Fullerton, William, Jr., composer; born in Newburg, N. Y., in 1854; died in London, England, Aug. 26, 1888. He was a son of ex-Judge William Fullerton, received his early education in Newburg Academy, studied music in Germany and England, and settled in London. Under the patronage of the Prince and Princess of Wales he was the author of many musical compositions, notably "The Lady of the Locket," and the opera "Waldemar," which he was preparing

to bring out at the Prince of Wales Theatre at the time of his fatal illness.

Gardner, William Sewall, lawyer, born in Hallowell, Me., Oct. 1, 1827; died in Newton, Mass., April 4, 1888. He was graduated at Bowdoin College in 1850, studied law in Lowell, and was admitted to the Middlesex bar in 1852. In February, 1855, he formed a partnership with Hon. Theodore H. Sweetser, and maintained this connection in Lowell and Boston till his appointment to the bench of the Superior Court in 1878. He held his judicial office till August, 1887, when failing health caused his resignation. Judge Gardner was an active member of the masonic fraternity, and a voluminous writer on freemasonry.

Garfield, Eliza Ballou, an American pioneer, born in Richmond, Chester County, N. H., Sept. 25, 1801; died in Mentor, Ohio, Jan. 21, 1888. She was a descendant of Maturin Ballou, who fled from France on the revocation of the edict of Nantes and joined Roger Williams's colony in Rhode Island, and a niece of the Universalist clergyman, Hosea Ballou. In 1819 she married, while living in Watertown, Mass., Abram Garfield, son of a farmer of Otsego County, N. Y., and soon afterward they removed to "The Wilderness" of Ohio, and settled on a farm in Newburg, now a part of Cleveland. They built a log-cabin, twenty by thirty feet, in which three children—Mehetabel, Thomas, and Mary—were born. The family removed to New Philadelphia, Ohio, in 1826, but returned to the lake country four years later, settled on a farm in Orange township, Cuyahoga County, and erected another log-cabin. In this humble dwelling a fourth child, James Abram Garfield, who became teacher, soldier, congressman, United States Senator, and twentieth President of the United States, was born on Nov. 19, 1831. Two years afterward the father died, and Mrs. Garfield was left with the farm and four children to care for. When President Garfield was shot, with his own hand he traced an almost illegible letter to his mother. She bore up bravely after his death, till a month before her own, and her last words were a wish to see "my boy Jimmy."

Garnett, Alexander Yelverton Peyton, physician, born in Essex County, Va., Sept. 20, 1820; died at Rehoboth Beach, Del., July 11, 1888. In 1841 he was graduated at the medical department of the University of Pennsylvania, and commissioned an assistant surgeon in the United States Navy. In 1848 he was promoted surgeon, and in 1850 resigned to become Professor of Clinical Medicine in the National Medical College, in Washington, D. C. At the outbreak of the civil war he resigned his professorship, removed to Richmond, was appointed a member of the Confederate board of examining surgeons for the army, and afterward surgeon in charge of the military hospitals in that city, and as family physician of Jefferson Davis, accompanied him after the evacuation of the capital. He returned to Washington after the war, resumed his professorship in the medical college, and held it till 1870, when, on his resignation, he was elected professor emeritus. In 1885 he was vice-president of the American Medical Association. Among his numerous medical papers were: "Condurango as a Cure for Cancer," "The Potomac Marshes and their Influence as a Pathogenic Agent," "Epidemic Jaundice among Children," "The Sorghum Vulgare, or Broom-Corn Seed in Cystitis," "Nelaton's Probe in Gunshot Wounds," and "Coloproctitis treated by Hot-Water Douche and Dilatation or Division of the Sphincters."

Gay, Sydney Howard, author, born in Hingham, Mass., in 1814; died in New Brighton, Staten Island, N. Y., June 25, 1888. When fifteen years old, he entered Harvard University, but was compelled by failing health to give up his studies while in his junior year. He then spent some time traveling in China and the East Indies, and, settling in Boston, entered on a mercantile career, but soon afterward abandoned it to study law. Having conscientious scruples against taking the oath to support the Constitution

of the United States, on account of his strong anti-slavery principles, he became an ardent abolitionist instead of a lawyer, and was appointed lecturing-agent of the American Anti-Slavery Society, in 1842.

In 1844 he removed to New York city, became editor of the "Anti-Slavery Standard," and held the office till 1857, when his powerful support of the cause of human freedom led Horace Greeley to appoint him an editor of the New York "Tribune," of which he became managing editor in 1862. He continued in warm personal association with Mr.

Greeley and in editorial connection with his paper till 1865, and then removed to Chicago, and assumed the managing editorship of the "Tribune" of that city. Immediately after the great fire in 1871 he resigned this office, and became one of the most effective members of the relief committee; and on the completion of this work returned to New York, and spent two years on the editorial staff of the "Evening Post." In conjunction with William Cullen Bryant he wrote and published an illustrated "History of the United States" (4 vols., New York, 1874-'81). He also wrote a life of James Madison (Boston, 1884), and was at work on a life of Edmund Quincy.

Gilman, George, soldier, born in Carlisle, Pa., April 4, 1828; died in Las Vegas, New Mexico, Aug. 6, 1880. He entered the United States Army as military storekeeper in the quartermaster's department on April 9, 1848, was appointed captain in the Eleventh regiment of United States Infantry on May 14, 1861, and was brevetted major for gallant conduct in the battle of Gettysburg on March 18, 1863, and lieutenant-colonel for meritorious services in the operations resulting in the fall of Richmond and the surrender of Gen. Lee on April 9, 1865. He was promoted major of the First United States Infantry, Jan. 12, 1866; assigned to the Fifth United States Infantry June 9, 1869, promoted lieutenant-colonel Third United States Infantry March 20, 1879, and colonel Fifth United States Infantry Aug. 1, 1886. At the time of his death he was commandant at Fort Bliss, El Paso, Tex., but was on a brief leave of absence.

Gilman, Walter Murray, adventurer, born at sea, in 1820; died in San Francisco, Cal., Jan. 21, 1888. He was the son of a merchant of Newcastle-on-Tyne, England, who removed to Montreal, Canada, in 1829, and was educated in the College of St. Sulpice there. When fourteen years old he went to New York, and engaged with a wealthy Southern planter, then on his wedding-trip, to drive his coach to his estate in Anderson County, S. C. On the way South he astonished his employer with his proficiency in the German and French languages and his general culture. He remained in Anderson County several years, taught school, and married; then became restless, searched the hills for the silver-mines of the Indians, ran a passenger steamer on Savannah river, tried journalism in New York, took advantage of the California gold-fever and made a fortune by speculating in cheap mining-apparatus; went to Mexico with Du Cramer, the Russian envoy, with the intention of trying Daniel Webster's plan of centralizing the several States, and joined the fortunes of Gen. Carrera, of Guatemala, in his endeavor to effect the centralization of the Central American republics. He then fitted out a war-vessel in New York, from which the United States Government removed the guns and ammunition, sailed to the island of Sumatra, contracted with a native prince for the sale of forty

square miles of land, on which he proposed to settle an American colony, and was arrested by the Dutch colonial authorities and imprisoned nearly two years. He returned to the United States in 1844, went to Salt Lake City, and in 1845 was appointed an agent of the Mormon Church, to establish a colony on the Hawaiian islands. At first he confined his operations to Lahaina, capital of the island of Maui, and then abandoning his Mormon colonization scheme, removed to the island of Lanai, leased a large tract, and raised wheat and sheep. In 1867 he settled in Honolulu, established the "News," advocated the claims of Prince Lunailo to the throne, and, in 1869, was sent to the United States, where he negotiated a reciprocity treaty. On the accession of Prince Kalakaua he was offered a cabinet appointment, and for several years had great influence with the King. In 1878 he was elected a member of the Legislature, and in 1882 was appointed Premier and Minister of Foreign Affairs. He held these offices till the revolution of 1897, when, with the other ministers, he was deposed, a price was set upon his head, and he fled to San Francisco, leaving interests aggregating \$1,000,000 in value.

Gilbert, Adolphe, philanthropist, born in Gloucester, Mass., in 1809, died there, July 2, 1888. He had been actively connected with the business interests of the city for fifty years, accumulated property valued at over \$50,000, and for many years before his death was president of the City, National, and Cape Ann Savings-Banks. He bequeathed \$100,000 to a board of trustees for a public hospital, \$75,000 for an old folks' home, \$10,000 to the Widows' and Orphans' Aid Society, \$5,000 to the Firemen's Relief Association, \$4,000 to the Cape Ann Scientific and Literary Association, and \$3,000 to the Female Charitable Society.

Gillman, Quincy Adams, soldier, born in Black River, Lorain Co., Ohio, Feb. 26, 1826; died in Brooklyn, N. Y., April 7, 1888. He was graduated at the United States Military Academy, first in a class of forty-three, in 1849, and was assigned to the corps of engineers with the rank of second lieutenant. In 1852 he was appointed assistant instructor in practical military engineering in the United States Military Academy, and held the office till Sept. 15, 1856, and was promoted first lieutenant in July of the latter year. Between 1856 and the opening of the civil war he was treasurer and quartermaster at West Point, in charge of the New York agency for the purchase and shipment of material used in the construction of fortifications, and in charge of the fortifications in New York harbor. In August, 1861, he was promoted captain, and in October was appointed chief of engineers of the Fort Royal expedition. He took an active part in the operations at Hilton Head, S. C., on Nov. 7, 1861, rebuilt the forts after their reduction, and superintended the erection of new ones. In 1862 he erected the fortifications for the attack on Fort Pulaski, at the mouth of Savannah river, and commanded the troops in the successful engagement in April. A few days after the capture he was brevetted lieutenant-colonel.

Failing health then compelled him to take a brief leave of absence, during which he was appointed brigadier-general of volunteers, and assisted in organizing and forwarding to the field sixty regiments of volunteers from New York State. He reported for duty in Au-

gust, was in command of the division that operated before Covington, Ky., September 18-28, and of a division in western Virginia from September 28 till October 14, was then appointed to command the first division of the Army of Kentucky, and subsequently the division of Central Kentucky. While holding this command, he defeated the Confederates under Gen. Pegram in the battle of Somerset, for which he was brevetted colonel. After another sick-leave, he was appointed commander of the Department of the South, and, in July, 1863, of the Tenth Army Corps. He directed the operations against Charleston, S. C., captured Morris Island on July 10, for which he was brevetted brigadier-general, bombarded Fort Sumter, besieged and captured Fort Wagner and Battery Gregg, and for planting and operating the famous "Swamp Angel" gun on Morris Island, seven miles from Charleston, received this commendation from Gen. Henry W. Halleck: "He has overcome difficulties almost unknown in modern sieges. Indeed, his operations on Morris Island constitute a new era in the science of engineering and gunnery." For his services at Charleston he was promoted major-general of volunteers. In 1864, at the head of the Tenth Corps, he commanded on the James river, Va., captured the line in front of Drewry's Bluff, covered Gen. B. F. Butler's retreat at Bermuda Hundred, and joined in the pursuit of the Confederates under Gen. Jubal Early. He was assigned to the defense of Washington with two divisions of the Nineteenth Corps. He commanded the Department of the South from Feb. 9 till Nov. 17, 1865, resigned his volunteer commission in December, and was appointed engineer-in-chief of all the fortifications on the Atlantic coast south of New York city. In the regular army he was promoted major in June, 1868, lieutenant-colonel in 1874, and colonel on Feb. 20, 1874. As one of the judges of the Centennial Exhibition in 1876, he made elaborate reports on "Brick-making Machinery, Brick-Kilns, Perforated and Enamelled Bricks and Pavements," and on "Portland, Roman, and other Cements and Artificial Stones." He also wrote "The Siege and Reduction of Fort Pulaski" (New York, 1863); "Limes, Hydraulic Cements, and Mortars" (1863); "Engineering and Artillery Operations against Charleston in 1863" (1865); "Beton, Coignet, and other Artificial Stones" (1871); "The Strength of the Building Stones of the United States" (1874); and "Roads, Streets, and Pavements" (1876).

Goldsmith, Oliver B., educator, born in Cutchogue, L. I., in 1815; died in New York city, April 23, 1888. When fifteen years old he removed to New York city, became a clerk in a dry-goods store, was established in the same line of business, and in 1837 owned the largest dry-goods store on the east side of the city, and was the chief rival of Lord & Taylor. The financial crisis of that year reduced him to poverty. While seeking other means of employment he was shown a specimen of artistic penmanship written by Isaac F. Bragg, and immediately afterward took a course of instruction in Mr. Bragg's school. Within a year he took the first prize of the American Institute for off-hand penmanship. In 1838 he opened a school in Brooklyn, and subsequently one in New city, which he conducted for forty years, and became known as the best off-hand penman in the United States. A few years ago he made a tour of the principal cities with his six-year old son, who had developed an extraordinary talent for Shakespearean recitations. In 1877 he was accidentally shot in the shoulder, and a few weeks afterward broke several bones in a fall. These injuries resulted in paralysis, from which he never recovered.

Gray, David, journalist, born in Edinburgh, Scotland, Nov. 9, 1836; died in Binghamton, N. Y., March 18, 1888. He settled in Buffalo, N. Y., about 1857, was successively a contributor, reporter, and editor of the Buffalo "Courier," and became its editor-in-chief in 1876. He held this office till 1882, and was then obliged to resign it on account of feeble health. In

1886 he was appointed secretary and treasurer of the New York State Niagara Park Commission, and held the offices till three months prior to his death, when he became secretary of the Buffalo Park Commission. He was on his way to Nassau, for his health, when he sustained injuries in a railroad accident at Vestal, N. Y., which caused his death. Mr. Gray, aside from his high reputation as a journalist, was known as a man of fine literary tastes and the author of a few exquisite fugitive poems. His writings, including essays, letters, and poems, with a sketch of his life, have been published (2 vols., Buffalo, 1888).

Greely, Edward, author, born in Sandwich, Kent, England, Dec. 1, 1835; died in New York city, Oct. 1, 1888. He received a private and a military education, accompanied the English naval expedition to China, and as captain of a company of marines was among the foremost in the storming of Peking. After the war he was appointed to an office in the British Legation in Japan, and during his residence in that country studied its language, literature, art, customs, and form of government. In 1868 he removed to the United States, passed several years in commercial pursuits in New York city, went to Manchester, Mass., and during a season of disability began his series of Japanese historical, descriptive, and story books. On his recovery he made several trips to Japan, and opened a store for the sale of Japanese curios and works of art in New York. His English translation of the great historical work of Japan, "The Loyal Ronins" (1890), elicited the commendation of the imperial authorities, and prompted a banquet to him on his next visit to that country. He was a member of the Zoological and Anthropological Societies of London, and of the Authors', Lotus, and other clubs of New York. He published the plays: "Vendome," "Mirah," "The Third Estate," "The College Belles," and "Uncle Abner," and the following works on Japanese history, manners, and customs: "Blue Jackets" (1871); "Young Americans in Japan" (1881); "The Wonderful City of Tokio" (1882); "The Golden Lotus" (1883); "Bear-Worshippers of Yezo" (1884); and "A Captive of Love" (1885).

Grefin, Henriette Augusta, Baroness de, educator, born in Paris, France, in 1819; died in Orange, N. J., July 25, 1888. She married at an early age Baron Charles de Grefin, a captain in the Chasseurs d'Afrique, accompanied her husband to the United States in 1855, and lived in the South till the close of the civil war, in which they lost all their property. Her husband died soon after the peace, and the widow, who was an accomplished musician and linguist, came north and supported herself by teaching. For several years she was Professor of Languages in Vassar College.

Gunning, William D., scientist, born in Bloomingburg, Ohio, in 1830; died in Greeley, Col., March 8, 1888. He was graduated at Oberlin College, pursued a course in comparative anatomy in New York city, and in biology under Prof. Agassiz at Cambridge, Mass., held lectureships in Hilldale College, Mich., and in Pittsburg, Pa., was a contributor to "The Index" and "The Open Court," and published a "Life History of our Planet." For some time previous to his death he was pastor of the Unitarian Society in Greeley.

Hager, Albert David, geologist, born in Chester, Vt., Nov. 1, 1817; died in Chicago, Ill., July 29, 1888. He was educated in the public schools of his native town, and in 1856 became assistant State naturalist of Vermont. During 1857-'61 he served under Edward Hitchcock as assistant geologist of Vermont, and from 1862 till 1870 was curator of the State cabinet of natural history. He then became geologist of Missouri, but in 1872 settled in Chicago, where, in 1877, he became librarian of the Historical Society, which place he held until his death. In 1867 he was appointed State commissioner from Vermont to the World's Fair in Paris. He contributed to the "Report on the Geology of Vermont" (3 vols., Claremont, N. H., 1861); "Annual Reports of Vermont

Fish Commission" (Montpelier, Vt., 1866-'69); and "Annual Report of the State Geologist for the State of Missouri" (Jefferson City, 1871).

Hamilton, Peter, lawyer, born in Pennsylvania in 1811; died in Mobile, Ala., Nov. 22, 1888. He was graduated at Princeton, removed to Mobile, and was admitted to the bar in 1838. He was vice-president and general manager of the Mobile and Ohio Railroad Company during the civil war; served in both branches of the State Legislature; was a special commissioner to Washington, D. C., in 1875, to arrange the political troubles in the State, and effected a consolidation of two legislatures then sitting in Montgomery. He assisted in the adjustment of the State debt and the drafting of the revenue law, and was a member of the commission to codify the laws of the State in 1886.

Hamilton, William J., lawyer, born in Washington County, Md., Sept. 8, 1820; died in Hagerstown, Md., Oct. 26, 1888. He studied in Jefferson College, Pa., was admitted to the bar of his native county in 1843, was elected to the State Assembly as a Democrat in 1846, was a Cass presidential elector in 1848, and in 1849 was elected to Congress. By re-elections he served from 1849 till 1855, was then defeated, and retired from political life till after the civil war. In 1867 he was defeated for Governor by Oden Bowie, by a majority of one; in 1868 was elected United States Senator for the term beginning March 4, 1869; and in 1879 was elected Governor by a majority of 22,000. Shortly after his inauguration he became involved in a conflict with the most active members of his own party, especially those constituting the board of public works, and his administration closed without a restoration of harmony. At his death he was the wealthiest person in Washington County.

Harris, Samuel Smith, clergyman, born in Autauga County, Ga., Sept. 14, 1841; died in London, England, Aug. 21, 1888. He was graduated at the University of Alabama in 1859, studied law, and, by special act of the Legislature, was admitted to the bar in 1860. He began practice in Montgomery, but on the outbreak of the civil war joined the Third Alabama Regiment, and served in the Confederate army till the close of the war. He became adjutant-general on the staff of Gen. Bragg with the rank of major. After the war he resumed his practice in Montgomery, but soon afterward removed to New York city, where he practiced three years. He studied theology, and was ordained deacon in Montgomery on Feb. 10, 1869, and priest on June 30 following. As deacon, he had charge of St. John's Church, Montgomery, and as priest he was rector of Trinity Church, Columbus, Ga., Trinity Church, New Orleans, and from 1875 till 1879 of St. James's Church, Chicago. He was elected Bishop of Quincy in 1878, but declined the office, and was elected Bishop of Michigan, and consecrated in Detroit on Sept. 17, 1879. He was a founder of "The Living Church," and received the degree of D. D. from the college of William and Mary in 1874, and that of LL. D. from the university of Alabama in 1879.

Hamard, John Ross Greene, journalist, born in New York city, Sept. 4, 1836; died there, April 18, 1888. He was graduated at St. John's (R. C.) College, Fordham, N. Y., in 1855, intending to enter the priesthood, but a season of delicate health interposed, and he engaged in literary work. He was assistant editor of the "New American Cyclopaedia" from 1857 till 1863; took George Ripley's place as literary editor of the New York "Tribune," while the latter was on a vacation in Europe; was appointed editor of the "Catholic World" in 1865, but soon afterward went to Chicago with Charles A. Dana, who there founded the "Republican"; returned to New York on the discontinuance of the "Republican," and joined the editorial staff of the "Tribune," and on the death of Mr. Ripley succeeded to the literary editorship. Subsequently he was also musical critic for many years. In 1878, in conjunction with William M. Groves, he translated, after many persons had tried and failed, a large number of cipher telegrams

that had been sent by the Democratic National Committee to various persons in the Southern States concerning the presidential election returns of 1876. He passed the summer of 1879 in England and the winter of 1880 in Nassau and Bermuda, in the hope of regaining his health, and afterward traveled and lived in France, Southern California, and the Adirondacks, but never regained his strength. Besides his literary and musical criticisms and correspondence with the "Tribune," he was the author of a "Life of Archbishop Hughes" (1866); "The Ring of the Nibelung" (1877); "Life of Pius IX" (1878); a school "History of the United States" (1878); and "A Pickwickian Pilgrimage" (1881).

Hastings, Alice, actress, born in Ireland in 1856; died in New York city, Dec. 1, 1888. She came to the United States with her parents when a child, made her first appearance on the stage when sixteen years old at Wood's Museum, Philadelphia, in "Man and Wife," and after two successful seasons in that city played at the Academy of Music in Cleveland as Susan Nipper in "Dombey and Son," Tidy in "Lost in London," and Audrey in "As you like it." Two seasons at the Grand Opera House in Pittsburgh followed. She was then engaged by James McVicker for his Chicago theatre, and made a notable success there as Mrs. Brown in "The Banker's Daughter." In 1881 she played male parts at the Fourteenth Street Theatre in New York city, starred with Augustin Daly's company as the Wild Rose in "An Arabian Night," and in 1882 became leading lady in Roland Reed's company, holding the place till her death. She created the parts of the Adventuress in "Cheek" and Mrs. Ponsby in "Humbug." Her last appearance was in "The Woman Hater," at the Fourteenth Street Theatre, New York city, a week before her death.

Hays, James Buchanan, lawyer, born in Crawford County, Pa., Sept. 10, 1838; died in Boise City, Idaho, May 31, 1888. He removed with his parents to Ashippun, Dodge County, Wis., in 1847, and received his education in the University of Wisconsin. In 1863 he was admitted to the bar of Dodge County, in 1867 to the bar of the Wisconsin Supreme Court, and in 1870 to that of the United States Circuit Court for Wisconsin. He was elected clerk of the circuit court of Dodge County for the term beginning Jan. 1, 1863, was re-elected in 1865, was elected member of the Assembly for the session of 1867, was Democratic candidate for county judge in 1869, and was elected district attorney for the county in 1874, 1876, 1878, and 1880. For several years he was president of the village of Haricon, and in 1877 was a candidate for Secretary of State of Wisconsin. In the early part of 1885 he was appointed Chief-Justice of Idaho Territory, and immediately assumed the duties of the office, which he continued to discharge till his death.

Hamard, Rowland Gibson, manufacturer and author, born in South Kingston, R. I., Oct. 9, 1801; died in Peacedale, R. I., June 24, 1888. He was engaged in the woolen business all his life. He was known throughout the United States for his philanthropy, literary work, and political services. In 1841 he was called to New Orleans, and during that and the following year he effected the release from the chain-gang of many free Northern negroes employed in the commercial marine service. His efforts were made with great pertinacity and in the face of frequent threats of personal violence. He served two terms in the Rhode Island Assembly, 1851-'52 and 1854-'55, and one term in the State Senate, 1866-'67. His publications comprise: "Language; its Connection with the Constitution and Prospects of Man" (1836); "Lectures on the Adaptation of the Universe to the Cultivation of the Mind" (1840); "Lecture on the Causes of Decline of Political and National Morality" (1841); "Essay on the Philosophical Character of Channing" (1844); "Essay on the Duty of Individuals to support Science and Literature" (1855); "Essays on the Resources of the United States" (1864); "Freedom of the Mind in Willing" (1864); "Essays

on *Finance and Hours of Labor*" (1865); and letters on "Cautation and Freedom in Willing," addressed to John Stuart Mill (1869). He received the degree of LL. D. in 1869 from Brown University.

Hosmer, *Lease Thomas*, clergyman, born in New York city, Dec. 18, 1819, died there, Dec. 28, 1888. He received a meager education, was compelled to support himself from an early age, and became connected with his two brothers in the flour business. While so engaged, he was led to the study of metaphysics and theology by reading Kant, and, withdrawing from business life, joined the Brook Farm Commu-

nity. He soon became dissatisfied with that life, and on attaining his majority returned to mercantile pursuits with his brothers. Up to his twenty-second year he had been a Protestant in religious belief and association. At that time he was drawn to a study of the Roman Catholic faith, and a year later became a convert. He again relinquished his business interests, went to Germany, studied for the priest-

hood, was ordained in 1840, passed two years as a novice at the retreat of the Redemptorist Fathers at St. Troul, Belgium, performed missionary service in England, and returned to the United States in 1841. After continuing his missionary labors here several years, he came to the belief that the United States and Canada offered a good field for a new society which should be wholly American and composed of converts from Protestantism. In 1847 he went to Rome, laid his plans before the Pope, was released from the Redemptorist Order, and received authority to organize his projected society, to which the name of "The Congregation of St. Paul the Apostle" was given. The founder was appointed Superior of the Paulist Fathers, returned to New York city, collected funds, and erected a church, home, and cluster of schools. In 1863 he founded "The Catholic World," which has since been conducted by members of the congregation, in 1849 was a member of the Roman Catholic Congress at Malines; in 1870-'71 attended the Vatican Council as theologian to Archbishop Spalding; in 1871-'73 traveled through Europe, Egypt, and the Holy Land, and in 1878 returned to New York city, and was elected superior of the congregation for a term of nine years. Besides his editorial writings and an article in the "Revue Générale," of Brussels (1869), setting forth the relations that should and did exist between the Roman Catholic Church and democracy in the United States, he published "Questions of the Soul" (New York, 1866); "Aspirations of Nature" (1857); "Catholicity in the United States" (1879); and "Catholic and Protestantism agreeing on the School Question" (1881).

Holprín, *Michael*, born in Piotrkow, Poland, in 1823, died in Summit, N. J., May 10, 1884. He was a son of Phineas Mendel Holprín, an eminent scholar and native of Russian Poland, removed to Hungary early in life, received a classical education, and became an active member of the revolutionary party in 1848. During the brief provisional governorship of Louis Kossuth, he was on the literary staff in the interior department. He settled in the United States in 1854, and soon attracted attention by his literary abilities, his scholarship, and his linguistic accomplishments. He was a contributor to the "Nation," of New York, from its fourth number, and to other literary periodicals, and did a large amount of work on the "American Cyclopædia" from its second

volume. It is believed that his death was hastened by his untiring labor in behalf of the Russian Jews, whose attempts at colonization in the United States he very materially promoted. He published "The Historical Poetry of the Ancient Hebrews" (2 vols., New York, 1878-'80).

Herrushoff, *Charles Frederick*, ship-builder, born in Providence, R. I., July 26, 1806; died in Bristol, R. I., Sept. 8, 1888. He was graduated at Brown University in 1828, and in 1838 settled in Bristol, on the Point Pleasant farm. Though he was extremely engaged in farming, his real energies were applied to naval construction. In 1856 he removed to Bristol, where shortly afterward his son, John Herrushoff, began boat-building. Within a short time John lost his eyesight, and his father took a more active interest in the business, and as the other sons grew up, all with the father's skill in naval architecture, the Herrushoff Manufacturing Company was established. For many years the business was confined to building sailing-vessels, and a number of remarkably fast boats, like the "Qui Vive" and the "Bodie," were constructed. But about 1878 the company began building steam-vessels, and afterward steel yachts, torpedo-boats, and war-vessels. John Herrushoff, now (1888) known as the "blind boat-builder," became president of the company, designed the colli-boller and the first steam-launch "Stiletto," which was bought by the Navy Department, and by the aid of his father's eyes planned outlines and details with astonishing accuracy.

Hink, *Laurens Fursten*, educator, born in Bethel, Conn., Dec. 29, 1798; died in Amherst, Mass., May 4, 1888. He was graduated at Union College in 1820, licensed to preach in 1822, and from that time till 1886 held pastorates in Newtown, Kent, and Litchfield, Conn. In 1866 he was elected Professor of Theology in Western Reserve College, Ohio, and served till 1864, when he was chosen to the similar chair in Auburn Theological Seminary. In 1869 he was elected Professor of Mental and Moral Science, and vice-president of Union College. He assisted the venerable Dr. Nott in the government of the college till 1860, had sole charge till March 1, 1864, and was then elected president, but only served two years, resigning when seventy years of age, and retiring to Amherst, Mass. Of his numerous works, which have been adopted as text-books in many of the higher institutions of learning in the United States, and translated into several foreign languages, the best known are: "Rational Psychology, or the Subjective Idea and Objective Laws of all Intelligence" (1848); "System of Moral Science" (1858); "Rational Cosmology" (1858); "Humanity Immortal" (1879); and "Rational Logic" (1876).

Hinkley, *Lease*, railroad president, born in Hingham, Mass., Oct. 28, 1814, died in Philadelphia, Pa., March 28, 1888. He was graduated at Harvard in 1834, and in 1848 was appointed superintendent of transportation of the Boston and Providence Railroad, holding the office two years. From January, 1848, till April 1, 1848, he was employed on various railroads in New England, and on the latter date was elected president of the Philadelphia, Wilmington and Baltimore Company. During the first eleven years of the existence of the Eastern Railroad Association he was its president, and for many years occupied the same office in the Junction Railroad Company, owned jointly by the Philadelphia, Wilmington and Baltimore, the Pennsylvania, and the Reading Railroad Companies.

Hitchcock, *Robert B.*, naval officer, born in Cheshire, Conn., Sept. 25, 1808, died in New York city, March 24, 1868. He was appointed midshipman in the United States Navy on Jan. 1, 1826, on March 2, 1835, was commissioned lieutenant, and, after serving in the Pacific squadrons, was ordered on ordnance duty in 1846, and given command of the storeship "Relief" in 1853. On Sept. 14, 1855, he was commissioned commander. He was on ordnance duty 1856-'60; commanded the steam-frigate "Merrimac" 1858-'60; became captain

and inspector of ordnance in 1861, and commodore and commander of the steam-sloop "Susquehanna" on July 16, 1862, and was senior officer of the fleet that blockaded Mobile. In 1866 he was appointed commandant of the navy-yard at Norfolk, Va., on Sept. 25 of that year was retired, and in 1870-'72 was on duty in the Ordnance Department at Washington.

Hoffman, John Thompson, lawyer, born in Sing Sing, N. Y., Jan. 10, 1828; died in Wiesbaden, Germany, March 24, 1888. He was graduated at Union College in 1846, removed to New York city, and was admitted to the bar in January, 1849. Soon afterward he became a member of the law firm of Woodruff, Leonard and Hoffman. He was chosen a member of the Democratic State Central Committee when only twenty years old, and gave an active "stump" support to Lewis Cass in the presidential canvass. By 1854 he had firmly established himself in practice, and attained a reputation as an orator. He then joined Tammany Hall, took sides against Fernando Wood in the contest for the control of that organization, applied to President Buchanan for the office of United States District Attorney of New York, and was refused on the ground that he was too young. In 1860, after formally declining to become the candidate of Tammany Hall for the office of recorder of New York, he was put in nomination and elected, receiving twice the number of votes for Abraham D. Russell, the Mozart Hall candidate, and four thousand more than Thomas B. Van Buren, Republican. During his first term three events gave him a high reputation: his charge to the jury in the Jafford murder case, his charge to the grand jury on the occasion of the riots of July, 1863, and his imposition of sentences on the convicted rioters. His fearlessness in the two last acts led to his unanimous re-election, the Republican judiciary convention warmly approving both his official conduct and his renomination. He was elected Mayor in 1865 and 1867, and defeated for Governor by Reuben E. Fenton in 1866. He was elected Governor over John A. Griswold in 1868 (though the opposing party claimed that the State was carried for him by frauds in New York city), and re-elected over Gen. Stewart L. Woodford in 1870. In 1871 the exposures of the Tweed ring were made, and the charges against the political organization that had been the means of his rapid official advancement, reacted against him personally. On Feb. 7, 1876, he delivered a lecture on "Liberty and Order—the Limits of Government," under the auspices of the New York Association for the Advancement of Science and Art, before a large audience in New York city.

Holder, Joseph Bassett, naturalist, born in Lynn, Mass., Oct. 26, 1824; died in New York city, Feb. 28, 1888. He studied at the Friends' School in Providence, R. I., and at the Harvard Medical College. After practicing medicine for several years in Lynn, he was sent to the Dry Tortugas in the capacity of physician and naturalist, and there began his study of invertebrate zoology. From 1860 till 1867 he was surgeon in charge of the United States military prison in Tortugas, Fla., and then was assistant post-surgeon at Fort Monroe, Va. He came to New York city in 1870, and was appointed curator of invertebrate zoology, ichthyology, and herpetology in the American Museum of Natural History, which post he held until his death. Dr. Holder was a fellow of the New York Academy of Sciences, a member of the American Ornithological Union, and of various other scientific societies. Besides papers on his specialty, contributed to technical journals, he wrote for the popular magazines, and published "History of the North American Fauna" (New York, 1882); "History of the Atlantic Right Whales" (1883); and "The Living World" (1884).

Hunn, David Lathrop, clergyman, born in Colerain, Mass., Nov. 5, 1789; died in Buffalo, N. Y., Jan. 29, 1888. He entered Yale University in 1809, and after being graduated took the theological course at Andover, and was ordained a Congregational clergyman.

He held pastorates at Greenfield, Mass., Sandwich, on Cape Cod, Vernon, Conn., and East Windsor and North Hadley, Mass., and on removing from the latter place to Rochester, N. Y., left the Congregational Church and was received into the Presbyterian. After a long residence in Rochester, where he was an editor of the "Genesee Evangelist," he settled in Buffalo, and preached at irregular intervals until his ninetieth year. He was a member of the local Yale Association, and spoke at its meetings till within a short time of his death. He was the oldest graduate of Yale, and the oldest clergyman in the United States.

Isach, Lawrence J., astronomer, born in Allentown, Pa., Jan. 17, 1816; died in Newmanstown, Lebanon County, Pa., Oct. 9, 1888. His father was a blacksmith, who brought him up to the same trade, and throughout his life he stuck to his forge, making horse-shoes, iron barrel-hoops, wheel-tires, smoothing-irons, shovels, and a variety of kitchen utensils. He received his first instructions in mathematics and astronomy from a French gentleman, and when nineteen years old he accompanied the family to Sheridan, Lebanon County, Pa., where his father died three years afterward. He carried on the blacksmithing business there till 1849, when he rented a forge near Reading. While working there he became acquainted with Charles F. Engleman, the astronomer, and with him began studying astronomy systematically. In 1852 he returned to Sheridan, and in 1860, on the death of Mr. Engleman, found himself heir to all his friend's books, charts, and instruments. About the same time he was called upon to make several series of astronomical calculations for almanacs that had been promised by his benefactor. He filled this first order in 1863, and from that time till his death the "blacksmith-astronomer" made annual calculations for almanacs published in the United States, Canada, Cuba, and South America. In 1875 he translated his calculations into four different languages. He was a member of astronomical and scientific societies, and after working at the forge all day was accustomed to spend a part of the night in studying the heavens.

Irving, Roland Duar, geologist, born in New York city, April 27, 1847; died in Madison, Wis., May 30, 1888. He was a son of the Rev. Pierre P. Irving, and a grand-nephew of Washington Irving. In 1869 he was graduated at the Columbia College School of Mines, and ten years later he received the degree of Ph. D. from that institution. Soon after graduating he became assistant to John S. Newberry, on the Ohio State Geological Survey, and in 1870 was elected Professor of Geology, Mining, and Metallurgy in the University of Wisconsin, which chair in 1879 became that of Geology and Mineralogy and was filled by him until his death. Prof. Irving became an assistant geologist on the survey of Wisconsin—authorized by the State in 1873—and continued so until 1879. During 1880-'82 he was one of the experts engaged on the work of the United States census, and in 1882 was appointed by the United States Geological Survey geologist in charge of the Lake Superior Division. He made a specialty of the micro-petrography of the fragmental rocks and crystalline schists, and his best work was accomplished in the direction of the pre-Cambrian stratigraphy and the genesis of some of the so-called crystalline rocks, particularly of the quartzites and ferruginous rocks of the Lake Superior region. He was a Fellow of the American Association for the Advancement of Science, a member of the American Institute of Mining Engineers, and of other scientific bodies, whose proceedings he enriched with contributions on his specialties. His publications under the auspices of the Wisconsin Geological Survey include "Geology of Western Wisconsin" (Madison, 1877); "Geology of the Lake Superior Region" (1880); "Crystalline Rocks of the Wisconsin Valley" (1882); and "Mineralogy and Lithology of Wisconsin" (1883). He contributed to the reports of the United States Geological Survey "The Copper-Bearing Rocks of Lake Superior."

(Washington, 1888); "On Secondary Enlargements of Mineral Fragments in Certain Rocks" (1884); with Charles R. Vanhise "The Archaean Formation of the Northwestern States" (1885); with Thomas C. Chamberlain "The Junction between the Eastern Sandstone and the Keweenaw Series, Keweenaw Point, Lake Superior" (1885); and "The Classification of the Early Cambrian and Pre-Cambrian Formations" (1886). He gained "the reputation of being one of the world's best geologists."

Jarvis, James Jackson, author, born in Boston, Mass., Aug. 20, 1818; died in Tarasp, Switzerland, June 28, 1888. He prepared for college, but a weakness of the eyes caused a change in his plans, and in 1837 he set out on a journey that embraced California, Mexico, Central America, and South America, and concluded with his settling in Honolulu. He established the first newspaper published in the Sandwich Islands, the "Polynesian," in 1840; became director of the Government press in 1844; was appointed special commissioner of Hawaii to negotiate commercial treaties with the United States, Great Britain, and France in 1849; and after concluding his official duties spent several years in Paris, Florence, and Rome, applying himself to literary work and the collection of art-treasures. He made four notable collections—a gallery of masters illustrating the history and showing the development of Italian art, now belonging to Yale University; a joint collection of old paintings and sculptures, now in Cleveland, Ohio; a collection illustrating the ancient and modern glass-work of Venice, now in the Metropolitan Museum of Art, New York; and unique specimens of laces, embroideries, costumes, and various fabrics, dating from the twelfth century, which he sold in New York in 1886. He was United States vice-consul and acting consul in Florence in 1879-'82, and Italian Commissioner to the Boston Exhibition in 1882-'83; was an honorary member of the Academy of Fine Arts in Florence; and had received the decoration of a Chevalier of the Crown of Italy for his services in the interest of Italian art, and that of a Knight-Commander of the Royal Order of Kamehameha I, for diplomatic services to Hawaii. Mr. Jarvis corresponded regularly with journals and periodicals for many years, and published a "History of the Hawaiian or Sandwich Islands" (Boston and London, 1843); "Scenes and Scenery in the Sandwich Islands" (1844); "Parisian Sights and French Principles, seen through American Spectacles" (New York, 1853); "Art Hints, Architecture, Sculpture, and Painting" (1855); "Kiana, a Tradition of Hawaii" (Boston, 1856); "Italian Sights and Papal Principles, seen through American Spectacles" (New York, 1855); "The Confessions of an Inquirer" (3 parts, Boston, 1857-'69); "Art Studies; The Old Masters of Italy" (New York, 1861); "The Art Idea, Sculpture, Painting, and Architecture in America" (Boston, 1866); "Art Thoughts; The Experiences and Observations of an American Amateur in Europe" (1869); "Glimpses at the Art of Japan" (New York, 1876); and "Italian Rambles" (1884).

Jenks, Francis H., founder of the American safe-deposit business, born in Boston, Mass., July 8, 1812; died in Worcester, Mass., Dec. 19, 1888. He was a son of the Rev. William Jenks, a distinguished Orientalist, author of "The Comprehensive Commentary." He was educated in the Boston Latin School, was employed in a mercantile house in Boston, removed to Baltimore in 1832, and was engaged in business there with George H. Weld under the name of Jenks & Weld until 1856, and then settled in New York city. Soon afterward he originated and entered upon the safe-deposit business. In 1861 he obtained a charter from the New York Legislature for the Safe-Deposit Company of New York, which he organized in 1865. He was elected president of the company, and held the office till 1885.

Jennings, Russell, philanthropist, born in Weston (now Easton), Fairfield County, Conn., Feb. 22,

1800; died in Deep River, Conn., March 8, 1888. He was educated at what is now Madison University, was ordained a minister of the Baptist Church while a student, and completed his studies in Newton Theological Institution. For some years he was a missionary of the Connecticut Baptist Convention, and afterward held pastorates in Saybrook, Meriden, Waterbury, Norwich, Deep River, and Haddam. When compelled by his health to decline a further settled charge, he acted as supply to destitute churches, and continued to officiate to within a year and a half of his death. In 1855 he invented the extension-lip bit, and then spent ten years in inventing and making the machinery for its economical manufacture, after which he derived a large income from its sale. Before he had acquired any considerable wealth, he made it a rule to give a portion of his income annually to the support of struggling Baptist churches, and at the beginning of his more prosperous days he established a domestic mission of his own, assuming the care of several churches that were unable to support a pastor. By his aid each of these was soon able to maintain a settled pastor. At the same time he was one of the largest contributors to the funds of the Connecticut Baptist Convention for domestic missions and of the Baptist home and foreign missions. He continued his private domestic mission nearly twenty years, and then gave to each of the churches a fund producing a handsome annual interest. In 1870 he bought ground in Chester, Conn., built and furnished a church for the congregation at a cost of over \$16,000 and a parsonage valued at \$2,500, and presented the congregation a fund of \$5,000. In South Windsor he bought property at a cost of over \$7,000, built a church at a little more cost than the Chester edifice, and presented the whole to the congregation. He made further cash donations of \$2,000 to the Moodus, \$4,000 and a parsonage to the Haddam, \$5,000 to the Easton, \$5,000 to the Winthrop, \$10,000 to the Deep River, \$3,000 to the Rowayton, \$3,000 to the New Canaan, \$4,000 to the Stepney, \$3,000 to the White Hills, \$3,000 to the Shelton, \$3,000 to the Clinton, \$3,000 to the Lyme, \$3,000 to the Cromwell, \$3,000 to the Plainville, and \$3,000 to the Rainbow Baptist churches. In addition he gave large sums to other churches to aid them in erecting new edifices and parsonages and paying off debts. His private charities were said to be on a correspondingly liberal scale.

Jerome, Lawrence Roscoe, broker, born in Pompey, Onondaga County, N. Y., Feb. 20, 1820; died in Sharon, Conn., Aug. 12, 1888. He was a son of Thomas Jerome and a brother of Leonard and Addison Jerome. He worked some years on his father's farm, was then placed with a Presbyterian clergyman in Palmyra, N. Y., to be prepared for a theological education, studied Greek and Latin, decided that he was better fitted to be a physician, studied medicine in his native village, and after a few months returned to farm-work. In 1842 he removed to New York city, spent several years in mercantile business, assisted his brother Leonard in establishing the "Rochester American," which the brothers conducted for two years as a Whig journal, and in 1854 returned to New York city and with Leonard established a brokerage business in Wall Street. He continued this till about 1879. In 1870 he was elected a member of the Board of Aldermen, and in 1878 was defeated as Tammany candidate for Congress by Gen. Anson G. McCook. He was one of the best known and most popular club-men in New York city and London, a liberal promoter of gentlemanly sports, a capital story-teller, and man of ready wit.

Johannet, James, educator, born in Bethel, Vt., in 1823; died in Tarpon Springs, Fla., June 18, 1888. He received a common-school education, and when sixteen years old began his special educational work that was continued with few interruptions for almost half a century. He taught for many years, compiled a large number of text-books, began organizing teach-

ers' institutes through New York State in 1850, and became State-Institute instructor, to which office he gave all his time and energy till 1885, when failing health compelled him to resign. Besides the textbooks he wrote "Principles and Practice of Teaching," which had a large circulation in the United States, and in a translation is now the principal guide of the native teachers of Japan.

Judd, David Wright, publisher, born in Lewiston, Niagara County, N. Y., Sept. 1, 1838; died in New York city, Feb. 6, 1888. He was a son of Ozias Judd, a well-known advocate of anti-slavery measures, who allowed his enthusiasm such wide scope that he emigrated to Kansas, though well advanced in years, to take part in the agitation that disturbed that region in 1855-'60. David was graduated at Williams College in 1860. At the beginning of the civil war he accompanied the Twenty-second Regiment of New York Volunteers to the field as press correspondent, and remained with the army till 1864, when he joined the editorial staff of the New York "Commercial Advertiser." During his service in the field he was taken prisoner at Harper's Ferry and at Chancellorsville, but escaped both times, and was commissioned captain in the First New York Cavalry. He remained with the "Commercial Advertiser" about seven years, then became editor and part proprietor of "Hearth and Home," and in 1888 was elected president of the Orange Judd Company and took charge of the editorial and business departments of the "American Agriculturist." In 1871 he was elected a member of the State Legislature from Richmond County (Statens Island), served on the Committees on Cities (chairman), Commerce and Navigation, Libraries and Apportionment, and introduced the "Judd Jury Bill" and the bill for the establishment of free libraries. He was appointed a quarantine commissioner in 1878, and was reappointed three times. He was a director of the National Rifle Association, to which he gave a costly prize for annual competition, and an active member of the Union League and New York Republican Clubs.

Kelly, William, inventor, born in Pittsburg, Pa., Aug. 22, 1811; died in Louisville, Ky., Feb. 11, 1888. When quite young he built a tin steam engine and boiler. When he was eighteen he made a propelling water-wheel and, four years later, a rotary steam-engine. He engaged in the commission and transportation business in Pittsburg, and owned interests in steamboats. In 1845 his warehouse was burned, and he removed to Kentucky. He purchased the Eddyville Iron Works on Cumberland river, in Lyon County, and with his brother, John F. Kelly, began the manufacture of iron. The plant included the Suwanee furnace and the Union forge. At the former about half of the metal produced was converted into large iron sugar-kettles, made in cast-iron elastic molds of his own invention, which he sold to the sugar-planters of Louisiana and Cuba, while the remainder of the metal was worked into charcoal blooms by the knobbling process. The latter was held in high reputation, and were almost entirely used for making boiler-plates. He began experimenting in 1847 in the direction of decarbonizing the iron by the introduction of a current of air. Concerning this, he wrote: "I conceived the idea that, after the metal was melted, the use of fuel would be unnecessary—that the heat generated by the union of the oxygen of the air with the carbon of the metal would be sufficient to accomplish the refining and decarbonizing of the iron." After devising several plans for testing this idea, he began experimenting with a small blast-furnace having a hearth and bosh similar to the ordinary type. Into this he introduced two tuyeres, one above the other, the upper one for the purpose of melting the stock, while the lower one, fixed near the bottom of the hearth, was intended to conduct the air into the hearth. He continued these experiments until 1851, when, on the completion of a new blast-furnace, he tried various improvements

with considerable success. The melting and decarbonizing departments were separated, so that the crude metal as it came from the blast-furnace was run into a converter, which was provided with three tuyeres. A powerful blast of air was then turned on through the tuyeres and the fluid metal run into the converter, which immediately began to boil violently. The blast was allowed to act on the metal for fifteen or twenty minutes, until the carbon of the metal was oxidized, when the converter was tapped and the metal run out into molds. Zerah Colburn, in his history of the Bessemer process of refining iron, says: "The first experiments in the conversion of melted cast-iron into malleable steel, by blowing air in jets through the mass in fusion, appear to have been made by William Kelly, an iron-master at the Suwanee furnaces, Lyon County, Kentucky, United States." This method, long known as "Kelly's air-boiling process," was used for the manufacture of boiler-plates before Sir Henry Bessemer was known. When Bessemer brought out his process in England, application was at once made by Mr. Kelly for a patent in the United States, and after considerable delay, during which time the English applicant appeared in the Patent-Office, the commissioner decided that Mr. Kelly was entitled to the patent, which he at once issued to him. In 1868 a syndicate of iron-masters organized the Kelly Process Company, for the purpose of controlling the Kelly patents, and erected experimental works at Wyandotte, Mich., where steel was first made under these patents in the United States months before the similar production under Bessemer's patents at Troy by Alexander L. Holley. The interests of the several patentees were consolidated in 1866 under the title of the Pneumatic Steel Association. In 1871 application was made for the renewal of the Bessemer, Mushet, and Kelly patents, and the claims of the two former were rejected, while a renewal of seven years was granted to Mr. Kelly.

Kelso, James J., police officer, born in New York city, Oct. 31, 1838; died there, Nov. 28, 1888. He was graduated at the College of the City of New York, then held a mercantile clerkship a short time, and in 1858 was appointed clerk in the office of the chief clerk of the New York Police Department. In January, 1861, he was made a patrolman and detailed to the detective squad, and during the following eight years made a wide-spread reputation by his detective skill and personal bravery. In 1869 he was promoted sergeant on March 29, captain on October 14, and chief of detectives on December 28. On July 28, 1870, the mysterious and still unexplained murder of Benjamin Nathan, a wealthy and highly esteemed Jewish citizen, occurred. The skill of the detectives was apparently baffled, and John Jordan, Superintendent of Police, died three months after the murder from worry over the inability of the police authorities to fasten the crime upon the perpetrator. On October 17 following Captain Kelso was appointed superintendent to fill the vacancy. On the reorganization of the police department in 1873, he was removed from command by the new board of commissioners. He then engaged in the coal business till 1885, when he was appointed collector of city revenue and superintendent of markets.

Kennedy, Hugh, physician, born in Belfast, Ireland, in 1810; died in Louisville, Ky., May 19, 1888. He engaged in the drug business in New Orleans in 1838, and was an active worker during the severe epidemic of cholera mixed with cases of yellow fever of that year. He conducted the drug business for twenty years, and in the mean time became proprietor of the "New Delta," a Democratic organ that opposed the Slidell wing of the party. During 1860 and the early part of 1861 the paper was strongly anti-secession. In 1864 he was appointed by the military and civil authority Mayor of New Orleans, but was afterward removed by Gen. Banks and replaced by Col. Samuel Quincy, of Boston. An appeal to President Johnson led to the removal of Col. Quincy and the reinstatement

ment of Dr. Kennedy. In 1868 he removed to Louisville, Ky., and became proprietor of the celebrated canal-coal mine in Breckenridge County.

King, John H., soldier, born in Michigan, about 1818; died in Washington, D. C., April 7, 1888. He was appointed a second lieutenant in the United States Army, Dec. 2, 1837, promoted first lieutenant March 2, 1839, and captain Oct. 31, 1846; was on duty on the Western frontier till the Mexican War, and served with distinction at Vera Cruz in 1847. On May 14, 1861, he was promoted major and assigned to the Fifteenth United States Infantry; Nov. 29, 1862, was commissioned brigadier-general of volunteers; May 31, 1865, was brevetted major-general; July 30, 1865, was commissioned colonel in the permanent establishment; and Feb. 6, 1882, was retired. During the civil war he was engaged in the battles of Shiloh, Murfreesborough, Chickamauga, Resaca, New Hope Church, Kennesaw Mountain, Peach Tree and Utoy Creeks. He received brevets in the regular army of colonel for services at Chickamauga, brigadier-general for Ruff's station, and major-general for gallantry in the field through the war. He had lived quietly in Washington since his retirement.

King, John Pendleton, lawyer, born in Glasgow, Barren County, Ky., April 3, 1799; died in Augusta, Ga., March 19, 1888. In 1815 his parents settled in Augusta, where he resided until his death. He was graduated at Richmond Academy, Augusta, and was admitted to the bar in 1819. On Nov. 21, 1838, he was elected United States Senator to fill the vacancy caused by the resignation of George M. Troup, and took his seat in the following month. In November, 1834, he was re-elected for a full term, but only served two years, his opposition to certain measures of the Administration leading the press of his State to criticise him severely. He served one year as judge of the Court of Common Pleas, was president of the Georgia Railroad and Banking Company from 1841 till 1878, and also, for some years, president of the Atlanta and West Point Railroad, which he planned and completed. He was a member of the State Convention of 1865, which repealed the ordinance of secession, repudiated the Confederate war debt, and abolished slavery.

Kissam, Agnes Allen, centenarian, born in New York city, March 4, 1788; died in Brooklyn, N. Y., March 28, 1888. She was born in Greenwich Street, and when a young lady passed the summers in her father's country-house just above the present Canal Street, and for some years had a city residence on Bowling Green. On her hundredth birthday she received several hundred relatives and family friends for six hours, without being fatigued, and showed that she retained her faculties. She had been a widow fifty years.

Krekel, Arnold, lawyer, born in Germany, March 12, 1816; died in Kansas City, Mo., July 15, 1888. He came to the United States in 1832, attended St. Charles College, Missouri, and was admitted to the bar in 1841. In 1852 he was elected to the State Legislature, and in 1865 was president of the State Constitutional Convention. In the latter year he was appointed United States District Judge for the Western District of Missouri, and he held the office till his death.

Lamy, John Baptist, clergyman, born in Auvergne, France, in 1814; died in Santa Fé, New Mexico, Feb. 13, 1888. He was educated and ordained a priest of the Roman Catholic Church in France, came to the United States as a missionary, and filled his first pastorate in Danville, Ohio, in 1839. He labored in that immediate field till 1848, when he was appointed pastor of a church in Covington, Ky., then in the Cincinnati diocese. Soon after the acquisition by the United States of the province of New Mexico, the Pope erected the territory into a vicariate-apostolic, and appointed Father Lamy to that change. He was consecrated Bishop of Agathonica and vicar-apostolic on Nov. 24, 1850. The see of Santa Fé was erected in July, 1863, and Dr. Lamy was elected its first bishop; and in 1875 the see was made archiepiscopal, with Bishop Lamy as archbishop. In 1885 he resigned on account

of feeble health. When he went to New Mexico he was the first Roman Catholic bishop that had visited it in eighty years, and when he resigned the diocese contained 84 parish churches, 203 chapels, 56 priests, 110,000 Catholics of Spanish origin, 3,000 English-speaking Catholics, 12,000 Pueblo Indians under Catholic instruction, and colleges, academies, hospitals, and asylums.

Lane, Harvey Bradburn, bibliophile, born in Plymouth, Wyoming valley, Pa., Jan. 10, 1813; died in Saratoga Springs, N. Y., Aug. 28, 1883. He was graduated at Wesleyan University in 1835, spent a year in European travel, taught for a year in Wilbraham Academy, and in 1838 removed to Georgia. He was a civil engineer in the survey for the first railroad constructed across that State, and, after eighteen months' service, was Professor of Mathematics successively in Oxford College, Georgia; Dickinson College, Carlisle, Pa.; and Wesleyan University, Middletown, Conn. In the latter institution he was Professor of Greek from 1844 till 1860, when he removed to New York city to become assistant editor of the "American Agriculturist." About 1868 he established himself as a collector of rare and valuable books for private and public libraries, and continued in this business until his death.

Lane, James O., civil engineer, born in New York city, July 23, 1823; died there, Dec. 13, 1888. He was graduated at Poultney Academy, Vt., in 1841, engaged in business as an architect and civil engineer till 1851, aided in the construction of the Illinois Central Railroad, entered the United States Coast Survey in 1852, and was employed in exploring in New Granada for an interoceanic canal company, and in mineralogical surveying in Santo Domingo, Porto Rico, and Cuba till the outbreak of the civil war. Returning to New York city, he was commissioned major of the One Hundred and Second New York Volunteers, and assigned to the command of McCall's camp at Dranesville. In April and May, 1862, he was in command of the defenses of Harper's Ferry, Va., and in July was promoted lieutenant-colonel. He commanded his regiment at Cedar Mountain, the second Bull Run, Chantilly, and Antietam, in 1862. In December, 1862, he was promoted colonel. At the battle of Chancellorsville his regiment captured sixty-two Confederate officers and men and a flag. At Gettysburg he had command of a brigade, and was wounded. On being transferred to the West, he led the advance on Lookout mountain, was conspicuous at Mission Ridge and in the Georgia campaign, and was brevetted brigadier and major general of volunteers. He was mustered out July 12, 1864. Subsequently he was engaged in mineralogical surveys in California, Arizona, and Nevada; in archaeological surveys in Palestine and the Jordan region; in railroad construction on Long Island, and since 1884 in surveying for the new parks beyond Harlem river, New York city.

Lassalle, Charles, journalist, born in Liege, Belgium, in Oct., 1817; died in Green Cove, Fla., Jan. 28, 1888. He accompanied Sir John Ross on his arctic expedition in the "Victory" in 1829-'33, and on his return settled first in Canada and then in New York city. After serving an apprenticeship as a compositor, he established a printing-office of his own, in which the French newspaper, the "Courrier des Etats-Unis," conducted by Frederick Gaillardet, was printed. In 1851, on the retirement of the proprietor, Mr. Lassalle became owner of the paper and conducted its editorial and business departments till 1883, when he retired from active business. He was a keen journalist, a man of quick perceptions, and sterling integrity. His paper was a steadfast promoter of the interests of his adopted country and city. He was a liberal patron of art.

Lecompte, Samuel Dexter, lawyer, born in Maryland in 1814; died in Leavenworth, Kan., April 24, 1888. He was admitted to the bar in his native State, and appointed chief-justice of the Territory of Kansas in 1864, and held the office during all the excitement at-

tending the legislation for the admission of the Territory into the Union as a State. He presided over the first constitutional convention, in October, 1856, and the first capital of the State was named in his honor. During his term of office, which expired on the admission of the Territory as a State, J. H. Gihon, in "Governor Geary's Administration in Kansas," says: "Judge Lecompte immediately affiliated with the most ultra of the pro-slavery men; declared himself warmly attached to their peculiar institutions; received their unqualified approbation; applauded their acts; addressed their meetings; and went quite as far as the most exacting could possibly expect or desire." Judge Lecompte was bitterly assailed for a charge he delivered to the grand jury of Douglas County, in May, 1856, in which he gave instructions concerning the extraordinary conditions and responsibilities under which they met, and an exposition of the nature of treason, holding that treason could be committed against the Federal Government by levying war upon the Territorial Government. This decision, Judge Lecompte claimed, led to a misconstruction of his motives and words that obtained circulation as late as December, 1864, when he wrote a long letter recalling the circumstances of 1856, reiterating his repudiation of the doctrine of constructive treason.

Le Roy, William Edgar, naval officer, born in New York city, March 24, 1818; died there, Dec. 10, 1888. He was appointed a midshipman in the United States Navy in 1832, was commissioned lieutenant July 13, 1843, took part in the engagement with Mexican soldiers at Rio Arriba in 1847, and was promoted commander July 1, 1861. In 1862, while in command of the "Keystone State," he took part in the capture of Fernandina, Fla., and in 1863 in the bombardment in Charleston harbor. During this action, after the boilers of his vessel had been shot through by Confederate cannon-balls, and twenty-four of his men had been killed, he hauled down his flag to surrender, but a moment later manned his only remaining gun, ran up his flag, and kept on firing till other vessels in the fleet came to his relief. In 1864 he took part in the battle of Mobile Bay, in command of the steam-sloop "Owsipee," and received the surrender of the Confederate ram "Tennessee." On July 25, 1866, he was promoted captain, July 3, 1870, commodore, and April 5, 1874, rear-admiral. On March 24, 1880, he was placed on the retired list.

Lewis, Henry Carvil, geologist, born in Philadelphia, Pa., Nov. 16, 1853; died in Manchester, England, July 21, 1888. He was graduated at the University of Pennsylvania in 1873, and after several years spent in special studies, he joined, in 1879, the Pennsylvania Geological Survey as a volunteer. At first he investigated the surface geology of Southern Pennsylvania, after which he studied the glacial phenomena of the northern part of the State, and traced the great terminal moraine from New Jersey to the Ohio frontier. His report on this subject was issued in 1884 by the survey as "Z" in its series of volumes. He was elected Professor of Mineralogy in the Academy of Natural Sciences in 1880, and to the chair of Geology in Haverford College in 1882. These places he retained until his death, although after 1885 he resided in Europe. During 1885-'86 he investigated glacial action in Great Britain, and completed a map of the separate ancient glaciers and ice-sheets of England, Wales, and Ireland. He was also engaged in studying microscopic petrology at the University of Heidelberg. Prof. Lewis furnished numerous papers on the geology and mineralogy of Pennsylvania to the "Proceedings of the Philadelphia Academy of Natural Sciences." He was also a zealous mineralogist, and for a time was editor of the mineralogical department of the "American Naturalist." He published "Notes on the Zodiacal Light" (1880), and "Genesis of the Diamond" (1886).

Lincoln, Thomas Blodgett, farmer, born in Philadelphia, Pa., April 27, 1813; died near Elkton, Md., June 28, 1888. About the time of the annexation of

Texas, he went there as agent of the New York syndicate to purchase scrip and head-right land. While living in Texas he became acquainted with its leading politicians and with members of the order of Knights of the Golden Circle, and for some time after the beginning of the civil war was an agent of that organization in the Northwestern States. In August, 1861, while so engaged, he was arrested in Cincinnati, and subsequently tried for treason in the United States Circuit Court there. United States Senator Jesse D. Bright had written a letter introducing him to Jefferson Davis, and the production of this letter in court was not only the most damaging evidence against him, but it led to Mr. Bright's expulsion from the Senate. Mr. Lincoln's counsel succeeded in having the indictment quashed, and he was allowed to return to the South. He was the only person tried for treason during the civil war. It is said that, at the instigation of Alexander H. Stephens, Vice-President of the Confederacy, he came North early in 1865, and furnished the authorities in Washington with information upon which they acted promptly, with the effect of bringing the war to a close within a few weeks. At the close of the war Mr. Lincoln received a custom-house appointment in New York. In 1872 he purchased a farm near Elkton, Md.

Linan, George, artist, born in Greenlaw, Scotland, April 29, 1802; died in Bloomingdale, N. J., Sept. 27, 1888. He was educated at the Royal Scottish Academy in Edinburgh, spent several years in England painting portraits and landscapes, and opened a studio in New York city in 1834. He began his career in the United States as a painter of cabinet portraits, and Henry Clay and Daniel Webster were among his patrons. In 1839 he was awarded by the National Academy of Design the medal for the best specimen of portrait-painting by American artists. He retired from studio work about 1868, bought a farm near Bloomingdale, N. J., gave it the Scottish name "Glenburn," and passed the remainder of his days there.

Lippe, Adolph, physician, born in Berlin, Germany, in 1814; died in Philadelphia, Pa., Jan. 23, 1888. He was a son of Count Ludwig and Countess Augusta zur Lippe, received a legal education in Berlin, but removed to the United States in 1839 without being admitted to practice, and was graduated at the Homoeopathic Medical College in Allentown, Pa., in 1841. From that date till within a week of his death he practiced in Carlisle and Philadelphia with a success that made him well known throughout the country. He was for many years a lecturer on materia medica in the old Homoeopathic Medical College of Pennsylvania, published a standard treatise on that subject, and contributed frequently to the periodical literature of his school of medicine.

Locke, David Ross, journalist, born in Vestal, Broome County, N. Y., Sept. 20, 1838; died in Toledo, Ohio, Feb. 15, 1888. He was apprenticed to the printer's trade in the office of the "Cortland Democrat" when ten years old, remained there seven years, and then set out on a journey over the United States, working as printer, reporter, and miscellaneous writer on various newspapers, as circumstances required. In 1852 he joined James G. Robinson in establishing "The Advertiser" in Plymouth, Ohio; in 1856 he began "The Journal" in Bucyrus, Ohio; and soon afterward wrote a series of stories for the paper. These attracted wide interest, and were extensively republished. After conducting in turn the Mansfield "Herald" and the Bellefontaine "Republican," he became editor and proprietor of "The Jeffersonian," a weekly newspaper of Findlay, Ohio, in 1861. The manifestation of disloyalty in Wingert's Corners, a small hamlet in Crawford County, Ohio, after the secession of South Carolina, and the circulation of a petition there asking the Legislature to remove all the colored people from the State and to forbid any others coming into it, suggested to him the publication of that inimitable series of patriotic satires which will

ever remain an important feature of the literature of the civil war. His first letter, announcing that this hamlet had declared itself free and independent of the State, was dated "Wingert's Corners, March the 21st, 1861," and signed "Petroleum V. Nasby." But he soon changed the location to "Confedrit X Roads, Ky.," and all his war letters were dated from that imaginary place. The early letters appeared in his Findlay "Jeffersonian"; but when he bought an interest in and took editorial charge of the "Toledo Blade" the letters were transferred to that paper. The influence of these letters for the national cause was incalculable. They were eagerly looked for and read by President Lincoln, who conceded their value; and that his opinion was shared by others high in authority is attested by the fact that ex-Secretary George S. Boutwell, in a public address in New York city, attributed the crushing of the rebellion to "three forces—the army, the navy, and the Nasby letters." After the close of the war, Mr. Locke dealt with President Johnson's administration and the reconstruction measures of Congress in the same manner. In 1871 he removed to New York city, and was for some years managing editor of the "Evening Mail," and subsequently established himself there as an advertising agent. He retained his interest in the "Toledo Blade" until his death. Besides his "Nasby" letters, numerous lectures, which he delivered through the Northern States after the war, and several plays, he wrote "Divers Views, Opinions, and Prophecies of Yours Truly," "Swingin' Round the Circle," "Ekkoes from Kentucky," "The Moral History of America's Life-Struggle," "The Struggles of P. V. Nasby," "The Morals of Abou Ben Adhem; or, East-orn Fruit in Western Dishes," "A Paper City," "Hannah Jane," a poem, and "Nasby in Exile."

Loring, Edward Greely, physician, born in Boston, Mass., Sept. 28, 1837; died in New York city, April 28, 1888. He was a son of Judge Edward Greely Loring, was a member of the class of 1861 of Harvard University a short time, went abroad, and studied in Italy. He returned to the United States in 1862, was graduated at Harvard Medical School in 1864, won the Boylston prize with an essay, and applied himself to the special study of ophthalmology under Dr. Hasket Derby in Boston. After holding brief appointments in the City Hospital and the Massachusetts Eye and Ear Infirmary, he removed to Baltimore in 1865, and a year later settled in New York city and became associated with the late Dr. C. R. Agnew. About 1870 this partnership was dissolved, and thence till his death he practiced alone. In 1874 he was appointed an ophthalmic surgeon in the New York Eye and Ear Infirmary, and held a similar office in St. Luke's Hospital, besides being a surgeon of the Manhattan and Brooklyn Eye and Ear Hospitals and consulting surgeon of the latter institution. He was a skillful surgeon and a thoroughly trained physician, while as an author he was widely known for his original contributions to medical and scientific literature, especially in the line of ophthalmology. He published a "Text-book of Ophthalmology," Part I (New York, 1886), and was completing the second part at the time of his death. He also invented the refraction ophthalmoscope that bears his name. Among his published papers are "Relative Accommodation" (1869); "Some Remarks on Cataract" (1871); "Is the Human Eye changing its Form under the Influence of Modern Education?" (1878); "Conjunctivitis from Impure Dust of the Streets" (1881); "An Improved Operation for New Pupil after Cataract Operation" (1881); "The Effect of the Optical Condition of the Eye on the Development of Character," "Hypermetropia in Public-School Children" (1882); "Premature Delivery for the Prevention of Blindness" (1883); and "An Improved Means of Oblique Illumination: a Corneal Condenser." Dr. Loring fell dead in the street.

McAllister, William K., lawyer, born in Salem, Washington County, N. Y., Aug. 6, 1818; died in Ravens-

wood, Ill., Oct. 29, 1888. He lived in Illinois many years, served as judge of the State Supreme Court from 1870 till 1875, and then resigned to accept an election to the circuit bench of Cook County.

McCartier, Ludlow, lawyer, born in Green Valley, Morris County, N. J., Oct. 23, 1844; died in Newark, N. J., Sept. 23, 1888. He was graduated at Newton Collegiate Institute, New Jersey, was admitted to the bar in February, 1869, and after practicing in Newton, N. J., two years, removed to Newark. In 1879 he was appointed president judge of the Court of Common Pleas for Essex County, and held the office till 1885. He was considered a sound lawyer, an able pleader, and a judge of great firmness and independence. By the severity of his sentences he became a terror to law-breakers.

McElrath, Thomas, lawyer, born in Williamsport, Pa., May 1, 1807; died in New York city, June 6, 1888. He learned the printer's trade in Harrisburg and Philadelphia, returned home and studied law, and then, removing to New York, became connected with the Methodist Book Concern. In 1825 he engaged in the publication of school and religious books. After a while he abandoned that business, renewed the study of law, was admitted to the bar, and, with William Bloomfield and Charles P. Daly, established the firm of McElrath, Bloomfield & Daly. In 1834 he was elected a trustee of the Public School Society; in 1838 one of the thirteen representatives of New York city in the Legislature, and in 1840 was appointed one of the ten masters in chancery for New York city. The next year he retired from the law, formed a partnership with Horace Greeley, and when the latter founded the New York "Tribune," became its business manager. He was elected alderman in 1845 and corresponding secretary of the American Institute in 1867; edited its annual reports till 1861; was appointed appraiser-general for the New York district, which comprised all the custom-houses in the State and those in the South below Virginia, in 1861; resigned, and resumed the management of the "Tribune" in 1864; was appointed chief appraiser of foreign merchandise at the port of New York under the act of Congress reorganizing that department in 1866, and became a commissioner to the Paris Exposition in 1867. On his return from France he applied himself to the completion of a cyclopedic work which he had projected while appraiser, "A Dictionary of Words and Phrases used in Commerce, with Explanatory and Practical Remarks" (New York, 1872). The high executive ability he had shown at Paris led to his appointment as one of the United States commissioners to the Vienna Exposition in 1873, and his selection as secretary and general executive manager of the New York State Commission at the Centennial Exhibition of 1876. The act of Congress providing for the World's Fair (1881) named him as one of the commissioners, and at the first meeting of all the commissioners in New York in 1884 he called the convention to order, and was elected secretary, with Gen. Grant as president.

McIntosh, John Ballie, soldier, born in Tampa Bay, Fla., June 6, 1829; died in New Brunswick, N. J., June 29, 1888. He was a son of Lieut.-Col. James Simmons McIntosh, United States Army, who commanded a brigade in the Mexican War, was educated by his uncle, Commodore McIntosh of the United States Navy, and served as a midshipman two years. At the beginning of the civil war he was appointed a lieutenant in the Second United States Cavalry, and a year later became first lieutenant of the Fifth Cavalry. He served through the Peninsula campaign, was appointed colonel of the Third Pennsylvania Cavalry, commanded a brigade at Chancellorsville and Gettysburg, was engaged in the Wilderness campaign and the battles around Richmond, led a brigade of cavalry at Winchester, and lost a leg at Opequan. He was commissioned brigadier-general of volunteers in July, 1864; brevetted major in the regular army for gallantry at Fair Oaks, lieutenant-

colonel for Gettysburg, colonel for Ashland, and brigadier-general for Winchester; brevetted major-general of volunteers for bravery and skill at Opequan, and promoted to the full rank for services during the war. He was commissioned colonel of the Forty-second United States Infantry in 1866, and retired with the rank of brigadier-general, United States Army, in 1870.

Markland, Abesalom Hanks, postal executive, born in Clarke County, Ky., Feb. 18, 1825; died in Washington, D. C., May 25, 1888. He was educated at Augusta College, and first went to Washington with Henry Clay in 1849. He served as a clerk in the Indian Office, and then in the Post-Office Department, and at the beginning of the civil war was in business for himself. In 1861 Gen. Grant, who knew of his large experience in the Western steamboat service, selected him to take charge of the mails of his army, and appointed him a member of his staff, with the rank of colonel. This office he held until the general disbanding of the army in 1865. He was invested with full authority, and by Gen. Grant's express command had the entire army co-operating with him in his difficult and important duty. Though nominally under the orders of the Post-Office Department and reporting regularly and directly to it, he was without a superior officer in his service in the field, and was appropriately called the postmaster-general of the army. Under the system that he organized, every regiment and every isolated command had its postmaster; all those reported to brigade postmasters; they in turn to division postmasters, and they, again, to Col. Markland. The advantage, if not the necessity, of maintaining as regular communication between the field and the home as the exigencies of the service would permit, was apparent; but few, even to-day, can appreciate the immense amount of detailed work, the executive ability, and the personal dangers involved in the task. The effort to keep track of every regiment and every detached company, officer, and man amid the intricacies of army movements seemed almost beyond possibility; yet, under the direction of Col. Markland, the soldiers' letters were handled with surprising promptness, regularity, and care. At the close of the war among the earliest appointments made by President Grant was that of Col. Markland to be third Assistant Postmaster-General and special agent for Ohio, Indiana, and Kentucky, which office he held from 1869 till 1873.

Matthews, James Newton, journalist, born in Bungay, Suffolk, England, Nov. 21, 1828; died in Buffalo, N. Y., Dec. 20, 1888. He learned the printer's trade in England, came to the United States in 1846, and settling in Buffalo obtained work as foreman in the printing-office of Jewett, Thomas & Co. In 1850 he established the "Journal of Commerce," and on its suspension within a few months became foreman of the job office connected with the "Express," then owned by A. M. Clapp and Rufus Wheeler. After a year's service, he was admitted to partnership in the job-printing business, and the new firm of Clapp, Matthews & Co. soon became known throughout the country as railroad printers. In 1860 he joined Rufus Wheeler and James D. Warren to acquire and conduct the "Commercial Advertiser"; in 1862 Mr. Wheeler retired, and thence till 1877 Messrs. Matthews and Warren were the sole proprietors of the establishment, and Mr. Matthews the editor. On Oct. 29, 1877, Mr. Matthews announced his retirement from the firm and paper as a result of a disagreement with his partner on local political matters, and early in 1878 he bought the Buffalo "Express," and established the art-printing firm of Matthews, Northrup & Co., both of which interests grew rapidly under his management. In 1883 he added a Sunday edition to his paper, which was prosperous from the start. He supported the Republican party editorially till 1882, then supported Mr. Cleveland's candidacy for Governor, but opposed him in the presidential canvass of 1884, and afterward adhered to the Repub-

lican party. He was a delegate-at-large from New York to the Republican National Conventions of 1872 and 1876.

Mauran, James Eddy, book-collector, born in New York city in 1817; died in Newport, R. I., Nov. 28, 1888. His father was a merchant, owning a large number of ships and doing business with all parts of the world. The son was well educated, and spent several years in foreign travel. By the time he was twenty-two years old he had formed an ambition to collect all available books illustrating and relating to the literature of the fourteenth century. For fifty years he collected, illuminated, and annotated rare and costly books, beginning with Froissart's "Chronicles," and extending his researches both to earlier and later periods. In 1866 he built an attractive home and a storehouse for his treasures in Newport, and resided there till his death, though conducting a book business in New York city. He restored and became president of Redwood Library in Newport, was a founder of the Newport Historical Society, was a voluminous writer on the history of Rhode Island affairs and people, had collected a large quantity of manuscript books and pamphlets relating to the history of Newport, and in his travels had gathered a rich museum of Indian relics, articles of colonial dress, ornament, and implement, and a great variety of curious Americana.

Maverick, Augustus, journalist, born in New York city in 1828; died in Brooklyn, N. Y., June 1, 1888. He began his newspaper career as a reporter on the New York "Tribune," under Horace Greeley, and was subsequently connected as reporter and editor with the "Times," "Evening Post," "Commercial Advertiser," "Brooklyn Argus," and "Brooklyn Eagle." His last engagement was on "Munsey's Weekly," where, as well as on the rostrum, he was an enthusiastic worker for the Republican presidential candidates in 1894.

May, Abby Williams, philanthropist, born in Boston, Mass., in 1829; died there, Nov. 30, 1888. She was a daughter of the Rev. Samuel May, of the old Hollis Street Church, and an early abolitionist, and from an early age was engaged in philanthropic and educational work. She was one of the organizers and became president of the woman's branch of the United States Sanitary Commission in Boston, and discharged the duties of that office with great zeal till the close of the civil war. Subsequently she was elected president of the Woman's Auxiliary of the American Unitarian Association, and one of the founders of the New England Hospital for Women and Children, vice-president of the Society for the Advancement of Women and of the New England Woman Suffrage Association, and treasurer of the Improved Dwelling-House Society, and was a founder of the New England Woman's Club and of the Horticultural School for Women. In 1878 she was one of the four women elected for the first time to membership in the Boston School Board. A dispute as to the eligibility of the woman members led the Legislature in 1874 to pass a law giving women the right to vote for members of the school board, and, after a second election, she was one of the three women to serve on the board. In 1875 she was appointed a commissioner of the State Board of Education, and she served as such till within a few months of her death.

Meany, Stephen Joseph, journalist, born in Ennis, County Clare, Ireland, in December, 1825; died in Waterbury, Conn., Feb. 8, 1888. He received a collegiate and classical education, studied stenography, became a member of the Dublin police force before he was eighteen years old, and for some time was employed by the Government to follow Daniel O'Connell and report his speeches. Unwilling to act the part of a spy, he resigned from the force, and was continued as O'Connell's reporter by the "Freeman's Journal"; and on one occasion, when the London "Times" sent a reporter to Dublin to report a speech at a monster meeting, and O'Connell spoke wholly in

pure Irish, Mr. Meany was the only reporter able to follow him and write out the speech. He joined the "Young Ireland" movement of 1848, and was imprisoned three months in consequence. On his release, he went to England, and was employed first on the "Post," and then the "Mercury" in Liverpool. He was one of the organizers of the Fenian brotherhood, and, after the events of 1866 in London and on the Canadian border of the United States, was arrested and sentenced to fifteen years of penal servitude, but was pardoned after a year's imprisonment. In 1868 he settled in the United States, and established the "Commercial" in Toledo, Ohio. In 1869 he removed to New York city, was admitted to the bar, and was employed as editorial writer and Irish correspondent on the "Irish Democrat," "World," and "Star." He was an active member of the Land League, and took part in the defense of Burton and Cunningham, accused of attempting to blow up the Tower of London with dynamite in 1885. While he was employed on the "Star" an accident compelled him to abandon work for some time, and, on his partial recovery, he accepted editorial charge of the "Evening Democrat," in Waterbury, Conn., where he remained from Dec. 1, 1887, till his death.

Mall, Patrick Hase, educator, born in Walthourville, Liberty County, Ga., July 19, 1814; died in Athens, Ga., Jan. 26, 1888. He was left a penniless orphan when fourteen years old, and when seventeen began supporting himself by teaching. Soon afterward he had an opportunity for attending Walthourville Academy by teaching some of the subordinate classes, and thence went to Amherst College, where he studied two years. Before he completed the regular course there he was appointed teacher in the academy in West Springfield, Mass., and, after an engagement of one year, became associate principal of the high-school in East Hartford, Conn. He held this office one year, then returned to Georgia, 1838, and taught in various places till February, 1842, when, on the recommendation of Gov. Troup, he was elected Professor of Ancient Languages in Mercer University. In November, 1856, he resigned, and in 1856 was elected Professor of Ancient Languages in the University of Georgia. He occupied this chair till the resignation of Rev. Dr. Church, president of the university, in 1880, and was then elected Professor of Metaphysics and Ethics. This chair, in conjunction with the chancellorship of the university, to which he was elected in 1878, and the *ex-officio* presidency of the State College of Agriculture and Mechanic Arts he held until his death. With one exception, he was moderator of the Georgia Baptist Association for twenty-four years; excepting four years, was elected president of the Georgia Baptist conventions for twenty-two years; and was president of the Southern Baptist Convention for eight years. He was the author of "Parliamentary Practice," and of several religious works.

Merrick, Fricilla Brailin, educator, born in Burlington, N. J., in July, 1833; died in Holyoke, Mass., Dec. 15, 1888. She was educated and for several years taught in her native city. On the opening of Vassar College in 1865, she was appointed tutor in mathematics and chemistry, subsequently became the head of that department, and held the chair till the spring of 1887, when she resigned, and in November married Timothy Merrick, a manufacturer. As Prof. Brailin she was well known in American educational circles.

Middleton, John Cavarly, clergyman, born in New London, Conn., in February, 1833; died in New York city, July 7, 1888. He was graduated at Yale in 1859, studied theology, and was ordained deacon in the Protestant Episcopal Church in 1860. His first appointment was that of assistant to Bishop Littlejohn, then rector of the Church of the Holy Trinity, Brooklyn, after which he was rector at Stonington and New Britain, Conn., and from 1874 till his death at Glen Cove, Long Island. He was principal of St. Paul's School at Glen Cove from 1874 till 1878, warden of the Cathedral schools at Garden City in 1877-

79, editor for several years of "The Teachers' Helper" and the Protestant Episcopal Sunday-school lesson leaflets, author of several hymns, and composer of the Christmas and Easter carols for his own church and school. At the time of his death he was archdeacon of the diocese of Queens County, N. Y.

Mills, Robert, pioneer, born in Todd County, Ky., in 1809; died in Galveston, Tex., April 18, 1888. He was graduated at Nashville University, and removed to Texas in 1830. He established himself as a cotton-planter in Brazoria County, and became owner of a dozen of the largest plantations in the South and 1,000 slaves. He shipped the first bale of cotton from Texas to Europe in 1839, and afterward employed vessels of his own to carry his cotton and sugar abroad. During the war for Texan independence he bought and equipped the Texas navy and furnished the means to carry on the war. In addition to his great plantations, he engaged in commercial pursuits, supplied the entire Southwest of early days with its currency, and after the panic of 1857, his credit was so high that his private notes of issue were the only currency that was taken at par. He was known through Texas and the South as the "Duke of Brazoria." At the beginning of the civil war, he was considered the richest man in the South, his estates and slaves representing an aggregate of \$3,000,000. He contributed freely to the Confederate cause, and was ruined by the results of the war. With a brother he resumed business, but his losses had been so heavy that in 1887 he was compelled to give up.

Mitchell, Lucy Myers, archaeologist, born in Orooniah, Persia, in 1845; died in Berlin, Germany, March 10, 1888. She was a daughter of Rev. Austin H. Wright, a missionary and physician among the Nestorians at the time of her birth, was educated in the United States chiefly at Mount Holyoke Seminary, returned to Persia in 1864, married Samuel S. Mitchell, an artist, in 1867, and subsequently spent the greater part of her time in Europe. In 1872-'73, while living in Leipzig, she became deeply interested in classical archaeology, and published a series of letters on recent archaeological researches and discoveries and several illustrated articles on Greek sculpture. She published her "History of Ancient Sculpture" (New York, 1883), established herself in Berlin and began collecting materials for a history of Greek vases and vase paintings in 1884, was taken sick while collecting, and spent the last year of her life in a vain search of health in Switzerland.

Morford, James Chamberlain, patriot, born in Baltimore, Md., in 1795; died there, Dec. 17, 1888. He was the last member of the Old Defenders' Association, which originally had 1,259 members, and was formed in 1844 by the survivors of the citizens who had taken part in the defense of Baltimore, when the British attacked North Point and Fort M'Henry in 1814. The members had met annually on Sept. 12, dined, and marched twice around the battle monument. On anniversary day, 1888, but two members were left, and the death of Nathaniel Watts, on Oct. 30, left Mr. Morford the sole survivor.

Morgan, William Ferdinand, clergyman, born in Hartford, Conn., Dec. 21, 1818; died in New York city, May 19, 1888. He was graduated at Union College in 1837, and at the General Theological Seminary of the Protestant Episcopal Church in 1840, was consecrated deacon in 1841, and ordained priest in 1842. He remained in New Haven three years, and then for fourteen years was rector of Christ Church, Norwich, Conn. At the end of this period he was called to the rectorship of St. Thomas's Church, New York city, and with this parish he continued till his death. During his pastorate the membership of families increased from 200 to 500, and of communicants from 350 to over 1,000, and the church built a free chapel that cost \$40,000. A few weeks before his death he resigned his charge, and was chosen rector *emeritus*.

Moulton, Charles William, lawyer, born near Cleveland, Ohio, Dec. 16, 1830; died in New York city,

Jan. 24, 1868. He studied law, and at Mansfield, Richland County, where he settled to begin practice, he became acquainted with the Sherman family, and married Frances, sister of Gen. William T. and Senator John Sherman. From Mansfield he went to Toledo, and formed a partnership with George R. Hayes. In June, 1861, he was commissioned a captain and quartermaster of Ohio Volunteers, and assigned to duty under Gen. McClellan in western Virginia. He also served there under Gens. Reynolds, Fremont, and Pope. In March, 1863, he was appointed lieutenant-colonel in the regular army, and ordered to Cincinnati as assistant to Quartermaster-General Swords, where he had charge of the purchasing of all the supplies for the armies then operating under Gens. Grant and Sherman. He was promoted colonel in 1864, and had charge of the depot, where his expenditures averaged \$5,000,000 a month the year round, and frequently amounted to \$10,000,000 in a single month, till the close of the war. He then resigned, and resumed the practice of law, first in Cincinnati, and afterward in New York city. He was well versed in revenue, insurance, and admiralty laws, and was counsel for the Government in cases in Louisiana based on infractions of the revenue statutes.

Mulford, Joseph L., physician, born in Pemberton, N. J., in 1830; died in New Brunswick, N. J., Feb. 5, 1888. He was graduated at the Homoeopathic Medical College, Philadelphia, commissioned surgeon of the Forty-eighth New York Volunteers in October, 1861, and served till the autumn of 1864. He was engaged in the Port Royal expedition, was assigned to the staff of the brigade commander, and was promoted to division surgeon. Most of the desperately wounded men at Morris Island, Fort Wagner, and Cold Harbor were placed under his charge, owing to his great skill as an operator. In the autumn of 1864 he was assigned to duty at the hospitals of the general army corps; in the following May he took charge of the Foster general hospital at Newbern, N. C., and was thence transferred to Queensborough, N. C., where he was discharged Aug. 25, 1865. After the war he practiced in New Brunswick till 1880, when he was appointed acting assistant surgeon in the army. He spent three years with the army in Texas, then resigned, and was then appointed surgeon for the Metropolitan Life-Insurance Company, New York.

Nelson, Joseph, lawyer, born in Arroyo, N. Y., in 1813; died in Brooklyn, N. Y., Jan. 26, 1888. He was of Scotch-Irish lineage, studied law, and practiced in Oswego, N. Y., till 1844, when he removed to New York city, and five years afterward to Brooklyn. He was chairman of the bar convention that drew up the plan of reorganization of the city court, embodied in the constitutional amendment which became law in 1869-'70, increasing the number of judges of the court to three, was elected a judge of the court, as a Democrat, for fourteen years in 1869, and was chosen Chief-Justice by his associates on the retirement of Judge Thompson in 1873. On Dec. 31, 1882, having reached the constitutional limit of age, he retired. He published "Reminiscences of Rufus Choate," and was a contributor to periodicals.

Nichols, James Robinson, inventor, born in West Amesbury (now Merrimac), Mass., July 18, 1819; died in Haverhill, Mass., Jan. 2, 1888. In 1836 he became a clerk in his uncle's drug-store in Haverhill, and while so employed devoted considerable attention to scientific reading, and in 1842 attended lectures at the medical department of Dartmouth College. He never practiced his profession, but in 1843 established a drug-store in Haverhill, and spent his leisure in studying chemistry. In 1857, having disposed of his retail business, he removed to Boston, where he began the manufacture of chemical and medical preparations, then a comparatively new industry in this country. In 1872 he retired, and in 1873 was chosen president of the Vermont and Canada Railroad, holding that place until 1878. He introduced new and improved chemical and pharmaceutical compounds,

and devised simple and economical methods and machinery for their manufacture. His inventions in other fields were numerous. All the modern forms of soda-water apparatus, portable gas-machines, and carbonic-acid fire-extinguishers, as well as the leather-board industry, are based either upon his original patents or inventions. An improved form of hot-air furnace was devised by him in later years, and is extensively used. As an agricultural chemist he gained a high reputation in consequence of his investigations at Lakeside Farm, which he purchased in 1865, and which was one of the earliest experimental farms in the United States. He established the "Boston Journal of Chemistry" in 1866, which, in 1883, became "The Popular Science News," and was its senior editor. Besides many scientific papers, notably those on agriculture, he published "Chemistry of the Farm and the Sea" (Boston, 1867); "Fire-side Science" (1869); and "Whence, What, Where? a View of the Origin, Nature, and Destiny of Man" (1882). He also issued Dr. James Hinton's "Mystery of Pain," with an introduction (1886).

Noble, Samuel, pioneer, born in Pennsylvania; died in Anniston, Ala., Aug. 14, 1898. He was the son of an iron-founder and machinery manufacturer, was apprenticed to that trade, and after serving his time, became his father's assistant. While the Kansas-Nebraska troubles were at their height, the business was removed to Rome, Ga. When the civil war broke out, the Noble factories were the most extensive of their kind south of Richmond, and during the war they produced a vast quantity of material for the Confederate Government. In 1872 Gen. Daniel Tyler, a veteran of the regular army, while visiting his son in Charleston, became acquainted with Samuel Noble, and expressed a desire to engage in his old business, iron-manufacturing, if he could find a suitable location. Mr. Noble informed him of a place in Alabama that answered all the conditions. The locality was visited, the two men formed a company, purchased land, and erected a charcoal-furnace at a cost of \$300,000, and then began building a town. In 1879 the town was incorporated, and in 1888 the worn-out farm of 1872 had been transformed into the city of Anniston. (See ANNISTON, page 158.)

Norris, A. Wilson, lawyer, born in Lewistown, Pa., in 1841; died in Philadelphia, Pa., May 21, 1888. He was educated at Georgetown College, D. C., and intended studying law, but in November, 1861, he joined the army as a lieutenant in the One Hundred and Seventh Regiment of Pennsylvania Volunteers. During the battle of Gettysburg, July, 1863, he was taken prisoner, and afterward was confined in Libby Prison nearly two years. After the war he studied law, was graduated at the law-school of the University of Pennsylvania in 1867, and practiced in Philadelphia till 1872, when Gov. John F. Hartranft appointed him his private secretary. In 1876 he was appointed official reporter of the Supreme Court of Pennsylvania, and held the office till January, 1881, and then was elected State Senator from the Sixth District. He was appointed United States pension agent at Philadelphia in 1884, held the office till after the accession of President Cleveland, and was elected Auditor-General of Pennsylvania as a Republican in 1886.

Oakley, Lewis Williams, physician, born in New York city, Nov. 22, 1823; died in Elizabeth, N. J., March 3, 1888. He was graduated at Princeton in 1849, and at the New York College of Physicians and Surgeons in 1852. At the outbreak of the civil war he was appointed assistant surgeon of the Second New Jersey Infantry, May 21, 1861, commissioned surgeon of the Fourth Infantry in October following, transferred to his former regiment in 1862, and retained his commission there till mustered out of the service in June, 1864. In January, 1862, he was appointed surgeon of the New Jersey Brigade in the first division of the Sixth Army Corps, and served upon the staffs of Gens. Kearny and Tarbert. He was detailed to the general hospital at Harrison's Landing later in the

year, and after the army moved from that place was almost continuously in charge of the Sixth Corps hospital in the field. After the war he practiced in Elizabeth till his death.

Palmer, Courtlandt, founder of the Nineteenth Century Club, born in New York city, March 25, 1843; died at Lake Dunmore, Vt., July 23, 1888. He was educated at Columbia and Williams Colleges, and was graduated a Columbia Law School in 1869, but never practiced. He inherited a fourth part of his father's estate of \$4,000,000, and had a private fortune of \$250,000. In 1880 he organized the Nineteenth Century Club, which for three years held its meetings at his residence. Of this organization he was president until his death. On religious and social questions he entertained what are known as extreme liberal views. He made occasional contributions to current literature, and left an unpublished volume.

Parker, Joel, lawyer, born near Freehold, N. J., Nov. 24, 1816; died in Philadelphia, Pa., Jan. 2, 1888. He was graduated at Princeton in 1839, was admitted to the bar in 1842, and began practicing in Freehold, where he resided until death. Directly after graduation he entered political life, and through the presidential canvass of 1840 worked for the election of Martin Van Buren. During the succeeding four years he attained reputation as a Democratic speaker, and in 1844 canvassed the State. In 1847 he entered the Legislature, being the youngest member and the only lawyer on the Democratic side at that session. He represented the minority on the judiciary and other committees, and introduced various reform bills. He was prosecuting attorney of Monmouth County from 1852 till 1857, and was a Democratic presidential elector in 1860. He was commissioned brigadier-general of State militia in 1857, and major-general in 1861, gave a vigorous support to the national Administration from the beginning of the civil war, and was elected Governor in 1862. He served in that office till 1866, and was a third time elected Governor in 1870. In 1868 and 1876 the New Jersey delegation supported him in the National Democratic Convention for the presidential nomination, and in 1879 the National Labor Reform Convention nominated him for Vice-President on the ticket headed by Judge David Davis. In 1880 and 1887 he was appointed a judge of the Supreme Court of the State, and in 1888 declined a fourth nomination for Governor.

Parker, Peter, physician and clergyman, born in Framingham, Mass., June 18, 1804; died in Washington, D. C., Jan. 10, 1888. He took the academic, medical, and theological courses at Yale, and in 1834 was ordained a Congregational clergyman and appointed a missionary to China. Soon after his arrival at Canton, he combined both professions, established a hospital for the special treatment of diseases of the eye, which he was shortly obliged to throw open for general practice, and preached regularly to his patients. His success as a physician was so large that within the first year he treated over 2,000 persons, and formed a class of native students in medicine and surgery to aid him in his work. In 1840, in consequence of the war with England, he closed his hospital and returned to the United States. In 1842 he returned to Canton, and reopened his hospital; in 1845 he was appointed secretary and interpreter to the United States embassy; was acting United States minister several times; and in 1855 was appointed United States Commissioner to China to revise the treaty of 1844. On the completion of this service in 1857, he returned permanently to the United States. Among his publications are "Journal of an Expedition from Singapore to Japan" (London, 1838); "A Statement respecting Hospitals in China" (1841); and "Eulogy on Henry Wilson" (Washington, 1880).

Patrick, Marsena B., soldier, born near Watertown, Jefferson County, N. Y., March 15, 1811; died in Dayton, Ohio, July 27, 1888. He was graduated at the United States Military Academy in 1835, served through the Mexican War, became captain in 1847,

and major in 1849, and, resigning from the army, engaged in farming in his native county in 1850. He followed this pursuit till 1859, when he was appointed president of the New York State Agricultural College, and held the office till the outbreak of the civil war. Entering the military service, he was appointed inspector-general of State militia, and in March, 1862, was commissioned brigadier-general of volunteers. Subsequently he was appointed provost-marshal general of the Army of the Potomac, of the combined forces operating against Richmond, and of the military Department of Virginia. He resigned his commission June 12, 1865, and on Sept. 23, 1880, was appointed governor of the Central Branch, National Home for Disabled Volunteer Soldiers, at Dayton, Ohio, in which office he served until his death.

Patten, Alfred Spencer, clergyman, born in Suffolk, England, Dec. 25, 1825; died in Brooklyn, N. Y., Jan. 12, 1888. He came to the United States with his parents when a child, was educated at Columbian University, Washington, D. C., and Madison University, Hamilton, N. Y., studied for the Baptist ministry, and held his first pastorate in West Chester, Pa. After a brief service there, he went to Haddonfield, N. J., and thence to the First Baptist Church in Hoboken, N. J., where he remained five years. In 1859 he accepted a call from Watertown, Mass., preached there five years, and was chaplain of the State Senate in 1862-63, and went to the old Broad Street Church in Utica, N. Y., in 1864. He remained with the latter congregation till 1872, and built the Tabernacle Baptist Church. In 1872 he removed to New York city, bought the "American Baptist," changed its name to the "Baptist Weekly," and edited it until his death. His published works comprise "Light in the Valley" (Philadelphia, 1852); "My Joy and Crown" (1855); "Kincaid, the Hero Missionary" (New York, 1858); "The Losing and Taking of Mansoul, or Lectures on the Holy War" (1859); "Live for Jesus" (Philadelphia, 1861); and numerous pamphlets.

Pearson, John James, lawyer, born in Delaware County, Pa., Oct. 25, 1800; died in Harrisburg, Pa., May 30, 1888. He was educated and admitted to the bar in Mercer County, began practice in Franklin, Venango County, in 1823, and returned to Mercer County in 1830. In 1835 he was elected to Congress, and on the expiration of his term was sent to the State Senate. In 1849 he was appointed judge of the Twelfth Judicial District, and in 1851, under a change in the State Constitution, was elected to the office for ten years. He was re-elected in 1861 and 1871, and declined the nomination in 1881. He became president judge of the district, and retired from service in January, 1882.

Perkins, George Leonard, treasurer, born in Norwich, Conn., Aug. 5, 1788; died there, Sept. 5, 1888. He was educated in public schools, and in 1807 he walked to Poughkeepsie to embark in the "Clermont" for New York city. The steamer trip lasted a day and a night, and he then returned home on foot by way of New Haven. During the war with Great Britain he was paymaster of the United States Military District No. 2, including Rhode Island, Connecticut, and Massachusetts, and was several times in service as major of brigade. He was one of the committee appointed to receive Lafayette in 1824. At the age of forty-seven he became a director in the Norwich and Worcester Railroad, of which he was one of the incorporators, and in 1838 was elected treasurer of the road, which office he then held until his death. He outlived eight of the nine presidents and more than ninety directors of the company. Mr. Perkins voted at eighteen presidential elections, and was introduced to twelve of the Presidents. He continued in the full possession of his faculties until his death, and his one hundredth birthday was celebrated.

Phelps, George May, inventor, born in Watervliet, Albany County, N. Y., March 19, 1820; died in Brooklyn, N. Y., May 18, 1888. In early life he became a manufacturer of mathematical instruments,

and afterward of light machinery. Soon after Samuel B. F. Morse had demonstrated the practicability of the magnetic telegraph, Mr. Phelps engaged in the manufacture of telegraphic instruments and the invention of new apparatus, as the service was developed. On the organization of the American Telegraph Company he sold out his manufacturing business and entered the employ of that corporation. He had charge of the factory till the company was merged with the Western Union, and then remained in the latter's service till 1884, when he was retired. His inventions include the electro-magnetic speed governor (1858); printing telegraphs (1869-'78); electrical railroad-signal (1869); magnetic motor (1874); printing telegraph-transmitter (1877); polarized electro-magnet (1878); speaking telephone (1878); switch for electric speaking telephones (1879); carbon telephone (1879); signal-box for district and alarm telegraphs (1882); rotating type-wheels of printing telegraph (1884); and microphone transmitter (1888).

Plestering, Charles W., naval officer, born in New Hampshire in 1806; died in St. Augustine, Fla., Feb. 29, 1888. He was appointed a midshipman in the United States Navy, May 1, 1822, was commissioned lieutenant, Dec. 8, 1838, commander, Sept. 14, 1855, captain, July 16, 1862, placed on the retired list, Feb. 1, 1867, and promoted commodore, Dec. 8, 1867. During his naval service he was on sea duty eighteen years and seven months, on shore and other duty eleven years and six months, and was unemployed nearly thirty-seven years. He was the executive officer of the "Cyane," which took out the Darien Exploring Expedition in 1854, and immediately afterward sailed to Greytown, Nicaragua, and bombarded the place in consequence of outrages committed on American citizens, and was the first commander of the "Kearsarge," but before her fight with the "Alabama" was transferred to the "Housatonic."

Pierrepont, Henry Evelyn, philanthropist, born in Brooklyn, N. Y., Aug. 8, 1808; died there, March 28, 1888. He received an academic education, assisted his father in managing his vast estate in Brooklyn, went abroad in 1833, and in his absence was appointed one of the commissioners to prepare plans for laying out the public grounds and streets of the newly chartered city of Brooklyn, and prepared the plans, after a personal inspection of all the large cities in Europe, that were in substance adopted in 1835. While abroad he also studied the principal rural cemeteries, and on his return drew plans for converting the Gowanus hills into a city of the dead. He employed Maj. David B. Douglas to elaborate his scheme, and in 1838 obtained a charter for the Greenwood Cemetery Company. In that year, on the death of his father, he inherited the greater part of the Brooklyn estate and a portion of that in the northern counties, and his subsequent life was occupied with the improvement of his property and the promotion of benevolent and ecclesiastical enterprises.

Plakney, Howard, surgeon, born in New York city, Jan. 9, 1837; died near London, England, May 14, 1888. He was graduated at the New York Free Academy in 1856, and at the College of Physicians and Surgeons in 1860, and immediately went on duty as house-surgeon in Bellevue Hospital. At the beginning of the civil war he went to the field as surgeon of the Ninth Militia Regiment (the Eighty-third New York Volunteers), took part in the battles of Ball's Bluff, Harper's Ferry, South Mountain, and Antietam, was several times assigned to special hospital duty, and was forced by an attack of typhoid fever to resign in 1863. On his recovery he was appointed an assistant surgeon, United States Army, with the rank of major, and placed in charge of the hospital in Frederick City, Md. After the war, he returned to New York city, and practiced. He was one of the first physicians in the United States to make a specialty of the study of the ear, was senior surgeon of the New York Eye and Ear Infirmary for twenty years, founded and conducted an unsectarian dispensary in

connection with the Church of the Holy Trinity for nine years, discovered the method of discolorizing iodine, was a delegate to the International Medical Congress in London in 1881, and published many articles and pamphlets on the treatment of the ear.

Porter, Elbert B., clergyman, born in Hilleborough, N. J., Oct. 23, 1820; died in Claverack, Columbia County, N. Y., Feb. 26, 1888. He was graduated at Princeton in 1839, studied law, but gave it up to prepare for the ministry, and was graduated at the Theological Seminary in New Brunswick, N. J., in 1842. The same year he entered the New Brunswick Classis of the Reformed Church. In 1843 he was called by a missionary congregation in Chatham, N. Y., with whom he remained seven years; in 1849 he went to the First Reformed Dutch Church of Williamsburgh (now a part of Brooklyn), and held its pastorate thirty-four years, resigning in 1883 on account of impaired health. In 1852 he became editor of the "Christian Intelligencer," the organ of his denomination, and remained in charge of it sixteen years. Though he retired from editorial work to give his whole time to his church in 1863, he continued to write for the "Intelligencer," and also contributed to the "Christian at Work," the "Christian Weekly," and other periodicals. He was president of the first General Synod held after the name of the denomination was changed to Reformed Church of North America, and published "A History of the Reformed Dutch Church in the United States," "The Pastor's Guide," and tracts and hymns.

Porter, James, clergyman, born in Middleborough, Mass., March 21, 1808; died in Brooklyn, N. Y., April 16, 1888. He was prepared at Kent's Hill Seminary, Readfield, Me., and received into the New England Conference; was president of the board of trustees of the Conference; a delegate to the General Conference from 1844 till 1872; an overseer of Harvard University (the first Methodist clergyman chosen to that office), from 1852 till 1855; a trustee of Wesleyan University from 1855 till 1871; a trustee for several years of the Concord, N. H., Biblical Institute; Manager of the Methodist Book Concern in New York city from 1856 till 1868; and secretary of the National Temperance Society from 1868 till 1882. Dr. Porter was a contributor to numerous periodicals, and published "Camp-Meetings considered" (New York, 1849); "Chart of Life" (1855); "The True Evangelist" (1860); "The Winning Worker" (1874); "Compendium of Methodism" (1876); "Revival of Religion" (1877); "Hints to Self-Educated Ministers" (1879); "Christianity demonstrated by Experience" (1882); "History of Spirit Rappings"; and "Common-Place Book."

Potts, Frederick A., financier, born in Pottsville, Pa., April 4, 1836; died in New York city, Nov. 9, 1888. He was a son of George H. Potts, for many years president of the National Park Bank of New York city, and one of the first shippers of coal by canal to the seaboard. He became a clerk in the coal firm of Louis Audenried & Co. in 1855, was admitted to the firm in 1865, and formed the coal firm of F. A. Potts & Co. in 1870. In 1872 he was defeated as Republican candidate for Congress in the Fourth District of New Jersey; but in 1874 was elected to the New Jersey State Senate. He served for several years as chairman of the Republican State Committee, and in 1880 was defeated as candidate for Governor. In 1877 he was elected a director of the Central Railroad of New Jersey; and in June, 1881, on the consolidation of the New Jersey Midland and other smaller lines, and the formation of the New York, Susquehanna and Western Railroad Company, he was elected president. He was one of the largest shippers of coal in the world.

Pulsifer, Royal Mackintosh, publisher, born in Newton, Mass., June 2, 1843; died in Arlington, Mass., Oct. 18, 1888. He received a common-school education, and at the age of eighteen entered the counting-room of the Boston "Herald," where at the end of

four years, he had risen to a partnership, and in 1869 he became head of the firm. He was foremost in procuring a city charter for Newton, and in the building of the water-works there; and in 1879 he was elected Mayor without opposition. He was the first secretary and treasurer of the New England Associated Press, and a director in several business corporations, and in 1886 became president of the Marietta and Georgia Railroad.

Rafferty, Thomas, soldier, born in Londonderry, Ireland, April 10, 1828; died in Plainfield, N. J. Feb. 21, 1888. He came to the United States in 1834, and when fourteen years old was apprenticed to the hatter's trade. On attaining his majority he began manufacturing hats on his own account, and in 1849 went to California. Subsequently settling in New York city, he was brought under the influence of Elder Jacob Knapp, withdrew from the Roman Catholic Church, and united with the Tabernacle Baptist Church, with which he held membership till within a short time of his death. On July 7, 1861, he was appointed captain of a Brooklyn regiment; July 31, 1862, was promoted major; May 1, 1863, became lieutenant-colonel, and with that rank, though he had long been in command of his regiment, was mustered out on July 30, 1864. During this service he participated in the battles of Fair Oaks, Fredericksburg, Chancellorsville, Gettysburg, Wapping Heights, the Wilderness, Cold Harbor, Petersburg, where he was wounded, and elsewhere, and was brevetted brigadier-general for gallantry in the field, but declined the promotion. He believed that he had been unfairly treated through motives of jealousy, and claimed that, as he had long been colonel of his regiment in fact, he should have received that rank. He was a member of the New York Produce Exchange, and retired from business in January, 1887.

Ray, John, lawyer, born in Washington County, Mo., Oct. 14, 1816; died in New Orleans, La., March 4, 1888. He was graduated at Transylvania University, Lexington, Ky., in 1835, removed to Monroe, La., the same year, and was admitted to the bar in 1839. In 1844 he was elected to the lower branch of the State Legislature; in 1850 to the State Senate; in 1854 and 1858 was defeated as Whig candidate for Lieutenant-Governor; in 1860 was a presidential elector on the Bell and Everett ticket; and through the civil war was a strong Unionist. He gave his support to the reconstruction plan of Congress, and was elected to that body in 1865, but was not seated. During 1868-'72 he served as State Senator, and also as commissioner to revise the civil code, the code of procedure, and the statutes of the State. He removed to New Orleans in 1872; was elected United States Senator in 1873 by the Kellogg Legislature when William L. McMillen, the choice of the McEnery Legislature, contested the election, with the result that neither was seated; was registrar of the State Land-Office in 1873-'77; and was appointed special attorney for the Federal Government to prosecute the local whisky cases in 1878. He was also an attorney for Mrs. Myra Clark Gaines, and for the French citizens of New Orleans who had claims against the Government for losses sustained during the civil war by the operations of the national army in Louisiana. He was author of a "Digest of the Laws of Louisiana" (2 vols., New Orleans, 1870).

Raymond, Robert Balkes, educator, born in New York city, Nov. 2, 1817; died in Brooklyn, N. Y., Nov. 16, 1888. He was graduated at Union College in 1837, studied law in Cincinnati with Salmon P. Chase, abandoned it for theology, took the full course in Madison University, and was ordained to the ministry of the Baptist Church. After preaching ten years, he applied himself to teaching, literary pursuits, and the study of Shakespeare. In 1856 he was appointed Professor of English Literature in Brooklyn Polytechnic Institute, in 1876 removed to Boston to teach Shakespeare in the School of Oratory there, in 1879 became president of that institution, and in 1884 re-

turned to Brooklyn. He was a brother of Dr. John H. Raymond, president of Vassar College.

Redfield, Justus Starr, publisher, born in Wallingford, Conn., Jan. 2, 1810; died near Florence, N. J., March 24, 1888. He was apprenticed to the printer's trade, and also learned stereotyping. When twenty-one years old he opened a publishing-office in New York city, and brought out the first illustrated monthly periodical in the United States, "The Family Magazine." He published this, under the editorship of Benson J. Lossing and A. Sidney Doane, eight years, and on the death of his brother, who managed the pictorial department, discontinued it, and established himself as a bookseller, printer, and publisher. He carried on this business till 1860, was appointed United States consul at Otranto, Italy, in 1861, was transferred to the consulate at Brindisi in 1864, and resigned that year. Mr. Redfield was the original American publisher of the collected writings of Edgar Allan Poe, William Maginn, and John Doran; brought out "Noctes Ambrosianae," the revised works of William Gilmore Simms, and numerous miscellaneous works; edited Jean Macé's "Histoire d'une Bouchée de Pain" (Paris, 1861); and translated "The Mysteries of Neapolitan Convents," from the Italian of Henrietta Carnocciolo (Hartford, 1867).

Riley, Henry Hiram, lawyer, born in Great Barrington, Mass., Sept. 1, 1818; died in Constantine, Mich., Feb. 8, 1888. He was apprenticed to the printer's trade in the office of the "Columbia Republican," Hudson, N. Y., and afterward worked in the office of the "New York Gazette and Commercial Advertiser." In 1837 he went to Waterloo, N. Y., and was editor and publisher of the "Seneca Observer" five years; and in 1842 removed to Kalamazoo, Mich., studied law, and was admitted to the bar. He then made his permanent residence in Constantine. He was prosecuting attorney of St. Joseph County in 1846-'50; State Senator in 1850, 1851, and 1862; was appointed one of the commissioners to revise the State Constitution in 1873; and became a trustee of the Northern Asylum for the Insane in Travers City and district court judge. He was a frequent contributor to the "Knickerbocker Magazine," and published several editions of his papers in that periodical, under the title of "Puddleford and its people."

Robinson, John, showman, born in Utica, N. Y., July 22, 1803; died in Cincinnati, Ohio, Aug. 4, 1888. He ran away from home when a boy to ship as a sailor, but a shipwreck satisfied this ambition, and he spent several years working as a driver on the Erie Canal, and in a Newport hotel. While at Newport he made his first visit to a circus, and then resolved to seek employment in that line. An opportunity was soon afforded him to travel with Col. Page's menagerie. In four years he became a skillful and daring performer, and for twenty years he was a popular favorite. From Page's menagerie he went with Page & McCracken's circus, and then with Turner's circus, Stewart's Amphitheatre, Hawkins's circus, Benedict & Haddock's circus, and the Zoological Institute. He first visited Cincinnati in 1820, and thirty years afterward built an elegant mansion there, which he ever afterward occupied. At St. Louis he organized a circus, and, under a contract with the American Theatre of New Orleans, took it to Havana and then exhibited throughout the United States. With the proceeds of this venture he was able to travel wholly on his own account, and made money rapidly. He built the National Theatre in New Orleans in 1840, made a business connection with Dan Rice in 1845, and built Robinson's Opera House in Cincinnati.

Rockwell, Julius, lawyer, born in Colebrook, Conn., April 26, 1805; died in Lenox, Mass., May 19, 1888. He was graduated at Yale in 1826, studied in the New Haven Law School, was admitted to the bar in 1829, and began practicing in Pittsfield, Mass., in 1830. He was a member of the Massachusetts Legislature as a Whig from 1834 till 1839, was Speaker from 1835 till 1838, and in the latter year was appointed State Bank

Commissioner. In 1846 he was elected to Congress; served till 1852; succeeded Edward Everett as United States Senator in 1854; was a member of the convention to revise the Constitution of Massachusetts in 1855; was the first candidate of the Republican party for Governor; and was again elected to the Legislature in 1858. In 1859 the State Superior Court was organized, and he was appointed its first judge; he held this office till 1866, when he resigned.

Ree, Edward Payson, author, born in New Windsor, N. Y., March 7, 1838; died in Cornwall, N. Y., July 19, 1888. He was graduated at Williams College and Auburn Theological Seminary, and ordained to the Presbyterian ministry. In 1863 he was appointed

chaplain of the Second New York Regiment, the Harris Light Cavalry, and served with the army till the close of the war, taking part in the raid upon Richmond, in which Col. Ulric Dahlgren was killed in 1864, and receiving from President Lincoln the appointment of chaplain of the hospitals at Fort Monroe, Va. From the close of the war till 1874 he was pastor of the Presbyterian church at Highland Falls, N. Y. In 1874

he resigned his pastorate, bought a farm at Cornwall, and, removing thither, engaged in the cultivation of fruit and plants and in authorship. The Chicago fire of 1871 first inspired him to become an author. He spent several days amid the ruins, studied the topography of the city, and as the story grew upon him, he "merely let the characters do as they pleased, and work out their own destiny." This story, "Barriers burned away," was published in 1872, and within a few years had a sale of 69,000 copies. All his stories were founded upon American events or phases of American life. "Without a Home" deals with New York tenement-house and retail-store life; "An Original Belle" derives its action from the civil war and the draft riots in New York city; "Nature's Serial Story" describes country life and work and the scenery of the Hudson Highlands; and "The Earth trembled" is a reflex of the Charleston earthquakes. At the time of his death the sale of his works of fiction was thus estimated: "Barriers burned away" (1872), 69,000; "What can she do?" (1873), 44,000; "Opening a Chestnut Burr" (1874), 66,000; "Near to Nature's Heart" (1876), 53,000; "From Jest to Earnest" (1875), 61,000; "A Knight of the Nineteenth Century" (1877), 64,000; "A Face Illumined" (1878), 52,000; "A Day of Fate" (1880), 50,000; "Without a Home" (1880), 60,000; "His Sombre Rivals" (1883), 47,000; "A Young Girl's Wooing" (1884), 42,000; "An Original Belle" (1885), 35,000; "Driven back to Eden" (1885), 30,000; "Nature's Serial Story" (1884), 24,000; "The Earth trembled" (1887), 24,000; and "He fell in Love with his Wife" (1886), 28,000. His "Miss Lou," a story of Southern life after the close of the war, was completed after his death, by means of an extract from his diary. Besides these works he published "Culture of Small Fruits," "Success with Small Fruits," and "Play and Profit in the Garden."

Rollins, James Sidney, lawyer, born in Madison County, Ky., April 19, 1812; died in Columbia, Mo., Jan. 9, 1888. He was graduated at the State University of Indiana in 1830; and at the Transylvania Law School, Kentucky, in 1833; and settled in Boone County, Mo. In 1838, 1840, and 1842 he was elected member of the State Assembly; in 1846 was elected

State Senator, and served four years; in 1854 was again elected to the Assembly; in 1857 was defeated as Whig candidate for Governor by 230 votes out of 100,000; and in 1860 was elected to Congress. During his first service he was a member of the Committees on Commerce and on Expenditures in the War Department, and after his re-election in 1862 served on the Committee on Naval Affairs. He was author of the bill that led to the construction of the Union Pacific, the Kansas Pacific, and the Central Pacific Railroads; and in 1867 was appointed one of the directors of the former. In 1868 he was again elected State Senator, and after a fruitful service there withdrew from political life. On the dissolution of the Whig party he joined the American, and after that the Democratic, with which he affiliated till 1880, when he became a Republican. Mr. Rollins was the father of the State University of Missouri.

Schmucker, Beale Melancthon, theologian, born in Gettysburg, Pa., Aug. 26, 1827; died in Pottstown, Pa., Oct. 18, 1888. He belonged to the third generation of distinguished Lutheran clergymen, was graduated at Pennsylvania College in 1844, and studied theology. In 1847 he was licensed to preach by the West Pennsylvania Synod, and in 1849 ordained by the Synod of Virginia. He held the following pastorates: At Martinsburg, Va., 1848-'51; Allentown, Pa., 1842-'63; Easton, Pa., 1862-'67; Reading, Pa., 1867-'80; Pottstown, Pa., 1880-'88. He was secretary of the Committee for Foreign Missions of the General Council in 1869-'88; secretary of the executive committee of the Ministerium of Pennsylvania for many years; corresponding secretary of the General Council from its organization, in 1867, until his death; and secretary of the board of directors of the Theological Seminary, at Philadelphia, 1864-'88. He was one of the founders of the Theological Seminary at Philadelphia in 1864; of Muhlenberg College, Allentown, Pa., in 1867; and of the General Council in 1867. He was recognized as one of the best liturgical scholars and hymnologists in America. Most of his leisure time was devoted to these studies, and most of his contributions to Lutheran literature were in that line. As co-editor he furnished valuable material for the new edition of "Halleische Nachrichten" (Allentown, Pa., and Halle; English edition, Reading, Pa.), the primary source of information concerning the early history of the Lutheran Church in America. He edited "Liturgy of the Ministerium of Pennsylvania" (Philadelphia, 1860); "Collection of Hymns" (1865); "Church-Book of the General Council" (1868); "Ministerial Acts of the General Council" (1867). The Common Service is based on the liturgies of the sixteenth century, and may be regarded as the result of Dr. Schmucker's research. He took a leading part in the preparation of the service, and with the complete manuscript in his satchel he died on the way to the printer.

Seawall, Washington, soldier, born in Virginia in 1802; died in San Francisco, Cal., Jan. 9, 1888. He was graduated at the United States Military Academy in 1825, and commissioned brevet second lieutenant of the Seventh United States Infantry, served with that regiment and on engineering duty till 1829, was appointed disbursing agent of Indian affairs in 1832, and became adjutant-general and aide-de-camp on the staff of Gen. Matthew Arbuckle in 1884. After a meritorious service among the Indians on the Western frontier, he was promoted captain in July, 1836, was brevetted major for gallantry in the Seminole War in Florida, took part in the operations of the Army of Occupation in Texas in 1845-'46, distinguished himself at Fort Brown, Tex., at the beginning of Gen. Taylor's campaign, and was promoted major of the Second Infantry, March 3, 1847. In 1849 he accompanied his regiment to Monterey, Cal. Subsequently he was on duty at Jefferson Barracks, Mo., Fort Hamilton, N. Y., and Benicia, Cal. In 1852 he was promoted lieutenant-colonel, and served in Texas till 1860; in October, 1860, was promoted colonel and as-

signed to the Sixth Infantry at Benicia, Cal.; and on Feb. 20, 1862, was placed on the retired list in consequence of disabilities incurred in the service. Though unable to perform field duty, he was anxious for military employment during the civil war, and after his official retirement was chief mustering and disbursing officer of Kentucky 1862-'63, and of the Department of the Pacific 1863-'64, was acting assistant provost-marshal in San Francisco 1865-'66, was brevetted brigadier-general, United States Army, March 13, 1865, and was fully retired in March, 1869.

Booy, William A., lawyer, born in Burkville, Va., in 1831; died at Shreveport, La., Dec. 21, 1888. He was graduated at Princeton College in 1850, subsequently went to St. Louis, became editor of the "Journal," a Democratic paper, and joined the "Kaw" Society during the Kansas troubles. Removing to Louisiana, he became a teacher in the State Military Academy, and during the civil war was a staff officer, and subsequently lieutenant of engineers. He was admitted to the bar, removed to Rapides, and entered upon practice. He served as a Democratic presidential elector in 1876, and as district judge and member of the Legislature. He was appointed chairman of the commission to revise the statutes of the State, and soon after the completion of this work, he was sent as minister resident to Bolivia. The climate disagreeing with him, he resigned, and returning to Louisiana, resumed the practice of his profession at Shreveport.

Settle, Thomas, jurist, born in Rockingham County, N. C., Jan. 23, 1831; died in Raleigh, N. C., Dec. 1, 1889. He was graduated at the University of North Carolina in 1850, and soon afterward began the study of law. He became in 1854 a member of the State Legislature, in which he served till 1863, being Speaker of the House during the latter year. He opposed the secession movement, but entered the Confederate Army as captain in the Third North Carolina Regiment, and having served one year, returned to the practice of his profession. In 1865 he joined the Republican party, and was that year elected to the State Senate, over which he was called to preside. From 1868 till 1871 he was a judge of the Supreme Court of North Carolina, and from that place was called by President Grant to be United States minister to Peru, in which country he remained but a few months on account of feeble health. In June, 1872, he presided over the National Republican Convention. In 1877 he was appointed United States District Judge for the Northern District of Florida.

Swallow, Samuel Edmund, lawyer, born in Boston, Nov. 9, 1799; died there Dec. 20, 1838. He was graduated at Harvard in 1817, and at the Law School in 1821, and was admitted to the bar. The anti-slavery cause received from its infancy his most active support, and he was frequently called upon to defend fugitive slaves who were arrested, and threatened with a return to captivity. He was himself once arrested for the part he took in rescuing one of these unfortunates. William Lloyd Garrison early enlisted him as a supporter, and his pecuniary aid enabled Garrison to establish the "Liberator" and continue it through the first year, and even up to its last volume. He prepared the arguments and assisted by his counsel and suggestions at the trial of John Brown. For several years he was the Liberty party's candidate for Governor of Massachusetts. He is said to have introduced and secured the passage of more bills for the benefit of women than any other man in Massachusetts. Grateful women placed a marble bust of him in Memorial Hall, at Lexington, and a marble tablet beneath it bears a poetic tribute from his intimate friend, John G. Whittier.

Sheridan, Mary Miner, pioneer, born in Cavan County, Ireland, April 16, 1801; died in Somerset, Ohio, June 12, 1888. She married John Sheridan, a native of the same county, in 1824; removed to Quebec, Canada, in 1829; to Albany, N. Y., in 1830; and to Somerset a few years afterward. While she was living in Albany, her oldest child, Philip Henry Sheridan, the

future General of the Army of the United States, was born, March 6, 1831. She was a woman of remarkable courage, pertinacity, and benevolence, was greatly attached to her children, and after their happiness and the discharge of her household duties, found her greatest delight in ministering to the sick and needy of her neighborhood. She became a widow in 1876.

Sheridan, Philip Henry, soldier, died in Nonquitt, Mass., Aug. 5, 1888. His birthplace has been supposed to be Somerset, Ohio, but it was recently ascertained to be Albany, N. Y. (For a full sketch of his career, with a portrait on steel, see the "Annual Cyclopaedia" for 1888, page 497.) During his last illness, a bill was passed by Congress and signed by the President, restoring the grade of full general in the United States Army, and Gen. Sheridan was appointed to that rank and immediately confirmed.

Sibley, Hiram, financier, born in North Adams, Mass., Feb. 6, 1807; died in Rochester, N. Y., July 12, 1888. At an early age he was apprenticed to a shoemaker, but the trade was displeasing to him, and he set out, on completing his seventeenth year, for Lima, N. Y., where he found employment in a cotton-factory. Here he remained until the age of twenty-one, when he established a machine-shop at a place now called Sibleyville, in Monroe County. At the end of ten years he had established a business which he sold out for a sum that enabled him to remove to Rochester and there open a banking-house. Within five years he was elected sheriff of Monroe County. In 1854 he became associated with Ezra Cornell, and with him was largely interested in telegraph companies and grants under the Morse patent. Together they absorbed and brought into one large company twenty others, in which about \$7,000,000 had been invested, and thus organized the Western Union Telegraph Company, which was chartered by the Legislatures of Wisconsin and New York in 1856. Of this company he was the first president, and so remained till 1866, when failing health compelled him to retire. In 1866 he undertook his transcontinental telegraph, for the promotion of which Congress passed an act granting an annual subsidy for ten years of \$40,000. Soon afterward the Overland Telegraph Company was organized in San Francisco, and subsequently the Sibley and Overland interests were united under the name of the Pacific Telegraph Company. Five years afterward telegraphic communication from ocean to ocean was at the service of the public. Mr. Sibley's next project was to establish telegraphic communication with Europe by way of Asia, across Behring Strait. Wires were actually strung in Siberia and in Alaska, but the successful laying of the Atlantic cable put an end to this enterprise. After retiring from the Western Union Company, he established a seed and nursery business in Rochester, for which he bought, in various parts of the country, 57,000 acres of land. He entered also into mining operations. Notwithstanding all his business cares he was public spirited, and spent large sums of money in philanthropic and charitable objects. He founded the Sibley College of Mechanical Arts at Cornell University, built and presented Sibley Hall to the University of Rochester; built a church in his native town, North Adams; contributed largely to the charitable institutions of Rochester; and performed a thousand charitable deeds that will never be publicly known.

Simpson, Edward, naval officer, born in New York city, March 3, 1824; died in Washington, D. C., Dec. 2, 1888. He entered the naval service Feb. 11, 1840, and was in the steamer "Vixen," on the coast of Mexico, during the Mexican War, taking part in the attacks upon the forts of Alvarado and Tabasco, and in the capture of Tampico. In 1856 he joined the sloop "Portsmouth," and was engaged in the bombardment and capture of the Barrier Forts in Canton river, China. Returning home, he entered upon duty at the Naval Academy as instructor in naval gunnery and commandant of midshipmen. In 1862 he was commissioned lieutenant-commander, and while in com-

mand of the iron-clad "Passaic" in 1863, took part in the attacks on Fort Wagner, Fort Sumter, and Fort Moultrie. He was fleet-captain of the blockading squadron before Mobile when that city capitulated. He was promoted commander in 1855, and captain in 1870. In 1877 he was detailed at the Brooklyn Navy-Yard as captain, and having been promoted in 1878 to commodore, he was placed in charge of the New London Naval Station, where he remained till 1881, when he took command of League Island Navy-Yard. There he remained till his promotion to rear-admiral in January, 1884, when he was appointed president of the Gun-Foundry Board. From this service he was transferred to the advisory board, and from this to the board of inspection, on which duty he was engaged when he was retired, March 8, 1886.

Sliver, William A., playwright, born in Baltimore, Md., April 10, 1843; died in New York city, May 19, 1888. He was graduated at Dickinson College in 1862, studied law, and was admitted to the bar in Philadelphia, Pa., in 1865. He practiced for several years, wrote a successful comedy in 1871, followed it with an adaptation from one of Ouida's novels, "Alma," adopted the name of Frederick Marnden, and thereafter applied himself wholly to dramatic work. His most ambitious play was "Clouds," an American society drama, for which he received \$8,000. At the time of his death he was under contract to write plays for which he was to receive \$38,000, and it was estimated that he had made over \$100,000 by his dramatic compositions and adaptations. After "Clouds" his best known pieces are "Zip," "Musette," "Bob," "Humbug," "Cheek," "Quack," "The Donagh," "Shaun Rhue," "The Kerry Gow," "The Irish Ministrel," "Zara," "Eily," "Otto," "Yule," "Nemesis," and "Called to account."

Spofford, Richard S., lawyer, born in Newburyport, Mass., in 1832; died on Deer Island, Amesbury, Mass., Dec. 11, 1888. He was graduated at Dummer Academy, studied law, and opened an office in Boston. During the administration of President Pierce, he was sent to Mexico on a diplomatic service for the Government. In 1858 he was a member of the Massachusetts Legislature. He was on several occasions a delegate to national and State conventions, and was president of the Democratic State Convention that nominated Gen. Butler the last time. In 1884 he was the Democratic candidate for Congress from his district. In 1846 he married Harriet Prescott, the well-known author, who survives him.

Squier, Ephraim George, author, born in Bethlehem, N. Y., June 17, 1821; died in Brooklyn, N. Y., April 17, 1888. He was the son of a Methodist clergyman, and was brought up to work on a farm. He became

connected with the village newspaper, and studied engineering. In 1841 he was associated in the publication of the "New York State Mechanic," in Albany, and in 1843 served on the Hartford "Journal." He then went to Chillicothe, Ohio, where he was employed on the "Scioto Gazette," and also served as clerk of the Ohio Legislature. In the mean

time he became associated with Dr. Edwin H. Davis, who was engaged in exploring the mounds in the vicinity, and for several years he investigated these prehistoric remains under the direction of Dr. Davis. The results were published in "Ancient Monuments of the Mississippi Valley" (Washington, 1848), and formed the first volume of the "Smithsonian Contributions

to Knowledge." During 1848 Mr. Squier examined the ancient deposits of New York State, under the auspices of the New York Historical Society, publishing his report through the Smithsonian Institution, as "Aboriginal Monuments of the State of New York" (1850). He was appointed special *chargé d'affaires* to all the Central American States in 1849, and negotiated treaties with Nicaragua, Honduras, and San Salvador. In 1853 he returned to Central America as secretary of the Honduras Inter-oceanic Railway Company, and he subsequently visited Europe in behalf of that enterprise. He was appointed United States commissioner to settle claims in Peru, where for two years (1853-'55) he made exhaustive researches concerning the remains of the Incas, and took numerous photographs. On his return to New York he was for a time chief editor of Frank Leslie's publications; but in 1874 his mind became so seriously impaired that he was obliged to relinquish all original work. Subsequently he recovered sufficiently to direct the final preparation and revision of his work on Peru, but he never entirely regained his strength. The medal of the French Geographical Society was given him in 1856. He was a member of various scientific and historical societies, and in 1871 was chosen first president of the American Anthropological Institute of New York. Besides official reports, scientific papers, magazine articles, and contributions to the "Encyclopedia Britannica" and foreign periodicals, he published "The Serpent Symbol, or Worship of Reciprocal Principles of Nature in America" (New York, 1852); "Nicaragua: its People, Scenery, Ancient Monuments, and Proposed Inter-oceanic Canal" (1852); "Notes on Central America" (1854); "Waikua, or Adventures on the Mosquito Shore" (1855); "Question Anglo-Américaine" (Paris, 1856); "The States of Central America" (New York, 1857); "Report of the Survey of the Honduras Inter-oceanic Railway" (London, 1859); "Translation, with Notes, of the Letter of Don Diego de Palacios (1571) to the Crown of Spain, on the Provinces of Guatemala and San Salvador" (New York, 1860); "Monographs of Authors who have written on the Aboriginal Languages of Central America" (1861); "Tropical Fibers, and their Economic Extraction" (1861); "Is Cotton King? Sources of Cotton Supply" (1861); "Honduras, Descriptive, Historical, and Statistical" (1870); and "Peru: Incidents of Travel and Exploration in the Land of the Incas" (1876). Many of his works were translated into German, French, and Spanish.

Stearns, Elias, ichthyologist, born in Bath, Me., May 13, 1859; died in Asheville, N. C., Aug. 2, 1888. In 1875 he engaged in business in Pensacola, Fla., and began to study the fauna of the surrounding waters, becoming familiar with the coast from Pensacola to Key West. In 1878 he visited the Smithsonian Institution, and by his thorough and exact knowledge with regard to the fishes of the Gulf of Mexico, he attracted the special attention of Spencer F. Baird and others. He then spent a year at Waterville, Me., where he engaged in classical studies, in order to acquire a knowledge of scientific nomenclature. Failing health compelled his return to Florida, but in 1880 he became a special agent of the United States Fish Commission and also of the United States Census Bureau in charge of investigations of the marine industries of the Gulf of Mexico. From this time his contributions to the Fish Commission were numerous and large. Upward of fifty new species of fishes were discovered by him, or through his aid, embracing many of what are known as the deep-sea fishes of those waters; and four species of the genera *Lutjanus*, *Scorpana*, *Blennius*, and *Prionotus*, bear his name.

Stevenson, James, ethnologist, born in Mayaville, Ky., Dec. 24, 1840; died in New York city, July 25, 1888. He showed great fondness for ethnology when he was a boy, and as early as 1855 went beyond the frontiers in pursuit of information concerning the

habits of Indian tribes. In 1856 he entered the national service, and engaged under Prof. F. V. Hayden, who was then making geological investigations in the Northwest with Lieut. G. K. Warren. Acting on the advice of Prof. Hayden, he spent several winters among the Blackfoot and Sioux Indians, studying their languages, customs, and traditions; and then made an exploration of the Yellowstone country. His researches were interrupted by the civil war, and he joined the National army, served as a staff officer in the Army of the Potomac under Gen. Fitz John Porter, and after that officer's retirement, continued with the army until the close of the war, attaining the rank of colonel. He then resumed his explorations in the Northwest with Prof. Hayden and with the United States Engineers. During the winter of 1866-'67, largely through his influence, Congress appropriated \$5,000 for geological work in the West. The Geological Survey of the Territories then came into existence, and Prof. Hayden was made its chief, and Mr. Stevenson became its executive officer. Continuing his explorations, he followed the Columbia and Snake rivers to their sources, making maps and correcting the supposed geography of those sections of the country. This work accomplished, he ascended the Great Teton mountain, being the only white man ever known to have reached its summit. On repeating the ascent, he succeeded in reaching the peak of the mountain, and there found a traditional Indian altar of stone. His next work was the blazing of a road over the Rocky mountains near this point. He then joined Prof. Hayden at the Yellowstone Lake, where further explorations were conducted. On the organization of the present United States Geological Survey in 1879, his services were continued as executive officer of the bureau, which place he held until his death. In the same year, with Maj. John W. Powell, he succeeded in obtaining an appropriation from Congress for ethnological research, and the Bureau of Ethnology was established under the Smithsonian Institution. He was detailed to this bureau by Maj. Powell, and directed to explore the ruins of the Southwest. Assisted by his wife, he investigated the habits, history, and religious myths of the Zuni, Moqui, and other Pueblo Indians, also of the Navajos of New Mexico and Arizona, and the Mission Indians of California. The extensive and valuable collections made by him in this field, as well as large fossil, ethnological, and ornithological collections made in the early years of his explorations, are deposited in the United States National Museum and in the Smithsonian Institution. He was a Fellow of the American Association for the Advancement of Science, and a member of other scientific societies, to whose "Proceedings" and to Government publications he contributed.

Stone, James Andrus Blinn, educator, born in Piermont, N. H., Oct. 28, 1810; died in Detroit, Mich., May 19, 1888. He was graduated at Middlebury College in 1834, and at Andover Theological Seminary in 1838. After his ordination he held a pastorate in Gloucester, Mass., was Professor of Biblical Literature and Interpretation in Newton Theological Seminary, and edited a missionary periodical in Boston. In May, 1843, he removed to Kalamazoo, Mich., to assume the presidency of the Literary Institute, which has since become Kalamazoo College. He resigned the presidency in 1863, was editor and publisher of the Kalamazoo "Telegraph" several years, was postmaster four years under President Grant's administration, and was president of the Michigan State Teachers' and the Michigan Publishers' Associations.

Stoughton, William Lewis, lawyer, born in New York, March 20, 1827; died in Sturgis, Mich., June 6, 1888. He received an academic education, removed to Michigan early in life, and was admitted to the bar in 1851. In 1855-'60 he was prosecuting attorney of his county, was appointed United States Attorney for the District of Michigan in March, 1861, and resigned a few months afterward to enter the national army. He

went to the field as second lieutenant of the Eleventh Michigan Volunteers, was rapidly promoted for meritorious services, lost a leg at Stone River, commanded a brigade in the battles of Chickamauga and Mission Ridge and the Atlanta campaign, and was mustered out with the brevet rank of major-general of volunteers. He resumed his law practice till 1867, when he was elected Attorney-General of Michigan, and in 1868 was re-elected, and also elected to Congress as a Republican. In 1870 he was re-elected.

Swetzer, David Hunter, author, born in Martinsburg, W. Va., Sept. 16, 1816; died in Charleston, W. Va., March 8, 1888. He developed strong artistic abilities in early youth, studied drawing, and traveled in Europe from 1840 till 1846. On his return he spent two years studying drawing on wood for engraving, then traveled through the West and South, and establishing himself in his native place, contributed the first of his series of illustrated articles, under the pen name of *Porte Crayon*, to Harper's "Magazine" in 1852. When John Brown made his attack upon Harper's Ferry, the artist, who lived near by, hastened to the scene of action, made sketches and wrote descriptions. He opposed the secession agitation in Virginia, and organized and equipped, at his own expense, a company of his townsmen. When the State seceded, his company deserted him and joined the Confederate army, while he hurried to Washington and offered the Government his services. He was appointed captain and assistant adjutant-general, assigned to duty on Gen. McClellan's staff, and subsequently served on the staffs of Generals Pope and Banks (at New Orleans and on the Red River expedition), and his cousin, Gen. David Hunter. He became colonel of the Third West Virginia Cavalry; resigned in September, 1864; and was brevetted brigadier-general of volunteers in 1865. After the war he resumed his literary and art work, and was United States consul-general to Mexico from 1877 till 1885. He published "The Blackwater Chronicle" (New York, 1853), and "Virginia Illustrated" (1857); and in later years illustrated the works of other authors.

Swetzer, J. Bowman, soldier, born in Brownsville, Fayette County, Pa., July 4, 1821; died in Pittsburgh, Pa., Dec. 12, 1888. He was graduated at Jefferson College, studied law, and was admitted to the bar. During the administration of President Taylor he was appointed United States Attorney for the Western District of Pennsylvania. In 1861 he became major of the Sixty-second Pennsylvania Volunteers, succeeded to the command of the regiment during the battle of Gaines's Mills, June 27, 1862, but before the battle had ended was himself made a prisoner, and sent to Libby Prison. He was exchanged in August, resumed his command, and was mustered out in July, 1864. On March 13, 1865, he was made brigadier-general "for gallant and meritorious conduct on the field of battle." Soon after the close of the war he was appointed Supervisor of Internal Revenue in Pennsylvania, and subsequently prothonotary of the Supreme Court of the Western District.

Tarbox, Increase Niles, clergyman, born in East Windsor, Conn., Feb. 11, 1815; died in Newton, Mass., May 3, 1883. He was graduated at Yale in 1839, and at Yale Theological Seminary in 1844, was tutor there from 1842 till 1844, pastor of Plymouth Congregational Church in Framingham, Mass., from 1844 till 1851,

and secretary of the American Educational Society and American College and Educational Society from 1851 till 1854. For some time he was associate editor of the "Congregationalist" and a contributor to the "New Englander." He published "Winnie-and-Walter Stories" (4 vols., Boston, 1860); "When I was a Boy" (1862); "The Curse, or the Position occupied in History by the Race of Ham" (1864); "Nineveh, or the Buried City" (1864); "Tyre and Alexandria" (1865); "Uncle George's Stories" (4 vols., 1865); "Life of Israel Putnam" (1876); "Sir Walter Raleigh and his Colony in America" (1884); "Songs and Hymns for Common Life" (1885); and "Diary of Thomas Robbins, D. D." (1886).

Terry, William, soldier, born in Amherst County, Va., Aug. 14, 1824; died near Wytheville, Va., Sept. 5, 1888. He was graduated at the University of Virginia, and was admitted to the bar in 1851. He practiced in Wytheville till the beginning of the civil war, when he entered the Confederate army as a lieutenant. In 1862 he was promoted major of the Fourth Virginia Regiment; in February, 1864, colonel; and in May following brigadier-general. In 1868 he was nominated for representative in Congress from the Eighth Congressional District of Virginia as a Conservative, and was elected, but was declared ineligible. In 1870 he was re-elected and admitted. He was drowned while trying to ford Reed creek, near his home.

Thieblin, Napoleon L., journalist, born in St. Petersburg, Russia, June 6, 1834; died in New York city, Nov. 1, 1888. He was graduated at the Russian Imperial Academy of Artillery in 1853, entered the Russian army at the outbreak of the Crimean War, and was in command of forty pieces of artillery at the siege of Sebastopol. He was decorated for his services, withdrew from the army in 1857, removed to London, and became foreign correspondent of the "Pall Mall Gazette." He also contributed to British magazines, and translated the works of Macaulay and Darwin into Russian. He followed the French army during the Franco-German War as correspondent for the "Pall Mall Gazette," described the atrocities of the Commune, wrote for the "Gazette" over the signature Azamet Batuk, and reported the Carlist War in Spain for the New York "Herald." In 1875 he came to the United States to lecture, but re-entered journalism, wrote the articles entitled "A Stranger's Note-Book" for the New York "Sun," and subsequently the Wall Street letters signed Rigolo, and contributed to various newspapers and magazines.

Thompson, Cephas Giovanni, artist, born in Middleborough, Mass., in 1809; died in New York city, Jan. 5, 1888. He was a son of Cephas Thompson, a well-known portrait-painter, studied with his father, and when eighteen years old removed to Plymouth, Mass., where he spent two years painting portraits, chiefly of sea-captains and their families. From Plymouth he went to Boston, and in 1837 removed to New York city, where for ten years he was busily employed in portrait painting. He then spent five years in New Bedford and Boston, went abroad in 1852, visited London, Paris, Florence, and Rome, and resided in the latter city seven years. In 1860 he established himself permanently in New York city. In 1865 he was appointed a clerk in the Treasury Department. While in Rome he copied the Staffa "Maddonna" of Raphael and the "Beatrice Cenci." His ideal paintings include "The Guardian Angel," "Prospero and Miranda," "St. Peter delivered from Prison," and "The Angel of Truth."

Tilton, John Rollin, artist, born in London, N. H., in 1832; died in Rome, Italy, March 22, 1888. He studied landscape painting without a teacher, following the style of the Venetian school, and particularly that of Titian, and spent his professional life almost entirely in Italy. He traveled extensively through Europe, Egypt, and the Holy Land, and had exhibited frequently at the Royal Academy, London, the National Academy, New York, and the Athenæum, Boston. Among his paintings, mostly in private gal-

leries in England, are "Rome from the Aventine," "The Palace of Thebes," "Como," "Venice," "Venetian Fishing-Boats," and "Kem Ombra."

Trimble, Isaac E., soldier, born in Culpeper County, Va., in 1802; died in Baltimore, Md., Jan. 2, 1888. He was graduated at the United States Military Academy in 1822, and was assigned to survey the military road from Washington to the Ohio river. In 1832 he resigned from the army and engaged in civil engineering, was chief engineer of the Northern Central, the Philadelphia, Wilmington and Baltimore, and the Boston and Providence Railroads, and was engaged in large railroad operations in the West Indies when the civil war began. He hastened to Baltimore, was placed in command of the uniformed volunteers mustered to protect the city, and on the dispersion of the Maryland Legislature in May, 1861, went South and joined the Confederate army, in which he attained the rank of major-general. He erected the batteries that closed the Potomac river in 1861, took part in the battle of Bull Run, commanded the Stonewall division after Gen. Jackson's promotion, was in charge of the fortifications in the valley of Virginia, and commanded Pender's division at Gettysburg, where he lost a leg and was captured during the third day's fight.

Tryon, George Washington, naturalist, born in Philadelphia, Pa., May 20, 1835; died there, Feb. 5, 1888. He was educated at the Friends' School in his native city, and then entered business, from which he retired in 1868. His attention was early directed to conchology, and his reputation in that specialty became world-wide. He was active in the Philadelphia Academy of Natural Sciences, of which he became a member in 1859, and in 1865 organized the movement to consider methods for the erection of its present building. Through his efforts the conchological section contributed three thousand dollars to the work, and he added an equal sum. In 1869 he was chosen curator of the Academy, and under his direction the library and collections were arranged in the new building in 1876. He was elected conservator of the conchological section of the Academy in 1875, and held that office until his death. The present condition of this collection, which is said to outrank even that of the British Museum, is due to his skill and labor, and he bequeathed funds for the preservation of the conchological specimens of the Academy. He was a member of scientific societies, and in 1865-'71 edited the "American Journal of Conchology," of which he was one of the founders. Mr. Tryon was a prolific writer on his specialty, and prepared numerous memoirs, including "On the Mollusca of Harper's Ferry" (1861); "Synopsis of the Recent Species of Gastrochænidæ" (1861); "Monograph of the Order of Pholadacea" (1862); and "Monograph of the Terrestrial Mollusks of the United States" (1865); "List of American Writers on Conchology" (New York, 1861); "Synopsis of the Species Strepomatidæ" (1865). His larger works comprise "Land and Fresh-Water Shells of North America," including monograph on the genus Strepomatidæ (4 vols., Washington, 1873); "American Marine Conchology" (Philadelphia, 1878); "Structural and Systematic Conchology" (8 vols., 1882); and "Manual of Conchology," including "Marine Shells," 9 vols., and "Land Shells," 3 vols. (1879-'85). With William G. Binney he edited "The Complete Writings of Constantine S. Rafinesque on Recent and Fossil Conchology" (Philadelphia, 1864).

Underwood, Adin Ballou, lawyer, born in Milford, Mass., May 19, 1828; died in Boston, Mass., Jan. 14, 1888. He was graduated at Brown University in 1849, was admitted to the bar in 1853, and practiced in Milford and Boston till the outbreak of the civil war. At the first call for troops he raised a company for the Second Massachusetts Infantry, was elected captain, and joined Gen. Patterson's division in the advance toward Winchester. He bore a conspicuous part in the rear-guard fight during Gen. Banks's retreat, May

24, 25, 1862, was appointed major of the Thirty-third Massachusetts Regiment in July, 1862, was soon afterward promoted lieutenant-colonel, became colonel in April, 1863, and commanded his regiment at Chancellorsville, Gettysburg, and other engagements. On the night of Oct. 28, 1863, while leading a successful charge at Wauhatchie, in the movement to relieve the beleaguered army at Chattanooga, he received a wound, at first supposed to be mortal, which prostrated him for over a year. For his gallantry on this occasion, Gen. Hooker solicited for him promotion to brigadier-general, which was granted November 6; and on Aug. 13, 1865, he was brevetted major-general of volunteers for services during the war. Gen. Underwood was appointed surveyor of the port of Boston, Aug. 20, 1865, and held the office till July, 1886. He published a "History of the Thirty-third Massachusetts Regiment" (Boston, 1881).

Underwood, John William Henry, lawyer, born in Elbert County, Ga., Nov. 20, 1816; died in Floyd County, Ga., July 18, 1888. He received a classical education, studied law, and was admitted to the bar in 1834. From 1843 till 1847 he was solicitor-general for the Western Circuit, in 1850 was a member of the Constitutional Convention of Georgia, in 1857 was a member and Speaker of the Georgia Legislature, in 1859 was elected a representative in Congress, in which he served on the committee on expenses in the Navy Department, and in February, 1861, resigned his seat and returned to Georgia. He served for several years after the war as a judge of the Superior and Supreme Courts of Georgia, and was a member of President Arthur's tariff commission.

Van Winkle, Simon, merchant, born in Jamesburg, N. J., in March, 1820; died in New Brunswick, N. J., May 15, 1888. He received a district-school education, removed to New Brunswick after attaining his majority, became a marine captain, and obtained wide notoriety about 1844 as commander of the steamer "Antelope," which was run in opposition to Commodore Vanderbilt's vessels. Afterward he was a conductor of the New Jersey Railroad and Transportation Company, and then engaged in the coal business, subsequently establishing the present New York firm of Van Winkle & Stout. He became a member of the Baptist Church in 1851, and for sixteen years he was superintendent of a Sabbath-school. In 1873 he was elected treasurer of the New Jersey Central Baptist Association, and in 1887 vice-president of the State Baptist Convention. He was also a member of the board of managers of the Peddie Institute at Heights-town, N. J., and gave it at one time \$15,000. He erected a church for the colored Baptists of New Brunswick, gave \$10,000 to another, and various sums to struggling congregations through the State, supposed to aggregate \$100,000.

Vassar, John Guy, born in Poughkeepsie, N. Y., in 1811; died there, Oct. 27, 1888. He was a nephew of Matthew Vassar, Sr., founder of Vassar College, and on attaining his majority was admitted to partnership in his uncle's brewing firm. He was actively engaged in the business from 1832 till 1833, when ill health caused him to retire and seek restoration in foreign travel. He acquired great wealth by fortunate investments and inheritance. He gave an equal sum with Matthew Vassar to the Vassar College Laboratory, and, after Matthew's death, a handsome endowment; to the Vassar Home for Old Men, \$15,000; and to Vassar Institute, \$65,000, and an endowment. He bequeathed to Vassar College, \$180,000 in securities—\$40,000 for a chair of Modern Languages, \$40,000 for a chair of Natural History, \$10,000 for materials and apparatus for the laboratory, \$20,000 for a department of music, and \$20,000 for a department of art; \$25,000 for the completion of the Vassar Brothers' Hospital, and \$200,000 toward its permanent maintenance fund; \$17,000 for special hospital purposes; his College Hill property and \$18,000 for the establishment of an orphan asylum, and \$100,000 for a permanent fund; \$70,000 and two valuable pieces of

real estate to the Vassar Brothers' Home for Old Men; \$25,000, besides the property and \$30,000 previously transferred, to the Vassar Brothers' Institute; \$10,000 to the Baptist church of Poughkeepsie, and \$5,000 as an endowment fund; \$5,000 to the American Seamen's Friend Society of New York; \$1,000 each to the Young Men's Christian Association, Woman's Christian Association, Old Ladies' Home, House of Industry, Society for the Prevention of Cruelty to Animals, and the Associated Fire Department, all of Poughkeepsie; and \$500 each to fourteen churches, irrespective of denomination, in the city. Vassar College, Vassar Hospital, and Vassar Orphan Asylum are his residuary legatees, each of which will receive about \$500,000.

Wadleigh, Lydia F., educator, born in Sutton, N. H., in 1818; died in Brooklyn, N. Y., Oct. 27, 1888. She became so widely known as a teacher of girls and young ladies, that when the Twelfth Street Advanced School for Girls was organized in New York city, in 1866, she was summoned to take charge of it. In the face of bitter opposition, she agitated the establishment of a free normal school for girls, and by her work as a teacher showed the public that such an institution would be practical, effective, and appreciated. When she had accomplished her project, she took possession of the Normal College of New York with her 300 girl pupils, and entered upon a new career of usefulness, which terminated only with her death. During the summer she had made a tour of England, Scotland, and Wales. She was an exceptionally good classical scholar.

Walker, George, lawyer, born in Peterborough, N. H., in 1824; died in Washington, D. C., Jan. 15, 1888. He was graduated at Dartmouth College in 1842, studied law in the Harvard Law School, and was admitted to the bar in Springfield, Mass., in 1847. In 1857 he was elected to the State Senate, and gave special attention to banking and financial legislation during two terms. On his retirement he was appointed bank commissioner of Massachusetts. At the expiration of his term he resumed his legal practice, and in addition engaged in the banking business, becoming president of the Third National Bank in Springfield. In 1865 he went to Europe on a confidential mission for Hugh McCulloch, Secretary of the United States Treasury, and while there prepared an article on the public debt and resources of the United States, which was published in the principal newspapers of the financial centers. He was chairman of the finance committee of the Massachusetts Legislature in 1868, and in the following year went to Europe on business for his State. After this service he gave up law practice and removed to New York city. In 1879 he was sent to Europe by Secretary Evarts of the State Department, to investigate the subject of bimetallicism, and in 1880 was appointed United States Consul-General in Paris, where he served till June, 1887.

Wallack, John Lester, actor, born in New York city Jan. 1, 1820; died near Stamford, Conn., Sept. 6, 1888. His grandfather, William Wallack, was a noted English actor, as was also his father, James William Wallack, who, two years before the birth of Lester, as he was commonly called, became a resident of New York. From early childhood, young Lester was destined by his parents for the British army, and to this end he was taken to England to be educated. His examination was passed, and a commission granted to him; but he soon left the army for the stage. His first appearance in London was at the Haymarket Theatre, Nov. 26, 1846, where he was discovered by John Barnett, an American *impresario*, in 1847. "He is too good for London, and I'll take him over the pond," said Barnett, who at once offered him a large sum for a season in New York. He appeared at the New Broadway Theatre under the name of Mr. John Lester, and under this name he played till 1861, when he resumed his patronymic. Business at the New Broadway was beginning to languish, when the manager announced his intention to produce "Monte Cristo" with Lester in the principal rôle. Lester

objected strongly, saying: "I have never played a melodrama in my life." But remonstrances were useless, and he prepared himself for an effort which he feared would be a ridiculous failure. When, however, the ordeal came, he was so thoroughly himself

that the vast audience was completely carried away, and "Monte Cristo" created a *furor* that continued for a hundred nights, and made Mr. John Lester a popular favorite. The following season he went to the Bowery Theatre, where he brought out his own versions of the "Three Guardsmen" and the sequel to it, based on the novels of the author of "Monte Cristo."

He became a member of Burton's Company at the Chambers Street Theatre, where he began the performances of the old comedies with which his name and fame are associated. In 1851 he went to London for the purpose of inducing his father, then in feeble health, to come back to America. Regaining his health, the father in 1852 secured a lease of Brougham's Lyceum, on the corner of Broome Street and Broadway, and opened it as Wallack's Theatre. Into this enterprise young Lester threw his whole soul, figuring on the bills as Mr. John Lester, stage manager, and for nine years it was conducted with uniform success. In 1861 the senior Wallack established the theatre known then as Wallack's (now as the Star), on the corner of Broadway and Thirtieth Street. In 1864 the elder Wallack died. Lester, adopting his father's policy, gathered around him actors of acknowledged ability and good repute, and by his considerate treatment of every one in his employ won the esteem of the whole profession. Perceiving, in 1880, that the demand for a theatre farther up-town could be no longer resisted, he leased ground on the corner of Broadway and Thirtieth Street, and built a splendid play-house, said to be the most perfect in the world. This was opened on Jan. 4, 1882, and continued under his control till 1887. Early in the spring of 1888 Mr. Wallack, who had not appeared on the stage for several years, suffered very much from rheumatic gout, but in May of that year he was present at the most brilliant performance ever given in the city of New York, known as the "Wallack Testimonial." On that occasion he made a speech full of hope that he might again be able to tread the boards with those who had that evening done him so much honor, but that speech was his farewell to public life. Mr. Wallack married at an early age Miss Millais, a sister of John Everett Millais, the English painter. She, with three sons and one daughter, survived him. He was the author of eight plays: "The Three Guardsmen" (1849); "The Four Musketeers" (1849); "The Fortunes of War" (1851); "Two to One, or, The King's Visit" (1854); "First Impressions" (1856); "The Veteran" (1859); "Central Park" (1862); and "Rosedale" (1863).

Warren, William, actor, born in Philadelphia, Pa., Nov. 17, 1812; died in Boston, Mass., Sept. 21, 1888. He was the son of an English comedian of the same name, who came to the United States in 1796, and made his reputation as an actor mainly in Washington, Baltimore, and Philadelphia, becoming the manager of the Chestnut Street Theatre, in Philadelphia, and of the Holiday Street Theatre, in Baltimore. William Warren, the younger, was trained for a mercantile life. By the death of his father, in 1832, his mother was left in straitened circumstances; a benefit for her was arranged at the Arch Street

Theatre, and her son made his *début* as young Norval, the character in which his father, forty-eight years before, had first appeared before an audience. After acting for a time in Philadelphia, he joined a traveling troupe, managed by Joseph Jefferson, father of the comedian of Rip-Van-Winkle fame. In this troupe he played all kinds of parts, and sometimes two or three characters in the same piece, the circuit of the troupe being through the rough regions of the West and Southwest, and their theatre very frequently a barn, a log-cabin, or a deserted storehouse. In 1841 he made his first appearance in New York, at the old Park Theatre, and for more than four years played in that city and other places in the State of New York. In 1845 he appeared at the Strand Theatre, London, in Logan's farce "The Vermonter." This was his first and last appearance on the boards of any European theatre. On his return to America in 1846, he was engaged for the stock company of the Howard Athenæum, Boston, and from that time Boston was his home, and he the favorite actor of the town. From the Athenæum he went to the Boston Museum, where he remained, except during a starring tour in 1865, until he retired. The fiftieth anniversary of his entrance upon the stage occurred on Oct. 28, 1882, and in celebration of it a benefit was given at the Museum, on the stage of which he had appeared in 577 different parts, the total number of performances being 13,845. At this time he was seventy years of age, but still vigorous and pleasing. After the evening performance he was escorted to his home in Bulfinch Place, where a party of his friends awaited him. A superb "loving-cup," the offering of Joseph Jefferson, John McCullough, Lawrence Barrett, Edwin Booth, and Mary Anderson, was presented to him. From other sources came costly gifts of various kinds. Shortly after this benefit he retired with an ample fortune. Mr. Warren never married.

Wells, John Adam, philologist, born in Ropperviller, canton of Bitche, Lorraine, Dec. 3, 1810; died in New York city, Jan. 12, 1888. He was graduated in classics and natural sciences at Bitche College, and in chemistry and philosophy at Metz Seminary, became a Professor of French at the Imperial School in Vienna, and came to the United States in 1840, settling in Boston. In 1848 he went abroad to study medicine, in 1849 was graduated at the University of Brussels, and in 1850 settled in New York city, where he built up a lucrative practice. During his active professional career of thirty-eight years, he applied considerable time to literary and philological labor, became president of the American Philological Society, and published "Progress, Future, and Destiny of the English Language" and a book on obelisks. He was the author of the elaborate article on "Obelisks," in the "Annual Cyclopaedia" for 1884. At the time of his death he had in hand a work on medical practice, for which he had made extensive researches.

Wells, Clarke H., naval officer, born in Reading, Pa., Sept. 22, 1822; died in Washington, D. C., Jan. 28, 1888. He was appointed a midshipman in the United States Navy in 1840, served on the home and Mediterranean squadrons, entered the Naval Academy in 1845, and was graduated in 1846. During the Mexican War he took part in the attack on the castle of San Juan d'Ulloa at Vera Cruz, and the capture of Tampico and Tuxpan. He then made a voyage round the world, was promoted master, March 1, and commissioned Lieutenant in September, 1855, and was on duty on the "Niagara" when she assisted in laying the first Atlantic cable. At the outbreak of the civil war he was executive officer of the "Susquehanna," and with that vessel took part in the battle of Fort Royal, S. C., and the occupation of Fernandina, Fla. He was then transferred to the "Vandalia," in which he was engaged on blockade duty at Warsaw Sound and Charleston several months; was commissioned lieutenant-commander on July 18, 1862; was executive officer at the Philadelphia Navy-Yard in 1863; and commanded

the "Galena" in the Gulf squadron under Farragut, having the "Oneside" also under his orders at the battle of Mobile Bay in 1864. Subsequently he was attached to Admiral Porter's fleet in the James river till the close of the war. He was commissioned commander July 25, 1864, captain June 19, 1871, commodore Jan. 21, 1880, and rear-admiral April 1, 1884. He was authorized to accept the French decoration of the Legion of Honor from President Thiers, by act of Congress March 8, 1875.

Wallis, Edward Randolph, clergyman, born in Waterloo, N. Y., Jan. 10, 1830, died there, Oct. 19, 1896. He was graduated at Hobart College in 1850, was ordained deacon in the Protestant Episcopal Church, Dec. 30, 1857, taught in De Vaux College, and was ordained priest Sept. 12, 1858. In the following month he entered upon pastoral work at Red Wing, Minn., organized the parish of Christ Church there, and was its rector till his elevation to the episcopate in 1874. He was consecrated in New York city, Oct. 24, 1874, and received the degree of S. T. D. from Racine College, Wisconsin, the same year. In 1875, when the diocese of Fond du Lac was erected from the northern portion of his jurisdiction, he was continued in his old field by his own choice.

Westworth, John, lawyer, born in Sandwich, N. H., March 6, 1816, died in Chicago, Ill., Oct. 14, 1896. He was graduated at Dartmouth College in 1836, settled in Chicago, studied law, and in 1841 was admitted to the bar.

He was elected to Congress in 1843, and was re-elected four times. In 1867 and 1890 he was elected Mayor of Chicago. In 1861 he was a member of the board of education and of the committee to revise the State Constitution; in 1863-'64 was a police commissioner; in 1865-'67 was again a representative in Congress; and in 1880 was a vice-president of the

Republican National Convention, but was declared ineligible by the majority report, which confirmed the rule of representation by congressional districts. He gave Dartmouth College \$10,000, received the degree of LL. D. from it in 1887, and was elected president of its alumni association in 1889 and 1893. His height, six and a half feet, made him a conspicuous figure in Chicago, and he was familiarly spoken of as "Long John Westworth."

Westcott, Thompson, journalist, born in Philadelphia, Pa., June 5, 1820; died there, May 9, 1888. He began his career as law reporter on the "Public Ledger," where he remained until May, 1851; was editor-in-chief of the "Philadelphia Inquirer" from December, 1863, till May, 1869; was contributing editor of the same paper from May, 1869, till September, 1874; and was an editorial writer on the "Philadelphia Record" from 1884 till within a few months of his death. He was the oldest journalist in continuous work in Philadelphia, and was the author of a popular history of that city and other works.

Wight, Orlando Williams, physician, born in Centerville, N. Y., Feb. 19, 1824; died in Detroit, Mich., Oct. 19, 1888. He was educated at the Westfield Academy and the Rochester Collegiate Institute, taught Latin and Greek in Genoa Academy, and mathematics and languages in Aurora Academy, and when twenty-three years old removed to New York city. There he studied theology and was ordained,

but never connected himself with any religious denomination. He afterward studied medicine and qualified to practice. He removed to Milwaukee, Mich., became health officer of that city in 1877, and, on the reorganization of the health board of Detroit in 1882, accepted a similar office there, serving till 1888. He was an accomplished linguist, received the degree of LL. D. from Yale University, and published a large number of works, including "Lives and Letters of Abélard and Héloïse," "The Philosophy of Sir William Hamilton," translations of Comin's "Course of the History of Modern Philosophy" and "Lectures on the True, the Beautiful, and the Good," and twelve volumes of "Standard French Classics." He was also associated with Mary L. Booth in translating Henri Martin's "History of France."

Wilson, Allen Benjamin, inventor, born in Willott, Cortland County, N. Y., Oct. 18, 1824; died in Woodmont, Conn., April 29, 1888. He learned the cabinet-making trade, and while working in Pittsfield, Mass., perfected the sewing-machine that was afterward known as the Wheeler and Wilson. The most important of his inventions were the rotary hook and bobbin and the four-motion feed, and the latter has since been adopted in some form in all sewing-machines. His principal patents were granted Nov. 12, 1850; Aug. 12, 1851; June 18, 1853; and Dec. 19, 1854. While perfecting his machine in Pittsfield, he had a small workshop in a room that he and the late William D. Axtell used jointly. Mr. Axtell was his only confidant during his experimenting days and an important witness in court in the case subsequently brought to establish the validity of his claim to the invention. Mr. Wilson proposed locating in Pittsfield to manufacture the machine, but, as the town would render him no assistance by abatement of taxes, he removed to Bridgeport, Conn., where the Wheeler and Wilson Manufacturing Company was organized and began working under his patents.

Wister, Casper, physician, born in Germantown, Pa., in 1817; died in Philadelphia, Pa., Dec. 30, 1896. He was a great-grandson of John Wister, who emigrated from Heidelberg, Germany, and built the old Wister homestead in Germantown. While still a minor, he went to Texas and served under Samuel Houston in the State's war for independence. In 1847 he was graduated at the Medical Department of the University of Pennsylvania, and had since practiced with success in Philadelphia. His widow, the daughter of William H. Furness, has attained wide repute by her translations of popular German novels.

Worthen, Amos Henry, geologist, born in Bradford, Vt., Oct. 31, 1813; died in Warsaw, Ill., May 6, 1888. He was educated at common schools and at Bradford Academy. In 1834 he went to Harrison County, Ky., where he taught for a year, and in June, 1836, settled in Warsaw, Ill., which thereafter became his permanent home. At first he engaged in the forwarding and commission business, but subsequently became a dry-goods merchant. The Mormon difficulties of 1842 caused a depression of business, and, disposing of his interests, he went to Boston where he remained until 1844, when he returned to Warsaw. Meanwhile his attention had been directed to the geological features of the country in the vicinity of his home, and he studied especially the fossil remains preserved in the sedimentary rocks, and he also investigated the geode-beds in that vicinity. When he removed to Boston he took with him several barrels of specimens, chiefly geodes, which he exchanged there for a cabinet of sea-shells that he carried back to Warsaw. He found similar forms to these shells everywhere preserved in the limestone rocks of that locality, and he devoted his leisure to the exploration of the ravines and bluffs and every exposure of the subjacent rocks that could be reached. His collection grew rapidly, and he soon began that system of exchanges that made his cabinet of such value as to command the attention of James Hall, who secured from him many of the specimens with which he illustrated the first

volume of his reports on the geology of Iowa. The paleontology of that State was subsequently placed in Mr. Worthen's hands, by Prof. Hall, for description. On the organization of the geological survey of Illinois in 1851, he was appointed assistant in the work and served actively for three years. In 1855 he was assistant State geologist of Iowa, but in 1858 he became State geologist of Illinois, which place he then held until 1877, when the office was abolished. He devoted himself largely to active work in the field,

and engaged the services of eminent specialists in the different lines of science to work up the material collected; thus he assigned the mineralogy to Josiah D. Whitney, the description of plants to Leo Lesquereux, the vertebrate paleontology to John S. Newberry, the invertebrate paleontology to Fielding B. Meek, and the geology to Garland C. Broadhead and Edward T. Cox. This resulted in the publication of his reports on the "Geological Survey of Illinois" (8 vols., quarto, Springfield, 1865-'88). In 1877 he was appointed curator of the State Historical Library and Natural History Museum, which place he held until his death. During his term of office he gathered an extensive collection of minerals and fossils, which were arranged by him in the Natural History Museum, now in the State Capitol, and also furnished numerous collections to different colleges in the State. Mr. Worthen was a member of scientific societies, and in 1874 was elected a fellow of the American Association for the Advancement of Science. In 1872 he was chosen a member of the National Academy of Sciences. The value of his reports was widely recognized, and besides a few professional papers was his only literary work.

Wetherston, William Wallace, merchant, born in New York city in 1821; died there, Oct. 11, 1888. He received a collegiate education, studied painting in Rome, took part in the Italian revolution of 1848, and, returning to New York city in 1849, established himself as a painter. He became a founder of the Artists' Fund and the Sketch Club, and was an active member of the National Academy of Design. On the death of his father, a well-to-do merchant with a fondness for art, he relinquished his art career and applied himself to his father's large business. For over twenty years he had painted only for pleasure, yet in that time he lost none of his enthusiasm for art, and delighted in quietly extending pecuniary aid and other encouragement to struggling artists of merit.

Wyckoff, William C., journalist, born in New York city, May 29, 1832; died in Brooklyn, N. Y., May 2, 1888. He was educated at Forrest's Collegiate School, in 1854 was appointed corresponding clerk and mathematician to Beebe & Co., who were at that time the largest specie and bullion dealers in the United States.

From 1861 till 1866 he was chief clerk of the National Bank-Note Company, and in 1868 became day and scientific editor of the New York "Tribune." He was secretary of the Silk Association of America from 1878 till his death, and during that period was associate editor of the "Science News"; 1879-'80, special agent and expert of the United States Government for the statistics of the American silk industry for the census, 1890-'93; and editor-in-chief of the "American Magazine" from the latter part of 1886 till March, 1888. He published "The Silk Goods of America" (New York, 1879); "Silk Manufacture in the United States" (1883); and "American Silk Manufacture" (1887); and he had nearly completed a curious work on "Silk Legends."

Young, Thomas L., lawyer, born in Killybegh, County Down, Ireland, Dec. 14, 1832; died in Cincinnati, Ohio, July 20, 1888. He came to the United States when a boy, entered the United States Army by enlistment in the last year of the Mexican War, served till 1857, settled in Cincinnati, and was graduated at the Law School. In 1861, after the firing on Fort Sumter, he entered the army as a lieutenant of volunteers, was appointed captain in Frémont's body-guard in August, and assisted in raising the One Hundred and Eighteenth Ohio Regiment, of which he was appointed major and promoted colonel in 1862. He was brevetted brigadier-general for gallantry at Resaca in 1865. Returning to Cincinnati, he was admitted to the bar, appointed assistant auditor of the city, and elected a member of the Legislature in 1865, was elected recorder of Hamilton County in 1867, appointed supervisor of internal revenue in 1868, elected State Senator in 1871, Lieutenant-Governor of Ohio in 1875, and succeeded Gov. Rutherford B. Hayes in 1877. He was elected to Congress as a Republican in 1878 and 1880, and was appointed a member of the board of public affairs of Cincinnati in 1866, holding the office till his death.

Zoraga, Augustus, merchant, born in Martinique, Dec. 4, 1803; died in New York city, Dec. 23, 1888. He was the son of a wealthy ship-owner, was educated in London, England, and Balbec, France, returned to the West Indies in 1818, studied navigation on his father's vessels, and became a ship-owner and captain in 1820. During the next fifteen years he was engaged in the West India and South American trade, sailing his vessels himself, and making and losing three fortunes. While temporarily living in La Guayra, he became intimate with Gen. Simon Bolivar, encouraged his scheme for liberating the South American states from Spanish rule, and in 1831 made a voyage to the United States to procure munitions of war for him. In 1835 he established himself as a coffee-merchant in New York city, and owned and managed a fleet of thirty vessels, noted in their day as the "Z" line, till 1855, when he retired from business and sold his vessels. One of his ships, the "Antartic," rescued over 300 United States soldiers from the "San Francisco" when she foundered at sea, in 1854. He lived in retirement at Throgg's Neck from 1856 till 1863, and after that spent his winters in New York.

OBITUARIES, FOREIGN. Sketches of a few of the most eminent foreigners that died in 1888 will be found in their own alphabetical places in this volume, accompanied with portraits.

Arnason, Jon, an Icelandic scholar, born Aug. 17, 1819; died in Reykjavik, Iceland, Nov. 13, 1888. He was for many years librarian of the public library of Iceland, which was largely increased under his direction, and did much to preserve the memorials of the early history of Iceland. Dr. Arnason was famous for his great collection of Icelandic sagas. He published, with Grímsón, a collection of Icelandic tales, followed by a larger one of "Popular Legends of Iceland" (Leipsic, 1862-'64).

Baden, Prince Ludwig Wilhelm, second son of the Grand-Duke and of Princess Louise of Prussia, born

in Baden, June 12, 1865; died in Freiburg, Feb. 23, 1888. He was a lieutenant of the Uhlan Guards at Potsdam, and a favorite grandson of the Emperor Wilhelm. Leaving active service to pursue his studies at Freiburg, he was attacked by inflammation of the lungs, and died unexpectedly.

Bagallay, Sir Richard, an English lawyer, born in Stockwell (now a part of London), May 13, 1816; died in Brighton, Nov. 13, 1888. He was educated at Oxford, becoming a fellow of Caius College in 1839, and was called to the bar in 1843. He entered Parliament in 1865, was appointed Solicitor-General under Mr. Disraeli in August, 1868, was knighted, and went out of office with his party in December of the same year. When the Conservatives defeated Mr. Gladstone in 1874, on the issue of the abolition of the income-tax, Sir Richard Bagallay resumed the office he had held, but before the end of the year he succeeded the retiring Attorney-General, Sir John Karslake, and in the autumn of 1875 was appointed a judge of the Court of Appeal. He retired in 1885, having for some years taken the lead as senior justice in the chancery division.

Bargash ben Said, Sultan or Seyyid of Zanzibar, born in 1835; died in Zanzibar, March 27, 1888. He succeeded his elder brother, Majid, Oct. 7, 1870. Formerly he administered an extensive range of coast extending northward and southward from the island of Zanzibar, where he had his residence, and maintained an army to guard the caravan-routes into the interior. Great Britain compelled him to sign a treaty in 1873, pledging himself to suppress the slave-trade in his dominions. A few months before his death Germany obtained a lease or cession of the coast-line lying in front of the territory of the East African Company, and England obtained the grant of the coast giving access to her newly acquired possessions, leaving the Sultan only a fraction of his former dominion on the mainland. He was succeeded by his brother, who rules under the title of Seyyid Khalifa.

Bartsch, Karl Friedrich Adolf Konrad, a German philologist, born in Sprottau, Silesia, Feb. 25, 1832; died in Heidelberg, Feb. 20, 1888. He practiced poetical composition in German and Latin while at the gymnasium, and studied Germanic philology at Breslau and Berlin. Taking his doctor's degree in 1853, he went to Paris to study the poetry of the Troubadours, which he was one of the earliest to introduce to the attention of German students. In 1855 he became librarian of the German Museum in Nuremberg, and in the same year published a reading-book of Provençal literature, which was followed by a chrestomathy of Troubadour poetry and an edition of the songs of Pierre Vidal. He also edited "Karl," an epic poem by Stricker, an Austrian poet of the Thirteenth century. In 1858 Bartsch was called to the professorship of Modern and German Literature at Rostock, where he established a Seminary of German Philology. He became editor of "Germania," the periodical devoted to German antiquities, in 1863, and in 1871 went to Heidelberg as Professor of Early German Literature. His voluminous published works include critical editions of Old and Middle High German poets, many of whose works were first issued in print by him, and of old French romances, pastorals, and popular songs, poetry of his own, of which a collected edition has been published, and lectures and essays, some of which were republished in 1838.

Beard Charles, an English divine, born in 1828; died at Liverpool, March 9, 1888. He became a minister of the Unitarian church at Hyde, removing subsequently to Liverpool. In 1861 was published his "Port Royal, a Contribution to the History of Religion and Literature in France." He founded the "Theological Review," in 1864. His other important works were, "Outlines of Christian Doctrine" and a translation of M. Renan's "Lectures on the Influence of the Institutions, Thought, and Culture of Rome on Christianity" (1880). In 1883 he delivered the Hibbert Lectures in London and Oxford, taking for his sub-

ject "The Reformation of the Sixteenth Century in its Relation to Modern Thought and Knowledge."

Bergaigne, Abel, a French Orientalist, died in Paris Aug. 20, 1888. He held the chair of Sanskrit at the Sorbonne. His translation of the gnomic poem, "Le Bhāminvilāsa," was published in 1872. In 1879 he published a translation of the Buddhist drama, "Nāgānanda" with the Sanskrit text, and from 1878 to 1883, he issued three volumes entitled "The Vedic Religion, after the Hymns of the Rig-Veda." He translated into French the drama, "Sacountala," in 1884, and during the same year began the issue of "Études sur le Lexique du Rig-Veda," which was still in progress at the time of his death.

Brand, Sir Johannes Henricus, President of the Orange Free State, born in Cape Town, Dec. 6, 1823; died July 15, 1888. He was the son of the Speaker of the Cape House of Representatives, studied law in Leyden, and in 1849 began practice in the Supreme Court in Cape Town. In 1868 he became Professor of Law in the South African College, and in 1863 he was elected President of the Orange River Free State, to which post he was re-elected every five years until his death. It was owing to his influence that the Free State held aloof from the Transvaal war and has declined to enter into the plans of the Transvaal Republic for a union of the three South African republics, accepting in preference the railroad and tariff proposals of Cape Colony. In recognition of his friendly services to England, the Queen knighted him.

Cameron, Sir Duncan Alexander, a Scottish soldier, born in 1808; died at Blackheath, June 7, 1888. He entered the army at the age of seventeen; became a captain in 1833, major in 1839, colonel in 1854, major-general in 1859, and general in 1873. In the Crimean War he was present at the battle of Alma, and commanded the Highland Brigade at the battle of Balaclava. He was also actively engaged in the siege of Sebastopol, and on the assault on the Redan. He commanded the forces in the New Zealand war of 1863-'65, in the battles of Kalikara, Kohasoa, Tangiriri, and Gate Pan. From 1868 to 1875 he was governor of the Military College at Sandhurst. In 1878 he was retired.

Carnot, Lesare Hippolyte, a French statesman, father of the President of the French Republic, born in St. Omer, April 6, 1801; died in Paris, March 16, 1883. He was the son of the War Minister of the Revolution, and at the restoration accompanied his father into exile. Returning to France in 1823, he studied law, and became a supporter of the St. Simon sect, but seceded when Enfantin introduced the doctrine of free love. He was elected deputy in 1839, and after the revolution of 1848 became Minister of Education. He was forced to retire from this office in consequence of a circular that he addressed to schoolmasters, enjoining on them activity at elections. He was one of the three Republican deputies that refused to take the oath of allegiance after the *coup d'état*, and was unseated. He entered the Chamber again in 1863, but was defeated by Gambetta in 1869. In 1871 he was again elected deputy, and on the formation of the Senate in 1875 was elected a life member. He published biographies of his father and of Bishop Gregoire, and edited the memoirs of Barère.

Correnti, Cesare, an Italian statesman, born in 1815; died in Meina, Oct. 4, 1888. He took part in the conflicts for the deliverance and unification of Italy, and was Minister of Education in 1867 and again from 1869 till 1872, when he prepared and carried through Parliament the laws for pensioning elementary school-teachers and abolishing the theological faculties in the universities.

Corti Luigi, an Italian diplomatist, died in Rome, Feb. 18, 1888. He studied mathematics in Padua, took part in the Revolution of 1848, filling an office in the Sardinian Ministry for Foreign Affairs, and afterward serving in the ranks against Austria. In 1850 he entered the diplomatic service as secretary of legation at London. He rose to be counselor in 1862,

and filled in rapid succession the posts of *chargé d'affaires*, minister resident, and minister plenipotentiary in Brussels, Stockholm, Madrid, and Washington. In 1878 he presided over the Alabama Commission, and two years later he went to Constantinople as ambassador, where he so skillfully asserted the position of Italy in the complicated Eastern question that from that time forth he was the chief diplomatic authority in Italy in Oriental affairs. When the center of gravity in European diplomacy shifted in the direction of Constantinople, Curioli, in 1878, called Corti into his Cabinet as Minister of Foreign Affairs, and, when the Congress of Berlin was convened, while retaining his post in the Cabinet, he went as the Italian representative. Soon after the work of the Congress was finished he resigned on account of a ministerial crisis, having been severely attacked by Crispi and others of the Opposition, because he had secured no territorial advantage for Italy, and went to London as ambassador, in which post he remained until he was removed by the Crispi ministry. He was a member of the Italian Senate.

Crampton, Thomas Russell, an English engineer, born in Broadstairs, Kent, in 1816; died in April, 1888. After receiving a liberal education he became the pupil of an eminent mechanical engineer in London. He designed the first locomotive for the Great Western Railway, and between 1842 and 1847 he perfected the type of locomotive that bears his name, in which a long boiler, outside cylinders, and a low center of gravity are the essential features. In 1851 his locomotives won for him the grand medal in the Great Exhibition. He laid the first submarine cable between Dover and Calais in 1851.

Debray, Jules Henri, French chemist, born in France, July 26, 1827; died in Paris, July 19, 1888. He was educated in Paris, and received the degree of Doctor of Sciences in 1855. Subsequently he was called to the chair of Chemistry at the Charlemagne Lyceum, and was assistant at the Normal School. In 1868 he was advanced to the rank of *Maître de Conférences*. He was also assayer at the testing department of the mint. In 1877 he was chosen a member of the French Academy of Sciences, and was vice-president of the Society of Encouragement for National Industry. Prof. Debray was a member of the Higher Council of Public Instruction, and of the Consulting Committee of Arts and Manufactures. The greater part of his original work was performed in association with Henri Sainte-Claire Deville, notably, the investigation of the properties of the rarer platinum metals, such as osmium and iridium, which at that time were but little known, also in the difficult construction of the standard metre of platinum alloyed with iridium, adopted by the International Metric Commission, and in the development of Sainte-Claire Deville's ideas on dissociation. His publications include, besides his thesis for the doctorate on "Glucinum and its Compounds" (1855), "*Des Principales Sources de Lumière*" (1863); "*Métallurgie du Platine et des Métaux qui l'Accompagnent*" (2 vols., 1863); and "*Cours Élémentaire de Chimie*" (2 vols., 1865).

Dellius, Nikolaus, a German Shakespearean commentator, born in Bremen, Oct. 19, 1818; died in Berlin, Nov. 18, 1888. He studied at Bonn and Berlin, acquired a name as a scholar in Sanskrit and in the Provençal and English languages and literature, and was professor of those subjects at Bonn from 1855 until his death. Besides works on the Romance literature, he published "The Shakespeare Myth" (1851); an edition of Shakespeare's "Works" (7 vols., 1864-'61); a volume on the English theatre in Shakespeare's time (1858); and a "Shakespeare Lexicon" (1854).

Devon, William Reginald Courtenay, Earl of, an English nobleman, born April 14, 1807; died at Powderham Castle, near Exeter, Nov. 18, 1888. He was graduated at Oxford in 1828, entered the House of Commons in 1841 as a Conservative, became a Peelite, and was secretary to the Poor Law Board from 1852

till 1858. Subsequently rejoining the Conservatives, he entered Lord Derby's Cabinet in July, 1866, as Chancellor of the Duchy of Lancaster, exchanging that office in May, 1867, for that of president of the Poor Law Board, which he held until December, 1868. He was a promoter of railroad enterprises in Devonshire and in Ireland, and was a supporter of religious, educational, and philanthropic societies.

Doyle, Sir Francis Hastings, Bart., an English poet, born in Yorkshire, Aug. 22, 1810; died in London, June 8, 1888. He was graduated with honor at Oxford in 1832, was called to the bar shortly afterward, succeeded to a baronetcy in 1839, and was appointed receiver-general of customs in 1846. He was elected Professor of Poetry at Oxford in 1867, and in 1873 was re-elected. He published ballads and other poetical pieces, and in 1886 a volume of "Reminiscences and Opinions."

Duclos, Charles Theodore Eugene, a French statesman, born in Bagnères-de-Bigorre, Nov. 9, 1812; died in July, 1888. He was a prominent Republican in 1848, a frequent speaker in the Constituent Assembly, and for a time Minister of Finance. During the time of the empire he devoted himself to private business. He was a member of the National Assembly that was summoned to make peace with Germany, was made President of the Republican Left, was regarded as an authority on financial questions, was elected Vice-President of the Chamber, and in 1875 was chosen a Senator for life, and was looked upon in the Senate as a leader of the Moderate Left. In 1882, after M. de Freycinet's defeat, on the proposal of a joint expedition to Egypt with England, M. Grévy invited him, after the other Republican leaders had declined, to form a working ministry, which he successfully accomplished by inducing several Gambettists to accept portfolios.

Duncan, Francis, a British artillery officer, born in Aberdeen, Scotland, in 1835; died in London, Nov. 16, 1888. He was graduated at the University of Aberdeen, passed the artillery examination at the head of all competitors, rose rapidly in the army, and after holding several staff appointments was selected by Sir Evelyn Wood, in 1863, to reorganize the Egyptian artillery. He commanded the outpost at Wady Halfa in 1884-'85, and rendered important services in caring for the refugees that Gen. Gordon sent down the Nile from Khartoum. Col. Duncan was a Fellow of the Geological and other learned societies, author of "The English in Spain" and "History of the Royal Artillery," a founder of the St. John's Ambulance Association, and a prime mover in the establishment of coffee-palaces in garrison towns. He was elected to Parliament as a Conservative after his return from Egypt in 1885.

Easdale, William, an English sanitarian, born in Loches, Forfarshire, Scotland, in 1832; died in South Hampstead, England, Aug. 16, 1888. He was a civil engineer by training, was one of the designers of the Renkioi Hospital during the Crimean War, and made the first excavations on the site of Troy after the conclusion of hostilities. He was one of the founders of the Sanitary Institute of Great Britain, and in 1874 of the Cremation Society, the "Transactions" of which he edited. He published "Healthy Houses," a work that gave an impetus to sanitary reform, and subsequently a maturer work on "Sanitary Arrangements for Dwellings." In 1874 he published "Cremation of the Dead," a standard work on the subject.

Etex, Antoine, a French sculptor, born in Paris March 20, 1808; died there, July 8, 1868. He belonged to a family of artists, and in 1828 gained the prize of Rome with his "Hyalacinth slain by Apollo." He exhibited the colossal group of "Cain" in 1833. The power and originality displayed in this work caused M. Thiers to commission the sculptor to execute the groups representing "1814" and "1815" on the Arc de l'Étoile. He would not exhibit again at the Salon, because some of his works were rejected, until 1841, when he appeared with the "Tomb of

Géricault." Étex was distinguished as a painter, engraver, and architect, as well as in sculpture. His most important statues are "Léda," "Olympia," "Rossini," "The Cholera," "Blanche de Castille," "Charlemagne," "St. Augustine," and "Gen. Lecourbe." He executed busts of Émile de Girardin, Delacroix, and M. de Lesseps, and many medallions and portraits. In 1868 he was commissioned with the execution of the monument to Ingres at Montauban. His most famous paintings are "Christ Preaching," "Sappho," "Dante and Beatrice," "Jacob Blessing the Sons of Joseph," "The Flight into Egypt," "Romeo and Juliet," and "The Great Men of the United States (for the City Hall, New York). He drew the plans for a fountain and swimming-schools in the woods of Boulogne and Vincennes and for several monuments and tombs. He published an "Essay on the Beautiful" (1851) and a volume of art studies on "Pradier and Scheffer" (1859).

Eversley, Charles Shaw-Lefevre, Viscount, an English statesman, born in London Feb. 22, 1794; died at Heckfield Place, his seat in Hampshire, Dec. 28, 1888. He was graduated at Cambridge in 1815, and in 1819 was called to the bar. He married a daughter of Samuel Whitbread and niece of Earl Grey in 1817. In 1830 he entered Parliament, and in 1831 was returned as a Liberal for his own county, the northern division of which he represented after the passage of the reform act of 1832. His tact, courtesy, fine presence, and knowledge of business made him the choice of his party and of the country gentlemen for the Speaker's chair when it was vacated in 1839, and on May 27 he was elected by a majority of eighteen over the Tory candidate. The fairness, firmness, readiness, and good temper with which he directed the stormy debates of the period, with the aid of new forms of procedure of his own suggestion, led to his retention in the chair, on the motion of Sir Robert Peel in 1841. Mr. Shaw-Lefevre governed the proceedings of the House during the embittered contest over free trade, was continued in the chair as a matter of course when a general election placed Lord John Russell at the head of the Government in 1847. And when the Tories again came into power in 1852, Mr. Disraeli, as leader of the House, followed the precedent set by Sir Robert Peel, and Mr. Shaw-Lefevre was re-elected by acclamation. He resigned when the fourth Parliament over which he had presided was dissolved by Lord Palmerston in 1857, having served longer than any of his predecessors except Arthur Onslow. He was created Viscount Eversley, of Heckfield, in the county of Southampton, and devoted himself to farming and horticulture and to his duties as chairman of quarter sessions, colonel of Yeomanry, Governor of the Isle of Wight, and ecclesiastical commissioner.

Feytaud-Perrin, François, a French artist, born in Bey-sur-Seille in 1829, died Oct. 14, 1888. He studied in the École des Beaux Arts, and relinquished the contest for the prize of Rome on receiving the commission to paint the curtain for the Théâtre des Italiens, which still remains one of the most beautiful designs of its kind. He devoted himself at first to historical painting, which brought him prizes, but only small pecuniary rewards. His best works of this period are "La Barque de Caron" (1857), "Le Cercle des Voluptueux de Dante" (1859), "Fête Venetienne" (1861), "La Muse de Boulanger" (1863), and "Charles le Téméraire retrouvé après la Bataille de Nancy" (1865). At the time when this last was painted he had already begun to search for a more popular class of subjects. In 1864 he exhibited the "Grève," which was followed by "La Vanneuse," a work that was much admired. A painting representing oyster-drogers returning from fishing hange in the Luxembourg Palace. Others of his works of the later period are "Naufrage de l'Evening Star" (1868), "Melancholie" (1870), "Le Printemps" (1872), and "La Rosée" (1874). He was one of the Society of Ten, the members of which each year exposed their new works at the Hôtel Drouot.

Fleischer, Heinrich Leberecht, a German philologist, born in Schandau, Saxony, Feb. 21, 1801; died in Leipzig, Feb. 15, 1888. He was a pupil of De-Sacy's, and became the head of a large school of Arabic scholars in Germany. He began lecturing on Arabic at Leipzig in 1835. His most important works were editions of Abulfeda's "Historia ante-Islamica" and Beidhawi's "Commentary on the Koran." He was a foreign member of the French Institute.

Galliera, Duchess of, an Italian benefactress, born in Paris; died in Genoa, Dec. 10, 1888. She was the daughter of the Marquis de Brigueole-Sall, who represented Piedmont in Paris for many years under Carlo Alberto, and married the Duke de Galliera-Ferrari, the wealthiest of Italian speculators, who acquired ducal and princely rank by the purchase of the estate of Galliera, near Bologna, and that of Luccido, in the vicinity of Turin. After his death his widow carried out his wish to give 20,000,000 lire toward the harbor improvements of the city of Genoa and 6,000,000 lire for laborers' dwellings. Their son, renouncing the titles and wealth that his father had won by reprehensible practices, induced a Frenchman to adopt him under the French law, in order that he might take the name De la Renaudière-Ferrari, and became a Professor of German History at Brussels. The duchess gave the Palazzo Rosso, with its library and picture-gallery and a fund for their maintenance, to the city of Genoa, and founded there the San Andrea Hospital, at a cost of 18,000,000 lire, and the Hospital della Coronata, which cost 5,000,000 lire, besides charitable institutions of lesser importance. She provided a great number of dowries for girls, in all ranks of life, with the means of marriage. In her will she endowed orphan asylums and made bequests for numerous charitable institutions. The Galliera property, valued at 80,000,000 lire, she willed to the Duke de Montpensier. Large legacies that were destined for other members of the Orleans family are said to have been stricken from the will, owing to her dissatisfaction with the political course of the Comte de Paris. Her palace in Paris, worth 5,000,000 francs, she bequeathed to the Austro-Hungarian Government, on condition that it shall be maintained as the Embassy forever. The residuary estate was left to be divided in equal parts between her son and the Empress Friedrich of Germany.

Gleig, George Robert, an English author, born in Stirling, Scotland, April 20, 1796; died near Winchfield, England, July 9, 1888. He was the son of a Scottish bishop, was educated at Glasgow and entered Oxford, but left in 1812 to join the army, and served in the Peninsular campaign, and afterward in the American war. Returning to Balliol College, he took his degree, and was ordained in 1820. He was rector of a church in Kent, became chaplain of Chelsea in 1844, and two years later was appointed chaplain-general of the forces, a post that he held for nearly thirty years. He devised a scheme for the education of soldiers, and was appointed inspector-general of military schools soon after he became chaplain-general. Among his numerous published works are "The Subaltern," "Campaigns at Washington and New Orleans," "Lives of Military Commanders," "History of India," "History of the Bible," "The Story of the Battle of Waterloo," "Lives of Lord Clive, Warren, Hastings, and the Duke of Wellington," "Memoirs of Sir Thomas Monro," "Traditions of Chelsea Hospital," "Chronicles of Waltham," "The Country Curate," "Military History of Great Britain," and "The Great Problem."

Godin, St. Jean Baptiste André, a French philanthropist, born in 1817; died in Guise, Jan. 17, 1888. He was the son of a locksmith, and was a workman in early life. In 1846 he established an iron-foundry at Guise. He rapidly became wealthy, and in 1859 he erected a *familière*, with co-operative shops, a club, a theatre, and other institutions for his workmen. He was elected a deputy in 1871, but withdrew from political life in 1875.

Godwin, George, an English author, born in London, Jan. 28, 1815; died there, Jan. 27, 1888. He was the son of an architect and practiced the same profession, but devoted himself also to art journalism and literature. He became editor of the "Builder" in 1844. He published a standard treatise on "Concrete" (1835), which was translated into various languages; "The Churches of London" (2 vols., 1838-'39); "Buildings and Monuments, Modern and Mediæval" (1848); "History in Ruins" (1853); "London Shadows" (1854); "Town Swamps and Social Bridges" (1855); "Memorials of Workers"; and "Another Blow for Life." His later works dealt with sanitary and social reforms. He was the designer of St. Mary's Church, West Brompton, and other ecclesiastical and public buildings.

Gondinet, Edmond, a French dramatist, born in Laurière, March 7, 1829; died in Paris, Nov. 10, 1888. He was the author of "Lakmé," "Le Roi l'a dit," "Le Panache," "Gavaud," "Minard et Compagnie," "Le Plus Heureux des Trois," "Le Parisien," and other successful comedies. His co-operation and advice were sought by authors and managers, and made successes of many unrepresentable plays, such as "Le Club," which would never have been performed but for his assistance. His works are distinguished for wit and refined humor.

Gosse, Philip Henry, an English naturalist, born in Worcester in 1810; died in Torquay, Aug. 23, 1888. In 1827 he went as a merchant's clerk to Newfoundland, where he spent his leisure in collecting insects and making colored drawings of them and their transformations. He removed to Lower Canada in 1835, studied zoology and entomology three years, afterward traveled in the United States, and passed a year in Alabama in making drawings of insects. He returned to England in 1839, and prepared for publication the results of his investigations, visited Jamaica in 1844-'45, and from that time forward resided in England, and devoted himself chiefly to the microscopic study of the *Rotifera* and to collecting shells for public and private cabinets. He also pursued a series of investigations into the characters of the *Papilionidae*. Besides his works on natural history, both scientific and popular, he published several volumes of sacred and ancient history. Among his books are "The Canadian Naturalist" (London, 1840); "Birds of Jamaica" (with an atlas) and "A Naturalist's Sojourn in Jamaica"; "Introduction to Zoology"; "Monuments of Egypt" (1847); "Sacred Streams" (1850); "History of the Jews" (1851); "Assyria" (1852); "The Aquarium" (1854); "Manual of Marine Zoology" (1855); "Life in its Lower, Intermediate, and Higher Forms" (1857); "Actinologia Britannica: a History of British Sea Anemones and Corals" (1860); "The Romance of Natural History" (1860-'62); "A Year at the Shore" (1865); "Land and Sea" (1865); "Wonders of the Great Deep" (Philadelphia, 1874); and "The Mysteries of God: a Series of Expositions of Holy Scripture" (London, 1884).

Gregory, F. T., an Australian explorer, born in England; died in Brisbane, Queensland, Nov. 10, 1898. He accompanied his father to Western Australia in 1829, on the second ship that sailed from England with that destination. With his elder brother he explored the country east and north of Swan river in 1846. In 1857 he traced the Murchison river, and in 1860 was intrusted by the Government with an expedition from the northwest coast of Australia in search of cotton-lands, which led to the discovery of the pearl-fisheries of Western Australia, of rich pastoral lands, and of Ashburton and Fortescue rivers. He made a geological map of Western Australia, and was the first to call attention to the coal-mines of the colony. Settling in Queensland, he became Commissioner of Crown Lands and Postmaster-General, and was a member of the Legislative Council.

Heller, Stephen, a Hungarian musician, born in Pesth, May 15, 1815; died in Paris, Jan. 14, 1888. He studied in Vienna, and remained for a few years

in Augsburg, but settled in Paris in 1838, and remained there during the rest of his life. He was a composer of pieces for the pianoforte, which are distinguished for tenderness of sentiment and artistic finish. One of his collections is called "Promenades d'un Solitaire," referring to Rousseau, and another is "Blumen, Frucht, und Dornen Stücke," supposed to have been inspired by the works of Richter. He rarely appeared in concerts, and as a player he was only heard to advantage in the inspiring presence of his pupils and admirers.

Hesse, Prince Alexander, of a general in the Austrian army, born in Darmstadt, Germany, July 15, 1823; died near Jugenheim, Dec. 16, 1888. He was the third son of the Grand Duke Ludwig. Entering the Hessian service as lieutenant in 1833, he joined the Russian army as colonel, in 1840, after his sister's marriage to the future Czar Alexander II, rose to be a major-general, and took service in the Austrian army in 1852, a year after his marriage to Julie, daughter of Count Maurice Hauke. The ability and decision that he displayed on the field of Montebello in 1859 led to his promotion to the rank of lieutenant field-marshal. He distinguished himself likewise at Solferino, and was intrusted later with the command of the Seventh Corps. He returned to his home in 1863, and devoted himself to the education of his children and the gratification of scientific and artistic tastes till the war of 1866 called him to the head of the Eighth Army Corps of the German Federation. He has shared with Field-Marshal Benedek the blame for the defeat of Austria and the South German States, although tardy mobilization and incoherent organization, sufficiently explained the failure of his corps, made up as it was of six contingents of troops all trained on different systems, commanded by generals who were strangers to him. After the close of the campaign he returned to his country-seat, called Heiligenberg, where he spent the rest of his life. His eldest son, Prince Alexander of Battenburg, filled for seven years the Bulgarian throne, and his second son, Prince Henry, married in 1885 the Princess Beatrice, daughter of Queen Victoria of England.

Hesse, Friedrich Wilhelm, Landgrave of, born in Copenhagen, Oct. 15, 1854; died at sea, Oct. 14, 1888. He was traveling in the tropics, and while sailing from Batavia to Singapore he disappeared from his cabin in the night, and is supposed to have committed suicide. His successor as chief of the electoral or elder line of the house of Hesse is his brother Alexander Friedrich.

Holl, Frank, an English artist, born in London, July 4, 1845; died there, July 31, 1888. He was the son of Francis Holl, the engraver, studied painting in London, and in 1864 began to exhibit pictures on sentimental subjects in the Royal Academy. A portrait of Samuel Cousins, the engraver, was so strongly handled that the artist was at once overwhelmed with commissions, and for the last ten years of his life painted nothing but portraits. Among his sitters were Lord Spencer, John Bright, Mr. Chamberlain, Sir Frederick Roberts, Lord Wolseley, Mr. Gladstone, the Prince of Wales, and the Duke of Cambridge. His last work was a portrait of Cornelius Vanderbilt. He was made an Academician in 1884.

Houssens, Jean Charles, a Belgian astronomer, born in Mons, Oct. 7, 1820; died in Schärbeck, July 12, 1888. He succeeded Quetelet as director of the Brussels Observatory, which he thoroughly reorganized and kept up to the requirements of modern science. His "Uranométrie Générale," containing all the stars of both hemispheres that are visible to the naked eye, was based on observations that he made for several years near the equator. A second great undertaking was the "Bibliographie Générale de l'Astronomie," of which only two volumes have appeared, containing a methodically arranged catalogue of all treatises, works, and published observations in the field of astronomy, from the invention of printing to the year 1880. He also published a "Vademecum de l'Astronomie."

Howitt, Mary, an English author, born in Uttoxeter in 1799; died in Rome, Italy, Jan. 30, 1888. She was the daughter of a Quaker named Botham, and married William Howitt in 1823. In the same year they published a volume of verse, beginning a career of joint authorship that made their names widely known. In 1834 she issued a dramatic poem called "The Seven Temptations," which was followed by "Wood Leighton," a story. She wrote largely for young people, and while residing in Germany translated from the Danish and Swedish, and first made the works of Fredrika Bremer known to English readers. In 1851 she produced with her husband "The Literature and Romance of Northern Europe." Besides the works that they jointly wrote and her books for children, Mrs. Howitt produced a novel entitled "The Cost of Casgrwyn" and a "Popular History of the United States." They settled in Italy in 1872.

Jellet, John Hewitt, Irish mathematician, born in Cashel, Dec. 25, 1817; died in Dublin, Feb. 20, 1888. He was educated at Trinity College, Dublin, became a fellow in 1840, was appointed to the chair of Natural Philosophy in 1848, received the appointment of commissioner of national education in 1868, and in 1881 was appointed provost of Trinity College. He wrote a "Treatise on the Calculus of Variations" (1850); a "Treatise on the Theory of Friction" (1872); and several theological essays, of which the principal ones are "The Moral Difficulties of the Old Testament" and "The Efficacy of Prayer."

Juste, Theodore, a Belgian historian, born in Brussels, Jan. 11, 1818; died there, Aug. 12, 1888. He did much to popularize the history of his own country and of France, publishing more than fifty volumes. Among his most important works were a "History of the French Revolution, the Consulate, and the Empire" (1839-'40); "Charlemagne" (1849); "Charles V and Margaret of Austria" (1858); "History of the Revolt of the Low Countries" (1862-'68); "History of the States-General in the Low Countries" (1864); "The Belgian Revolution of 1830" (1873); and "Founders of the Belgian Monarchy" (20 vols., 1865-'74).

Key, Sir Astley Cooper, an English naval officer, born in 1821; died in Maidenhead, March 3, 1888. He distinguished himself in the Naval College, and obtained a lieutenant's commission, rescued the stranded "Gorgon" off Montevideo in 1844, was wounded in action and made a commander in 1845, became a captain in 1850, and took part in the capture of the forts of Bomarsund and the other operations of the Baltic campaign in 1855. In 1857 he commanded a fleet of gunboats at Calcutta during the Indian mutiny, and in 1858 he commanded a battalion of seamen at the capture of Canton. On returning to England, he served on the board to consider the state of the defenses that was called into existence on account of the building of the French iron-clad "Gloire." When the British Government began to build iron-plated vessels and to make heavy guns, Captain Key was made director-general of naval ordnance. In 1869 he was appointed superintendent of Portsmouth dockyard. In 1873-'76 he was president of the Naval College at Greenwich, holding the rank of vice-admiral. He was promoted admiral in 1878, and held the office of Principal Naval Lord of the Admiralty under two successive administrations.

Labiche, Eugène Martin, a French dramatist, born in Paris, May 5, 1815; died there, Jan. 23, 1888. He was educated at the Bourbon College, and entered the Law School, wrote *feuilletons* for the Paris papers, and in 1838 published a romance entitled "La Clef des Champs." His first attempt at dramatic authorship, the play of "M. de Croylin," in which he had the assistance of two other writers, was not a success. He applied himself, however, to the work, and developed a new kind of vaudeville farce, in which the central character is involved in a constant succession of laughable complications caused by the eccentric actions of the persons of the drama, producing absurdly improbable situations. His plays became ex-

ceedingly popular, keeping the stage at the Gymnase, the Palais Royal, and the Variétés longer than any contemporaneous works. In 1880 he was elected to the Academy. Among his more popular works were "Frisette" (1846); "Madame Larifa" (1849); "Un Garçon de chez Véry" (1850); "Une Femme qui perd ses Jarretières" (1851); "Le Chapeau de Paille d'Italy," Kavel's favorite piece (1851); "Otez votre Fille, s'il vous plaît" (1854); "L'Affaire de la Rue de Lourcine" (1867); "Le Voyage de M. Perrichon," a comedy of superior merit, written in collaboration with Edouard Martin (1860); "La Poudre aux Yeux" (1861); "Moi" (1864); "La Gagnotte" (1864); "Madame cat trop Belle" (1874); "Un Mouton à l'Entresol," with M. Second (1875); and "La Charge de Cavallerie," his last piece (1876). He published a complete edition of his works in 1878.

Latham, Robert Gordon, an English ethnologist, born in 1812; died in London, March 9, 1888. He was educated at Eton and King's College, Cambridge, of which he became a fellow, studied medicine, and for some years lectured on materia medica and medical jurisprudence at Middlesex Hospital. Before 1840 he had published books on Norway, and translated Tegner's "Frithiof Saga." Many ethnological and philological works followed, of which the most successful were "The Ethnology of Europe" (1852); and "The English Language" (1856). He prepared a revised edition of Johnson's "Dictionary" (1870).

Lee, Henry, an English naturalist, born in 1827; died in London in 1888. As naturalist to the Brighton aquarium he carried out experiments regarding the habits of the herring, the natural history and classification of white bait, and the migration of smolts. He published "Aquarium Notes," describing the life history of the fish under his care; "Sea Fables explained," "The Octopus," and "The Cuttle-Fish of Fact and Fiction."

Levi, Leone, an English statistician, born in Ancona, Italy, July 6, 1821; died in London, May 9, 1888. He went to England when a young man on a commercial enterprise, and finding difficulties in the commercial laws, he studied law, obtained admission to the bar, organized the Liverpool Chamber of Commerce in 1849, and similar institutions elsewhere, and by agitation secured the removal of some of the obstructions to foreign trade. He published a treatise on "The Commercial Law of the World" in 1850, and in 1852 was called to the chair of Commercial Law in King's College, London, which he filled for many years. He was the author of "Taxation: how it is raised, and how expended" (London, 1860); "History of British Commerce and of the Economic Progress of the British Nation, 1688-'78"; and "Work and Pay"; "War and its Consequences"; and other published lectures.

Levy, Joseph M., an English journalist, born in London in 1812; died in Ramsgate, Oct. 12, 1888. In the earlier period of his life he was engaged in various mercantile pursuits. He purchased the London "Daily Telegraph" about 1857, when it was a small sheet with insignificant circulation. Through his enterprise in obtaining interesting news and in engaging vigorous writers, he gained a circle of readers, especially among the Dissenters and Liberals of England, as large as any newspaper in the world commanded.

Lucan, George Charles Bingham, Earl of, an English general, born April 16, 1800; died Nov. 10, 1888. He entered the army in 1816, and while holding the rank of lieutenant-colonel volunteered to serve on the staff of Gen. Diebitsch in the Russian campaign against Turkey in 1828. He succeeded to the earldom in 1839, and was elected an Irish representative peer. When the war with Russia began, in 1854, Lord Lucan was a major-general, having reached that rank in 1851. He was placed in command of the cavalry, took part in the battles of Alma and Inkerman and the covering operations intrusted to the cavalry during the siege of Sebastopol, and was wounded at Balaklava; he and his brother-in-law, Lord Cardigan, being chiefly

responsible for the sacrifice of the Light Brigade on that day. He was made a major-general in 1858, and a field-marshal the year before his death.

Lapton, Bey, an English officer in the Egyptian service, died in Khartoum, in June, 1888. He went to Khartoum with Gen. Gordon, and when the place was taken by the Mahdi he was made a prisoner and put at menial tasks, but subsequently was given the technical direction of the arsenal.

Maclay, Mikuloh, a Russian explorer, born in 1846; died in St. Petersburg, April 15, 1888. He came of half Scotch and half Cosack parentage, was educated at the University of St. Petersburg and in Germany, went to the Pacific in 1866, and settled in an unexplored part of the coast of Papua, where he investigated the natural history and ethnology of the island, and acquired great influence over the natives. He endeavored to induce the Russian Government to annex the country of his adherents when New Guinea was divided between Germany and Great Britain, and returned to Russia with the object of founding a Russian colony among the Papuans and of composing an account of his travels. He had only half completed this work when he died.

Maine, Sir Henry James Sumner, an English jurist, born in 1822; died in Cannes, France, Feb. 3, 1888. He distinguished himself at Cambridge in classics and mathematics, became a tutor in Trinity College, of which he was afterward master, and in 1847 was elected Regius Professor of Civil Law. He published in 1856 an essay on "Roman Law and Legal Education," and contributed frequently to periodical literature, but published no important work till 1861, when his "Ancient Law" was issued. This work was based on the earlier labors of Savigny and other German jurists, but it was the first presentation in the English language of the study of early institutions by the method of comparative jurisprudence, and as such produced a profound effect in England and America. A year after its publication the author was appointed legal member of the Council of the Governor-General of India. He was the chief author of the reform of land tenures in India that was carried out under Lord Lawrence's administration. The understanding and respect for indigenous institutions which have been the aim of recent Indian administrations are largely attributable to the influence of Sir Henry Maine. After his return to England in 1871 he was appointed a member of the Council of the Secretary of State for India, and created a knight of the Star of India. He held the Corpus professorship of Jurisprudence which was created for him at the University of Oxford from 1871 till 1878, and from 1877 till his death filled the post of Master of Trinity, although his duties at the Indian Council, of which he was one of the most influential members, made it necessary for him to continue his residence in London. In 1885 he was offered the post of permanent Under-Secretary of State for the Home Department, but declined the appointment. Sir Henry Maine's experience in India enabled him to bring valuable original contributions to the science of the evolution of laws and political institutions. Soon after his return he published the first series of his "Village Communities in the East and West," embodying and supplementing the researches of Maurer, Nasse, and others. In 1875 appeared "Lectures on the Early History of Institutions," which was followed in 1883 by "Dissertations on Early Law and Customs." He delivered a lecture at Cambridge in 1875 on "The Effects of Observation of India on Modern European Thought," and in 1878 lectured at Oxford on "Modern Theories of Succession to Property after Death, and the Correctness of them suggested by Recent Researches." His latest work was "Popular Government," which originally appeared as a series of articles in the "Quarterly Review." The Whewell Lectures on "International Law" delivered at Cambridge in 1887 were published after his death.

Mandri, Pasquale Stanislas, an Italian statesman, born in Castel-Baronia, near Ariano, in 1817; died in Na-

ples, Dec. 26, 1888. He studied law in Naples, becoming a professor of the University. When the revolution of 1846 broke out, he espoused the side of the Parliament, and after the suppression of the disturbances went into exile. He settled at Turin, where he became Professor of International Law. He was one of the most earnest pioneers in the cause of Italian unity, and on the constitution of the kingdom he was elected to represent the circle of Ariano in Parliament. Taking his seat among the Left, he became one of the leaders of the party. When the Liberals gained the ascendancy, two years later, and the Rattazzi Cabinet was formed in 1862, Mancini was appointed to the Department of Public Instruction. The measure with which his name is identified is the abolition of capital punishment, which he carried in 1865, after having gained the reluctant consent of his political associates. Public opinion in Italy is not yet settled as to the expediency of this measure, which did away with the death penalty for all crimes except parricide and regicide. There was an apparent increase of crimes of violence, causing Parliament to repeal the law in 1874; yet it was again enacted in March, 1876, when Mancini was Minister of Justice in the Depretis Cabinet. He retired from office in 1878. He filled the chair of Criminal Jurisprudence in the University of Rome from 1872 till his death, and was the author of many legal treatises, one of which was a "Projet de Code Pénal Unique," the first part of which was presented to the French Academy of Moral Sciences in 1877.

Martinelli, Tommaso Maria, an Italian prelate, born in 1827; died in Rome, March 30, 1888. He was a member of the Augustinian order and one of the most learned theologians of the Catholic Church. He was created a cardinal in 1873, becoming Bishop of Sabina and one of the six cardinal-bishops, and was made Prefect of the Congregation of the Index. He received the largest number of votes at the first ballot for a successor to Pius IX, but exerted his influence in favor of Cardinal Pecci, who became Leo XIII.

Matout, Louis, a French painter, born in Charleville, Ardennes, in 1813; died in Paris, Jan. 30, 1888. He studied architecture at the École des Beaux Arts, but afterward turned his attention to historical painting. He was commissioned by the Government in 1846 to paint pictures representing the "Five Senses," and was sent to Rome for the purpose. Two of these he completed, which were exhibited in the Salon of 1848, together with "Le Dieu Pan au Milieu des Nymphes." He passed several years in Algiers, and on his return decorated the Paris Medical School, for which he was given the Legion of Honor in 1857. Among his works are "Minerve," "Danse Antique," "Ariane endormie" (1874), "Vénus Pandemos" (1876), "Saint Jacques le Majeur" (1877), "Jésus chez Simon le Pharisien" (1879), and "St. Louis" (1880).

Molbeck, Christian Kant Friedrich, a Danish poet, born in Copenhagen, July 21, 1821; died there, May 20, 1888. He published a succession of lyric and dramatic works, among which were a series of poems on "The Life of Jesus," "Barbarossa," "Dante," and other dramas, a collection of sonnets called "Madonna," another of lyrics, and a highly commended translation of Dante. In 1864 he became Professor of Danish Literature in the University of Kiel. Subsequently he was the literary critic of the "Dagblad" of Copenhagen, and in 1871 he became censor of the Royal Theatre, for which he composed "Ambrosius," "Pharaoh's Ring," and other plays, besides translations and adaptations. He was also the author of a biographical study on Ludvig Holberg, the Danish dramatist, and of a comedy that was written for the unveiling of a statue to that poet.

Mongredien, Augustus, an English economist, born in 1807; died near London, March 30, 1888. He was the author of "Free Trade and English Commerce," "History of the Free-Trade Movement," "Wealth Creation," "Trade Depression, Recent and Present," "The Western Farmer of America," and "England's Foreign Policy."

Monselet, Charles, a French author, born in Nantes, April 30, 1825; died in Paris, May 22, 1888. When seventeen years old he published "Marie et Ferdinand," a poem that was much admired, then wrote several pieces for the stage, and in 1846 settled in Paris, where he wrote romances, sketches, and critical articles for newspapers, was dramatic critic for the "Figaro" for some time, and edited a short-lived weekly called "Le Gourmet." In the long list of his books the most important are "Histoire du Tribunal Révolutionnaire" (1850); "Les Vignes du Seigneur," a volume of poems (1854); "La Lorgnette Littéraire," sketches of contemporary writers (1857); "Les Oubliés et les Dédaignés," portraits from the last century (1857); "La Franc-Maçonnerie des Femmes" (1861); "Les Frères Chantemesse" (1872); "Les Amours des Temps Passé" (1875); "Lettres Gourmandes" (1877); and "Le Petit Paris" (1879).

Morison, James Otter, an English author, born in London, April 30, 1831; died in London, Feb. 26, 1888. He spent several years in France before he entered Oxford University. With some of his associates, he identified himself with the Positivist Society after settling in London, where he contributed frequently to reviews and magazines. His longest work was "Life and Times of St. Bernard" (1863). He published a pamphlet on "Irish Grievances" in 1868; the lives of "Gibbon" and "Macaulay" to the "English Men of Letters" series; "Madame de Maintenon, an Étude" (London, 1885); and "Service of Man," a polemical statement of the Positivist arguments against Christianity (1886). Mr. Morison projected a great work on French history, and spent many years in study and preparation, but died before he could carry out his plan.

Mount-Temple, William Francis Cowper-Temple, Baron, an English official, born Dec. 13, 1811; died at Broadlands, near Romsey, Oct. 16, 1888. He was the second son of the fifth Earl Cowper. After serving a short time in the army, he became secretary to Lord Melbourne, then Prime Minister, was elected to Parliament for Hertford as a Liberal in 1834, and continued to sit for that borough till 1868. From 1846 till 1852 he was Lord of the Admiralty in Lord John Russell's administration, and in 1853 he resumed that office, which he exchanged in 1855 for that of president of the Board of Health. In 1857 he became the first vice-president of the Committee on Education, and held that office in conjunction with the other till the ministry resigned in the following year. In August, 1859, he became vice-president of the Board of Trade, and in the following February was appointed Commissioner of Public Works. In this post, which he held until 1866, he carried through the Thames-Embankment bill and made many improvements in public parks and buildings. He was member of Parliament for South Hampshire from 1868 till 1880, when he was created Lord Mount-Temple, having assumed the additional name of Temple in 1869 on inheriting the estate of Broadlands from his step-father, Lord Palmerston.

Musgrave, Sir Anthony, Governor of Queensland, born in Antigua in 1823; died in Brisbane, Oct. 9, 1888. He studied law in London, and returned in 1852 to Antigua to take a clerical appointment under his father, who was colonial treasurer. He became colonial secretary in 1854, filled a succession of posts in the colonial administrative service, became Governor of Newfoundland in 1864, and of British Columbia in 1869, was nominated Lieutenant-Governor of Natal in 1872 and Governor of South Australia in 1873, was thence transferred to Jamaica in 1877, and in March, 1883, succeeded Sir A. J. Kennedy as Governor of Queensland. He married in 1870 a daughter of David Dudley Field, of New York, who survives him.

Oliphant, Laurence, an English author, born in 1829; died in London, Dec. 23, 1888. He was the son of the chief-justice of Ceylon, who sent him home with a tutor at the age of twelve, and five years later set out on a tour through Europe with his son, who was

moved by his adventurous spirit to participate in the Italian revolutionary uprising, helping to burn the Austrian arms at Rome, and recklessly exposing his life at the bombardment of Messina. Returning to Ceylon as his father's private secretary, he made the acquaintance of Jung Bahadoor, and accompanied him on a journey to Nepal, which afforded material for a very successful book entitled "Katmandu." He practiced for a short time at the Ceylon bar, but his passion for travel and literary ambition brought him back to Europe. He set out for Lapland, and when the authorities objected to his scheme of exploration, made a journey in the south of Russia, which he described in "Crimea and the Shores of the Black Sea." He was invited to accompany the British army to the Crimea; but he yielded to the requests of Lord Elgin to go with him on his special mission to Washington, where his social charms were of service in bringing about the Canadian reciprocity treaty that was "floated in a sea of champagne." He then accompanied Lord Elgin to Canada, and was sent on a diplomatic tour among the Red river settlements as civil secretary and commissioner for Indian affairs, recording his experiences in "Minnesota and the Far West." After his return to England he published a pamphlet on the Crimean campaign, suggesting a diversion in the Caucasus, and offered to undertake a mission to Schamyl in Daghestan. Lord Stratford de Redcliffe, whom he accompanied to Sebastopol, would not countenance so perilous an undertaking. Oliphant was with Omar Pasha on his Transcaucasian operations, which he reported in a series of letters to the London "Times." When Lord Elgin went out as special ambassador to China he was accompanied by his former secretary, who was present at the exciting scenes of the mutiny when the expeditionary force tarried to aid the British in India, and in the Chinese war took an active part in the capture of Canton and other military operations besides assisting in the diplomatic negotiations. He went to Japan as *chargé d'affaires* in 1860, and in the attack on the British embassy was severely wounded. He published a "Narrative of Lord Elgin's Mission to China and Japan," and recounted other episodes of his adventurous life, such as his experiences with the filibusters of Central America and with Garibaldi and the Sicilian legion on the expedition to Montenegro, Albania, and the camps of the Polish insurgents, in his volumes entitled "Patriots and Filibusters" and "Incidents of Travel." In 1865 he entered Parliament, but attained no prominence as a legislator, and in 1868 resigned his seat. He was a contributor to "Blackwood's Magazine" while living in London, and mingled much in society, satirizing its follies and vices in the novel of "Piccadilly." Withdrawing to a peaceful retreat in the United States, he lost himself in spiritual speculations, and became a disciple of Thomas Lake Harris, submissively yielding to the religious direction of that enthusiast. He acted for some time as an agent and promoter of the Transatlantic Telegraph Company. He was in France during the war of 1870 as a correspondent of the "Times," and remained in Paris in the same capacity after the peace, until he was summoned to America by Harris. Embracing the chance that was opened by the Treaty of Berlin, permitting the interposition of Christian powers in Turkish affairs, for the realization of a cherished scheme for the colonization of Jews in Palestine, especially the impoverished and persecuted Jews of Roumania whom he had materially aided, he visited southern Gilead and the land of Moab, which he described as eminently suited for settlement in "The Land of Gilead." He resided for a long time at Haifa, where he befriended the Druses and dispensed justice as an Oriental magistrate. Among his later publications are "Traits and Travesties" (1882); "Altiore Peto," a novel (1883); "Irene McGillicuddy," a satire on American manners; "Masullam," a mystical novel (1886); and "Scientific Religion," an exposition of his spiritualistic faith.

Paley, Frederick Apthorpe, an English commentator, born near York in 1816; died at Bournemouth, Dec. 11, 1888. He was graduated at Cambridge in 1838, and continued to reside there till 1846, when he joined the Roman Catholic Church. In 1860, the religious disabilities of nonconformists having been partially removed, he returned to Cambridge, and was a tutor there till 1874, when he accepted the chair of Classical Literature in the Catholic University College at Kensington. He edited Homer, Hesiod, Theocritus, Demosthenes, and the Greek tragic writers for the "Bibliotheca Classica" and other series of classics, prepared the text of the Greek tragedies for the "Cambridge Texts," translated Æschylus, Pindar, and some of the works of Plato and Aristotle, and wrote many papers on archeology and botany.

Palgrave, William Gifford, an English traveler, born in London, Jan. 24, 1828; died in Montevideo, Uruguay, Oct. 1, 1888. He was the son of Sir Francis Palgrave, the historian, and brother of Reginald F. D. Palgrave, clerk of the House of Commons. He left Cambridge University after a brilliant academic course, to serve with the army in Bombay, but resigned his commission after a short time, and a few years later entered the Jesuit order, and in due time became a priest. In this capacity he was engaged in southern India, in Rome, and in Palestine and Syria, where he acquired such mastery of the Arabic language and manners that he was able to pass himself off as a Mohammedan. He was summoned to France in 1860 to report to the Emperor Napoleon concerning the Syrian massacres, and was then commissioned by the French Government to penetrate into central Arabia, where he had many narrow escapes from death. An account of his journeyings in the disguise of an Arabian physician he published under the title "Narrative of a Year's Journey through Central and Eastern Arabia, 1862-'68" (London, 1865). He was employed in 1865 by the English Government to negotiate for the release of prisoners in Abyssinia, afterward held consulships in various Oriental cities, was consul-general to Bulgaria in 1878, and thence transferred to Bangkok in 1879, and from 1884 till his death was British minister to Uruguay. His other literary works were "Essays on Eastern Questions" (1872); "Hermann Agha, an Eastern Narrative" (1872); and "Dutch Guiana" (1876).

Palisi, Joseph, Italian artist, born in Lanciano, Italy, in 1818; died in Paris, Jan. 7, 1888. He studied art in his native city, and in 1844 went to Paris. He was eminent as a landscape painter, and was also successful in his representations of animals. His principal works are "Storm in the Abruzzi" (1845); "Shepherd guarding his Flock" (1848); "Goats ravaging the Vines" (1855); "Cattle in the Valley of the Tonque" (1859); "Drove of Oxen in a Storm" (1864); "Souvenir of the Landes" (1872); and "In the Vicinity of Pæstum" (1873).

Péna, Henri de, a French journalist, born in Paris, April 25, 1830; died there, Jan. 27, 1888. He came from a noble Bearn family possessing a castle near Pau. He was educated at the Collège Rollin, became a writer for the "Événement" and other papers. In 1858, for a paragraph in the "Figaro" reflecting on the ball-manners of the military, he was overwhelmed with challenges, which he offered to accept in alphabetical order. He was wounded severely by his second adversary, and went to Mannheim for surgical treatment, publishing on his return "Une Mois en Allemagne," which had been preceded by a similar volume of Portuguese sketches. Piquant sketches of Parisian life that he wrote for the "Indépendance Belge" were reproduced in book-form under the titles of "Paris Aventureux," "Paris Vieux," etc. He founded the "Paris" and when it expired the "Paris Journal," which was merged in the "Gaulois." In 1871 he was wounded in a manifestation of Friends of Order who had organized with the intention of disarming the Commune. He was the editor-in-chief of the "Gaulois" and always an ardent Roy-

alist. He wrote a life of the Comte de Chambord under the title of "Henri de France." In 1886 he published a novel called "Trop Belle," and in 1887 "Rose Michon," which has been dramatized.

Plançon, Jules Smile, French botanist, born in Gauges, France, March 21, 1823; died in Montpellier, April 2, 1888. He was educated at Montpellier, studied botany under Auguste Saint-Hilaire, and received the degree of doctor of sciences in 1844. To perfect his botanical knowledge, he went to England, where until 1849 he was officially connected with the botanical garden at Kew. In 1845-'51 he was connected with the faculty of the Horticultural Institute at Ghent, in Belgium. He then received the degree of doctor of medicine, and was professor at the College of Medicine and Pharmacy in Nancy until 1858, when he became Professor of Botany in the scientific faculty at Montpellier and also of the Pharmaceutical College in that place, of which he subsequently became president. He had charge in 1878 of the scientific mission to America to study the disease that was threatening the extinction of the grape-plant. Corroborating his previous observations, he demonstrated that the trouble sprang from an insect, *Phylloxera vastatrix*, which he had discovered in 1888, a native of this country, which preyed upon the root. He also found that some varieties of the vine in America were not subject to the attacks of the insect. In addition to many papers in scientific journals, he contributed to the "Revue des Deux Mondes," and he published "Le Phylloxera de 1854 à 1873" (Paris, 1874); "Les Vignes Américaines" (1875); "La Truffe et les Truffières Artificielles" (1875); and "L'Eucalyptus Globus" (1875).

Pollakoff, Samuel, a Russian financier, born in Orscha, Lithuania; died in St. Petersburg in April, 1888. He was the son of poor Jewish parents, was a butcher, then clerk to a wood-seller, learned Russian, went to St. Petersburg in 1850, and in ten years became very wealthy. Before he died he was the owner of five great railroads, constituting a fourth of the entire Russian system. In 1885 he elaborated a plan for consolidating the railroads under the direction of the state, and was sworn a member of the Czar's Privy Council. He founded the first school of railroad engineering and the Russian School of Mines, the Alexander II College and dormitories for students at the University of St. Petersburg, a large hospital at Moscow, technical schools for women, and many other institutions. His public benefactions before 1888 amounted to 6,000,000 rubles.

Price, Bonamy, an English economist, born in Guernsey, May 22, 1807; died in London, Jan. 8, 1888. He obtained a double first in classics and mathematics and was graduated at Oxford in 1829, became master of mathematics at Rugby, and was a teacher in that school till 1850, when he removed to London and devoted his attention to business. In 1868 he was elected Professor of Political Economy at Oxford as the successor of Thorold Rogers, whose theories were condemned by the Conservative majority. He published a course of lectures on "The Principles of Currency" (1869); a work entitled "Of Currency and Banking" (1876); and a course of his lectures entitled "Chapters on Practical Political Economy" (1878), besides several that preceded it. As a member of the Duke of Richmond's Royal Commission on Agriculture he appended to the minority report some remarks which called forth Mr. Gladstone's comment that he alone "had the resolution to apply, in all their unmitigated authority, the principles of abstract political economy to the people and circumstances of Ireland, exactly as if he had been proposing to legislate for the inhabitants of Saturn."

Prjevalsky, Nicholas M., a Russian traveler, born in the district of Smolensk in March, 1839; died in Central Asia between Tashkend and Vernejo in October, 1888. He entered the Russian army, and in 1867 volunteered for service in eastern Siberia, where he spent two years in exploring the Usuri valley, publishing

on his return to St. Petersburg a volume of "Notes on the Ussuri." In 1870-'78 he traveled in western China, and in 1876 left Russia for the purpose of determining the position of Lob Nor. He was absent a year, during which he explored the Tarim valley, discovered the true Lob Nor, and reached the Altyn Tagh mountains. In April, 1879, he undertook a journey to Tibet, but was deserted by his guides after having penetrated to the Tsaidam steppe and the region of the Koko Nor, and made his way back amid extreme perils and hardships. In 1885 he made another unsuccessful attempt to reach Lhasa, and on his return traversed Chinese Turkistan. When the British began their war against the Tibetans in Sikkim, Gen. Prievalsky was placed at the head of a strong expedition, and ordered to reach Lhasa at all hazards. Already weakened by years of hardship, he was unable to endure the fatigues and exposure of another journey, and died on the route to Vernoje, where he intended to equip his party.

Questel, Charles Auguste, a French architect, born in Paris, Sept. 18, 1807; died Feb. 15, 1888. He received his artistic training at the École des Beaux Arts. His first great work was the cathedral at Nîmes, which was begun in 1838 and completed in 1849. He designed an elaborate fountain in the same city. The library and museum at Grenoble were built after his plans. He was the architect of the Historical Monuments Commission who directed the restorations of the amphitheatre at Arles and the Pont du Gard. He was architect to the palaces of Versailles and Trianon under the Empire, served as a member of the Council on Public Buildings, and was a professor in the École des Beaux Arts.

Rothemann, Baron Ferdinand von, a German geographer, born in Karlsruhe in May, 1833; died May 8, 1888. He studied at Breslau and Berlin, was attached for some years to the Geological Survey of Austria, and in 1860 accompanied Count Eulenberg's Prussian expedition to Eastern Asia as geologist, visiting Formosa, the Philippine Islands, Java, Celebes, Siam, and Indo-China. He then crossed the Pacific, and traveled through California and the Sierra Nevada. In August, 1868, he returned to China, which he traversed in various directions during the next four years, studying the orography and geology of the country, and also its productions and commercial possibilities. Returning to Germany after twelve years of absence, he spent the remainder of his life in working out the results of his researches in China. He was appointed Professor of Geography at Bonn in 1879, and in 1888 was transferred to Leipzig, which he quitted in 1886 to accept the same chair at Berlin. Of his great work on "China" three volumes have been issued. His atlas, in which he reconstructed the map of China from his own observations and from the best native information, is not completed.

Rose, Sir John, a British financier, born in Aberdeenshire, Scotland, in 1820; died in Caithness-shire, Aug. 26, 1888. He emigrated to Canada at the age of sixteen, served as a volunteer during the rebellion, studied law, and in 1843 was admitted to the bar of Lower Canada. He became Solicitor-General in 1857, and entered Parliament as a member for Montreal. In 1859 he was Minister of Public Works. He took part in the Canadian conference in London as the representative of the Protestants of Lower Canada, and assisted in framing the act of federation. In the Government of the new Dominion he was appointed Minister of Finance, and during the three years that he held the office he prepared measures providing for the defense of the Dominion and assimilating the fiscal laws. He was intrusted with several diplomatic missions to settle difficulties that arose with the United States between 1860 and 1870 on the Oregon boundary question, reciprocity, the fisheries, copyright, and extradition. In 1870 he resigned his post in the ministry, and went to England to engage in commercial business. He was at once sent to Washington by the English Government on a confidential mission in con-

nection with the "Alabama" and fishery disputes, and assisted in negotiating the Washington Treaty, receiving the honor of a baronetcy for his services. He has since served on several commissions dealing with affairs relating to British America. On his return to England he promoted Canadian railroad enterprises, became a partner in the banking firm of Morton, Rose, & Co., and when he left it connected himself with the London and Westminster Bank enterprise and with an insurance company. He died suddenly while hunting deer.

Roussau, Emilie, French chemist, born in Clamency, France, April 4, 1815; died in Paris, Feb. 4, 1888. He came to Paris when he was twenty-three years old, and became assistant to Mateo José Bonaventura Orfila, of the medical faculty. Subsequently he assisted Jean Baptiste Dumas, and also taught in several of the public colleges. In 1843 he resigned his appointments and entered upon the manufacture of chemical products. At his laboratory, and with his aid, Henri Sainte-Claire Deville and Jules Henri Debray developed the industrial production of aluminium. He made investigations on the use of pyrites for the manufacture of sulphuric acid, introduced a new method for the production of charcoal, and devised the sugar process known by his name.

Rutland, Charles Cecil John Manners, Duke of, born May 16, 1815; died at Belvoir Castle, March 4, 1888. He was elected to Parliament in 1837, after receiving his education at Cambridge, and represented Stamford for fifteen years. He became one of the principal members of the Protectionist party, and in February, 1848, was chosen to succeed Lord George Bentinck as its leader. He only held the place till the former leader was willing to resume it, and when Lord George Bentinck died in September, 1848, the Marquis of Granby was unwilling to take on himself again the onerous duties, which Mr. Disraeli then assumed. From 1852 till he succeeded to the dukedom in 1857, Lord Granby represented North Leicestershire. He had no sympathy with the progressive Toryism of the Young England party, and did not scruple to criticise the Government when Mr. Disraeli and his own brother, Lord John Manners, were in office. He clung to the principle of protection when Lord Derby and Disraeli abandoned it, and even to the end of his life he lost no opportunity to advocate it, more than once drawing upon himself the sarcastic rebukes of Lord Beaconsfield. The Duke of Rutland was a courageous defender also of the most extreme and unpopular Conservative views regarding land, the ballot, and all other subjects. His successor in the title is Lord John Manners, Chancellor of the Duchy of Lancaster in Lord Salisbury's Cabinet.

Salomon, Louis E. F., ex-President of Hayti, born in 1815; died in Paris, Oct. 19, 1888. He was of pure negro blood, and long occupied a prominent place in Haytian politics. The revolution of 1879 resulted in his election to the presidency for seven years, at the end of which he was re-elected; but the revolution of August, 1888, drove him into exile.

Sarmiento, Domingo F., an Argentine statesman, born in 1811; died in Asuncion, Nov. 2, 1888. He was first director of a school in the province of San Luis, went to Chili in 1831, returned in 1836 and founded a female school at San Juan, but settled in Chili in 1840, where he greatly promoted education, publishing many school-books, editing educational periodicals, and founding schools and colleges, one of these being the normal school at Santiago. He also established a daily newspaper, the first one published in Santiago. In 1845 the Chilean Government sent him to the United States and Europe to study the common-school systems of those countries, and on his return he published a work on "Popular Education." Returning to the Argentine Republic, he became Minister of the Interior, then colonel commanding the military forces, afterward governor of the province of San Juan, and from that post was transferred to the Ministry of Public Instruction. In 1864-'68 he was Minister to

the United States. His election to the presidency of the republic recalled him to Buenos Ayres. During his administration, which lasted until October, 1874, the war with Paraguay was brought to a successful termination, several insurrections were quelled, railroads and telegraphs were constructed, immigration was promoted, foreign trade was developed, a national college was established in every province, the National Observatory was founded, and many institutions were introduced, mainly modeled after those of the United States. Among his literary works the principal were "Manual of the History of Ancient Peoples," "Civilization in Barbary," "Travels in Europe, Africa, and America," and a "Life of Abraham Lincoln."

Schleyer, Johann Martin, the inventor of Volapük, born in Constance, Baden, in 1831; died there, Oct. 10, 1888. He was a priest of the Catholic Church. His successor as chief of the Volapük Society is M. Kerckhoffs, teacher of languages in the Commercial High-School at Paris. (See VOLAPÜK, in the "Annual Cyclopædia" for 1887, page 794.)

Storm, Theodor, a German novelist, born in Husum, Holstein, Sept. 14, 1817; died in Hadamarsch, July 4, 1888. He left Schleswig-Holstein in consequence of the revolt of the Holsteiners against Denmark in 1853, in which he took part, entered the Prussian service, became a district judge in Potsdam and Heiligenstadt, and returned in later years to practice law in his native town. He was the author of many tales characterized by dreamy melancholy and love of nature. He also wrote lyric poetry that was equally expressive of North German thought and sentiment.

Tommasi, Salvatore, an Italian physician, born in 1814; died in Naples, July 14, 1888. He took part in political movements while yet a schoolboy, and was obliged to flee from the Romagna, began his medical studies in Aquila, was appointed Professor of Pathology in the University of Naples at the age of thirty-three, and in a few years he reached a pre-eminent position in his profession as physician, university teacher, and medical author. The half-dozen warring schools or tendencies in medicine then existing in Italy were harmonized under his lead. His works contain the germs of many discoveries and theories that have been developed later by other men in other countries. In 1846 he published "Fisiologia Umana," a work that had a great influence on medical thought in Italy. Taking part in the revolution of 1848, he was elected to the Neapolitan House of Deputies and twice condemned to prison in that year, and finally exiled. He lived in poverty at Turin with other political refugees, whom he served as physician, until after the deliverance of Lombardy he was appointed a professor at Pavia. When the Bourbon monarchy was overthrown and the clinical hospital that he had suggested was established in Naples, he returned thither in 1863, and continued to work indefatigably during the remaining years of his life, devoting his remarkable skill to the good of the poor, and imparting his knowledge and enthusiasm to thousands of students.

Tuson, Richard Vine, English chemist, born in England in 1832; died near London, Oct. 31, 1888. He received his scientific training at University College, London, where he made a specialty of chemistry. Subsequently he served as assistant in chemistry at Galway, and later at St. Bartholomew's Hospital in London. He was afterward elected lecturer on chemistry at the Medical School of Charing Cross Hospital, where he continued until 1860, when he was chosen Professor of Chemistry at the Royal Veterinary College in London, which place he held until his death. Besides various scientific papers in technical journals, he edited and partly rewrote the sixth edition of Cooley's "Cyclopædia of Practical Receipts" (2 vols., New York, 1879).

Walsh, John Henry, an English author, born in 1810; died in London, Feb. 12, 1888. He was originally a physician practicing in Worcestershire, and settled in

London in 1855, when he wrote a book on "The Greyhound," and shortly after its appearance published under the pen-name of Stonehenge the first edition of "British Rural Sports," which has obtained great popularity. From 1857 until his death he was the editor of the "Field." He published among other works "The Dog in Health and Disease" (1869); "Dogs of the British Islands," which passed through several editions, and "The Modern Sportsman's Gun and Rifle" (2 vols., 1882-'84).

Weber, Georg, a German historian, born in Bergzabern, Feb. 10, 1808; died Aug. 19, 1868. He studied theology at Erlangen, left that university to devote himself to history and ancient literature at Heidelberg, and after residing in Switzerland, Italy, and France, where he engaged in historical researches, he became a teacher in 1839 of the Bürgerschule at Heidelberg, of which he was afterward principal till 1872. His principal works are: "Calvinism in its Relations to the State" (1838); "History of the English Reformation" (1853); "History of German Literature" (1855); "Germany in the First Stages of its Historical Existence" (1862); "Manual of Universal History" (1866); "Survey of the World's History" (1866); "History of the People of Israel and of the Birth of Christianity," with Dr. Holtzmann (1867); and "Universal History of the Peoples of the World" (15 vols., 1857-'84).

Wroblewski, Siegmund, a Russian chemist, born in 1848; died in Craoow, Austrian Poland, April 16, 1888. He was educated at the Universities of St. Petersburg and Strasburg, and in 1882 became Professor of Experimental Physics at the University of Craoow. This place he held until his death, which was the result of an explosion in his laboratory. He became noted for his experiments on the so-called permanent gases, and with his colleague, Dr. Z. Olozewski, he determined the critical temperatures and pressures of oxygen and nitrogen. From similar researches, he proved that carbonic acid did not form the hydrate, and he succeeded in solidifying both carbon bisulphide and alcohol. The insulating properties of liquid oxygen and nitrogen were determined by him in 1885, and in 1886 he determined the density and properties of liquefied air, and established the fact that atmospheric air, when in a liquid state, behaves as a mixture. The atomic volumes of these gases were also first accurately determined by him, and his results have been confirmed. In 1887 he proposed that the relations of the physical properties of gases be represented by curves showing the rate of change of pressure with temperature for different densities, instead of by isothermal lines. These curves he called "isopycnics," and from the inspection of them new and important conclusions were deduced.

Zuckertort, J. H., a German chess-player, born in Riga in 1842; died in London, England, June 20, 1888. He studied in Berlin, settled in London in 1872, devoting himself to the game of chess, and in 1880 became editor of the "Chess Monthly." In the international tournament at Paris in 1878 he took the first prize, and in 1883 he defeated Steinitz in the international tournament at London, and was accounted the champion of the world until the same player won a match of a series of games played in New York, St. Louis, and New Orleans in 1886. Dr. Zuckertort was unequalled as a blindfold player.

OHIO. The State Government in 1888 was: Governor, Joseph B. Foraker (Republican); Lieut.-Governor, William O. Lyon; Secretary of State, James S. Robinson; Auditor, Ebenezer W. Poe; Treasurer of State, John C. Brown; Attorney-General, David K. Watson; Board of Public Works, William M. Hahn, C. A. Flickinger, Wells S. Jones; Commissioner of Common Schools, Eli T. Tappan; Judges of the Supreme Court, Selwyn N. Owen, Mar-

shall J. Williams, William T. Spear, Thaddeus A. Minshall, Franklin J. Dickman; Clerk of the Supreme Court, Urban H. Hester.

Finances.—The report of the Auditor shows the balance to the credit of the general revenue fund, Nov. 15, 1887, to have been \$65,864; receipts during 1888, \$3,310,716.75, this amount including \$100,000 advance draft drawn on the taxes collected for the fiscal year 1889; disbursements, \$3,849,328.13; balance in treasury, Nov. 15, 1888, \$26,752.71. The sinking-fund began the fiscal year with \$102,294.08; receipts, \$894,511.77, this amount including \$10,000 advance draft drawn on the taxes collected for 1889; disbursements, \$995,357.16; leaving balance \$1,448.69. The State common-school fund had on hand \$54,620.56; receipts, \$1,690,961.04; disbursements, \$1,654,057.50; balance, \$91,524.10. During the year the public funded debt of the State was reduced by the payment of loans to the amount of \$619,800. On Nov. 15, 1888, the public funded debt of the State was \$3,046,665, of which \$5,000 was foreign loan not bearing interest, \$1,665 domestic debt, and the remainder 8-per-cent. loans payable July 1 yearly in sums of \$250,000, except in 1899, \$240,000, and 1890, \$300,000. The irreducible State debt (trust funds) was \$45,638,127. The aggregate of local debts in the State was \$56,780,024.40, divided as follows: Counties, \$7,110,343.24; cities, \$44,881,672.15; incorporated villages, \$1,937,403.24; townships, \$451,784.76; special school districts, \$2,448,871.01. There has been a steady annual increase of local indebtedness, mostly in counties and cities.

Property and Taxation.—The value of all taxable real estate and personal property in the State, according to the consolidated tax-duplicate of 1888, is as follows: Real estate in cities, towns, and villages, \$477,604,587; real estate not in cities, towns, or villages, \$722,459,608; chattel property, \$581,994,601; total taxable values, \$1,732,058,796. The taxes levied for 1889 on that basis are: Total State purposes (2 9-10 mills), \$5,020,384.81; county purposes, \$8,594,293.55; township, city, school, and special taxes, \$19,318,687.33; levies for all purposes, \$32,933,365.69; per-capita tax on dogs—for the sheep fund, \$203,840; total taxes, including all the delinquencies of former years, \$35,481,758.62.

Railroads.—The Commissioner of Railroads, in his annual report, gives the railroad mileage of entire lines that pass through Ohio, and places the Ohio mileage at about 10,227½ miles; of this amount about 467½ miles are in the hands of receivers, and of this total amount of track 6,960½ miles are laid with steel rail and 2,059½ miles with iron. The total train mileage was 91,420,208, and of cars 1,489,572,169. The total tonnage of freight yielding revenue was 87,080,555; total number of cars, 136,581. The average of passengers killed to number carried is 1 to 3,334,196. The number injured was 1,453, an average of one to 582,161 carried.

Centennial Celebrations.—The centennial of the settlement of Ohio and organization of the Territory of the Northwest was celebrated on four different occasions during the year. The first was at Marietta, to commemorate the landing at that place of the first colony, April 7, 1788. A second celebration was held in July at the same place to commemorate the organization of civil government in the new territory. Each celebration occupied several days and was participated in by representatives of other States, orations being delivered by Hon. George F. Hoar, of Massachusetts, Hon. John Randolph Tucker, of Virginia, Hon. William M. Evarts, of New York, and Hon. John W. Daniel, of Virginia, in addition to a number of speeches by eminent citizens of Ohio. The centennial celebration of the Ohio valley and Central States was held at Cincinnati and took the form of an exhibition showing the progress and present prosperity of those States. The exhibition was opened July 4 with exercises in which the States of Kentucky, Pennsylvania, Indiana, and Nebraska were represented by their respective executives and other officials and distinguished citizens. The Ohio Centennial celebration was at Columbus, taking the place of the annual State fair. It was opened September 4 with speeches by State and visiting officials, the States of Massachusetts and Connecticut being officially represented, and continued to October 19.

White Caps.—Ohio had been free from organized bands of outlaws that under various names had troubled neighboring States, but on the night of November 17 there suddenly appeared in the town of Sardinia, Brown County, a band of from thirty to fifty horsemen, wearing masks and calling themselves "White Caps," who went to the house of Adam Berkes, dragged him from his bed and severely whipped him, on the ground of immoral conduct. The local authorities failing to take cognizance of the crime, appeal was made to the Governor. In a message to the Legislature, the Governor said an investigation was immediately instituted, by which it was disclosed that a regular organization had been formed of a secret, oath-bound character, with a growing membership, including some prominent respectable and responsible citizens; and that they were proceeding upon the theory that they would be strong enough to take the law into their own hands, defy the local authorities, and bring prosecutions against their members to naught if attempted. The declared purpose of the order was to protect society from petty crimes and misdemeanors for which, it was alleged, the tedious and expensive processes of the law afforded no adequate relief. It was manifest that the organization must be broken up at once. But it was difficult to ascertain who its members were, and to command the evidence necessary to support a prosecution and secure a conviction. No one that belonged to the organization could be found who could be, under

any circumstances, induced to give testimony that would implicate a fellow-member. It was finally determined to accept as better than the uncertainty of waiting for testimony, which otherwise might never be obtained, and then resorting to legal proceedings, with the uncertainties, delays, and expenses always attendant thereon, the following agreement, which was signed by members of the order as settlement of the whole matter, viz.:

We, the undersigned, members of the organization known as White Caps, do hereby agree and bind ourselves to procure the immediate disbanding of said organization; and we do further promise and agree that there shall be no more raids, whippings, threatenings, intimidations, terrorizing, or other violation of law of any kind whatsoever by said organization or the members thereof, acting either together or separately; and we further agree that if this stipulation on our part be violated by any members of said organization who may refuse to be controlled by us we will, in such event, do all in our power to give information and to aid the officers of the law in bringing them to justice.

To all who in good faith sign and keep the above agreement the State hereby promises immunity from further proceedings against them.

The Governor informed the Legislature that "in pursuance of this agreement, the organization has been permanently disbanded and the State has been put in possession of all the evidence necessary to secure convictions should there be any necessity to resort to the courts."

The Legislature.—The sixty-eighth General Assembly began its session on January 2, with a Republican majority of 14 in the Senate and 20 in the House. The proceedings were more than ordinarily devoid of interest although a large number of laws were enacted, most of them of a local or minor character. The adjournment took place April 16. The liquor-tax law was amended by increasing the annual tax to \$250. A board of pardons to advise with the Governor was created. Instruction as to the effect of alcoholic drinks and narcotics on the human system was ordered to be made part of the common-school course.

Political.—The Republican State Convention was held at Dayton, April 18, 19, and the Democratic at the same place, May 15, 16. The platforms of both parties were of the usual character. Prohibition and Union Labor Conventions were also held, and full State tickets placed in the field. There were but three State offices to be filled. The result of the election, November 6, was as follows: For Secretary of State, Daniel J. Ryan (Republican), 417,510; Boston G. Young (Democrat), 395,522; Walter S. Payne (Prohibition), 24,618; George F. Ebner (Union Labor), 3,452. For Judge of Supreme Court, Joseph P. Bradbury (Republican), 415,862; Lyman R. Critchfield (Democrat), 396,236; John T. Moore (Prohibition), 24,569; Grandison N. Tuttle (Union Labor), 3,422. For member of Board of Public Works, Wells S. Jones (Republican), 416,248; James Emmitt (Democrat), 395,869; James W. Penfield (Prohibition), 24,532; William W. Dunipace (Union Labor), 3,435.

ONTARIO, PROVINCE OF. By the retirement, through ill health, of the Hon. T. B. Pardee, Hon. A. S. Hardy became Commissioner of Crown Lands, and J. M. Gibson, of Hamilton, took his place as Provincial Secretary. A new portfolio of Agriculture was created, and Charles Drury was appointed minister. The reconstructed ministry is as follows: Lieutenant-Governor, Sir Alexander Campbell; Attorney-General, Oliver Mowatt; Commissioner of Public Works, C. F. Fraser; Commissioner of Crown Lands, A. S. Hardy; Provincial Treasurer, A. M. Ross; Minister of Education, G. W. Ross; Provincial Secretary, J. M. Gibson; Minister of Agriculture, Charles A. Drury.

Finances.—The financial statement for the year ending Dec. 31, 1888, showed a total expenditure of \$3,586,248, and a total revenue of \$3,589,423, leaving a surplus on the year's operations of \$51,172. The surplus assets of the province over all liabilities are estimated at \$6,784,649.

Dairy Industry.—The latest statistical abstract issued by the Provincial Bureau of Industries gives figures connected with the dairy industry of Ontario. The approximate product of cheese for three years was:

YEARS.	Pounds.	Value.
1885	71,209,719	\$5,781,500
1886	68,721,621	5,598,818
1887	65,688,656	6,918,918

The quantity of milk used and the number of cheese-factories are given as follow for the same period:

YEARS.	Milk used.	No. of factories.
	Lbs.	
1885	738,487,254	759
1886	654,708,248	770
1887	601,384,579	787

The returns for butter are approximately as follow: 1885, 353,347 pounds, valued at \$69,583; 1886, 823,853 pounds, at \$160,797; 1887, 1,186,576 pounds, at \$230,022.

Legislation.—The second session of the fifth Legislature opened Jan. 25, 1888. The principal measures adopted were: An act establishing manhood suffrage in provincial elections, doing away with property qualification, and granting the voting privilege to every male citizen twenty-one years of age, a British subject by birth or naturalization, and not disqualified by being a criminal undergoing sentence in jail, or a lunatic, or receiving state aid as a pauper; an act creating a new Cabinet office, that of Minister of Agriculture; a measure giving municipalities the power to pass by-laws regulating the hours at which shops shall be closed, the by-law to be passed on application of three fourths of the occupiers of shops, the hour of closing in the evening to be not earlier than seven o'clock, and providing a system of penalties for violation of the law; a series of resolutions adopted at a conference

in Quebec, in 1887, of representatives of the provinces of Canada, suggesting amendments to the Federal Constitution, assented to by the British Parliament in July, 1887.

Miscellaneous.—The public events of 1888 included the formal opening, on May 24, of the Canadian Park at Niagara Falls; the election of four members to the Legislature, through the deaths of the sitting members, the result being a net loss of one seat to the Government, which is sustained in the Legislature by a majority of 25 in a house of 91 members; the decision by the Imperial Privy Council of Great Britain, in a lawsuit appealed from the Supreme Court of Canada, awarding to Ontario a large tract of timber-lands, the ownership of which was in dispute, owing to their being Indian lands.

OREGON. State Government.—The following were the State officers during the year: Governor, Sylvester Pennoyer (Democrat); Secretary of State, George W. McBride; Treasurer, George W. Webb; Superintendent of Public Instruction, E. B. McElroy; Chief Justice of the Supreme Court, William P. Lord; Associate Justices, William W. Thayer, and Reuben S. Strahan.

Finances.—The following is a statement of the indebtedness of Oregon on Jan. 1, 1889: Principal, \$35,705.96; interest, \$25,058.24; less funds applicable to its payment, \$31,351.54; net indebtedness, \$29,411.66. All other indebtedness is nominal and fully provided for. It is expected that the debt will have been extinguished before the year is over.

The expenditures in 1887-'88 were as follow:

Total amount of warrants drawn during term for expenditures during term	\$760,656 58	
Deficiencies Jan. 1, 1889, for which warrants are yet to be drawn	16,372 66	\$777,029 19
Deduct expenses previously incurred	\$45,740 70	
Expenditures for public buildings	85,629 66	
Expenditures on account of trust funds and funds arising from special tax	65,466 99	
		196,837 85
Ordinary expenses		\$590,191 84

The expenditures for 1887-'88 were swollen by the outlay of about \$25,000 on account of the Railroad Commission and the Fish Commission, with the outlay thereunder, to which the previous term was not subjected.

Education.—The following is a statement of the total amounts of the common-school funds on January 1 of each year: 1885, \$868,735.16; 1887, \$1,059,409.01; 1889, \$1,756,700.90; increase of funds in 1885-'86, \$190,637.85; and increase of funds in 1887-'88, \$697,291.89. The interest arising from the fund during the past few years has been distributed as follows:

YEAR.	Per capita.	Total.
1885	\$0 75	\$50,046 75
1886	90	74,571 80
1887	1 00	87,217 00
1888	1 25	105,217 50

There were also on Jan. 1, 1889, in the other trust funds, the following amounts: Agricultural College fund, notes and cash, \$100,511.80; Agricultural College fund, due on certificates of sale, \$12,627.57; total, \$113,139.37; University fund, notes and cash, \$80,733.71; University fund, due on certificates, \$1,472.32; total, \$82,206.93. The money belonging to the foregoing trust funds is loaned on land at one third of its appraised value.

Agricultural College.—This institution has an endowment of upward of \$100,000, the proceeds of the sale of the Agricultural College lands given by the General Government to the State. It also receives \$15,000 a year from the Federal Government under the Hatch act. It has a commodious building, erected by the citizens of Corvallis. All that is needed to give it a fair start is to furnish it with the necessary land for a farm for which the Legislature has been asked to appropriate \$10,000. When this shall have been received and the free scholarships abolished, the Agricultural College at Corvallis, like the State University at Eugene, will be able with frugal management to enjoy a prosperous existence without being a pensioner upon the tax-payers of the State. By authority of law, the Governor has accepted the college buildings and grounds for and in behalf of the State, and as such property is under State control, and in the peaceable possession of the State by virtue of deeds of title and possession, no suit can be maintained against the State in regard to it.

State University.—From the report of the president of the regents of the State University it appears that the institution now has, besides the Villard fund of \$50,000, an endowment of over \$80,000 arising from the sales of University lands, and that over 15,000 acres of such lands remain unsold. Of the 110 pupils in attendance at the university during the present year, 56 paid tuition and 54 had free scholarships. With its present endowment, and with the abolition of free scholarship, says the Governor, the State University can now prosper without imposing any further tax upon the people. Certain funds belonging to the State University at Eugene have been diverted for the support of a law school at Portland; but there is no authority of law for such diversion of the funds of the State University. It is suggested that the State should provide funds for the support of a school of medicine at Portland; but there is now in that city a college of medicine, built by private individuals, at a cost of \$25,000.

The Salmon-Fishery.—Concerning these interests, the Governor in his message says:

Positive prohibitory enactments should be made against the taking of salmon in the Columbia river and its tributaries by either fish-traps or fish-wheels. There ought to be but one mode provided by law for the taking of salmon, and that mode should be the one open to all classes, and by which no monopoly or undue advantage can be had. It is due to those who will come after us that the fishing interest of our State

should not be entirely destroyed by the greed and avarice of those now engaged in it. The records of the Supreme Court of our State disclose the fact that a paid lobby was employed by those interested in the monopolies of traps and fish-wheels during the last Legislature, and although such a lobby may again be employed, it is to be hoped that the Legislature will change the law by which the monopoly of the men owning fish-traps and fish-wheels may be destroyed. The last Legislature created a board of three fish commissioners, one of whom is denominated president, and the law creating such board declared that "it shall be the duty of the president to see that all laws for the propagation, protection, and preservation of food fishes in the public waters in the State of Oregon, whether entirely or partially within the State boundaries, are enforced." The Constitution of the State declares one of the prerogatives of the Governor to be that "he shall take care that the laws are faithfully executed." If the Legislature can thus rightfully invest a commission of its own creation and selection with the powers conferred upon the Governor by the fundamental law of the land, then our Constitution is a mere wanton fraud, and your supporting oaths a hollow mockery. The commission has been rather a detriment than an aid in the en-

forcement of the law. No further need for its existence remains since the Clackamas hatchery has passed under the control of the Federal Government, and no other suitable location in Oregon, as the board asserts, can be found. Besides, it can be questioned if it is any more just for the State to expend money in the establishment of fish-hatcheries in order that cannery men may have plenty of fish for future use than it would be to furnish seed wheat to the farmer in order to insure him future great harvests.

Political.—In June, 1888, a State election was held for the Chief-Justice of the Supreme Court, and William P. Lord was elected by 88,008 votes, against 26,836 for John Burnet. At the same time, Binger Herman was chosen, as a Republican, to Congress. The Legislature consists of twenty-one Republicans and nine Democrats in the Senate, and fifty-one Republicans and nine Democrats in the lower branch. The vote in the Presidential election was as follows: Gen. Harrison, 38,291; Mr. Cleveland, 26,522; Gen. Fisk, 1,677; Mr. Streeter, 368.

P

PARAGUAY, a republic in South America. (For details of the census taken in 1886, see "Annual Cyclopædia" for 1887.)

Government.—The President is Gen. Patricio Escobar, whose term of office will expire on Nov. 25, 1890. His Cabinet is composed of the following ministers: Interior, Col. Meza; Foreign Affairs, J. S. Decoud; Finances, H. Uriarte; Justice and Public Worship, M. Maciel; War, Col. Duarte. The United States Minister for Paraguay and Uruguay, resident at Montevideo, is John E. Bacon; the American Consul at Asuncion is Frank D. Hill. The Paraguayan Consul-General in the United States is John Stewart.

Army.—All citizens capable of bearing arms between the ages of twenty and thirty-five are liable to be enrolled in the army, but the strength of the latter has for economical reasons been reduced to 623 men. In case of war the National Guard is mobilized.

Navy.—The fleet consists of a screw-steamer registering 440 tons, carrying 4 guns, having 6 officers, and manned by 86 sailors, and of two small steamers doing river service.

Finances.—The foreign debt, contracted in 1871-'72, amounted in 1888 to \$4,250,000, bearing 2 per cent. interest. After Jan. 1, 1892, the interest is to be 8 per cent., and after Jan. 1, 1897, 4 per cent. The home debt amounts to \$1,068,250, the sinking-fund having canceled \$398,000 in 1887. The revenue collected in 1887 was \$1,609,080; money collected for land sales effected \$329,146; total, \$1,938,176; deducting therefrom the expenditure, which, together with the interest on the foreign and home debt, did not exceed \$1,400,508, there remained a surplus of \$537,673. The Government still owed the National Bank \$47,200 in 1886; this money has been refunded,

VOL. XXVIII.—43 A

and a total internal debt reduction effected in 1887 of \$298,200.

Communications.—The number of items of mail matter in 1887 reached 438,846, the receipts amounting to \$9,695. Aside from the 72 kilometres of telegraph running parallel with the Paraguari Railroad, there is the one from Paso de la Patria to Asuncion, which communicates with the world's cable system. The number of messages forwarded in 1887 was 31,857, the receipts aggregating \$22,511.

The telephone service at Asuncion has been in operation since 1884, when a seven years' privilege was extended to the company. The lines measure 1,000 kilometres, the number of subscribers being 175.

There is in running order the line from Asuncion to Paraguari, 72 kilometres, and building the line from Paraguari to Villa Rica, 80 kilometres. There were 257,668 passengers in 1887, the expenses being \$111,337, and the receipts \$161,550. Some 25 kilometres of tramway are in operation at the capital.

Commerce.—The imports increased from \$1,805,741 in 1886 to \$2,221,750 in 1887, and the exports from \$1,620,779 to \$1,715,853. The number of vessels that entered the ports of Montevideo and Buenos Ayres with cargoes intended for Paraguay was 820 in 1886, of which 228 were steamers; the tonnage being 60,408.

Education.—Besides the National College at Asuncion, attended by 209 students, there are 9 schools for boys in the capital and 7 for girls, attended respectively by 1,148 and 792 pupils. The number of professors at the National College is 21. The library contains 2,538 volumes, and had 2,626 readers in 1886.

Government Land Sales.—The proceeds of public lands during 1887 were \$1,408,128, of which \$485,489 were for cash and the remainder

payable in installments between 1888 and 1891, both inclusive. The sale of Paraguay tea lands produced \$73,938, of which \$18,900 cash; the Government also collected \$19,465 from renting tea-lands which it owns. The Government granted in 1888 to a Netherland society extensive concessions for the creation of tobacco-plantations.

Colonies.—The Government possesses two colonies, San Bernardino and Villa Hayes. The first-named extends along the shore of Lake Ipacará near the Aregua Railroad depot, and comprises 25 square leagues of exuberantly fertile land. The number of colonists was 384 in 1886, 69 new comers having arrived in that year. The second is in the Obaco, on the banks of the river, five miles from the capital, and the number of families composing the colony in 1886 was 31, only a dozen settlers having joined it during the year. Government agricultural lands are worth \$2 to \$4 the "cuadra"; private lands, \$10 to \$12.

German-Paraguayan Treaty.—The treaty of commerce and navigation, signed between Germany and Paraguay on July 21, 1887, was ratified and exchanged on May 18, 1888.

PATENTS. General Statistics.—The statement of the work of the United States Patent-Office for the year ending Dec. 31, 1888, will be found in the following summary:

Applications for patents for inventions.....	24,718
Applications for patents for designs.....	971
Applications for reissues of patents.....	118
Total number of applications relating to patents..	25,797
Caveats filed.....	2,351
Applications for registration of trade-marks.....	1,314
Applications for registration of labels.....	739
Disclaimers filed.....	8
Appeals on the merits.....	1,252
Total.....	5,554
Total number of applications requiring investigation and action.....	41,351
Patents issued, including designs.....	20,430
Patents reissued.....	86
Trade-marks registered.....	1,050
Labels registered.....	327
Total.....	21,893
Patents expired during the year.....	11,687
Patents withheld for non-payment of final fee.....	2,981

In inventiveness the State of Connecticut led the list with one patent for every 820 inhabitants; the District of Columbia came next, with one for every 830 inhabitants; and Massachusetts was third with one for every 944 inhabitants. North Carolina was least inventive, only one inhabitant out of 25,450 securing a patent. In total patents issued New York was first with 3,634, which, however, only represented one to 1,398 inhabitants, giving her the eighth place in inventiveness. Among foreign countries England as usual has the best record, 523 American patents being issued to her citizens; Germany is next with 355 patents; and France is third with 131 patents; Brazil, the Canary Islands, China, Newfoundland, Queensland, Turkey, and Wales have one patent apiece.

The year 1888 in number of patents issued ranks fifth; it is surpassed in numbers by the years 1885 (24,233 patents), 1886 (22,508 patents), 1883 (22,383 patents), and 1887 (21,477 patents). The immense increase in business is shown by an examination of the records of past years. In 1837 only 436 patents were issued, and in 1855 for the first time the number exceeded two thousand (2,012 patents).

Commissioner's Report.—This document, dated Jan. 31, 1889, is published in the "Official Gazette" of the United States Patent-Office of Feb. 12, 1889. In addition to the usual interesting statistical tables, it contains various recommendations for legislation, among other changes suggesting the repeal of section 4887 of the patent laws. This is the section limiting the duration of an American patent to the shortest term of a foreign patent granted for the same invention to the same inventor. In the decision of the United States Supreme Court in "*Bate vs. Hammond*" noted below, some limitation of the scope of this statute was laid down.

Proposed Legislation.—One most important modification in the operation of the patent laws has been the subject of much agitation among those interested in patents, and involves the establishment of a new court, to be termed the Court of Patent Appeals. The fact is undoubted that the docket of the United States Supreme Court is overloaded with matter, much of which is appealed patent suits, in which the action is carried up from the United States circuit courts. The Supreme Court of the District of Columbia is the recipient of appeals from the Commissioner of Patents. The new body is to take the place of both these courts to a certain extent. It is to have jurisdiction over appellate cases coming from the circuit courts, the Supreme Court of the District, and the Commissioner of Patents. It is not proposed to make it of last resort. If a sufficient amount is involved cases can be carried up from it to the United States Supreme Court.

Litigation.—An important decision was rendered by Judge Kekewich, of London, in the English suit brought to annul the Ganlard and Gibbs patent on transformers; it declared the patent to be invalid. He so decided, concluding that the invention was not a fitting subject for a patent, as well as that the parties named were not the first inventors. The "transformer" as essential to the newly developed system of alternate current lighting has within the last year acquired much importance. Attention is called to a corresponding American decision (*Westinghouse vs. Sun Electrical Company*, see below). In England also Justice Kay declared the Edison "carbon filament," patent 4,576 of 1879, invalid, this being one of the basic patents on incandescent electric lamps.

One of the great patent suits reached an accounting during the last part of the year. It was brought by the Webster Loom Company against the Higgins Carpet Company. It re-

ferred to the famous Webster patent upon one feature of weaving Brussels carpet. The patent was granted in 1873, and a special company with a capital of \$200,000 was formed to litigate it. The present suit occupied four years, 1874 to 1878, before the final hearing in the United States Circuit Court was reached, where the patent was decided to be invalid. On appeal the United States Supreme Court upheld the patent and ordered an accounting. Two years were devoted to it, and two tons of books and documents were eventually produced. The claim presented by the Webster Loom Company was \$28,750,000. On cross-examination of the president of the company the claim was reduced to \$1,500,000. His testimony embraced nearly 6,300 questions and extended over two years. In the final argument before the master eleven days were occupied and over 1,000 pages of briefs were handed him. His decision practically threw out the patent in suit as an element of damages. The Webster Company were awarded nothing. The most eminent counsel were retained in the case, which passes into history as one of the most famous patent litigations of America.

The Bell telephone patent at last reached the Supreme Court on appeal, five cases being consolidated into one for the purposes of the hearing. The court upheld the patent in its broadest scope, so that all electric speaking telephones are covered by it. A minority opinion representing the views of three out of seven judges was delivered as against the patent, in favor of the claims of priority of Daniel Drawbaugh. Meanwhile the suit brought by the Government for the cancellation of the Bell telephone patent of 1876 is slowly progressing. On a demurrer it reached the Supreme Court, and the Government's right to bring such a suit was upheld (see "Official Gazette" of the United States Patent-Office" xlv, 1,811).

A very important decision of the U. S. Supreme Court was rendered in the suit entitled *Bate Refrigerating Company* against *George H. Hammond & Co.* A United States patent had been awarded to John J. Bate for a process of preserving meat, and previous to the issue of his American patent he had taken out a Canadian patent for five years. Although by due payment of fees he had kept the Canadian patent alive for fifteen years, it not having as yet expired, it was claimed that the American patent was limited in duration to the first period of five years of the Canadian patent. The Supreme Court decided otherwise, and held that as long as the Canadian patent was extended it was without effect upon the American franchise. It did not state, however, that if the Canadian fees had not been paid, and the foreign patent had expired after five years, that such expiration would not have limited the American patent. It left it to be inferred that it would have had that effect.

Foreign Laws.—For changes or new legislation in, or recent publication of foreign patent

laws, the following references to the "Official Gazette" of the United States Patent-Office are given: The Congo Free State, xlii, 202; Guatemala, xlii, 880; Germany, xliii, 889; British India, xliii, 1,588; South African Republic, xlv, 1,507; South Australia, xlv, 1,510; Switzerland, xlv, 283 and 1,070; New South Wales, xlv, 128.

Court Decisions.—Abstracts of some of the more important points decided in the Federal courts are given below, the references being to volume and page of the "Official Gazette."

The mere fact that a person sells an article to which a patented device may be attached does not make him an infringer, provided the article is not so constructed that the patented device and no other can be used with it. *Bliss et al. vs. Merrill et al.*, xlii, 97.

Where one patentee has invented a combination for a particular purpose, the field is open to another to invent a combination of the same parts differently arranged and affecting the same result by a different mode of operation. *Railway Register Manufacturing Company vs. Third Avenue Railway Company et al.*, xlii, 379.

The omission of one step of an old process with an improved result constitutes a new process. *Lawther vs. Hamilton et al.*, xlii, 487.

Where the new process requires greater care, or even greater skill, on the part of the workmen than formerly, it does not change its character as a process or materially affect its utility. *Ibid.*

A patent sufficiently describes a process when by the aid of the knowledge derived from the state of the art the same may be carried out from the description in the patent by those skilled in the particular manufacture. *Ibid.*

A claim for a process consisting of several steps may be limited by the state of the art and the description in the patent to the instrumentalities or their equivalents as thus described, which are essential in the carrying out of the process claimed. *Ibid.*

In claims for combinations it is unnecessary to include any element except such as are essential to the peculiar combination and affected by the invention. *Rapid Service Store Railway Company vs. Taylor et al.*, xlii, 721.

A reconstruction of a machine so that a less number of parts will perform all the functions of the greater may be invention of a high order; but the omission of a part with a corresponding omission in function, so that the retained parts do just what they did before in the combination, can not be other than a mere matter of judgment, depending upon whether it is desirable to have the machine do all or less than it did before. *McClain vs. A. Ortmayer & Sons et al.*, xlii, 724.

Where notice is not given in the answer of a specified prior use of the invention described in the patent, it can not be set up as an anticipation of such invention; but, as exhibiting the state of the art, the evidence is competent to aid the court in putting a proper construction on the patent. *Stevenson vs. Magowan et al.*, xlii, 1,068.

A fraudulent surreptitious purchase or construction or use of an invention prior to the application for a patent probably would not affect the rights of the patentee under this section of the act of 1839. *Andrews et al. vs. Hovey*, xlii, 1,285.

After a patent has been granted for an article described or made in a certain way the inventor can not afterward obtain a valid patent on an independent application for the method or process of making the article in the way described in the earlier patent. *The Mosler Safe and Lock Company vs. Mosler, Bahmann & Company*, xliii, 1,115.

It is not material whether the foreign patent is granted to the inventor who made the application in this country or to some other person to whom he has

caused the invention to be patented, nor that the inventor who makes the application here is one of our citizens. *Edison Electric Light Company vs. United States Electric Lighting Company*, xliii, 1,456.

It is difficult to find invention in mixing or putting together, in a dry state, two materials, it being old to mix the same materials during the process of manufacturing or brewing. *Geis vs. Kimber*, xliv, 108.

Where a patent has been found to be valid by a circuit court at an earlier date upon the same evidence as now exhibited, and since that date the Supreme Court has defined more strictly the line between mere mechanical skill and the exercise of invention, it is no longer the duty of the last circuit court to follow and adopt the adjudication of the former court. *The Rubber and Celluloid Harness Trimming Company vs. The India-Rubber Comb Company*, xliv, 843.

For several important points in this connection, see *Russia Cement Company vs. Le Page*, xliv, 833.

The inventor's consent to or allowance of the public use or sale of his invention is not requisite to invalidate a patent. *Campbell vs. The Mayor, etc. of New York*, xliv, 1,185.

Three things are requisite to the acquisition of a title to a trade-mark. First, the person desiring to acquire the title must adopt some mark not in use to distinguish goods of the same class or kind already on the market; second, he must apply his mark to some article of traffic; third, he must put his article marked with his mark on the market. Mere adoption of the mark and a public declaration that the mark so adopted will be used to distinguish goods to be put on the market at a future time, create no right, no title arises until the thing is actually on the market marked with the particular mark. *Schneider & al. vs. Williams* xlv, 1,400.

A "sale," to invalidate a patent, must have been completely effected more than two years before the application for the patent. *Campbell vs. The Mayor, etc. of New York*, xlv, 845.

For limitation of the Gannard and Gibbs converter system of distributing electric energy, see *Westinghouse Electric Company vs. The Sun Electric Company*, xlv, 710.

PECULIAR PEOPLE. The sect of Peculiar People was established in Essex, England, about half a century ago; and, while members of the body have removed to London and other parts of the United Kingdom, and some have emigrated to the colonies, it still exists in its greatest strength in that county, and chiefly at Prittlewell. The name of the body is taken from the Scripture, and the particular tenet for which they are principally known is founded on these words of St. James: "Is any sick among you? let him call for the elders of the Church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up." They argue that this text proves that medical aid is needless, and when a member of the body falls sick, the elders pray over him and anoint him, and then leave nature to take its course. Their steadfast adherence to this belief and practice has many times brought them in conflict with the laws which require a certain amount of care and attention to be given to children and the sick. Members of the sect have been prosecuted for neglect of those dependent upon them in not calling medical aid to their relief; and, in cases where the patients died, prosecutions for manslaughter have been instituted

against those responsible for their care. Conviction in the latter kind of cases is, however, difficult, because medical men are not able or willing to declare positively that if called in they would have advised measures that would have saved life. Hence only one conviction is recorded against them for this offense. Aside from this idiosyncrasy the Peculiar People are reputed to be exemplary in the social virtues. While none among them are wealthy and few are above the condition of laborers, they never permit one of the "brethren" to become chargeable to the poor-rates. They are faithful and careful in their family relations, always make full provision of wholesome food, are strict abstainers from intoxicating drinks, are neat and cleanly, and are orderly citizens, no instance being known of any of them having been brought before the courts, except in connection with their single peculiarity. Their Church polity is of a very simple character. They recognize a single head or bishop, who is at present Mr. Samuel Harrod, from whose decisions there is no appeal. Their worship is marked by earnest singing of easy tunes, usually without the aid of musical instruments. For the most part their meetings are held in barns and other buildings of that character; but they have erected a few special places of worship, to which members of congregations are often drawn from considerable distances.

PENNSYLVANIA. State Government.—The following were the State officers during the year: Governor, James A. Beaver, Republican; Lieutenant-Governor, William T. Davies; Secretary of State, Charles W. Stone; Treasurer, William B. Hart; Auditor-General, A. Wilson Norris (who died on May 21); Secretary of Internal Affairs, Thomas J. Stewart; Attorney-General, W. S. Kirkpatrick; Superintendent of Public Instruction, E. E. Higbee; Insurance Commissioner, J. M. Forster; Chief-Justice of the Supreme Court, Isaac G. Gordon; Justices, Edward M. Paxson, John Trunkey, James P. Sterrett, Henry Green, Silas M. Clark, and Henry W. Williams. Justice Trunkey died on June 24, and the Governor appointed Alfred Hand to fill the vacancy, his commission dating from July 31 and continuing till the first Monday of January, 1889.

Finances.—The Legislature of 1887 made appropriations amounting to nearly \$17,000,000, but the revenues were about two millions less, and several important public works were necessarily postponed, including the remodeling of the legislative building, and the enlargement of the House of Refuge in Philadelphia. The revenues have also been crippled by the decision of the Supreme Court of the United States, that what was known as the "gross-receipts tax" is unconstitutional so far as it is a tax on interstate commerce. The loss in revenue from this source in 1888 was about \$800,000, but owing to the thorough collection of claims due the State, little embarrassment was experienced. The receipts for the

year amount to \$8,694,060.42, of which \$5,920,504.06 belong to the general fund and \$2,773,556.36 to the sinking-fund, the former being applicable to general purposes, and the latter to the redemption of the principal and the payment of the interest on the public debt. The principal items of the receipts were: Taxes on corporations, \$2,398,405.44; tax on bank stock, \$456,102.76; tax on personal property, \$1,014,828.20; tax on collateral inheritances, \$713,484.11; tavern and liquor licenses, \$1,017,807.57; tax on foreign insurance companies, \$428,816.41; commutation of tonnage tax, \$460,000. The principal items of disbursement during 1888 were: Expenses of State Government, \$790,535.80; judiciary, \$560,611.01; payment of loans and interest, \$1,884,322.26; charitable institutions, \$1,068,077.91; penitentiaries, \$244,686.25; reform schools, \$226,242.16; common schools, \$1,614,276.58; National Guard, \$354,446.37; Soldiers' Home, \$151,850; soldiers' orphans' schools, \$386,419.22; second geological survey, \$50,000; State College, \$59,500. The balance in the treasury Dec. 1, 1888, was \$3,687,035.65, against \$2,380,841.47 on the same date in 1887. Of this balance, only \$1,318,691.92 is applicable to general expenses, the sinking-fund absorbing the rest.

The State debt on Nov. 30, 1888, was as follows: Non-interest bearing debt, \$134,821.28; 8½-per-cent. bonds, \$1,857,900; 4-per-cent. bonds, \$7,798,700; 5-per-cent. bonds, \$4,430,500; 6-per-cent. Agricultural College bond, \$500,000; 6 per cent. on proceeds of sale of experimental farms, \$17,000; making an aggregate indebtedness of \$14,788,921.28.

The 5-per-cent. loan may be paid in accordance with its terms in 1892. The available funds are more than sufficient to pay this balance now, and the commissioners have endeavored to purchase these bonds at a reasonable premium, but many holders refuse to sell. The larger part of the balance of the debt, funded at 3½ and 4 per cent., is not due until 1912. The net reduction in the debt for 1888 was \$496,794.90.

Education.—The State is divided into thirteen normal-school districts. There are normal schools in eleven districts, and a twelfth has recently been erected at Centerville, leaving only one district (the fourth) without a school. The Central State Normal-School buildings at Lock Haven have recently been burned. There has been a strong movement to secure industrial training as part of the public-school system, and in 1887 the Legislature authorized the Governor to appoint a commission to investigate the subject. The commission report strongly in favor of the system. Issiah V. Williamson, a wealthy citizen of Philadelphia, toward the end of 1888, conveyed to trustees property valued at several million dollars for the establishment of a "Free School of Mechanical Trades." The State College has had a year of prosperity, there being ninety students

in the college and seventy-seven in the preparatory department, with nineteen professors.

Soldiers' Orphans' Schools.—The Legislature of 1887 provided for the closing of these schools on June 1, 1890. The Governor recommends the repeal of this law, and calls attention to the fact that, at the time set for closing the schools, there will be 1,549 children in them under the age of sixteen, all orphan children of deceased soldiers of the Union. There are at present in these schools 2,249 children, the schools having been established in 1864. By the same act, the schools were closed to further applicants June 1, 1887, yet many applications have been made.

Insurance.—The last annual report of the insurance commissioner gives the following statement of the business done in the State in 1887: Premiums for life insurance, \$10,855,456.87; premiums for fire and marine insurance, \$9,305,172.21; total paid for insurance, \$20,160,628.58. This aggregate is \$1,880,550.16 greater than the total sum paid for insurance in 1886. The total losses paid in 1887 were as follow: Paid by fire and marine companies, \$5,400,687.34; paid by life companies, \$4,357,188.36; total losses paid, \$9,757,825.70.

National Guard.—The last annual report of the adjutant-general gives the total strength of the guard at 7,788 enlisted men and 601 officers. In twenty-three counties no military organization exists, while in the two counties of Allegheny and Philadelphia there are fifty-four companies. The annual appropriation for the guard has been increased from \$220,000 to 300,000, and the term of enlistment reduced from five to three years.

State Institutions.—The last Legislature provided for the erection of an Industrial Reformatory at Huntingdon. The buildings have been erected and equipped, but, owing to the fact that no appropriation had been made for maintenance, the institution is not open. The courts have discretion to send convicts to this reformatory instead of to the State penitentiaries. Work on the Western Penitentiary approaches completion. The Eastern Penitentiary continues what is known as the solitary or confinement plan. The House of Refuge in Philadelphia is about to make an important departure. Through the liberality of two individuals, large funds have been given for the purchase of a farm and the erection of new buildings. The five insane asylums of the State contain 4,265 inmates, of whom 1,568 are at Norristown, 676 at Warren, 843 at Danville, 618 at Dixmont, and 560 at Harrisburg. The number has largely increased by reason of the legislation requiring the removal of insane in county homes to the State institutions.

Decision.—Late in December the State Supreme Court rendered a decision declaring the act of 1887, dividing the cities of the State into seven classes, unconstitutional and void, on the ground that the act was in the nature of local and special legislation. This decision brings

into force again the act of 1874, dividing cities into three classes, which the same court has already decided to be valid.

Harbor at Philadelphia.—The Governor says in his message to the Legislature in January, 1889:

Smith's and Windmill Islands, which constitute a formidable obstacle to navigation and lie directly in the harbor, must be purchased and entirely removed, and 140 acres of Petty's Island cut away. It is proposed to give to the harbor of Philadelphia a channel from the upper part of the city to Delaware Bay 600 feet wide and 36 feet deep at mean low water. The entire cost of this work, when completed, will exceed \$6,000,000. An appropriation for \$500,000 for beginning the work has already been made by Congress with this proviso: "That no part of this sum shall be expended until the title to the lands forming said islands shall be acquired and vested in the United States without charge to the latter, beyond \$300,000 of the sum herein appropriated." Proceedings to condemn these islands for public use have been already commenced. It is believed that the amount necessary to pay for them will equal \$700,000 to \$800,000.

Political.—The Republican State Convention met at Harrisburg on April 25, and nominated delegates to the National Convention and a candidate for Judge of the Supreme Court to succeed Chief-Justice Gordon. For the latter office James T. Mitchell secured the nomination, after several ballots, over the Chief-Justice and several other contestants. Resolutions were passed demanding legislation by Congress to secure fair elections, protesting against placing wool on the free list, reiterating the doctrine of protection and continuing:

We recognize the strength of the sentiment in this commonwealth relative to the evils and abuses of the sale of liquor; and we favor all laws looking in this respect to the elevation of the moral condition of the people. We, therefore, repeat our pledge to submit the question of prohibition to a popular vote.

We earnestly protest against the passage by Congress of the "Dunn Free-Ship Bill" which has been reported to the House by the Democratic majority of the Committee on Merchant Marine, or any other similar measure, as calculated to work an injustice to American labor by imperiling the livelihood of the large number of workers in wood, metals, and other materials, who are engaged in American ship-building industries and who should have home protection the same as other wage-workers.

We have the enactment of a law that will allow the laborer an exemption to the amount of \$300 from levy and sale upon execution.

We recommend such a revision of the revenue laws of the State as will impose upon corporations taxation equal in amount to that from which they have been exempted by judicial decisions recently rendered.

On May 23 the Democratic Convention at Harrisburg nominated J. B. McCollum for Judge of the Supreme Court, and selected delegates to the National Convention and electors-at-large for the State. The delegates to the National Convention were instructed to vote for the renomination of President Cleveland. The platform included the following:

We denounce the prevalent abuse of corporate power, the formation and operation of trusts, combinations, and monopolies, all of which interfere with and limit the natural and inalienable rights of the individual; and we pledge ourselves to secure remedies and to apply the same, with due regard for all interests of the people.

The Republican party is justly responsible for the failure of the late Legislature to give relief to the taxpayers by the enactment of an equitable and judicious revenue law; and the scandal connected with the failure of the revenue bill to become a law should work a forfeiture of all claims of that party to legislate for the people of the commonwealth.

The present State administration is to be condemned for its failure to enforce the provisions of the Constitution against the consolidation of corporations and other encroachments and abuses of corporate power; it has failed and refused to redeem the pledges of its own party; and the action of the last Republican Legislature in the defeat of the bill for the relief of the producers and refiners of oil, known as the Billingsley Bill, was in the interest of monopoly and opposed to the interests of the people of that large section of the State for whose relief the bill was intended.

On May 8, the Prohibitionists at Harrisburg selected delegates to their National Convention, and nominated James Black for Supreme Judge. The Union Labor party nominated John B. Young for the same office.

The death of Auditor-General Norris, on May 21, rendered necessary the election of a successor at the November election, and candidates were nominated by the executive committees of the various parties. By the Republicans, Thomas McCamant was made the candidate; by the Democrats, Henry Meyer; by the Prohibitionists, Milton S. Marquis; by the Union Labor party, J. M. Green. A vacancy on the Supreme Court bench, caused by the death of Judge Trunkay, on June 24, made it necessary to choose two judges of that court in November; but, in consequence of a peculiar provision of the State Constitution, that when two judges are to be chosen at one election, each voter is limited to vote for only one, no further party nominations were necessary. At the November election, therefore, both the Republican and Democratic nominees for this office were elected, being the two highest candidates. Mitchell received 528,585 votes; McCollum, 444,327; Black, 20,708; and Young 8,877. For Auditor-General, McCamant received 528,581 votes; Meyer, 443,438; Marquis, 20,262; and Green, 8,575. The Republicans elected 34 members of the State Senate, and the Democrats 16; of the Lower House, 114 members are Republican, and 60 Democratic. In the Third, Eighth, Ninth, Thirteenth, Seventeenth, Nineteenth, and Twenty-eighth Congressional Districts, Democratic candidates were elected; in the remaining 21 districts the Republicans were successful. This is a gain of one district for the Republicans.

PERSIA, an empire in Central Asia. The government is an unlimited monarchy. The present ruler is Nassreddin, who was born July 18, 1831, and succeeded his father Mohammed Shah, in September, 1848. The heir-apparent, called Valiashd, is his son Muzaffereddin, born March 25, 1858. The Shah has the entire revenue of the country at his disposal, and has amassed a private fortune said to amount to \$35,000,000, most of it in the form of precious stones. The governors-general of the provinces, who possess a large measure of authority, are

mostly sons or relatives of the Shah. The priests are a powerful body, exercising a strong restraining influence over the acts of the Shah, and opposing all ideas of progress coming from Europe. The chief priest is the Muftahad, who resides at Kerbela, near Bagdad.

Legal Reform.—Justice is administered by the governors and their representatives, who follow the *Urf* or common law, and by the priests and Sheikhs-el-Islam, who are guided by the *Shar*, or sacred written law. The Shah and his governors are unrestricted in their powers, and have abused their authority to enrich themselves in a way to check production and material progress. In May, 1888, the Shah issued an edict promising to the people equal justice and protection against extortion and oppression. He declared that henceforward every Persian shall have the complete disposal of his property, and shall be at liberty to enter into financial associations for the construction of public works, or for other purposes.

Russian and English Rivalry.—Russian influence has for a long period been preponderant at the Persian court, more especially since the Russian possessions in Turkistan have been extended so as to encompass Persian territory on the northeast and east. A Belgian company has recently begun, under Russian auspices, a railroad 200 miles long, connecting Teheran, the Persian capital, with Resht, near the Caspian Sea, which will probably be extended to Baku, where it will join the Russian system of railroads. The first section of the railroad was opened in June, 1888. Sir Henry Drummond Wolff, the present English Minister to Persia, has endeavored to regain the influence that Great Britain formerly had in Teheran, and has encouraged the Shah to take a more independent stand in dealing with Russian demands, by holding out hopes of the political and financial support of Great Britain. The edict promising protection to companies was suggested by the British representative, who pressed for a concession to a British company to construct a railroad from Teheran to the Persian Gulf, as a counterpoise to the Russian railroad. Instead of this, he obtained for foreign merchant steamers of all nations the right to navigate Karun river as far as Ahvaz, 125 miles from its mouth. This river, which enters the estuary of the Euphrates after many windings, is one of the few navigable waterways in a country devoid of roads. The Russian Government assumed a threatening attitude toward Persia on account of this concession and other anti-Russian proceedings that took place during the absence of Prince Dolgorouky, the Czar's representative in Teheran. The Shah's proclamation was communicated to the powers in a circular note dated Oct. 30, 1888. Sir H. Drummond Wolff, the son of a German missionary who once visited Persia and Turkistan, found the Shah fully alive to the danger of Russian proximity on the east, especially to the rich province of Khorassan, whose inhabitants have twice rebelled. En-

couraged by signs of English support, the Shah refused the Russian application for the right to establish a consulate at Meshed, and forbade the exportation of grain from Khorassan into Turkistan at Lutfabad. The vigorous representations of the Russian Government led the Shah afterward to retreat from the bold position he had been encouraged to take, and to undo most of the advantages that England had gained while the Russian minister was away from his post. The refusal of the *ezequatur* to the Russian consul at Meshed was held by Russia to be a violation of the treaties of peace, commerce, and navigation; and when the Persian Government replied that no other power had a consul in that place, it was pointed out that Gen. Macleod, the British agent to supervise the Afghan frontier, has his headquarters at Meshed. The Shah not only gave way on this point, but issued in December a second note as an appendix to his circular throwing open the Karun to international navigation, in which he greatly limited the privileges to British commerce and enterprise that were supposed to have been granted. The later note forbids Persian subjects to undertake works of any kind with the help of foreign capital, declaring that all irrigation-works, roads, and other undertakings must be carried out by Persian subjects with Persian capital. The proclamation that Sir Henry Drummond Wolff induced the Shah to issue in May, encouraging the formation of companies and promising them protection, was supposed to grant to foreigners the right to embark in speculations in Persia, and to give foreign governments a claim to interfere in behalf of companies or capitalists, and it was so construed by the British Under-Secretary for Foreign Affairs, who affirmed in Parliament the right to appeal to the proclamation, since it had been formally communicated to the foreign representatives in Teheran, as well as to the most-favored-nation clause as a guarantee of the rights of British companies for the construction of railroads and carriage-roads from the Persian Gulf.

PERU, a republic in South America. (For details relating to area, population, etc., see "Annual Cyclopædia" for 1888.)

Government.—The President (since June 8, 1886) is Gen. Andres Avelino Cáceres. The Cabinet is composed of the following ministers: President of the Council and Minister of the Interior, Don Pedro A. del Solar; Minister of Justice, Señor Zegarra; Minister of Foreign Affairs, Don Isaac Alzamora; Minister of Finance, Señor Urigoyen; Minister of War, Señor Torrico. The United States Minister at Lima is Charles W. Buck. The American Consul at Callao is Henry May Brent. The Peruvian Minister at Washington is Don Felix Cipriano C. Zegarra. The Peruvian Consul at New York is Don Francisco Perez de Vilasco.

Finance.—The home debt of Peru included, October, 1888, \$39,235,947 of bonded debt, inclusive of accumulated interest; \$10,000,000

of floating debt; \$77,469,923 of paper money in circulation (\$1,530,077 having been burned and replaced by silver coin in April, 1888); and \$9,541,000 of Inca notes outstanding; together, \$186,246,870. Of the proceeds of the alcohol tax, 70 per cent. are to be applied to paying the interest on the bonded debt, and 30 per cent. to the gradual withdrawal of the paper money.

As a measure of economy, the salaries of Peruvian consuls have been discontinued by decree of Aug. 25, 1887; by way of compensation, they are to be allowed to retain a part of the consular fees.

Army and Navy.—The strength of the permanent army, rank and file, is 7,371 men, including a police force of 3,371, of whom 843 are mounted. The fleet has been reduced to two steam transports, registering 1,800 tons each. In January, 1888, it was resolved to reorganize the national forces by enrolling all Peruvians between the ages of twenty-one to thirty years in the active National Guard, in which they are to serve for five consecutive years, and a sufficient number of them drawn annually to be incorporated in the permanent army for the remainder of their term of service.

In May a decree was issued organizing the naval militia, under the law of Oct. 30, 1886. A naval school was founded at Callao in February, 1888.

New Treaty.—A treaty of amity and commerce between the United States and Peru was proclaimed on Nov. 7, 1888.

Communications.—The number of post-offices in 1886 was 230, which forwarded during the year 2,254,434 items of mail matter, the receipts being 741,551 francs, and the expenses 798,976 francs.

In addition to the 2,600 kilometres in running order, the Government, by decree, in November, invited tenders for the construction and exploitation of a line from Lima to Pisco. This line will open communication between the capital and the fertile region extending between Ica and Islay, and will also intersect the nitrate fields. A branch line is to connect Islay with Arequipa.

A decree of January 26 invited tenders for the organization of communication by telephone throughout the republic, the exclusive privilege to extend fifteen years.

In May, 1888, a new steamship line was established between Antwerp and Chilean and Peruvian ports. It is called the "Anglo-Belgian Pacific Line."

Commerce.—The trade between Peru and the leading maritime nations has of late years been as follows:

COUNTRIES.	Import from Peru.	Export to Peru.
United States (fiscal year 1887)	\$461,726	\$717,968
England (calendar year 1886)...	8,103,311	4,304,933
France (calendar year 1885)....	4,155,708	1,899,492
Germany (calendar year 1885)...	1,408,484	338,890
Spain (calendar year 1885).....	147,425	15,350

The American trade with Peru presents these figures:

FISCAL YEAR.	Import from Peru.	Domestic export to Peru.
1886.....	\$363,430	\$798,577
1887.....	461,726	717,963
1888.....	309,040	865,160

Before the war, Peru produced annually 60,000 tons of sugar; in 1888 the production had decreased to 30,000 tons, half of the fine machinery on the sugar-estates having been destroyed during the war, and little of it replaced for lack of funds in the present impoverished condition of the country. The export of silver from Callao during the first six months of 1888 amounted to 4,936,876 kilogrammes, the bulk of which was shipped to Hamburg. Hitherto argentiferous lead bullion has been shipped to Germany, but now a German company is smelting on the spot.

A decree was issued in September, by virtue of which coal is to enter Peru duty free. The same privilege is extended to personal effects the property of foreign diplomatic agents; steam fire-engines and all fire-extinguishing apparatus; articles imported for hospital use and asylums; clerical church garments and sacred vessels; school and university books and apparatus.

PETROLEUM (Latin, *petra*, a rock, and *oleum*, oil), rock-oil, is that form of bitumen which has an oily or ethereal consistence. The lighter varieties are sometimes called naphtha (Persian, *nafta*). It rises with the water of springs and through artesian borings. (The history of the petroleum industry, down to 1875, is given in the "American Cyclopædia," vol. xiii.)

An examination of the relative position of many of the most successful wells led O. D. Angell to the opinion that the strata of sand-rock in Pennsylvania, from which the oil issued, extended northeast and southwest on certain parallel lines of moderate lateral extent. This led to the sinking of "wild-cat" or prospective wells upon such lines, run by compass for long distances in both directions over the hills of that region, and resulted in the discovery and development, about 1875, of the Butler and Clarion County fields; later, in an opposite direction, to the Bradford or McKean County field; still later, to that of Warren County, Pa., and Allegany County, N. Y. The enormous volumes of inflammable gas that often accompanied petroleum led, in 1885, to the drilling of wells for natural gas over an area extending from Michigan to Alabama, and from the Allegheny to the Rocky mountains. Not only gas but petroleum was discovered in several localities where it had not been known to exist. Most notable among these is the region around Washington, in southwestern Pennsylvania; and in northwestern Ohio, around Lima, Findlay, and North Baltimore, in Hancock, Wood, and Auglaise Counties. Attempts had been made as early as 1860, and again in

1865, to obtain oil in commercial quantities in southern California. But little success attended these efforts until about 1880. Several wells have been successful at or near Los Angeles, also near Newhall and in the Despe Canyon, and on the Ojai Ranch. These last-mentioned localities lie along the Santa Clara valley, east of San Buenaventura, in Ventura County. The oil is chiefly used as fuel.

Distribution.—Petroleum, as well as other forms of bitumen, is one of the most widely distributed substances in nature; but its occurrence in commercial quantities is limited to comparatively small areas. Besides the petroleum regions of the United States, the only region that furnishes petroleum to commerce is Galicia and Roumania and the Apscheron peninsula of the Caspian Sea, which really form one region, extending from central Austria along the line of the Transylvanian Alps and the Caucasus to the shores of the Caspian and farther east into Central Asia. Other localities of less importance, together with the "oil regions" of the United States, form an ellipse around the Cincinnati anticlinal, which is in general an uplift of Silurian rocks sloping in all directions, and extends from central Kentucky to Lake Erie. Starting at Great Manitoulin Island, in the northern part of Lake Huron, and passing southwesterly to Chicago, petroleum is encountered at several points in eastern Michigan, near Chicago in limestone, in northwestern Ohio, at Lima, rarely in Indiana, and in Illinois, Kentucky, and Tennessee, as far south and east as Chattanooga, where the line of outcrop turns north and appears in Cumberland and Johnson Counties, Kentucky, and in West Virginia, southeastern Ohio, Greene and Washington Counties, Pa., and all through the valley of the Alleghany into New York. The oil-fields of Canada complete the ellipse. In Kansas, Missouri, Louisiana, and Texas, springs of petroleum occur, but few wells have proved productive. Farther west, in Wyoming, Utah, and Colorado, several localities produce petroleum for local uses. Along the mountain-range from Alaska to Patagonia petroleum has been found at intervals, and it has been produced in commercial quantities in California and Peru. In Cuba and the Windward Islands, including Trinidad, and on the mainland in Venezuela, and southward into Bolivia, the outcrops of bitumen of various forms are of marvelous extent, especially the famous Pitch Lake of Trinidad. An area fifteen hundred miles long and of unknown breadth extends from the Saskatchewan northward along the valley of Mackenzie river to its mouth. On the Eastern Continent petroleum has been observed in insignificant quantities in the British Islands, along the Pyrennees, in central France, in the valley of the Rhône, in the Tyrol, Italy, Sicily, Dalmatia, and the Ionian Islands; in Egypt along the Red Sea; in Morocco. At various points in China, and in Japan, oil-springs have been known from time

immemorial, and oil-wells have occasionally been productive.

Beginning on the Lüneburger heath, south of Hamburg, a line of outcrops extends through Germany and Austria-Hungary, through the principalities north of the Danube, the Crimea, Kertch, the Caucasus, through Armenia and the mountains that surround the plateau of Iran, along the valleys of the Euphrates and the Tigris, eastward through the Punjab, through the Burman peninsula, and into Java. In Austria-Hungary the production has been of moderate commercial importance for many years. In the Caucasus and at Baku wells have poured forth enormous quantities and are now rivaling those of the United States. In Armenia and Persia, the Punjab and Burmah, and the Assyrian valley, the use of petroleum and other forms of bitumen for local purposes has been continuous from remote antiquity, but the amount produced is nowhere of commercial importance. A careful study of all the localities mentioned will show them to be intimately connected with the principal mountain-chains of the world.

Geological Relations.—Petroleum occurs in, or issues from all geological formations, but this statement alone would be misleading. There have been two bitumen-producing eras in geological history, viz., the series older than the carboniferous, especially the Silurian, and the older Tertiary. The vast accumulations along the principal axis of occurrence in North America are found in Silurian and Devonian rocks; the most productive axis of occurrence in the Eastern Hemisphere lies in the Eocene and Miocene of the Carpathians, Transylvanian Alps, and the Caucasus. In England the small quantities obtained have sprung from the Coal-Measures; in the valley of the Rhône from Jurassic limestones. The little that is known concerning the geology of the oil-bearing strata in Persia, the Punjab, and Burmah, leads to the conclusion that they are of the same age. At Great Manitoulin Island, in Canada, and in northwestern Ohio the oil is found in the Trenton limestone; at Chicago and Terre Haute, Ind., in the Niagara limestone; both of which are Silurian. The Great Devonian black shale is considered to be the source of the oil in Kentucky. At Glasgow the oil is found saturating sandstone; near Burkesville in crevices in a sort of marble; near Nashville, Tenn., it is often found in geodes in the Silurian rocks of that region; in Johnson County, Ky., it lies in the Subcarboniferous sandstones, often above the drainage-level of the country. In West Virginia the so-called "oil-break" yields oil from several strata of sandstone that lie within the Coal-Measures. Throughout the oil regions of Pennsylvania and New York the "oil-sands" are found beneath the Coal-Measures, in the Upper Devonian. "Petroleum exists in the Cretaceous rocks which extend along the eastern slope of the Rocky mountains from British Columbia to Mexico, and in many of the

interior valleys." The bitumen of California is Miocene, while that of Mexico, the West India Islands, and Peru, is Eocene.

It will be seen that there is an area, estimated at 200,000 square miles in the Mississippi valley, the formations of which are nowhere later than the Coal-Measures, which yields petroleum at many points and often in vast quantities. Another area yielding bitumen, of vast extent, reaching from California to Bolivia is everywhere Tertiary; while on the Eastern Continent a belt of corresponding age, so far as is known, extends from the North Sea to Java. At present, the greatest volume of petroleum issues from rocks older than the Carboniferous, while the greater number of localities producing bitumen are Eocene. In Canada and West Virginia it rises from sandstone strata beneath the crowns of anticlinals, as also in northwestern Ohio, where the rock is the Trenton limestone. In Pennsylvania the so-called "oil-sands" appear to lie in the inclosing rocks in long narrow belts or sheets, far beneath superficial erosion, like sand-bars in a flowing stream. They run through a vast accumulation of sediments, from the lower Devonian to the Upper Carboniferous, and lie conformably with the inclosing rocks dipping gently to the southwest. The Bradford field—at a depth of about 1,800 feet, 100 square miles in extent, by from 20 to 80 feet in thickness—lies with its lowest southwestern edge submerged in salt water, and its northeastern edge filled with gas, originally under an enormous pressure. In Galicia the sandstones that hold the oil are implicated in the folds of the Carpathians and much distorted; while at Baku the sands appear to be lenticular masses inclosed in a stiff blue clay.

Chemistry.—The first analyses of petroleum were ultimate, and showed that it consists of carbon and hydrogen, with occasional small quantities of sulphur and nitrogen appearing as impurities. There are, however, several varieties of petroleum, to some extent dependent upon the age of the rocks from which they issue. All, or nearly all, Trenton limestone petroleum contains sulphur and more or less nitrogen. The Upper Devonian and Subcarboniferous petroleum of Pennsylvania is a very pure hydrocarbon, and, along with the Eocene petroleum of Galicia, contains paraffine. The Miocene petroleum of California appears to be a mixture of unstable fluids, compounds of carbon and hydrogen, containing a notable amount of nitrogen. These, with the Mexican and South American oils, do not contain paraffine, and readily oxidize into asphaltum. There are many other petroleum of this class, and others still have been little examined chemically. The proximate examinations that have been made show that petroleum from different localities are quite unlike. The petroleum of Pennsylvania, eastern Ohio, and West Virginia, contains a large number of the paraffine series in varying proportion, in mixture with a smaller

and indefinite proportion of the olefine series. Other petroleum of nearly identical composition contain small quantities of the benzole series with an increasingly large proportion of unstable compounds that oxidize into asphaltum. Those of Galicia are of this description. Those of California have been little examined, but appear to be almost entirely confined to unstable, easily oxidized oils. The Russian oils from Baku consist of the additive compounds of the benzole series, which have the same percentage composition as the olefines, and contain less hydrogen than the paraffines. Burmese petroleum contains a notable proportion of the benzole series. All of the compounds derived from petroleum absorb oxygen when exposed to light, and become colored and viscid. The residues from the distillation of petroleum have remarkable fluorescence. It is not supposed that these substances are present in the natural oil, although it is not impossible that they are.

Origin.—The theory that petroleum is the product of chemical reactions still in progress in the earth's crust was originally put forward by Bertholet, and has since been continued on the same line by Mendeljeff, the eminent Russian chemist. Their theories are based on the results of laboratory experiments, and assume the existence in the earth's crust of powerful deoxidizing agents, such as the alkali metals, cast-iron, spiegeleisen, etc., which in contact with steam and carbonic acid set free the hydrogen and carbon, causing them to unite in the nascent state and produce mixtures of hydrocarbons resembling petroleum. These theories require conditions nowhere proved to exist in nature.

Petroleum is, without a reasonable doubt, primarily derived from a partial decomposition of animal or vegetable remains. In the Trenton limestone and other Silurian rocks it has probably been produced by the transformation of low forms of animal life. The petroleum issuing from the Miocene shales of southern California is also of animal origin. The first of these oils is often found hermetically sealed in the cavities of large fossils and in geodes in limestones rich in animal remains. These older oils are rich in sulphur, and those of California are comparatively rich in nitrogen also. They are dark, fetid, and in many instances, particularly those of California, they rapidly change on exposure to the air to a black, viscid mass, which finally becomes solid asphaltum. The California oils undergo changes due to a sort of putrefactive process, as pools of oil have there been observed to become infested with maggots, like a pool of blood when similarly exposed. These fetid animal oils are difficult to refine, and are chiefly used as fuel.

The Devonian oils of eastern Ohio, Pennsylvania, New York, and West Virginia are with equal certainty derived by spontaneous distillation from the deposits of shales that underlie the oil-sands, and, where exposed along

the shores of Lake Erie, exhibit such an extraordinary accumulation of fucoids as to suggest to Dr. J. S. Newberry the idea that a "sargasso sea" existed at that point in the primeval ocean. The oil-sands overlie more than 1,000 feet of the Devonian shales, and are themselves overlaid by beds of shale containing so much silica as to form an impervious shell that holds down the oil and gas under such a pressure that much of the material that is gaseous when it reaches the surface, is doubtless liquid while within the oil-sand. These "shells," being impervious over wide areas, prevent the escape of the oil except from minute fissures, where oil or gas springs are produced. This fucoidal shale has been subjected to destructive distillation at a low temperature, and has yielded fifty gallons to the ton of an oil resembling petroleum. In like manner, other shales, coal, peat, wood, or animal matter, either recent or fossil, will yield petroleum-like oils, and the lower the temperature and slower the distillation the more nearly will the product resemble the natural oil. In the light of these facts, with the added weight of laboratory experiments that have confirmed them, the French chemical geologists have maintained that all forms of bitumen are the product of metamorphism, or of those physical agencies that, through the combined action of heat, steam, and pressure exerted through indefinite periods of time, have produced such changes as those that have converted the sedimentary rocks of the Eastern States, New York, and Pennsylvania into crystalline schists, and the coal into anthracite. These agencies, acting with less violence upon the strata forming the gentle western slope of the Alleghanies, have left in undisturbed repose the strata that underlay and inclosed the oil-sands, while the superficial have been subject to erosion through immense cycles of geological time. Under these conditions, no arbitrary line could mark the point at which such agencies ceased to act, and the natural process of distillation going forward through indefinite periods of time and of necessity at the lowest possible temperature, must result in the accumulation of distillates in any overlying strata porous enough to act as a reservoir. No additional evidence seems to be required to render this an adequate origin for petroleum as it occurs in Pennsylvania and Galicia. Petroleum occurs at many points along the entire western slope of the Appalachian System, from Point Gaspe on the St. Lawrence river to northern Alabama, and is most abundant where there is the greatest accumulation of organic remains. These sediments were deposited in a current whose course was from northeast to southwest. The facts that concern petroleum are found in the undisturbed and nearly level position in which the rocks containing it lie like sand-bars in a flowing stream, and the further evidence they afford that the metamorphic action that has altered nearly all the formations of the eastern

border of the Appalachian System became extinct along a plane that descended deeper and deeper, in many instances far below the surface formations and the coal that they inclose. In Galicia and Transylvania, the metamorphic core of the Carpathians is flanked by beds of fucoidal shale rich in the remains of marine animals, intercalated with the sandstone strata holding the oil. If petroleum is a product of metamorphism, the production is long since completed, and the vast natural reservoirs, when once emptied of their contents, are as completely removed from future consideration as a worked out bed of coal.

Throughout the world petroleum is obtained by means of artesian wells. Dug wells were used in Japan for many centuries, and other primitive methods were employed in other regions; but the so-called American method is now employed universally where petroleum is handled in commercial quantities. The wells are drilled like other artesian wells. Sometimes the oil pours forth in an artesian torrent that flows without control until partial exhaustion renders it possible to stop the flow. Such wells have been of frequent occurrence in the United States and at Baku. When brought within control, the oil is conducted into a tank. Here it accumulates until the tank is nearly filled when an agent of the pipe-line appears and gauges the tank. The oil is then run from the tank into the pipes of a pipe-line, and the tank is gauged again. The difference between the first and second gauging is the measure of the oil run. When a well ceases to flow, a pump is introduced. Often several wells are so connected as to be pumped by one power. At present it is usual to stimulate the flow of wells of moderate productiveness by torpedoes. The torpedo consists of several long cylinders of tin, into which nitro-glycerin is poured, and the whole is carefully lowered to that point in the well at which it is desired to quicken the flow of oil. To the last section a cap is attached, upon which a mass of iron, called a "go-devil," is allowed to descend. The charge is from twenty-five to one hundred quarts of nitro-glycerin, and the result of its explosion is usually the projection of a column of oil, resembling a geyser, above the top of the derrick, often one hundred feet in height. After a few minutes, the fountain gradually subsides, and the flow continues uninterrupted in increased volume until the well is exhausted. The effect upon the oil-sand is, first, an enormous pressure in all directions, driving the oil and gas back into the rock until a point of maximum tension is reached, when the reaction sends everything before it out of the rock and into the air. The oil-rock is thus effectually cleared, and the flow of the oil unimpeded.

As soon as the flow of oil is established and connection has been made with the pipe-line, the action of the well goes on uninterruptedly, often for months. The pipe-lines converge

from many wells to trunk-lines which have pumping-stations at which powerful pumps force the oil through sections of pipe about forty miles long. Trunk-lines of six-inch pipe run out of the oil regions to Baltimore, Philadelphia, and New York, Buffalo, Cleveland, and Pittsburg. Small quantities of crude oil are transported in tank-cars, and a very little is still transported in barrels, from localities of small production that are remote from the trunk pipe-lines.

The methods employed in transporting oil in pipe-lines have made possible a vast amount of speculation in crude petroleum. When a run of oil is made from a well-tank to a trunk-line, the owner of the oil receives a certificate for each 1,000 barrels run, which, when properly indorsed by the officers of the pipe-line, becomes negotiable paper, after the manner of an accepted draft or a certified check. These certificates may be sold and resold many times daily without any reference to the oil that they represent. But if a person wishes to use the oil, he purchases the certificates and, taking them to the nearest pipe-line station, demands the delivery of the oil. From 1870 until 1884 the production of oil was each year greatly in excess of its use for all purposes; consequently, oil accumulated above-ground. In August, 1884, this accumulated oil reached the enormous maximum amount of 39,083,464 barrels, since which period it has been reduced to less than 30,000,000 barrels. The storage of these vast accumulations of inflammable material was at first managed by private individuals and corporations; but it was finally undertaken by the pipe-lines acting together as the United Pipe-Lines. In the hands of this great corporation the storage of oil has been carried on with remarkable success and safety. Besides the vast quantity of oil required to fill the nearly 1,000 miles of six-inch pipe of which the trunk-pipe lines consist, the United Lines provide storage-tanks. The usual size of these tanks is ninety-five feet in diameter and twenty-nine feet high, having a working capacity of 35,000 barrels. They are constantly menaced with destruction from lightning, and are occasionally struck and fired. In the Caucasus a pipe-line extends from Batoum to Poti on the Black Sea, 600 miles.

Transportation of both crude and refined oil across the ocean has been carried on in barrels, for northern ports, and in cases, each containing two tin cans holding five gallons. This case oil goes to all equatorial countries and the far East. Since 1880 experiments have been in progress for carrying bulk cargoes of oil across the ocean. Steamers fitted with tanks in such a manner that the liquid cargo is comparatively motionless have successfully transported Russian oil from ports on the Black Sea to England, Adriatic ports, Germany, and Russian ports on the Baltic. Such cargoes have also been carried from Philadelphia to English ports.

Statistics.—The following table shows the amount of oil exported from 1864 to 1887:

YEAR.	Gallons.	Value.
1864.....	12,791,518	\$6,764,411
1865.....	12,732,005	9,520,957
1866.....	24,355,921	18,626,141
1867.....	62,696,657	22,509,466
1868.....	67,969,961	19,977,870
1869.....	84,408,892	27,686,187
1870.....	97,909,505	29,564,196
1871.....	102,606,955	34,188,736
1872.....	122,680,575	30,506,106
1873.....	158,102,414	37,195,735
1874.....	217,230,504	37,580,995
1875.....	191,551,938	37,080,361
1876.....	204,314,678	28,755,688
1877.....	262,441,844	55,401,182
1878.....	289,214,541	41,518,676
1879.....	331,596,442	35,999,863
1880.....	367,822,828	31,783,575
1881.....	382,268,015	34,317,695
1882.....	498,218,083	41,588,854
1883.....	419,321,018	36,226,574
1884.....	415,515,639	38,195,849
1885.....	458,348,192	40,074,237
1886.....	469,471,451	40,684,231
1887.....	480,845,911	37,308,907

The following table shows the amount of oil produced from 1859 to 1886 inclusive, with the average price per barrel for each year. The apparently large price in 1864 was due to the condition of the currency, a paper dollar being worth less than fifty cents in gold:

YEAR.	Barrels.	Price.
1859.....	2,000	\$30 00
1860.....	200,000	9 60
1861.....	2,110,000	2 73
1862.....	2,055,000	1 05
1863.....	2,610,000	3 15
1864.....	2,180,000	9 57½
1865.....	2,721,000	6 50
1866.....	2,782,000	3 74
1867.....	2,698,000	3 41
1868.....	2,716,000	3 62½
1869.....	4,251,000	5 62½
1870.....	5,571,000	8 80
1871.....	5,581,000	4 34
1872.....	6,257,000	3 64
1873.....	9,283,000	1 88
1874.....	10,688,000	1 17
1875.....	8,900,000	1 35
1876.....	9,015,000	2 56½
1877.....	13,045,000	2 43
1878.....	15,867,000	1 19
1879.....	19,597,000	55½
1880.....	26,046,000	94½
1881.....	27,228,000	60½
1882.....	30,460,000	72½
1883.....	24,300,000	1 06½
1884.....	38,500,000	86½
1885.....	20,900,000	88
1886.....	26,150,000	71½
Total.....	310,943,000

With the consumption of Galician oil confined to Austria-Hungary, Russian oil is the only competitor with the United States in the markets of the world. From insignificant proportions, this competition has grown year by year until all Europe and Eastern Asia are feeling its influence. The low price and superlative quality of American petroleum alone permit it to maintain its superiority in many localities not yet seriously invaded by Russian oil. For the past ten years oil at one dollar or more a barrel has been predicted along with the partial exhaustion of every new pool that

has been opened and gradually declined in production; yet, during that period, prices have been for the most part much below that figure. While it can not be disputed that the present production is less than the consumption, it is equally true that a permanent advance in price from present prices to one dollar a barrel would lead to an abandonment of the use of petroleum for many purposes, and, at the same time, would stimulate production in many localities where oil is known to exist over a very wide area.

Petroleum Products.—The extent to which substances manufactured from petroleum have become necessities places them among the most important products of modern technology. First in importance among these products is illuminating oil or kerosene, both in respect to the vast bulk of the commodity and also the large proportion of the human race dependent upon it for artificial light. When compared with the methods in use half a century ago, illumination by means of this material has prolonged human life over half the habitable globe, and it is the cheapest and most perfect illuminating agent yet discovered.

Next in importance in the list of products are lubricating oils, which, when prepared of various grades and qualities for different purposes, have nearly superseded all other oils devoted to similar uses.

The lighter products begin with righolene, which boils at 65° Fahr., and is the lightest of all known fluids. This is prepared by condensing in a mixture of ice and salt that portion of the distillate from petroleum that at ordinary temperatures would be gaseous. It evaporates so rapidly that it will reduce the temperature to -19° Fahr. in twenty seconds. It was originally prepared, and is still used for producing local anesthesia in surgical operations. A similar but not so volatile fluid has been prepared in commercial quantities under the name of cymogene. It has been used in ice-machines to produce a very low temperature by its evaporation. The next least volatile product is gasolene, the most volatile commercial product of petroleum when no unusual means are taken to condense the vapors. It is used in automatic gas-machines to saturate air with the volatile vapor, and, by thus carburetting the air, to produce an inflammable gas. It has been found extremely useful for this purpose, and is also used as a fuel in a so-called "gasolene-stove"—a very dangerous utensil. A, B, and C naphthas are fluids of different volatilities, taken off between gasolene and illuminating oil. They are used in mixing paint, printing oil-cloths, dissolving resins, and for other similar uses. Illuminating oils are of different grades and qualities. Lubricating oils are also of very various quality, from the most delicate strained oils used on spindles to heavy mixtures of residuum and crude oil used on railroad axles. Filtered petroleum residues, under the name of petroleum oint-

ment, cosmoline, vaseline, etc., have been widely introduced into medicine, having been admitted to the United States Pharmacopoeia, and very extensively used as a domestic remedy. Lastly, the solid product of petroleum, paraffine, has become of immense importance in the arts, for candles, water-proofing cloth and paper, insulating electrical conductors, and many other uses.

Technology.—The general technology of petroleum is simple in its details, and is adapted to the handling of vast quantities of material in the most rapid and economical manner. The oil is received at the refineries from the wells through one of the trunk-pipe lines, and is allowed to settle in huge tanks, in order that the small amount of water that invariably accompanies the oil, with any other impurities, may be completely separated. From these storage-tanks the oil is thrown by powerful steam-pumps into the stills, at the rate of 2,000 to 3,000 barrels an hour. The stills are either low, upright cylinders, heated by several fires around their circumference, or plain cylinders set horizontally in banks, similarly to steam-boilers. The stills hold about 1,200 barrels each. In the refineries recently constructed they are not inclosed in a building, but are entirely exposed to the atmosphere, excepting a sheet-iron jacket, which prevents too great radiation. The vapors from the stills are conducted through a series of pipes immersed in cold water, in which they are condensed. The distillates at first are gaseous, but they gradually increase in density and pass through a great variety of fluids, from cymogene to solid paraffine. The fluids are separated and discharged into different tanks by means of a complicated system of stop-cocks. A system of traps in these discharge-pipes also enables the operator to send the gaseous distillates beneath the stills, where the gas may be consumed as fuel.

The crude naphtha is first run off, and in a subsequent operation, often at another establishment, is by redistillation converted by fractionation into gasolene and A, B, and C naphthas. From crude naphtha the distillate is run off until it becomes too dense for the preparation of illuminating oil. This distillate forms the "high-test" illuminating oil, having a fire-test of 120° to 150° Fahr. The residue in the still is then in a condition for "cracking." This process consists of a slow distillation, during which the vapors are constantly being condensed upon the upper portion of the still, from which they flow or drop down upon the heated oil. The oils are thus repeatedly heated to a temperature above their boiling-points, producing destructive distillation, and resulting in the disengagement of a permanent gas, the deposition of carbon in the still, and the production of an oil of a specific gravity suitable for illumination. But this so-called "cracked oil," is not identical in quality or in composition with the illuminating oil first distilled from the

crude petroleum. There are, therefore, three distillates possible and in a general way three qualities of illuminating oil. They consist of oils that are pure distillates, oils that are cracked, and mixtures of the two. Whatever the distillate may be, about 1,200 barrels are pumped into a tank 40 feet high and 12 feet in diameter, called an agitator, which rests upon a base of timber: 6,600 pounds of strong oil of vitriol are then forced into the tank from a closed cistern into which the carboys are emptied. The cistern is closed, and air is forced into it until the pressure is sufficient to drive the acid into the tank. The distillate and acid are then thoroughly mixed by air forced into the bottom of the tank. After the acid has been drawn off, the oil is washed with water, then with a solution of caustic soda, again with water, and lastly with caustic ammonia, which is supposed to remove the last traces of sulphur compounds. The oil is then discharged into settling-tanks through a perforated perpendicular pipe, in a fine spray, which causes any remnant of very volatile oil to be evaporated and removed. In these settling-tanks, beneath skylights, the last traces of water settle and leave the oil clear and almost colorless. It is then pumped into tank-cars or into storage tanks.

The residue in the still is worked over by distillation and mixture into lubricating oils and paraffine. Lubricating oils are prepared by a great variety of processes for as great a variety of purposes. For lubricating the interiors of steam cylinders oils are deprived of their more volatile constituents by exposing them to the sun on the surface of water in shallow tanks. Sometimes the water is heated by a steam-coil. For the same purpose, oils are deprived of their naphtha and illuminating oil in a still, and the residue, called "reduced oil," is then run out of the still. Sometimes the reduced oil is filtered through animal charcoal or other material, and deprived of much of its odor and color. Other oils of less density—which in the ordinary distillation of petroleum "without cracking" come off between illuminating oil and the heavy oils next to residuum—are treated in a still by means of superheated steam in such a manner as to remove the volatile cracked products invariably resulting from the first distillation, leaving in the still an oil of high boiling-point, almost entirely without taste or odor. These oils are called "neutral lubricating oils." The oils that are distilled from them after treatment have been called "mineral sperm," and are distinguished from ordinary illuminating oils by their very high boiling-point and fire-test.

Another class of petroleum products of superior quality has been prepared by distilling the crude oil in a vacuum apparatus, by which the effects of cracking are prevented. These oils have been largely used in treating leather. When crude petroleum is carefully distilled without cracking until the residue in the still

has the consistence of jelly at ordinary temperatures, and the residue while hot filtered through animal charcoal, the product is an amorphous paraffine of a semi-transparent pale-brown color. This substance has been widely introduced into pharmacy as petroleum ointment, and is used as a basis for medicated ointments, being found greatly superior to preparations of lard and spermaceti on account of its freedom from rancidity. The same preparation is also widely consumed under the names of cosmoline, vaseline, petrolina, etc.

The use of petroleum prior to the past thirty years for illuminating, though centuries old, was confined to various rude attempts to burn the crude oil in the regions in which oil-springs occurred in greatest abundance. In Burmah, the Rangoon tar was burned in earthen lamps of the simplest construction possible. In Persia pencils of dried camel's dung, which served as a wick, were immersed in the oil, in vessels that were placed in niches in the houses, the niches communicating with the open air. In Italy the fluidity of the oil made possible its combustion in street-lamps. In the valley of Oil Creek in Pennsylvania the crude petroleum was used in a vessel resembling a tea-kettle, the wick protruding from the nozzle, for lighting salt-well derricks and saw-mills, long before the introduction of coal-oil had suggested the refining of the crude oil.

Since 1854, when petroleum was first refined in Pittsburg, Pa., refined petroleum has penetrated the most remote regions of the habitable globe, until it has superseded almost every other illuminating agent except coal-gas and electricity. Under many conditions of place and purpose, one serious objection lies against its use, which has been found to require constant legal and sanitary supervision. The vapors of the more volatile constituents of petroleum, when mingled with air in proper proportion, form mixtures that burn with great explosive violence. If these light oils, even in very small proportion, are allowed to mingle with illuminating oil, the mixture becomes unsafe under the ordinary conditions of domestic life, and frightful disasters have followed a careless disregard of these facts. To insure public safety, nearly all civilized countries and most of the States of the American Union have enacted laws intended to compel the use of oils properly prepared. Their safety is determined through tests designed to ascertain the temperature at which any given specimen of oil will give off a sufficient amount of vapor to burn explosively when mingled with air. The instruments and methods vary, but a sufficient uniformity follows their use to insure a generally uniform result, and in the main protect the public from unsafe oils.

For many and obvious reasons, petroleum can not generally compete with coal as a fuel. There are localities, notably the Caspian region and the Pacific Coast of North America, where petroleum of inferior quality is abundant and

cheap, while other fuel is scarce and dear, and large quantities of petroleum are consumed as fuel. Elaborate experiments have been made, not only by private individuals but by the governments of the United States, Great Britain, and other countries, to ascertain the most practical methods of burning petroleum as a steam fuel. The result has been in every respect satisfactory, especially in the Caspian region, where stationary, marine, and locomotive engines are being run, not only by means of the crude oil, but also by means of the "astalki" or residuum that results in much larger proportion from the manufacture of Russian than American petroleum. Crude petroleum and naphtha have been successfully used in the manufacture of iron, and one of the purposes for which the fetid oils of northwestern Ohio have been lately introduced by pipe-line to Chicago is to provide fuel for the extensive steel-works in the southern suburb of that city. High-test oils are largely used as a fuel in so-called kerosene-stoves.

PHARMACY. The advance in this art has been manifested by the recognition that it has received from the proposed formation of a section on pharmacy and materia medica by the American Medical Association. This was suggested early in the year, and at the subsequent meeting of that association an amendment to its constitution providing for such a section was introduced, but, according to the rules, an amendment can not be acted on till the next annual meeting. At the meeting of the International Medical Conference in Washington Dr. F. E. Stewart, of Wilmington, Del., in a paper that he read before the section on therapeutics and materia medica, advocated the establishment of a national laboratory for pharmacological investigation. The duties of such an institution would include the scientific examination of new therapeutic agents, with an expression of opinion as to their value. With such a bureau, the public would no longer be at the mercy of dealers of nostrums who widely advertise their preparations, claiming that they contain new drugs having wonderful curative properties. A bill was introduced into Congress by Samuel J. Randall providing that the Government undertake the preparation of a national pharmacopœia, its execution to be charged on a detail of officers from the various governmental medical departments, who are to invite three representatives from the American Medical Association, and a like number from the American Pharmaceutical Association, to aid in the work. This bill has not as yet become a law. According to a recent compilation, there are in the United States and the Dominion of Canada 82,244 druggists (proprietors of stores) and drug firms. Of this number there are 815 strictly wholesale, 310 wholesale and retail, and 81,619 retail drug establishments in the two countries. In the Dominion the number of establishments of all kinds is placed at 1,199. New York contains

2,897 drug-stores, and leads the list in this country, which ends with Nevada, that contains only 80. The other States that contain over 1,000 drug-stores are Pennsylvania, 2,586; Illinois, 2,284; Ohio, 1,902; Missouri, 1,758; Indiana, 1,549; Kansas, 1,442; Massachusetts, 1,888; Iowa, 1,372; Maryland, 1,219; and Texas, 1,156.

Colleges.—The faculty of the Michigan College of Medicine in Detroit have organized a school of pharmacy in connection with their college. Two lectures each on chemistry, materia medica, and practical pharmacy are delivered every week, in the evening. It is reported that a department in pharmacy had been organized at the Denver University, Col., the first session of which was to take place in September.

Legislation.—In Louisiana an act was passed, on July 11, to regulate the practice of pharmacy; the sale of compounded medicines and drugs, preparations and prescriptions; the sale of poisons; to create a State board of pharmacy, and to regulate the fees and emoluments thereof; to prevent the practice of pharmacy by unauthorized persons; and to provide for the trial and punishment of violators of the provisions of this act by fine or imprisonment. The amendment to the Kentucky law, that went into effect on March 8, requiring druggists to obtain certificates, has given general satisfaction, and it is the desire of the pharmacists that it be extended so as to include those doing business in cities of less than one thousand inhabitants. In Massachusetts, the law concerning the sale of poisons has been amplified so as to include some thirty more substances. The new law provides that whoever sells any of the poisonous articles named without the written prescription of a physician, shall affix to the bottle, box, or wrapper containing the article sold a label of red paper upon which shall be printed in large black letters the word "poison," and also the word "antidote," if there be one, and the name and place of business of the vender. The States of Arkansas, California, Florida, Indiana, Mississippi, Nevada, Oregon, Tennessee, Texas, and Vermont still lack proper legislative measures to regulate the practice of pharmacy. An interesting legal decision was rendered during the year to the effect that "acid phosphate," claimed by the Rumford Chemical Works as a trade-mark, was decided against that corporation. The matter is now before the higher courts, and a definite decision has not yet been reached.

Pharmaceutical Revision.—During the coming year delegates for this purpose will be chosen, and the present committee have issued an appeal to the several State pharmaceutical associations for aid in gathering information concerning the drugs and preparations actually in use by physicians in this country. They desire that analyses of the prescriptions of physicians in all parts of the United States be made by any who have the time and inclination, and

offer to supply to societies, at cost price, printed blanks to facilitate the work. This will be a collective investigation of great importance. The committee also desire to obtain from societies, and presumably also from individuals, expressions regarding the question of weights or measures in the pharmacopœial formulas.

Associations.—The thirty-sixth annual meeting of the American Pharmaceutical Association was held in Detroit, Mich., on September 8-7, under the presidency of John U. Lloyd. Delegates from five alumni associations, eight colleges, and five local and twenty State associations were formally recognized. The scientific section was presided over by James M. Good, and the following papers were presented: "Artificial Salicylic Acid," by Albert B. Prescott and Erwin E. Ewell; "Calycanthus Seed," by R. G. Eccles; "The Masking of Quinine," by Luther F. Stevens; "Adulterating Peppermint Oil," by Alvisio C. Stevens; "Acacia Catechu and Uncaria Gambier," by Henry Trimble; "Nomenclature of Pharmaceutical Preparations," by C. S. Hallberg; "The Loco Weed," by L. E. Sayre; "Artificial and Natural Mineral Waters," by Enno Sanders; "Phosphomolybdic Acid for the Quantitative Estimation of Alkaloids," by H. W. Snow; "Is the Precipitated Sulphate of Iron of Constant Composition? and does it contain the same Proportion of Water of Crystallization as the Large Crystals," by Henry Trimble; "Pepsin Testing," by Frank A. Thompson; "Notes on the Morphimetric Assay of Opium," by Joseph F. Geisler; "Sponges," by Rosa Upson; "Assay of Powdered Ipecacuanha," by John E. Pennington; "A New Method of preparing Mercurous Iodide," by Edward Soetje; "Arsenic in Medicinal Bismuth Salts," by R. E. Hawkes; and "Cream of Tartar," by Charles V. Boetcher. This section discussed very fully the recently issued "National Formulary" published under the auspices of the association. It was the result of the labors of a committee appointed in 1885 to prepare a list of unofficial preparations, so that when a prescription calling for a compound generally recognized but not in the "United States Pharmacopœia," was presented to the druggist a reliable and uniform article of standard quality could be made. The volume which contains 435 titles was published in July, and means tending toward its periodical revision were discussed, but it was decided to leave the matter open.

The commercial section discussed, under the chairmanship of A. H. Hollister, various trade measures, notably a resolution calling on the National Wholesale Druggists' Association to abolish the rebate system, and the questions "Is substitution going on?" and "Should we practice substitution?" referring to the treatment of drugs by the jobbers, also the very important "liquor question." Earnest protest was made against the present laws which, it was claimed, "placed the pharmacy and the grog-shop on the same level." The education

and legislative sections held brief meetings at which pertinent topics were considered. The special object of the legislative section was to consider how best "to secure a uniform standard of requirement for graduation through the States, so that the certificates of all State boards of pharmacy will be received as *prima-facie* evidence of competency."

At the business meeting 154 new members were admitted, and at the close of the sessions the total membership was 1,411. The financial condition of the Association was found to be excellent. The receipts were \$12,656.49 and expenditures \$10,280.42, showing a cash balance, and \$11,347.89 were invested in United States bonds. Considerable discussion as to the next place of meeting prevailed, but ultimately San Francisco, Cal., was chosen and the date left to the council. Maurice W. Alexander, of St. Louis, Mo., was elected president, and John M. Maisch, of Philadelphia, Pa., continued as secretary. Various local associations were organized during the year, among which was that of the drug clerks of Newark.

Trade Associations.—The fourteenth annual meeting of the National Wholesale Druggists' Association, under the presidency of E. Waldo Cutter, was held at Saratoga Springs, N. Y., beginning on September 11 and continued for three days. The proposition of extending the rebate plan to the retailers was discussed and its impracticability decided upon. The committee on legislation reported its failure to secure the repeal of the excise tax on all spirits, and urged that efforts be made toward the total repeal of all revenue taxes; also the repeal of the tax on spirits to 50 per cent. and the removal of the druggists' license tax. The committee on proprietary goods reported that the annual sales of these goods by the members of the association was estimated at \$37,500,000. Reports of the committees on fraternal relations; on paints, oils, and glass; on Paris green; on transportation; on boxes and cartage; and on commercial travelers were presented and referred to the board of control. A deficiency of \$465.98 in the Druggists' Mutual Fire Insurance Company was shown, and concerning it a resolution was passed from which the following is taken:

"An important feature of this company is its advance premium fund. This fund, of \$100,000, is intended to furnish the company with substantial assets; and in addition to the premiums paid on policies, it is fair to suppose, with the care exercised in the selection of risks, that prosperity will follow.

"Of this fund \$55,000 has been subscribed and paid. It is earnestly hoped that the members of the National Wholesale Druggists' Association, who have not already subscribed to this fund, will avail themselves of the opportunity now offered. These certificates are issued in sums of \$500 or more—80 per cent. payable at time of subscription, and the balance payable in monthly installments of 10 per

cent. for seven months. Six per cent. interest per annum is allowed on installments until all are paid; and after that, 6 per cent. per annum on amount of certificate; and in addition thereto a further participation in the profits of the company, at the rate of 10 per cent. per annum. After the expiration of one year from the date of the certificate, the amount subscribed may be used in the payment of premiums on accepted insurance.

"The policies of insurance of the company are not assessable."

The secretary reported a total membership of 841, and the treasurer showed a balance of \$1,689.50 on hand. George A. Kelly, of Pittsburgh, Pa., was chosen president, and A. B. Merriam, of Indianapolis, Ind., continued as secretary. The next annual meeting will be held, beginning on September 10, at Indianapolis. A supplementary meeting was held of the Western members in St. Louis, Mo., on October 18 to consider various trade matters in which they dissented from the resolutions adopted at the Saratoga meeting. The wholesale druggists of Chicago, St. Louis, Peoria, and Indianapolis met in Chicago on December 4 and organized a "Central Drug Exchange," having for its object the promotion of friendly relations, the correction of any mercantile abuses in the trade, and the maintenance of the high standard in the quality of goods handled. P. Singer, of Peoria, was elected president; Peter Van Schaak, of Chicago, vice-president; and C. Walbridge, of St. Louis, treasurer and secretary.

The Association of Manufacturers and Dealers in Proprietary Articles held its annual meeting at Saratoga Springs, N. Y., on September 14. About twenty members were present. Several communications were received and referred to committees for consideration, after which R. V. Pierce, of Buffalo, N. Y., was elected president, and Henry E. Bowen, of New York city, as secretary. The Association then adjourned subject to the call of the president. A National Paint, Oil, and Varnish Association was organized at Saratoga Springs on September 11, and Charles Richardson, of Boston, Mass., was chosen president, and G. H. Vrooman, of Chicago, Ill., secretary.

Literature.—The books of the year include: "The Art of Dispensing" (London); "The National Formulary" (Philadelphia); "Pictorial History of Ancient Pharmacy," translated from the German by Dr. William Netter (Chicago); "Organic Analysis," by Prof. Albert B. Prescott (New York); "The Beginnings in Pharmacy," by R. Rother (Detroit); "An Introductory Treatise on the Practical Manipulation of Drugs," by R. Rother (Detroit); "The Prescription, Therapeutically, Pharmaceutically, and Grammatically Considered," by Otto A. Wall (St. Louis); "Price and Dose Labels," by Hans M. Wilder (New York); "Toilet Medicine," by Edwin Wooton (New York); also new editions of "The Dispensatory of the

United States," 16th edition (Philadelphia); "Pharmacology, Therapeutics, and Materia Medica," by T. Lauder Brunton (Philadelphia); "Prescription Writing," by Frederick H. Gerish (Portland, Me.); "Chemical Lecture Notes," by H. M. Whelpey (St. Louis); "Therapeutics: its Principles and Practice," by Dr. Horatio O. Wood (Philadelphia). The pharmaceutical journals have been active in the exposure of the objectionable character of various proprietary medicines. "The Druggists Circular" deserves credit for its analysis of "Scotch Oats Essence," which it showed to be a preparation of morphine. Samples of the widely advertised "Recanier Balm" proved on analysis to consist of one drachm of oxide of zinc and two grains and a quarter of corrosive sublimate in four ounces of water. The original cost of the mixture could hardly have exceeded three cents yet it finds a ready sale at \$1.50 a bottle. The "Vita Nuova" owes, according to the same journal, its wonderful properties to a small quantity of cocaine dissolved in alcohol; still it is advertised as "free from alcohol" and as not being a "wine of coca."

"The Rocky Mountain Druggist," edited by J. L. T. Davidson, made its appearance in Denver, Col., in June, and is the first distinctively pharmaceutical journal to be issued west of the Mississippi. "The New England Druggist," of Boston, Mass., edited by J. W. Colcord, began publication later in the year.

PHYSIOLOGY. The Nervous System.—The researches of Profs. Victor Horsley and Schäfer go to show that, as the result both of ablation and excitation, the motor region of the brain cortex may be mapped out into a series of main areas, each being connected with the movements of a particular part—such as the head, trunk, leg, arm, and face areas—and these, again, present subdivisions concerned with more specialized movements; there are, however, no sharp lines of demarcation between the several areas, but they overlap one another. Brown-Sequard has made another contribution to the discussion of this subject, in which he suggests that each function, each property of the central-nerve system, is strongly localized in certain nerve-cells, but these cells are not localized in restricted areas or microscopic centers, but are distributed through many parts of the central nervous system. This dissemination, he considers, explains the fact that there is no single spot or region in the whole of the central nervous system the destruction of which is followed with absolute certainty by either paralysis or anæsthesia.

A distinction has been made by some writers between cranial and spinal nerves; and, although efforts have not been wanting to bring both groups under the same system, they have failed, on account of some misconceptions and confusions that are pointed out in a paper by W. H. Gaskell. This author has made a new study of the subject, from the results of which he concludes that both of the groups to which he

assigns these nerves—a foremost, which in man are entirely efferent, and a hindmost group of nerves of a mixed character—are built upon the same plan as the spinal nerves, both with respect to the structure, function, and distribution of their nerve-fibers, and as far as the arrangement of the centers of origin of those nerve-fibers in the central nervous system is concerned; and he thinks it probable that the reason for the deviation of the cranial nerves from the spinal-nerve type is bound up with the changes which occurred at the time when a large portion of the fibers of the foremost group of cranial nerves lost their functional activity.

Dr. Marckwald has brought forward evidence to show that, although the respiratory centers in the medulla oblongata are automatically active, as well as excitable by reflex action, yet the automatically active center can only liberate respiratory spasms, but no regular rhythmic respiratory movements.

Dr. Gersung, of Vienna, has successfully performed the novel operation of transplanting a portion of the nerve of a rabbit to the thumb of a patient, Prof. Von Fleischl. The transplanted nerve not only united with the human nerve upon which it was grafted and performed its functions normally, but the operation resulted in curing a tendency to neuromatous degeneration with which the original thumb nerve had been affected. The case is further interesting from the light which it casts upon the existence of a practical identity between the nerves of different species of animals.

A remarkable case is described by Mr. Sutton in which the divided ends of a median nerve that had been severed ten weeks previously were dissected out, revived, and after five days began to recover function. Mr. Barwell, discussing Mr. Sutton's paper, mentioned a case in which recovery of a function occurred when the parts were brought together six months after division.

Special Senses.—The experiments of Herr Urbanschitsch, of Vienna, on the reciprocal influence of organs of sense lead to the general conclusion that any sense-excitation results in an increase of the acuteness of other senses. Thus, sensations of hearing sharpen the visual perceptions. If colored plates are placed at such a distance that one can hardly distinguish the colors, and various sounds are then produced, the colors become generally more distinct the higher the sounds. Similarly, one can, while a sound affects the ear, read words which he could not read before. The ticking of a watch is better heard when the eyes are open than when they are closed. Red and green increase the auditive perceptions, while blue and yellow weaken them. Several musicians, however, were agreed that red, green, yellow, and blue caused an intensification of sound of about one eighth, while violet had a weakening effect. Taste, smell, and touch are

under like laws. Light and red and green colors increase their delicacy, while darkness, blue, and yellow diminish it. Under the influence of red and green, taste extends from the anterior border of the tongue to the whole surface; on the other hand, a strengthening of smell, taste, or touch, exalts the other sensitive perceptions. The reciprocal influence of touch and the sense of temperature is specially interesting. If we tickle the skin with a hair, and plunge the hand in hot water, the tickling ceases; but, if the hand be placed in cold water and a part of the body is tickled, the temperature is felt more vividly.

From a purely physical point of view, Prof. S. P. Langley has concluded that the time required for the distinct perception of an excessively faint light is about half a second. A relatively very long time is, however, needed for the recovery of sensitiveness after exposure to a bright light, and the time demanded for this restoration of complete visual power appears to be the greatest when the light to be perceived is of a violet color. The visual effect produced by any given constant amount of energy varies enormously according to the color of the light in question. It varies considerably between eyes which may ordinarily be called normal ones; but, letting 1 represent the amount of energy required to make us see light in the crimson of the spectrum near A, the average will give the following proportionate results for the wave-lengths corresponding approximately to the six colors: Violet, 1,600; blue, 62,000; green, 100,000; yellow, 28,000; orange, 14,000; red, 1,200. Since we can recognize color still deeper than crimson, it appears that the same amount of energy may produce at least 100,000 times the visual effect in one color of the spectrum that it does in another. The absolute measure of energy represented by the sensation of crimson light is 0.000,000,000,000,8 horse-power.

Dr. Kœnig has made some experiments for testing Holmgren's statement that very small colored dots can be seen only of one of the primary colors of Young and Helmholtz's theory—red, green, or violet. The statement was not confirmed when the necessary precautions were taken, and it was found that small dots of any color, even yellow and blue, were perceived as possessing their own objective color. This had also been observed by Hering. Isaacksen had, further, investigated the power which the eye possesses of distinguishing between minute dot-like lights which are so small that their image on the retina only falls on one cone, and found that it was as fully developed as for the colors of large surfaces.

The attention of anatomists was first directed to the papilla foliata of mammals as an organ of taste by Van Wyss in 1869-'70, and Engelmann in 1872. The investigations have been carried on by other observers—as to man, by Krause, Ajtai, and Lustig. Boulart

and Pilliet examined the tongues of a large number of mammals with special reference to the presence or absence of the papillæ foliatae. They found them existing in marsupials, edentates, insectivora, rodents, proboscidea, and swine; and wanting in cetacea, chiroptera, perissodactyla, ruminantia, and many carnivora. Frederick Tuckerman observes that there are probably many groups of existing animals whose remote ancestors possessed foliate areas, which have long since disappeared from their present representatives. An exception is met in the swine, which have undergone fewer structural modifications from the primitive type than most of the other mammals since the Eocene period. According to this author, this organ in the pig is now and then rudimentary, is usually more or less atrophied, and very frequently shows a want of symmetry between the two papillæ. With a single exception all the specimens of swine's tongues examined had well-developed foliate areas. The papilla foliata consists of four or five rather irregular folds, with slightly rounded crests, separated by furrows varying much in breadth, and slightly in depth. Occasionally the bottom of a furrow is invaginated upward into a ridge, which may or may not bear taste-bulbs. Serous glands and ducts are very abundant at the base of the folds and occupy a large space within them. Some of the ducts of these glands are very tortuous, and several millimetres in length. They usually open between the folds at the bottom of the furrows. Glands of the mucous type are sparingly scattered through this region. Each fold carries at its upper part many secondary papillæ, the depressions between which are filled by the epithelium. The taste-bulbs of this gustatory region are a little smaller on the average than those of the circumvallate area, and are estimated to number 2,400 for each papilla. Dr. Tuckerman quotes from Dr. Luigi Griffini, of Modena, on his experimental study of the reproduction of the gustatory papillæ and regeneration of the taste-bulbs in the rabbit and dog. Destruction, partial or complete, of the organs of taste appears to be effected by the direct removal from the animal of the papillæ themselves, or by division of the glosso-pharyngeal nerves. The process of reproduction is described in the memoir. Griffini rejects the theory of direct continuity between nerve-fibers and epithelial cells, and asserts that reproduction of the papillæ after their partial or complete removal always takes place. He has also made an experimental study of the organ of smell, the motorial end-plate of the muscle-fiber, and the retina of the lower animals, the results of which have not been published. Dr. Tuckerman has added to his contributions in this branch studies of the tongue and gustatory organs of *Fiber Zibethicus*, and of the gustatory organs of *Putorius Vison*.

In the experiments of E. H. S. Bailey and E.

L. Nichols upon the delicacy of the sense of taste as to different classes of substances, quinine, cane-sugar, sulphuric acid, sodium bicarbonate, and common salt were employed as severally representing, typically, the bitter, sweet, acid, alkaline, and saline tastes. The tests were made upon 82 men and 46 women. The average results were as follow:

- I. Quinine:
Male observers detected 1 part in 890,000 parts of water.
Female observers detected 1 part in 456,000 parts of water.
- II. Cane-sugar:
Male observers detected 1 part in 199 parts of water.
Female observers detected 1 part in 204 parts of water.
- III. Sulphuric acid:
Male observers detected 1 part in 2,060 parts of water.
Female observers detected 1 part in 8,380 parts of water.
- IV. Bicarbonate of soda:
Male observers detected 1 part in 98 parts of water.
Female observers detected 1 part in 126 parts of water.
- V. Common salt:
Male observers detected 1 part in 2,340 parts of water.
Female observers detected 1 part in 1,980 parts of water.

The authors conclude that the sense of taste is much more delicate for bitter substances than for the others included in the list (the relative delicacy for quinine and sugar being very nearly 2,000:1); that, taken in the order of their effect upon the organs of taste, the classes of substances must stand in the order—bitters, acids, saline substances, sweets, and alkalies; that the sense of taste is, as a rule, more delicate in women than in men (in the case of all the substances tried excepting salt); that the ability to detect a dilute bitter is very generally accompanied by inability to detect a dilute sweet, and *vice versa*; and that the long-continued habitual use of a substance does not seem to influence in any marked way the delicacy of the sense of taste for that substance. While these conclusions represent the average results, the tests brought out some astonishing individual peculiarities. Thus there were persons who could detect with certainty 1 part of quinine in 5,120,000, while others failed to notice 1 part in 160,000.

A device for measuring the acuteness of the sense of smell has been invented by M. Zwaardemaker, of Utrecht. It consists of two tubes, a smaller one of glass and a larger one of India-rubber or gutta-percha, sliding over the former in such a way that the air breathed in by the nostrils at the free end of the glass tube may pass through a desired length—short or long—of the odor-bearing tube. The length is read off in centimetres, which it is required to give to the passage in the odor-bearing tube to produce a definite olfactory impression upon the nose.

Circulation.—The changes in the volume of the heart and the amount of blood propelled by it under varying conditions of pressure have been studied by Prof. Roy and J. G. Adami. A slight compression of the abdomen of a dog caused an increase in the volume of the heart and in the amount of blood passing through it in a given time. The phenomenon is explained by the fact that the abdominal vessels are capable of containing more than all the blood in the

body. Slight compression of the abdomen will, without disturbing the arterial supply, drive out a large amount of blood which will be of use for other regions of the body, where it may be applied to the augmentation of their functional activity. The front and side abdominal walls are, furthermore, formed of soft, elastic tissues, which, in health, exert an adequate pressure upon the abdominal contents and blood-vessels. If, however, the muscles lose their tone, the walls become flaccid, the veins dilate and become reservoirs for more blood than is needed there, depriving the rest of the body of a part of the fluid requisite for its due nutrition. Here, then, we have an explanation of the office of the waist-belts worn by active peoples and athletics. They help to maintain a due pressure on the abdominal vessels to prevent a useless storing of the blood there, and to secure an adequate supply for the parts of the body where it will be demanded. Hence some form of moderate pressure upon the abdomen may be beneficial to persons leading sedentary lives and to women. But if the pressure is made extreme, it will prevent instead of aiding exercise and activity, will affect the arteries also, and disturb the blood-supply of the abdomen and lower extremities.

Dr. John A. McWilliam has found that the rule of behavior of the cardiac muscle of cold-blooded animals under the influence of single stimuli—that the minimum stimulation is at the same time maximal—holds also with the mammalian heart. There occurs a rhythmic rise and fall in the excitability of the organ; a fall immediately succeeding the occurrence of an effective stimulation, followed by a gradual rise, and this again by subsidence into the phase of quiescence. The facts indicate that all parts of the organ are endowed with independent rhythmic power, but not in equal degree; and if one portion of the heart possesses a higher power of spontaneous rhythm than the rest of the organ, its rhythm will supersede the inherent rhythm of the other parts, and determine the rate of contraction in the whole organ. The causes determining rhythm are to be sought for at the venous end of the organ, and ultimately in the molecular changes occurring deep in the tissue. The propagation of the contraction from auricles to ventricles is mainly effected through the nerves that pass between those parts.

Dr. E. W. Carlier has explained a method by which human blood may be withdrawn from the body and its fluidity preserved. The finger from which the blood is obtained is greased and plunged into castor-oil before the puncture is made, while every precaution is taken to prevent the blood coming in contact with the air or with solid matter. In this way the blood may be preserved in a fluid state for a considerable time. As the drops of blood settle slowly in the oil, the corpuscles are seen to fall to the lower part of the drops, while the clear plasma remains above. Prof. Haycraft and Dr.

Carlier believe that the human blood plasma has never before been demonstrated in an unaltered condition, except microscopically. Coagulation eventually occurs, because the blood necessarily comes in contact with the sides of the wound made in the finger.

Continuing his researches on the coagulation of the blood, Dr. Wooldridge endeavors to show that the antecedents of the fibrin are not pure albumens, but fibrinogens consisting of albumen and lecithin; and he attributes great importance to lecithin in the process of coagulation. The experiments of Prof. Haycraft and Dr. Carlier in the same line tend to show that the white corpuscles play an important part in the process.

The distribution of the blood-vessels in the valves of the heart has been investigated by M. Darier, who finds that both in the fetus and the adult, in health, there are no vessels in the purely fibro-elastic portion of the auriculo-ventricular valves, and that there are none in the chordæ tendinæ attached to these valves. The aortic segment of the mitral valve, however, presents at its upper part a vascular area of small extent, not exceeding one sixth of the whole height of the valve; and in the fetus a few muscular fibers accompanied by vessels penetrate the auriculo-ventricular valves, but never extend to the lower fourth of these valves. The semi-lunar valves of the aorta and pulmonary arteries are always destitute of vessels; when vessels are found, therefore, in those non-vascular parts, they may always be regarded as pathological.

Researches on the blood-vessels of the carnivora, made by Bellarminoff under the direction of Dr. H. Virchow, show that the blood-vessels of the eye have a tendency to form rings, from which a large number of fine branches pass posteriorly, and that the arrangement is very different in different classes of animals; thus, for instance, the course of the arteries in the eye of a dog, as compared with that of a rabbit, is such that the dog's eye must be turned through an angle of 180° in order to make the course of its arteries correspond with that of the rabbit's eye.

Respiration.—A simplified method of measuring the gaseous interchange during respiration is described by Prof. Zuntz. In it breathing is carried on, the nose being closed, through a mouth-piece, which is connected by very mobile valves with gasometers, which thus measure the volume of the inspired as well as of the expired air. Samples of the expired air can be collected at any desired intervals of time, and the amount of oxygen and carbonic acid in them determined. Dr. Loewy has carried out some experiments with this apparatus in order to determine the influence of digestive activity on the process. The respiratory interchange of the patients was determined in the morning, while they were fasting and in a quiescent condition; they were then given Glauber's salt; as soon as the action of the salt had manifested

itself painfully, and increased peristaltic action had set in, the respiratory interchange was again determined. In all cases the gaseous interchange was increased by from 7 to 80 per cent. more than the normal. The several persons behaved very differently in this respect, and the same person showed marked differences in the increase of respiratory interchange at different times, after equal doses of salt. As a rule, the increase was proportional to the amount of discomfort experienced by the patient in the lower parts of the body.

Dr. Marcet, in the investigation of normal respiration, directs attention to the occlusion of a proportion of the air inspired, and insists on the importance of considering the proportion of it to the carbonic acid expired.

Digestive System.—Later studies by Dr. J. N. Langley on the physiology of the salivary secretion relate to the effect of atropine upon the supposed varieties of secretory nerve-fibers. Heidenhain supposes that there are two kinds of secretory fibers, one proper secretory causing a flow of liquid, and the other trophic causing an increase in solubility in the stored-up gland substance. The author had already shown that on the assumption of the existence of different kinds of secretory fibers, there is ground for supposing that there is a third variety—anabolic fibers—causing the formation of fresh substance by the cells. The effects of atropine having been observed only on the proper secretory fibers, Dr. Langley's observations were extended to the other fibers, with the result that the drug was found to paralyze the trophic, anabolic, and secretory fibers simultaneously. Hence, the author concludes, the various changes caused in the gland-cells by nerve stimulation are all affected by atropine, and to approximately equal extents. When paralysis of the chorda occurs, it is a paralysis of the whole of its function with regard to the gland-cells. In other words, the phenomena of atropine poisoning give no indication of the existence of more than one kind of secretory nerve-fiber in the chorda tympani.

G. Sticker concludes, from his observations, among which were special experiments upon living persons, that the supposition that the salivary secretion plays no part in gastric digestion is erroneous; and that, on the contrary, the presence of saliva in the stomach has a direct effect in promoting the secretion of gastric juice.

Dr. Poulet has found evidence that the acid of the gastric juice in man, as ascertained by the process of dialysis during the first period of digestion, is exclusively the hippuric, while during the close of digestion there is a mixture of hippuric and tartaric acids. In the fasting state tartaric acid is alone present.

In experiments to determine the effect of cooking on the digestibility of starchy foods, Dr. N. Butlagin, of St. Petersburg, found that the activity of the saliva does not differ much among healthy persons, but that when people

are badly nourished and weak, and especially when they are also suffering from disease, their saliva has a diminished power of dissolving starch. When starchy substances are subjected to prolonged cooking they become more easily digestible; and in this way compensation may be provided for the inactivity of the saliva of weakly persons. Thus, rice and peas were found to require three hours' cooking in order to render them as easily digested in the saliva, possessing only 88 per cent. of the normal activity, of a badly nourished, hysterical woman, as they were with a single hour's cooking by the saliva of healthy persons; and generally it was found that in the case of weakly or diseased persons starchy food must be cooked twice or thrice as long, in order that it may be equally acted upon, as in the case of healthy persons. Again, when starch has been cooked for a long time there is less difference between the effects of healthy and unhealthy saliva upon it; this is especially remarkable in the case of millet, which after one hour's cooking showed a difference of 12.89 per cent. in favor of the saliva of healthy as against that of diseased persons, but after three hours' cooking a difference of only 5.77 per cent.

From a series of experiments still going on, Drs. Vincent D. Harris and Howard H. Tooth have obtained evidence in support of the generally accepted belief that micro-organisms need not take any part in gastric digestion. In regard to the formation of leucin and tyrosin in pancreatic digestions, although their experiments were inconclusive, they have been led to believe that the formation of these substances depends, in part at all events, on bacteria. It seems to them likely that the formation of indol and its allies in the alimentary canal below the stomach is a mode of excreting nitrogen, like the production of leucin and tyrosin, and that the former substances are not formed from the latter, but directly from peptone.

The researches of Drs. Henry Leffmann and William Beam on the action of antiseptics in perishable articles of food upon the organism and their effect on the nutritive or medicinal value of any articles with which they may be associated were based on the estimation of the sugar formed in presence of a large excess of starch, arrow-root starch being selected for the purpose of the experiments. It was found that salicylic acid prevents the conversion of starch into sugar under the influence of either diastase or pancreatic extract, but does not seriously interfere with peptic or pancreatic digestion of albumen. Saccharin holds about the same relation as salicylic acid. Sodium acid, sulphite, and boric acid are practically without retarding effect. Beta-naphthol interferes decidedly with the formation of sugar by diastase, but not with the action of pancreatic extract on starch. Peptic and pancreatic digestions of albuminoids were almost prevented by this agent. The authors conclude that the indis-

orimate use of these agents is to be regarded as objectionable and a proper subject of sanitary inspection.

Nutrition.—The results of an investigation of the effect of the Russian bath on nitrogenous metabolism have been published by Dr. Makovetski, of St. Petersburg. The subjects were four student friends in perfect health. The baths were given daily for five days; perspiration in a hot chamber was induced with the usual amount of shampooing, but without the use of steam. It was found that the assimilation of the nitrogenous parts of the food was diminished, while the nitrogenous metabolism was increased. The loss by the lungs and skin was increased to a marked degree, but the urine was diminished; and the uric acid was diminished during the days when the baths were given. The baths have the effect of strengthening the muscular and nervous systems, and of increasing secretion when there is much muscular work, especially when the food is deficient in nitrogen, when there is a large amount of nervous and mental activity, and when there is deficient action of the secretory organs in consequence of preceding hypersecretion, or morbid conditions, such as chronic catarrh of the bronchi, stomach, intestines, or genito-urinary tract, chronic hepatic, renal, or splenic affections. In these cases, together with the baths, fat and hydrocarbons are required in the food. As contra-indications, theory would lead us to conclude all conditions where the nitrogenous metabolism is diminished, and also those where artificially induced diminution of it appears to act prejudicially.

After an investigation of the qualities of vegetable albumens, Dr. Rutgers concludes, in the "*Zeitschrift für Biologie*," that they are capable of supplying the place of the ordinary albumens which we are accustomed to consume as food, without causing any disturbance in the nitrogenous balance of the economy; that beans and peas overcharge the alimentary tract, because both of their solids and of their disposition to develop gas, while meat and rice cause no disturbance. There are consequently various contra-indications as to an exclusively vegetable diet. The acidity of the stomach and of the urine are much less upon a wholly vegetable than upon an ordinary mixed diet.

Dr. R. Schneider has experimented upon the absorption of iron and on its occurrence as oxide in the organs and tissues of animals. All the animals examined—whether living in water, mud, or underground—contained oxide of iron. It was detected by employing ferrocyanide of potassium and dilute hydrochloric acid. Among vertebrates, oxide of iron was found in the alimentary canal, in the liver and spleen, occasionally in the kidneys and teeth; and in the proteus it occurred throughout the whole skeleton. Among the invertebrates it was found in the cells of the liver and intestine, in the respiratory organs, the shells, and the chitinous envelopes. It occurred chiefly in

the protoplasm of the cells, but also frequently in the nuclei.

Muscular System.—The researches of Prof. Horsley and Schäfer (see "*Annual Cyclopædia*," for 1886) on the character of certain muscular contractions are supplemented by observations of Mr. W. Griffiths, to determine the influence of strain in modifying the number and character of the waves seen in the myogram of a voluntarily contracting muscle. The author concludes that the waves seen in the myogram represent contraction and not vibration waves; that the number of these per second varies in different individuals; that the number of muscular responses per second in a voluntarily contracting muscle varies with the weight lifted, increasing with the weight up to a certain maximum, beyond which a decrease takes place; that the number of responses varies with the time during which the muscle is made to contract; a similar course is observed with increased activity to that described in connection with increased weight; and that the number of responses per second presented by an unweighted muscle and the same muscle in a state of dead strain is fairly constant, and is the lowest number of muscular responses obtained from a voluntarily contracting muscle.

The experiments of Horsley and Schäfer have led them to conclude that the normal muscular rhythm is about ten per second. Charcot, studying the differences in the rates of muscular movements in different forms of tremor, has determined tremors of slow rhythm—four or five per second—in paralysis agitans and multiple sclerosis; and of rapid rhythm—eight or nine per second—in alcoholic and mercurial tremors and the tremor of exophthalmic goitre. Drs. R. N. Wolfenden and Dawson Williams urge that these distinctions must be taken with reserve, and maintain that the rate of the normal tremor is preserved in pathological conditions, but with variations in amplitude. While the apparent rate is five or six per second in the tremors of old age, a careful study of the curves will show that the apparent single vibrations are really made up of two, and that the slow tremor is therefore one of normal rate in which every other vibration is imperfect.

An attempt has been made by Dr. G. F. Yeo to settle the doubt which had arisen in regard to the duration and significance of the latent period of excitation in muscle contraction. He finds that as the intensity of stimulation increases up to the injurious point, the duration of latency decreases, but beyond this point the latent period becomes longer. Also that if the weight with which the muscle is loaded be suspended by an elastic band from the axle of the lever belonging to the apparatus, difference of tension no longer seems to influence the duration of latency. He has not recorded less than .004 of a second as the normal time of latency, and no reliable measurement (without heating) of a less duration can

be found in ordinary records. From these and other results he concludes that there is a period of some .005 of a second (net latency) during which certain molecular changes, necessary for its energy to become visible, take place in muscle. The influence of the elasticity of muscle or the rate of propagation of the wave of contraction can only come into operation after this period.

The study of the action of caffeine upon voluntary muscle is one of especial interest, because different observers have often obtained very different results. In taking the subject up again for investigation, Drs. T. Lauder Brunton and J. Theodore Cash have kept in view the facts that the action which a substance is alleged to have upon a living organism may vary according to the nature of the drug; according to the nature of the organism; and according to the conditions (of temperature, duration of observation, dose, etc.) under which the experiments are made. So far as described in their paper, the experiments of the authors have been directed to the amount of caffeine producing rigor, and to the effect of certain acids and alkalies on caffeine rigor.

Whatever view may be entertained as to the nature of the electric currents present in an injured muscle or nerve, whether they be regarded as pre-existing in the uninjured condition or as being developed through injury, such currents exist in the injured condition. They have been made the subject of investigations, with improved apparatus, by Drs. Henry O. Chapman and Albert P. Brubaker, who have sought to demonstrate their presence in muscle and nerve, and to determine their electro-motive force. The method of these authors has been applied to the gastrocnemius muscle and the sciatic nerve of the frog, and they have determined that the electro-motive force of the muscle is more than three times as great as that of the nerve.

John Campbell, of Johns Hopkins University, has found that when curarized muscles are moderately weighted and stimulated with electricity, the stimulus starts from only one electrode—viz., the cathode on closing and the anode on opening the current; while with insignificant weights the muscle is stimulated at both anode and cathode, with equal and simultaneous stimuli.

Poisons.—An investigation has been undertaken by Dr. Weyl of the toxic or non-toxic properties of the coloring matters derived from coal-tar, including especially those that might be employed for the coloration of food-materials. The author first tested the nitroso and nitro derivatives of benzol and phenol, and, taking phenyl green as a typical representative, found the first to be non-poisonous. The nitro-derivatives which he examined—namely, picric acid, dinitro-kresol, and Martin's yellow—he found to be poisonous; the sulpho-compounds of the last-named matter were harm-

less; two of these—naphthol yellow and brilliant yellow—are articles of commerce. The difference points to a relationship between the chemical constitution and physiological action of these bodies.

The general physiological action of carbonic monoxide was well illustrated in a case of fatal poisoning by that gas at Troy, N. Y., of which Prof. W. P. Mason gave an account before the American Association. Owing to a break in the mains, a quantity of fuel-gas passed beneath the frozen crest of the earth and escaped into the adjoining houses. Three deaths and a number of serious illnesses resulted. The fuel-gas contained about 40 per cent. of carbon monoxide and was practically odorless. Very searching autopsies were made with the result of finding nothing abnormal except the bright, cherry-red color of the tissues and the vivid redness of the blood. The physician making the autopsies was seized with giddiness and great oppression in the chest, calling strongly to mind the symptoms described by Sir Humphry Davy when he so rashly experimented upon himself with carbon monoxide. The presence of carbon monoxide in the blood was shown by the spectroscope, the characteristic absorption bands being strongly marked. Although now twenty months since the time of its removal from the body, the blood still preserves its brilliant redness and gives the carbon monoxide bands as distinctly as ever.

The toxic milk ptomaine, tyrotoxin, according to Braithwaite's "Retrospect," is, chemically speaking, diazo-benzole. It is developed in milk by the growth of a micro-organism which multiplies rapidly under favorable conditions. These are principally the exclusion of air, entirely or to a great extent, and a temperature approaching 86°. It is observed under these conditions if milk, as it is drawn from the cow, is placed in cans and they are tightly closed.

It is shown in a memoir by MM. Roux, and Chamberland, to which M. Pasteur has called attention in the French Academy of Sciences, that the septic vibron, a living ferment analogous to the butyric vibron, develops soluble chemical products, which gradually act as an antiseptic on the organism itself. These products, introduced in sufficient quantities into the body of the guinea-pig, confer absolute immunity from the attacks of the virus, to which that animal is specially susceptible.

Experiments by Dr. R. H. Chittenden have shown that uranium is an irritant poison tending to destroy the life of the intestinal and renal tissues. Enteritis, or acute catarrhal inflammation, was easily induced by the administration of small doses of its salts. In toxic doses it causes absolute anuria; in smaller doses, merely acute parenchymatous nephritis; in minute doses it has a diuretic effect. Oxalate of lime crystals in the urine, and glycosuria were constantly noted in cases of poisoning by uranium.

There are a number of substances, according to Prof. Liebrich, which, when injected subcutaneously, give rise to anæsthesia in the immediate neighborhood of the place where they are injected. Antipyrine, sal-ammoniac, salts of tannin, resorcin, chloride of iron, and other substances have this action, although there is no chemical or physiological similarity between them. They possess, however, the property in common that they all have a corrosive action on the tissues—the expression being understood to imply any kind of alteration of molecular structure. The alkaloids, in the cases where they possess a local anæsthetic action, act in the same way, as, for instance, erythrophæin. Cocaine alone is an exception to the rule, inasmuch as it is a local anæsthetic, but does not corrode the tissues. When applied subcutaneously to man, the substances named produce either no localized anæsthesia, or one which is very imperfect. When testing the action of anæsthetics on the eye, it is essential to take into account the difference in sensitiveness of the conjunctiva and cornea, as Claude Bernard has pointed out.

PORTUGAL, a constitutional monarchy in Southwestern Europe. The crown is hereditary to both sexes in the house of Braganza. The present sovereign is Luis I, born Oct. 31, 1838, the son of Queen Maria II and Prince Ferdinand of Saxe-Coburg, who succeeded his brother Pedro V, Nov. 11, 1861, and married in 1862, Pia, youngest daughter of King Vittorio Emanuele of Italy.

The *Carta de Ley*, or Constitution, granted in 1826, and altered in 1852, was further modified by the law of July 24, 1885, which abolishes hereditary peerages by a gradual process. These become extinct on the death of the immediate successors of the peers now living. In the place of the hereditary peers, there will be 100 peers appointed for life by the King, and 50 elective peers. The Chamber of Peers consists of 162 members, and the Chamber of Deputies since 1884 has had 178 members. The present Cabinet, constituted on Feb. 20, 1886, is composed as follows: President of the Council and Minister of the Interior, Luciano de Castro Pereira Corte Real; Minister of Justice, F. A. da Veiga Beirao; Minister of Public Works, E. J. Navarro; Minister of Finance, M. Cyrillo de Carvalho; Minister of War, Col. Viscount San Januario; Minister of Marine and the Colonies, H. de Barros Gomes, who is also Minister of Foreign Affairs *ad interim*.

Finances.—The public debt on June 30, 1887, amounted to 490,498,599 milreis. The interest discharged during the year was 14,907,479 milreis, and the interest in default that was added to the debt was 5,287,420 milreis.

Communications.—The main lines in 1888 had the total length of 1,761 kilometres, while 882 kilometres were in course of construction. Of subsidiary railroads, there were 144 kilometres completed and 109 kilometres building.

The number of letters sent through the mails

in 1887 was 20,319,712; post-cards, 8,056,279; circulars and newspapers, 16,944,182.

The length of the Government lines at the beginning of 1885 was 4,978 kilometres, with 11,782 kilometres of wire. The receipts were 220,684 milreis.

Commerce.—The values of the imports and exports of the various classes in 1887 are given, in milreis, in the following table:

CLASSES.	Imports.	Exports.
Cereals.....	6,192,000	817,000
Fruits and vegetables.....	1,068,000	1,714,000
Colonial produce.....	8,268,000	90,000
Wines and spirits.....	162,000	11,423,000
Animals and animal products.....	4,644,000	2,521,000
Minerals.....	2,468,000	1,068,000
Metals.....	7,765,000	161,000
Hides and leather.....	2,844,000	282,000
Timber.....	1,177,000	17,000
Textiles.....	6,805,000	140,000
Various manufactures.....	5,246,000	878,000
Drugs and chemicals.....	400,000	463,000
Total merchandise.....	42,018,000	21,244,000

The imports of precious metals amounted to 4,771,000 milreis, and the exports to 5,000 milreis.

The countries participating in the foreign commerce of Portugal in 1886 and the value of the trade with each, in milreis, are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	12,174,000	6,722,000
France.....	5,180,000	9,491,000
Brazil.....	2,014,000	4,575,000
Germany.....	4,695,000	1,318,000
United States.....	4,978,000	647,000
Spain.....	2,594,000	1,155,000
Portuguese possessions.....	1,582,000	557,000
Belgium.....	1,587,000	849,000
Italy.....	799,000	164,000
Sweden and Norway.....	741,000	912,000
Russia.....	471,000	296,000
Other countries.....	285,000	430,000
Total.....	87,826,000	26,122,000

The merchant marine in 1888 consisted of 48 steam-vessels of the aggregate capacity of 16,260 cubic metres, and 421 sailing-vessels of 82,810 cubic metres.

The Army.—The effective strength of the army on the peace footing, Aug. 31, 1888, was 2,073 officers and 28,534 men, with 2,852 horses and 768 mules. The war strength was 3,862 officers and 125,057 men, with 7,821 horses, 4,870 mules, and 264 guns. These figures do not include the colonial forces, consisting of a regiment of infantry 1,198 strong, and 7,688 colonial troops of the first line, besides numerous native troops of the second and third lines.

The Navy.—The fleet in 1888 numbered 42 steamers with 126 guns, and 13 sailing-vessels with 41 guns. The steam navy included 1 iron-clad corvette, the "Vasco de Gamo"; 6 other corvettes; 18 gun-boats; 7 other steamers; and 6 torpedo-vessels.

Colonies.—In Macao, Portuguese sovereignty over which has recently been acknowledged by China in return for the co-operation of the

colonial authorities in suppressing opium-smuggling, great excitement was produced in September by the conduct of the Governor in dissolving the Senado or municipal council, owing to a difference of opinion between himself and its members. This body has existed for three hundred years, managing all the internal affairs of the colony, regulating trade, administering finances, and performing all duties of an administration except the control of troops. The Portuguese Government notified to the powers in 1888 the abandonment of the protectorate that it assumed over the Kingdom of Dahomey in August, 1886, being unwilling to bear the international responsibility for the actions of the Sultan. On the African coast farther south the Government has made extraordinary efforts to extend and consolidate its authority. The Governor of the Congo territory, in February, 1888, took peaceable possession of Ambrizette. New export duties for the Portuguese Congo, copied from those of the Congo Free State, went into force on March 1. The Portuguese occupation interfered in no way with trade, though the natives complained of having to pay duties to the native chief in addition to the new import duties imposed by the Portuguese authorities. Kinsembo was also occupied, but not without a struggle. The Portuguese military posts have been advanced into the interior, and Portuguese emissaries and traders have penetrated toward Kasai river and into the Congo Free State. In East Africa the colonial authorities have been active in extending Portuguese influence, though with less success. The cause of this unusual activity is the desire to preserve the regions where Portugal has her colonies and the belt extending through the interior from shore to shore, as a field for colonization and a commercial outlet for Portuguese manufactures. Portugal obtained from France, in her treaty of May 12, 1886, an acknowledgement that the territories between Angola and Mozambique were within her sphere of influence. Germany, in the treaty signed on December 30 of the same year, likewise promised not to encroach upon this territory. Great Britain, however, made no such agreement, but in 1888, in order more especially to hem in the Transvaal Boers, announced that the country of Lobengula and all the territory west of the Portuguese possessions and south of the Zambesi river, would henceforth be regarded as within the sphere of British influence. This includes Mashonaland, where the most important of the gold-fields are situated. An English company having obtained from Lobengula the exclusive right to mine for gold in Mashonaland, the Portuguese consul at Cape Town, in the name of his Government, repudiated the pretended rights of Lobengula to Mashonaland and the adjacent territories, over which Portugal claims sovereignty. A project for a transcontinental railroad has been adopted, and the first section of two hundred miles from the west coast has been begun. In order to

link the two colonies together, a line of steamers between Loango and Mozambique has been established, while the Portuguese subsidy has been withdrawn from the British line running between Mozambique and Bombay, which is the chief outlet for the products of the Portuguese possessions on the east coast. Portugal has undertaken to preserve peace and order on the shores of Lake Nyassa, where English missionaries and traders are established, having abolished the transit-dues for goods passing to Lake Nyassa in 1884, thus making a financial sacrifice in order to obviate any claim of Great Britain to interfere in that region.

PRESBYTERIANS. I. Presbyterian Church in the United States of America.—The following is the General Summary of the statistics of this Church, as they are published with the "Journal" of the General Assembly for 1888. The statistics for 1874, 1880, and 1887 are also given for comparison, and to show the growth of the Church during the past fifteen years:

ITEMS.	1874.	1880.	1887.	1888.
Synods	85	88	29	28
Presbyteries	174	177	391	393

* To be known hereafter as Sunday-school work.

† Includes part of Centenary fund.

The receipts of the Board of Home Missions for the year had been \$785,627, the largest ever returned, and also the largest, it was claimed, that had ever been contributed to this cause in a single year by any evangelical denomination in America. Fourteen hundred and eighty-six missionaries had been employed, in all but six States, in the Union; under whose labors 170 churches had been organized, 371 Sabbath-schools established, 119 houses of worship built, and 10,182 church-members added on profession of faith. The Woman's Board had maintained 29 schools, with 115 teachers, among the Indians; 24 schools, with 48 teach-

ers, among the Mexicans; and 88 schools, with 81 teachers, among the Mormon population. Its receipts of money for the year had been \$226,092. The committee of the Centenary fund reported that the receipts from less than one half of the churches of the denomination to May 19 had been \$419,000 in cash and \$140,000 in pledges. The Board of Aid for Colleges and Academies had received \$40,000. The General Assembly invited contributions for it for the coming year of \$100,000. The Committee on Theological Seminaries, of which there are eight, returned the aggregate value of the property of those institutions as \$7,216,000, and the whole number of students attending them as 607. The contributions of the churches to the funds of the Board of Publication had amounted to \$78,000, giving an increase from the previous year more than sufficient to pay off its debt. Twenty-three new volumes and eleven tracts had been added to its book-list; 10,000 books and 3,000,000 lesson helps and papers had been granted; and 73 mission schools had been organized during the year. The debt of the Board of Education had been reduced from \$15,000 to \$3,800, and the number of students for the ministry had increased. The trustees of the General Assembly returned the whole amount of its trust funds on the 31st of March, 1888, at \$467,390. The treasurer of the General Assembly had received \$62,986, and had expended \$44,324. The Board of Missions for Freedmen reported that its receipts for the year had been \$181,653 or \$35,182 more than for the previous year. It had employed 26 white and 81 colored missionaries, 48 white and 106 colored teachers, and 10 catechists, and sustained 235 churches, with 16,661 members, and 226 Sabbath-schools, with 14,555 members. Thirteen churches had been organized, and 1,210 members added on examination.

The total receipts of the Board of Foreign Missions had been \$901,181, or \$117,023 more than those of the previous year.

The one hundredth General Assembly met in Philadelphia, May 17. The Rev. Charles L. Thompson, D. D., was chosen moderator. The Committee of Conference with the Southern Presbyterian Church presented its report, relating the correspondence and negotiations that had passed between it and the similar committee of the Southern Church in relation to organic union. The committees had held a conference in Louisville, Ky., in December, 1887. The Southern committee indicated four points on which it desired to know the mind of the Northern Church. These points were: 1. The spirituality of the Church, referring especially to its attitude in regard to "political deliverances"—concerning which the declaration of the previous Northern General Assembly would be satisfactory if the Southern Church was assured its interpretation of it was correct. 2. The relation of the Church in the Southern States to the colored people—a matter concern-

ing which the alternative plans were suggested of organizing these people into churches of an entirely separate existence, or into separate churches, presbyteries, and synods, with representation in the General Assembly, and in the expectation that an independent organization would ultimately be effected. 3. The powers and responsibilities of the various boards of the Northern Church and to what extent they are under the control of the General Assembly. 4. "Touching those portions of the Confession of Faith which more specifically involve the great system of truth known as the Calvinistic, and particularly whether there is traceable any distinct tincture of such Pelagian and semi-Pelagian heresies as were matters of controversy in 1837." The Northern committee replied to these questions, February 2, that the reunited General Assembly has no other doctrine on the subject of political deliverances than is declared in its expression of May, 1887 (see "Annual Cyclopædia" for 1887), which is in the language of the Confession of Faith and is equally binding on both Churches. Having asserted that the Northern Church is not in favor of setting off its colored members into a separate organization, the committee expressed the belief that the religious work to be done among this people could only be fully done by the Church reunited as one; that a careful supervision of their churches and a well-defined system of moral and scriptural education of them was demanded; that while their evangelization should be continued under the direction of the General Assembly, the General Assembly had recognized that it was best accomplished by the education of colored ministers and the organization of churches composed of colored members and of those connected with this work, and had organized such churches with presbyteries and synods, with representation in the General Assembly. The committee added, on this point:

We are of the opinion that our Assembly will agree to a basis of organic union, by which the present boundaries and constituencies of presbyteries and synods in the South shall remain *in statu quo*, to be changed only with the consent of the parties interested; and that all the new churches and all new presbyteries hereafter established, shall be organized by and received into connection with presbyteries and synods respectively, as the interested parties may mutually agree.

The ecclesiastical boards were described to be agents of the General Assembly and subject to the government and control of the Church. On the fourth point, the committee declared that no heresy existed in the Northern Church and no doctrinal question was agitating it. In conclusion, while it was hoped that such substantial unity of belief was disclosed as would encourage the continuance of the committees with powers for a full conference on organic union, and such union was favored by the Northern Church, it would not be desirable unless it could be consummated with mutual confidence in the doctrinal soundness of both parties.

The Assembly, while declaring that it would be premature and improper to consider the report as furnishing a definite and formal basis of union, inasmuch as that subject was not properly before it, approved of the general principles enunciated in the replies of the committee to the inquiries of the Southern brethren, as furnishing substantially a reflection of its views touching the subjects to which they relate; expressed the conviction that the most effective form of co-operation could be secured only by an organic union of the two Churches; and declared itself ready to enter upon negotiations looking to that result whenever in the judgment of the Southern Assembly it might be deemed desirable. The committee was continued and enlarged, with instructions to confer with a committee of the Southern General Assembly, if one should be appointed, in devising such methods for conducting the common work as should "open the door to the fullest and heartiest co-operation." A committee was appointed to visit the Presbytery of Rio Janeiro and be present at the organization of the Synod of Brazil. A conference was held by his desire with President Cleveland, by a committee of the Assembly, on Indian affairs, particularly with reference to the modification of certain orders affecting missionary work among the tribes. A committee was appointed to act with committees of other evangelical church organizations in the United States as a National Sabbath Committee. A committee was appointed to inquire into the duties of the Presbyterian Church toward the immigrant population, with special reference to the Germans, Scandinavians, Bohemians, and French. Provision was made for the revision of the proof texts of the Church standards, and the suggestion of such changes as may be found desirable; also for drawing up a plan for the systematic instruction and training of young persons and others, with a view to their admission to the Lord's table. A resolution was passed deprecating the prevalence of improper advertisements in religious newspapers, and particularly disapproving all such advertising "as involves the essential principle of a lottery": as promises or encourages investors to expect improbable returns from capital invested; and "all those advertisements of patent medicines which are prejudicial to the refinement, modesty, and purity of home life." In view of "the unsettled condition of public opinion" regarding the Revised Version of the Scriptures, it was decided to be inexpedient to authorize its use in public worship. A plan was ordered prepared for bringing together unemployed ministers and vacant churches. The Assembly, "while disclaiming all connection with or relation to political action or measures," declared itself "unequivocally in favor of the entire suppression of the traffic in intoxicating liquors as a beverage"; and cautioned the sessions against admitting as members persons who are engaged in it. It also, regarding the introduc-

tion of the traffic by civilized nations into heathen lands with "shame, horror, and apprehension," declared itself ready to unite with other Churches in an effort to induce Christian governments to abolish and prevent it. A resolution recognizing "Decoration Day," and the value of the services of Union soldiers, was supplemented by a declaration that it was not intended to contradict the great principles of the spirituality of the Church as laid down in the Confession of Faith. A case of discipline came before the Assembly in which the question of the legality of responsive services in the Presbyterian Church was involved. The action of the Assembly, without deciding the issue, virtually reiterated the decision of the Assembly of 1876, which declined to make responsive readings a subject of discipline.

II. Presbyterian Church in the United States (Southern).—The following is a summary of the statistics of this Church as they were reported to the General Assembly in May:

Number of synods.....	18
Number of presbyteries.....	65
Number of candidates.....	935
Number of licentiates.....	55
Number of ministers.....	1,199
Number of churches.....	2,230
Number of churches organized.....	47
Number of ruling elders.....	7,110
Number of deacons.....	5,223
Number added on examination.....	10,173
Number of communicants.....	156,249
Number of adults baptized.....	8,452
Number of infants baptized.....	5,155
Number of baptized non-communicants.....	33,444
Number of teachers in Sunday-schools and Bible-classes.....	12,201
Number of pupils in Sunday-schools and Bible-classes.....	101,700

Amount of contributions:

For sustentation.....	\$47,291
For evangelistic fund.....	48,866
For invalid fund.....	12,087
For foreign missions.....	72,859
For education.....	35,276
For publication.....	9,092
For Tuscaloosa Institute.....	6,028
Presbyterial.....	13,541
For pastors' salaries.....	625,931
Congregational.....	705,656
Miscellaneous.....	97,826

The Executive Committee of Education had received during the year \$15,879, and had aided 150 candidates in the total sum of \$13,887.

The Committee of Publication had received from churches, Sabbath-schools, and individuals, \$8,119; and from royalties, \$2,824. The whole amount of its grants had been \$8,494. The business of the Book Depository had increased by nearly 20 per cent. The balance-sheet of the Publishing House showed an excess of arrears amounting to \$73,243. All of the 4-per-cent. bonds issued by the concern had been redeemed except four representing \$300. The Tuscaloosa Institute for colored ministers had been attended by 26 students.

The receipts of the Committee of Home Missions had been \$64,455; of which \$28,406 were in the Department of Sustentation, \$14,769 for the Evangelistic fund, \$15,117 for the Invalid fund, and \$6,105 for the Colored Evangelistic

fund. From the Sustentation fund \$2,595 had been appropriated in aid of the erection of 20 church-buildings, and \$19,509 in aid of 122 ministers supplying 500 feeble churches; from the Evangelistic fund, \$12,887 in aid of the support of 61 evangelists; from the Invalid fund, \$11,957 in aid of 109 ministers and widows and children of ministers; and from the Colored Evangelistic fund, \$3,446 for Tuscaloosa Institute, and \$2,689 in the support of 22 ministers. Loans of \$650 had been made in aid of the erection of 8 church-buildings.

The Committee of Foreign Missions had received \$88,040, or \$3,967 more than in any previous year. The missions—in Brazil, China, Mexico, Greece, Italy, Japan, and among the American Indians—returned 66 missionaries, men and women; 88 stations; 89 out-stations; 897 communicants, of whom 428 had been added during the year; 15 ministers, ordained or licensed; 29 other native helpers; 1,238 pupils in Sunday-schools; 891 pupils in day schools; and \$5,087 of contributions by the native churches. Nine missionaries had been added to the number in the field, and 4 new stations opened.

The General Assembly met in Baltimore, May 17. The Rev. J. J. Bullock, D. D., was chosen moderator. The "Committee of Inquiry," which had been appointed to confer with a committee of the Northern General Assembly with reference to organic union, made its report relating to the conferences and correspondence which it had held with the committee of the Northern General Assembly.

On consideration of this report, the Assembly declared itself unable to discover that the obstacles to organic union heretofore existing between the two General Assemblies had been to any considerable extent removed; therefore, in view of all the interests involved, it continued established in the conviction that it would be best for it to remain distinct. In reply to the communications of the Northern General Assembly, it declared a desire to forget as far as possible all past dissensions and to cultivate the most friendly relations. A committee was appointed to confer with a committee of the Northern General Assembly "in reference to all such modes of fraternal co-operation in Christian work, both at home and abroad, as may be considered practicable and edifying," and report to the next General Assembly. The case of the Rev. James Woodrow, D. D., against the Synod of Georgia, came up for adjudication. This case has been, in one shape or another, before the Presbyterian courts for several years. It originated in the removal of Dr. Woodrow from his professorship in Columbia Theological Seminary for holding and teaching the doctrine of evolution. In 1886 charges were presented against him before the Presbytery of Augusta for holding and teaching views contrary to the word of God as interpreted in the standards of the Church in respect to the probable animal origin of Adam's body. The

Presbytery found a verdict of "not guilty." A complaint was made to the Synod of Georgia against this verdict as contrary to the law and evidence. The synod sustained the complaint and annulled the verdict. Dr. Woodrow complained to the General Assembly against this action, and it decided not to sustain the complaint. The minute formally expressing the action of the Assembly declared that:

It is the judgment of this General Assembly that Adam's body was directly fashioned by Almighty God of the dust of the ground, without any natural animal parentage of any kind. The wisdom of God prompted him to reveal the fact while the inscrutable words of his action therein he has not revealed.

Therefore the Church does not propose to teach, handle, or conclude any question of science which belongs to God's kingdom of nature; she must by her divine constitution see that these questions are not thrust upon her to break the silence of Scripture and supplement it by any scientific hypothesis concerning the mode of God's being or acts in creation which are inscrutable to us. It is, therefore, ordered that this complaint in this case be not sustained and the judgment of the Synod of Georgia be, and the same is hereby, in all things, affirmed.

The Rev. T. C. Whaling, of the Synod of South Carolina, then offered the following protest, which is to go on record alongside the minute presented by Dr. Snoot:

We, whose names are undersigned, desire to enter our solemn protest against the decision of this General Assembly refusing to sustain the complaint of the Rev. James Woodrow, D. D., against the Synod of Georgia, for the following reasons:

1. The second specification in the indictment against the Rev. James Woodrow, D. D., is expressly excluded by the constitution of our Church, inasmuch as "nothing ought to be considered by any court as an offense, or admitted as a matter of accusation, which can not be proved to be such from Scripture as interpreted in the standards."

2. In the view of your protestants, the Holy Bible does not reveal the form of the matter out of which, the time in which, or the mode by which God created the body of Adam, and therefore the hypothesis of evolution as believed by Dr. Woodrow can not be regarded as in conflict with teachings of the Sacred Scriptures.

3. The Westminster Standards simply reproduce, without interpretation, the statements of the Scriptures in reference to the creation of Adam's body, and as the views of the complainant are not in conflict with the statements of the Scripture, so neither can they be with the teachings of the standards.

4. The action of the Assembly in refusing to sustain this complaint is equivalent to pronouncing as certainly false the theory of evolution as applied by Dr. Woodrow to Adam's body, which is a purely scientific question entirely foreign to the legitimate sphere of ecclesiastical action. Your protestants, therefore, are unwilling that this General Assembly should express any opinion whatever respecting the hypothesis of evolution or any other scientific question.

A committee was appointed to prepare and report to the next General Assembly on the intemperate use of intoxicating drinks, for the instruction of the churches respecting their duty in suppressing the evil, with the reservation by the Assembly that it was to decide no political question connected with the subject. Provision was made for the representation of the General Assembly on the National Sabbath Committee proposed by the General Conference of the Methodist Episcopal Church.

Centennial of the General Assembly.—The centennial anniversary of the organization of the General Assembly in America was celebrated in Philadelphia during the session of the Northern General Assembly by special popular meetings in behalf of the several benevolent enterprises of the Church and by a series of meetings throughout the day of May 24, in which both the Northern and Southern General Assemblies participated. The Southern General Assembly had been invited by the Northern body to join with it in the celebration, and was met by it May 28 at Overbrook, on the Baltimore Railroad, where both bodies were addressed by President Cleveland. The meetings of May 24 were held in the morning, afternoon, and evening at the Academy of Music and Horticultural Hall, and were presided over severally by the Moderator of the Southern General Assembly, Justice William Strong, of the United States Supreme Court, Gov. A. M. Scales, of North Carolina, the Moderator of the Northern General Assembly, the Hon. J. L. Marye, of Fredericksburg, Va., and Gov. J. A. Beaver, of Pennsylvania. Addresses were delivered by the Rev. T. L. Cuyler, D. D., on the "History of Presbyterianism"; Rev. T. D. Witherspoon, D. D., on "The Work of Presbyterianism for the Future"; Hon. J. R. Tucker, on "The Adaptation of Presbyterianism to the Masses"; Rev. S. J. McPherson, D. D., on "Presbyterianism and Education"; Hon. J. S. Cothran, M. C., on "Calvinism and Human Progress"; Hon. S. J. McMillan, on "Presbyterianism and Republican Government"; Rev. G. P. Hays, D. D., LL. D., on "Home Missions"; Rev. M. H. Houston, D. D., on "Foreign Missions"; Rev. C. J. Thompson, D. D., on "Historic Presbyterian Characters"; Rev. W. C. P. Breckinridge, on "Calvinism"; Rev. Howard Crosby, D. D., LL. D., on "Presbyterianism and Biblical Scholarship"; Rev. John Hall, D. D., and Mr. M. K. Jessup, on "The Necessity of City Evangelization"; Rev. M. O. Hodge, D. D., on "The Methods of City Evangelization"; Rev. Samuel J. Niccolla, D. D., on "Preaching to the Masses"; Hon. B. H. Young, on "Lay Effort among the Masses"; Rev. W. W. Moore, D. D., on "Home Missions"; Rev. C. S. Pomeroy, D. D., on "The Work of the Presbyterian Church in Foreign Fields"; and the Rev. W. P. Breed, D. D., closing the proceedings.

Committees on Organic Union.—The committees appointed by the Northern and Southern General Assemblies of 1888 to consider the question of fraternal co-operation in Christian work met in New York city, December 28, and, after several conferences, they adjourned to meet again in Atlanta, Ga., April 24, 1889.

Presbyterian Synod of Brazil.—A Synod of Brazil was organized at a meeting of the three missionary presbyteries of the Presbyterian Church in the United States, which was held in Rio Janeiro for that purpose, in the last

week in August and the first week in September. The Rev. Dr. Alexander L. Blackford, the oldest missionary, was chosen moderator, and a native minister was made stated clerk. The Westminster Confession and Catechism and the Book of Order of the Southern Presbyterian Church, with slight modifications, were adopted as standards. Fraternal delegates from the Northern Presbyterian Church were present, and greetings were received from the Council of the Presbyterian Alliance in London and the General Synod of the Reformed Church in America. The subjects of revising the Portuguese translation of the Scriptures and of forming an alliance with all other English-speaking missionary churches were referred to special committees. The new synod has 50 churches, 19 missionaries, 12 native ministers, 22 church schools, 2 high-schools, 18 women teachers and missionaries, 80 native assistants, and 8,000 communicants. A society of national missions already existed in two of the presbyteries. The next meeting of the Synod was appointed to be held in 1891.

United Christian Church of Japan.—Negotiations have been conducted for the constitution of the "United Christian Church of Japan," by the union of the Presbyterian, Reformed, and Congregational Mission Churches in that country. The doctrinal basis of this Church will consist of the Apostles' Creed and the Nicene Creed, with which are associated the special Confessions of the Presbyterian, Reformed, and Congregational Churches, all being held subordinate to the Bible. In the system of government the Presbyterian elder and the Congregational committee-man are equally recognized, to be ordained for a definite time as the congregation may designate; the elders recommend candidates for admission, who are to be received or dismissed by a vote of the Church; and specified powers are delegated to bodies corresponding with the presbytery and assembly or conference and national council. The new Church organization will include about 11,000 members.

III. United Presbyterian Church in North America.—The statistics of this Church, presented to the General Assembly in May, show that it includes 10 synods, 61 presbyteries, 758 ministers, 8,580 elders, and 98,992 members. The contributions of Sunday-school and missionary societies for the year amounted to \$1,019,937.

The General Assembly met in Cedar Rapids, Iowa, May 23. The Rev. Dr. W. T. Maloney was chosen moderator. The Committee on Union with the Reformed Presbyterian Church reported that the negotiations on that subject had been without result, and that union as yet appeared impracticable. The point of difference on which the negotiations broke was the toleration of participation by members of the Church in political action under a government which does not recognize the headship of Christ—to which the Reformed Presbyterian Church is opposed, while the United Presby-

terian Church leaves it to the individual member to determine conscientiously what his action shall be. A proposition to instruct presbyteries to refuse to license candidates for the ministry who are addicted to the use of tobacco was rejected, on the ground that the Assembly has no right to make such a rule.

IV. Reformed Presbyterian Church (Synod).—This body includes eleven presbyteries, with 121 congregations, 116 ministers, 503 elders, 325 deacons, 10,970 communicants, and 12,574 members of Sabbath-schools. The number of baptisms returned during the year was 462. The contributions were: For foreign missions, \$18,247; for home missions, \$3,767; for the Southern mission, \$3,632; for the Chinese mission, \$1,493; for the Theological Seminary, \$8,322; for education, \$5,177; for sustentation, \$2,156; for church erection, \$21,648; for pastors' salaries, \$78,190; for national reform, \$4,650.

The Central Board of Missions, besides "domestic missions" in the States and Territories, supports a school at Selma, Ala., and a mission among the Chinese of the Pacific coast, and contemplates a mission among the Indians. The Board of Foreign Missions returns at Latakiah and Tarsus, in Syria, 11 missionaries, 57 teachers and other agents, 209 native communicants, 1,165 pupils in schools, 23 baptisms during the year, and \$465 of contributions.

The Synod met at Allegheny City, Pa., May 29. The Rev. J. W. Sproull was chosen moderator. The Committee on Union with the United Presbyterian Church reported as the result of its conferences with the committee of that Church that the difference between the bodies in their doctrines and practices on the subject of civil government and their attitude toward the Government of the United States had proved to be irreconcilable, although the two bodies were in full accord on other fundamental principles. The Synod, approving the course of its committee, reaffirmed its conviction that—

The Constitution of the United States is a virtual agreement or compact to administer the Government without reference to Christ or the Christian religion, and that incorporation with the Government on the basis of this Constitution is therefore an act of disloyalty to Christ. With this conviction in our hearts, we can not do otherwise than maintain to the end the discipline we have maintained in the past.

While expressing itself desirous for the restoration of the unity of the Church, it declared that—

Partial unions on the basis of compromise, for the purpose simply of forming a larger sect, involves for us the abandonment of our testimony and unfaithfulness to the special work which the Lord, as we believe, has called us to do.

The Synod resolved, on the subject of jury-service that it recognized—

But one supreme law in civil and in ecclesiastical courts, and this is God's revealed Word. If any of our members be summoned to serve on juries, it shall be the duty of such member to state in open court his

determination to make God's law, as we understand it, the basis of all decisions involving moral considerations, and that he shall take the juror's oath—such oath being otherwise unobjectionable—only on this condition being definitely accepted by the court. In such case there shall be no censure visited on a member sitting on a jury, since the court, in accepting him on this condition, has, so far as he is concerned, accepted God's law as the basis of judicial action. In case any member acts as a juror, he may be required, by the session of the congregation to which he belongs, to furnish proof that he has complied with the conditions laid down above.

A special service was held in commemoration of the second century after the revolution of 1688, when addresses were made upon the principles for which the Covenanters contended, the character and spirit and the influence of the Covenanters and their struggles on American history.

V. Cumberland Presbyterian Church.—The following is a summary of the statistical reports that were made to the General Assembly in May: Number of ministers, 1,584; of licentiates, 246; of candidates, 262; of congregations, 2,648; of communicants, 151,929; of members of Sunday-schools, 85,890. These statistics do not include the Colored Cumberland Presbyterian Church, which numbers about 15,000 communicants.

The Publishing House returned a profit of \$8,272 on the business of the year. It had freed itself from debt, and had declared a dividend of \$5,000 in favor of the Board of Ministerial Relief. The latter board had received \$5,826, and had relieved 59 families of ministers. The Board of Missions had received \$13,071 for home, and \$9,418 for foreign missions; while the Woman's Board of Foreign Missions returned an income of \$11,212.

The fifty-eighth General Assembly met at Waco, Tex., May 17. The Rev. W. H. Black was chosen moderator. The Board of Missions was directed to take immediate steps toward establishing a theological training-school in Japan. Satisfaction was expressed at the movement toward organic union among the mission forces and native Christians of different denominations of Christians in that country, and a willingness that the Cumberland Presbyterian Missions should enter the "United Christian Church" upon the basis of the exceptions to the Westminster Confession that are set forth in the Declaratory Act of the United Presbyterian Church of Scotland.

VI. Presbyterian Church in Canada.—This Church comprises 5 synods, 43 presbyteries, 788 pastoral charges, with 1,881 churches and stations supplied, 145,640 communicants, 78,649 families and 1,826 single persons connected with the Church, and 12,976 teachers and 112,940 pupils in Sabbath-schools and Bible-classes. The number of members admitted during the year on profession of faith was 12,471; number of baptisms, 10,144 of infants and 1,148 of adults. Amount of contributions to the schemes of the Church, \$22,490; amount raised for all purposes, \$1,780,252. The

Church and Manse Building scheme, which was started to raise a fund of \$100,000 for the purposes implied in its name, had received in 1888, \$115,499. Under it, 109 buildings, valued at \$127,700, had been aided to the extent of \$48,897. A large increase was reported in the income for Foreign Missions. One hundred and sixty-nine missionaries and assistants were laboring in Central India, Formosa, Trinidad, Demarara, the New Hebrides, and among the Indians of the Northwest. A new mission was to be begun in the province of Honan, China.

The General Assembly met at Halifax, N. S., June 13. The Rev. W. T. McMullen was chosen moderator. An *ad-interim* act, passed at the previous General Assembly, on marriage with a deceased wife's sister was re-enacted, and the proposal to alter that part of the Confession of Faith bearing on the subject, was sent down to the presbyteries.

VII. Church of Scotland.—The report to the General Assembly of the Committee on Presbyterian Superintendence gave the total number of communicants in 1887 as 579,002, showing an increase of 7,973. Since 1873, communicants had been added to the roll of the Church at the rate of 1·8 per cent., while the annual increase of the population was only 1·1 per cent.

The income of the Colonial Committee had risen from £4,176 in 1886 to £4,859 in 1887, the increase being solely due to legacies. The income of the Jewish Mission Committee had been £6,400, and the expenditure £5,045, while the adverse balance had been reduced to £1,823. There were 1,792 children in the schools, 950 of whom were Jewish. Four baptisms had taken place. The contributions to the Aged and Infirm Ministers' fund had been £2,737, 836 parishes contributing. The capital now stood at £24,182, showing an increase of £2,213. The sum of £1,362 had been dispensed on nine grants.

The total revenue of the Committee on Home Missions had been £10,395 or £1,855 more than the revenue of the previous year. Seventy-two mission churches were returned, with 15,124 worshipers, of whom 10,263 were communicants. The total of collections and contributions reported for 1887 to the Committee on Statistics of Christian Liberality amounted to £385,506 as compared with £407,312 in 1886.

The receipts of the Committee on Foreign Missions had been £24,481, while a deficit of nearly £1,500 had been incurred. Toward the special fund of £10,000, £4,700 had been received. Fifteen mission stations were returned in Africa and India, with, in Africa, 30 European missionaries and 110 native agents, and 2,982 native Christians, 783 of whom were communicants; while in India there were about 8,000 baptized Christians connected with the mission, and 827 had been baptized during the year.

The General Assembly met in Edinburgh,

May 24. The Rev. Dr. W. H. Gray was chosen moderator. A question arose concerning the commissioners from Edinburgh, whose town council had refused by a majority to send representatives to the Assembly, leaving action on the subject to be taken by the minority. A legal opinion having been read, to the effect that it was the duty of the town council to send representatives to the Assembly, the commissioners were received. A hearing was given in the case of an appeal concerning a petition which had been refused by the Committee on Bills for the removal of certain "images" from St. Giles's Cathedral. The petitioners complained that the laws of the Church of Scotland were being set at defiance, and that "the superstitions of Rome" were being brought in again. If they were true to the historic teaching of their Church, they would see that the "images" were swept away. It was argued against the petition that the time had passed for occupying attention with such matters; and that hardly any persons now seriously believed that there was anything superstitious or idolatrous in the erection and maintenance of such images. The Assembly refused to sustain the appeal. An overture declaring that any person found guilty of carrying on simoniacal practices to procure a benefice or office should be deprived of his license if a probationer, and deposed if a minister, having been approved by a majority of the presbyteries, was converted into a law of the Church. A resolution was passed approving the leading features of the "Universities Scotland Bill" which was then pending in Parliament. The report of the Committee on Church Interests represented that the course of events had afforded proof of the artificial character of the agitation which had been "created from time to time" against the connection between Church and State in Scotland, and intimated that the agitation might have had no existence except where it had been created or stimulated for sectarian purposes. There was no evidence that the majority of the people of Scotland were opposed to the Established Church. With the report was adopted a renewed expression of the desire of the Assembly to maintain toward the other Churches of Scotland an attitude of earnest watchfulness for any opportunity for kindly co-operation and intercourse. The report of the Committee on the Subscription of Office-Bearers of the Church suggested that it was desirable that in the case of ministers and licentiates, the Church should revert to the formula contained in the act of Parliament of 1693, entitled "An act for settling the quiet and peace of the Church"; and in the case of elders to an act of 1690 requiring simply approbation of the Confession of Faith. The report was adopted as an overture to be sent down to the presbyteries. Sunday, the 4th, and Monday, the 5th, of November, were appointed as days for celebrating throughout the Church the bicentenary of the revolution of 1688. The employment of dea-

conesses and the opening of city churches on week days were approved. Satisfaction was expressed at the results of the bill for the early closing of liquor-saloons in Scotland; and the committee of the Assembly was authorized to approach the Government with reference to the drink-traffic among native races.

VIII. Free Church of Scotland.—The total contributions of the year for the Sustentation fund of this Church had been £168,657, showing a decrease from the previous year of £3,476. In the report on colonial missions it was claimed that some of the most prosperous settlements in the colonies had originated through the efforts of these missions. A favorable report was made of the condition of the Jewish missions. The financial statement of the Foreign Mission Committee showed a charge amounting to £51,908. The discharge showed a balance in favor of the scheme of £8,674. The increase in contributions from associations had been higher than ever before in the history of the Church. It was reported that the desire had spread among the Hindoo population at Madras, India, for the foundation of a national Hindoo college, in which religion should be taught as an inseparable portion of the curriculum.

The General Assembly met at Inverness, May 24. The Rev. Dr. Gustavus Aird, was chosen moderator. The report on the state of religion and morals, represented that while peculiar hardships affected some of the Highland ministers, in general adequate organization existed among the churches. The belief was expressed that intemperance was on the decrease; but in many places tourists were doing much to lower the tone of Sabbath observance. A congratulatory address was voted to the Presbyterian Churches of the United States on the occasion of their friendly meeting in Philadelphia, and of the centenary of Presbyterianism in the United States. An active debate on the question of disestablishment terminated in the adoption of a resolution declaring that the maintenance of a Church Establishment in Scotland was unjust, inexpedient, and a hindrance to the welfare of the Presbyterian churches of the land. A resolution was adopted recognizing the grievances of the crofters, and asking for suitable legislation for the relief of their distress. An overture, concerning federal relations with the Presbyterian Church in England, having been approved by a majority of the presbyteries, was passed into a standing order of the Church. A petition to Parliament was approved against the bill for legalizing marriage with a deceased wife's sister, otherwise known as the marriage affinity bill. A committee was directed to consider whether the benefits of the Widow's fund may not be extended to the widows and orphans of missionaries.

IX. United Presbyterian Church (Scotland).—The statistical reports of this Church, made to the Synod in May, gave the following results:

Number of congregations, 565; of members, 182,170, showing an increase during the year of 107; number of baptisms, 9,374; of Sabbath-schools, 887, with 12,075 teachers and 97,475 pupils. The total congregational income amounted to £320,698.

The income for foreign-mission purposes had been £56,584, the largest amount ever received in one year. The eight mission fields returned 60 ordained European missionaries, with 56 other trained agents, 95 native evangelists, 301 native teachers, and 100 other native helpers. The 87 congregations and 155 out-stations had an aggregate membership of 18,497, with 2,074 candidates for admission. The Sabbath-schools, exclusive of those in China and Japan, returned 11,418 pupils, and the day-schools 18,676 pupils. The Board of Missions was empowered by the Synod to discontinue the Spanish mission, and to take steps to form, along with other Protestant agencies in Spain, a native Spanish Protestant Church.

X. Presbyterian Church in England.—The entire income of this Church for the year was returned at £219,585. The Home Mission reported that two congregations had been added. The Jewish Mission reported concerning its labors in London. The receipts for foreign missions had been £15,800. The Synod had in China 15 European ordained missionaries, 6 medical missionaries, 18 women missionaries, supported by the Women's Association, and a number of native evangelists and pastors. Some of the native churches were self-supporting, and were themselves undertaking mission work. The income of the Women's Missionary Association had been £2,336, showing an increase during the year of £600. Additions having been made to the capital of the Aged and Infirm Ministers fund, the minimum annuity had been raised from £45 to £50. The minimum ministerial dividend had been retained at £200 a year.

The Synod met in Newcastle-on-Tyne, April 30. The Rev. Dr. Oswald Dykes was chosen moderator. The Committee on the Church's Relations to the Confession of Faith, which had been engaged for three years in the revision of the creed, reported; the declaratory statement, setting forth the sense in which the Church received the Westminster Catechism, was held in abeyance, as legal difficulties might arise in view of certain clauses in the trust-deeds, were it adopted. The new articles were to be regarded in the light of a summary of the Confession in which the language of that document was simplified, while the Confession itself would remain the standard by which they held their respective properties. To the new creed as reported was appended a list of illustrative passages in support of the various clauses, drawn from the Apostle's and Nicene Creeds, and various confessions of the Reformation period. The creed consists of twenty-three articles, of which the article on the creation declares:

We believe that Almighty God for his own holy and loving ends was pleased at the beginning to create the heaven and the earth, through the Son, the eternal Word, and through progressive stages to fashion and order this world, giving life to every creature, and to make man after his own image, that he might glorify and enjoy God, occupying and subduing the earth, and having dominion over the creatures, to the praise of his Maker's name.

That on the fall of man :

We believe and confess that our first father Adam, the representative head as well as common ancestor of mankind, transgressed the commandment of God through temptation of the devil, by which transgression he fell, and all mankind in him, from his original state of innocence and communion with God; and so all men have come under just condemnation, are subject to the penalty of death, and inherit a sinful nature, degenerate in every part, estranged from God, and prone to evil; out of which condition we acknowledge that no man is able by any means to deliver himself.

Concerning the salvation of men, the belief is avowed

In the Holy Spirit, the Lord and Giver of life, who worketh freely as he will, without whose gracious influence there is no salvation, and who is never withheld from any who truly ask for him; and

That every one who, through the quickening grace of the Holy Spirit, repents and believes the Gospel, confessing and forsaking his sins, and humbly relying upon Christ alone for salvation, is freely pardoned and accepted as righteous in the sight of God, solely on the ground of Christ's perfect obedience and atoning sacrifice.

The doctrine of election is also reiterated in the article :

We humbly own and believe that God the Father, before the foundation of the world, was pleased of his sovereign grace to choose a people unto himself in Christ, whom he gave to the Son that he might bring them unto glory; and to those who were thus chosen we believe that the Holy Spirit imparts spiritual life by a secret and wonderful operation of his power, using, as his ordinary means, where years of understanding have been reached, the truths of his Word in ways agreeable to the nature of man; so that, being born from above, they are the children of God, and his new creation in Christ Jesus.

Concerning the Holy Scriptures, it is declared :

We believe that it has pleased God, in addition to the manifestation of his glory in creation and providence, and especially in the spirit of man, to reveal his mind and will to man at successive periods and in various ways; and that this revelation has been, so far as needful, committed to writing by men inspired of the Holy Spirit, and is contained in the Scriptures of the Old and New Testament, which are therefore to be devoutly studied by all; and we reverently acknowledge the Holy Spirit speaking in the Scriptures as the Supreme Judge in questions of faith and duty;

and concerning the final judgment :

We believe the Lord will judge the world in righteousness by Jesus Christ, before whom we must all appear, who shall separate the righteous from the wicked, make manifest the secrets of the heart, and render to every man according to the deeds which he hath done in the body, whether good or evil, when the wicked shall go away into eternal punishment, but the righteous into eternal life.

The document was accepted by the Synod and sent down by it to the presbyteries for consideration.

The Committee on the Revision of the Westminster Directory of Worship reported progress, having completed the morning service and the evening service, and the service of the administration of baptism. The last will be in two parts, the first for the baptism of adults, of which no notice is taken in the Westminster Directory, and the second for the baptism of children. The committee adheres to the plan of a directory as against a prescribed liturgy.

XI. Presbyterian Church in Ireland.—The statistical reports of this Church, made to the General Assembly in June, give the number of congregations as 557; of families, 79,971; of communicants, 103,499; of stipend-payers, 67,965; and of Sabbath schools, 1,099, with 9,119 teachers and 103,607 pupils.

The General Assembly met at Belfast, in June. The Rev. R. J. Lynd was chosen moderator. The amount of capital invested in the various departments of the work of the Church was represented in the reports on the subject to be £893,640. The proceeds of the invested funds for the year had been £35,542. The donations and bequests had been for missions, £6,808; for the Orphan Society, £1,508; for the Sustentation fund, £787; making in all, £9,083. The annual income of the Church from all sources was therefore £205,106. The Sustentation fund had made substantial progress, the total increase being £768, and the dividend having increased by £1 to each minister. In the mission in India, the first two native pastors had been ordained over congregations of converts from heathenism. The report of the Jewish Mission showed progress in Syria. The report of the Committee in Correspondence with the Government showed that, while the claims of Presbyterians for civil appointments had in some measure been successful, they were still suffering from religious disabilities. Resolutions were adopted approving of the most decided legislation in behalf of temperance.

XII. Welsh Calvinistic Methodist Church.—The General Assembly of the Welsh Calvinistic Methodists met at Merthyr Tydvil, June 4. The Rev. Owen Thomas, D. D., served as moderator. The statistical reports showed that the number of members in Wales and England was 180,617, or 1,159 more than in the previous year, and the highest number ever reached by the denomination; the number of hearers was 281,078. The whole amount of collections was returned at £198,948. Eight foreign missionaries had gone out during the year from South Wales. There were 119 churches and preaching-stations in the mission on the Khassia Hills, India, with 4,401 members, 5,899 children in the Sunday-schools, and 6,499 in the day schools.

XIII. Presbyterian Alliance.—The fourth General Council of the Alliance of Reformed Churches holding the Presbyterian system, met in London, July 3. About three hundred

delegates were present, representing more than twenty-five countries and colonies in all the quarters of the earth. Statistical reports were presented showing that the family of churches represented in the definition of the Alliance represented 78 branches, having 1,392 presbyteries, 209 synods, 3,603,209 communicants; with 500 brethren at work in the missionary field, and more than 60,000 communicants gathered from among the heathen; that the aggregate contributions of free-will offerings in these churches amounted to \$30,000,000 a year; that the newly organized women's associations had been the means, during the past year, of contributing nearly \$500,000 to the cause of missions. A different chairman was chosen for each of the several sessions of the Council. The following topics were discussed during the meetings of the Council, which continued through nine days: "How to work the Presbyterian System—as directing the Eldership and the Deaconship in their Various Lines of Influence and Work, and as promoting Co-operation and fostering Activity, Harmony, and Spiritual Life in Congregations," by Drs. Andrew Thoinson and J. B. Drury and Principals Rainy and Caven; "Some Elements of Congregational Prosperity," "Prayerfulness," "Self-sacrifice," and "Organized Christian Work," by Pastor Theodore Monod, E. R. Craven, D. D., A. T. Pierson, D. D., and Principal Cairns; "The Duties of the Church with Reference to Present Tendencies of a more Intellectual Kind, bearing on Faith and Life," the subject comprehending the "Originality of Christianity," "The Speculative Tendencies of the Age," "How Far is the Church responsible for Present Unbelief?" "Responsibility for Belief," and "Historical Research and Christian Faith," by Rev. E. de Pressense, D. D., Rev. Dr. Ellinwood, Rev. Marcus Dods, D. D., Pastor Monod, Rev. G. F. Moore, D. D., and Principal Edwards; "The Duty of the Church with Reference to Social and other Tendencies bearing on Faith and Life," including "The Pressure of Commercial Life," "Rich and Poor," "The Church in Relation to the Socialistic Drift of the Times," and "Christ's Method of reconciling Social Antagonisms," by Dr. Marshall Lang, Principal McVicar, Prof. W. G. Emalie, and Rev. Dr. Moses Hoge; "Co-operation in Foreign-Mission Work," after the discussion of which the Council approved of measures for the union of mission churches in heathen lands, such as is proposed in Japan; "Woman's Work," by Dr. Charteris, at whose suggestion a resolution was passed favoring organizations of women for Christian work; "Church Worship," "Aggressive Work in Cities," "Church Work on the European Continent and the Progress of the Colonial Churches," "The Desiderata of Presbyterian History," by Prof. Mitchell; "Commemoration of the Revolution of 1688," by Rev. Dr. Philip Schaff; "Sabbath-schools and the Church's Duty to the Young," by Rev. Dr. Horton, of California,

Prof. Ellis Edwards, Rev. Dr. John Hall, Rev. J. M. C. Holmes, D. D., and Rev. John McNeil. A resolution was adopted urging international action to repress the liquor-traffic in Western Africa, and to prevent the sale of fire-arms to uncivilized peoples. The next meeting of the Council was appointed to be held in Toronto, Ont., in 1892.

PRINCE EDWARD ISLAND, PROVINCE OF.

The estimated population in 1888 was 120,000. The Lieutenant-Governor is Andrew A. Macdonald; Executive Council, W. W. Sullivan, Premier and Attorney-General; D. Ferguson, Provincial Secretary, Treasurer, and Commissioner of Public Lands; G. W. W. Bentley, Commissioners of Public Works; John Lefurgey, Neil McLeod, Samuel Prowse, I. O. Arsenault, Archibald J. Macdonald, and James Nicholson. Thomas W. Dodd is President of the Legislative Council; John A. Macdonald, Speaker of the House of Assembly; Edward Palmer, Chief-Justice of the Supreme Court; I. H. Peters and Joseph Hensley, Assistant Judges.

Finance.—In Prince Edward Island the Provincial Government defrays the cost of education, the maintenance of public works, the expense of local legislation, and the administration of justice. The revenue in 1887 was \$241,687.26; the expenditure, \$287,700.17. On July 1, 1887, \$20,000 was added to the annual subsidy paid to Prince Edward Island by the Dominion Government, which now amounts to \$193,587.20. There is no provincial taxation. The school system is non-sectarian. The Provincial Government is Liberal-Conservative.

Communications.—The want of winter communication, hitherto one of the most serious disadvantages of this province, has to some extent been supplied by the steel steamship "Stanley," built in 1888. This steamship has been procured by the Dominion Government at a cost of \$150,000, and is especially designed for the arduous service of navigating the Strait of Northumberland in winter. The hull and engines are of superior strength and power; the registered tonnage is 1,000 tons. In open water she can steam twenty knots an hour, and she has been known to go through ice from two to four feet thick, at the rate of five miles an hour.

Summer.—As a summer resort, Prince Edward Island is rapidly gaining favor. Visitors are pleased with the delightful, clear, sunny atmosphere. Fair hotel accommodation is provided at Rustico, Malpeque, Tracadie, and on the north side of the island, and also in several towns throughout the province. The farmers have comfortable homes, where many tourists find accommodation.

Fisheries.—The north shore of Prince Edward Island is one of the best fishing-grounds in North America. Here mackerel of the finest quality are caught. Eighty-six American fishing-vessels visited those waters in 1888,

and hundreds of Canadian fishermen also were employed in this business. The coast-line was patrolled by Canadian cutters, but no seizures were made.

PROCTOR, RICHARD ANTHONY, astronomer, born in Chelsea, England, March 28, 1837; died in New York city, Sept. 12, 1888. He received his early education at home, being a sickly child, and then attended the academy in Wilton-on-Thames. The death of his father unsettled his school life, the patrimony became involved in

large star-atlas (1870). The last-named was one of the most popular works ever published on astronomy, and after its publication he was regarded as perhaps the most fertile popular writer on astronomical subjects of his day. His original work included numerous researches on the stellar system, the law of distribution of stars and the nebulae, and the general constitution of the heavens. In 1869 he advanced a theory of the solar corona, which has since been generally accepted, and also that of the inner complex solar atmosphere, which was afterward advanced by Prof. Charles A. Young. He was active in the transit-of-Venus expeditions of 1874 and 1882, and became involved in a dispute with the Astronomer Royal of England as to the best methods of observation. In 1873-'74 he visited the United States and lectured on popular phases of astronomy. Again, in 1875, he came to this country, and during a stay of seven months delivered 142 lectures. In 1879 he left England for America and Australia, and lectured in all of the principal towns of Victoria, New South Wales, South Australia, and New Zealand. His first wife died in 1879, and in 1881 he married Mrs. Robert J. Crawley, of St. Joseph, Mo., and for some years made that city his home. In October, 1887, he removed to Orange Lake, Fla., and there established his residence and observatory; but, early in September, 1888, he set out for London to fill a lecture engagement. On reaching New York he was taken ill and died of hemorrhagic malarial fever. Prof. Proctor was appointed an Honorary Fellow of King's College, London, in 1873, and became a Fellow of the Royal Astronomical Society in 1886. He was appointed honorary secretary of that society and editor of its proceedings in February, 1872, but resigned these offices in November, 1873. In 1881 he founded "Knowledge," a weekly scientific journal, but changed it to a monthly in 1885, and continued its editor until his death. His productiveness and versatility were remarkable. In the same issue of his journal he would appear in several rôles at once: as the editor and as Richard A. Proctor, writing on astronomy and mathematics; as Thomas Foster, criticising and carrying to its logical conclusions Dickens's unfinished novel of "Edwin Drood"; and then anonymously criticising and refuting the said Thomas Foster; as the whist editor and the chess editor and every other sort of editor demanded by the occasion. At the same time he was writing articles for other periodicals and newspapers, and he wrote well on every subject he handled. Besides those already mentioned, he published "Light Science for Leisure Hours" (three series, 1871, 1873, and 1883); "Elementary Astronomy" (1871); "Orbs around us" (1872); "Elementary Geography" (1872); "School Atlas of Astronomy" (1872); "Essays on Astronomy" (1872); "Familiar Science Studies" (1872); "The Moon" (1873); "Borderland of Science" (1873); "Expanse of Heaven" (1873); "The Universe and Com

RICHARD ANTHONY PROCTOR.

a chancery suit, and in 1854 he entered the London Joint-Stock Bank as a clerk. In 1855 he began studying at King's College, London, and a year later went to St. John's, Cambridge, where he took a high stand in mathematics, and was graduated in 1860 among the wranglers. For three years he devoted his time to historical and literary studies, when the bank in which his money was deposited failed. He had begun the study of astronomy, and in December, 1863, published in the "Cornhill Magazine" a paper on "Double Stars." In 1864 he began a series of investigations in regard to the great ringed planet of the solar system, the fruits of which were ultimately embodied in his treatise of "Saturn and its System" (London, 1865). In preparing this work he had to make many maps, and from these grew his "Gnomonic Star Atlas" (1866), which in turn suggested his "Hand-Book of the Stars" (1866). Thereafter his literary industry was very great, and he published in quick succession "Constellation Seasons, Sun-Views of the Earth" (1867); "Half-hours with the Telescope" (1868); "Half-hours with Stars" (1869); and "Other Worlds than ours; the Plurality of Worlds, studied under the Light of Recent Scientific Researches," with a

ing Transits" (1874); "Transits of Venus" (1874); "A Treatise on the Cycloid" (1878). He edited the "Knowledge Library," consisting of a series of works made up of papers that appeared in his own journal, among which were several of his own, notably "How to Play Whist" (1885) "and "Home Whist" (1885). After becoming an American citizen, he published "Chance and Luck" (1887); "First Steps in Geometry" (1887); "Easy Lessons in Differential Calculus" (1887); and "Old and New Astronomy," which at the time of his death was being issued in parts.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. This Church has moved on steadily in its appointed course during 1888. It is true, it has been roused to more than ordinary effort in order to test and examine its liturgy and services by the proposed plan for enrichment and flexibility, whereby congregations are urged to use fully and freely the Church's provisions for worship and growth in spirituality and the higher Christian life. This matter will come up for final adjustment at the General Convention in October, 1889. The sources of information in preparing this article are the published journals of conventions, reports and documents of Church societies and corporations, Pott's "Church Almanac," and Whittaker's "Protestant Episcopal Almanac." The following table presents a summary of statistics of the Church during 1888:

DIOCESES AND MISSIONS.

Missionary Society.—In accordance with the canon, this society comprehends all persons who are members of the Protestant Episcopal Church. The Board of Missions consists of all the bishops of this Church, the members for the time being of the House of Deputies of the General Convention, the delegates from the missionary jurisdictions, and the Board of Managers. The Missionary Council comprises all the bishops, an equal number of presbyters, and an equal number of laymen. It meets annually (except in the years when the Board of Missions meets), and is charged with taking all necessary action in regard to the missionary work of the Church which shall not conflict with the general policy of the board. The Council met in Washington, D. C., November 13, and continued in session for two days. It was largely attended by bishops, clergy, and laity, and disposed of its work with promptitude and hearty zeal. The annual report of the Board of Managers was received, with accompanying documents; careful attention was given to the Commission for Work among

the Colored People; also to the Woman's Auxiliary, and to the important work of the Church Building-Fund Commission. Appropriate action was freely discussed and tolerably clearly outlined, and the subject of increasing the interest of Church people in behalf of mission^s was urgently pressed upon all who were present. The Board of Missions divides its work between a domestic committee and a foreign committee, which have headquarters in New York city.

Domestic Missions.—From Sept. 1, 1887, to Sept. 1, 1888, there were: Missionaries (16 missionary jurisdictions and 80 dioceses): Bishops, 13; other clergy (white, colored, Indian), 490; teachers, other helpers, etc., 75; total, 578. The financial condition was as follows: Cash in hand (September, 1887), \$25,468.92; offerings, etc., \$156,240; legacies for domestic missions, \$51,009.43; legacies for investment, \$53,500; legacy for endowment of missionary episcopate, \$100,000; specials, \$23,478.01. Total, \$409,691.36. Expenditures (16 missionary jurisdictions and 82 dioceses), \$108,658.98; missions among Indians and colored people, \$62,059.41; specials, \$27,905.80; missionary episcopate endowment (paid over), \$100,000; legacies, etc. (paid over), \$55,127.80; office and other expenses, \$17,732.23; balance in hand, \$38,207.14. Total, \$409,691.36.

Foreign Missions.—From Sept. 1, 1887, to Sept. 1, 1888, the number of missionary bishops was 3; the number of other clergy (white and native) 50; teachers, physicians, helpers, etc., 173; total, 223. The financial condition was as follows: Cash in hand (September, 1888), \$44,974.38; offerings, legacies, general fund, \$163,519.45; legacy for investment, \$9,550; specials for China, Japan, etc., \$16,863.22; total, \$234,907.05. Expenditures on account of missions, etc., in West Africa, China, and Japan (including Hayti and Mexico), \$132,795.12; legacies, etc. (paid over), \$10,169.63; specials, \$21,209.99; salaries, rent, printing, etc., \$17,732.22; balance in hand, \$53,001.09; total, \$234,907.05. The mission property at foreign stations is estimated to be worth much the same as last year, viz., in Africa (about), \$22,000; in China (about), \$170,000; in Japan (about), \$50,000; and others making nearly half a million dollars.

Woman's Auxiliary to the Board of Missions renders important and efficient aid in all the departments by means of parochial, city, county, and diocesan associations of ladies, formed for the purpose of raising money, preparing and forwarding boxes to missionaries and mission stations, and in various other ways giving help to the missionary work of the Church. Money raised for domestic, foreign, and other mission work, \$100,985.33; boxes for the same (3,246 in number), value, \$175,168.77; total, \$276,154.10.

American Church Missionary Society (also auxiliary to the Board of Missions) has employed during the year in 17 dioceses and missionary

jurisdictions 38 missionaries. The financial condition was as follows: For general work, domestic missions, \$33,456.91; for general work, foreign missions, \$680.05; specials, \$5,958.85; Ely professorship, Griswold College, \$7,000; balance to new account (\$7,350 being trust fund not yet invested), \$31,873.33; total, \$78,969.14. The society holds in securities, property, etc., \$102,675. Boxes of clothing were sent to the missionaries, in value about \$4,000.

Church Work in Mexico.—Aid in this work was continued by the reappointment for another year of the presbyter sent out in 1887. His duty remains the same, viz., that of "counseling and guiding presbyters and readers in Mexico who have asked for the fostering care of this Church to be extended to them as a mission." An advisory committee for the work in Mexico has in charge all offerings made through the Board of Missions. "The Mexican League" is still actively at work as an independent association, consisting of ladies, for aid in missionary work in Mexico. It has no further connection with the Board of Missions.

Church in Hayti.—This Church, though independent, is not strong, and seeks aid from the Protestant Episcopal Church in the United States. A commission of bishops has it in charge, and it receives help from the Domestic and Foreign Missionary Society. Aid was extended to the amount of \$6,551.73. Statistics: Bishop, 1; other clergy, 13; teachers, 2; catechists, 16; mission stations, 23; baptisms, 58; communicants, 370; day scholars, 552; Sunday-school scholars, 221; contributions, \$647; mission property, estimated value, \$17,470.

Protestant Episcopal Churches in Europe, under the charge of a bishop of the American Church: In France, 2; in Germany, 1; in Italy, 2; in Switzerland, 1.

American Church Building-Fund Commission, established in 1880, continues its very useful and important work. It aims to create a fund of not less than \$1,000,000, so as to be enabled to give effective aid in all parts of the United States toward building chapels and new churches. Thus far the permanent fund has reached to \$103,408.83; but, as the matter becomes better understood, there is good reason to expect that the fund will be raised to the desired amount. During the year forty-seven applications for aid were responded to and loans were voted in sums from \$200 to \$3,000, the average being about \$1,000 to each church. The total amount was \$46,500.

Society for Promoting Christianity among the Jews (auxiliary to the Board of Missions) reports quiet and steady progress. The society has missionaries in seven of the large cities as well as in numerous large towns. There are five missionary schools, five industrial schools, and two branch schools, and 252 of the parochial clergy kindly co-operate in local activities. The entire work is such as to reach the Jews in 254 cities and towns in the United States.

Of publications 35,556 copies have been issued, and Bibles, Testaments, Scripture portions, and prayer-books have been distributed in the English, German, and Hebrew tongues. Balance in hand (Sept. 1, 1887), \$7,846.95; contributions, specials, etc., \$12,188.48; total, \$20,035.38. Expenditures for schools, salaries, publications, etc., \$12,752.52; real-estate account, \$518.20; balance to new account, \$6,764.66; total, \$20,085.38.

Changes in the Clergy.—During the year four of the bishops have died, viz., Bishop Edward

R. Welles, of Milwaukee, Bishop J. H. H. Brown, of Fond du Lac, Bishop S. S. Harris, of Michigan, and Bishop G. K. Dunlop, Missionary Bishop of New Mexico and Arizona. Three presbyters have been consecrated bishops, viz., J. S. Johnston, Missionary Bishop of Western Texas; A. Leonard, Missionary Bishop of Nevada and Utah; and L. Coleman, Bishop of Delaware. Three are on the list of retired bishops, viz., H. Southgate, O. C. Penick, and S. I. J. Schereschewsky. Over seventy of the clergy died in 1888.

Q

QUEBEC, PROVINCE OF. Finances.—The Treasurer of the province, in his budget speech on June 18, 1888, shortly before the close of the fiscal year, announced that the ordinary receipts up to April 1 amounted to \$3,024,981.65, and the ordinary expenses to \$2,259,960.14.

An act was passed authorizing the Government to issue debentures bearing interest at not more than 4 per cent. to the amount of the whole existing debt of the province. As the act left the creditors of the province no option but to accept the lower rate of interest or to terminate their debentures, it was severely criticised in London as well as in Canada, as amounting to a partial repudiation of the province's liability to its creditors. Presumably in deference to freely expressed public opinion, the Government refrained from carrying out the scheme of conversion.

District Magistrates Act.—This act, of little importance in itself, gave rise to no little public excitement through being disallowed by the Dominion Government as *ultra vires* of the Quebec Legislature. The purport of the act was to abolish the Circuit Court of Montreal and substitute therefor a court with practically the same jurisdiction, to be called the District Magistrates Court. Under the British North America Act, the provincial legislatures enjoy the power to make laws in relation to the administration of justice in the province, including the Constitution, maintenance, and organization of provincial courts both of civil and criminal jurisdiction; but the appointment of judges to the superior, district, and county courts in each province appertains to the Governor-General in Council. The appointment of magistrates rests with the provincial governments. Consequently, the practical effect of the act was simply to change the name of the court and of its presiding officer, and to confer upon the Quebec Government the power of appointing that presiding officer, which power of appointment is by the British North America act of the Imperial Parliament expressly conferred upon the Dominion Government. The Quebec Government appointed two district magistrates under the act, and the friends of the local government, in mass meet-

ing assembled, protested against the disallowance as an unwarrantable interference with provincial rights. Some justification for the Quebec Legislature straining the interpretation of the British North America Act in order to authorize the appointment of the judges by the Provincial Government, is to be found in the persistent neglect of the Dominion Government to appoint new judges, although the work in the courts was notoriously in arrears.

The Jesuits' Estates Settlement.—An act passed by the Legislature during the session of 1888, destined to arouse considerable dissension throughout the Dominion, was the act respecting the settlement of the Jesuits' estates. At the time of the suppression of the Society of Jesus throughout the world by the Pope in 1774, the Jesuits owned large estates in Canada, which had been bestowed upon them chiefly for educational purposes. According to a schedule made in 1787, their properties included: 1, Six superficial arpents, on which the Quebec college and church are erected, given for the instruction of the inhabitants; 2, the two Lorettes or Seigniory of St. Gabriel; 3, the peninsula of Lavacherie; 4, Sillery, near Cape Rouge; 5, Belair; 6, Cap de la Magdelaine, near Three Rivers; 7, Batiscan; 8, the Island of St. Christophe, near Three Rivers; 9, Laprairie de la Magdelaine; 10, a piece of ground at St. Nicholas; 11, eleven arpents of ground at Pointe Levis; 12, the Isle of Reaux, below the Island of Orleans; 13, six arpents at Tadousac; 14, the Fief Pacherigny, near Three Rivers; 15, another lot at the same place; 16, a remnant of ground extending to a small river near Lake St. Peter; 17, a number of lots in Quebec city, now built upon, and many used as public streets; 18, the ground used by the church and mission house of Montreal, etc. Altogether the Jesuits owned 48,000 acres in the district of Montreal, 439,000 in the district of Three Rivers, and 129,500 in the district of Quebec—valued at from \$2,000,000 to \$3,000,000. In 1791 the society was suppressed as a body corporate by King George III, and all its lands were declared to be vested in the crown. Provision was made

out of the revenues of the property for the surviving members of the order, the last of whom died in 1800. It is contended that, even if the lands had not been already confiscated, they would then have escheated to the crown for want of other heirs. The revenues of the estates were applied to educational purposes. The estates were transferred to the old Province of Canada, and at the time of confederation (1867) a large portion of them was ceded to the Province of Quebec. From time to time the ecclesiastical authorities have demanded the transfer of the Jesuits' estates to the Roman Catholic Church. In 1878 it was claimed that the bishops were the rightful heirs to the suppressed order. In 1887 the Quebec Legislature passed an act incorporating the Jesuits, and the Quebec Government entered into negotiations with the Jesuits and with the Holy See for a settlement of the long-disputed claims. In these negotiations the Premier, the Hon. Honoré Mercier, refused to recognize any civil obligation, but merely "a moral obligation," on the part of the Government. The Jesuit fathers were authorized by the Pope to treat with the Government, on condition that the money received be depos-

ited and left at the free disposal of the Holy See. Finally an agreement was made and ratified by the Legislature, at this session, in the act respecting the settlement of the Jesuits' estates. Under this act the Government of the Province pays \$400,000 to the Society of Jesus, and also transfers Laprarie Common to it, and pays \$60,000 to the Protestant Committee of the Council of Public Instruction for the purposes of higher education. The society—in its own behalf, for its suppressed predecessor, for the Pope, and for the Roman Catholic Church generally—accepts the grant as a full settlement.

The passage of the act gave great offense to Protestants, and the Dominion Government was urged to exercise its power of disallowance; but the Dominion Government took the ground that, wise or unwise, the legislation was within the competence of the Provincial Legislature. Some politicians were unkind enough to say that the act was passed in the hope that it would be disallowed, in which case the Quebec ministry would have appealed to the electorate upon an issue that would have greatly strengthened their weak majority.

R

REFORMED CHURCHES. The following table is published in the "Almanac for the Reformed Church in the United States" for 1889:

No.	NAMES OF CHURCHES AND COUNTRIES.	Synods.	Minist- ters.	Congrega- tions.	Communi- cants.	Adherents.

I. Reformed Church in the United States.—“The Almanac of the Reformed Church in the United States” for 1887 gives the following statistics of this denomination: Number of districts synods, 8; of classes, 54; of ministers, 823; of congregations, 1,512; of members, 190,527; of unconfirmed members, 111,416; of persons communing during the year, 152,274; of baptisms, 18,743 of infants and 1,500 of adults; of confirmations, 10,542; of Sunday-schools, 1,464, with 129,718 pupils; of students for the ministry, 207. Amount of contributions for benevolent purposes, \$147,297; for congregational purposes, \$841,291.

Eight colleges and universities, 9 academic schools and institutes, and 2 theological seminaries are conducted and 4 orphan homes are maintained under the patronage of the Church. The publishing enterprises passed into private hands on the last day of 1887, and are now carried on at Philadelphia under the style of the “Reformed Church Publication House.” Home missions are carried on under the care of Boards of the General Synod and of three district synods. Fifty-six missions are returned, with 5,430 communicants, who contributed during the year \$38,724 for congregational, and \$3,500 for benevolent purposes. The General Board had received during the fiscal year 1887-’88, \$16,738, and asked for \$20,000 for the ensuing year. The Board of Foreign Missions received \$20,000. The missions of the Tokio and Sendai districts in Japan returned 8 organized churches, 4 of which were self-supporting; 7 preaching-stations; 482 baptisms of adult converts; 8 baptisms of children; 1,202 members; 3 schools, with 209 pupils; 16 Sunday-schools, with 719 pupils; 1 theological school, with 9 pupils; 7 native ministers; 4 other agents; and \$1,950 of contributions.

II. Reformed Church in America.—The following is a summary of the statistics of this Church as they were reported to the General Synod in June, 1888: Number of classes, 34; of churches, 546; of ministers, 555; of licentiates, 9; of families, 47,520; of communicants, 87,015; of baptisms during the year, 4,751 of infants and 1,230 of adults; of members admitted on confession, 4,949; of baptized non-communicants 34,070; of catechumens, 31,814; of Sunday-schools, 750, with 96,019 members. Amount of contributions for religious and benevolent purposes, \$284,902; for congregational purposes, \$370,856.

The Board of Education reported to the General Synod that it had received \$9,070, while its debt had been increased by \$450; had 80 students under its care; and had aided 5 parochial schools. Its permanent funds amounted to \$41,665. The Widows’ fund had been increased by \$3,000, and was now \$73,971. It had aided 31 annuitants in the amount of \$4,661. It was, however, able to pay only 75 per cent. of the maximum annuity. The income of the Disabled Ministers’ fund had been \$9,199.

Appropriations had been made on its account to 16 ministers, 21 ministers’ widows, and to guardians of ministers’ children. The investments in its behalf were returned at \$53,817. The Theological Seminary at New Brunswick possessed scholarship endowments amounting to \$118,110. The treasurer of the General Synod gave the whole amount of its funds in his hands as \$768,173.

The receipts of the Board of Domestic Missions for the year had been for the Missionary Department, \$47,472; for the Church Building fund, \$19,584. The expenditures had been in the Missionary Department, \$32,298; from the Church Building fund, \$16,255. The board had aided 108 churches and stations, served by 90 pastors, and comprising 4,802 families and 6,947 members, in which 756 members had been received on confession; with 108 Sunday-schools having an average attendance of 9,349 pupils. These stations had contributed \$1,672 to home missions and \$4,474 to other objects.

The Board of Foreign Missions had received \$109,946. From the missions—in China, India, and Japan—were returned 11 stations; 123 out stations and preaching-places; 25 ordained and 3 unordained missionaries; 30 assistant-missionaries; 26 native ordained missionaries; 220 native helpers; 4,559 communicants; 7 seminaries for boys, with 308 pupils; 5 seminaries for girls, with 300 pupils; 4 theological schools or classes, with 32 students; and 106 day schools, with 2,612 pupils. The contributions of the native churches amounted to \$8,324. One ordained missionary and one assistant missionary were under appointment.

The eighty-second General Synod met in Catskill, N. Y., June 8. The Rev. M. H. Hutton, D. D., was chosen moderator. The Committee on Conference with the Reformed Church in the United States presented a report of progress, and was continued. The committees had held a preliminary joint meeting in the city of New York, in December, 1887, and a meeting and conference of ministers and laymen in Philadelphia, April 3 and 4, 1888. At the latter meeting, papers which had been previously arranged for were read, on “The Historical and Doctrinal Relations of the Two Churches,” by Dr. E. T. Corwin and Prof. J. H. Dubbs; “The Canons of Dort,” by Dr. Van Gieson; “The Present Condition of the Two Denominations,” by Dr. Van Horne; “Church Union for the Evangelization of the World,” by Dr. E. B. Coe; “The Obstacles to Union, and Methods of overcoming them,” by Profs. Mahon and Williams; and “The Advantages of Union,” by the Rev. Messrs. C. Cleaver and Peter Moerdyke. Three alternative forms of union were suggested: 1. the return of the Reformed Church in the United States to the articles of the Synod of Dort which conform to the Heidelberg standard catechism; 2, with the retention by

each body of its own standard; or, 8, on the basis of a common formula in which both Churches could unite. The Conference expressed its judgment that "a closer union between these two bodies, the only ecclesiastical organizations of the Reformed Church, of Continental origin, in America, is desirable, and at this juncture of the religious issues of our land specially important and, if the object is pursued in Christian wisdom and love, undoubtedly practicable. Besides, there is good reason for the opinion that, if judicious efforts in behalf of a closer union be conducted by the two committees, present obstacles will gradually disappear, and the end in some form just and acceptable to both branches may, without much delay, be attained." The ministers of the two organizations were advised to inform themselves more fully on the history of the Reformed Churches in Europe and in this country, "particularly in its bearing on the present movement, and, as occasion may arise, to promote, by preaching and otherwise, among all our congregations better knowledge of the Christian propriety and practical worth of the proposed union." Whatever action may be taken on the subject will have to wait for ratification by the General Synod of the Reformed Church in the United States, which will not meet till 1890.

A committee was appointed to make such additions to the liturgy of the Church "as may make it more available and comprehensive for service and worship," and report at the next meeting of the General Synod. A resolution protesting against the toleration of the traffic in intoxicating liquors on the Congo was passed and telegraphed by cable to the International Missionary Conference sitting in London. The Synod also recorded its pleasure at the growing public interest in efforts that are being made to diminish the evils growing out of the liquor-traffic, and declared that these evils constitute one of the greatest obstacles to the religious progress of the nation, and should be "energetically opposed" by all who love the Lord Jesus Christ. The Committee on Systematic Benevolence recommended the substitution of the term "offering" for "collection" in ordinary usage, and the revival of the idea of worship in making offerings of money to the Church. A minute was adopted recognizing the efforts of the Evangelical Alliance, particularly as they are directed to the preservation of the public schools in their integrity, and against efforts to divert public moneys to the advantage of particular denominations. The committee appointed to prepare a manual of instruction for young children presented a catechism which, after examination, was recommended to a committee enlarged by the appointment of two women upon it.

III. Reformed Churches in the Netherlands.—The Christian Reformed Church of the Netherlands originated in a secession in 1835 from the state Church as established by the law of

1815. It consists of eleven provincial synods, each of which sends four delegates to the General Synod meeting every three years.

A more recent movement within the state Church has resulted in the organization of an orthodox or conservative party, strictly adhering to the old ways and faith, as distinct from the other parties which are more ready to follow the modern tendencies of criticism and questioning thought, under the lead of Dr. A. Kuyper, of the Free University of Amsterdam. This party came to an issue with the authorities of the state Church in 1886, on a question of the admission of persons denying the divinity of Christ to full membership in the Church at Amsterdam. The Consistory refusing to consent to their admission, the orthodox majority—being eighty in number, and including Dr. Kuyper—were suspended, and afterward deposed. After this exclusion, a correspondence was begun with reference to a union with the Christian Reformed Church, and two meetings of a satisfactory character were held between representatives of the two parties. The General Synod of the Christian Reformed Church, at its meeting held at Assen in August, took action demanding that the orthodox party recognize that Church as the real Church of the Netherlands, and declare more openly than it had done that it had broken with the established Church and its representative bodies.

The first synodical meeting of the orthodox body was also held in August at Utrecht, when 180 churches, forming twelve classes, were represented by twenty-four delegates, besides five general advisers of the Synod.

RHODE ISLAND. State Government.—The following were the State officers during the year: Governor, John W. Davis, Democrat, succeeded by Royal C. Taft, Republican; Lieutenant-Governor, Samuel R. Honey, succeeded by Enos Lapham; Secretary of State, Edwin D. McGuinness, succeeded by Samuel H. Cross; General Treasurer, John G. Perry, succeeded by Samuel Clark; State Auditor and Insurance Commissioner, Elisha W. Bucklin, succeeded by Almon K. Goodwin; Attorney-General, Ziba O. Slocum, succeeded by Horatio Rogers; Railroad Commissioner, James H. Anderson; Commissioner of Public Schools, Thomas B. Stockwell; Chief-Justice of the Supreme Court, Thomas Durfee; Associate Justices, Pardon E. Tillinghast, Charles Matteson, John H. Stiness, and George A. Wilbur.

Legislative Sessions.—The General Assembly met at Providence on January 17, and remained in session till March 23, adjourning on that day to meet at Newport on May 29. The most important work of the session was the passage of the so-called Bourn amendment to the State Constitution, abolishing the property qualification for electors, which had been approved by the preceding Legislature. The proposed amendment provides that—

Every male citizen of the United States of the age of twenty-one years who has had his residence and

home in this State for two years and in the town or city in which he may offer to vote six months next preceding the time of his voting, and whose name shall be registered in the town or city where he resides on or before the last day of December in the year next preceding the time of his voting, shall have a right to vote in the election of all civil officers and on all questions in all legally organized town or ward meetings; provided, that no person shall at any time be allowed to vote in the election of the city council of any city, or upon any proposition to impose a tax or for the expenditure of money in any town or city, unless he shall within the year next preceding have paid a tax assessed upon his property therein, valued at least at \$124.

Section 2 provides that—

The assessors of each town and city shall annually assess upon every person, who, if registered, would be qualified to vote a tax of one dollar, or such sum as with his other taxes shall amount to one dollar, which tax shall be paid into the treasury of such town or city and be applied to the support of public schools therein; provided that such tax, assessed upon any person who has performed military duty, shall be remitted for the year he shall perform such duty; and said tax, assessed upon any mariner for any year while he is at sea, or upon any person who, by reason of extreme poverty, is unable to pay said tax, shall upon application of such mariner or person be remitted. The General Assembly shall have power to provide by law for the collection and remission of this tax.

Provision was made for the submission of this amendment to the electors at the April election.

Another act provides for the establishment of a State Agricultural School, and appropriates \$5,000 therefor. Any sums received from the Federal Government under the Hatch act, for the aid of agriculture, are placed at the disposal of the governing board of the school. The sum of \$26,000 was appropriated for enlarging and improving the Hospital for the Insane.

Other acts of the session were as follow :

To prevent discriminations by life-insurance companies.

Providing for an examination, by the State Board of Health, of the sanitary condition of hotels and boarding-houses.

Requiring savings institutions to report to the State Auditor every five years a list of unclaimed deposits remaining in such banks for twenty years, and to publish said list.

Requiring railroad corporations to draw cars, passenger and merchandise, of any other railroad corporation connecting with it over its road, for a reasonable compensation, and to furnish suitable depot accommodations therefor; in case of failure to agree upon a compensation, commissioners appointed by the Supreme Court shall decide.

The General Assembly elected in April convened at Newport on May 29, and after a session of four days adjourned to June 12. The following acts were passed during the session:

To establish a board of registration in dentistry.

Authorizing the city of Pawtucket to issue \$300,000 of bonds to obtain money for public improvements.

Authorizing the redemption of the franchise and property of railroad corporations from sale on execution.

Approving and confirming the lease of the Boston and Providence Railroad to the Old Colony Railroad Company.

Appropriating \$50,000 for a new almshouse at the State farm in Cranston.

At the adjourned session, which occupied only two days, United States Senator Jonathan Chace was re-elected, receiving 29 votes in the Senate and 59 in the House. Ex-Gov. John W. Davis received 4 votes in the Senate and 8 in the House, and Charles H. Page 1 vote in each body.

The most important act of Legislation provides for the incorporation and establishment of the city of Woonsocket.

Finance.—The State debt on the last day of the year consisted of bonds of 1863, payable in 1893, to the value of \$584,000; and bonds of 1864, payable in 1894, to the value of \$699,000; total, \$1,283,000. This is a reduction in the total debt during the year of \$58,000. At the same time the securities in the sinking-fund have increased by \$66,192.69, and now amount to \$757,641.18, reckoning these securities at par. The net debt, less the sinking-fund, on December 31 was therefore \$525,358.82. One year before it was \$639,495.60. The treasury statement for the year is as follows: Balance in the treasury, Jan. 1, 1888, \$135,458.18; receipts for the year ending Dec. 31, 1888, \$822,908.74; payments for year ending Dec. 31, 1888, \$695,648.22; balance in treasury Jan. 1, 1889, \$62,713.68.

The excess of expenditure over the revenue for 1888 was only about half that of the preceding year, in consequence of an act of March, 1888, increasing the tax on ratable property of the State from twelve to fourteen cents on each \$100 of valuation. By this increase the treasury received \$65,703.11 above that received from taxes the previous year. For 1889 the excess will be still further reduced by an act, also of March, 1888, reducing for 1889 and subsequent years the amount of annual payment into the sinking-fund from \$100,000 to \$50,000.

Banks.—The deposits in savings-banks of the State amounted on December 31, to \$57,699,884.94, an increase of \$2,336,601.61 for the past year. The number of depositors is 123,102, an increase of 2,958, being an average of \$468.07 to each depositor.

Education.—The last report of the Commissioner of Public Schools, covering the school year ending in April, 1887, presents the following statistics: Number of children of school age, 63,199; number attending public schools, 42,798; number attending Catholic schools, 6,852; number attending select schools, 1,745; total registration in public schools, 49,507; average attendance, 32,632; length of school year in months, 9½; male teachers employed, 190; female teachers employed, 1,120; average wages per month, male teachers, \$82.67; average wages per month, female teachers, \$44.38; number of evening schools, 38; number of public-school houses, 465; value of public-school property, \$2,404,081; total school expenditures for the year, \$798,465. These figures show a slight decrease in the average attendance over the preceding year, but an increase in the total enrollment, in the number

and salary of teachers, in the number of school-houses, and in the value of school-property.

The number of students enrolled in the Normal School since its reorganization in 1871 is 1,226. A large proportion of these have taught in the schools of Rhode Island. The whole number of graduates, including the latest class, is 446. The attendance during the second half of the year was 149, the largest in the history of the institution.

Charities.—The State Home and School, providing a home and education for homeless children, had an average attendance for 1887 of 57; and for 1888 of 80; there were remaining in the Home at the close of the year 87 children, an increase of 9 over that of a year ago. This increase in members calls for an increase in the annual appropriations. The expenses for conducting the Home and School for the year were \$12,179.94, against \$9,816.82 for 1887. At the beginning of 1888 there were 28 pupils at the State School for the Deaf, supported at the expense of the State.

Prohibition.—The Governor said in his annual message in January, 1889: "The operation of the laws prohibiting the manufacture and sale of intoxicating liquors is, as yet, very far from being satisfactory. Until the advent to office of the present Attorney-General, the litigation arising under the law had not been prosecuted with the zeal and energy necessary to demonstrate whether the system itself, properly administered, was effective or not."

The opponents of the law introduced a measure into the Legislature during the year providing for the resubmission of the prohibitory amendment to the people, while its friends urged the passage of a bill similar to the Kansas injunction law to secure a more effective enforcement. The sentiment of the Legislature was in favor of a further trial of prohibition, but action upon the injunction bill was deferred from the May and June sessions to the following January. The Chief of State Police, who is charged with the duty of enforcing the law, reports that great difficulty is found in the failure of the local police, especially in Providence, to co-operate with him. The former, with only ten men at his command at any one time, made during the first four months of the year 465 seizures of liquors, entered 18 complaints for illegal keeping, 22 for illegal selling, and 8 for common nuisances; while in the same time the Providence Chief of Police, with 200 men under him, made only 165 seizures, 78 complaints for illegal selling, and 8 for common nuisances. During the remaining eight months of the year the State police made 1,258 seizures, 26 complaints for illegal selling, 141 for illegal keeping, and 30 for common nuisances. In the same period the Providence police made only 241 seizures and 8 complaints for illegal keeping.

The total number of seizures by local officers as distinct from the State police during the first four months of the year were 825, complaints

for illegal keeping 128, for illegal selling 26, for common nuisances 16; during the remaining eight months the seizures were 535, complaints for illegal selling 42, for illegal keeping 16, and for common nuisances 15.

The Bourn Amendment.—The vote cast for this amendment in April was not opened and officially counted till late in November, when the announcement of its adoption was made by the Governor's proclamation. Questions at once arose as to the validity of the existing registry acts under the new provision of the Constitution, and these questions were submitted by the Governor to the Supreme Court. The Court decided that such parts of those acts as were not inconsistent with the amended Constitution should be allowed to stand; that the statutory provisions relating to the assessment and payment of a registry tax must be considered as null and void; but that the method of registration by town and ward clerks was still in force as before. It is estimated that the increase of the voting-lists under this amendment will be over twenty thousand names.

Political.—On February 22 a State Convention of Prohibitionists met at Providence and nominated a ticket as follows: For Governor, George W. Gould; Lieutenant-Governor, H. D. Scott; Secretary of State, F. A. Warner; General Treasurer, A. B. Chadsey; Attorney-General, John T. Blodgett. The usual prohibitory resolutions were adopted, and also the following:

We declare our belief that the laws governing the right of suffrage in our State should be so amended as to bring them into harmony with the laws of other States upon this subject. We further believe that the registry tax has been a great source of corruption and that it should be abolished.

We believe that gross corruption prevails through the use of open ballots, and we declare ourselves in favor of a secret ballot, as most likely to prevent intimidation of voters, and some adaptation of the "Australian system," as providing best against facilities for bribery.

The Republicans met in State Convention at Providence, March 15, and nominated: For Governor, Royal C. Taft; Lieutenant-Governor, Enos Lapham; Secretary of State, Samuel H. Cross; General Treasurer, Samuel Clark; Attorney-General, Horatio Rogers. The platform includes the following:

We believe that all proposals to divide the present surplus among the States or to distribute it by extraordinary expenditures are indefensible, but we favor sufficient appropriations for building the navy, for constructing coast-defenses adequate for the protection of our homes and property, which are now exposed to the attacks of a foreign enemy, and for pensions.

We heartily indorse the action of the Republican members of the General Assembly in securing the submission to the people of the State of a proposition for an extension of the right of suffrage, and we again express ourselves in favor of the abolition of the registry tax as a prerequisite for voting.

On March 19 the Democratic State Convention met at Providence, and renominated Governor Davis, Secretary of State McGuinness,

Treasurer Perry, and Attorney-General Slocum. Lieutenant-Governor Honey declined a renomination, and was succeeded on the ticket by Howard Smith. The resolutions included the following :

The constantly increasing surplus in the National Treasury (estimated at nearly \$100,000,000 annually) which arises from unjust and unnecessary taxation of the people, threatens to paralyze trade and commerce by the withdrawal from their channels of the money which is needed in their operations; reduction of taxation is therefore an imperative duty, and should be made first upon those articles which can be classed as necessities to the whole people—men, women, and children. The industries of Rhode Island will be most efficiently fostered and protected by the introduction into our ports free of duty of such raw materials as enter into or are used in connection with our manufactures; we designate wool, lumber, and coal as among the most important of such raw materials.

We pledge ourselves :

1. To secure for the people of this State a constitutional convention, to the end that the many reforms needed may be accomplished and that the abuses and irregularities now existing, which have been bred and fostered by the ruling element of the Republican party of this State, may be abolished.

2. To abolish the registry tax, which has for another year continued to be a source of unmitigated evil and fraud on the native-born voters of this State, and again making money instead of intelligence and capacity a qualification for office.

3. To abolish the property qualification which is unjustly imposed upon naturalized citizens of the United States as a prerequisite for voting.

At the election, in April, the Republican ticket was elected by a plurality of over 8,000 votes. For Governor, Taft received 20,744 votes; Davis, 17,556; Gould, 1,326. The Legislature elected at the same time was composed of 81 Republicans and 8 Democrats in the Senate, and 61 Republicans, 10 Democrats, and 1 Prohibitionist in the House. At the same time the Bourn amendment to the State Constitution, passed by the Legislature in January, was submitted to the people and approved by a vote of 20,068 in its favor and 12,198 against it. Three fifths of the total vote cast being necessary for its adoption, it secured only 711 votes more than the requisite number.

ROMAN CATHOLIC CHURCH. The two most important events in the history of the Catholic Church during the past year were the celebration of the Papal Jubilee—the fiftieth anniversary of the ordination of Leo XIII to the priesthood—and the visit of the Emperor William to the Sovereign Pontiff. The first event, which occupied the end of 1887 and the first days of 1888 was most elaborately celebrated. All the rulers of the world, including the Sultan, sent gifts to the Pope. King Humbert was the only exception. The gift of President Cleveland was particularly appropriate. It was a copy of the Constitution of the United States. Brazil, in honor of the festival, freed several thousand slaves. Later in the year the Pope issued an encyclical to the bishops of Brazil on the subject of slavery, one of the most remarkable documents of his pontificate. In connection with this unre-

served throwing of the influence of the Church against the owning of human beings, the cordial approval of the Holy Father to Cardinal Lavigerie's project for the suppression of the African slave-trade makes in itself an epoch in the annals of the Church which has from the beginning regarded liberty as the most beautiful of all things. The visit of the Emperor William to the Sovereign Pontiff, though apparently deprived of all political significance by the rules of papal and royal etiquette, had no effect in clarifying the Roman question. The Emperor seems to have avoided committing himself by any verbal promise to the amelioration of the Pope's position. Mr. Gladstone's letter to the Marquis de Riso, quoted in the "Osservatore Romano," which created a sensation during his visit to Naples, seems to show that public opinion in Europe was, late in 1888, not averse to the submission of the Roman question to an international tribunal. But, taking Mr. Gladstone's later explanation of that letter, it becomes evident that the Marquis de Riso was mistaken. The position of the Pope still remains, in his own phrase, "intolerable."

The abolition of slavery in Brazil, brought about by the entire sympathy of Dom Pedro and his people on the subject and the counsels of the bishops of Brazil, urged on by the Pope, occasioned His Holiness to send the golden rose—sent to some royal personage each year on *Lætare Sunday*—to the Princess-Regent of Brazil. The new Archbishop of Carthage—a see created by the Pope to revive the past glory of the African Church is Cardinal Lavigerie. The cardinal is nearly sixty-four years of age, but he believes that he will be enabled to lead a new crusade against the slave-trade in Africa with as much success as if he were half his present age. In London, Paris, Naples, Madrid, and Brussels, he has gained the enthusiastic sympathy of all who heard him. At Rome, he aroused the intensest interest in the heart of Leo XIII. He is forming a defensive force for the protection of defenseless tribes against the slave-traders. He believes that less than a thousand well-drilled soldiers would be sufficient to abolish slavery from Albert Nyanza to the south of Tanganika; with an American regiment at his command, he would guarantee to wipe out the bloody marks which the Arabs and mulattoes make each recurring year. It is computed that, out of the five hundred thousand men, women, and children stolen and sold every year, fifty thousand die under the oppression of their captors. Human life is held very cheap in the interior of Africa.

The deaths during 1887-'88 were unusually numerous in ecclesiastical circles. The Most Rev. Francis X. Leray died Sept. 23, 1887. The death of the Rev. John Baptist, S. J., occurred on November 4 of the same year; Father Baptist was the hero of an outburst of un-American fanaticism in 1854, and of Miss

Tincker's well-known novel "Grapes and Thorns." The death of the Rev. John J. Riordan, the rector of the Irish Emigrants' Mission at Castle Garden, a great loss to the poor, was followed by that of Dom Bosco in Italy, who died on March 28, and that of Father Drumgoole, in New York—both apostles of poor boys of the streets. On February 18, the Most Rev. John B. Lamy, the first Bishop of Santa Fé, departed this life; he had resigned his see in 1885; March 9, Cardinal Czacki died; March 31, Cardinal Martinelli; April 14, the Most Rev. Joseph Sadoc Alemany, O. P., first Archbishop of San Francisco, who had resigned his see to spend his last days with the Brothers of his Orders in Valencia, Spain; May 10, Archbishop Lynch, of Toronto; and on June 29, the Rev. Francis X. Weninger, S. J., famous as a preacher of missions.

The death of the Very Rev. I. T. Hecker, C. S. P., took place on December 20. Father Hecker, born in 1819 and received into the Church in 1845, had long been a prominent figure in the annals of the Catholic Church. The conversion of Father Hecker, who had been seeking in various religious organizations the peace he desired, introduced a new element into the Church in this country. He saw the necessity of making, as he himself expressed it, the synthesis between the Catholic Church and the American Republic more apparent. He had been a member of the Brook Farm Community, he had studied for the Protestant Episcopal ministry, he had paused awhile in Congregationalism. Entering the Catholic Church, he brought with him a great experience, gained entirely from contact with American social life. He became a Redemptorist in Belgium. As one of this famous religious congregation, which in this country devotes itself to the preaching of missions, he performed his priestly duties scrupulously for several years. It then occurred to him that a similar association, composed of American priests, might be very useful in the United States. He went to Rome and secured the approbation of the Pope for his project. The Congregation of St. Paul (C. S. P.) was founded and reached a class of Catholics and searching non-Catholics more effectually than any other organization within the Church. Father Hecker's "Aspirations of Nature" and "Questions of the Soul," are in every complete religious library. He founded "The Catholic World," now conducted by the Rev. Walter Elliott, and justly regarded a foremost exposition of Catholic thought. He was succeeded by the Very Rev. Augustine Hewit, C. S. P., the present Superior of the Congregation.

On May 24, the corner-stone of the Divinity Building, near Washington, D. C., was laid by Cardinal Gibbons. The sermon was delivered by the Right Rev. J. Lancaster Spalding, Bishop of Peoria. A gold medal sent by the Pope was presented to Miss Mary G. Caldwell, whose generous contribution has made the

university possible. Among those present were the Misses Drexel, who had founded a chair of Divinity. The Right Rev. Bishop Keane, having resigned the see of Richmond, was made Titular Bishop of Jasso and rector of the new university. Having formulated the statutes he departed for Rome to consult the Holy Father further on the affairs of the great school.

The University of Notre Dame, Indiana, celebrated on Aug. 15, 1888, the fiftieth anniversary of the ordination of the Very Rev. Edward Sorin, its founder, to the priesthood. The Very Rev. E. Sorin is the founder of the university and the Superior-General of the Congregation of the Holy Cross. His Eminence Cardinal Gibbons, several archbishops, many priests, and a great assemblage of other distinguished gentlemen visited Notre Dame on this occasion. The Very Rev. Father Sorin was born in France, Feb. 6, 1814; he came to this country in 1844. Notre Dame did not exist then; Indians lived in the wilderness of wood and prairie which then occupied its site; now magnificent buildings containing over five hundred students give the place the appearance of a large and handsome university town.

Another important celebration occurred on September 20, in honor of the twenty-fifth anniversary of the ordination of the Most Rev. Archbishop Corrigan. The ceremony, at which were present all the priests of his diocese not on duty and an immense congregation, was one of the most imposing ever held within the cathedral. The principal episcopal sees filled during the year were that of New Orleans by the Most Rev. Francis Janasens; that of Belleville, Ill. (newly created); and that of Alton, Ill., filled by the Right Rev. John Janassen and the Right Rev. James P. Ryan; Vancouver Island by the Rev. John N. Lemmens, succeeding Archbishop Seghers; Detroit by the Rev. Dr. John S. Foley, who succeeded Bishop Borgess, resigned. The Right Rev. Leo Haid, O. S. B., was consecrated Vicar Apostolic of North Carolina, and Rev. Andrea Hintenbach, O. S. B., made Archabbot of St. Vincents, in Westmoreland County, Pa.

At Rome, in March, 1888, the Pope made a vigorous speech to the cardinals on the necessity of his temporal independence and a pronouncement on the attitude of the Church toward the Knights of Labor, whose association is not condemned, provided their statutes contain nothing communistic or tending to oppose the right of holding property. In Prussia a law was passed restoring to a large number of religious orders the rights abrogated by the Kulturkampf. At Baden, the Chambers refused to admit the excluded religious congregations.

At Rome, in May, the Pope received a great crowd of Spanish Catholics headed by Mgr. Catala. Arrangements were made with Prussia on the question of the veto—the Government agreeing not to oppose for political reasons a nomination of a bishop by the Pope. The new Italian penal laws were protested

against by the Neapolitan episcopate. Herr Windhorst's jubilee was celebrated.

In June, at Rome, a *triduum* was held in honor of the Blessed de la Salle, founder of the Institute of the Christian Brothers. The success of the Catholic Belgians in the legislative elections gave great pleasure to the Holy Father. Cardinal Manning, in London, issued a pastoral letter on the progress of the Church in England.

The Holy Father issued an encyclical on liberty and license.

At Rome, in July, the Italian Counsel of State explained that the law of the guarantees did not confer on the Pope extraterritorial rights or privileges. The Pope protested. An encyclical letter to the bishops of Ireland was issued which had a good effect on the minds of the Irish people, made anxious by the exaggerated rumors about the Papal rescript condemning the Plan of Campaign and boycotting. The schism of the Armenians ended; an encyclical letter was addressed by the Pope to Mgr. Azarian and the other Armenian bishops.

In September the Prussian bishops met at Fulda and expressed their loyalty to the Pope and their desire for the restoration of Rome. The Catholic Congress of Fribourg, which expressed similar sentiments, was held.

In October the Pope gave the decree *Tolerari posses* on the Knights of Labor; this decree was interpreted by Cardinal Gibbons in a letter printed in the Baltimore "Mirror."

The Holy Father ordered a universal mass of requiem on the last Sunday in October for the repose of the souls of all the faithful departed. The Italian penal laws which force students studying for the priesthood into the army were protested against by assemblages held in nearly every city of the Continent. An important encyclical letter *exaunte jam anno* appeared in December as the finish of the jubilee. It is a protest against unbelief and the ostentation of the rich. In France Mgr. Treppel made an attempt to revive the French laws against dueling. The year was closed by a universal mass, ordered by the Pope in thanksgiving for the graces of the jubilee.

ROUMANIA, a constitutional monarchy in Eastern Europe. The reigning sovereign is Carol I, born April 20, 1839, of the family of Hohenzollern, being the brother of the present Prince of Hohenzollern-Sigmaringen. He was elected Domnul or Lord of Roumania by a Constituent Assembly on April 20, 1866, and proclaimed King on March 26, 1881. The heir-presumptive is his nephew Prince Leopold of Hohenzollern-Sigmaringen. The Constitution voted by the Constituent Assembly of 1866 was amended in 1879 and 1884. The Senate consists of 112 members elected for eight years and 8 bishops. The Chamber of Deputies numbers 185 members elected for four years.

Finances.—The financial accounts for the year ending March 31, 1887, show 181,329,693 lei of receipts and 127,045,614 lei of expenditures.

The capital of the public debt at the close of the fiscal year 1888-'89 is 788,732,489 lei. It was increased by the emission of new bonds for 100,000,000 lei in July, 1888. In a period of seven years the funded debt has been increased by the sum of 218,000,000 lei, and the annual charge of the debt has grown from 41,000,000 to 54,500,000 lei.

The Army.—The effective strength of the permanent army in time of peace is 1,480 officers and 33,714 rank and file, with 6,969 horses and 370 guns. The strength of the active territorial army is 1,350 officers and 29,679 men, with 11,742 horses. The country is divided into 4 territorial districts, each of which can furnish a *corps d'armée* of 28,000 troops, not reckoning the active division of troops belonging to the separate territorial division of the Dobrudja. The Government possesses 1 torpedo-cruiser, 6 gun-boats, and 5 torpedo-boats for the defense of the Danube. The Prime Minister declared in Parliament, in March, 1888, that Roumania in case of war could put 300,000 soldiers into the field. Fortifications at Focshani, commanding the river Sereth and the railways leading to Galatz and Bucharest, and at Barboosh, near Galatz, where the largest bridge spans the Sereth, were completed in 1888, and others were begun on the Russian frontier that are designed to bar the passage of Russian troops toward the lower Danube.

Commerce.—The values of the imports and exports in 1886, in lei or francs, and their distribution among commercial nations are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	71,407,000	116,637,000
Austria-Hungary.....	9,518,000	84,678,000
Germany.....	78,840,000	2,618,000
France.....	14,495,000	29,184,000
Belgium.....	14,494,000	15,240,000
Russia.....	9,645,000	12,897,000
Italy.....	3,123,000	16,663,000
Turkey and Bulgaria.....	8,985,000	5,993,000
Greece.....	3,400,000	2,713,000
Switzerland.....	2,559,000	65,000
Other countries.....	1,499,000	18,916,000
Total.....	296,497,000	353,547,000

The imports of textiles amounted to 117,000,000 lei; metals and metal goods, 53,800,000 lei; hides and leather, 23,200,000 lei; timber, 12,000,000 lei. The exports of cereals were valued at 184,200,000 lei; fruits, pulse, etc., 21,000,000 lei; wines, 12,800,000 lei.

Railroads.—The state lines in 1888 had a total length of 2,235 kilometres, or 1,390 miles. There were 224 kilometres, or 140 miles, belonging to companies. The railroads in course of construction or in contemplation will add 457 kilometres, or 287 miles, to the network.

Post-Office.—The number of letters and postal-cards, circulars, and newspapers carried in the mails during 1887 was 19,084,914; the number of packets, 583,556.

Telegraphs.—The length of the telegraph lines in 1887 was 5,396 kilometres, or 3,350 miles,

with 11,911 kilometres, or 7,397 miles, of wire. The paid internal messages transmitted in 1887 numbered 880,829; private international messages, 281,264; total number of dispatches, private and official, 1,256,696. The receipts from the postal and telegraph service amounted to 5,049,218 francs, and the expenses to 3,702,567 francs.

The European Commission of the Danube.—The International Danube Commission, created by the Treaty of Paris in 1856 and confirmed by the Treaty of Berlin in 1878, exercises certain sovereign powers over the Danube river below Galatz. When the powers deputed to the commission expired by limitation of time, on March 18, 1883, a new commission was constituted. The financial statement for 1885 shows a total expenditure for the year of 1,805,824 francs, and receipts amounting to 2,627,358 francs, of which 1,480,958 francs were obtained from tolls, and the remainder from special sources. The number of steamers that passed the Sulina mouth of the Danube on the outward voyage in 1886 was 872, of 866,768 tons, of which 564, of 622,201 tons, were British; 61, of 63,140 tons, Greek; 81, of 62,826 tons, Austrian; 49, of 55,772 tons, French; 26, of 20,585 tons, Italian; 60, of 19,786 tons, Russian; and 28, of 22,493 tons, were Norwegian, German, Dutch, and 1 of them Spanish. The Greek sailing-vessels numbered 201, of 39,459 tons, and the Turkish 257, of 83,001 tons, while 49, of 11,844 tons, belonged to other countries. The grain exports from the ports of the lower Danube in 1886 were 6,461,889 quarters, as against 6,070,157 quarters in 1885, and 4,441,039 quarters in 1884.

Political Crisis.—The Conservative ministry of Lascar Catargio, constituted in 1871, made the first attempt to create a Government party and set the national needs and interests above personal and sectional rivalries. Lacking the courage of an energetic initiative, Catargio failed to unlock new financial resources for the growing requirements of the state until he was confronted by a deficit of 80,000,000 lei, and had no money in the treasury to pay salaries and other current expenses. The Conservatives succumbed to the attacks of the Liberals, who, owing to their French sympathies, had been under a shadow since the Franco-German War. Joan Bratiano, the most prominent among those Liberals to whom the King would intrust the Government, formed a ministry in 1876, and with the exception of a few weeks in the spring of 1881, he has guided the policy of the Government for twelve years with the aid of his colleague, Demeter Sturdza. By securing to the state the revenues of the salt and tobacco monopolies, establishing the banking and credit system of Roumania, and completing the railroads, he placed the finances on a solid basis, and developed the economical resources of the country. On the eve of the Russo-Turkish conflict he obtained from Russia the recognition of Roumanian independence, telling

Gortchakoff that without a treaty Russian troops could not march through Roumania except over the bodies of the Roumanians, and in May, 1876, he issued the proclamation of Roumanian independence. He adopted, in opposition to the Radical section of his party, the policy of subservience to German and Austrian wishes to gain protection against Russian aggression, and through this course and the successes of his internal administration drew to his side some of the ablest of the Moderate Conservatives, and built up the National Liberal party, which was supported by the great majority of the voting population. Gradually, however, the reluctance of Bratiano to embrace new reforms, and still more the dictatorial methods of personal government into which his energetic character betrayed him, alienated the strongest men in the Liberal party. Some retired from public life and others formed a Liberal Opposition, of which the brother of the Prime Minister was one of the leaders. These politicians joined forces with the Junimini or Young Conservatives, a group that sprang from a literary society founded in 1867 by Theodor Rosetti, P. Carp, and T. Majoresco, which had for its object the cultivation of German ideas in opposition to the French tendencies of the Liberals. The Young Conservatives were equally removed from the ideas of class rule represented by the Old Conservative or Boyar party, which disappeared from the political field to a great extent after the advent of the Liberal Cabinet. They contributed their money and efforts when the United Opposition was formed, and to their aid was added that of Russian intriguere, who paid liberally for assaults on the German prince and his Philo-German Cabinet. Such was the unbridled license of the Opposition press and orators that a revolutionary spirit pervaded the community in the early part of 1888. There were strong grounds for the charges made against Bratiano's administration that undermined his popularity. Deserted by the best of his fellow-workers, he was obliged to rely more and more on servile and selfish instruments, with no one to aid him in watching and checking abuses and corruption. When the Opposition grew strong enough to threaten the continuance of the ministry, the officials resorted to oppressive expedients to control the elections. The attacks of the press led them to take unusual measures for silencing criticism. Thus the editor of the "*Lupta*" was sentenced and imprisoned for *lèse majesté* until the Government was constrained by popular clamor to pardon him in February, 1888. The chief accusation against the official clique that Bratiano had gathered about him, with more regard to ability than to uprightness, was that they enriched themselves at the public expense by all kinds of corrupt methods. No suspicion of personal dishonesty attached to Bratiano himself; but against officers, high and low, in various departments charges were made in the press, and were generally believed. At

length Col. Maican-Dumitrescu, director of the Military School and president of a commission for the trial of weapons, was arraigned before a court-martial for demanding a bribe of 40,000 lei for recommending a revolver from Capt. Dimancea, its inventor. As the investigation proceeded it was found that the go-between in this transaction, the English commercial agent Broadwell, who represented the firm of Sir William Armstrong, had paid the brother of the culprit, Gen. Maican, commander of the flotilla, a heavy bribe while he was secretary of the Ministry of War, and thus induced him to reveal the sealed bids for two new cruisers. While the trial of the two officers was pending, the Chambers met in February, 1888, and members of the United Opposition gave notice of interpellations affecting the personal character of many men connected with the Government. Bratiano had emerged from the parliamentary elections with a majority of full two thirds. The new Chamber of Deputies was composed of 126 Ministerialists, 49 members of the United Opposition, 7 Independents, and 1 Socialist. Although Bratiano obtained a vote of confidence of two to one, the situation was such that he offered his resignation on March 2, 1888, and Prince Ghika attempted to form a coalition Cabinet. He failed because the leaders of the Opposition imposed unacceptable conditions, and the Bratiano Cabinet was reconstructed, Ministers Raduchihai, Statesco, and Gheorghian, of the Departments of the Interior, Justice, and Domains and Commerce, retiring. The Cabinet as reconstituted was composed as follows: President of the Council and Minister of War, Joan C. Bratiano; Minister of Foreign Affairs, M. Pherekyde; Minister of Public Instruction and Worship, C. Naku, who assumed provisionally the portfolio of the Interior; Minister of Public Works, P. S. Aurelian; Minister of Commerce, M. Gane; Minister of Justice, M. Giani. The troubles of the Bratiano-Sturdza ministry were precipitated by the revelations of bribery in the War Department, from which Gen. Angelesco had retired some time before the attacks in the Chamber impelled Bratiano to carry out his frequently declared intention of resigning. When he was, nevertheless, induced to resume the helm, and the same ministry, with slight changes, returned to power, the Opposition redoubled its attacks, and in the press wholesale charges of maladministration and corruption were brought. The Russian minister at Bucharest, Hitrovo, spurred on the malcontents. The Opposition, not content with the violent scenes that they enacted in the Chambers, arranged popular demonstrations and mass meetings. The Government attempted to put a stop to these by issuing a police regulation forbidding public gatherings. Several meetings were broken up by the military, who wounded many persons. This suppression of the right of assemblage was the occasion of a stormy sitting in the Chamber on March 26. It had the

approval, however, of a large section of the trading community of Bucharest, and they offered a dinner to the Prime Minister, who was hooted by the people on his way to the saloon. In the evening the deputies of the Opposition went to the royal palace, and, while a mob gathered in front shouting for the dismissal of the ministry, they demanded an audience with the King in order to lay before him the wishes of the people. King Carol sent word to the spokesman, Iascar Catargio, the ex-Premier and leader of the Old Conservative party, that he would not receive him before morning. The street before the palace was cleared by the military, and finally the deputation of legislators left the palace. On the following day an appeal that was signed by all the Opposition members of the Senate and Chamber was distributed from the office of the "Epoca" newspaper, and in accordance therewith the members marched with bared heads through the streets to the legislative hall, in order thus to express their grief at the bloodshed that had occurred. The guards were unable to keep out the crowd that followed, and in the struggle many revolver-shots were fired, some of them by deputies. One of the doorkeepers was killed. Troops were sent on the demand of Gen. Lecca, President of the Chamber, and many persons were arrested, among them two deputies, Nicholas Flea, ex-Mayor of Bucharest, and M. Philipesco, and the editors of the "Epoca" and the "Indépendance Roumaine." Opposition politicians meanwhile made incendiary addresses to the people on the streets. In the judicial inquiry evidence was brought to show that many of the Radical deputies were armed, and that from the direction of the shots the intention was to kill Bratiano, who happened to be absent in audience with the King. On the 31st a vote of want of confidence in the ministry, coupled with a demand for the liberation of the imprisoned deputies, was lost by 90 against 42 votes, and a simple motion for the release of the deputies by 83 against 45 votes, after which the Government party carried, by a majority of 87 against 36, a vote of confidence based on the charges against the Opposition of disturbing the peace of the land and jeopardizing its political position by intemperate speeches and shameless newspaper attacks, and finally violating the privacy of the King and the independence of Parliament, when every member was free to exercise the fullest liberty of criticism. The personal questions that had been brought up made it impossible for the Cabinet to remain in office, and Bratiano was determined not to head another ministry, whatever might be its composition. The King appealed to Prince Demeter Ghika, the President of the Senate, and when he for the second time declined, turned to the Young Conservatives because the leaders of the Liberal Opposition and of the Old Conservatives had made themselves impossible by their connection with the recent disturbances. Theodor

Rosetti, President of the Court of Cassation and a member of the Senate, was invited to form a Cabinet, which was constituted on April 2 as follows: President of the Council and Minister of the Interior, T. Rosetti; Minister of Foreign Affairs, P. P. Carp, formerly Minister Plenipotentiary to Vienna; Minister of Education and Provisional Minister of Commerce, J. Majoresco; Minister of Justice, A. Marghiloman; Minister of Finance, M. Ghermani; Minister of Public Works, Prince A. B. Stirbey; Minister of War, Gen. C. Barossi, Adjutant-General of the King. Prince Stirbey and Ghermani belong to the Old Conservative party. The first act of the new ministry was to release the imprisoned deputies and journalists. The majority promised to vote the budget and observe an expectant attitude if the new elections were postponed till the autumn, whereas the minority demanded that they should take place soon. The ministry promised to hold the elections as soon as the agitated state of public feeling subsided, and on April 15 the regular session was closed.

Peasant Insurrection.—Just before the closing of Parliament the new Cabinet had to deal with an outbreak of agrarian discontent which began in the sub-prefecture of Urticeni in the Jalomitza district, and spread into the neighboring districts of Prahova and Iloof. In the sub-prefecture of Panteleimon in the Iloof district, which reaches to the city-bounds of Bucharest, the entire peasantry rose against the local authorities, the landlords, and the tenant farmers, and stoned the military that were sent out to restore order, but commanded not to use their weapons. In the village of Stefanesti, near the capital, the mayor was shot by the insurgents. In many places they attacked unpopular estate stewards and extortionate farmers, and in others the local officials, whom they accused of keeping back the money that the Government had given to relieve their distress. The occurrence of disturbances in various other sections of the country showed that agencies had been at work to foment trouble, and the fact that hawkers of Russian pictures of saints and of the Czar had told the peasants of many villages to demand land of the Government, and said that if it were refused Russian troops would come to their aid, as well as the story of large sums left for each village by the Russians, which was spread among the gypsy communes of Shindrelita, indicated the source of the agitation. Premier Rosetti declared in the Chamber that the instigators of the disturbance were not Roumanians. The Government adopted severe measures to put down the disturbances. Bands of peasants who were marching to Bucharest to present their grievances to the Government were fired into by detachments of soldiers, and many were shot. The territorial militia was first called out, but it showed open sympathy with the rioters, and was replaced by regular soldiery. The important town of Kalarasch

was on April 17 entirely in the power of the insurgents, until a detachment of troops arrived, and in the encounter that took place killed a large number of peasants. At Perish, north of Bucharest, the insurgents attacked the railroad station. At Budescht the troops killed or wounded more than 100 peasants.

The troubles had their root in the same conditions that have caused uprisings in the Russian peasantry. When serfdom was abolished there were 72,108 peasants possessing two yoke of oxen, to whom were allotted 11 *pogon*, or 13½ acres, each; 199,791 who had a single team, and received 7 *pogon*, or 8½ acres; and 184,995 without draught-animals, whose share was 4 *pogon*, or 5 acres, for each family. The right to pasturage and wood, which they had enjoyed as serfs, was taken away from them, and the land that was assigned to them was usually selected by the land-owner from the poorest or the most inaccessible part of his estate. The peasants, who were made to pay in installments the price of good land, often found their allotments measured out in worthless bogs or rocky hills. The boyars have always lived away from their estates as a rule, the smaller landlords entering the professions or the Government service. Since the emancipation of the serfs they have been accustomed to lease their estates, usually for three or five years, to speculative farmers, Jews, Greeks, and Bulgarians, whose rent depends not so much on the extent or quality of the land as on the number of peasants living on the property. The peasants are kept in a condition of practical serfdom by these tenant farmers, who exact so many days' labor for fuel and fodder that the peasants are compelled to purchase on the farmers' terms. Advances of money the peasants likewise contract to repay in work. The peasants are forbidden by law to alienate their allotments, and are thus prevented from acquiring one from another enough land to make them independent of the land-owners and farmers. The boyars will not sell land to peasants on any terms, although a considerable part of their estates must remain idle for want of labor to cultivate it. The peasants' allotments, originally much too small because the villages possess no common pastures, have been divided by inheritance. In the gypsy villages there are large numbers of cottiers who have no land. The peasants often rent land, usually the poorest that there is, from the farmers or landlords, paying a third of the produce crop and in addition agreeing to work for their landlords, who often exact so much labor that the peasants are unable to attend to their own crops. A deficient maize and fodder crop in 1887 was followed by a severe winter. The peasants were compelled to sell the cattle that they could not feed, and were in consequence reduced to extreme misery. The Government took measures to relieve distress, but the aid did not reach the sufferers soon enough, and was altogether insufficient. The insurrec-

tion was put down in a few weeks, and the peasantry were appeased by promises. The plan of distributing crown lands among them was taken into consideration. When no effective practical measures were taken to relieve the distress, new outbreaks occurred sporadically during the summer and autumn. An attempt on the life of the King, although without serious political significance, was a sequel of the peasant uprising. In the evening of May 7 a former police-officer named Preda Fontanaro fired two shots at the palace, one of which entered the window next to the room where the King was. The perpetrator of the murderous attempt, a dissipated man, was clothed in the dress of the peasantry, and, when questioned as to his motive, said that he desired to avenge the many peasants who had been shot by the military during the disturbances. The total area of Roumania is about 80,000,000 acres, of which 5,000,000 acres are forest. The emancipated serfs received something over 3,250,000 acres, and the free communes, which always existed in the mountainous part of the country, possess an equal amount. The remaining 18,500,000 acres are divided between the state, which has confiscated the extensive possessions of the monasteries, charitable corporations, and the landed nobility. Some of the boyars own 25,000 acres. Yet as a rule the large estates range from 1,250 to 4,000 acres, and the small ones from 125 to 625 acres.

General Election.—The ministry, refusing the demand of the Radicals for speedy elections on the ground of the excited state of the country, did not dissolve the Chamber and order new elections till September 20. The old Conservative or Boyar party profited by the delay and put forth its whole strength, while attempts to reunite the party of Demeter Bratiano with the Liberals who had adhered to his brother came to naught. The Old Conservatives were victorious in the elections, returning a clear majority that was able to dictate the policy of the Junimist ministry, or to overturn it at any time. The ministry was reconstituted on November 24, after the election of Lascar Catargio to the presidency of the Chamber. Rosetti remained Minister President, but without a portfolio, while the Conservative Prince Stirbey, son of a former hospodar of Wallachia, succeeded him as Minister of the Interior, giving up the portfolio of Public Works to Marghiloman, who gave place in the Ministry of Justice to a new member of the Cabinet, Vernesca, the possessor of great wealth, and one of the leaders of the Conservative party. Gen. Barossi, who owned no party ties, was succeeded in the Ministry of War by a Conservative, Gen. Mano. The portfolio of Agriculture, Commerce, and Domains, which was held *ad interim* by Carp, was intrusted to Alexander Lahovary, one of the bitterest of the assailants of Bratiano's Cabinet and the leader of a movement to protest against the crown domains, which

were declared to be a robbery of state property. With others of his family, he has taken the lead in the pro-Russian and anti-dynastic opposition within the Conservative party. The results of the general election were the return of 51 Conservatives, 39 Junimists, 81 Independent Liberals, 5 partisans of Joan Bratiano, 4 Socialists, and 42 Ministerialists. Ex-Premier Bratiano lost his seat. The success of the Boyar party compelled the Government to abandon its project of dividing a part of the public domains among the landless peasantry in lots of from four to eight acres. The Conservatives, under threats of a dissolution, agreed to allow the ministry to proceed with its bills for establishing a national bank and a gold currency, and making the higher judiciary irremovable except for cause, and promised not to oppose the foreign policy of the Cabinet. The compromise ministry, nevertheless, could not stand, and on December 31 the Parliament was dissolved, and new elections were appointed for Feb. 4, 1889.

ROUTLEDGE, GEORGE, an English publisher, born in Brampton, Cumberland, Sept. 23, 1812; died in London, Dec. 13, 1886. He served as an apprentice to Charles Thurnam, in Carlisle, in

GEORGE ROUTLEDGE.

1827-'38, and then entered the employ of Baldwin and Cradock, at a salary of £60 a year. At first his special duty was to collect books from other publishers for the country booksellers for whom that house was agent, and later he was given charge of the bindery. In September, 1836, he began business on his own account in Ryder's Court, Leicester Square, as a retail bookseller and purchaser of books at sales, supplying new books as they were ordered. His first book, "The Beauties of Gilsland Spa" (1836), proved a failure, as it depended upon local sale entirely. In November, 1837, he was given charge of the documents in the Tithe Office, where he remained for four years, be-

ginning with a salary of £80 a year. Meanwhile he continued his publishing-house, also doing some stationery business, which proved profitable and increased his capital for other ventures. He removed to Soho Square in 1843, and began the publication of Barnes's "Notes on the Old and New Testaments," in twenty-one volumes. In 1848 he began the "Railway Library," with "The Pilot," by J. Fenimore Cooper, and the series is still continued, now numbering upward of a thousand volumes. It includes the "Colleen Bawn," of which 80,000 copies were sold, and "The Romance of War," of which more than 100,000 copies have been sold. Another series, called the "Popular Library," comprising travels, biography, and miscellaneous works, was begun about the same time. In 1852 he removed to Farringdon Street, and there published an edition of "Uncle Tom's Cabin," of which over 500,000 copies were sold, also a companion volume, called "The White Slave," of which 100,000 copies were sold. Of Miss Warner's "Wide, Wide World" and "Queechy" enormous editions were disposed of. These editions of American books were all "pirated," no compensation being given to the authors. In 1858 Mr. Routledge entered into an engagement with Sir Edward Bulwer, to pay him a sum of £20,000 for a term of ten years, to republish nineteen of his novels in the "Railway Library." Ultimately he paid this author in all £40,000 for his works. Mr. Routledge came to New York in 1854, and established an agency. Later, he was the first to publish an edition of Oliver Wendell Holmes's poems in England, and in 1855 issued Longfellow's poetical works, illustrated by John Gilbert, whose drawings were engraved by Dalziel Brothers. In 1857 he began the publication of Shakespeare's works in monthly parts, illustrated by Gilbert. This edition was edited by Howard Staunton, and the outlay, exclusive of printing and binding, was £10,000. Another important work issued by him was the Rev. J. G. Wood's "Natural History," for which the plant cost £16,000. In 1868 he issued Longfellow's "New England Tragedy," and later his translation of Dante. He began in 1883 the "Universal Library," edited by Henry Morley, comprising standard works of the best old authors. In all, Mr. Routledge published more than 5,000 volumes during the fifty years that he was in business, an average of two a week. He retired from business in 1887, and at that time a public dinner was given him. Mr. Routledge was a justice of the peace in Carlisle, and deputy lieutenant of Cumberland County.

RUSSIA, an empire in Northeastern Enrope. The supreme legislative, executive, and judicial authority resides in the Emperor, who is assisted by the Council of the Empire, which examines every project of law; the Senate, which promulgates every new law and is the high court of justice for the empire; the Holy Synod, which superintends ecclesiastical affairs

and decides religious questions; and the Committee of Ministers.

The reigning Emperor is Alexander III, born Feb. 26, 1845, who succeeded to the throne at his father's death by assassination, March 13, 1881. The heir-apparent is the Grand Duke Nicholas, born May 18, 1868, eldest son of the Czar and of the Czarina Maria Dagmar, a daughter of King Christian IX of Denmark. The Czar's Cabinet of Ministers is composed as follows: Minister of the Imperial Household, Gen. Count Vorontzoff-Dashkoff; Minister of Foreign Affairs, Nicholas Carlovich de Giers; Minister of War, Gen. Vannofsky; Minister of Marine, Vice-Admiral Shestakoff; Minister of the Interior, Count Tolstoi; Minister of Public Instruction, M. Delyanoff; Minister of Finance, M. Vyshnegradsky; Minister of Justice, M. Manasein; Minister of Domains, M. Ostrofsky; Minister of Public Works and Railroads, Admiral Possiet; Comptroller-General of the Treasury, M. Solsky. The Grand Dukes Michael and Constantine are also members of the Committee of Ministers, the President of which is M. Bunge, ex-Minister of Finance.

Area and Population.—The area of the geographical divisions of the Russian Empire, in square miles, and their population in 1885 are given in the following table:

DIVISIONS.	Area.	Population.
Russia in Europe.....	1,902,099	81,725,185
Kingdom of Poland.....	49,187	7,900,804
Grand Duchy of Finland.....	144,255	2,232,278
Caucasus.....	182,505	7,284,547
Siberia.....	4,824,070	4,818,680
Central Asia.....	1,820,887	5,827,096
Sea of Aral.....	25,768
Caspian Sea.....	169,670
Sea of Azov.....	14,421
Total.....	8,682,925	108,548,199

The population of Russia in Europe and Poland together is 89,685,480, consisting of 44,524,239 males and 45,161,250 females. The population of the Caucasus consists of 3,876,868 males and 3,407,679 females; that of Siberia of 2,146,411 males and 2,002,879 females; that of Central Asia into 2,448,085 males and 2,207,568 females. The following cities in European Russia contained more than 100,000 inhabitants in 1885: St. Petersburg, 861,308; Moscow, 753,469; Warsaw, 454,298; Odessa, 240,000; Riga, 175,382; Kharkov, 171,416; Kiev, 165,561; Kasan, 139,915; Saratov, 122,829; Kishinev, 120,074; Lodz, 118,413; Vilna, 102,845. The largest cities of Russia in Asia are Tashkend, with 121,410 inhabitants, and Tiflis, the capital of the Caucasus, with a population of 89,551. The population of St. Petersburg on June 27, 1888, was 842,883, of which number 488,990 were males. This shows a falling off of 85,133 as compared with 1881, and even this does not measure the entire decline, because the former census was taken in the winter, and does not include workmen from the provinces engaged in building, who figure for 41,696 in the returns for 1888.

Finances.—The financial account for 1887 makes the total ordinary receipts 829,661,000 rubles, and the extraordinary receipts 144,548,000 rubles. Of the ordinary receipts 41,102,000 rubles were derived from the land and forest taxes, 28,862,000 rubles from patents, 11,677,000 rubles from the income-tax, 257,624,000 rubles from the tax on drink, 24,098,000 rubles from the tobacco-tax, 23,162,000 rubles from the sugar-duty, 107,425,000 rubles from customs duties, 18,242,000 rubles from stamps, 10,282,000 rubles from registration fees, 24,417,000 rubles from various indirect imposts, 29,397,000 rubles from the post-office, telegraphs, and royalties, 51,298,000 rubles from railroads, forests, and mines, 88,957,000 rubles from payments for land redemption, and 108,727,000 rubles from other sources. The total expenditures for ordinary purposes in 1887 amounted to 835,850,000 rubles, and the extraordinary expenditures to 95,098,000 rubles. Of the ordinary expenditures, 280,908,000 rubles were for the public debt, 210,953,000 rubles for military purposes, 109,067,000 rubles for financial administration, 40,859,000 rubles for the navy, 72,576,000 rubles for the Interior Department, 25,834,000 rubles for highways, 20,684,000 rubles for public instruction, 20,443,000 rubles for the judiciary, 22,350,000 rubles for domains, 10,999,000 rubles for the Holy Synod, and 10,560,000 rubles for the court.

The gold value of the paper ruble in the spring of 1888 fell to 45 per cent. below par, a lower point than it had yet reached. Only 20 per cent. of the depreciation is due to inflation, the remaining 25 per cent. being accounted for by the fall in silver. The exchange market for the ruble is in Berlin, where Russian currency has become an object of speculative manipulation, which interferes seriously with the foreign trade of Russia, and has lately caused distrust of the paper ruble in Russia, although it has hitherto passed freely from hand to hand amid all fluctuations. The exchange rates are raised or lowered on the Berlin Bourse by corners and false rumors in connection with enormous speculative dealings in the Russian internal loans. The metallic ruble in March was worth 1.80 paper ruble, against 1.67 in 1887, and 1.50 in 1886. The Government in 1881, and again in 1887, decreed the redemption of all paper currency not guaranteed by a metallic reserve, and has repeatedly declared its intention to recall and destroy the 266,000,000 rubles of paper money that were issued during the Turkish war. In February, 1888, the new Minister of Finance presented a project for establishing a metallic standard. On July 20 the minister was empowered by an imperial ukase to issue 15,000,000 rubles of additional paper currency against deposits of gold, merely as a temporary measure to facilitate the large export movement of grain. Another issue of credit-notes of the same amount was decreed in October.

The internal debt, payable in paper rubles, amounted on Jan. 1, 1888, to 3,104,899,764 rubles. In addition, the Government owed at that date 391,505,969 metallic rubles, 66,068,000 Dutch florins, £122,271,720, and 552,031,000 francs. There were in circulation 780,032,238 rubles of paper money, of which 211,472,495 rubles were protected by a reserve. A new loan contracted in 1887 yielded 81,068,000 rubles, of which 45,093,000 rubles were applied to the construction of railroads and harbors. A 4-per-cent gold loan of 500,000,000 francs for the conversion of old 5-per-cent. debts was offered in Paris on December 10, and found subscribers for six times the required sum.

The Army.—The peace strength of the Russian army in the beginning of 1887 was 659,274 men. The war effective of the regular army is about 1,689,000 combatants, including 36,600 officers, with 3,776 guns and 204,390 horses. The Cossack troops, a great part of which have been incorporated in the regular army, have a peace strength of 47,150 men, and a war strength of 140,033 men, inclusive of 3,644 officers. The irregular forces, comprising Tartars, Georgians, and Turkomans, number 5,769 men, of whom 1,420 are infantry and 4,349 cavalry. The *opoltehenie* or militia, which is about equal in numbers to the rest of the armed forces, brings up the total military strength of the empire to nearly 4,000,000 men.

In accordance with an imperial ukase published on July 13, the recruit of the army for 1888 was 250,000 men, an increase of 15,000 over the previous year. A second law fixes the duration of military service at eighteen years, of which five are spent in the active army, and the remainder in the two classes of the Landwehr, the second of which can only be called into active service by a proclamation of the Czar. Although the legal period of service in the active army is shortened by a year, the actual term of service with the colors will probably be a year longer than under the old law, when the men were furloughed on the average two years out of the six. The entire period of military service is made three years longer, increasing the strength of the regular army on the war footing by 750,000 men nominally, and in reality by not less than 400,000.

In the latter part of 1887 the movement of Russian troops toward the western frontiers and unprecedented activity in building barracks, fortifications, and military railroads created alarm in Austria and Germany, and necessitated the strengthening of the frontier garrisons in Prussia and Galicia. The Russian Government explained the dislocation of troops as the execution of a plan that had been in existence for a long time, and while Prince Bismarck accepted this assurance with equanimity, M. Tisza declared in the Hungarian Chamber in January, 1888, that measures would be taken by the Austro-Hungarian Government for contingencies that might imperil the security of the frontiers. The Russian forces on the west-

ern frontier at that time numbered 123,275 men, with 24,198 horses and 274 field-cannon. In March re-enforcements of about 100,000 men arrived. Works were begun at Libau which will transform it by 1890 into a military port, with a harbor formed by two breakwaters. There were 96 barracks erected along the frontier of Austria and Germany, and about 100,000 cavalry were held in readiness to cross the frontier at a moment's notice. Two branch lines of the Ivangorod-Dabrova Railroad running to the Austrian and Prussian frontiers were opened in the spring. At Rovno, Ivangorod, and other places in the western districts new fortifications were constructed.

The Navy.—Russia in 1888 had 32 iron-clads, 39 armed steamers, 59 other steamers, 8 sailing-vessels, and 95 torpedo-boats in the Baltic Sea; 7 iron-clads, 27 armed steamers, 59 unarmed steamers, and 16 torpedo-boats in the Black Sea; 12 armed and 4 unarmed steamers in the Caspian Sea; 6 steamers in the Lake of Aral; and 8 armed steamers, 13 unarmed steamers, and 6 torpedo-boats on the Pacific coast. The most powerful vessels are the "Tchesma" and "Catherine II," which were launched in the Black Sea in 1886, and the "Sinope," which was launched in June, 1887, each of which has a displacement of 10,180 tons, and carries six 12-inch and seven 6-inch guns. The armor at the water-line is 16 inches thick. The guns are mounted in a casemated, pear-shaped redoubt. The "Alexander II" and the "Nicholas I," 2 barbette cruisers of 8,440 tons, have 14 inches of armor above the belt, and are armed with two 12-inch, four 9-inch, and eight 6-inch guns. These vessels—the latter of which was launched on the Neva in October, 1888—are of the same type as the English "Imperieuse," but heavier and more powerfully armed. The "Pamiat Azoff," which was launched in the Baltic on June 1, 1888, is an iron-clad frigate of 6,000 tons displacement, carrying 14 heavy long-range guns, 15 machine-guns, and 8 torpedo-guns.

Commerce.—The values in rubles of the imports and exports of merchandise in 1886 and the shares of the different countries in the foreign commerce of Russia are exhibited in the following table:

COUNTRIES.	Imports.	Exports.
Germany	125,354,000	119,210,000
Great Britain	110,071,000	148,984,000
France	12,474,000	80,292,000
Austria-Hungary	16,996,000	25,816,000
Netherlands	8,998,000	86,195,000
Turkey	16,901,000	16,598,000
China	80,016,000	1,615,000
Italy	7,731,000	21,947,000
Belgium	8,884,000	18,190,000
United States	26,774,000	832,000
Sweden and Norway	5,682,000	14,569,000
Peria	10,256,000	6,129,000
Greece	945,000	9,108,000
Denmark	1,175,000	5,875,000
Roumania	2,461,000	4,014,000
Other countries	48,988,000	86,077,000
Total	422,206,000	482,484,000

The imports by way of the Baltic ports in 1886 were of the value of 152,400,000 rubles; the exports, 144,500,000 rubles. The value of the imports from European countries brought by railroad was 150,400,000 rubles, and that of the exports by way of the land frontiers was 114,100,000 rubles. The imports at the ports of the Black Sea were valued at 78,800,000 rubles, and the exports at 172,800,000 rubles. The imports passing by way of the White Sea were 1,300,000 rubles in value, and the exports 5,600,000 rubles. The imports from Finland amounted to 9,900,000 rubles, and the exports to Finland to 16,600,000 rubles. The imports across the Asiatic frontiers amounted to 45,400,000 rubles, and the exports to 85,400,000 rubles.

The imports of alimentary products in 1887 across the European frontiers were valued at 50,397,000 rubles; exports, 850,640,000 rubles; imports of materials, raw or partly manufactured, 224,404,000 rubles; exports, 193,262,000 rubles; imports of live animals, 498,000 rubles; exports, 11,991,000 rubles; imports of manufactured articles, 57,940,000 rubles; exports, 12,627,000 rubles; total merchandise imports in 1887, 833,239,000 rubles; total exports, 568,520,000 rubles.

The overland exports to China in 1887 consisted of 2,858,502 rubles worth of Russian merchandise, 251,914 rubles worth of other European products, 2,924,085 rubles of the precious metals, and 809,860 rubles of paper currency. The principal articles of Russian produce were grain, hogs, sugar, cotton goods, Russia leather, sheepskins, and furs. During the same year China exported to Russia 26,456,557 rubles worth of merchandise, in which total the single article tea stands for 24,097,679 rubles.

Agriculture.—The grain belt in European Russia stretches from the government of Tchernigoff, on the middle Dnieper, to the Ural mountains. North of it is the zone containing the industrial cities, between which and the tundras of the Arctic Circle the great forests extend from Poland and the western governments northeastward to the Ural. In the southern part of the wheat belt is the "black-earth" country, a vast plain extending from Kremenchug on the Dnieper to the other side of the Volga. Herds of horses and sheep cover the steppes farther south. The productive land in Russia amounts to 70·4 per cent. of the entire surface, 20·4 per cent. being occupied by farms and gardens, 11·9 per cent. by pastures, and 38·1 per cent. by forests. The number of persons employed in agriculture in Russia, exclusive of Poland, is about 48,000,000. The economical condition of this population has in some respects become worse since the emancipation of the peasants from serfdom. The insufficiency of the land transferred to the peasants, their drunkenness, which has been actually fostered by the Government in order to swell the revenue from excise duties, and their indolence, which is a consequence of the commu-

nistic *mir* system, have reduced the whole class to poverty and debt. The nobility, owing to their lavish way of living and their ignorance of practical affairs, are in still worse case. Russians say that there is hardly an estate outside of the "black-earth" region that is not mortgaged for its full value. More blighting even than the vices of the people is the corruption of the officials, who embezzle the funds that are raised for public improvements and draw blackmail from every private enterprise. The grain-crop in 1886 was poor, and in 1887, though the harvest was abundant, prices were very low. Protective duties in Germany and other countries have seriously injured the export trade in Russian cereals. In 1888 the reported yield of autumn wheat, excluding Poland, was 11,445,000 quarters, being 89 per cent. above the average; of spring wheat, 18,480,000 quarters, or 8 per cent. better than the average; of rye, 85,400,000 quarters, 9 per cent. more than a normal crop; of oats, 63,160,000 quarters, exceeding the average by 4 per cent.; of barley, 16,284,000 quarters, which was 6 per cent. above the average. Count Tolstoi in 1888 proposed a bill prohibiting peasant proprietors from selling their land. The peasants have in recent years purchased largely of the nobles, whose land was unremunerative in their own hands. The transfers have been facilitated by the Peasants' Credit Bank, established under Government patronage, which during 1887 made 5,000 loans, 4,800 of them to *mir*s or rural associations containing in all 590,000 members. The sum of the loans was 50,000,000 rubles, with which 8,400,000 acres were bought. More recently the Government has founded a Nobles' Bank to prevent the lands of the hereditary proprietors from passing into the hands of commercial men and usurers. The question of constructing grain-elevators was considered in 1888 by a special commission, which recommended building with Government means elevators at the export ports and on the lines of railroad with capacity for 600,000,000 kilogrammes, the amortization of the required capital of 20,000,000 rubles being provided for by an export tax of half a copeck per pood, yielding 1,500,000 rubles on a minimum export of 800,000,000 poods. This improvement will tend to place it out of the power of traders to control and dictate prices as they do, paying sometimes only half as much for one farmer's grain as for that of his astuter neighbor.

Navigation.—There were 5,873 vessels entered and 5,329 cleared at the ports of the Baltic during 1886; 647 entered and 625 cleared at Archangel, on the White Sea; 4,483 entered and 4,481 cleared in the ports of the Black Sea and the Sea of Azov; and 1,087 entered and 1,005 cleared at the ports of the Caspian Sea. Of the 11,590 vessels entered at all ports, 7,204 were steamers; and of 11,440 cleared, 7,122 were steamers. Of the total number, 2,485 were Russian vessels, 2,828 English, 1,439 German, 1,397 Swedish and Norwegian, 757 Greek, 637

Turkish, 776 Danish, 689 Austrian, and 185 Dutch. The number of coasting-vessels entered was 37,656, of which 14,708 were steamers. The merchant navy in 1886 numbered 2,157 sailing-vessels of 469,098 tons, and 218 steamers of 108,295 tons. The Russian marine in the Caspian is rapidly increasing, 10 new iron steamboats having been finished in 1888, making a total of 70 steamers, besides many sailing-vessels. The Government has granted an annual subsidy of 111,000 rubles to a new line of steamers between the Russian Pacific ports and the ports of Corea, Japan, and China, which in time of war will be at the disposal of the Government.

Railroads.—The railroad network completed at the beginning of 1888 had a total length of 26,964 kilometres, or 16,745 miles, exclusive of the railroads of Finland and the Transcaspian line of 660 miles. The amount invested in railroads at the end of 1885 was 2,800,000,000 rubles, and the net revenue they produced was 87,400,000 rubles. The Transcaspian Railroad to Samarcand was opened with public ceremonies on May 27, the anniversary of the Czar's coronation. When Gen. Skobelev took command of the Transcaspian territory in 1880 it was with the condition that Kysil Arvat should be connected with the Caspian Sea by a narrow-gauge railroad. After the conquest of Merv the railroad, on which camels were used instead of locomotives, was extended to the Akhal-Tekke oasis. Gradually the plan expanded, and the tramway was converted into a broad-gauge steam-railway, and carried across the newly acquired Turkoman districts into the Turanian khanates on the other side of the Oxus. The ukase authorizing this railroad was issued on May 20, 1885, and within three years the line was built to Samarcand which is destined to play an important part in the commercial development of Central Asia, as well as in furthering the political and strategical plans of Russia by enabling the Government to store reserves and supplies at Merv, Sarakhs, Penjdeh, Chardjul, and Kerki, and in a short space of time to concentrate an army of 100,000 men on the Asiatic frontier. The railroad is expected to give Russian manufacturers a great advantage over their English and French competitors in the markets of Central Asia, and to lead to a large development of the material resources of the Russian dominions in that part of the world, especially of the cotton-culture in Turkistan, Ferghana, and Samarcand. The cost of the line, which has a total length of about 1,000 miles, was \$43,000,000 rubles. The embankments and stations are nearly all, however, of a temporary character, and must be replaced by permanent works at a cost of many more millions. The Transcaspian line connects all the trade-routes converging in the Black Sea with Central Asia, and will be joined with the Indian system if English fears will allow. A new railroad from the Vladikavkas line through the Kuban valley to Novorossi,

on the Black Sea, was opened to traffic on March 27, 1888. The communications of the Transcaucasus will be greatly improved by the Suram Tunnel, which is nearly completed between Tsipa and Malita. The route of the projected Siberian railroad has been surveyed as far as Irkutsk. It will start from Tomsk, and pass through Marjinsk, Krasnojarsk, Irkutsk, Verkne, Oudinsk, Chita, Stretensk, and Nikol'skoi, to Vladivostock, on the Pacific coast. A branch line will be constructed to the Transbaikalian province between Lake Baikal and the Chinese frontier. The European connection of the Siberian line will be with a railroad from Samara running through Omsk, which was completed as far as Ufa, in Astrakhan, in September, 1888, and is being extended to Statusk. A private capitalist has undertaken to build a railroad from the river Obi to the Bay of Obainuder, an accessible port in the Arctic Ocean, in order to compete in the wheat, cattle, fish, fur, and timber trades of western Siberia, with the English company that made an unsuccessful attempt in 1888 to take a freighted steamer through the Sea of Kara.

Post-Office.—The number of ordinary letters forwarded in 1886 was 150,348,689; of postal-cards, 15,838,686; of registered letters, 13,087,881; of letters containing valuables, 11,017,635; of journals, 106,100,275; of sealed packets, 20,986,078. The receipts in 1886 were 67,694,516 francs, and the expenses of the postal and telegraph service 99,852,560 francs.

Telegraphs.—The length of the state telegraph lines in 1886 was 107,574 kilometres; length of wires, 204,043 kilometres. Including railroad and private lines, the Anglo-Indian line, and military and police lines, there were 116,692 kilometres of telegraph lines in the empire, with 267,414 kilometres of wire. The number of internal dispatches in 1886 was 8,371,187; international dispatches sent, 559,754; received, 568,815; dispatches in transit, 130,202; official dispatches, 660,883; total, 10,290,791. The receipts in 1886 were 35,869,680 francs.

Foreigners in Russia.—Statistics compiled by the Ministry of the Interior show that the yearly average of foreigners arriving in Russia has been 800,000, and of those who leave the country 750,000. During the ten years ending with 1881 there were 9,458,182 arrivals and 8,025,198 departures. Among the number entering the country were 4,871,571 Germans, 1,305,138 Austrians, 255,207 Persians, 122,771 French, 70,387 Turks, 41,878 Roumanians, Bulgarians, and Servians, 20,691 English, 17,359 Italians, 14,885 Greeks, and 120,688 of other nationalities. Stringent passport regulations and restrictions on the enterprise of foreigners have been the rule during the past three years. In 1887 all foreigners were prohibited by an imperial ukase from holding or leasing lands. This is a reversal of the policy the Government has followed steadily since the year 1815.

Emancipation of the Baltic Provinces.—The Government has ordained that instruction in the gymnasia and secondary schools in Revel, Dorpat, Goldingen, Libau, Birkenruh, and Fellin shall henceforth be given in the Russian, instead of in the German language. When the Esthonian and Livonian nobility protested against the banishment of their mother-tongue from the schools in which their sons are educated the Minister of Education replied that the only alternative would be to abolish the schools and demand the restitution of the sums contributed by the Government to their erection and endowment. The Directing Senate in April rejected a complaint against a decree of the Governor of Livonia according to which no report or document in the German language will be received by the courts or the municipal authorities. The Senate also decided that no part of the local revenues of the Baltic provinces can henceforth be diverted to ecclesiastical purposes, which will deprive many Protestant religious institutions of a considerable portion of their income. A proposition of Count Tolstoi, made at the suggestion of the Procurator of the Holy Synod, whereby the Minister of the Interior shall have the power to remove Evangelical pastors in the Baltic provinces after they have been suspended by the Governor, was approved by the Council of the Empire, but encountered such opposition on the part of influential statesmen that the Czar ordered the matter to be reconsidered, with the result that a majority of 28 against 16 voted against the proposition. Afterward the Czar, yielding to Pan Slavist arguments, changed his own mind, and confirmed the decision of the minority. The Swiss branch of the Evangelical Alliance addressed a petition to the Emperor which was answered by Procurator-General Pobedonostzeff. The reason for clothing the Minister of the Interior with powers that the Czars never assumed in former times is found in the return to the Protestant faith of many of the Letts and Esths who have lately been induced to enter the Orthodox Church. This movement the Russian Pan Slavists expect to check by deposing every Protestant pastor who exerts himself to undo the extraordinary proselyting work of the Russian clergy among the Slav peasantry of the German provinces of Russia.

Closing of the Universities.—Toward the close of 1887 students' riots occurred in many of the universities and other educational institutes. The disturbances began in Moscow, where the inspector of the university excited the ill-will of the students, who became so disorderly that the troops were called out. There were similar occurrences at Kiev, Odessa, Kasan, and other universities, all of which were closed. The students hoped by uproarious demonstrations to compel the Government to rescind the recent regulations which curtail the liberty of students by various vexatious restrictions, limit the period in which they are allowed to remain at the universities, and exclude whole

classes from the gymnasia and universities on account of lack of means or social station. In St. Petersburg the arrest of many of the students who engaged in a demonstration against the rector was followed by a stormier outbreak, during which the authorities shut the rioters in the building. In January the Minister of Education announced that the universities of St. Petersburg, Moscow, Kasan, Kharkov, and Odessa would not be opened at the beginning of the term. The Kiev and Moscow universities were the first ones reopened, before the end of January. Several hundred students were sent to Siberia or to prison; but eventually some of the obnoxious university statutes were altered, and complaints of the students ceased. A Siberian university was opened in August at Tomsk with the establishment of a faculty of medicine to supply the need of doctors, who now number only twenty-two for the whole of Siberia.

Commemoration of the Introduction of Christianity.

—The nine hundredth anniversary of the adoption of Christianity under Vladimir the Great was celebrated throughout Russia on July 27, 1888. The principal festivities were held at Kiev, the mother of Russian cities and the first seat of the Russian Church.

The Political Situation.—With Count Tolstoi at the head of the Ministry of the Interior, Pobedonostzeff in charge of ecclesiastical affairs, and a high Protectionist directing the finances, the Nationalists, Panславists, and Old Conservatives have controlled the internal politics of Russia during the reign of Alexander III, and have even influenced the Czar to sometimes act in foreign affairs at variance with the officially declared policy of his Government, although they have not succeeded in displacing M. de Giers from the Foreign Office. The Greek Orthodox propaganda has been carried on by the aid of Government encouragement and intervention. Poland is governed as though it were a part of Old Russia. The state schools of the Baltic provinces have been Russified, and the separate police system of Livonia, Esthonia, and Courland has given place to Russian institutions conducted by Russians. The provincial and district autonomy granted by Alexander II has been shorn of one feature after another, the independence of the courts has been reduced to the smallest limits, and ecclesiastical and civil bureaucrats rule with power as unrestricted as in the time of the Emperor Nicholas. Early in 1888 Count Tolstoi brought forward a project for the transformation of the Semstvos or representative bodies of the governments and districts established by the law of January 13, 1864. These councils, in which land-owners, manufacturers, merchants, and rural communes are proportionally represented, have the disposal of the local revenues and of a part of the imperial revenue that is devoted to local purposes, and are empowered to legislate in matters relating to the erection and maintenance

of schools, churches, poor-houses, jails, roads, and bridges; to sanitation, and the prevention of epidemics and cattle-plagues; to public charities, mutual insurance, and the encouragement of commerce and industry; and to satisfying the requirements of the civil and military authorities and the post-office. The governor can protest against acts of the Semstvo; but the decision rests with the Directing Senate. The Semstvo elects an executive committee from among its members, and fixes the salaries of the committeemen. Tolstoi proposed to change the basis of representation by having each 8,000 acres of land held by the nobility, each 450,000 rubles of commercial capital, and each 4,000 adult male peasants represented by one delegate in the council, thus giving the nobles a great preponderance. Even then he would give the governor an absolute veto over the decisions of the Semstvo, while the standing committee which prepares the legislation would be appointed by the Government, not necessarily from the members of the Semstvo, and the rate of salary would be determined by the Government. There was much opposition in several of the ministries to this plan, which practically extinguishes the right of local self-government, and the question was therefore postponed till another year. A proof of the strength of Panславism was the appointment in April, 1888, to the chief place in the Department of the Interior, next to that of the minister, of Gen. Bogdanovich, whom a year before the Czar had dismissed from the army in disgrace because he had entered into secret dealings with Gen. Boulanger with the object of bringing about an alliance between Russia and France. Gen. Ignatieff was elected president of the Slavonic Benevolent Society, which is the chief agency of Panславic agitation in the Balkan Peninsula on the eve of the anniversary of Russia's conversion to Christianity. The organs of Liberal opinion and Western ideas have all been suppressed in Russia, except one monthly.

Central Asia.—Col. Alikhanoff on the Afghan frontier has succeeded in bringing nearly all the Turkomans under the Russian ægis. The Afghan authorities at the instigation of Col. Maclean, the British political agent in that region, have sought to prevent by force the migration of Turkomans into Russian dominions, and on April 15, 1888, a collision took place between Afghan troops and Salor Turkomans. According to the British account, Alikhanoff entered Afghan territory, as he had done before, in order to protect a band of 168 emigrant Salors in their flight over the border, while the Russians say that the Afghan troops pursued the fleeing Salors 36 versts (about 20 miles) on Russian territory; and on overtaking them fired at them and received their fire in return, which caused them to recross the frontier, carrying with them their dead and wounded comrades before Alikhanoff and his cavalry appeared on the scene.

S

SALVADOR, a republic in Central America. Area, 18,720 square miles; population, Jan. 1, 1888, 664,518, an increase for 1887 of 18,388.

Government.—The President is Gen. Francisco Menendez, whose term of office will expire in 1891. In April, 1888, the Legislative Assembly appointed vice-presidents, and to succeed one another in the order in which their names are given: Don José Larreynaga, Don Manuel Delgado, and Don José Antonio Quirós. The President's Cabinet is composed of the following ministers: Public Instruction and Charitable Institutions, Dr. Hermogenes Alvarado; Finance, Señor E. Perez; Foreign Affairs, Justice, and Public Worship, Dr. Manuel Delgado; Interior, Dr. Rafael Reyes; and War, Señor Arriola. The United States Minister to the Central American republics is Hon. Henry C. Hall, residing at Guatemala. The American Consul at Salvador is Thomas T. Tunstall; the Salvadorian Consul at New York is Don Mariano Pomáres.

Finance.—Instead of owing any money abroad, Salvador has lodged money in London for the completion of its railroad. The home indebtedness of \$5,000,000 involves an annual interest charge of \$369,777. The Government's expenditure in 1887 of \$2,106,508 was met by an income of equal amount. The liquor-tax produced \$818,040 in 1887.

Army.—A decree issued in August fixed the strength of the military forces at 24,000, including the militia, to be drawn by lot, all Salvadorians between the ages of eighteen and forty-five capable of bearing arms to be subject to enrollment, with the exception of the clergy. The Minister of War has procured several infantry and artillery officers from the Spanish army to drill the national recruits and instruct Salvadorian cadets.

Communications.—In addition to the 1,281 miles of wire that were in operation in Salvador prior to 1888, there were laid 180 miles during the year, the number of offices being increased from 68 to 74.

In July, 1888, the Government made a contract with Stanley McNider for the establishment of a telephone plant and service in the cities of San Salvador and Santa Tecla. The concession covers a term of twenty-five years.

Commerce.—The trade of Salvador has developed of late years as follows:

MOVEMENT.	1883-'84.	1884-'85.	1885-'86.
Imports.....	\$2,646,628	\$2,184,085	\$2,460,047
Exports.....	6,065,199	5,716,428	7,597,688

During the last fiscal year named the trade was distributed as follows, reduced to thousands of dollars:

COUNTRIES.	Import.	Export.
England.....	1,524	1,578
France.....	441	1,198

Central America.....	848	866
Total.....	3,460	7,597

The chief products exported were as follow: Coffee, \$5,024,288; indigo, \$1,603,952; silver, in bars, \$268,457; Peruvian balsam, \$115,856; sugar, \$108,189; brown sugar, \$107,356. There entered Salvadorian ports in 1886, 380 vessels, 317 being steamers.

The American trade exhibits these figures:

FISCAL YEAR.	Import into the United States.	Domestic export to Salvador.
1885-'86.....	\$1,261,275	\$470,541
1886-'87.....	1,059,841	477,125
1887-'88.....	1,473,480	645,802

The increase during the last fiscal year is due to the advance in coffee.

Mining.—The Chamber of Deputies, in their last session, made a decision of great importance to mine-owners, by abolishing the taxes upon transfers of mine property, which formerly amounted to five per cent. of the purchase price. They have also removed the duties upon all kinds of imported mining machinery and implements.

Education.—On July 1 was inaugurated, at the University of Salvador, the Academy of Sciences and Fine Arts, Don José María Francés y Rosillo occupying the chair, and Don David Guzman delivering the inaugural address. The National Library was inaugurated on March 15 at the capital.

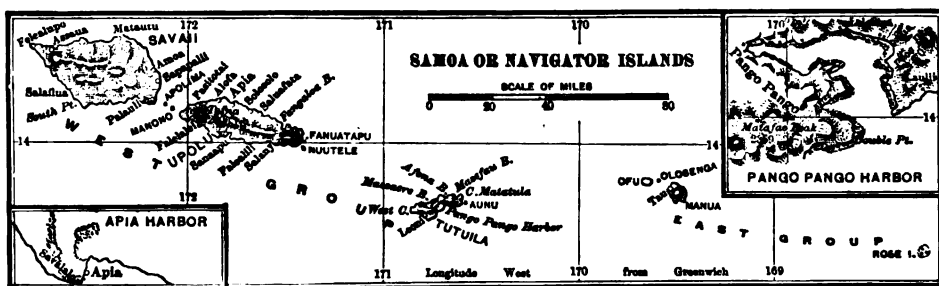

Agriculture.—In April an agricultural school was created in Salvador, with a model farm and experimental station, to which are to be admitted, at the expense of the state and municipalities, at least two apprentices for every department into which the republic is divided, and as many paying pupils as may apply.

Waterworks.—The Government has made a contract with Señor Patricio Branon to provide the city of San Salvador with drinking-water, by means of steam machinery, at the rate of 2,500 gallons an hour. The Government contributes toward the work the sum of \$15,000, advancing the *concessionnaire* \$6,000.

Charitable Institutions.—During the fiscal year ended June 30, 1888, the expenditure in Salvador toward entertaining hospitals, work-houses, and orphan asylums, and for pensions, reached the sum of \$142,217, toward which the Government contributed direct \$41,915.

SAMOA, a kingdom in the western Pacific, occupying the Samoan Islands, formerly known as the Navigator Islands.* The group of twelve islands, two of which are uninhabited, has an area of 1,000 square miles, and contained in 1874 a population of 84,265 natives, of whom 16,568 lived on the island of Upolu, 12,580 on Savaii, 3,746 on Tutuila, and 1,481 on the other islands. There are about 300 whites and 1,000 imported Polynesian laborers employed on the plantations. The cocoanut plantations, the incipient cotton and coffee cultures, and the trade in copra, which is the chief article of export, are conducted mainly by Germans, who have their commercial headquarters in this part of the Pacific at Apia. The principal imports are cotton goods, hardware, arms, ammunition, building-material, coal for steamers, provisions, beer, and tobacco. The total value of the imports in 1885 was \$468,000; of exports, \$369,000. The share of Germany in the imports was \$355,000, and in the exports \$295,000. Of 88 vessels, with an aggregate tonnage of 22,003, that were engaged in the for-

Godeffrois in a scheme to acquire the administration of the finances and the political control of the country, instigated Malietoa to make war on Tupua, and by means of fire-arms supplied by the German company in exchange for grants of land the former made himself sole King, and chose Steinberger for his Prime Minister, dismissing and banishing him, however, as soon as he discovered his real purposes. The Germans then furnished the adherents of the rival dynasty with war material, and Malietoa was forced to abdicate; but the majority of the people remained true to him, and he fought his way back to power. His position was strengthened by the official recognition of the United States Government, which was anxious to secure the confirmation of the cession of the port of Pango Pango for a naval and coaling station, which had been made in 1872 by the then sovereign chief of the part of Tutuila in which it is situate. A treaty was signed at Washington on Jan. 17, 1878, and the ratifications exchanged on February 13, by which the right to establish at Pango Pango a

sign and coastwise trade, 37, of 14,588, carried the German flag. The house of Godeffroi and Son, Hamburg merchants, since succeeded by the German Trading and Plantation Company, took the lead in developing the copra-trade in the Samoan Islands. The imports of this company in 1885 were valued at \$306,000, and its exports at \$532,000.

History.—Formerly there were ten independent chiefs on the island of Tutuila, while the remaining islands were governed from time immemorial by the two royal houses of Malietoa and Tupua. In 1878, at the suggestion of foreign residents, a House of Nobles and a House of Representatives were established, with Malietoa Laupepa and the chief of the royal house of Tupua as joint Kings. The islanders had been converted to Christianity by American and French missionaries, and the commerce was divided between the Americans and the English until the cocoanut culture and the exportation of copra grew to large proportions in the hands of the Germans. Steinberger, who went to Samoa in 1875, nominally as a special agent of the United States Government, but in reality as the secret agent of the

station for coal and naval supplies, freedom of trade, commercial treatment as a favored nation, and extra-territorial consular jurisdiction were secured to the United States. On Jan. 24, 1879, King Malietoa made a perpetual treaty of amity and commerce with Germany, and by a special clause confirmed the grants of all lands acquired by Germans, and debarred himself from future interference with regard to their lands, plantations, wharves, and houses. Soon afterward civil war broke out again, and at the end of the fighting Malietoa was firmly established upon the throne. This fact was recognized in a proclamation that was signed by the American, British, and German consuls, which was issued by the British Commissioner for the Western Pacific, Sir Arthur Gordon, who, on Aug. 27, 1879, made a treaty with Malietoa securing to England most-favored-nation treatment, extra-territorial jurisdiction, and the right to select a harbor for a naval station and coaling depot. On Sept. 2, 1879, a convention was agreed upon between the United States, Germany, Great Britain, and Samoa, by the terms of which the administration of the town and district of Apia was assumed by the consular authorities for three years, at the end of which

* For another map, showing some of the islands on a larger scale, see the "Annual Cyclopædia" for 1886, page 798.

it should revert to Malietoa's government. Malietoa Laupepa a few days later was succeeded by his nephew Telavao. The new Malietoa refused to ratify the treaty with Germany, in the belief that it confirmed land titles that were in dispute, and acknowledged all kinds of land transfers made to Germans, and maintained his objections until the British Commissioner for the Western Pacific assured him a year later that this was not the case. In July, 1881, in order to put an end to the warfare that continued between the two dynastic parties, an agreement was made between the United States, Great Britain, and Germany, whereby it was arranged that all Samoa should be ruled by Malietoa as King, and Tupua as Vice-King. In 1882 the joint administration of the three foreign powers in Apia was continued by a new convention until such time as the internal state of the island should admit of the district being placed again under the native government. Germans continued to barter rifles and powder for land at the price of about thirty-seven cents and a half an acre, and on Nov. 10, 1884, Dr. Stübel, the acting German consul, by threats compelled Malietoa to sign a treaty creating a State Council consisting of the German consul, two Germans designated by him, and two Samoans, one to be appointed by the King and the other by the Vice-King. This Council should have power to make laws on all subjects affecting the interests of Germans or persons in their employ, and especially laws in regard to crimes committed by Samoans against the persons or property of Germans. The King bound himself furthermore to appoint a German of the consul's selection who should advise him on all subjects relating to German residents and their interests, and act as judge in cases in which Germans were interested. The German officer in the Samoan Government should also have supervision of the prisons, and command of a police force for the prison service and for the security of the German plantations. On Dec. 29, 1884, Malietoa sent a protest to the German Kaiser, complaining that the treaty was wrong from him by intimidation, and that the former German consul, Weber, was continually stirring up rebellion, giving arms and money to Samoan chiefs, and encouraging them to rise against their sovereign. Soon after this Malietoa, Tupua, and fifty-two chiefs petitioned for British annexation. The King had offered the sovereignty of the islands to Great Britain about a year previously, and also offered it to the United States, in order to escape German domination. The British Government supported German encroachments, in accordance with a secret understanding, and the municipal administration at Apia passed entirely into the control of the Germans.

Tamasese, before he was set up as King by Germany, never had a large party at his back. Malietoa had been able to crush the rebellion at any time, but did not, because he knew that

any attempt to enforce his authority against Tamasese would be resented by the Germans, and probably treated as a *casus belli*. The Hamburg Commercial and Plantation Company was the earliest of the enterprises that have led to the formation of a German colonial empire. Prince Bismarck was willing to extend financial Government aid when the company had become embarrassed through interfering with Samoan politics, but the opposition in the Reichstag was too strong. The naval forces, however, were employed to further the political purposes of the company, in which some of the Chancellor's personal friends were interested. In the spring of 1886 Admiral Knorr went with a squadron to Samoa, with the evident intention of creating a state of affairs that would lead to German annexation. He treated Malietoa, the King, with open contempt and indignity, visited the camp of Tamasese in his flagship, landed with his officers and band of music, and feasted with the rebel chief. The flag that the Germans had given Tamasese was saluted, instead of the royal ensign. Malietoa consulted with his English and American friends, and, by their advice, appealed to Consul Greenebaum to proclaim an American protectorate temporarily by virtue of the supposed promise of the United States to extend protection in the event of difficulties with foreign powers. The fifth article of the American treaty was so construed by the consul, who acted on this supposition, although, whatever its covert intent, it did not indeed promise more than the good offices of the United States. The bold action of Greenebaum and the attitude of the English deterred the German admiral from carrying out his intentions. He held no further communication with the rebels, and in a few days left Apia just as a British war-ship entered the harbor. Malietoa had been assured by English consuls and by the captains of English men-of-war that, if he refrained from putting down the rebellion by force, England would not only give him advice but protection. At length the German Government determined to depose Malietoa, and notified the English and American Governments that, since the German representatives in Apia did not enjoy the expected support from their colleagues, it would be obliged to protect German interests by independent action, and therefore found it necessary to declare war and refuse to recognize Malietoa. In a dispatch to the German minister at Washington, dated Aug. 7, 1887, the German Chancellor wrote that Germany was unable to renounce her demand for immediate reparation for the insults to the Emperor and to the national honor of which the partisans of King Malietoa had been guilty, and must obtain a guarantee that German interests would be protected.

In August, 1887, four German war-vessels arrived at Apia, and on the 23d, after the

mail-steamers had left, the German consul made a demand on the King for the immediate payment of \$12,000 as damages for cocoanuts that had been stolen during the previous four years and \$1,000 for an injury sustained by a German in a street fight. King Malietoa asked for three days to consult with his chiefs; but on the next morning a detachment of marines seized the Government House, affixed a declaration of war signed by Heusner, the German commodore, raised the German flag, and searched the town for Malietoa, who had escaped to his residence at Afanga, eight miles distant, from which he fled just before the arrival of a German man-of-war. On the 25th the Germans proclaimed as King the rebel chief, Tamasese, who took possession of the Government House and hoisted his flag. Once before the Germans had raised the rebel flag of their *protégé*, but had been obliged to take it down again. The American consul-general, Harold M. Sewall, who had succeeded Greenebaum when the latter was recalled for proclaiming on his own authority an American protectorate over Samoa on the occasion of the former German attempt to depose Malietoa, now was joined by the British pro-consul in a declaration that the American and British Governments would not recognize Tamasese, but would continue as heretofore to recognize Malietoa as King. Malietoa was hunted by the Germans until he finally gave himself up, on the promise that his life would be spared, and was taken as a state prisoner first to German New Guinea, then to Cameroona, and in August, 1888, to Hamburg. A large number of his chiefs and principal followers were likewise banished to distant islands. When the German squadron was sent to carry out this intention, Malietoa was disposed to resist, and was only deterred by the proclamation of the British and American consuls advising submission to the inevitable, and declaring that their Governments would never acknowledge Tamasese as King.

The Germans, on landing from their war-vessels, endeavored to provoke disturbances that would afford a pretext for carrying out the warlike intentions that Germany had notified to the other interested powers through diplomatic channels. They first set up a target for rifle-practice, and fired through the principal street of Apia. When this arrogant proceeding led to no result, they regaled the natives with intoxicants, which was a breach of the law, and bullied them into a fight in which a German's nose was broken. This also led to nothing, because the German magistrate before whom the matter was taken refused to hold the accused persons, for lack of evidence. It was only then that they fell back upon the thefts of cocoanuts, for which the courts created under German auspices had failed to bring the guilty parties to justice, and, proceeding on the novel theory that the King was responsible for the pilferings of his subjects,

made a sudden demand for a money indemnity, which Malietoa could not at once satisfy, or would not without a decent interval for consideration.

The German naval authorities declared and enforced martial law. Some natives tore down the proclamations to this effect, whereupon the village of Sapapaha was bombarded and burned. The German consul refused to recognize the municipality of Apia, which, under the convention of 1879, had been administered by the foreign consuls. The American consul protested. The British consul issued a proclamation to British residents saying that he had received no instructions to recognize the existing Government, and that British subjects would be under the jurisdiction and protection of the consulate. The British Government took no action until Feb. 24, 1888, when orders were sent to the acting British consul that since the continuance of the municipal board had been found impracticable, the convention should be considered as suspended and the district as having passed under the control of the *de facto* Samoan Government as provided by the terms of the convention in case of its termination. The Government of the United States refrained from any official communications with Tamasese's Government, and would not recognize him. The English Government, however, in spite of the pledges made to Malietoa by the British consul, recognized Tamasese as the King *de facto*, and entered into diplomatic relations with his Government.

The Samoan Conference.—The convention of 1879, the renewal of it in 1883, and the previous acts of the three foreign powers in relation to Samoa, were based on a definite understanding and express assurances of a mutual guarantee of its neutrality and independence. In 1884 a treaty was entered into between Germany and Great Britain to respect the independence of Samoa. The action of the German consul in forcing Malietoa in November of that year to sign a treaty giving Germany a virtual protectorate, and the events of 1886, made it desirable for the United States Government to have the diplomatic understanding attested in a solemn treaty. The powers were therefore invited to a conference, which was held at Washington in the summer of 1887. At the conference the German minister proposed to commit the actual control of the islands for a term of five years to a foreign adviser of the King, who should be appointed by the power having the preponderant commercial interests in the islands, the other powers having the right to approve or disapprove the nominee. At the end of the quinquennial term the control should be renewed on the same conditions. Mr. Bayard proposed, instead, to place the executive authority in the hands of a council composed of the King and Vice-King of Samoa and three foreigners designated respectively by the three treaty powers, but under the commission and pay of the na-

tive Government, which would make them as free as possible from the control of the Governments to which they owed their original appointment. In a dispatch to Minister Pendleton at Berlin, the Secretary of State afterward explained that his opposition to the German plan was not due to the fact that under it the appointment of the actual governor of the islands would be given to Germany, but to the union of complete political control with commercial preponderance supplanting instead of aiding the native Government, and tending to diminish rather than to develop the capacity of the natives to manage their own affairs.

In 1886 the British Government, following Prince Bismarck's principle of *quid pro quo*, which had previously led to the clandestine surrender of the best shores of Papua behind the backs of the Australians, and which involved the Samoan question in combinations affecting European politics and the British position in Egypt, in South Africa, on the Niger, in Zanzibar, and in other parts of the world, had entered into a secret bargain with the German Government to give it practically a free hand in its dealings with Samoa. The United States Government has for a long period regarded Samoa, as well as Hawaii, as a country possessing a frame of government admitting of permanent treaty relations, and in whose independence the United States have for military reasons a supreme interest. In 1877 Secretary Evarts declared that the desire of the United States in respect to Samoa was to see a stable, independent native Government established. In 1880 President Hayes, in his annual message, spoke of the diplomatic agreement subsisting between the three treaty powers as the best security for harmony in their relations to the native Government. When the rumor was circulated that in May, 1886, Germany intended to annex Samoa, as well as the Marshall and Gilbert Islands, Secretary Bayard, in communicating his views of the policy of the United States in the Pacific for the guidance of the ministers at London and Berlin, said that the concern of the United States Government in Samoa differs from that in regard to distant groups of islands, and that we have established treaty relations with Samoa, with which relations Germany disclaims any intention to interfere.

Mr. Bayard refused to consent to the German proposals, and, when it became evident that the English minister had entered the conference instructed to support the scheme of the German Government implicitly, he broke off the negotiations. The conference was not concluded, but suspended. The question passed out of the diplomatic stage when, ten days after the adjournment, the German fleet sailed for Samoa to carry out the purposes to which the American Government had refused its consent. The correspondence with the German Government was closed by a letter from Mr. Bayard in January, 1888, in which he

declares that, while willing to accept the explanation that the action of the German Government in Samoa was influenced by a desire to protect the people, he can not bring himself to believe that its course has been proper.

Tamasese's Government.—No sooner had the German forces overthrown the legitimate King than they began to compel the puppet whom they had placed on the throne to carry out the scheme of transferring into German possession all the productive resources of the islands. Through land titles and mortgages the German speculators, with the aid of the new Government, held the natives entirely under their control. Herr Brandeis, who had been connected with the German consulate, was made the chief adviser of Tamasese, and practically directed all acts of government. The German squadron, which consisted of the flagship "Bismarck," the "Olga," the "Carola," and the "Sophie," sailed away as soon as the new Government seemed to be established. Yet, when the war-vessels left, the position of the usurper at once became precarious. He deeply offended the people when, at the suggestion of his German Prime Minister, he assumed the hereditary name of Malietoa. When he was further misled into imposing a poll-tax, his followers dwindled to a mere handful of men, and the country openly rebelled against the tax, which he was unable to collect. Influential chiefs called the people together and urged them to resist the tax; and, when Tamasese was induced by the German agent to propose the suppression of these assemblages, chiefs of his own party grew angry and threatening. Many of the influential men of the islands remained away from the Legislature when it met, and many who attended were hostile to the Government. The Germans introduced the registration of title-deeds and mortgages, an elaborate judicial system, and regulations for village councils and assemblies of chieftains. The authority of the Government was recognized in parts of the districts of Aana and Atua at the western and eastern extremities of Upolu, while the middle district of Tuamasanga, the birthplace of the Malietoas, as well as the other islands, were hostile. The American gunboat "Adams" arrived at Apia on Oct. 19, 1887, before the departure of the German squadron. The German cruiser "Adler" and the gunboat "Eber" were subsequently stationed in Samoa. An English war-vessel, the "Lizard," was also sent to observe. Mr. Sewall, the American consul, returned to the United States on leave, a deputy, Mr. Blacklock, being left to look after American interests. The Germans in Apia subjected Americans to injustice and hostility, and American and British trade suffered greatly. The American residents, and some of the English, encouraged the spirit of resistance, which became so strong and determined that the entire country, except his own clan and political dependents, was ready to rise against Tamasese.

Civil War.—Mataafa, a near relative of Malietoa, was the chief of the loyalist party, and its candidate for the throne as the legitimate successor of the exiled King. The enemies of Tamasese were supplied with arms by American and English traders. The crisis was precipitated by a conflict, on August 31, between Tamasese's people and five chiefs of the Tumasanga district, which occurred on the occasion of a division of mata. The chiefs were summoned on the following day to appear before the royal court of justice at Matianu. Refusing to obey, they raised the flag of revolt, and called on Mataafa, who was chief of Faleula, fifteen miles from Apia, to lead them against Tamasese. The King gathered his military forces, fortified Matianu, a point of land jutting into the Bay of Apia, where the kings had from ancient times held their court, and occupied two forts at Matantu. Warriors from Upolu and Savaii streamed into Mataafa's camp at Faleula. On Sept. 9 the representative of the old dynasty proclaimed himself King of all Samoa, under the title Mataafa Malietoa II. On Sept. 12 Mataafa led his forces around Apia to the neighborhood of Matantu, where a battle took place that lasted from noon till evening. There were about two thousand combatants on either side, Tamasese's men having the greater number of breech-loading rifles. According to their wont, the Samoans fired without aim, discharging about thirty thousand shots, many of which passed through the houses of Europeans and struck the shipping, killing Capt. Bisset, of an English merchant-schooner, who was in the English consulate, and wounding a sailor on the "Adler." The killed on neither side numbered more than half a dozen; but after the battle many heads were cut off from the wounded as trophies of victory. Conquered by noise and the consciousness of a failing cause, the soldiers of Tamasese fled from their forts, and escaped by swimming to Matianu, while Mataafa took up his position in Matantu. On the morning after the battle an officer of the "Adler," with forty men, occupied the strip of land giving access to Matianu, to prevent the victors from attacking Tamasese's demoralized army.

At the proposal of the German and English consuls, Mataafa declared the neutrality of Apia. The conqueror was elected King in meetings that were held all over the country, and was proclaimed as such in Apia, where he took possession of the Government property. The English and American consuls were anxious to have the foreign parts of the district of Apia declared neutral, but the German consul insisted on extending neutrality to all German land throughout the island, including the promontory where Tamasese's army lay encamped, and similar places of refuge everywhere, in which he could gather his forces and prepare his attacks without molestation. Mataafa would not agree to this, and, in order to remove the scene of conflict from the vicinity of the

Europeans, Tamasese established himself at Saluafata, where he was supplied with arms and ammunition by a German schooner which made many trips between Apia and his camp. Brandeis, who had served in the German artillery, became his military adviser. An English merchant named McArthur and an American named Moores supplied Mataafa with munitions of war. Mataafa's authority as King was acknowledged all over the islands, except in a few villages. The American vice-consul, Blacklock, in replying to the notification of Mataafa's election by the people, said that he thought it was in accordance with the wishes of the three powers. The English consul simply informed Mataafa that the party of Tamasese, as he was assured by the German consul, would respect the territory declared neutral if Mataafa would also do so.

Mataafa gathered together an army of five thousand men, while Tamasese's force at Saluafata did not exceed seventeen hundred warriors from the Ituatane district of Savaii and the Aana and Atua tribes. The main body of all these tribes, with the Tumasasas and the Mononos who fight in canoes joined Mataafa's standard. On Nov. 5 Mataafa moved from the village of Lauili on the formidable works at Saluafata. These consisted of stockades in the forest, parapets on the mountain-side leading up to the fort, from which the timber had been cleared to afford a free rifle-range, and the big fort built of stones and baskets filled with sand, in three sections, with narrow passage-ways between them. The fort stood on a hill at the eastern extremity of the Bay of Apia. Mataafa's position was likewise fortified. The fighting lasted many days. About one hundred and twenty men were killed, and one hundred and fifty wounded. Both parties took the heads of their enemies. Tamasese's outposts in the bush were driven from their principal stockade on Nov. 6, and retreated up the side of a steep hill, where they hastily made a clearing and threw up a stockade. The Tumasaga warriors of Mataafa's army stormed the height, pulling themselves up by bushes in the face of the enemy's fire, drove the Tamasesans from the stockade, and forced them to retire farther up the mountain, where they made another stand. By Nov. 9 the Tumasaga men had fought their way to a good position in the mountains, and built a stockade within twenty-five yards of a Tamasese stockade. The wounded of Mataafa's army were taken to Apia, where they were bandaged by the surgeons of the "Adams" and "Lizard," and cared for under the directions of Col. H. de Coëtlogon, the British consul, Vice-Consul Blacklock, and the commanders of the American and British men-of-war. The German naval surgeons dressed the wounds of Tamasese's men. On Nov. 10 the German steamer "Lübeck" arrived with Dr. Knappe, who relieved Consul Becker.

The new German consul, on the arrival of the "Adler," ordered Mataafa to leave his en-

campment, on account of alleged violations of German neutral territory and depredations on the plantations, which Mataafa denied, saying that he would not stop fighting nor forego the advantage that he had gained, and only desired foreigners to leave the Samoans to settle the war for themselves. The second day after this the three consuls held a meeting, at which Vice-Consul Blacklock proposed that the three consuls should assume the government jointly, until they received definite instructions from their Governments. The British consul said that the only peaceable solution was to deprive Tamasese and Brandeis of all power; but Dr. Knappe replied that he must continue to recognize Tamasese. On the next day, Nov. 16, the British consul issued a proclamation, assuming jurisdiction over British subjects, and directing them to pay taxes to him in trust for the Samoan Government, whenever it should be properly established.

On Nov. 19 the Monono and Savaii men of Mataafa's army made an attack by water on Saluafata in thirty-eight canoes and three of the Samoan naval vessels, which consist simply of two large canoes lashed together, holding a stockade, on which small ancient cannon are mounted. Two other ports were taken. The German gunboat "Eber" and the "Nipsic," which had come to relieve the "Adama," anchored off Saluafata. The German authorities warned Mataafa to keep away from German ground. They obtained an agreement from him to this effect, but he renounced it when he learned that international law imposed no such obligation, ascertaining that such was the view of the American and British consuls, and made his military dispositions without regard to the ownership of the soil.

On the arrival of the "Olga" the Germans decided to make an attempt to disarm the natives. Marines were landed from the "Olga" on Dec. 17 and 18. An American newspaper correspondent, John C. Klein, acted as military adviser to Mataafa. The Samoans fired at the German boats, but a landing was made, and the party already on shore cut their way through the natives and joined the others at Bailele. The Germans, one hundred and fifty in number, took their position in the houses on the plantation and held their own against thousands of natives for two hours, at the end of which they were re-enforced by a detachment from the "Eber." The Germans then advanced and drove the Samoans before them, burning their villages. Several hundred natives were killed, while the German losses were fifteen killed and thirty-seven wounded. The Germans bombarded and destroyed eighteen villages.

After these events the German authorities proclaimed martial law, and assumed complete authority in Apia. All vessels were searched, American goods were not allowed to land unless sent to German warehouses for examination, the English newspaper was suppressed,

the confiscation of all fire-arms was ordered, houses were searched, and several English and American residents were roughly handled. Capt. Mullan, of the "Nipsic," received Klein on board, and refused to give him up to be tried before a military tribunal on the demand of Capt. Fritze, the German naval commander. These events led to fresh correspondence between the Governments of Germany and the United States. The firmness of the latter caused the Berlin authorities to check the high-handed proceedings, which could only lead to German annexation. Consul Knappe and Vice-Consul Brandeis were recalled, while the State Department at Washington ordered Consul Sewall not to return to Samoa. At the proposal of Prince Bismarck it was decided to reopen in Berlin the conference that was suspended at Washington on July 26, 1887.

SANDS, HENRY BERTON, surgeon, born in New York city, Sept. 27, 1830; died there, Nov. 18, 1888. He was graduated at the College of Physicians and Surgeons in 1856, and then studied abroad. On his return he became demonstrator of anatomy in that college until

HENRY BERTON SANDS.

1866, and in 1869 he was called to the chair of Anatomy, which he held for ten years, when he accepted that of the Practice of Surgery, which he filled until his death. Dr. Sands had been connected with various hospitals as consulting and attending surgeon, but had gradually withdrawn from such relations to devote his entire time to private practice. From 1860 till 1870 he was in partnership with Dr. Willard Parker. He was a member of many medical societies, including the New York Academy of Medicine, and in 1883 was chosen a corresponding member of the Society of Surgery of Paris. In 1866-'67 he was President of the New York County Pathological Society, in 1874-'76 of the County Medical Society, and in 1883 of the New York County Surgical Society. For many years he had been recog-

nized as the foremost surgeon in New York city, astute in diagnosis, sound in judgment, and dextrous as an operator. He was called for consultation in President Garfield's case, and also in ex-President Grant's illness, and he attended Roscoe Conkling in his last illness, performing the operation on his head. Dr. Sands was too busy to devote much time to publishing his results, but among the descriptions of operations that he contributed to medical literature are "Case of Cancer of the Larynx successfully removed by Laryngotomy" (1865); "Aneurism of the Sub-Clavian, treated by Galvano-Puncture" (1869); "Case of Traumatic Brachial Neuralgia, treated by the Excision of the Cords which go to form the Brachial Plexus" (1878); "Case of Bony Anchylosis of the Hip-Joint, successfully treated by Subcutaneous Division of the Neck of the Femur" (1878); "Esmarch's Bloodless Method" (1875); "Treatment of Intussusception by Abdominal Section" (1877); "The Question of Trephining in Injuries of the Head" (1883); and "Rupture of the Ligamentum Patellæ and its Treatment by Operation" (1885).

SANTO DOMINGO, a republic, occupying the eastern portion of the West Indian island of that name, the western portion being Hayti. The population of the republic, by the census of 1887, is 504,000.

Government.—The President is Gen. Ulysses Heureaux. His Cabinet is composed of the following ministers: Interior and Police, Gen. Wenceslao Figueredo; Foreign Affairs, Don Manuel Maria Gautier; War and Navy, Gen. Miguel A. P. Pichardo; Finance and Commerce, Gen. Julio J. Juliá; Justice, Public Works, and Instruction, Don Juan Tomás Mejía; Public Works, Señor P. M. Garrido. The United States *Chargé d'Affaires* is John E. W. Thompson, resident at Port-au-Prince, Hayti. The American Consul at Puerto Plata is Thomas Simpson. The Dominican Consul at New York is Don Leoncio Juliá.

Finances.—The public indebtedness on July 1, 1888, included an internal debt of \$1,650,000, a balance of \$234,250 of foreign debt (which is being paid off by an extra 2-per cent. import duty), and the old 6-per cent. English-Santo Domingo loan of 1869, of which £750,700 is still held in London. The republic in July, 1888, made a loan in London and on the Continent to the amount of £770,000, bearing 6 per cent. interest, to be paid off within thirty years, the amount to be applied as follows: First, £142,860 for canceling the Hartmont loan of 1869; second, £151,680 toward canceling the internal debt, the remaining £475,480 to bear interest dating from July 1, 1888. This debt is to be paid off at par by sixty half-yearly drawings, the first of which is to be made on June 15, 1889. This loan was placed at 83½.

Communications.—There is in operation a line from Sanchez to La Vega, 115 kilometres. Besides the telegraph running along the San-

chez and La Vega Railroad, there is one connecting the capital with Puerto Plata. Santo Domingo has been connected with the world's telegraph system since April, 1888, by the submarine cable connecting Mole St. Nicolas (Hayti), Puerto Plata, and Santo Domingo with Santiago de Cuba.

Commerce.—The imports in 1887 amounted to \$2,057,928, and the exports to \$2,660,471. The chief articles of export were tobacco, sugar, coffee, honey, wax, mahogany, and cabinet and dye woods. Guano exportation has been resumed on a large scale. The American trade exhibits the following figures:

FISCAL YEAR.	Import from Santo Domingo.	Domestic export to Santo Domingo.
1886.....	\$1,656,181	\$1,017,286
1887.....	1,890,196	1,014,414
1888.....	1,459,892	792,560

SAVAGE, JOHN, author, born in Dublin, Ireland, Dec. 13, 1828; died in Spragueville, Pa., Oct. 9, 1888. He was educated in the Jesuit college at Colougones, and took a course in the art school of the Dublin Society, where he gained several prizes. While studying art he began to contribute patriotic articles and poems to John Mitchell's Dublin newspaper, and when that was seized by the British Government, and its editor sent to Australia, he joined several friends in establishing another

JOHN SAVAGE.

newspaper devoted to the popular cause. He gave much aid with his pen to the revolutionary movement of 1848, and the suppression of his newspaper led him to undertake more active and personal work. At the outbreak of the revolt he organized and commanded a body of armed peasantry in the south of Ireland, and at their head captured several British garrisons. On the failure of the movement, he came to New York city and secured employment as a proof-reader in the "Tribune" office. While so engaged he contributed frequently to newspapers and periodicals, wrote

several dramas and poems, planned historical works, and painted pictures. Subsequently he held editorial appointments on the New York "Citizen" and on newspapers in New Orleans and Washington, besides writing regularly for the "Democratic Review" and the "American Review." While in Washington he became editor-in-chief of Stephen A. Douglas's political organ "The States," and afterward its proprietor. When the civil war broke out he was assistant editor of the New York "Irish News," but he resigned his appointment, aided Gen. Thomas Francis Meagher in organizing the famous Irish brigade, and served in the war as his aide, though on the roll of the Sixty-ninth New York Regiment. He first became connected with Irish politics in the United States in 1868, when he was chosen head center of the Fenian Brotherhood, and through the solicitations of John O'Mahony, his friend and the founder of the order, reluctantly accepted the office. He applied himself with vigor to the reconciliation of the antagonistic factions within the order, and, though a man of great popularity and influence in Irish and Roman Catholic circles, was unsuccessful. During the presidential canvass of 1864 he had rendered the Republican party much service as an orator, and on the conclusion of peace his friends urged upon President Johnson the propriety of appointing him to a foreign office, and the President tendered him the United States consulship at Leeds, England. He felt deeply grieved at this action, because he was widely known as an expatriated man, and was convinced that the British Government would never recognize him officially. Still, believing he might be of some service to the Fenian prisoners confined in England, he went to Paris, and there, through the aid of Gen. John A. Dix, the American minister to France, began negotiations with the British Government which resulted in the release of some of the prisoners. Returning to New York city, he engaged in literary work, bought a summer home, "Laurelside," at Spragueville, Pa., and made his winter quarters in Fordham, N. Y. He was an accomplished scholar, and as an orator and lecturer was in great demand with Roman Catholic colleges and societies. St. John's College, Fordham, N. Y., gave him the degree of LL. D. in 1875. His published works include "Lays of the Fatherland" (1850); "Ninety-eight and Forty-eight; the Modern Revolutionary History and Literature of Ireland" (1856); "Our Living Representative Men" (1860); "Faith and Fancy," poems (1863); "Campaign Life of Andrew Johnson" (1864); "Life and Public Services of Andrew Johnson" (1868); "Fenian Heroes and Martyrs" (1868); "Poems; Lyrical, Dramatic, and Romantic" (1870); and "Picturesque Ireland" (1878-'83).

SCHOFIELD, JOHN McALLISTER, an American soldier, born in Chautauque County, N. Y., Sept. 29, 1831. He was graduated at West Point Military Academy in 1853, Philip H.

Sheridan, James B. McPherson, and John B. Hood, being among his classmates. McPherson was at the head of the class, Schofield was No. 7, Sheridan No. 84, and Hood No. 44. The whole number was 52. On his

JOHN McALLISTER SCHOFIELD.

graduation, Schofield was assigned to the First United States Artillery, and served for two years in South Carolina and Florida; and from 1855 to 1860 he was Assistant Professor of Natural Philosophy at West Point, after which, on leave of absence, he was for one year Professor of Physics in Washington University, St. Louis, Mo. He had been commissioned first lieutenant, United States Army, in August, 1855, and captain, in May, 1861. At the outbreak of the civil war he became major of the First Regiment of Missouri Volunteers, and on April 26, 1861, was made chief-of-staff to Gen. Nathaniel Lyon, with whom he served in the Missouri campaign. He was appointed brigadier-general of volunteers in November, 1861, and soon afterward brigadier-general of Missouri militia, and he commanded in that State until April, 1862. He was made major-general of volunteers in November, 1862, and from May, 1863, till February, 1864, he commanded the Department of the Missouri. He was next assigned to the command of the Department and Army of the Ohio, which formed a part of the army that Gen. William T. Sherman organized for his Georgia campaign against the Confederate army under Gen. Joseph E. Johnston.

In that great campaign, Gen. Schofield participated in the battles of Resaca, Dallas, Kennesaw mountain, and Atlanta. After the capture of Atlanta, when Sherman was preparing for his march to the sea, Schofield, in command of the Twenty-third Corps, was sent back to Nashville, where he joined the army of Gen. George H. Thomas. When the Confederate army, of about 40,000 men, under Hood, defeated by Sherman at Atlanta, turned back to attack Thomas, it was first confronted by Schofield's force of about 25,000. Schofield made a skillful retreat as far as Franklin, on the Harpeth river, eighteen miles from Nashville, where he intrenched a line with both flanks resting on the stream. Here he was at-

tacked on the afternoon of Nov. 30, 1864. The brigade forming Schofield's rear guard, instead of falling back quickly to the main line as ordered, so as to permit the whole fire to be directed on the advancing enemy, attempted to withstand the onset alone. It was soon borne back in confusion, and the enemy followed it over a part of the intrenchments. A portion of the line thus seized was recaptured after hard fighting; but the remainder could not be retaken, and Schofield established a new line a few rods in the rear, where the battle was continued until dark. Meanwhile he had got his artillery and trains across the stream, and at midnight he followed with his whole force and retreated to Nashville. In the battle of Franklin, Schofield lost 2,500 men; Hood, about 6,000. For this action, Schofield was made brigadier-general and brevet major-general in the regular army. He participated with his corps in the battle of Nashville, Dec. 15 and 16, 1864, in which Thomas destroyed Hood's army.

In January, 1865, Gen. Schofield, with 15,000 men, was detached from Thomas's army and sent by rail to Washington, and thence by transports to the mouth of Cape Fear river, when Schofield was given command of the Department of North Carolina. He captured Wilmington on Feb. 22, 1865, fought the battle of Kinston on March 8-10, and on March 22 joined at Goldsborough the army of Gen. Sherman as it moved northward after its march to the sea. When Gen. Johnston's army surrendered to Sherman's, April 26, Gen. Schofield had charge of the details.

In June, 1865, he was sent to Europe on a mission relating to the French occupation of Mexico, whence he returned in May, 1866; and in August of that year he was assigned to the command of the Department of the Potomac. From June 2, 1868, till March 12, 1869, he was Secretary of War. He was then commissioned major-general in the United States Army and ordered to the Department of the Missouri. He commanded the Division of the Pacific from 1870 till 1876, and again in 1882-'83. He was superintendent of the Military Academy at West Point from 1876 till 1881, commanded the Division of the Missouri from 1883 till 1886, and was then transferred to the Division of the Atlantic. On the death of Gen. Philip H. Sheridan, in August, 1888, Gen. Schofield became the ranking officer of the United States Army. He was president of the board that in 1870 adopted the system of tactics now in use in the army, and was also president of the board that investigated the Fitz John Porter case in 1878.

SERVIA, a monarchy in Southeastern Europe, which gained its independence in 1829, after a war with Turkey lasting fourteen years, and was erected into a kingdom in 1882. The executive authority is vested in the King, who is assisted by a council of eight ministers. The legislative body is the Narodna Skupshtina, or

National Assembly, a single house composed of 208 members, of whom one fourth have been nominated hitherto by the King. No member of the legal or the military profession is eligible. A Great National Assembly of four times the number of members in the ordinary Skupshtina is sometimes convoked to consider matters of vital national importance.

The Radical Ministry.—The Radicals in Serbia, whose opinions coincide with the ideas of constitutional liberty prevalent in Europe, with a tincture of the socialistic theories of Russian nihilism, have for many years represented the prevailing sentiment of the Servian people. The official class and the merchants are, to a great extent, Progressists or Conservatives, and the liberal professions contain many Liberals; but the peasantry, almost to a man, belong to the Radical party. The King, sustained by the pro-Russian Liberals under Ristich or the pro-Austrian Progressists who followed the lead of Garashanin, has repressed the demand for a more popular form of government, annulled the victories of the Radicals at the polls, and imprisoned or banished their leaders, who were driven by persecution to conspire the violent overthrow of despotic power. The Bulgarian war was a desperate resort to restore the King's prestige, and when this failed, and Garashanin retired, King Milan called Ristich to the head of the Administration in June, 1887, and attempted to govern with a coalition Cabinet. The Radicals gained another victory in the autumn elections. The King was constrained to accept their programme. A commission was appointed to devise a scheme of constitutional revision. He was unwilling to intrust the Government to a party which had been hostile to him and was distrusted abroad on account of its revolutionary tendencies. The Radicals had, however, a majority of four over the elected and appointed ministerial deputies, and after a preliminary agreement on their part to continue the foreign policy of the King, and to accept the financial programme of the retiring ministry, at least in regard to the issuance of a loan of 20,000,000 dinars for the payment of the floating debt, the King sent for Col. Gruich, who, on Jan. 1, 1888, formed a new ministry of Radical complexion, made up as follows: Premier and Minister of War, Sava Gruich; Minister of Foreign Affairs, Franasovich; Minister of Communications, Velimirovich; Minister of Finance, Vujich; Minister of the Interior, Milosavlyevich; Minister of Commerce, Stefan Popovich; Minister of Justice and Education, Gersbich. Col. Gruich had been Minister of War under Ristich. Col. Franasovich was Minister of Foreign Affairs in Garashanin's Cabinet. The new Minister of Justice was a Professor of International Law who was sentenced to death in 1883 for participating in the revolution of Alexinatz, and Dr. Vujich, the Minister of Finance, was expelled from Russia in 1884 for suspected complicity in the Nihilistic conspiracies.

After voting the new loan, which was raised in Vienna at 6 per cent., the Skupshtina, on January 3, adjourned till the end of the month. The chiefs of the Radical party, whose demand for a general amnesty to political offenders was granted, sent an address expressing fidelity to the King. In a circular note to the powers the Minister of Foreign Affairs unfolded the scheme of political reforms. Personal and civil liberties should be extended, though not at the expense of order, by enlarging the self-government of the communes, restricting official interference in elections, liberalizing the laws governing the press, associations, and public meetings, and modifying the criminal code and laws relating to security of person and property, and the civil service.

The Radical Cabinet, existing only by the King's sufferance, endeavored to carry out their pact, and to prove the capability of their party to conduct the Government. But in the new Chamber elected in February and convened on March 31, in which the Radicals secured 129 seats out of 142, the Prime Minister was unable to control the majority, which was composed largely of men educated in France, holding Republican and Socialistic opinions. King Milan, in an angry message to the Chamber, warned the ministers that they could not continue in office if they allowed the Radical Club to control their decisions, and if they could not forward legislative business within acceptable lines. Resolutions of revolutionary tendency were voted, such as one in favor of taxing luxuries, another to make 3,000 dinars the uniform salary of officials of all grades, a third abolishing bishoprics, and others reducing the pay of military officers, making officers of the militia elective, and introducing new direct and indirect taxes, some of which were contrary to existing treaties. One deputy proposed to dismiss all foreigners employed in the railroad service, and another demanded to know if there was a secret treaty with Austria. The bill on the government of communes took away from the central authorities the right to interfere with the ordinances or the acts of the local authorities within their province, and the powers to remove mayors and to dissolve communal councils. The only other act that was passed, a bill on the reorganization of the army, contained provisions for abolishing about half of the standing army, and replacing it with a militia. Both these bills the King refused to sanction. At a conference with the ministers on April 26, he persisted in his refusal to sign the bill on communal representation, and said that he considered the agreement which he had made with the Radical majority in the winter no longer binding for either party, whereupon the ministry resigned in obedience to the demand of the Radical Club. The King determined to call to his aid the moderate men of the Conservative party, and therefore invited Nikola Christich, who had thrice performed a similar task, to select a neutral ministry.

The Christich Ministry.—The new Council of Ministers, constituted on April 27, was made up as follows: Premier and Minister of the Interior, Christich; Minister of Foreign Affairs, Miyatovich; Minister of Public Instruction and Ecclesiastical Affairs, Vladan Djorjevich; Minister of Justice, Georg Pantelich; Minister of Agriculture and Commerce *ad interim*, Vladan Djorjevich; Minister of Finance, Dimitrije Rakich; Minister of Public Works, Michael Bogitchevich; Minister of War, Costa Protich. The new Minister of Foreign Affairs held the same portfolio in the Pirotshanatz Cabinet, which first entered into the Austrian alliance, and has since been several times Minister of Finance. The present Minister of Finance is a young man prominent in the councils of the Progressist party, who has been chief of sections in the department over which he was called to preside and in the Ministry of Foreign Affairs. The Minister of Justice, an eminent jurist who was a member of the Christich Cabinet in 1883 is free from party ties, as are also Dr. Djorjevich, an author and scientist who has done much for sanitary reform, and Gen. Protich, a distinguished military administrator. The Minister of Public Works held the same office in Garashanin's last Cabinet, and in 1883 under Christich.

The Skupshtina was dissolved on April 29 without having voted the budget. The leaders of the Radicals published assurances that they would countenance no revolutionary disturbances, and would act within constitutional limits. Gen. Gruich, on account of a statement made to a foreign newspaper correspondent, in which he ascribed the dismissal of the Radical Cabinet to Austrian pressure, was placed on the retired list of the army. The arrears of taxes were collected more strictly than under Ristich and Gruich, who spared their party followers. The Government attempted again to break the spirit of Radicalism by tyrannical repression. Many politicians were arrested and thrown into jail. The financial situation was difficult, but, by means of the new loan, the Government in June redeemed the tobacco *régie*, which had been sold to a foreign corporation. Besides suppressing insurrectionary movements in Servia, especially in the Saitchar department, the authorities, after a frontier raid of political brigands into Bulgaria had taken place in the Trn district, dismissed the prefects of Pirot and Nish, and took measures to prevent the recurrence of such disturbances.

The Royal Divorce.—King Milan married Natalie, Princess Sturdza, born May 14, 1859, daughter of a Russian nobleman, Col. de Keshko de Pulcherie, on Oct. 17, 1875. Their only child, the Crown-Prince, was born in 1876. Domestic differences arose between them; the opponents of the King all sympathized with Queen Natalie, and even those who plotted to overthrow Milan desired to preserve the throne for her son, except some

of the Panславist Liberals, who dreamed of the restoration of the Servian Empire, embracing all the South Slavs, under Russian auspices, with Prince Karageorgevich or Prince Nikola of Montenegro on the throne. The Queen thus became identified with the party having Russian leanings. In 1887 the King insisted on Natalie's leaving Serbia, and compelled her to sign articles of separation and take up her residence abroad. The Queen under this arrangement was given the custody of her son. In May, 1888, Natalie announced her intention to return to Belgrade. The King forbade her to do so, and, meeting her at Vienna, directed her to go to Wiesbaden. While she was there, he sent a proposal for a new agreement, declaring that the former one was impracticable. She rejected the new proposition, whereupon King Milan applied to the Synod of the Servian Church for a divorce. The Queen made a compromise more difficult by addressing indignant protests to the Synod, the Consistory, and the Council of Ministers. Ex-Minister Pirotshanatz became her advocate. She denied the competence of the Synod to try the case. The Synod, consisting of the Metropolitan, three bishops, and seven clergymen, asserted its jurisdiction; but, after the King had transferred the case to the Belgrade Consistorial Court, consisting of three delegates of the Consistory, the bishop agreed that this was the proper tribunal. The Queen purposed appearing in person before the Consistory, but was forbidden by the King, who demanded that the Crown-Prince be given into his custody, and sent Gen. Protich to Wiesbaden to bring him to Belgrade. Queen Natalie refused to give up her child, but the German authorities interfered, and took him by force from his mother.

The ground given for the petition of divorce was "irreconcilable mutual antipathy." The Servian law gives to the ecclesiastical authorities alone the power of divorce, which can only be granted after the parties have been brought face to face and a formal attempt has been made to reconcile their differences. Bishop Dimitrije, of Nish, a friend of the Queen, was sent by the Synod to Wiesbaden to arrange a reconciliation, if possible, on the terms proposed by the King, allowing Natalie to retain all the rights and privileges of Queen on condition that she should not return to Serbia except at the King's invitation. The Queen scornfully refused to accede to these conditions, but afterward, when Milan showed a determination to proceed with his application for an absolute divorce, she pressed for a compromise on these very terms. After being robbed of her child and expelled from Wiesbaden by order of the German Government, she demonstratively identified her cause with the political designs of Russia by going to that country in order to interest the people and the Czar in her wrongs. Subsequently she went to the house of her brother-in-law, Prince

Ghika, in Bucharest, and waited for permission to answer the summons of the ecclesiastical tribunal in Belgrade. Her cause was espoused by the Liberal and Radical Opposition, and even the leaders of the Progressist party disapproved the divorce proceedings. Gen. Horvatovich, for championing the Queen, was placed on the retired list. The Cabinet could not approve the King's course, and the ministers wished to retire. So determined was Milan to punish his consort that he contemplated recalling the Russian party to power on condition of its upholding the divorce proceedings; but Ristich declined to take office if the suit were not dropped. Milan's temper became so moody and violent that he sent into exile his old and devoted friend Garashanin for advising him to withdraw his application for absolute divorce.

The Court of the Consistory ruled that the King and Queen must both be heard in person. The ministers decided that there was no law to prevent the Queen from entering Serbia, yet held that they could prohibit her sojourn in any particular town as likely to produce political disorders. When King Milan found the Consistorial Court determined to treat him as a private person, he suspended its action, requesting an adjournment for three months to allow the Queen time to prepare an answer. While the matter remained in abeyance in the Consistorial Court and before the Holy Synod, Milan applied to the Metropolitan Theodosije, and on Oct. 24 obtained from him a decree of absolute divorce, granted in his capacity as autonomous head of the Servian Church. The law gives the Metropolitan no authority to grant divorces independently of the Synod; and, even if he had the right, the title of Archbishop Theodosije to his office is doubtful, since many religious persons look upon the deposed Metropolitan Michael as the rightful head of the Church. Milan took this irregular way to accomplish his purpose, because he expected an adverse decision in the Consistorial Court. To prevent hostile action of the Synod, the King suspended Bishops Dimitrije and Nicato, on the ground of contumacy.

Revision of the Constitution.—King Milan followed up his divorce with a bid for popular favor, ordering elections for a Grand Skupshchina, to be held on December 2, and summoning the Assembly for December 25. The manifesto ends with an assurance that the elections should be free. A commission for the revision of the Constitution, consisting of 85 members, chosen from the three political parties, met in Belgrade, under the presidency of the King, on November 8. The King brought about a fusion in the revision commission between the Progressists and the Liberals, whose political alliances have heretofore been made only with the Radicals. The preliminary elections were by no means free. The police interfered everywhere, and a great many persons were arrested or maltreated.

Notwithstanding this, the Radicals were generally victorious. The King then annulled the elections, and ordered new ones to be held, under the supervision of three royal commissioners in each of the 480 circumscriptions. In these the Radicals achieved still greater successes. The Liberals did not maintain the alliance with the Progressists at the polls, but aided the Radicals. In the final elections, which were postponed till December 16, nearly three quarters of the seats went to Radicals. The Liberals elected about 100 of the 628 members of the Great Assembly, and the Progressists not more than 60. Before convoking the Assembly, the King required every member to give a written promise that he would vote for the Constitution as drafted by the commission. The Radicals, under the lead of Gen. Gruich, stood out especially for the relinquishment by the King of the right to conclude alliances and military conventions without the consent of the Skupshtina, and when he yielded on this and some other points, the bulk of the party agreed to accept the compromise Constitution. The session of the Grand Skupshtina was opened on December 30. A royal ukase declared that no discussion would be allowed, and no amendment proposed, but that the Constitution must be accepted or rejected as a whole. The Radicals were inclined to insist on having the Skupshtina meet annually, without requiring the King's summons. They also wished to take away from the King the power to declare war, and many were pledged to vote for the abolition of the standing army, and wished at least to obtain a considerable reduction in the military establishment. The King had already surrendered the right to allow foreign armies to cross Servian territory without the consent of the Assembly. The limitation of the time that was allowed to the King to continue provisionally the budget of the previous year without convoking the Skupshtina to three months, was likewise a concession on the King's part, as the old Constitution allowed a full year. The Radicals objected particularly to the electoral system in the new Constitution, which provides that in the 10 *supanias* into which the country is divided the deputies shall be elected by *scrutin de liste*, in the proportion of one to every 4,500 tax-payers, that voting shall be by ballot, and that three members from each *supania* must be graduates of universities. Notwithstanding the objectionable features, fewer than 100 of the Radical deputies proved irreconcilable, and voted against the Constitution, which was adopted.

The direct active franchise under the new Constitution is given to all citizens paying 15 dinars in direct taxes, and the passive franchise to persons whose taxes amounted to 30 dinars. Every elector is eligible to the Skupshtina. All parties approved the removal of the disqualifications of advocates and state pensioners, including ex-ministers who, under

the old Constitution, were not allowed to sit in the Chamber. In the place of deputies appointed by the King, a class of official deputies is created, consisting of the members of the Council of State, the bishops, generals on the retired list, and the presidents of the Courts of Cassation and Appeal. The Skupshtina has the initiative in legislation. A significant article provides for a regency of the King's selection in case of his abdication, showing the earnestness of King Milan's desire to retire from his difficult position before involving his dynasty in his fall. The Great Skupshtina will hereafter consist of double the number of deputies in the ordinary Assembly, and its functions will comprise the consideration of questions affecting the throne, the election of a regent in a case of its vacancy, and constitutional revision. The Council of State will consist of eight members nominated by the King and an equal number chosen by the Skupshtina for life, whose duties will be to draw up bills and administrative decrees, and nominate candidates for judges of the Supreme Court and the Courts of Cassation and Appeal. Courts are declared absolutely independent, and judges irremovable. The *supanias* are to have autonomous organization for matters relating to roads and communications, sanitary and financial requirements, and schools. The Servian Church is declared independent and autocephalous, and its head shall bear the title of Patriarch. All religions are free. The liberty of the press is guaranteed, and newspapers may be founded without a deposit of caution money. No citizen shall be arrested or have his house searched without a warrant. Foreigners may possess any kind of property in Servia and may be employed in the state service. Public instruction is gratuitous and compulsory. No titles of nobility may be borne by Servian citizens. No pensions may be granted without a special act of the Skupshtina. While he retains the right of declaring war and making peace, the King can not conclude negotiations involving the payment or exaction of a war indemnity or the cession or acquisition of territory without summoning the Skupshtina.

SEVENTH-DAY BAPTIST CHURCH. The statistics of this Church as presented to the General Conference in August were incomplete. They gave the whole number of members as 8,387, but the returns of the contributions for the several purposes of the Church were defective and unsatisfactory. Seventy-five Sabbath-schools returned 5,754 members, including officers and teachers and pupils. The revenue and expenditure of the Education Society were balanced at \$46,557. It received reports from Albion (Wisconsin) Academy and Normal Institute; Milton (Wisconsin) College, and Alfred (New York) University. The last two of these institutions have endowment funds amounting together to \$148,000. Young men and young women are admitted on an equal footing to all

the institutions. The society at its meeting recommended that the English language and literature should hold a more prominent place in both preparatory and higher courses of instruction. The American Sabbath Tract Society had received \$6,543. Three journals in the English language, one in Dutch (in Holland), one in Swedish (in Sweden), and one Hebrew journal are published under its care. The receipts of the Missionary Society had been, from all sources, \$12,089. The society had supported a mission in China, with three American missionaries, two native preachers, and eight other native laborers, with which a dispensary was connected; a mission in Holland; a mission to the Jews, home missions, and a Scandinavian mission, in the United States, in which twenty-six laborers were employed. The whole number of additions by baptism during the year in all the missions was ninety-one.

The Seventh-Day Baptist General Conference met at Leonardsville, N. Y., August 22. The Rev. L. A. Platts presided. A record was entered of the organization of a new association—the South Western—of eight churches at Texarkana, Ark. Four other churches in the South were admitted to the Conference. The Memorial Board reported that the amount of the memorial fund, excluding original notes for \$14,148 and certain real estate not estimated, was \$111,924. Provision was made for the more complete collection of materials for the history of the denomination and its churches through the action of individual churches, pastors, and families. In view of the movement of the Women's Christian Temperance Union for promoting the observance of Sunday as the Sabbath, the Woman's Executive Board was authorized to present a memorial to that body explaining the reasons why the women of this Church could not join in its effort; and a resolution adopted by the Conference declared all legislation "against rightful business on Sunday" unwarrantable from a religious point of view, and protested, "in the name of religious liberty, against all infringement upon the rights and duties of Sabbath-keepers by such legislation." Another resolution declared that "total abstinence from the use of all intoxicating beverages is the imperative duty of every individual, and the suppression of the manufacture and sale of such beverages, by law, is the duty of the state." A committee was appointed to consider and develop a proper method for bringing about united action by the young people of the denomination in denominational work.

SOUTH CAROLINA. State Government.—The following were the State officers during the year: Governor, John P. Richardson, Democrat; Lieutenant-Governor, William L. Mauldin; Secretary of State, William Z. Leitner, who died early in the year and was succeeded by J. F. Marshall by appointment of the Governor; Treasurer, Isaac S. Bamberg; Comptroller-General, J. S. Verner, elected by the Legislature in December, 1887, to fill out the

unexpired term of William E. Stoney, who resigned; Attorney-General, Joseph H. Earle; Superintendent of Education, James H. Rice; Commissioner of Agriculture, A. P. Butler; Chief-Justice of the Supreme Court, W. D. Simpson; Associate Justices, Henry McIver and Samuel McGowan.

Finance.—The revenues for the year ending Oct. 31, 1888, amounted to \$1,163,218.21, not including the balance from the previous year of \$104,385.05, and were derived from the following sources: Direct taxes, \$582,611.78; phosphate royalty, \$187,064.12; deficiency bonds and stock, \$322,367.46; Department of Agriculture, \$31,562.14; railroad assessment, \$8,189.62. The annual interest charge on the State debt was \$356,126.81. For all purposes the total expenditures were \$1,190,482.63, leaving a balance in the treasury, Nov. 1, 1888, of \$77,120.63. The personal property in the State was assessed for the year at \$41,407,412, the real estate at \$84,261,348, and railroad property at \$16,317,394, aggregating \$141,986,154. The State tax of five mills on this valuation yielded \$709,734.91. The poll-tax is not uniformly collected, as the returns show only 1,576 polls in Charleston, while there were 6,089 in Spartansburg.

State Debt.—The deficiency bonds and stocks, which became due and payable on July 1 and amounted to \$420,692.26, have been settled as follow: \$20,962.26 were bought up and canceled by the Sinking-Fund Commission; \$177,913.79 were exchanged for 4½-per-cent. bonds, under the act of the last General Assembly; and \$216,898.48 was redeemed for cash realized from the sale of the 4½-per-cent. bonds, as authorized by the act, leaving a balance of \$5,187.78 of bonds and stock yet to be redeemed in cash. The remaining portion of the State debt, which has been funded under the consolidation acts of 1873, 1878, and 1879, consists of consol. stocks, \$2,161,140.26; consol. bonds, \$3,841,000; and the Agricultural College stock, a permanent fund of \$191,800. These amounts added to the 4½-per-cent. stock of \$183,000 and 4½-per-cent. bonds of \$217,000, together with the \$5,187.78 deficiency bonds and stocks to be redeemed, makes the total funded debt \$6,599,127.99. The 4½-per-cent. bonds, known in the State as "blue bonds," were advertised for sale in New York and London, but no bid having been received, the entire issue was purchased, in some cases at a premium, by citizens of South Carolina. The bonds redeemable in 1893 are selling at a premium.

Legislative Session.—The Legislature elected in November met on the 27th of that month. On Dec. 12 it re-elected United States Senator Matthew C. Butler. The pension act of 1887, which had proved so expensive to the State, was revised and amended, the annual sum available for pensions was limited to \$50,000, and each pensioner allowed only \$3 a month. An act to establish a home for disabled soldiers was defeated.

The railroad law was amended so as to give the railroad commissioners power to establish fares and rates, under certain limitations.

The State tax for general purposes was fixed at $\frac{5}{8}$ mills for the ensuing year; a regular 2-mill tax for schools is also levied.

Almost contemporaneously with the opening of the session, the State Supreme Court, in the case of *Floyd vs. Perrin*, rendered an important decision, which nullified all acts theretofore done by townships in issuing bonds and assessing taxes for their payment to aid in the construction of railroads. The court decided that the act of 1882, and acts amendatory thereto, by which counties and townships were authorized to subscribe to the stock of railroad corporations, and for that purpose were declared to be bodies politic and corporate with necessary powers to carry out the provisions of the act, were in violation of that clause of the State Constitution which permits the grant to the corporate authorities of townships of the authority to assess taxes for corporate purposes. By this decision the liability of townships for over \$900,000 of bonds issued by them was destroyed. As it was evidently unjust that these bonds, purchased in good faith by the bondholders, should be repudiated, several measures were introduced into the Legislature to restore the liability of the townships. After considerable discussion and much opposition, the Legislature finally passed an act declaring that where the railroad had already been constructed, the principal sum of the township bonds issued should be a debt of the township issuing them, for the payment of which with interest a tax might be levied. An important act to regulate and protect primary elections, based upon the New York law, was passed. The sum of \$77,250, received from the United States for rent of and damage to the State Military Academy building by United States troops, was appropriated to public uses.

Education.—The total enrollment of school children for 1887-'88 was 198,434, an increase of 18,417 over the previous year. Of these children 108,834 were colored and 90,100 were white. The average attendance for the year was 139,557, an increase of 14,086 over 1886-'87. There were 4,208 teachers employed, receiving \$381,887.81 in salaries—a gain of 209 in the number of teachers over the previous year, but a decrease of \$3,419.41 in salaries; 2,611 teachers were white and 1,592 were colored; 2,242 were men and 1,961 women. In one county, Georgetown, there were no public schools during the year; twenty-one counties report an increase in the number of public schools and ten report a decrease. Eighty-six new school-houses were erected during the year at a cost of \$31,486.22, so that the total number of school-houses is 3,280, valued at \$436,455.36; 757 are log buildings, 1,856 frame buildings, and 83 brick or stone. The statement of receipts for school purposes dur-

ing the year were \$466,619.78; the expenditures, \$430,669.28.

The last session of the university was the first under the new system requiring payment of tuition fees. The attendance was large (170), and the number withdrawing during the year was smaller than ever before. At the end of the year 221 students were enrolled. Sixty-eight have asked for a remission of tuition fees. The university has 28 teachers. The expenses for 1887-'88 amounted to \$50,280, of which \$41,500 was paid in salaries.

Clafin College, devoted to the education of colored people, had an enrollment of 946, a large gain over any previous year, with 55 teachers and superintendents. The State appropriates \$5,000 annually to this institution.

Militia.—Companies have been organized in every county in the State but three, and interest in military affairs is everywhere increasing. There are now 92 companies in the State, with 841 officers and 4,748 men. A movement has been made to uniform the troops with the regular United States Army uniform, which is furnished free by the General Government. Twelve companies have been so uniformed.

State Institutions.—The Penitentiary contained at the close of the year 894 convicts, of whom 848 were colored and 51 white. Of these 217 are at work on phosphate-mines near Summerville, 199 are employed on shoe and hosiery contracts inside the prison, and the others are at work on the farms connected with the institution. All the convicts are now being worked under the sole control and supervision of the officers of the Penitentiary, and are paid for by the contractors at a stated price per capita per day. The prison is on a self-supporting basis, and there was an excess of receipts over expenditures for the year of \$3,444.23.

The State Lunatic Asylum has 680 inmates, an increase of 81 over 1887, of which 893 are white and 287 are colored. The present buildings are crowded. It is proposed to build a separate hospital for the colored insane.

There are 102 pupils in the Institution for the Deaf, Dumb, and Blind. Here, too, a separate school for colored children is proposed.

Pensions.—Under the act of 1887, providing a pension of five dollars a month for disabled Confederate soldiers and the widows of those killed in the Confederate service, an unexpectedly large number of claimants appeared. Up to September 30, 2,623 applications had been filed, of which the pension-board had approved 2,025, 1,492 being in favor of widows and 533 in favor of soldiers. In the payment of these approved claims the annual appropriation of \$50,000 was not only expended, but the Governor, in accordance with the law, borrowed \$50,000 additional, which was nearly exhausted at the close of the year.

Political.—A Republican State Convention met at Columbia on May 1, nominated delegates to the National Convention, and adopted a platform containing the following:

We declare the work and achievements of the Republican party are such as to commend it to the continued favor of the nation, and its mission will not be completed until all American citizens are protected at home as well as abroad, and a full ballot and a fair count make a solid South no longer possible.

We denounce the methods employed by the Democratic party in carrying elections in this State, and charge them as being responsible for the violence and intimidation which has suppressed the Republican vote.

While registration laws are usually intended to prevent fraud and to secure the free expression of the will of the people, the registration law of this State is plainly designed to facilitate fraud and suppress the will of the majority, and is on its face one of the most disgraceful acts ever placed upon the statutes of this or any other State.

We invoke the aid of the National Government to relieve us of this obnoxious law and demand of Congress to enact such legislation as shall secure a fair election at least for members of Congress and presidential electors.

On May 17, at the same place, the Democrats elected delegates to the St. Louis Convention, and adopted a short series of resolutions, approving the National Administration, the renomination of President Cleveland, tariff reform, and the message of the President on that subject, but omitting any reference to the Mill's Bill, the provisions of which relative to rice were not approved. A second Democratic State Convention met at Columbia on September 6 to nominate candidates for State officers. The renomination of Gov. Richardson was opposed by a considerable number of delegates, who united upon Attorney-General Joseph H. Earle as a candidate, but the Governor obtained nearly two thirds of the convention on the first ballot, and his nomination was made unanimous. The other State officers were also renominated. The resolutions reaffirm the National Democratic platforms of 1884 and 1888, without adverting to State issues. No nominating convention was held by the Republicans, and no State ticket supported by them, so that the Democratic ticket received the entire vote cast at the election in November. The Democrats elected every member of the State Senate (85 in all) and 121 out of 124 members of the Lower House, the three remaining members being Republicans. The Democratic national ticket was successful, and Democrats were elected in the seven congressional districts. In the Third, Fourth, and Fifth Districts there was no opposition to the Democratic candidate; in the First District the vote stood, Democratic 8,540, Republican 1,296; in the Second District, Democratic 10,704, Republican 1,405; in the Sixth District, Democratic 8,586, Republican 827; and in the Seventh District, Democratic 8,858, Republican 7,008.

The people voted at the same election upon two constitutional amendments—one extending the term of probate judges from two to four years, which was adopted by a vote of 28,806 yeas to 20,543 nays; the other abolishing the election of county school commissioners, which was rejected by a vote of 15,125 yeas to 33,457 nays.

SPAIN, a constitutional monarchy in South-western Europe. The present King is Alfonso XIII, posthumous son of Alfonso XII, born May 17, 1886. Queen Maria Christina, mother of the King, is Regent during the minority of her son. She was an Austrian princess, daughter of the late Archduke Karl Ferdinand.

The following ministers were in office at the beginning of 1888, having been appointed Nov. 27, 1885: Prime-Minister and President of the Council, Praxedes Mateo Sagasta; Minister of Foreign Affairs, Segismundo Moret; Minister of Finance, Joaquin Lopez Puigcerver; Minister of the Interior, José L. Albareda; Minister of Justice, Manuel Alonso Martinez; Minister of Agriculture and Public Works, Carlos Navarro Rodrigo; Minister of War, Manuel Casola; Minister of Marine, Rafael Rodriguez de Arias; Minister of Colonies, Victor Balaguer.

The Army.—The peace establishment of the Spanish army was fixed by the resolution of the Cortes of April 14, 1887, at 131,400 men, of whom 100,000 were for service in the peninsula, 19,000 for Cuba, 8,700 for the Philippine Islands, and 3,700 for Porto Rico. The number of horses provided for is 16,495; the number of guns, 416. The war effective is 869,353 men, with 23,467 horses and 484 guns.

The Navy.—The fleet on Jan. 1, 1888, comprised 3 iron-clad frigates, 9 unarmored frigates and cruisers, 12 gun-boats, 6 avisos, 1 torpedo-catcher, 12 torpedo-boats, and 71 other vessels. There were under construction 1 armored frigate, 3 belted cruisers, 3 unarmored cruisers of the first class, 8 of the third class, and 2 torpedo-boats. A credit of 171,000,000 pesetas to be spent on the navy in the space of nine years was made conditional on all the ships being built in Spain from Spanish material. The Government in 1888 ordered 3 armored cruisers, of 7,000 tons each, and 3 torpedo gun-boats.

Commerce.—The total value of the imports in 1886 was 855,206,950 pesetas, against 764,758,000 pesetas in 1885; the value of the exports was 727,349,885 pesetas, against a total of 698,008,000 pesetas for the preceding year. The principal articles of import and their values were the following: Cotton and cotton goods, 73,186,042 pesetas; spirits, 68,614,684 pesetas; cereals and flour, 53,233,645 pesetas; tobacco, 43,133,521 pesetas; timber, 37,625,930 pesetas; sugar, 32,625,930 pesetas; wool and woolen goods, 27,606,381 pesetas; fish, 27,520,010 pesetas; hides and skins, 26,061,640 pesetas; coal, 26,033,681 pesetas; machinery, 20,902,194 pesetas; cattle, 20,409,521 pesetas; silk and silk goods, 18,186,885 pesetas; iron and manufactures of iron, 17,290,616 pesetas; hemp and flax, and their manufactures, 17,888,335 pesetas; chemicals, 15,851,818 pesetas; cocoa, 14,023,433 pesetas; all other articles, 320,629,218 pesetas. The principal exports and their values in 1886 were as follow: Wine, 834,816,652 pesetas; minerals, 61,849,023 pesetas; fruits, 59,520,923 pesetas; lead, copper, iron, and zinc

48,194,270 pesetas; cattle, 22,069,928 pesetas; cork, 17,671,091 pesetas; wool, 16,094,946 pesetas; oil, 14,858,812 pesetas; all other articles, 152,774,740 pesetas. Of 162,623,472 gallons of wine exported, 180,818,000 gallons went to France and 4,785,800 to England.

Railroads, Posts, and Telegraphs.—The total length of the railroads open to traffic at the beginning of 1887 was 9,809 kilometres, or 5,780 miles.

The number of letters forwarded in 1886 was 90,845,607; postal-cards, 332,054; samples and printed inclosures, 10,054,974; registered articles and letters, 1,248,537; money letters, 62,148. These figures do not include the international service, in which 11,955,213 letters, 88,461 postal-cards, 7,794,870 registered letters, and 18,856 money letters were sent or received. The receipts of the post-office were 16,577,417 francs; expenses, 9,515,468 francs.

The length of telegraph lines in 1887 was 18,419 kilometres, or 11,512 miles; length of wires, 46,187 kilometres, or 28,870 miles. The number of dispatches in 1886 was 3,549,860, of which one fourth were international.

Political Crisis.—The Sagasta ministry found itself compelled in 1888, to do something to redeem its pledges in regard to the long-promised political reforms, lest it should be overturned by the Democrats, although at the imminent risk of defeat through the defection of the Ministerial Right. The Minister of Justice accordingly brought in a bill to introduce trial by jury. Canovas del Castillo met it with a proposition to raise the grain duties, asserting that the agricultural crisis demanded the first attention. The Conservative bill to impose a supplementary duty on cereals was defeated in Congress on January 9, by 138 votes against 60. In February the party in power was upheld by Castelar, the leader of the Possibilists or Conservative Republicans, in a great speech in which, without formally renouncing Republicanism, he accepted the existing frame of government, including the union of Church and state, as the most suitable for Spain, and declared that as soon as the ministry had carried out its scheme of Democratic reforms he would bid farewell to public life and devote his remaining years to a "History of Spain." The official corruption and despotic misrule of the colonies, especially Cuba and Porto Rico, afforded Gen. Salamanca—whose appointment as Governor-General of Cuba had been canceled—and the opponents of the Government an opportunity to charge the ministers with apathy, weakness, and indifference to official immorality, and to condemn as futile a commission that was appointed to investigate colonial administrations; yet the discussion of colonial wrongs awakened, as ever, very little interest. The Protectionist agitation caused the greatest difficulties that the ministry had to contend with. The commercial and agricultural crisis was made use of by politicians, who organized an Agrarian League, at the

head of which stood the Liberal ex-Minister of the Colonies Gamazo. This movement divided the ministerial majority, attracted Reformists like Romero y Robledo and Montillo, was supported by Canovas, Villaverde, and the rest of the Conservatives, and even obtained the support of Muro and other Republicans. The Cabinet met the demands of the Agrarian League with partial concessions, agreeing to take off 18,000,000 pesetas of the land-taxes, whereas the agriculturists asked for a reduction of 50,000,000 pesetas, promising to secure lower rates on the railroads for agricultural and mineral produce, and accepting the proposition to spend large sums on public works. The main demand for higher duties, however, the Premier declared, could not be granted without a violation of national faith, because the slight reductions of which Spanish manufacturers and farmers complained were made in pursuance of treaty obligations entered into with twenty different nations in the course of the last twenty years. The Reformist party which contested the succession to the tottering Sagasta ministry with the Conservatives, was disrupted in the spring by the secession of Lopez Dominguez, the founder of the party, and of his powerful military following, leaving its parliamentary leader, Romero y Robledo, at the head of a remnant that was no better than a political group. Gen. Lopez Dominguez organized a new group, called by the name of Monarchical Democrats, to advocate the old programme which Romero y Robledo had not faithfully observed.

The ministerial crisis had lasted almost a year when the resignation of the Cabinet took place as the result of a trivial question of military etiquette. The Queen had left Madrid for an excursion to Valencia, which the Minister of Justice insisted on her making according to the published arrangement, lest the postponement should be construed as a sign of fear of the Zorillist Republicans, who had convoked a mass meeting in the same city. The Infanta Isabel, who was left to represent her, decided to take a journey also, and informed Gen. Martinez Campos that her sister, the Infanta Eulalie, would give out the military watchword. The Military Governor of Madrid replied that the married infanta was not legally competent to perform that office, and that it was impossible, according to military rules, for him to receive the parole from her husband, Prince Antonio, Duc de Montpensier, who was only a captain in rank. The Minister of War, who was not on good terms with the Captain-General, sent a brusque telegram ordering him to receive the pass-word from the Princess Eulalie, whereupon Gen. Campos offered his resignation. All attempts to accommodate the quarrel failed, and as the majority of the Cabinet sided with the Captain-General, Gen. Casola and the ministers who had supported his view resigned their portfolios. Señor Sagasta handed in the resignation of the entire Cabinet

to the Queen Regent, who requested him to form a new ministry. In the reconstructed Cabinet the Marques de la Vega de Armijo, who was Minister of the Exterior in 1881-'83, resumed that office, Señor Moret, who had held the portfolio, exchanging it for that of the Interior. Señores Puigcerver, Martinez, and Rodriguez, remained at the head of the Ministries of Finance, Justice, and Marine. Señor Ruiz Capdepon entered the Cabinet as Minister of the Colonies, and Señor Canalejas y Mendez as Minister of Commerce. Gen. Cassola was succeeded as Minister of War by Gen. O'Ryan, the director of infantry, who had never before held a political office.

The question of military reform brought the generals again to the front in Spanish politics, destroying the discipline which had been cultivated since the accession of Alfonso XII. A Democratic reform of the army was the demand of the progressive wing of the Ministerial party, which was led by Martos, President of the Chamber, and represented in the Cabinet by Moret, Puigcerver, Capdepon, and Canalejas. For fiscal, as well as for political and military reasons, it was desirable to reduce the peace establishment which has an officer for every half-dozen soldiers. Gen. Cassola elaborated a plan which was under discussion for a full year. It met with such opposition that he was driven from office before the Cortes could come to a decision. Gen. Lopez Dominguez and Gen. Martinez Campos had other plans of reform. The Government created a dangerous situation by announcing just before the separation of the Cortes in July the intention of enacting reforms by royal decree during the recess. Gen. O'Ryan who was expected to carry out Cassola's scheme, inclined rather to that of Martinez Campos, which was a virtual abandonment of army regeneration. The army officers divided into parties supporting Cassola, Campos, Lopez Dominguez, and the Government respectively. The friends of Gen. Cassola, who had never led a political group before his dismissal, subscribed money to have his reform project printed as a testimonial, and arranged political demonstrations which the Government attempted to suppress, placing officers under arrest for such breaches of discipline. Gen. Cassola entered into a coalition with Gen. Lopez Dominguez, whose persistent agitation for army reform had compelled Sagasta to promise such a measure, and who had demanded a more radical reform than was embodied in the bills of Gen. Cassola and his predecessor, Gen. Castillo. The Democratic members of the Cabinet urged the promulgation of reform measures by Executive orders, but were defeated in a Cabinet council on October 21, when it was decided to call the Cortes together in November, and re-submit the project for legislative action. After the opening of the Cortes, a conference was held with all interested parties, at which it was decided to withdraw the military reform bill,

and bring the matter before the Cortes in a revised form. But immediately afterward the Premier was goaded by the Opposition into an announcement that Cassola's bill and all other unfinished legislation would be revised. Gen. O'Ryan tendered his resignation. At the election of the Budget Committee, the dissentient Liberals and Protectionists who follow the lead of Gamazo and Montero Rios, carried two fifths of the seats, and were only prevented from gaining a majority by groups of the regular Opposition, notably the followers of Castelar and Romero y Robledo, who came to the support of the ministry. Señor Sagasta, in consequence of this moral defeat, on December 8 placed the resignations of all the members of the Cabinet in the hands of the Queen, who invited him to constitute another ministry. Gen. O'Ryan and Señores Moret, Alonso Martinez, and Puigcerver, were determined not to resume office. The Minister of Marine, who had sustained the course of Gen. O'Ryan, also retired. The list of the new ministry was published on December 10. The Marques de la Vega de Armijo, retained the portfolio of Foreign Affairs, and Señor Canalejas remained Minister of Commerce. Señor Ruiz Capdepon took the portfolio of the Interior, being succeeded as Minister of the Colonies by Señor Becerra. The other new Ministers were Venancio Gonzalez, of the Department of Finance; Count Xiquena, Minister of War; Gen. Chinchilla, Minister of War; and Admiral Arias, Minister of Marine.

Legislation.—Among the reforms promised by the Sagasta ministry were trial by jury, civil marriage, and universal military service. The bill introducing jury trials was passed, and was signed by the Queen-Regent in March, 1888. The civil-marriage law, which was framed with the design of meeting all the objections of the Olericals, fails entirely to satisfy the Radicals. The sanction of the clergy is as necessary as before for mixed marriages, and free-thinkers of Catholic birth are still required to go through the religious ceremony in order to be legally married, since the new law prescribes that every Catholic must be married in church, and that this marriage is valid in all civil relations. The latter provision annuls the only innovation in the new law, which provides that a Government official shall be present at the ceremony, whose duty it is to have the marriage properly registered, because the marriage is legal even if the registration is for any reason evaded. The principle of the bill was agreed upon in negotiations between the Government and the Vatican before it was presented to the Cortes, and when a paragraph was added to the effect that marriages of Spanish subjects abroad could be contracted according to the custom of the country in which they take place the Vatican objected, and it was stricken out.

The bill introducing trial by jury was agreed to by both Houses on March 26. The jury law withholds for the present from the juries about

thirty crimes and punishable offenses, or two thirds of the entire number on the statute-books. The election of jurors was fixed for January, 1889, and the juries will begin their functions throughout the kingdom in the following April. The establishment of trial by jury is regarded with great satisfaction by the majority of Spaniards because the administration of justice by judges who are the creatures of politicians has been often scandalously partial and has brought the law and the courts into contempt.

In the financial legislation for 1888, Señor Puigcerver was called upon to obtain a larger revenue, and at the same time to remit a part of the land-tax in order to relieve the agricultural depression caused by the fall in the prices of grain and diminished exports of cattle. Heavy taxes on imported spirits met the approval of all the chambers of commerce, as they served the double purpose of increasing the receipts of the treasury and of discouraging the manufacture of artificial wine, and thus promoting vine-culture. The spirits used in imitation and fortified wines are mostly German potato brandy. The new tax is a consumption duty on all spirits, foreign and domestic, ranging from 80 pesetas per hectolitre for qualities containing less than 60 per cent. of pure alcohol to 120 pesetas for those above 80 per cent. The wine-growers demanded the prohibition of imports, and in their interest the Cortes passed a law against the manufacture of spurious wines, in pursuance of which many factories were closed and the manufactured stock was destroyed. In attempting to collect the new tax on spirits the revenue officials encountered in all the large towns the resistance of the distillers, who organized indignation meetings and appointed a committee to arrange with the Government for changes in the law. At Tarragona, where there are large distilleries, the populace rose against the police and revenue collectors, stoned them, and raised barricades. To prevent serious disturbances the Government suspended the collection of the duties. The largest distillery in that town is a Swedish concern on behalf of which the Swedish Government raised a protest. In Saragossa, Barcelona, and Madrid, the manufacturers, liquor merchants, and retailers refused to pay the tax on their stock in trade, and threatened to close up their establishments if the Government insisted on the payment. The Minister of Finance finally yielded and agreed with the deputations from Tarragona, Barcelona, Reus, and other cities that the tax on pure alcohol should be collected, but not on manufactured wines; that the tax on spirits of all kinds should be remitted if the municipal authorities of any town demand it; and that the cost of excise licenses should be graduated according to the density of population.

Elevation to a Great Power.—Germany has gone out of her way to show diplomatic courtesies to monarchical Spain, and aimed to be the sponsor who would help Spain to regain her former

place in the European councils, partly with the object of attracting the good will of Spain and of gaining her moral support or definite adhesion to the Central European league, and partly in order to enable her to assert her pretensions to Morocco, and thus prevent the French and English from establishing themselves in that country, and gaining control of the road to the Suez Canal. In 1881 Germany invited Spain to take part in the conference of the great powers for the regulation of the Suez Canal. Spanish pride and antipathy, especially on the part of the Liberals, toward the "hereditary foe of the Latin nations" defeated the purpose of the patronizing court-essies. The consequences of the indiscreet nomination of Alfonso XII to the colonelcy of the Uhlan regiment in Strasburg, and, the feeling roused by the Caroline Islands dispute, caused the Government to abandon the purpose of raising the Berlin legation to the rank of an embassy after the visit of the German Crown-Prince in 1885, although the permission of the Cortes had been obtained, lest it should be construed as a sign of a political treaty. The allied monarchical powers are especially interested in preventing the establishment of a republic in Spain, and since 1885 a secret agreement for this end has subsisted between them. The matter of raising the rank of ministers to that of ambassadors was allowed to rest until 1887, when Spain called the Morocco conference, where it was desirable that she should appear as a great power. The authorization of the Cortes was obtained, and by the royal decree of Dec. 27, 1887, the ministries at Berlin, London, Vienna, and Rome were changed into embassies. In January, 1888, the representatives of these four great powers at Madrid presented their credentials as ambassadors.

It was the opposite of a *rapprochement* with Germany that Señor Moret and his colleagues had in view when they invested Spain with the outward rank of a great power. They hoped to see their country take the lead in the Latin League, comprising Spain, France, Belgium, and Italy, with the Spanish republics of South and Central America, over which the supremacy of the mother-country would again be asserted when Spain, strengthened by the acquisition of Morocco, should be restored to a leading position among the powers of Europe. The alliance, which is the dream of Spanish statesmen, is to be directed against Germany's predominance in Europe and the expansion of the Germanic races in all parts of the world. Count Benomar, the Spanish ambassador at Berlin, disclosed to Prince Bismarck communications of Anti-German tenor, intended only for his own instruction, revealing this secret aim of Spanish policy, and for this offense was abruptly recalled in the autumn of 1888.

Labour-Revolt.—The farmers and land-owners in the province of Huelva, adjacent to the mining district of Rio Tinto, complained that the process of roasting copper-ore in the open

air was injurious to the health of the people, as the sulphurous fumes poisoned the air for a wide distance. The mines had been sold in 1873 for 92,800,000 pesetas by the Government to an English company, which had developed an industry that gave employment to 12,000 work-people. The Government appointed a commission, and at the request of the local officials issued a provisional edict forbidding the open-air process of calcination pending the investigation. The mining company entered a protest, which was supported by the English ambassador, and when the Government declined to rescind the order the managers cut down wages and discharged a part of the force of laborers. This led to a general strike and tumultuous demonstrations. The miners demanded not only the restoration of the old scale of wages, but the shortening of the hours of work in their deadly occupation as a preventive of mortality. The Government ordered out the military, and in a collision on February 4 the troops were ordered to fire, and poured a volley into the unarmed crowd. There were 280 persons hit, and 50 were killed, whose blood "sprinkled the ministerial bench." Romero Robledo declared in moving a vote of censure, which received only 19 votes against 176. A royal decree was issued in accordance with the conclusions of the commission on March 1 for the gradual abolition before 1891 of open-air calcinations. This decision, contravening the contract with the company and the law of Dec. 17, 1878, it is feared will ruin the industry and give cause for claims against the Government.

The Barcelona Exhibition.—An international industrial exhibition, opened on April 7, 1888, was planned on a large scale, and proved moderately successful notwithstanding the large number of similar exhibitions that were held in Europe, and the critical economical and political conditions existing in Spain.

When Queen Christina visited the National Exhibition at Barcelona in May, the naval powers of Europe united in a demonstration in her honor in the harbor, where the greater part of the Spanish fleet was also assembled. The Italian navy was represented by the "Italia," "Duilio," and other great ships; the French by the "Colbert," "Amiral Dupret," "Courbet," and other formidable iron-clads; Great Britain by the Mediterranean squadron under the command of the Duke of Edinburgh; Austria-Hungary by an imposing detachment; Germany by the "Kaiser"; and the United States, Russia, the Netherlands, and Portugal by representatives from their respective fleets.

Colonies.—The colonial possessions of Spain comprise Cuba, with 118,833 square kilometres of territory and 1,521,684 inhabitants; Porto Rico, with an area of 9,620 square kilometres and 754,313 inhabitants in 1880; the Philippine Islands, having an area of 298,726 square kilometres and 5,559,020 inhabitants; the Sulu Islands, 2,456 square kilometres in extent, and

containing a population of about 75,000; the Mariana Islands, with an area of 1,140 square kilometres and a population of 8,665; the Carolines, 700 square kilometres in extent, with 22,000 inhabitants; the Palao Islands, 750 square kilometres in extent, with a population of about 14,000 souls; Fernando Po, Elobey, Annobom, and the territory of San Juan, on the coast of Guinea, having an aggregate area of 2,208 square kilometres and 68,656 inhabitants; and the Western Sahara, between Cape Bojador and Cape Blanco, with the territory of Ifni and other districts on the west coast of Africa. The extent and population of these latter possessions are not known, except in the case of the barren Saharan, where her coastline is 1,800 kilometres, and her claim extends 400 kilometres into the interior. The territory at Coresco Bay, on the French Gaboon, is 24,960 square kilometres in extent. Spain also claims the little district of Spri, at Cape Nun. The strip of coast in Assab Bay, between Ras Garibal and Ras Macama, on which there is a commodious harbor, has been leased from Italy as a coaling-station for fifteen years.

In March extensive districts in the Sulu Archipelago were occupied, but not without a sharp conflict, during which many of the natives and several Spaniards were slain.

SUNDAY LEGISLATION. The Roman Empire established religion by entering into a contract with the gods through its official representatives. Worship, therefore, consisted of ceremonies, prayers, sacrifices, and games, through which the people fulfilled their part of this contract. The state maintained colleges of sacred lore, which determined all matters connected with religion. The most important of these was the College of Pontifices. The Emperor stood at the head of this as *Pontifex Maximus*, and had full power to decide "what days were suitable for the transaction of business, public or private, and what were not." The Oriental sun-worship cultus, Mithraicism, was widely prevalent and extremely popular in the Roman Empire about the beginning of the Christian era. It was for a long time a dangerous and a well-nigh successful competitor for the controlling religious influence throughout the empire. The evidences of this worship are still associated with the ruins of all the principal military stations that sprung up in the course of the Roman conquest of Europe. The division of days into judicial and non-judicial was an established custom under the original pagan cultus of the empire. This custom was enlarged and intensified by the influence of Mithraicism, in which the sun's day occupied a prominent place. Even before the age of Augustus the number of days on which no trials could take place at Rome, because of reverence to the gods to whom these days were consecrated, had become a means by which wealthy criminals evaded justice; and Suetonius sets it down as a praiseworthy act on the part of Augustus that he rejected

thirty days from that number in order that business might not be impeded and crime might not go unpunished. The ferial system also included the forbidding of various kinds of labor on the days consecrated by religious observances. This system and these practices antedate Christianity.

Constantine, like his predecessors, was a devotee of the sun god, and he favored all influences and used all measures to establish himself as supreme ruler. While he was thus struggling for the supremacy, Sunday legislation first appeared (321 A. D.). The pagan character of this first legislation is shown by the law and its associations. There is nothing in contemporaneous history to indicate that such legislation was desired or sought by the people of the empire or by any class thereof. On the contrary, everything shows that these edicts sprang from the will of the Emperor alone. In 386 A. D. legislation was renewed, forbidding shows and litigation on Sunday, and then, for the first time, the term "Lord's Day," was used as the counterpart of Sunday.

In the middle ages almost all questions of religious duty and of ecclesiastical organization were subject to civil control. The ecclesiastico-civil authority claimed the prerogative of legislating on religious questions, after the manner of the Jewish theocracy. Hence there are several points of analogy between the Sunday legislation of the middle ages and the Sabbath legislation of the Mosaic period. Legislation fixed sacred time from noon on Saturday until sunrise on Monday; and during the latter part of the middle-age period those who dared to disobey such requirements were coerced by additional commands, which, it was claimed, were furnished by direct interposition of Heaven.

The Saxon legislation was much like the middle-age legislation of Southern Europe. It began as early as 688 A. D. under Ina, King of Wessex. It divided the punishment for working on Sunday between the slave, the master who required work of him, and the freeman who worked from his own choice. The sacred time sometimes began with sunset on Saturday and ended with sunset on Sunday, known as "Monday eve." In some instances, as under Edgar, 959-975 A. D., it extended from noon on Saturday until daylight on Monday.

The English Sunday laws were a continuation and expansion of the Saxon laws, and, like these, were the product of the original Roman legislation. In 1281, under Edward I, an attempt was made to eliminate the Jewish theocratic idea. The showing of wool in the market was forbidden under Edward III in 1354. Islip, Archbishop of Canterbury, in 1359 enlarged the prohibitions and requirements with reference to Sunday and other church-appointed days. Marketing, and fairs for the sale of goods, which seem to have been held in and about church-buildings and cemeteries, were forbidden on Sunday and other

festivals, under Thorsby, Archbishop of York, in 1357 A. D.; while "unlawful games on Sundays and other festivals" were prohibited under Henry IV in 1409 A. D. Fairs and markets, which evidently increased rather than diminished, were especially inveighed against under Henry VI in 1448. The sale of goods by "cobblers and cordwainers in the city of London," excepting in certain localities, was forbidden "on Sunday and other festivals," in 1464. In 1547, under Edward VI, more stringent regulations concerning religious worship on Sunday were introduced. In 1552 he issued "an act for the keeping holy days and fast days," which included a large number of days and made many strict prohibitions. The "Injunctions of Elizabeth" created a stricter legislation, and made special provision for the appointment of "discreet men to see that all the parishioners duly resort to their churches upon Sundays and all holy days," and to punish neglect thereof. The spread of the Puritanic element in England, which urged this stricter legislation, was opposed by the "Book of Sports," first published by James I in 1618, and republished by Charles I in 1633. This declaration set aside much of the stricter legislation that preceded it, and favored the ruder and irreligious habits of the masses.

The Sunday legislation in England that was peculiarly Puritanic, dates from 1640 to 1660. The Sunday laws passed during the Puritan supremacy, were at once civil enactments and theological treatises. In strictness of requirement, extent of application, special features, regulations, and provisions, these laws are in strong contrast with nearly all that preceded them. They form a curious and interesting epoch in the history of Sunday legislation. They are prefaced by the complaint that Sunday was little regarded as a sacred day, and was wickedly desecrated by business and recreation. They forbade all secular business, traveling, and recreation, in careful detail. They specified minutely in all particulars, and instituted a rigid system of police supervision and of punishment. The dates of the long and prominent laws under Cromwell are 1644, 1650, and 1656. In connection with these laws, and in the more stringent laws enacted before and after the Cromwellian supremacy, excise regulations concerning drinking-shops were prominent.

Sunday legislation in Scotland appeared under James I in 1424; the main feature of the first law being a requirement that all men practice themselves in archery in connection with their attendance upon parish churches on "holy days," under penalty of fine. This was in the interest of military service. In 1469, under James III, special legislation forbade moving, collecting of rents, etc., on holy days. Next came the forbidding of fairs and markets, in 1503. From this time Sunday legislation increased in strictness, being in its general characteristics like that of England, and allied

to that of the Cromwellian period. This legislation also included "legal fast days," as early as 1693. Many of these Scotch laws are still in force.

The first Sunday law in America was enacted in Virginia, previous to 1623. It punished absence from church service on Sunday, without excuse, by the forfeiture of fifty pounds of tobacco. But the representative and most important type of Sunday legislation during the colonial period, appeared in the New England colonies. The early government of these colonies was theocratic, after the Jewish model; and all Sunday legislation was analogous to, or identical with, the Mosaic legislation concerning the Sabbath (Saturday). This legislation began in the Plymouth Colony as early as 1650, previous to which time the common law of England was regnant in the colonies. All this colonial legislation was emphatically religious. The usual punishments were fine, imprisonment, whipping, caging, and setting in the stocks. This legislation forbade servile work, and even the simplest forms of recreation, not excepting "walking in the streets or fields after sunset on Saturday night, and before sunset on Sunday." It also required attendance on such public worship as was legally established, and forbade all other. Police regulations were rigidly enforced. Sunday exercise legislation began in the Plymouth Colony as early as 1662. By a law enacted in that year at Plymouth, those having occasion to travel, "in case of danger of death, or such necessitous occasion," were to receive a ticket from one appointed for that purpose, without which the traveler was liable to arrest by any person. Servile work and sports were also forbidden on days of public fasting, prayer, and thanksgiving. In 1665, in the Plymouth Colony, sleeping in church was forbidden, under penalty of being admonished for the first offense, set in the stocks for the second, and being reported to the court for further punishment if this did not reclaim. In 1669 sleeping and playing outside the building, and near the meeting-house, were also forbidden, under penalty. A fine of twelve-pence was inflicted upon "any person or persons that shall be found smoking of tobacco on the Lord's Day, going to or coming from the meetings, within two miles of the meeting-house."

The first Sunday legislation in the Massachusetts Bay Colony was in 1629. This ordered the cessation of all labor on "every Saturday throughout the year, at three of the clock in the afternoon," and the spending of the rest of that day in "catechizing and preparation for the Sabbath, as the ministers shall direct." In 1644, among the answers of the reverend elders to certain questions propounded to them, they agreed that "any sin committed with a high hand, as the gathering of sticks on the Sabbath-day, may be punished with death, when a lesser punishment might serve for gathering sticks privily and in some need."

The first draft of certain laws for this colony made "profaning the Lord's Day, in a careless or scornful neglect or contempt thereof," a capital crime. This form of the law was erased from the code as finally adopted. In 1679 the General Court at Boston set a special guard "from sunset on Saturday night until nine of the clock or after, between the fortification and the town's end," with instructions not to permit any cart, footman, or horseman to pass out of the town, except upon such necessity as the guard deemed sufficient. Those who disregarded the challenge of the guard were proceeded against as "Sabbath-breakers."

Sunday legislation in the New Haven Colony began in 1647. It forbade all work from sunset to sunset, with punishment according to the judgment of the court. About this time, also, profaning Sunday, "either by sinful, servile work, unlawful sports, or careless neglect, was punished by fine, imprisonment, or whipping," and upon evidence that the "sin was proudly, presumptuously, and with a high hand committed, against the known authority of the blessed God, such a person therein disobeying and reproaching the Lord shall be put to death, that all others may fear and shun such provoking and rebellious courses." In the colony of Connecticut there were at first no special statutes concerning Sunday. The code of 1650 punished burglary or theft, "in the fields or in the house, on the Lord's Day," by the loss of one ear for the first offense, and the second ear for the second offense. For the third offense, "he shall be put to death." These requirements were often repeated, being enlarged or changed in minor particulars.

Sunday legislation in the colony of Rhode Island was less severe than in those already noticed; but there was a general prohibition of labor, gaming, shooting, drinking, etc. In the colony of New Netherlands (New York) in 1647, the dictator issued a proclamation against "Sabbath-breaking, brawling, and drunkenness." In the colony of Pennsylvania the early Sunday legislation was much more lenient than in New England. Virginia led in Sunday legislation, although that legislation never reached such extreme features as were common in New England. The Sunday laws of New England were not a dead letter; many examples of punishment for "Sabbath-breaking" are on record, while the majority of cases were tried in the lower courts, concerning which no record remains.

The Sunday laws of the colonial period passed into the legislation of the States, but in most instances were considerably modified. Naturally the Eastern States, where colonial influences had been strongest, retained more of the rigid features of the earlier laws. The influences connected with the Revolutionary War diminished religious regard for Sunday in no small degree, and the stricter features were gradually eliminated from subsequent legislation. The Sunday laws of the Western and

Southwestern States are slight in extent and mild in requirements, when compared with earlier legislation. This is still more marked in the Territories. Arizona has no Sunday laws, and Colorado and Wyoming scarcely more than fragments; while the former law of California, though mild, was wholly repealed in 1888. Louisiana had no Sunday law until 1886, and the original law of Massachusetts was so amended in 1887 as to make it extremely liberal. In general, the Sunday laws forbid ordinary employment—works of necessity and mercy excepted—and in a greater or less degree, sporting, gaming, fishing, and hunting. But the legal status of Sunday in the States is very different from the actual. For many years past, the Sunday laws have been nearly or quite inoperative. Aside from excise legislation, little is done to enforce existing laws. All serious efforts to do so, even against liquor-selling, have, in most instances, been checkmated by the attempt to enforce the provisions against traveling, and other secular occupations that have become almost universal. Thus opposed, those who have sought to enforce the law in one particular have soon desisted, and the execution of the law has failed. The history of this practical decline in the execution of our Sunday laws shows a marked change in the public opinion concerning the religious status of the Sunday; nor can any one seeking to analyze the causes that have produced the history here outlined, make such analysis successfully without a careful and extended consideration of the religious features of the case.

For more than twenty years past preparation has been made for an epoch in the history of Sunday legislation in the United States, which has appeared, definitely, within the current year. The National Reform Association, organized to secure a recognition of the name and authority of God and Christ in the national Constitution, has included in its mission the work of reviving and securing the better enforcement of existing Sunday laws, and the enactment of more stringent ones. The National Women's Christian Temperance Union has lately entered into this movement with great zeal; and, still later, individuals in religious circles have joined in the movement, by organizing "The American Sabbath Union." In May, 1888, a bill was introduced into Congress by Senator Blair, of New Hampshire, proposing national legislation which forbids all secular business and work on Sunday, in all places under the control of Congress, such as the postal service, the army and navy, the Territories, and in interstate commerce. At the present writing this bill is in the hands of a committee which has granted two public hearings to the advocates of the bill, in one of which the opponents of the bill were also recognized. This movement is a radical departure from the historical policy of the United States concerning Sunday legislation. The friends of the bill claim that it is necessary,

since State legislation is of little value, while the nation, in its corporate capacity through the Post-Office Department and otherwise, continues "to be the greatest Sabbath-breaker"; that State laws against commerce and traveling are insufficient, and hence Sunday legislation must continue to be a failure, unless Congress assumes control of all such matters, under the general provisions of the interstate commerce act. The history of this movement includes two prominent features. It involves more extended efforts, and more nearly national organization in its favor, among the religious people of the United States than any similar movement in the history of the nation. Through their efforts, the "the workingmen," so-called, and especially representative organizations in which these are combined, are petitioning Congress for the passage of the bill. The friends of this movement claim that the Roman Catholics of the United States have united with Protestants in support of the Blair Bill. Those who advocate its passage on religious grounds, insist that they do not wish to deal with religion directly, but desire the passage of the law for its indirect effect. Nevertheless, the bill avows a distinctly religious character, as is shown by its title: "A bill to secure to the people the enjoyment of the first day of the week, commonly known as the Lord's Day, as a day of rest, and to promote its observance as a day of religious worship." The history of this movement also includes an unprecedented interest and agitation on the part of the people in the various phases of the Sunday question. The Blair Sunday-Rest bill expired in the hands of the Committee, in March, 1889.

It is impossible to trace the results of Sunday legislation in detail in different periods; but some general results appear in the successive laws. Prominent among these is the fact that legislation has not secured religious regard for Sunday. Neither has legislation been strictly enforced and sustained in any period when there was not high religious regard for Sunday. The general effect has been, rather, the development of Sunday as a holiday; the character of this holiday varying with the state of civilization, refinement, and general culture. The verdict on this point, as shown in the results connected with the stringent legislation of the Puritan period, both in Great Britain and in the United States, is emphatic and important. Such legislation has always been lightly regarded by the irreligious. In spite of all stringent legislation, the strictness required under the Puritan *régime* declined rapidly in England, and steadily, though perhaps a little less rapidly, in the New England colonies, where such legislation passed through a searching historic test. In many instances the history of Sunday legislation shows that enforced abstinence from legitimate business has increased objectionable holidayism on the part of the irreligious. Another fact is clearly set forth in the history of

this legislation, especially in modern times, viz., that the more carefully men have studied the history of such legislation and its philosophy, the less eager have they been in its support; if, indeed, they have not wholly discarded it. The discussions of the past few years, and in some instances the decisions of courts, have sought a new basis for Sunday legislation in the needs of society and of individuals, apart from religious considerations. Many now deny the right of the civil law to touch Sunday in any way as a religious institution, and admit only the right to consider it as a legal holiday, on hygienic and economic grounds. See Irmischer's "State and Church Ordinances concerning the Christian Observances of Sunday" (Erlangen, 1839), and Lewis's "Critical History of Sunday Legislation from 821 to 1888" (New York, 1888).

SURGERY. While the advance in the science of surgery during the past three years has been great, it has not been due to the addition of many new ideas, but rather to the development of some already suggested and partly tested.

Bacteriology.—The study of bacteria, or the germs of disease, has been pursued vigorously. Many troubles belonging to the domain of surgery are directly caused by these organisms, and by their exclusion or destruction prevention or cure is accomplished. The following surgical diseases are proved to be due to microbes, and their peculiar forms of bacteria are so well known that the diagnosis can be made from them alone: The various forms of tuberculosis or scrofula, septicæmia or pyæmia, anthrax or malignant pustule, suppurative inflammation (abscess), gonorrhœa, glanders, and hydrophobia. Many other diseases are presumed to have the same origin, but we must wait for proof positive. Cancer and syphilis are among these latter. While there can be little doubt that their peculiar bacteria have been discovered, that fact has not yet been placed beyond a question. The antiseptic method is founded on the germ theory, and neglect of it on the one hand, or strict observance on the other, will furnish ample proof of the correctness of the theory.

Anæsthetics.—Many new substances have been tested, but a good anæsthetic has not been added to the list. Cocaine has been extensively experimented with, and has proved very valuable. It has aided greatly in the study and treatment of diseases of the eye and the throat. It is extremely useful in small surgical operations and in dressings. For instance, abscesses, felons, small tumors, etc., may be operated upon painlessly by its aid, and irritable wounds may be dressed without discomfort. When it can be employed it possesses a great advantage, as its effect is local and transient, and we can have the intelligent co-operation of the patient.

Antiseptics.—In general, our methods of securing an aseptic condition have not changed. By aseptic is understood freedom from germs of disease that cause inflammation, blood-

poisoning, and similar conditions. It is chemical and microscopic cleanliness. The weak solution of corrosive sublimate (1:1000), carbolic acid, and heat (for the instruments and dressings), are the chief agents employed. A new substance called creoline is being tested, and has shown excellent results. It is a coal-tar product. The advance in this connection has been a more general knowledge of its importance and a more universal adoption of its use.

Abdomen.—In surgery of the abdomen the greatest advance in medical science has been made. By the careful use of antiseptic measures the operation known as laparotomy, or opening the abdominal cavity, is so free from danger that the patient is put to scarcely any risk, and we are therefore able to treat successfully and safely many diseases and accidents that formerly would have been hopeless. The past three years have added little that is entirely new in this connection, but there has been great improvement in operative technique, and consequently much better statistics as to results.

The most important operations are: 1. Gastrotomy, or opening the stomach for the removal of foreign bodies. 2. Gastrorrhaphy, or sewing wounds of the stomach-wall. 3. Digital dilatation of the intestinal end of the stomach, done by forcing the finger through the opening to the intestine without cutting (except the laparotomy). The intestine is inverted over the end of the finger, and the constriction is dilated. This is done in cases of stricture due to cancer or to scar following ulceration. 4. Gastro-enterostomy, or joining the intestine to the side of the stomach and making a communication between them, so that the food shall pass through the new opening. This is done for cancer at the lower end of the stomach or at the upper end of the bowel. 5. Removing intestinal obstruction, which may be due to any one of several causes, such as twisting or knotting of the bowel, telescoping of a portion of the intestine within itself, constriction due to matting together of the bowels by inflammation, impaction of foreign bodies, often gall-stones, etc. 6. Resection or removal of a diseased portion of the intestine in cases of cancer, gangrene, extensive wound, typhoid ulceration causing peritonitis, etc. 7. Enterorrhaphy, or sewing of wounds of intestine. 8. Entero-enterostomy, or making a direct communication between two portions of the intestine, so that their contents shall pass through the new opening and avoid the intervening diseased part of the bowel. This is done in case of cancer. 9. Abscesses or cystic tumors of the liver may be opened and cured. The laparotomy is done, and the wall of the abscess or cyst is sewed to the abdominal wall, and not opened till the third day. By that time firm union takes place, and there can be no leakage into the abdominal cavity. 10. The gall-bladder may be opened (cholecystotomy), and accumulated

gall-stones removed. Peritonitis is treated surgically. Laparotomy is performed, and the cause removed. A frequent cause of peritonitis, and one that is often cured, is perforation of the vermiform appendix, due to ulceration or gangrene. The diseased appendix is removed, then the abdominal cavity is disinfected by washing, carefully dried, and closed. This is also done in peritonitis from other causes. Hæmorrhage from an abdominal organ, following disease or accident, may be arrested. Laparotomy is performed, and the bleeding vessel ligated. Tumors of many of the organs may be removed, especially those of the uterus and ovaries. The uterus and ovaries may be removed when diseased. All the above-named operations are done frequently and with good results. An important innovation in this connection is the device known as Senn's absorbable plates, used for the various sewing operations on the intestines. They consist of flat rings of bone, from which the mineral elements have been removed by acid and are used as follows: To each circular plate four threads are attached and passed through needles. One plate is then placed in each end of the intestine that is to be united, and the needles passed through the intestine from the interior about a quarter of an inch from the margin. The corresponding threads are then tied tightly together, bringing the outer layer of the intestines firmly in contact, pressed together between the two rings of bone. Nature causes adhesion to take place in a few hours, which gradually becomes a complete union. The bone plates are softened, and, after a few days, are discharged through the bowels. This is a complete and rapid method of connecting the parts. The old method of sewing the ends together required from one to two and a half hours, while this process can be completed in about half an hour.

Hernia is cured by operation, with little or no risk. The proportion of permanent cures has greatly improved, owing to better methods and to the increased experience of individual surgeons.

But little has been added to our possibilities in surgery of the kidneys and bladder. An ingenious instrument has been perfected, known as the cystoscope, which enables us to explore the interior of the bladder visually and renders our means of diagnosis much more perfect and extended. It consists of a tube, at the end of which is a small but powerful electric lamp which illuminates the bladder. The tube is passed into the bladder, as a catheter would be, and the current turned on, the bladder having first been filled with water. The entire interior of the bladder is seen, part at a time, in a small mirror at the end of the tube. A telescope in the tube magnifies the image to about the actual size. Tumors, ulcerations, encysted stones, etc., can be seen, which could not be detected otherwise without opening the bladder. By watch-

ing the urine enter the bladder, we can tell which kidney is the source of hæmorrhage or of pus.

Enlargement of the prostate gland, obstructing the flow of urine from the bladder, has of late been successfully treated by operation. Operations on the kidney are not new, but the results are much better than formerly. The removal of a stone from the kidney has become a comparatively common operation, and is quite free from danger. Floating or movable kidneys are replaced and retained by sutures; and in case of destruction of a kidney by disease, as diffuse abscess or cystic degeneration or tubercular disease, the unhealthy organ may be removed, the other kidney carrying on the work.

The Brain and the Nervous System.—The brain has become much more a field for operative surgery, and mortality from its diseases and injuries has been diminished considerably, many cases being saved by an operation which formerly would have been lost. A most important advance in this direction is our enlarged and improved knowledge of what is known as cerebral localization, i. e., determining, by paralysis and other nervous phenomena in a given part of the body, exactly what part of the brain or spinal cord is affected, and to about what extent. So exact has our knowledge become that abscesses, tumors, inflammatory changes, bullets, hæmorrhage, old fractures causing pressure on the brain, etc., can be successfully located and operated upon. Many parts of the brain may be cut into quite freely without producing ill effects. This has been shown by experiments on animals and by some remarkable cases of head-injury. By removing diseased conditions, many cases of epilepsy, constant headache, neuralgia, and paralysis have been cured. The interior of the skull is reached by removing a button-shaped piece of bone with a trephine. Tumors have been removed from the spinal cord, and some cases have been successfully treated where the bone has been pressed upon the nerve substance by fracture of the spinal column. It has been known for a long time that a nerve accidentally divided may be sewed together and regain its full power. This practice was at first confined to recent cases, but lately cases of local paralysis of long standing are cured by this operation.

Respiratory Organs.—The most important addition to the treatment of diseases of the larynx is known as intubation of the larynx (O'Dwyer). It is especially useful in cases of obstruction of the larynx due to diphtheria and membranous croup. It is now universally employed, and has greatly reduced the death-rate. It is a substitute for the operation of tracheotomy, consisting in placing a very perfectly shaped and sized tube in the larynx, through the natural opening. This forms a metallic lining to the larynx, through which the patient breathes. The tube can be retained several days, and is not removed until the disease has subsided.

Tumors of the larynx are frequently removed by making an incision through the front of the organ, which is afterward closed. Complete removal of the larynx for cancer has been done successfully in a sufficient number of instances to prove it to be a justifiable operation in exceptionally favorable cases. The death-rate from the operation is very high, but in considering this point we must remember that the disease is fatal, and that, without the operation, the patient's life can be but short. We are limited in our ability to operate on the lungs. The attempt has been made to cure localized consumption by excision; but, with our present skill, the undertaking is too dangerous. Some very brilliant results, however, have been obtained in the treatment of abscess of the lungs by surgical means.

The Eye.—Here, also, has been a steady advance, though little that is entirely new has been done. Since the last writing some successful transplantations of animals' eyes have been made on human subjects. The object is to furnish a living artificial eye. It is hoped, in young patients, that the eye (of a young animal) will cause the orbital cavity to continue to grow as does the unaffected one, so that there shall be but little difference in size at the time of maturity.

SWEDEN AND NORWAY, two kingdoms in the north of Europe united in one sovereignty by the act promulgated Aug. 6, 1815. They have a common diplomacy, which is directed by a Council of State composed of Swedes and Norwegians. The reigning sovereign is Oscar II, born Jan. 21, 1829, who succeeded to the throne in 1872.

SWEDEN.—The Diet consists of two chambers, both elective. The First Chamber has 143 members, elected by the provincial and municipal bodies for nine years. The Second Chamber contains 222 members, of whom 76 represent the towns and 146 the rural districts, elected for three years. The King, in the exercise of the executive power, in making appointments to office, in concluding treaties, and in legislating on matters of political administration, acts under the advice of a Council of State, which was composed, in 1888, of the following members: Oskar R. Themptander, Minister of State; Count Albert Carl Lars Ehrensvärd, Minister of Foreign Affairs; Nils Henrik Vult von Steyern, Minister of Justice; Gen. Knut Axel Ryding, Minister of War; Baron Carl Gustaf von Otter, Minister of Marine; Julius Edvard von Krusenstjerna, Minister of the Interior; Baron Claes Gustaf Adolf Tamm, Minister of Finance; Carl Gustaf Hammar skjöld, Minister of Education and Ecclesiastical Affairs; Johan Henrik Lovén; and Johan Christer Emil Richert.

Finances.—The budget for 1889 makes the ordinary receipts 18,929,000 kronor, and the extraordinary receipts 65,280,000 kronor, giving a total sum, with 3,472,000 kronor remaining in the treasury from the previous year, of

87,681,000 kronor. The ordinary receipts are made up of 4,435,000 kronor from land-taxes, 2,700,000 kronor from farmed domains, 1,600,000 kronor from forests, 1,200,000 kronor from tonnage dues, 6,000,000 kronor net receipts from railways, 1,200,000 kronor from telegraphs, and 1,794,000 kronor from other sources. The customs revenue, amounting to 86,000,000 kronor, the postal receipts of 6,580,000, the stamp-tax, yielding 3,500,000 kronor, the spirit duty, amounting to 15,000,000 kronor, the income-tax, reckoned at 3,600,000 kronor, and the sugar duty and other receipts, amounting to 600,000 kronor, constitute the extraordinary receipts. The ordinary expenditures are estimated at 65,493,411 kronor. The capital of the public debt, which was contracted exclusively for the construction of railways, was 245,967,708 kronor on Jan. 1, 1888.

The Army.—The Swedish army in 1888 numbered 9 general officers, 38 officers on the staff, 974 officers and men in the engineer corps, 4,520 in the artillery, 4,974 in the cavalry, 27,468 in the infantry, and 303 in the transport service, making a total of 88,289 inclusive of civil employes. The enlisted troops, counting only rank and file, numbered 9,423, and the cantoned troops 26,657. Including the *bevärning*, or militia, the forces of the kingdom had a total strength of 194,577 officers and men, with 246 cannon and 6,178 horses.

The Navy.—The naval force in 1887 comprised 15 armored gunboats, 16 sloop gunboats, 1 school-ship, 1 frigate, 3 corvettes, 3 avisos, 1 torpedo school-ship, 18 torpedo-boats, 6 transports, and 6 sailing-vessels.

Commerce.—The imports in 1886 were of the total value of 801,366,000, kronor as compared with 840,003,000 kronor in 1885 and 825,817,000 kronor in 1884. The value of the exports was 228,398,000 kronor, as compared with 246,271,000 kronor in 1885 and 238,612,000 kronor in 1884 (1 krona = 27 cents). Nearly one third of the imports in 1886 came from Germany, one fourth from Great Britain, and one seventh from Denmark, while of the exports nearly one half went to Great Britain, and one third were divided between Denmark, Germany, and France. The imports of textile manufactures in 1885 were valued at 53,929,186 kronor, and those of textile materials and yarn at 29,686,080 kronor. Grain and flour were imported to the amount of 46,813,719 kronor, while the exports amounted to 28,544,414 kronor. The imports of groceries amounted to 41,535,545 kronor; of coal, 25,000,000 kronor; of metal goods and machinery, 28,682,618 kronor. The imports of live animals and animal food-products were valued at 22,490,777 kronor, and the exports at 33,772,438 kronor. The timber exports were 107,215,793 kronor in value, and those of raw metals 34,751,320 kronor.

Communications.—There were in operation at the end of 1887 2,496 kilometres of state rail-

roads and 2,892 kilometres of lines belonging to companies, making altogether 7,388 kilometres, or 4,588 miles.

The Post-Office in 1886 forwarded 52,022,864 letters and postal-cards, 9,462,185 circulars and samples, and 39,664,046 journals. The receipts were 6,106,476 kronor, and the expenses 5,896,960 kronor.

The state telegraph lines in 1887 had a total length of 8,845 kilometres, with 21,804 kilometres of wires. The dispatches sent during the year numbered 589,278 for the interior and 489,146 in the international service, besides 161,287 in transit. The receipts were 1,229,860 kronor, and the expenses 1,241,978 kronor.

Politics.—The old Agrarian party gave place to a new one of protectionist leanings, which achieved an unexpected victory in the elections for the Riksdag that met in January, 1888. In Stockholm there was a disputed election, which was decided by awarding the 22 seats to the Protectionist candidates, giving the party a majority in the House of 112 against 110. Prime Minister Themptander offered his resignation to the King, and advised him to send for Archbishop Sundberg; but the latter was unwilling to take the responsibility of broaching a decided protective policy with a chance majority that was not proved to represent the actual majority of electors in the country. As the King would not agree to an immediate dissolution of the Diet, the ministers retained their portfolios until, on February 6, a compromise Cabinet was formed by Baron D. A. G. Bildt, in which Count Ehrensvärd, J. von Krusenstjerna, and Baron Otter, the Ministers of Foreign Affairs, the Interior, and Marine, were retained in office. The new members of the Cabinet were as follow: Bergström, Minister of Justice; Maj.-Gen. Baron N. A. H. Palmstjerna, Minister of War; Baron F. von Essen, Minister of Finance; and Dr. G. Wennerberg, Minister of Ecclesiastical Affairs. Of the two Associate Ministers, Lovén and Lönnegren, the former served in the Themptander Cabinet. The elections for the First Chamber in September placed beyond a doubt the preponderance of the protectionist sentiment in the country. The Chief of the Department of Justice retired from the ministry, and was replaced on September 28 by U. G. A. Orbom, and on the same date Baron A. L. E. Akerhielm succeeded State Councillor Lönnegren. Krusenstjerna and Count Ehrensvärd, two pronounced Free-Traders, offered their resignations, but were induced to withdraw them.

The grain tariff was passed by a majority of 117 against 96 in the Second Chamber and 73 against 42 in the First Chamber, and went into force on February 14. The duties are 2.50 kronor per 100 kilogrammes on wheat, rye, barley, maize, peas, and beans; 4.30 kronor on flour; 8 kronor on malt; and 1 kronor on oats. The import duties on spirits were made much higher, although the budget committee

considered that the grain duties would add enough to the revenue to make the accounts balance. The Diet, which had a considerable Protectionist majority even in the joint session of both houses, proceeded to impose a series of protective duties calculated to yield 15,000,000 kronor annually, while the ministers remained entirely neutral. The new tariff went into force on July 1, except the duties on raw iron, which were postponed, pending negotiations with France in regard to the free importation of Swedish iron. Ships were declared free of duty if purchased by Swedes before July 1 and brought into the country before the end of the year. The surplus revenue obtained by the new duties is to be applied, in accordance with the desire of the King, in establishing accident insurance and old-age pensions for workmen; for the reduction of local taxes, especially those for the support of churches and public charities; for the reduction of the land-tax; for the equipment and maintenance of the military forces; and for the encouragement of the shipping industry. In accordance with King Oscar's suggestion, a commission was appointed to draw up plans for the application of the surplus revenue from the protective duties in the manner proposed for the relief of the working and farming classes. The increased revenue for 1889 and 1890 will be required to cover the deficits for 1886 and 1887, so that three years must pass before there will be means available for these objects.

The new tariff places a duty on raw iron, in which there is no foreign competition, but could not be made to protect manufacturers of machinery and iron wares, because these articles are embraced in the commercial treaty with France, which will not expire till Feb. 1, 1892. The treaty of 1874 with Norway renders illusory many of the new duties, and diverts the benefit to Norwegian producers. This treaty provides for free trade between the two countries, not only in the products of the countries themselves, but in all articles that have been subjected to a manufacturing process made from materials imported in a raw or partly finished state from other countries. The Norwegians, in competing with Swedish manufacturers, have the advantage of free materials for iron manufactures and ship-building. The Swedish duties on live animals, in like manner, benefit Norwegian stock-raisers, who can abundantly supply the demand for sheep, hogs, cattle, and horses.

The new ministry was attacked by the Advanced Liberals not only for its protective policy, which threatened to shut out foreign commerce with tariff barriers, but for its reactionary political tendencies, manifested especially in an administrative order to the police to watch and, if necessary, to close political meetings. This was designed to put an end to the meetings of Social Democrats and their agitation for universal suffrage. The Themptander Cabinet appointed a commission after

the first manifestations of Socialistic activity in Sweden to consider measures for improving the condition of the working-classes. This commission, in September, 1888, reported projects of laws embracing measures for the protection of the life and health of workmen, the insurance of laborers and seamen against accidents, and a state insurance establishment.

Norway.—The legislative power is vested in the Storting, consisting of 114 members, which, on assembling, divides itself into the Odelsting and the Lagthing. All legislation originates in the Odelsting, which is thrice as numerous as the Lagthing. The smaller body adopts or rejects the bills that come from the other House. Bills that are rejected by the Lagthing can be passed by a vote of two thirds of the entire Storting sitting together. The King can veto a measure twice, but, if it is passed by three successive Storthings, it becomes law. The executive authority is exercised by the King through a Council of State, consisting of a Minister of State in Christiania, another minister residing in Stockholm near the King, and at least seven Councilors of State, of whom two reside in Stockholm. The Council of State at Christiania in the beginning of 1888 was composed as follows: Minister of State, Johan Sverdrup; Department of Education and Ecclesiastical Affairs, Dr. Elias Blix; Department of Justice, Hans Georg Jakob Stang; Department of the Interior, Sofus Anton Birger Arotander; Department of Public Works, Birger Kildal; Department of Finance and Customs, Baard Madsen Haugland; Department of Defense, Johan Sverdrup; Department of the Revision of Accounts, Jakob Liv Rosted Sverdrup. The delegation of the Council of State at Stockholm was composed of Ole Richter, Minister of State, and Aimar August Sörensen and Hans Rasmus Astrup, Councilors of State.

Finances.—The receipts of the treasury for the year ending June 30, 1887, were 42,977,000 kronor, of which sum 19,495,600 kronor were derived from customs, 6,088,400 kronor from railways, 2,594,400 kronor from the brandy-tax, 2,276,700 kronor from the postal service, 2,165,700 kronor from invested capital, and smaller amounts from the malt duty, domains and forests, and other sources. The total expenditure was 43,145,400 kronor, of which 7,951,800 kronor were for railroads, bridges, and other public works, 9,026,800 kronor for the administration of the finances, 5,280,100 kronor for posts, telegraphs, and other services under the charge of the Interior Department, 4,310,800 kronor for education and worship, 4,131,400 kronor for sanitary service, police, and prisons, 6,654,100 kronor for the army, and 2,601,900 kronor for the navy. The amount of the state debt on June 30, 1887, was 108,427,600 kronor, and of active capital 139,207,700 kronor.

The Army.—By virtue of the laws of 1866, 1876, and 1885, the military forces are divided

into troops of the line, *landværn*, and *landstorm*. The troops of the line are limited to 800 officers and 18,000 men. The other bodies are destined for the defense of the country within its borders.

The Navy.—The fleet of war in 1887 consisted of 4 monitors, 2 frigates, 2 corvettes, 30 gun-boats, 9 torpedo-boats, and 7 other vessels, having a total armament of 168 guns.

Commerce.—The total value of the imports in 1887 was 133,691,000 kronor, as compared with 135,169,000 kronor in 1886; the value of the exports was 106,628,000 kronor, as compared with 102,844,000 kronor. The average value of the imports for the five years preceding was 152,272,000 kronor, and of the exports 111,215,000 kronor. The imports from Great Britain in 1887 were 85,368,000 kronor in value; from Germany, 34,950,000 kronor; from Sweden, 16,873,000 kronor; from Russia, 14,873,000 kronor. The exports to Great Britain were valued at 34,588,000 kronor; to Sweden, 14,455,000 kronor; to Germany, 13,817,000 kronor. The value of the imports from the United States was 7,185,000 kronor, and of the exports to the United States 1,108,000 kronor. The imports of cereals and flour in 1886 were of the value of 26,891,000 kronor, the most important article being wool, of the value of 9,328,000 kronor, after which came coffee, coal, sugar, butter and cheese, and cotton goods. Fish was exported of the value of 31,153,000 kronor, and timber of the value of 29,275,000 kronor. Other articles of export are wood-pulp, train-oil, butter, woolen and cotton goods, skins and hides, and matches.

Communications.—The length of railroads open to traffic in 1888 was 1,562 kilometres, or 970 miles.

There were 21,722,315 letters and 21,332,664 newspapers carried in the mails during 1887. The receipts of the Post-Office were 2,866,288 kronor; expenses, 2,439,355 kronor.

The state telegraph lines at the end of 1887 had a length of 7,494 kilometres, with 18,087 kilometres of wires. The number of internal dispatches was 442,660 in 1887; of foreign dispatches, 172,621 sent and 214,215 received. The receipts were 838,528 kronor; expenses, 1,080,487 kronor.

Politics.—The dissatisfaction of the Radicals with the Cabinet led to their secession from the party in the beginning of the year on the refusal of the Premier to dismiss his nephew, Jakob Sverdrup, and admit the Democratic leaders, Steen and Qvam, into the ministry. The Storting was opened on February 2. The Odelsting did not re-elect Qvam as president, but Daae, a Moderate. The left formally dissolved itself, and a group of the Pure Left was constituted under the leadership of Rector Steen. The Radical ministers, Arotander, Astrup, and Kildal, retired, and their resignations were accepted on February 16 by the King, whom the crisis brought to Christiania. Two weeks later the Minister of Education and

Worship, Dr. Elias Blix, resigned. The Opposition mustered 51 in the Storthing on a vote of censure emanating from the Radical Left, the Government being supported by 30 Moderates and 81 men of the Right. In June Ole Richter, the Minister of State, representing the Government at Stockholm, and Aimar A. Sörenssen, of the same section of the ministry, handed in their resignations, and Hans G. J. Stang and Baard M. Haugland were transferred to their posts. Richter's resignation was the consequence of an attack on the Prime Minister by Björnson Björnstierna, the real leader of the Radical party, who accused Sverdrup of falsehood and violation of his word on the authority of his colleague in Stockholm. Richter denied having made the accusation, but the evidence was so strong that, after his return to Stockholm, he shot himself in despair on June 15. The ministry as finally reconstituted was made up as follows: Minister of State at Ohristiania and Minister of National Defense, Johan Sverdrup; Chief of the Department of Justice and Police, W. S. Dahl, appointed March 5, 1888; Chief of the Department of Revision of Accounts, L. K. Liestøl, appointed March 5, 1888; Chief of the Department of Education and Ecclesiastical Affairs, Jakob Liv Røstved Sverdrup; Chief of the Department of Public Works, O. Jakobsen, appointed March 5, 1888; Chief of the Department of Finance and Customs, O. J. Olsen, appointed July 19, 1888; Minister of State at Stockholm, Hans Georg Jakob Stang; Councillors of State at Stockholm, Baard Madsen Haugland, previously Chief of the Department of Finance, and P. O. Schjøtt, appointed March 5, 1888. The Ministry of the Interior, formerly held by Sofus A. B. Arcander, was left vacant.

The Storthing rejected a scheme of protective duties on wheat, butter, and other agricultural products, agreeing only to an impost of 4 öre per kilogramme, equal to $\frac{1}{4}$ cent a pound, on oleomargarine, and to duties on fresh fruit ranging from 4 to 7 öre per kilogramme. On June 25 an act was passed reducing the salaries of members of the State Council from 12,000 to 10,000 kronor, and taking away the additional allowances of the councillors residing in Stockholm. The Storthing separated on July 7, after rejecting, by 64 against 50 votes, a motion of the Radicals declaring want of confidence in the ministry.

A law was passed on April 21, 1888, in relation to state citizenship, declaring that Norwegians who become citizens of foreign states lose their rights of citizenship in Norway, and likewise those who reside permanently abroad, unless they record their intention to remain as such in the Norwegian consulate within a year, and renew the declaration every ten years.

General Election.—Johan Sverdrup, when he formed a Radical ministry, was regarded as a true representative of the Norwegian Democracy, of which party he was a leader of many

years' standing. In office, however, he abandoned the principles of popular sovereignty and national independence, and made one compromise after another with the monarchist reaction that has spread through the Scandinavian lands, owing to the example and influence of Germany, until he stood on the platform of the Constitutional Right, from which his chief support now came, and was surrounded by ministerial colleagues taken from that party. The electoral contest that took place in the autumn of 1888 was embittered by the accusations of faithlessness brought against the minister. The suicide of Richter was laid to his door. Councillor Stang, the leader of the Constitutionalists, sought to make the issue one of principles, asserting that his party was the defender of the historic rights of the crown, of the connection between Church and state, and of the Union against destructive "European" innovations, foreign to the national character. The Conservatives and Ministerialists, while preserving separate party organizations, formed an electoral alliance against the Radicals. The Radical leaders, Qvam, Steen, and Konow, lost their seats, and were shut out from the next Storthing, as the law requires every candidate to be a resident of the district that he seeks to represent. The new Storthing consists of 54 members belonging to the Right, 38 adherents of the Pure Left, and 22 who belong to the ministerial group.

SWITZERLAND, a federal republic in Central Europe. The central Legislature is composed of the State Council, in which each of the twenty-two cantons is represented by two members, and the National Council, containing one deputy for every twenty thousand of the population, elected by direct universal suffrage. The executive body is the Federal Council, which was composed, in 1888, of the following members: President, W. F. Hertenstein; Vice-President, B. Hammer; members, Dr. A. Schenck, Dr. E. Welti, L. Ruchonnet, Dr. N. Droz, and Dr. A. Deucher. (For area and population, see the "Annual Cyclopædia" for 1887.)

FINANCES.—The federal revenue in 1887 amounted to 59,586,972 francs, of which 24,632,285 francs were derived from customs and 21,108,869 francs from the Post-Office. The expenditures amounted to 56,829,996 francs, the principal items being 21,157,204 francs for military administration and 19,571,324 francs for the post-office. The debt of the federation on Jan. 1, 1888, was 88,984,982 francs, and the capital assets were 78,002,798 francs.

THE ARMY.—The Swiss army consists of the regulars, called *Bundesarmee*, and the *Landwehr*. Men between the ages of seventeen and fifty, not belonging to either of these forces, are enrolled in the *Landstrum*. The strength of the regular army in 1888 was 123,081 officers and men, and that of the *Landwehr* 80,248. The *Landstrum* comprises 4,922 former officers, 5,652 non-commissioned officers,

and 287,069 men, of whom 40,247 have served in the regular army. The Federal Council has divided the Landstrum into the armed and the auxiliary forces. The active army has 20,000 horses, and is armed with the Vetterli repeating rifle with ten charges, 280 Krupp field-guns, and 22 mountain-guns. The cost of the army has nearly doubled in ten years. The Swiss Government has fortified the entrances to the St. Gothard Tunnel, and to other tunnels of the international railroad lines, and has prepared the means of blocking them instantly by filling them with stones precipitated with the aid of electricity.

Commerce.—The special imports in 1887 were valued at 792,284,000 francs; the exports at 641,918,000 francs. The imports of precious metals were 44,751,000 francs, and the exports 29,175,000 francs. Switzerland has a foreign trade of 510 francs *per capita*, which exceeds that of every other country except Holland. The commerce for three years past has increased 8 per cent. per annum, almost the entire growth having been in imports.

Railroads.—The railroads in operation in 1886 had a total length of 2,912 kilometres, exclusive of 68 kilometres belonging to foreign companies. The total capital was 1,050,608,170 francs. The receipts were 75,392,588 francs, and the expenses 41,084,353 francs. A mountain railroad over the Brünig Pass, connecting Lucerne with the Bernese Oberland, was opened in June, 1888.

The Post-Office.—The number of domestic letters and postal-cards forwarded in 1887 was 61,001,268, exclusive of 6,880,115 official letters; the number of printed inclosures, 16,292,656; of packets, 8,823,127; of postal money-orders, 2,488,221, of the total value of 275,410,943 francs. The number of international letters and postal-cards was 30,651,127; of printed inclosures, 13,576,430; of journals, 65,805,083; of packets, 2,649,474; the value of money-orders, 33,653,038 francs.

Telegraphs.—The length of the telegraph lines in 1887 was 7,060 kilometres; the length of wires, 17,102 kilometres. The number of dispatches was 8,831,155, of which 1,816,524 were internal, 1,008,097 international, 896,037 in transit, and 110,497 official. The receipts were 3,531,598 francs; expenses, 2,893,992 francs.

The Alcohol Law.—In order to check the spread of drunkenness, the Swiss Legislature made the sale of spirits a state monopoly in 1887, except such as are used in industrial processes, which must be rendered unfit for drinking. A commission of experts decided what substances should be used in denaturalizing alcohol to be used in the various industries, and fixed the proportions of the admixture in each case.

Emigration.—In 1886 the National Council passed an act to license and supervise emigration-agents, the provisions of which were made stricter by a bill approved in April, 1888. Agencies are required to give bonds in the

sum of forty thousand francs, and to pay an annual license-fee of fifty francs. Sub-agents can be employed on conditions subject to the investigation of the cantonal authorities, but an additional bond of three thousand francs is required for each. No colonial enterprise can be undertaken by companies, individuals, or agencies, without the approval of the Federal Government. When agencies undertake to forward money to emigrants in foreign lands they must deliver the full sum without deduction. A special bureau was created for the purpose of supervising emigration-agencies and furnishing information to intending emigrants, and protection to Swiss citizens in foreign countries.

Anti-Socialist Proceedings.—The German Government has brought pressure to bear on the Federal authorities continuously for several years past, to secure the suppression of the German Socialists who make Zürich their headquarters, and the Swiss rulers have done everything to please Germany except abrogating the right of asylum. Four German Anarchists, named Schopen, Metzler, Haupt, and Von Ehrenberg, were expelled from Zürich in January, 1888. Against a German, named Bürger, who had become a naturalized Swiss citizen, and acted as a spy and *agent provocateur* in the pay of the Berlin police, the cantonal authorities brought criminal proceedings. On March 20 the Bundesrath voted a credit for the establishment of a political police, which was asked for on the ground that the relations with Germany necessitated measures to prevent a disturbance of the friendship between the two countries and abuse of the right of asylum. In introducing the bill, Federal Councillor Droz said: "The majority of the Swiss people are determined that our house shall be respected by all who dwell in it. The air we breathe is the air of healthy liberty. We will not allow it to be vitiated by the miasma of anarchism. Neither shall our house be a refuge whence assaults can be directed with impunity against the repose of other countries." The chief object of the German Government was to suppress the Socialistic journals and pamphlets that are smuggled into Germany, notwithstanding the vigilance of the post-office police authorities, and, especially the "Social Demokrat" newspaper, which is the organ of the German Parliamentary Socialist party, and has a circulation of from 10,000 to 12,000 copies. Several urgent notes from the German Government demanded the suppression of this organ of moderate Socialism, which continued to spread through Germany the views that no one there dared to utter except from the tribune of the Reichstag, and was more obnoxious to the German Chancellor than the revolutionary "Rothe Teufel" and the Anarchistic *brochures* that were also issued by thousands in Zürich for circulation in Germany, because it helped to keep alive the Parliamentary party. The Fed-

eral authorities sent a warning to the editor, to which he replied in the next issue of the paper, "*Sit aut est, aut non sit.*" Yet he was careful not to print anything that could give occasion for interference. The German authorities were not satisfied, and fresh representations from Berlin made it a point that Switzerland should prevent Germans from using the right of asylum to carry on a political agitation in their own country. At length the Federal Council decided on April 16 to issue a decree of expulsion against four Germans connected with the paper: Bernstein, the editor, who came from Berlin; Schlütter, the publisher, a native of Schleswig-Holstein; Tauscher, the business manager, a naturalized American, who once lived in Chicago; and Motteler, formerly editor of a journal in Saxony, and an ex-member of the German Parliament, who was the agent for circulating the paper. The printing-office was not suppressed, because it was carried on under the firm name of a Swiss citizen, although the managers and the printers were all Germans. New editors and business agents at once stepped into the places of those who were expelled, and the journal continued to appear and to find its way into Germany just as before. In the beginning of June the Bundesrath ordered the expulsion of Ulrich Wäbbeler and Martin Eller, two Germans who had been enticed into sending a box of dynamite to an agent of the Berlin police named Schröder, in Zürich. In July the Bundesrath directed the cantonal authorities to have all Socialistic meetings watched by the police. The Swiss Socialists united into a single Social-Democratic party, and arranged to hold a Labor Assembly in October. The Swiss Government was at last induced to take measures to suppress the exportation of forbidden literature into Germany. The Bavarian, Franz Troppmann, a correspondent of the Chicago Anarchists, was expelled in September, and the evidence taken in the case of ex-Captain von Ehrenberg, of the German army, was delivered up to a military tribunal in Baden. Many Socialists joined the Swiss Grütli Association, which rejected a proposition to exclude foreigners from membership. The "Social Demokrat" was finally driven in September to change its place of publication to London. A Swiss "Social Demokrat" was established during the summer, and announced the programme of a Swiss Socialistic party, embracing obligatory education up to the age of fifteen; assistance for capable poor students who wish to complete their education in the higher institutions of learning; election of the Bundesrath by the people; a Federal code of criminal law; obligatory sick and accident insurance, gratuitous medical service, and Federal trade laws; the acquisition by the state of railroads, and management by the Government of banking and the grain-trade; the recognition in the Constitution of the right of all citizens to labor, and of the duty of the authorities

to provide every one who asks, with work corresponding to his abilities and justly compensated either in the service of the public or of private persons who are willing to furnish the employment; and the gradual naturalization of commerce, transportation, industry, and agriculture, with the distribution among the producers, as equally as is expedient, of the proceeds over and above the working expenses, and a sum was set aside for insurance, justice, military, civil administration, etc.

Commercial Treaties.—Negotiations for a new commercial treaty with Germany were suspended, pending the settlement of commercial and railroad regulations between Germany and Austria. The German treaty with the Swiss Confederation was concluded on Nov. 15, 1888, and a Swiss-Austrian treaty on November 28. The latter embodies substantial reductions in the tariff on both sides. Switzerland obtained the same duties as Italy on silks, machinery, and other manufactures, and in return lowered the duties on grain, flour, cattle, and timber.

The Institute of International Law.—The annual meeting of the Institute of International Law was opened at Lausanne on Sept. 8, 1888. The principal subjects of discussion were the exceptions to the rule determining the capacity of persons for entering into binding contracts on foreign soil or with foreigners; the law of collisions at sea; extra-territoriality of consulates; and the obligations toward neutral powers incurred through territorial annexations. The Institute in its meeting at Oxford decided that the nationality of parties entering into contracts ought to be the test of their capacity. At Lausanne a resolution was adopted to the effect that in commercial matters, if the person seeking to escape the obligations of his contract on the ground of legal incapacity had deceived the other party in this particular, or if there were a combination of grave circumstances showing fraudulent intent, the judge should follow the law of the country in which the contract was made. The liability for negligence in maritime collisions the Institute would place upon the vessel that was the cause of the accident, except where both ships were negligent, in which case the one chiefly offending should pay its just share of the loss to the other vessel, while damages to passengers and cargoes should be divided between them. The question of the inviolability of consulates was brought up by a French member, in connection with the seizure of papers relating to a will case, by order of an Italian magistrate, in the French consulate at Florence. The consul had placed the documents among the consular archives, and warned the Italian authorities not to search the consulate, as a special article in the Treaty of 1862 between France and Italy guarantees the inviolability of the archives. The Institute decided to deal with the subject of extra-territoriality as a whole, and appointed a committee to report on the subject comprehensively. Among the other questions discussed were con-

licts of law in connection with public companies; the limitations of the right of Governments to expel foreigners; railways, telegraphs, and telephones in time of war; and the theory of the Berlin Conference on the occupation of territory. The Institute adopted resolutions in respect to the assertion of properly asserted

rights in newly annexed territory in the uncivilized parts of the globe; to the protection of vested interests of citizens of civilized nations; to freedom of access and settlement without regard to nationality; to the prohibition of slavery; and to the proper treatment of natives.

T

TEACHERS' ASSOCIATIONS. The oldest living educational association in this country is the American Institute of Instruction, organized in Boston, in 1830. The earliest educational association in this country was formed at Middletown, Conn., in 1799, under the name of "Middlesex County Association for the Improvement of Common Schools." The existence of this society was due to the efforts of the Rev. William Woodbridge, of Middletown, Conn., a famous teacher. Although this effort was premature, it gave a great impulse to the cause of education, and its recommendation was considered one of a teacher's best testimonials. There is no record of any other continuous associated movement until 1826, when Josiah Holbrook organized in Connecticut the "lyceum," which had for its main object "the association of teachers for mutual improvement." One of the first societies of this kind was organized in Windsor County, Conn., by Mr. Holbrook himself, assisted by the Rev. Samuel J. May. Twenty of these lyceums were in active operation as late as 1888. In 1827, a "Society for the Improvement of Common Schools" was formed in Hartford, and in 1830 a general convention of teachers and friends of education was held in that city, of which Noah Webster was president. This meeting was largely attended, and addresses were delivered by President Humphrey, of Amherst College, Noah Webster, and W. A. Alcott. In 1839 a State convention was held at Hartford, at which addresses were delivered by Prof. Calvin E. Stowe, Thomas Cushing, Alexander H. Everett, and Mrs. Lydia H. Sigourney. In the autumn of the same year the first teachers' institute in this country was held in Hartford, under the invitation and arrangement of the secretary of the Connecticut Board of Education. The expenses of this institute were paid by the Hon. Henry Barnard. During the same year, a plan for a State association was drawn up by Dr. Barnard, which was the first decisive movement of this kind in Connecticut, and, perhaps, in the country, although there were voluntary conferences in Massachusetts for discussing educational questions at a much earlier date. For instance, in August, 1836, "a general meeting of the registered inhabitants of the town of Boston" was convened, and money was subscribed "toward maintaining a free school-master for the youth with us." This was not distinctively an association of teachers, but it

was the beginning of conferences that led to the formation of organized efforts, as well as teachers' associations at a later date. These voluntary meetings led to the general organization of the State, and afterward to the formation of Bible, Educational, Tract, and Sunday-school societies. In 1812 the first successful effort was made to bring the teachers of Boston and vicinity into an association for their own professional improvement. The name of this was "The Associated Instructors of Youth in the Town of Boston and its Vicinity." Meetings were held for several years, and in 1835 it was reorganized under the name of "The Association of the Masters of Boston Grammar-Schools," and came before the public in the memorable controversy of the "thirty-one Boston masters" with Horace Mann, in 1844-'45. The lyceum movement mentioned above, led to the formation of the Boston Mechanics' Institute in 1827, the Boston Infant-School Society in 1828, and the Boston Society for the Diffusion of Useful Knowledge the same year, and to State educational conventions in 1829 and 1830. One result was the organization of the American Institute of Instruction, Aug. 21, 1830, annual meetings of which have been held until the present time. It was proposed to call this society "The New England Association of Teachers"; but as several of the Middle, Southern, and Western States were represented in its first conventions, and many persons not teachers were desirous of membership, a more comprehensive name and plan were adopted, although it has continued to be an association of New England teachers. Its presidents from 1830 to 1856 were Francis Wayland, William B. Calhoun, James G. Carter, George B. Emerson, Gideon F. Thayer, Thomas Sherman, and John Kingsbury. Through the efforts of James G. Carter in 1835, then a member of the Massachusetts Legislature, an appropriation of \$300 a year, for five successive years, was made in aid of the association, and this grant was from time to time renewed. Year after year the institute has held its meetings, usually in one of the principal cities or towns of New England, each session occupying three or four days in lectures, reports, and discussions. The day meetings have been attended by hundreds of teachers, school-officers, and friends of education, and the evening sessions by thousands of people.

The first national educational association was the American Association for the Advancement of Education, organized in Philadelphia in December 1849, under the leadership of Horace Mann, Alonzo Potter, Joseph Henry, Henry Barnard, Charles Northend, John S. Hart, John Griscom, Joseph Chandler, Nathan Bishop, Alexander D. Bache, Samuel S. Randall, and others. The early presidents were Horace Mann (1849), Eliphalet Nott (1850), Right Rev. Alonzo Potter (1851-'52), Joseph Henry (1853), Alexander D. Bache (1854), and Henry Barnard (1855). The credit of suggesting and originating the formation of the present National Educational Association is probably due to William Russell, who was born in Glasgow, Scotland, in 1798, and was educated in the Latin School and University of that city. He began his life work as a teacher in Georgia, and was the author of an admirable address setting forth the nature and objects of an organization that should include all the professional teachers in this country. This address was read to a convention held in Philadelphia, Aug. 27, 1857, and resulted in a formal organization of the National Teachers' Association, with Zalmon Richards as president. The first anniversary of the association was held in Cincinnati on Aug. 11-13, 1858. Its successive presidents were: Andrew J. Rickoff, J. W. Bulkley, John D. Philbrick, W. H. Wells, S. S. Green, J. P. Wickersham, J. M. Gregory, L. VanBokelen, and Daniel B. Hagar. This association was merged into the National Educational Association, at Albany, N. Y., in 1870. The successive presidents have been: J. L. Pickard (1871), E. E. White (1872), B. G. Northrop (1873), S. H. White (1874), W. T. Harris (1875), W. F. Phelps (1876), M. A. Newell (1877), John Hancock (1879), J. Ormond Wilson (1880), John H. Smart (1881), G. J. Orr (1882), E. T. Tappan (1883), Thomas W. Bicknell (1884), F. Louis Soldan (1885), N. A. Calkins (1886), W. E. Sheldon (1887), Aaron Gove (1888), and A. P. Marble (1889). These meetings have been held in most of the principal cities of our country, the last being in San Francisco. The meeting for 1889 is to be held in Nashville, Tenn. An historical sketch of the organization of the associations in each of the States would fill a large volume, but the following outline will indicate a few facts concerning their early history. In some instances the records of the first meetings have been lost, but the dates as given below are thought to be correct:

Arkansas—Teachers' Association, 1860.
 Alabama—State Educational Association, 1856.
 California—Education Society, 1854.
 Connecticut—State Association, 1839.
 District of Columbia—Association of Teachers, 1849.
 Delaware—State Convention, 1853-'56.
 Florida—Education Society, Tallahassee, 1831.
 Georgia—Teachers' Society, 1831.
 Iowa—State Teachers' Association, 1854.
 Indiana—State Teachers' Association, 1854.
 Illinois—State Education Society, 1841.
 Kansas—State Teachers' Association, 1863.

Kentucky—State Teachers' Association, 1857.
 Louisiana—Institute for the Promotion of Education, 1838.
 Mississippi—Teachers' Association, 1858.
 Maine—State Teachers' Association, 1846.
 Maryland—Institute of Education, 1843.
 Massachusetts—State Association, 1835.
 Michigan—State Education Society, 1852.
 Minnesota—State Teachers' Association, 1853.
 Missouri—Teachers' Association, 1848.
 New York—State Teachers' Association, 1845.
 New Jersey—State Teachers' Association, 1853.
 New Hampshire—State Teachers' Association, 1843.
 North Carolina—Institute of Education, 1830.
 Oregon—State Educational Association, 1863.
 Ohio—State Teachers' Association, 1853.
 Pennsylvania—State Teachers' Association, 1852.
 Rhode Island—Institute of Instruction, 1844.
 South Carolina—State Teachers' Association, 1849.
 Texas—Literary Institute, 1846.
 Tennessee—Association of Professional Teachers, 1837.
 Vermont—State Teachers' Association, 1850.
 Virginia—State Teachers' Association, 1856.
 West Virginia—State Teachers' Association, 1865.
 Wisconsin—Teachers' Association, 1853.

The National Educational Association, as now organized, is divided into the following departments: General Association; National Council of Education; and Departments of Kindergarten Work, Elementary Education, Secondary Education, Higher Education, Normal Education, Superintendence, Industrial Education, Art, and Music. The National Council of Education holds its meetings the week previous to the sessions of the General Association. During its meetings, the General Association occupies the forenoon and evening of each day, while the departments meet at assigned places in the afternoons.

Questions bearing directly upon the work of education in all parts of our country, and in all its relations, are discussed by able educators, whose papers and remarks are published in an annual volume of "Proceedings." The volume for 1888 contains 944 pages; that of 1887, 829 pages; and the volumes of several years preceding 1887 contained from 400 to 550 pages. The attendance at these meetings during the past few years has been very large. The membership attendance at Madison, 1884, was over 8,000; at Topeka, 1886, 5,000; at Chicago, 1887, about 10,500; at San Francisco, 1888, about 4,500.

Among the principal subjects discussed at the San Francisco meeting were: "The Place of Literature in Common-School Education," "The Best Discipline to Prepare Law-Abiding Citizens," "Current Criticism of Public Schools," "The Relation of the State to School Supplies," "The American Schools and the American Library," "Waste in Elementary Education," "The Business Side of City School Systems," "The University and the High School," "The Normal School and the Academy," "The Ethics of School Management," "Industrial Training and General Culture," "Elementary Music in Public Schools." As an example of the scope and value of these discussions, we refer to the papers on the relation

of the State to school-supplies. This subject, during the past few years, has been exciting considerable attention, and it was given a large place in the discussions of the California meeting. The question at issue was, Should the State raise by taxation a fund sufficient to furnish to all pupils in the public schools text-books and other supplies free of cost? In other words, should the State become a public corporation, publishing text-books and manufacturing supplies for the schools under its care? Superintendent R. W. Stevenson, of Columbus, Ohio, in discussing this question, said: "The principle underlying free text-books is wrong, and must result in evil. That government is the best which gives the people the power and the opportunity to do the most for themselves. There can be no co-operation without interest. To be interested in anything, the person must have a share in its use that costs something to secure—even in education. There are, therefore, limitations beyond which the State, for its own safety, should not go. The State that supplies those wants of its people which, by common industry and economy they can supply for themselves, encourages idleness and dependence. No good will come from a system of free text-books, but, on the contrary, great dangers. The taxation of the Northern States for school purposes is now as heavy as the people will bear. The plan of free text-books means higher taxes, or the attraction of the money now raised from more useful purposes."

Hon. L. S. Cornell, of Denver, Col., in discussing this question, said: "The members of the State board of education and text-book commissions, however constituted, are usually men whose time is fully occupied with official and private duties. They are not, as a rule, connected with the work of the common schools, and are unable to make the best selections. Books that have been adopted by such persons with the greatest confidence in their merits, have frequently been found very defective when practically tested in the school-room. The power to decide what books should be used by every child in the State, and to give some publishing-house or dealer a monopoly of the school-book trade, is too great to place in the hands of any board or commission. The record of the past in many States will testify to great danger in this direction. It is not desirable for the State to enter the field as a publisher or manufacturer on the ground of economy. No one will claim that the State will make better books than those issued by some private houses, nor that it can do the work more cheaply than they. A first-class book is a thing of growth; it can not be made to order in a few weeks or a month." The testimony of the superintendent of a Western State was given in the following words: "It has been the misfortune of our common schools that they have been forced to use books, by authority of law, which none would

prefer, while independent and special districts have been at liberty to choose for their children the best and freshest in the markets."

It was urged during the discussion that the tendency of our school systems is to make them machines that grind out all the individuality from children; that the manufacture of text-books by State authority, and the forcing of these books upon the districts, is a species of literary tyranny that is contrary to the free character of our institutions, and would intensify the "machine" in education; that there is no more sense in requiring all schools to use the same geography or history or grammar than there would be in requiring all farmers' wives to use the same kind of flour or sugar or potatoes. It was urged with great force that States attempting to adopt the system of manufacturing school-books had failed to carry with them the sympathy of the people, and thus the plan had fallen into disrepute from the evident unfairness of its requirements. It was also said by the Hon. E. E. Higbee, of Pennsylvania, that a legalized State monopoly and a uniform system of text-books by State authority would create a tyranny; that the large publishing-houses command the best skill in workmanship and the best experience of learned men and professional teachers, which the State would fail to do; that the competition now existing is itself a guarantee that prices will not be excessive, and that also the highest degree of perfection will be obtained.

In opposition to these arguments it was urged by Thomas Tash, of Portland, Maine, that it is wise to furnish text-books at public expense on account of convenience and economy. Much confusion, especially in rural districts, results from the ownership of wrong and unsuitable books. In such schools pupils do not pursue all the studies they should, or such as they ought, on the plea that they have not the books. With an ample supply of books a school can be more easily and promptly classified. There is no waiting for slow-moving fathers. Reducing the grade of scholars or loss of time or neglect of study vanish when text-books are furnished by the State. Parents criticise the classification of their children far less than under the old voluntary system. Where text books are supplied by the State, supplementary books may be furnished in any study without increase of cost—two sets of readers lasting six years costing no more than one set lasting three years.

The picture of the State establishing its own shops, gathering its material, constructing its various machines, fixing prices, enforcing the use of its books, establishing its depots of supplies and its numerous agents of distribution, its collectors, and accounts, were presented in such a forcible manner as to lead to the general verdict that such a course would be the death-knell of our inventive genius in the direction of text-book making; would cripple all self-developing enterprise on the part of

the people, and tend to destroy the chief inducements to individual impulse and activity.

The discussion of this question gives a fair example of the subjects considered by the National Association from year to year. In State and county meetings the topics discussed are generally more technical, relating to subjects usually taught in elementary village and country schools. Teachers' institutes are in some respects modified teachers' associations.

TENNESSEE. State Government.—The following were the State officers during the year: Governor, Robert L. Taylor, Democrat; Secretary of State, John Allison; Treasurer and Insurance Commissioner, Atha Thomas; Comptroller, P. P. Pickard; Attorney-General, B. J. Lea; Superintendent of Public Instruction, Frank M. Smith; Commissioner of Agriculture, Statistics, and Mines, B. M. Hord; Chief Justice of the Supreme Court, Peter Turney; Associate Justices, W. C. Folkes, W. C. Caldwell, B. L. Snodgrass, and W. H. Lurton.

Finances.—The receipts of the State Treasury for the biennial period ending Dec. 20, 1888, were \$3,694,996.37, of which \$916,002.10 is a temporary loan. Deducting this and \$22,942.50 for accidental receipts, there remains \$2,756,052.13. The total disbursements during the two years were \$3,408,761.69, of which \$373,114.43 represents Bank of Tennessee certificates paid by the State, and \$262,500 of the temporary loan repaid, leaving \$2,773,147.26 as the actual expense for ordinary purposes. This is greater than the ordinary revenue by \$17,095.33.

The assessed valuation of the State for 1888 was \$297,205,054, divided as follows: Land, \$165,479,717; town lots, \$88,646,683; personal property, \$43,078,704. The increase in valuation over 1887 is \$57,654,973. Railroad property is assessed for the year at \$32,290,302.10. There are 2,224 miles of railroad in the State.

Education.—The last annual report of the State Superintendent, for the year ending June 30, 1887, presents the following public-school statistics: Scholastic population between six and twenty-one years, white males, 248,112; white females, 230,509; total white, 478,621; colored males, 81,006; colored females, 80,387; total colored, 161,393; grand total, 640,014. Number of teachers employed: White males, 8,906; white females, 1,833; colored males, 1,075; colored females, 565; total, 7,379. Number of schools: White, 5,101; colored, 1,506; total, 6,607. Number of pupils enrolled during the year, 380,625; average daily attendance, 252,248.

The State University has undergone, during the year, a thorough reorganization; a new president and almost an entirely new faculty have been selected. Commodious buildings have been erected and the older ones improved.

Charities.—The School for the Blind, on December 20, had 84 pupils, 73 being white and 11 colored, an increase of 18 since December,

1886. The total number in the school during the past two years was 120, and the expenditures during that period were \$31,906.62.

At the School for the Deaf and Dumb the attendance at the close of the year had increased to 115.

Mills and Manufactories.—The following figures for 1888 are taken from the annual report of the State Commissioner of Statistics: Woolen-mills, 19; pounds of scoured wool used, 2,113,000; of which 887,500 pounds were Tennessee wool; hands employed, 879; cotton-mills, 23; spindles, 100,161; bales of cotton consumed, 87,610; hands employed, 2,677; iron manufactories, 13; hands employed, 5,510.

Coal.—The product for 1886 in short tons was as follows: First District, coal, 188,424; coal coked, 280,082; total, 448,506. Second District, coal, 488,917; coal coked, 811,259; total, 750,176. Third District, coal, 515,608. Total, 1,714,290 tons. The product for 1888 in short tons was: First District, coal, 332,715; coal coked, 304,700; total, 637,415. Second District, coal, 309,973; coal coked, 374,000; total, 683,973. Third District, coal, 645,909. Total for the three districts, 1,967,297 tons.

Political.—A Democratic State Convention met at Nashville on May 9, for the purpose of electing delegates at large to the St. Louis Convention, nominating presidential electors, and selecting a candidate for Governor. The two former objects were easily accomplished, but a prolonged contest arose over the gubernatorial nomination, which required a session of four days and forty ballots. Gov. Taylor was a candidate for renomination, but was opposed by a large minority of the delegates, whose support was divided between four aspirants—T. M. McConnell, W. M. Daniel, Julius A. Trousdale, and W. P. Caldwell. On the first ballot, Taylor received 649 votes, McConnell 241, Daniel 226, Trousdale 100, and Caldwell 114. A two-third vote of the 1,384 delegates was necessary for a choice. The contest was marked with so great excitement and bitterness that more than one third of the minority refused to vote at all on the decisive ballot, in which 1,081 votes were cast for Taylor, with 214 scattering votes. The nomination was then made unanimous. The resolutions included the following:

We favor such reform in our penal system as will separate minor convicts and offenders of low grade from hardened criminals, and will reduce to a minimum the competition between convict and free labor. We are opposed to all monopolies and "trusts."

On May 16 the Republicans met at Nashville and selected delegates to the Chicago Convention, but postponed the nomination of a gubernatorial candidate till the meeting of a subsequent convention on July 18. This convention selected Samuel W. Hawkins. The platform included the following:

We favor an exemption from taxation of \$1,000 worth of property in the hands of every head of a family who is a citizen of the State, without regard to its character, in lieu of the present law exempting \$1,000 worth of personal property.

We oppose the present system of assessing and equalization of values of the taxable property of the State, and favor such revision of the assessment laws as will secure a more just and equal assessment and equalization, to the end that the burdens of taxation will fall equally upon all the tax-payers of the entire State.

We are opposed to the taxation of the agents of the agricultural organizations of our State, and will favor the enactment of such laws as will secure to the farmers equal rights and privileges with all other secular occupations and professions in the State.

We again denounce the system of leasing the convicts in our Penitentiary to be worked in the mines in competition with the free labor engaged in developing our wonderful mineral resources.

Late in July the Prohibitionist State Executive Committee announced the name of J. O. Johnson as the candidate of its party. At the November election, Taylor received 156,799 votes, Hawkins 139,014, Johnson 6,898. The Legislature elected at the same time will contain 28 Democrats and 10 Republicans in the Senate, and 73 Democrats and 26 Republicans in the House. Cleveland electors were chosen, and Democratic Congressmen elected in all of the ten districts except the First, Second, and Third. In the Third District the contest was close. Upon the face of the returns, it appeared that Evans, the Republican candidate, had a majority of 228 votes; but the friends of Creed F. Bates, the Democratic candidate, claimed that fraud in two of the election districts could be shown, sufficient to justify the canvassing board in rejecting the returns from those districts. In the event of such rejection, the Democratic candidate would have a majority of one vote. On the representation of these facts, the Governor, as the head of the board of canvassers, prepared, at the suggestion of Bates's friends, a certificate of his election prior to the meeting of the board, in order that, if it should find that he had been duly elected, the certificate might be instantly issued before an injunction could be obtained by the Republican candidate. The certificate was signed and sealed and delivered by the Governor to the Secretary of State, with orders that it was not to be considered as issued, and was not to be entered or copied into the records, until further directions were given. When the canvassing board met, it was found that the facts would not justify the exclusion of the votes in the two districts referred to, and the Governor destroyed the first certificate and prepared another in favor of Evans. But the Secretary of State disagreed with him in his conclusions regarding the frauds, and refused to attest his signature to the second certificate. He was also enjoined from issuing and delivering the certificate to Evans. The investigation of the returns not only showed that Evans was elected, but, even if the amended returns were accepted and the two districts thrown out, still Evans was elected, because an amendment from Bradley County increased his majority by four votes, thus overcoming Bates's majority of one and leaving Evans a clear majority of three.

Arguments in the injunction case were made before Chancellor Allison in December, the Governor appearing by counsel and denying that the court had any jurisdiction to control the Executive in the exercise of what he claimed was the discretionary power of his office. The Chancellor decided in favor of the Governor, and an appeal was taken to the State Supreme Court.

TEXAS. State Government.—The following were the State officers during the year: Governor, Lawrence S. Ross, Democrat; Lieutenant-Governor, T. B. Wheeler; Secretary of State, J. M. Moore; Treasurer, Frank R. Lubbock; Comptroller, John D. McCall; Attorney-General, James S. Hogg; Superintendent of Public Instruction, Oscar H. Cooper; Commissioner of the General Land-Office, R. M. Hall; Chief-Justice of the Supreme Court, Asa H. Willie, who offered his resignation, to take effect March 8, and was succeeded by Associate Justice John W. Stayton; Associate Justices, John W. Stayton, promoted as above, R. R. Gaines, and Alexander H. Walker, appointed in March to succeed Justice Stayton.

Legislative Session.—A special session of the Legislature was called to meet on April 16. The more important reasons for this were, first, the existence of a large and growing surplus in the revenue account of the treasury, amounting at that time to over \$1,500,000, exclusive of the net indemnity claim of \$922,541.52, recently received from the General Government; second, a large deficiency in the school revenue, amounting to \$400,000 for the year 1886-'87 and \$250,000 for 1887-'88; third, the completion of the new State Capitol. The existence of a large surplus revenue gave rise to various extravagant measures for its expenditure, but the action of the Legislature in making appropriations was on the whole moderate, though its reduction of the tax-rate from 25 cents to 10 cents for 1888, and 20 cents for each year thereafter, proved to be ill-advised. For the purpose of reducing the school-revenue deficiency a bill was passed transferring \$254,000, or so much of it as should be needed, to pay outstanding warrants held by the counties against the available school-fund, from the general revenue fund to the school-fund; and the further sum of \$250,000, which was appropriated out of the treasury as a sinking-fund to pay such part of the bonded debt payable in 1890 and 1891 as should be held by individuals, was loaned to the school-fund without interest till the maturity of said bonds. The sum of \$504,000 was thus made available for the use of the school-fund. Among the other appropriations of the session was \$150,000 for the erection of two wings, for the accommodation of 400 patients, at the North Texas Insane Asylum, in Terrell; \$140,000 for furnishing the State Capitol and grading and fencing the grounds; \$50,000 for the expenses of the session; \$125,000 as a loan to the University of Texas, without interest, payable in 1910, of which \$50,000 is

to be used in the construction of a medical department at Galveston; \$18,500 for enlarging the Asylum for the Blind; \$20,000 for a new dormitory and hall at the Agricultural and Mechanical College; \$25,890 for additions and improvements at the State Reformatory; \$18,000, \$25,000, and \$15,000 for similar purposes at the Deaf and Dumb Asylum, Prairie View Normal School, and State Orphan Asylum at Corsicana, respectively. The total appropriations of the session amounted to \$1,241,471.17.

With regard to the State Capitol, the Legislature passed a bill appointing the Governor, Treasurer, Comptroller, and Commissioner of the General Land-Office, a board for the purpose of accepting or rejecting the building, and another bill creating a Capitol-furnishing board of three members, appointed by the Governor, to superintend the expenditure of the above-named appropriation for furnishing and grading the grounds. Other acts were:

Providing that the Commissioner of Agriculture shall cause a geological and mineralogical survey of the State to be made, and appropriating \$15,000 therefor.

Amending the general incorporation law so as to permit the incorporation of mercantile companies to purchase and sell goods, wares, and merchandise, and agricultural and farm products.

Requiring the assessment of property for taxes that may be removed from the State before January 1 to evade taxation, provided it be returned to the State before the tax-rolls are completed for the year.

To establish a tax-lien upon property assigned or levied upon by creditors.

Providing that the county or district attorney or Attorney-General may procure issuance of the writ of injunction to prohibit, prevent, or restrain the violation of any revenue or penal law of the State.

Requiring suits to be instituted by order of commissioners' courts to recover taxes due on unrendered personal property.

The session adjourned on May 15.

Finances.—At the close of the fiscal year, August 31, there was a balance in the treasury of \$1,261,000 to the general revenue and \$88,000 to the available school fund. The general revenue surplus, one year previously, was \$888,970.44. By the reduction of the tax-rate at the special session to 10 cents, it is estimated \$750,000 of annual revenue will be cut off, while the extraordinary appropriations of the special session will further reduce the surplus, so that, according to the Comptroller's estimate, only about \$70,000 will remain in the treasury on Aug. 31, 1889. The balance of \$88,000 in the school-fund is produced by addition to the fund of \$504,000 loaned to it by act of the special session. The actual deficiency of the fund is, therefore, about \$420,000.

The total bonded debt of the State, on August 31, was \$4,237,780, of which \$3,017,100 is held by the State in its various special funds, and \$1,220,680 by individuals. The only bonds falling due in 1890 and 1891 are \$200,000, of revenue 6-per-cent. deficiency bonds, none of which are held by individuals.

Education.—The report of the State Superintendent shows the total scholastic population

of the State, for the school year 1886-'87, to have been 459,795, an increase of 37,117 in one year; 364,958 being white and 124,842 colored. Of this number, 295,510 white and 118,150 colored children, or 408,660 in all, were enrolled in the public schools, an increase of 5,349 over 1885-'86. There were 6,911 schools for white children and 2,076 for colored children maintained during the year, a total increase of 267. In the white schools 8,232 teachers were employed at an average monthly salary of \$43.27 in the counties and \$69.32 in the cities; in the colored schools 2,891 teachers were employed at a monthly salary of \$38.65 in the counties and \$49.78 in the cities. The average school term in the counties was 5-07 months; in cities, 7-92 months. During the year the amount of the school-fund apportioned to counties was \$2,362,226.25 or \$4.75 per capita. This apportionment was \$400,000 in excess of the school-fund revenue for the year. For 1887-'88 the total school apportionment was \$2,285,551, \$4.50 for each child.

Charities.—The State Orphan Asylum established by the Legislature in 1887 was located by commissioners at Corsicana, on a tract given by that city. Buildings were in process of erection at the close of the year for the accommodation of 200 children.

The Institute for Deaf, Dumb, and Blind Colored Youth, established at Austin by the same Legislature, was completed during the year, and many of beneficiaries were received.

Prisons.—The report of the State Penitentiary for the two years ending in November is as follows: Convicts, Nov. 1, 1886, 2,859; convicts, Nov. 1, 1888, 3,302; increase 442. Highest number at any time, on July 25, 1888, 3,396; average number daily, 3,129. Cash receipts, \$1,256,795.44; cash disbursements, \$1,226,212.10; cash balance, \$30,583.34. The number of deaths for the period, 223, is high.

The State Reformatory, established by the Legislature of 1887, was located by commissioners in Coryell County, near Gatesville, on a farm of 696 acres purchased for \$10,000. They expended \$62,157 for buildings, which were completed and transferred to the State on November 10. The institution was opened, and the youthful prisoners transferred thereto by proclamation of the Governor of Jan. 1, 1889.

Statistics.—The following figures for the year ending Jan. 1, 1888, are taken from the annual report of the Commissioner of Agriculture:

Population.....	2,015,032
Cotton: Acres planted	3,259,973
Bales made.....	1,128,287
Value of crop.....	\$45,127,676
Wheat: Acres planted.....	590,219
Bushels made.....	5,174,454
Value of crop.....	\$3,765,673
Corn: Acres planted.....	2,929,267
Bushels made.....	55,775,745
Value of crop.....	\$25,349,652
Oats: Acres planted.....	561,021
Bushels made.....	13,490,925
Value of crop.....	\$4,456,653

There are 422 saw-mills, with a capital of \$3,147,688; 17 cotton-seed oil-mills, with a

capital of \$12,045,000; 86 marble-shops, with a capital of \$128,860; 76 carriage and wagon factories, with a capital of \$386,988; 136 flour-mills, with a capital of \$1,816,110; 8 coal-mines, with a capital of \$135,840; the woolen-mills, with a capital of \$650,000; and 40 foundries and machine-shops, with a capital of \$702,760.

Decision.—On October 29 the United States Supreme Court rendered a decision declaring unconstitutional the State law making it a misdemeanor for any person to do business as a commercial traveler without having first paid an occupation-tax. The law was held to be a regulation of interstate commerce by the State.

State Capital.—This building was so far completed in May that the government occupied it early in the month, and the closing meetings of the special session were held in it. On May 16, the day following the adjournment of the session, exercises in dedication of the building were held. At this time it had been accepted by the construction commission only conditionally. Some further improvements were made, and it was finally accepted by that commission on September 20 and delivered over as complete to the receiving commission created at the special session to receive the property in behalf of the State. But, finding manifest defects in the roof and elsewhere, this commission refused to accept the report of the construction commission or to receive the building. It was then agreed that an expert be engaged to examine the work; the contractors made such changes as he suggested, and it finally became the property of the State late in the year.

Political.—A Republican State Convention met at Fort Worth on April 24, and selected delegates to the Chicago Convention, and appointed a committee of thirty-three, who should meet at Austin, on August 28, and nominate a State ticket. Among the resolutions were the following:

We recognize the importance of sheep husbandry in this State, and the danger threatening its future prosperity, and we therefore repeat the demands of this important agricultural interest for a full and adequate protection of her product.

We demand of our General Government at Washington to make ample provision for the construction of a first-class deep-water harbor on our Gulf coast, at such point as may be designated by the Government engineers, and that Congress concentrate the appropriations of money for that purpose.

On the following day the Prohibitionists met in convention at Waco, selected delegates to their National Convention, and nominated the following ticket: For Governor, Marian Martin; Lieutenant-Governor, F. E. Yoakum; Superintendent of Public Instruction, F. O. McKinzey; Treasurer, W. D. Jackson; Comptroller, O. R. King; Commissioner of the General Land-Office, J. C. Rathburn; Attorney-General, J. B. Goff. The resolutions included the following:

We favor the repeal of the United States internal revenue laws, and the repeal of all revenue laws, State

and national, by which taxes are collected on the manufacture or sale of intoxicating liquors.

That such public lands as remain to the State of Texas be reserved as homesteads for citizens, and the school lands be sold only to actual settlers in quantities not exceeding 320 acres.

That the State convicts should be confined within prison walls, and the contract system abolished.

On May 15, delegates from the State Alliance, Knights of Labor, and Union Labor party met at Waco in a semi-political convention. Their common interests were discussed, and a platform adopted which included these paragraphs:

The national banks should be abolished and their bank-notes retired from circulation, and in lieu thereof we advocate a legal-tender money and a direct loan of the same to the people at a low rate of interest on real-estate security.

The means of transportation and communication should be owned or controlled by the people, as is the United States Post-Office, and equitable rates everywhere established.

No aliens should be permitted to hold or own real estate in the United States, and that no further grant of public lands be made to corporations.

We demand that an amendment be submitted to Congress making the President and Vice-President eligible by a direct vote of the people.

We demand a free ballot and a fair count, and that tampering with the ballot-box shall constitute one of the greatest of crimes.

The Democrats selected delegates to their National Convention on May 22, at Fort Worth. At the same place, on July 8, the Independent party, organized at Waco on May 15, held a second State Convention, and nominated a State ticket as follows: Evan Jones for Governor; H. S. Broiles for Lieutenant-Governor; Ward Taylor for Superintendent of Public Instruction; C. W. Geers for Comptroller; J. M. McFadin for Treasurer; J. P. Philpot for Land Commissioner; William Chambers for Attorney-General; J. C. Kearby for Chief Justice; J. T. Nugent and W. K. Homan for Associates; Hal. W. Greer and William H. Burkhardt for Court of Appeals. The resolutions included these:

We demand the immediate payment of the national debt at its face value.

We are in favor of free and unlimited coinage of silver.

We demand a graduated income-tax.

We favor the passage of compulsory arbitration laws by which a just and speedy settlement of differences can be had between corporations and their employés.

We demand that all real estate held for speculative purposes be taxed to the full amount at which it is offered to purchasers.

A committee was appointed to confer with a State Convention distinctively of the Union Labor party, which should meet on the following day at the same place, and to secure its adoption of the Independent ticket. In this object they were successful, and the two parties were practically united. But the ticket was unfortunately constructed. The candidates for Governor, Lieutenant-Governor, Chief Justice, and one of the Associate Justices, soon sent in their declinations. On August 24 the

committee selected in their places Marion Martin as its candidate for Governor, W. A. Moers for Lieutenant-Governor, and H. F. O'Neal for Chief-Justice.

The Democratic State nominating convention met at Dallas on August 15, and renominated Gov. Ross by acclamation. The Lieutenant-Governor, Treasurer, Comptroller, Attorney-General, Superintendent of Public Instruction, and Superintendent of the General Land-Office were also renominated. For Chief-Justice of the Supreme Court, John W. Stayton of that court was nominated, and R. R. Gaines was renominated as Associate Justice. For the third member of the court John T. Henry was selected. For Judges of the Court of Appeals, John P. White, J. M. Hurt, and Samuel A. Wilson were the nominees. The platform includes the following:

We favor the enactment of prudent and efficient mining and irrigation laws to develop the agricultural and mineral resources of our State.

We favor the enactment of such laws as shall restrict the freight charges of railway and express companies, so that they may only yield a fair interest on the money actually invested in them, and at the same time to prevent discrimination in charges against any points within the State.

That the next Legislature shall pass laws defining trusts, pools, and all illegal combinations in restraint of trade, and imposing severe penalties.

The Republican Executive Committee, instead of nominating a State ticket, according to the vote of the Fort Worth Convention of April 24, called a second convention at the same place for September 20, at which the question of nominating a ticket was earnestly discussed, and where it was finally determined to support the Prohibition-Independent-Union-Labor ticket headed by Marion Martin. At the November election the Democratic national ticket was successful by a large majority, and Gov. Ross was re-elected.

TURKEY, an empire in eastern Europe and western Asia. The Government is an absolute monarchy. The Sultan is recognized as Khalif or Vicar of the Prophet in most Mohammedan lands. The legislative and executive power is exercised, under the direction of the Sultan, by the Sheikh-ul-Islam, who is the head of the religious and judicial departments of the Government, and the Grand Vizier, who is the chief in civil and administrative affairs. With these are associated heads of departments corresponding to ministers of state in European Governments. The present Sheikh-ul-Islam is Ahmed Essad Effendi. The Grand Vizier is Kiamel Pasha. The Cabinet in 1888 was as follows: President of the Council, Aarifi Pasha; Minister of Foreign Affairs, Said Pasha; Minister of War and Grand Master of Artillery, Ali Saib Pasha; Minister of Marine, Hassan Pasha; Minister of the Interior, Munir Pasha; Minister of Justice, Djevdet Pasha; Minister of Finance, Zihni Pasha; Minister of Public Works, Commerce, and Agriculture, Agob Pasha Kaziazin; Minister of

Public Instruction, Munif Pasha; Ekval-Naziri or Intendant of Religious Property and Revenues, Mustafa Pasha. The reigning Sultan is Abdul Hamid Khan, born Sept. 21, 1841, the thirty-fourth sovereign of the family of Osman. He succeeded his brother Murad V on Aug. 31, 1876. (For area and population see "Annual Cyclopædia" for 1887.)

FINANCES.—The receipts of the Sultan's treasury for the year 1887-'88 are estimated at 17,500,000 Turkish liras. The debt, on March 13, 1887, amounted to 104,458,706 pounds sterling. Agob Pasha gave place in the Ministry of Finance, in the beginning of 1888, to Mahmond Djelal-ed-Din Pasha, who promised to extricate the Government from its financial difficulties by an extensive scheme of improvements, and especially by unlocking new sources of revenue through the development of fisheries, mines, forests, and new industries. German capital was embarked in these enterprises, but the minister failed in accomplishing his task. The salaries of officials remained, and only at the Bairam festival was the Sultan able to pay an installment of the sums due to civil and military officers. The Minister of Finance was detected in discounting the salaries of the suffering officials at 60 per cent., and in the summer was dismissed from his post. Agob Pasha, an Armenian Christian, would not undertake the task of establishing the finances of the Empire on a sound basis, but was induced to resume the administration of the department provisionally. Eventually Zihni Pasha was appointed to the post. The Deutsche Bank, representing the group of German financiers who obtained the concession for the Asiatic Railroad to the Euphrates, negotiated a loan of 1,350,000 Turkish pounds. The unpaid creditors of the Porte clamored for the payment of their claims out of this sum, which the Minister of Finance reserved to carry out his projected reforms. The Ottoman Bank, which encashes the funds for the payment of the public debt, objected to the infringement of the monopoly of all loan transactions given to it by law. The Government, having been unable to obtain a loan from this institution except on exorbitant terms, answered that it had failed to fulfill its part of the bargain. The Russian Government made a pressing demand in June, 1888, for the payment of the arrears for two years of the war indemnity. The amount that Turkey undertook to pay was fixed by the treaty of February, 1879, at 802,500,000 francs. By a subsequent convention, dated May 14, 1882, it was settled that the payments should be effected in annual installments of 350,000 Turkish pounds, the proceeds of the sheep-tax and the tithes of certain villages being assigned for that purpose. The revenues on which the payment of the indemnity was secured failed owing to a famine in these districts. In November the Minister of Finance reported a deficit in the treasury of 1,500,000 liras, and informed the Sultan that

no means would be available to provide against it without severe economy and the reorganization of certain departments. By an imperial irade, promulgated on November 6, machinery and apparatus of public utility imported into Turkey were declared free of duty for ten years. A commercial treaty was negotiated with Germany in the autumn.

The Navy.—The Turkish naval force, at the beginning of 1887, comprised 15 iron-clads, of which 7 were frigates and 8 corvettes; 50 wooden vessels—viz., 3 frigates, 8 corvettes, 18 gun-boats and avisos, 8 imperial yachts, and 18 transports; and 12 torpedo-boats, including 2 submarine boats of the Nordenfeldt pattern.

Commerce.—The value of the imports into Turkey for the year ending March 12, 1888, was 21,025,953 Turkish pounds (equal to \$91,988,000), against 20,708,281 pounds for the previous year. The exports were valued at 11,287,800 Turkish pounds, against 12,707,295 in 1886-'87. The trade in tobacco, which is administered by the Régie, is not included in these figures, nor are articles free of duty. The exports of tobacco amount to about 10,000,000 kilogrammes per annum. The values of the principal imports in 1886-'87 were, in Turkish pounds, as follow: Sugar, 1,473,226; cotton thread, 1,278,812; cotton prints, 1,171,217; linen goods, 441,177; cotton and linen stuffs, 288,861; sheeting, 583,253; cashmere, 242,717; cloth, 463,990; muslin, 296,688; coffee, 768,045; flour, 693,506; wheat, 529,538; live animals, 447,961; petroleum, 429,744; leather, 340,880; iron, 314,581; carpets, 278,458; skins, 255,932; chemicals and drugs, 203,266; butter, 192,846; coal, 178,574; glass, 127,895; timber, 177,408. The principal exports were of the following values: Raisins, 1,828,895; other fruits, 844,190; opium, 798,181; raw silk, 792,238; cocoons, 388,896; wheat, 765,447; cotton, 528,911; valonia, 512,660; wool, 500,280; coffee, 490,067; skins, 366,913; wines, 311,509; chemicals and drugs, 274,996; sesame, 272,614; olive-oil, 260,949; beans and lentils, 191,606; carpets, 145,980; soap, 188,761; minerals, 121,391; seeds, 109,217; confectionery, 108,264; gum tragacanth, 49,042.

The merchant navy in 1886 numbered 416 vessels of over 50 tons burden, with an aggregate tonnage of 69,627, and 17 steamers of 100 tons or above, having an aggregate tonnage of 7,297.

Railroads.—The length of railroads open to traffic in 1888 was 788 kilometres in European Turkey, and in Asia Minor 660 kilometres, viz., four lines in the vicinity of Smyrna of the total length of 462 kilometres, the line from Scutari to Ismid, 93 kilometres in length, the line of 88 kilometres from Modania to Brussa, and one of 67 kilometres between Mersina and Tarsus. The international railroads of European Turkey, which have been in contemplation for twenty years, were completed in 1888. The line from the Servian frontier to Larissa

was opened to traffic in the spring, and the line through Servia and Bulgaria to Constantinople by way of Adrianople, affording rail communication with all the capitals of Europe, was opened on August 12. A concession, which English and French applicants have sought, was given to a German syndicate in September, 1888, to extend the Scutari-Ismid line to Angora, and eventually to Bagdad.

Posts and Telegraphs.—There were 408 post-offices in European Turkey in 1886 and 746 in Asiatic. The state telegraph stations numbered 283 in Europe, 438 in Asia, and 12 in Africa. The European governments have maintained separate post-offices for their citizens doing business in Turkey. The arrangement was not protected by treaty, and when the international railroad was completed the Turkish Government determined to suppress the foreign post-offices. Although prompt and efficient service was promised, the governments refused to part with the privilege that had grown up by custom, and which yielded some profit in addition to the power and prestige connected with it. The Austrian Government took the lead, and was able to compel the Turkish authorities to abandon the system of an international postal service that they had carefully organized, by refusing to deliver or forward official correspondence of the Ottoman Government.

Fortifications.—To supply the loss of Kara, the Turkish engineer, Gen. Chahab Pasha, has converted Erzerum into a fortress of the first rank, by building fifteen forts on the side fronting the road from the Russian frontier. The Russian Government, supported by the English, remonstrated with the Porte in August, 1888, against the erection of fortifications at El Arab, near the confluence of the Tigris and the Euphrates. Adrianople has been fortified, and the Government has decided to establish a military port at Chinkin or St. Juan de Medua on the Albanian coast, opposite Italy. The defenses of the Bosphorus and the Dardanelles have been strengthened since the war under the superintendence of German officers.

The Macedonian Question.—Jealousies between the Christian nationalities inhabiting European Turkey involved Turkey, in 1886, in a dispute with Greece, and created a ferment throughout the peninsula. The Greeks once counted all the Christians as of their nationality, and confidently expected to extend the limits of the Hellenic kingdom to the Danube. The language of the Church, of the schools, of business, and of educated society was Greek. The rise of the Balkan nationalities and their development as independent states has destroyed this dream of a greater Greece, and now the only hope the Hellenes have of advancing their boundaries into Macedonia is in preserving the predominance of the Greek language with the help of the Phanariot in Constantinople. The creation of the independent Exarchy of Bulgaria made this difficult in respect to the Bul-

garians of Macedonia. Very recently the Roumanians and Albanians on the borders of the Greek kingdom have begun to cultivate their separate nationalities, encouraged probably by Austria. The Roumanian Government and an educational society founded for the purpose in Bucharest have aided the Wallachian peasantry of Epirus to maintain schools in their own language. In the districts of Salonica and Clissura the Greeks used every means to check the Roumanian nationalist movement, and began to form political conspiracies for the annexation of these districts to Greece. The Patriarch refused the request of the Roumanians for a liturgy in their national language, and when the Bulgarian Exarch requested the Turkish Government to install Bulgarian bishops in certain districts of Macedonia, the Porte refused, acting at the instigation of the Russian ambassador. Many Bulgarians were arrested in the autumn for refusing to recognize the jurisdiction of the Greek clergy.

The Armenian Agitation.—The Turkish authorities took vigorous measures in 1888 to suppress the national movement that has for its

object the re-establishment of the ancient Kingdom of Armenia. The local authorities searched the houses, and even the churches and convents, in the districts of Van, Harpoot, Diabebir, and Erzerum. In Van a great number of persons who possessed arms or compromising documents were imprisoned, and some were subjected to torture in order to extort confessions. Armenian teachers and merchants in Constantinople were placed in confinement or banished to Tripoli. Sir William White, the English ambassador at Constantinople, addressed an inquiry to the Grand Vizier concerning the arrests, and was informed that the Government possessed documentary proofs of an insurrectionary conspiracy. The British Government, which the Armenians have considered their special protector, refused to interfere, saying it had no right to do so under the Treaty of Berlin, unless it did so in conjunction with the other signatory powers. The Armenian Patriarch, Harioutioun Vahabedian, who had sought in vain to allay the revolutionary spirit, was forced to resign by his compatriots.

U

UNITARIANS. The "Year-Book of the Unitarian Congregational Churches" for 1889 gives lists of 892 Unitarian Societies and 488 ministers in the United States and Canada, and 365 Unitarian churches and others in fellowship and habitual association with them in Great Britain, Ireland, and Australia.

American Unitarians.—The American Unitarian churches and their associations and benevolent societies are represented in the National Conference of Unitarian and other Christian churches, a body that imposes no authoritative tests of membership, which meets for consultation and discussion every two years. The American Unitarian Association, organized in 1825, is the most active agency through which work for the extension of the principles of the societies is carried on. Its objects are to collect and diffuse information respecting the state of Unitarian Christianity in America; to promote union, sympathy, and co-operation, publish and distribute books and tracts, supply missionaries when they are needed, and to promote its purposes by such other measures as may be expedient. These purposes are also furthered by a number of local organizations in virtual co-operation or affiliation with this society. The sixty-third annual meeting of the American Unitarian Association was held in Boston, Mass., May 29. The Hon. George S. Hale presided. The receipts for the year had been, from societies and individuals, \$50,291, and from the income of invested funds and all other sources, except legacies, \$28,922. The expenditures had amounted to \$103,989 showing a deficiency of \$24,775, the amount of which

had to be withdrawn from the general fund. The general fund, after accounting for the addition of \$69,000 to it from legacies and for the amounts that had been withdrawn from it, stood at \$189,609. The trustees of the Church-Building Loan fund had received \$3,650 in contributions and \$3,075 from payments on loans, and had on hand \$5,286. The association gives aid in Southern education at the Hampton Institute, Va., Tuskegee, Ala., Palatka, Fla., and the Highland Academy, N. C., and supports an industrial school for Indian children at the Crow Reservation, Montana. The mission in Hindustan has been discontinued since the death of the Rev. C. H. A. Dall. A mission has been begun in Japan, in the conduct of which the British and Foreign Unitarian Association co-operates. The Woman's Auxiliary Conference, which was formed in 1880 to aid the Association and supplement its work, had, since that time collected and applied \$31,887, the contributions of its last financial year having amounted to \$6,000.

The Unitarian Sunday-School Society, incorporated in 1885, seeks to promote moral and religious instruction in Sunday-schools. It publishes text-books and "Lesson-Helps for Sunday-Schools," and an illustrated Sunday-school paper, and has a missionary work of increasing scope and importance. The Meadville Theological School, Meadville, Pa., and the Divinity School of Harvard University are under Unitarian influence.

Unitarians in Great Britain.—The third Triennial National Conference of Unitarian and other non-subscribing or kindred congregations met

at Leeds, April 24. Papers were read by the Rev. T. W. Freckleton and Mr. John Dendy, Jr., on the best means of commending free Christianity to public favor. Propositions were made for building chapels at Oxford and Cambridge to hold Unitarian students to their faith. An address on "The Organization of our Churches," by Dr. Martineau, attracted much attention. The speaker was not satisfied with the Congregational system, or with the Unitarian name. He proposed a Presbyterian organization, and the name English Presbyterian. A committee was appointed to consider the questions raised, and call a special conference to consider its report.

The British and Foreign Unitarian Association met in London, May 23, and was opened with a sermon by Prof. Estlin Carpenter, who urged that theology be based on the broadest human experience. The Unitarian churches of the United States, the Reformed Church of France, and the Sadharan Brahmo Somaj of India were represented by visiting delegates. Mr. Harry Rawson, J. P., of Manchester, presided. A diminished income was reported. Papers were read on "Some Special Difficulties of Unitarianism To-day, and how to overcome them," in which the character of the religious services in the chapels was discussed. The autumnal meeting of the association was held in Newcastle in October. A paper unfavorable to the scheme of church organization which had been presented by Dr. Martineau, was read by Dr. Glendinning.

The council of the Association issued a protest against the proposals of the Education Commission, in which it was affirmed that the only satisfactory scheme of national education is one placing the management of the schools under the control of those who are compelled to contribute to their support. Since the last report till October, 1888, 12,000 tracts had been sent out, and 86 copies of Channing's works, with other books, had been presented in answer to applications.

The Unitarian Sunday-School Association in Great Britain includes 251 schools, with 82,244 pupils and 3,989 teachers. It returned an income for the year of £1,067.

Unitarians in Continental Europe.—The number of Unitarian churches in Hungary—where Unitarianism was introduced into Transylvania in 1563—is 110, and the number of registered Unitarians is 57,000. The head of the organization is Bishop Joseph Ferencz, who has under him eight rural deans and an ecclesiastical council of 350 members. The higher education is provided for by the college at Klansenburg, where there are five theological and nine ordinary professors, with assistant professors and teachers; and the middle schools at Thorda and Szekely Keresztnr. The Church has a considerable religious literature, including a periodical organ, "The Christian Seed-Sower."

The American "Year-Book" mentions several organizations in other European countries

outside of the British Empire and Hungary, which, without taking the Unitarian name, are in substantial agreement with the Unitarian faith. A considerable number of the 225 Protestant churches in Austria are liberal in their theology. The Protestant Verein of Germany has about 40 branches and 27,000 members, and supports two missionaries in Japan. The Free Christian Association in Switzerland is active in the Protestant cantons. The Protestant Union of Holland has 13,000 members. A minority of the Protestants of France hold liberal views. The Spanish Evangelical Church includes a few liberal congregations. The Liberals in Sweden, while having societies similar to the Protestant unions, retain their membership in the state church. Services of a Unitarian type are held in Rome and Brussels. The Unitarian faith is represented in Salem, Madras, and Calcutta, India. A missionary is supported in Tokio, Japan, by the American Unitarian Association, the British and Foreign Unitarian Association co-operating.

UNITED BRETHREN IN CHRIST. The following is a summary of the statistics of this Church, as they are given in the "United Brethren Year-Book" for 1889: Number of bishops, 6; of organized churches, 445; of itinerant preachers, 1,490; of local preachers, 560; of members, 204,517; of Sunday-schools, 3,509, with 32,026 officers and teachers and 219,846 pupils; of church edifices, 2,609, having a total value of \$3,757,161; of parsonages, 493, valued at \$401,959. Total amount of contributions, \$1,036,086; of which \$474,591 were for preachers' salaries, \$366,258 for church expenses, \$3,566 for bishops, \$3,566 for preachers' aid, \$91,184 for missions, \$1,964 for church erection, and the remainder for Sunday-school and educational purposes. The property of the Publishing-House at Dayton, Ohio, is valued at \$252,987 above indebtedness; its receipts from business for the year ending April 1, 1888, were \$156,198. The educational institutions include 9 colleges, 6 academies and seminaries, and 1 Biblical seminary. The United Brethren Home, Frontier, and Foreign Missionary Society received during its fiscal year \$66,238. It operates missions in West Africa, Germany, Canada, and the United States, with a station among the Chinese at Walla Walla, Washington Territory, and gives aid to eighteen conferences. The two missions in Africa returned 27 stations, reaching 328 towns; 12 organized churches, 6 American and 26 native missionaries; 4 ordained and 25 unordained preachers; 4,105 members; 14 Sunday-schools, with 38 teachers and officers and 564 pupils; 12 day schools, with 12 teachers and 500 pupils; 11 church-houses, 8 mission residences, and property valued at \$66,000. The German mission returned 720 members and 345 pupils in Sunday-schools. The society has an interest-bearing fund of \$85,264, and has expended since its organization in 1853, \$2,301,908.

UNITED STATES. The Administration.—On January 16 the United States Senate, after much discussion and delay, confirmed the nomination, made by the President, in December, of Lucius Q. C. Lamar to be a Justice of the United States Supreme Court, the vote standing 82 for confirmation and 28 against. Three Republican Senators (Stanford, Stewart, and Riddleberger) voted with the majority. The Republicans that voted against confirmation, based their objections upon the record of Mr. Lamar in the Confederacy. At the same time, the nominations of William F. Vilas to be Secretary of the Interior and D. M. Dickinson to be Postmaster-General were confirmed, and these officers qualified on the following day. On January 19 the appointments of the President to the Interstate Commerce Commission, made in the preceding March, were approved.

The most important change in the Government during the year was caused by the death of Chief-Justice Morrison R. Waite on March 28 (for sketch of Chief-Justice Waite see page 836; for portrait see the "Annual Cyclopædia" for 1882, page 126). The President made no appointment of his successor till April 30, when the name of Melville W. Fuller, of Chicago, was sent to the Senate (see page 859). This appointment was confirmed on July 20, by a vote of 41 to 20; but the new Chief-Justice did not take his seat until the October term of the court.

Strother M. Stockslager, of Indiana, was nominated on March 20, to be Commissioner of the General Land-Office, *vice* William J. Sparks, resigned; and Thomas J. Anderson, of Iowa, to be Assistant Commissioner, a former nomination by the President to the commissionership having been annulled. On May 21, Thomas J. Smith, of New Hampshire, was nominated as Solicitor of Internal Revenue, *vice* Charles Chesley. The resignation of Commissioner of Indian Affairs Atkins, in June, caused a vacancy, which was filled by the nomination of Civil-Service Commissioner John H. Oberly. Other nominations were: Carroll D. Wright, of Massachusetts, to be Commissioner of Labor for a second term; William L. Bancroft, of Michigan, to be General Superintendent of the Railway-Mail Service; John S. Bell, of New Jersey, to be Chief of the Secret Service Division of the Treasury Department; and Charles Cary, of New York, to be Solicitor of the Treasury Department. All of these nominations were confirmed. The President, on July 17, nominated as envoys extraordinary and ministers plenipotentiary: Lambert Tree, of Illinois, to Belgium; Robert B. Roosevelt, of New York, to the Netherlands; Rufus Magee, of Indiana, to Sweden and Norway; and Charles L. Scott, of Alabama, to Venezuela; also John E. Bacon, of South Carolina, to be Minister Resident at Paraguay and Uruguay. The Senate confirmed these nominations on August 14. Soon thereafter the resignation of George V. N. Lothrop from the Russian mission was received, and

the President, on September 11, nominated Lambert Tree, the recently confirmed Belgian minister, to the vacancy. Ten days later he nominated John G. Parkhurst, of Michigan, to the Belgian mission. These nominations, as also that of Perry Belmont, of New York, in December, to be minister to Spain, were confirmed. Ezekiel E. Smith, of North Carolina, was nominated and confirmed as Minister Resident and Consul-General in Liberia. On January 12 Edward S. Bragg, of Wisconsin, was confirmed as minister to Mexico.

On August 5 Gen. Philip H. Sheridan died, and on August 14 the President promoted Maj.-Gen. John M. Schofield to the command of the army (see page 787).

The Army.—At the date of the last consolidated returns, the army consisted of 2,188 officers and 24,549 enlisted men. The actual expenditures of the War Department for the fiscal year ended June 30, 1888, amounted to \$41,165,107.07, of which \$9,158,516.68 was expended for public works, including river and harbor improvements, and \$23,387,245.11 for the actual support of the army and the Military Academy. The only difficulty with the Indians that occurred was upon the Crow Reservation in Dakota, where a threatened outbreak was promptly suppressed by Gen. Ruger, and the ringleaders arrested and punished. All the States and Territories now have an active militia sufficient under the regulations to entitle them to receive ordnance and quartermaster's stores from the United States, excepting Arkansas, Arizona, Idaho, and Utah.

Postal Service.—For the fiscal year ending June 30, 1888, the total revenue was \$52,695,176.79, while the actual and estimated expenses were \$56,885,408.84, leaving an estimated deficiency of \$4,190,227.05. The actual deficiency for the fiscal year preceding was \$4,297,288.81, the total expenses \$58,184,847.70, and the total revenue \$48,837,609.89.

The number of post-offices on June 30, 1888, was 57,876; there were established during the year preceding 3,864 offices, and 1,645 were discontinued. The number of postmasters appointed during the year ended June 30, 1888, was 12,388, of which 6,521 were upon resignations and commissions expired, 1,244 upon removals, 659 to fill vacancies by death, and 3,864 on establishment of new post-offices. The free-delivery service was extended to 169 additional places, under the act of Jan. 3, 1887, making a total of 358 free-delivery cities. The volume of ordinary mail has largely increased, as shown by the increased revenue of the department from the sale of postage-stamps. The total number of pieces handled has doubled since 1883.

The number of money-order offices at the close of the year was 8,241, and the number of postal-note offices 811. The domestic orders issued numbered 9,959,207, of the aggregate amount of \$119,649,064.98, while the orders paid and repaid were in excess of that

sum by \$94,280.27. There were issued 6,668,006 postal notes, amounting to \$12,184,459.04, and the notes paid were only \$29,577.49 less in value. There were 759,686 orders drawn for payment in foreign countries, reaching the large total of \$11,293,870.05, while 286,992 orders of the value of \$1,169,675.64 were transmitted from abroad for payment in the United States.

Pensioners.—The number of pensioners added to the rolls during the fiscal year ended June 30, 1888, is 60,252, and increase of pensions was granted in 45,716 cases. The names of 15,780 pensioners were dropped from the rolls during the year, and at the close of the year the number of persons of all classes receiving pensions was 452,557.

The Civil Service.—The fourth annual report of the Civil-Service Commission, covering the period between Jan. 16, 1886, and July 1, 1887, was transmitted to Congress in July. During the time covered by the report, 15,852 persons were examined for admission in the classified civil service of the Government in all its branches, of whom 10,746 passed the examination and 5,106 failed. Of those who passed the examination 2,977 were applicants for admission to the departmental service at Washington, 2,547 were examined for admission to the customs service, and 5,222 for admission to the postal service. During the same period 547 appointments were made from the eligible lists to the departmental service, 641 to the customs service, and 3,254 to the postal service.

Since the period covered by the report, the rules and regulations governing the violations of the law upon the subject have been completely remodeled in such a manner as to render the enforcement of the statute more effective and greatly increase its usefulness.

Indians.—Reports of Indian agents show that the total Indian population for the fiscal year 1887-'88 was 246,095, not including the Indians of Alaska. The entire extent of territory now in reservation for Indian purposes, including all portions of the Indian Territory, is 112,418,440 acres, being an average of 456 acres for each Indian, computed on the last reported number of the total population. The work of allotting lands in severalty which was begun in 1887 on seven reservations, the Yankton and Lake Traverse Reservations in Dakota Territory, the Winnebago Reservation in Nebraska, the Pottawatomie Reservation in the Indian Territory, the Crow Reservation in Montana, the Fond du Lac Reservation in Minnesota, and the Siletz Reservation in Oregon, was suspended early in 1888, because the funds had been exhausted.

In June Congress appropriated \$10,000, and with this money the work was resumed on three reservations, the Winnebago Reservation in Nebraska, the Crow Reservation in Montana, and the Fond du Lac Reservation in Minnesota. The allotment on the Lake Traverse Reservation is complete.

Alaska.—The Governor estimates the population of Alaska as follows: Whites, 6,500; creoles, 1,900; Aleuts, 2,950; civilized natives, 3,500; uncivilized natives, 85,000—a total of 49,850. The town of Juneau has doubled in population during the past year, owing to the development of valuable mining properties, and most of the towns in the southeastern section of the Territory show an increase. During the past year considerable progress was made in mining; the great stamp-mill on Douglas Island has now two hundred and forty stamps in operation, and it is the largest mill of the kind in the world, its output being at least \$150,000 a month. The ore at this mine is improving, and four undeveloped claims on this island were recently sold to Eastern and European capitalists for \$1,500,000. Mines are being opened and new discoveries made of promising ore-beds.

Coal seems to abound in the explored parts of the Territory. During the last year cannel coal was found. The United States steamer "Thetis" replenished her bunkers from a vein that measured thirty-two feet in thickness, and while on a cruise with this vessel the Governor saw all along the coast coal-veins from one to fifteen feet thick.

The following is a careful estimate of the market value of Alaskan products for the year: Furs, \$3,000,000; fish, oil, bone, and ivory, \$4,000,000; gold (bullion and dust), \$2,000,000; silver, \$50,000; lumber, \$50,000—total, \$9,100,000.

Foreign Relations.—On February 15 the commissioners appointed to negotiate a treaty between Great Britain and the United States with respect to the Canadian fisheries completed their work at Washington, and signed a proposed treaty, which was transmitted to the Senate, which on August 21 rejected the treaty by a strict party vote of 30 Republicans against 27 Democrats. The President thereupon sent a warlike message to Congress, saying that retaliatory measures were now the only ones to be adopted, and asking for greater powers to carry them into effect. The Republicans in Congress claimed that he already had sufficient authority for that purpose, and, regarding the message as an attempt to attract supporters in the pending political canvass, refused to take any action thereon.

On March 12 a treaty with China was signed at Washington. It provides for the absolute exclusion of Chinese laborers from this country for twenty years, and for a second period of twenty years unless notice to the contrary should be given by either party. The Senate ratified this treaty with some amendments on May 7, but it was rejected by the Chinese Government, whereupon a Chinese exclusion bill, having already passed the House, was adopted by the Senate on September 7 and signed by the President. Differences existing between the United States and Morocco were settled by an agreement made in May.

In November difficulties arose with Hayti in consequence of the seizure and detention of American vessels, especially the steamer "Haytian Republic," by the authorities temporarily in power in that island. A strife of factions had existed there for several months, and the President, without recognizing any settled government, had sent to Haytian waters a war-vessel for the protection of American people and interests. On being satisfied that the seizure of the "Haytian Republic" was wrongful, he dispatched Admiral Luce with the ships "Galena" and "Yantic" to demand a return of the vessel. The demand was promptly acceded to, the steamer was surrendered on December 22, and the former amicable relations between the two countries were restored.

A comprehensive treaty of amity and commerce with Peru was completed and ratified during the year, and became effective by proclamation of the President dated November 7.

Democratic Convention.—At a meeting of the Democratic National Committee in Washington, on February 23, it was voted to call the National Convention to meet at St. Louis on June 5. Some time before the date of the convention, President Cleveland's renomination was universally conceded; the only question was regarding the second place on the ticket. The convention organized by the choice of S. M. White, of California, as temporary chairman, and Congressman Patrick A. Collins, of Massachusetts, as permanent chairman. The name of President Cleveland was presented to the convention by Daniel Dougherty, of New York, and his nomination unanimously carried amid great enthusiasm. For the Vice-Presidency, Gov. Isaac P. Gray, of Indiana, and Ex-Senator Allen G. Thurman, of Ohio, were the only candidates formally before the convention.

Before the first ballot was completed, it was evident that Mr. Thurman would easily obtain a majority. The name of Gov. Gray was then withdrawn, and the Ex-Senator was unanimously nominated. Of the votes cast on this ballot, 690 were for Thurman, 105 for Gray, and 25 for John C. Black, of Illinois.

The platform is as follows:

The Democratic party of the United States in national convention assembled renews the pledge of its fidelity to Democratic faith and reaffirms the platform adopted by its representatives in the convention of 1884, and indorses the views expressed by President Cleveland in his last earnest message to Congress as the correct interpretation of that platform upon the question of tariff reduction, and also indorses the efforts of our Democratic representatives in Congress to secure a reduction of excessive taxation. Chief among its principles of party faith are the maintenance of the indissoluble union of free and inextinguishable States, now about to enter upon its second century of unexampled progress and renown; devotion to a plan of Government regulated by a written constitution strictly specifying every granted power and expressly reserving to the States or people the entire ungranted residue of power; the encouragement of jealous, popular vigilance directed to all who have been chosen for brief terms to enact and execute

the laws and are charged with the duty of preserving peace, insuring equality, and establishing justice.

The Democratic party welcomes an exacting scrutiny of the administration of the Executive power which four years ago was committed to its trust in the selection of Grover Cleveland as President of the United States, but it challenges the most searching scrutiny concerning its fidelity and devotion to the pledges which then invited the suffrages of the people. During a most critical period of our financial affairs, resulting from overtaxation, the anomalous condition of our currency, and a public debt unmatured, it has, by the adoption of a wise and conservative course, not only averted disaster, but greatly promoted the prosperity of the people.

It has reversed the improvident and unwise policy of the Republican party touching the public domain, and has reclaimed from corporations and syndicates, alien and domestic, and restored to the people nearly 100,000,000 acres of valuable land to be sacredly held as homesteads for our citizens.

While carefully guarding the interests of the taxpayers and conforming strictly to the principles of justice and equity, it has paid out more for pensions and bounties to the soldiers and sailors of the republic than was ever paid before during an equal period.

It has adopted and consistently pursued a firm and prudent foreign policy, preserving peace with all nations while scrupulously maintaining all the rights and interests of our own Government and people at home and abroad.

The exclusion from our shores of Chinese laborers has been effectually secured under the provisions of a treaty, the operation of which has been postponed by the action of a Republican majority in the Senate.

Honest reform in the civil service has been inaugurated and maintained by President Cleveland, and he has brought the public service to the highest standard of efficiency, not only by rule and precept, but by the example of his own untiring and unselfish administration of public affairs.

In every branch and department of the Government under Democratic control the rights and the welfare of all the people have been guarded and defended; every public interest has been protected, and the equality of all our citizens before the law, without regard to race or color, has been steadfastly maintained. Upon its record thus exhibited and upon a pledge of a continuance to the people of these benefits, the Democracy invokes a renewal of popular trust by the re-election of a Chief Magistrate who has been faithful, able, and prudent. We invoke in addition to that trust the transfer also to the Democracy of the entire legislative power.

The Republican party, controlling the Senate and resisting in both Houses of Congress a reformation of unjust and unequal tax laws which have outlasted the necessities of war and are now undermining the abundance of a long peace, deny to the people equality before the law and the fairness and the justice which are their right. Thus the cry of American labor for a better share in the rewards of industry is stifled with false pretences, enterprise is fettered and bound down to home markets, capital is discouraged with doubt, and unequal, unjust laws can neither be properly amended nor repealed. The Democratic party will continue with all the power confided to it the struggle to reform these laws in accordance with the pledges of its last platform, indorsed at the ballot-box by the suffrages of the people.

Of all the industrious freemen of our land the immense majority, including every tiller of the soil, gain no advantage from excessive tax laws, but the price of nearly everything they buy is increased by the favoritism of an unequal system of tax legislation. All unnecessary taxation is unjust taxation. It is repugnant to the creed of Democracy that by such taxation the cost of the necessities of life should be unjustifiably increased to all our people. Judged by Democratic principles, the interests of the people are

betrayed when, by unnecessary taxation, trusts and combinations are permitted to exist, which, while unduly enriching the few that combine, rob the body of our citizens by depriving them of the benefits of natural competition.

Every Democratic rule of governmental action is violated when, through unnecessary taxation, a vast sum of money far beyond the needs of an economical administration is drawn from the people and the channels of trade, and accumulated as a demoralizing surplus in the national Treasury. The money now lying idle in the General Treasury, resulting from superfluous taxation, amounts to more than \$125,000,000, and the surplus collected is reaching the sum of more than \$60,000,000 annually. Debaunched by this immense temptation, the remedy of the Republican party is to meet and exhaust by extravagant appropriation and expenses, whether constitutional or not, the accumulation of extravagant taxation. The Democratic policy is to enforce frugality in public expense and abolish unnecessary taxation.

Our established domestic industries and enterprises should not and need not be endangered by the reduction and correction of the burdens of taxation. On the contrary, a fair and careful revision of our tax laws, with due allowance for the difference between the wages of American and foreign labor, must promote and encourage every branch of such industries and enterprises by giving them assurance of an extended market and steady and continuous operations. In the interests of American labor, which should in no event be neglected, the revision of our tax laws contemplated by the Democratic party should promote the advantage of such labor by cheapening the cost of necessities of life in the home of every workingman, and at the same time securing to him steady and remunerative employment. Upon this question of tariff reform, so closely concerning every phase of our national life, and upon every question involved in the problem of good government the Democratic party submits its principles and professions to the intelligent suffrages of the American people.

Resolution presented by Mr. Scott, of Pennsylvania:
"Resolved, That this convention hereby indorses and recommends the early passage of the bill for the reduction of the revenue now pending in the House of Representatives."

Resolution presented by Mr. Lehmann, of Iowa:
"Resolved, That a just and liberal policy should be pursued in reference to the Territories; that right of self-government is inherent in the people and guaranteed under the Constitution; that the Territories of Washington, Dakota, Montana, and New Mexico are by virtue of population and development entitled to admission into the Union as States, and we unqualifiedly condemn the course of the Republican party in refusing Statehood and self-government to their people."

Resolution presented by ex-Governor Abbett, of New Jersey:

"Resolved, That we express our cordial sympathy with the struggling people of all nations in their effort to secure for themselves the inestimable blessings of self-government and civil and religious liberty, and we especially declare our sympathy with the efforts of those noble patriots who, led by Gladstone and Parnell, have conducted their grand and peaceful contest for home rule in Ireland."

Republican Convention.—The place and date of the Republican National Convention were fixed at a meeting of the National Committee held late in 1887, Chicago being the choice of a majority of the committee, and June 19 the time agreed upon. On February 12 a letter of James G. Blaine, from Florence, Italy, to Chairman B. F. Jones, of the committee, was published, in which Mr. Blaine said that, as personal reasons would prevent him from en-

tering the contest, his name "would not be presented to the convention." No serious efforts in behalf of any candidate had hitherto been made, except for Senator John Sherman, of Ohio, who had been recommended for the nomination by the Ohio State Convention in July, 1887, and who, during the autumn of that year, had delivered speeches in Southern cities. Other names were now mentioned, and as the various State conventions were held, in April and May, to select delegates to the National Convention, candidates were formally presented. The Indiana Convention recommended ex-Senator Benjamin Harrison; Iowa recommended Senator William B. Allison; Michigan, ex-Gov. Russell A. Alger; Wisconsin, Gov. Jeremiah M. Rusk. Judge Walter Q. Gresham, of Indiana, attracted earnest supporters in many parts of the country, and the Republican Convention of Illinois instructed its delegates to vote in his favor. In New York, Chauncey M. Depew was a popular candidate, although the delegation from that State was unpledged. Senator Joseph R. Hawley was the favorite of Connecticut, Congressman William Walter Phelps of New Jersey, and Senator John J. Ingalls of Kansas. The possibility that Mr. Blaine might finally be induced to accept the nomination was a disturbing element, which apparently prevented many of the delegates from earnestly supporting any other candidate. On May 30 a second letter from him was published, which set at rest all reasonable doubts. In this letter, dated at Paris, France, he said, unequivocally, that he could not accept a nomination without showing bad faith toward those candidates who, relying on his former letter, were already in the field, and therefore he could not accept at all. No one of the candidates was assured of the support even of one third of the delegates. The convention organized by choosing John M. Thurston, of Kansas, for temporary chairman and M. Estee, of California, for permanent chairman. Three days were occupied in the work of organization, in the preparation and adoption of a platform, and in the presentation of candidates. Nominating speeches were made in favor of Gresham by Leonard Swett, of Illinois; in favor of Harrison by ex-Gov. Albert G. Porter, of Indiana; for Allison by William P. Hepburn, of Iowa; for Alger by R. E. Frazier, of Michigan; for Depew by Senator Hiscock, of New York; for Sherman by Gen. Hastings, of Pennsylvania; for Rusk by Senator Spooner, of Wisconsin. The names of Senator Hawley and ex-Mayor Edwin H. Fitler, of Philadelphia, were also presented in brief speeches. On the first ballot 830 votes were cast, a majority being 416. Of these, Sherman had 229, Gresham 111, Depew 99, Alger 84, Harrison 80, Allison 72, Blaine 35, Ingalls 28, Rusk 25, Phelps 25, Fitler 24, Hawley 18, ex-Secretary Robert T. Lincoln 3, and Congressman William McKinley, of Ohio, 2. The vote of Senator Ingalls

came from Kansas and Arkansas, and sixteen of the Pennsylvania delegation voted for Fittler. The New York delegates voted unitedly for Depew, according to an agreement made in caucus on the preceding day. The State delegations not having favorites were very much divided.

Upon the second ballot, after the names of ex-Mayor Fittler and Senator Hawley had been withdrawn, the following vote was cast: Sherman 249 votes, Alger 116, Gresham 108, Depew 99, Harrison 91, Allison 75, Blaine 88, Rusk 20, Phelps 18, Ingalls 16, McKinley 3, Lincoln 2. On the third ballot Kansas ceased to vote for Ingalls, and nearly all the New Jersey delegates abandoned Phelps. Sherman received on this ballot 244 votes, Gresham 123, Alger 122, Harrison 94, Depew 91, Allison 88, Blaine 85, Rusk 16, McKinley 8, Phelps 5, Lincoln 2, and Mr. Justice Miller 2. The convention adjourned after this ballot, and on its reassembling, Mr. Depew made an address, withdrawing his name. Col. Robert G. Ingersoll, then being asked to address the convention, attempted to advocate the nomination of Gresham, but the convention refused to hear him. The convention again adjourned without balloting. When it reassembled on the fifth day Congressman McKinley protested against the use of his name, but without effect. On the fourth ballot Wisconsin transferred her vote from Rusk to Harrison, and 59 votes from New York went to the same candidate. Sherman received 285 votes, Harrison 217, Alger 185, Gresham 98, Allison 88, Blaine 42, McKinley 11, Gov. Foraker, Lincoln, and Fred. Douglas one each. The fifth ballot resulted as follows: Sherman 224, Harrison 218, Alger 142, Allison 99, Gresham 87, Blaine 48, McKinley 14. The convention then adjourned to the following Monday.

It had become evident that Sherman, although still leading, could not command a following sufficient to nominate him, and the strength of Harrison appeared to have reached its highest point. A conference committee of friends of the various candidates met on Saturday evening and during Sunday, but without uniting upon a candidate. When the convention came together, Congressman Boutelle, of Maine, announced the receipt of two telegrams from Mr. Blaine, at Edinburgh, in which he earnestly requested his friends to respect his Paris letter and to refrain from voting for him. This was accepted as a finality, although the California delegation and a few others still voted for their favorite. On the sixth ballot Sherman received 244 votes, Harrison 281, Alger 187, Gresham 91, Allison 73, Blaine 40, and McKinley 12. The seventh ballot resulted as follows: Harrison 278, Sherman 231, Alger 120, Gresham 91, Allison 76, McKinley 16, Blaine 15, Lincoln 2, Foraker 1. The decisive point was now reached, when Congressman Henderson, of Iowa, arose and withdrew the name of Senator Allison, whose strength was

at once transferred to Harrison. Friends of the other candidates joined to swell the winning column, and at the end of roll-call, on the eighth ballot, Harrison had obtained 544 votes, or over 100 more than were necessary for a choice. Sherman received on this ballot 118 votes, Alger 100, Gresham 59, Blaine 5, McKinley 4. The nomination was then made unanimous.

For Vice-President, William O. Bradley, of Kentucky; William Walter Phelps, of New Jersey; and Levi P. Morton, of New York, were placed in nomination. Mr. Morton was nominated on the first ballot by the following vote: Morton 561, Phelps 119, Bradley 93, Blanche K. Bruce, of Mississippi, 11. The nomination was made unanimous.

The platform adopted by the convention is as follows:

The Republicans of the United States, assembled by their delegates in National Convention, pause on the threshold of their proceedings to honor the memory of their first great leader, the immortal champion of liberty and the rights of the people—Abraham Lincoln—and to cover also with wreaths of imperishable remembrance and gratitude the heroic names of our later leaders who have been more recently called away from our councils—Grant, Garfield, Arthur, Logan, Conkling. May their memories be faithfully cherished!

We also recall with our greetings and with prayer for his recovery the name of one of our living heroes, whose memory will be treasured in the history both of the Republicans and the republic, the name of that noble soldier and favorite child of victory, Philip H. Sheridan.

In the spirit of those great leaders and of our own devotion to human liberty, and with that hostility to all forms of despotism and oppression which is the fundamental idea of the Republican party, we send fraternal congratulations to our fellow Americans of Brazil upon their great act of emancipation which completed the abolition of slavery throughout the two American continents.

We earnestly hope we may soon congratulate our fellow-citizens of Irish birth upon the peaceful recovery of home rule for Ireland.

We reaffirm our unwavering devotion to the national Constitution and to the indissoluble union of the States, to the autonomy reserved to the States under the Constitution, to the personal rights and liberties of citizens in all the States and Territories in the Union, and especially to the supreme and sovereign right of every lawful citizen, rich or poor, native or foreign born, white or black, to cast one free ballot in public elections and to have that ballot duly counted.

We hold a free and honest popular ballot and just and equal representation of all the people to be the foundation of our republican Government, and demand effective legislation to secure the integrity and purity of elections, which are the fountains of all public authority.

We charge that the present Administration and Democratic majority in Congress owe their existence to the suppression of the ballot by a criminal nullification of the Constitution and the laws of the United States.

We are uncompromisingly in favor of the American system of protection; we protest against its destruction as proposed by the President and his party. They serve the interests of Europe; we will support the interests of America. We accept the issue and confidently appeal to the people for their judgment. The protective system must be maintained. Its

abandonment has always been followed by general disaster to all interests except those of the usurer and the sheriff.

We denounce the Mills Bill as destructive to the general business, the labor, and the farming interests of the country, and we heartily indorse the consistent and patriotic action of the Republican representatives in Congress in opposition to its passage.

We condemn the proposition of the Democratic party to place wool on the free list, and we insist that the duties thereon shall be adjusted and maintained so as to furnish full and adequate protection to that industry.

The Republican party would effect all needed reduction of the national revenue by repealing the taxes upon tobacco, which are an annoyance and burden to agriculture, and the taxes upon spirits used in the arts and for mechanical purposes, and by such revision of the tariff laws as will tend to check imports of such articles as are produced by our people, the production of which gives employment to our labor, and release from import duties those articles of foreign production except luxuries the like of which can not be produced at home. If there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of internal taxes rather than the surrender of any part of our protective system at a joint behest of whisky trusts and agents of foreign manufacturers.

We declare our hostility to the introduction into this country of foreign contract labor and of Chinese labor alien to our civilization and our Constitution, and we demand the rigid enforcement of existing laws against it and favor such immediate legislation as will exclude such labor from our shores.

We declare our opposition to all combinations of capital organized in trusts or otherwise to control arbitrarily the condition of trade among our citizens, and we recommend to Congress and State legislatures in their respective jurisdictions, such legislation as will prevent the execution of all schemes to oppress the people by undue charges on their supplies or by unjust rates for the transportation of their products to market. We approve the legislation by Congress to prevent alike unjust burdens and unfair discriminations between States.

We reaffirm the policy of appropriating the public lands of the United States to be homesteads for American citizens and settlers not aliens which the Republican party established in 1862 against the persistent opposition of the Democrats in Congress, and which has brought our great Western domain into such magnificent development. The restoration of unearned railroad land grants to public domain for the use of actual settlers which was begun under the administration of President Arthur should be continued. We deny that the Democratic party has ever restored one acre to the people, but declare that by joint action of Republicans and Democrats about fifty million acres of unearned lands, originally granted for the construction of railroads, have been restored to the public domain in pursuance of the conditions inserted by the Republican party in the original grant.

We charge the Democratic Administration with failure to execute the laws securing to settlers titles to their homesteads and with using appropriations made for that purpose to harass the innocent settlers with spies and prosecutions under the false pretense of exposing frauds and vindicating law.

The government by Congress of the Territories is based upon necessity only to the end that they may become States in the Union; therefore, whenever the conditions of population, material resources, public intelligence, and morality are such as to insure stable local government therein, the people of such Territories should be permitted as a right inherent in them to form for themselves constitutions and State governments and be admitted into the Union. Pending the preparation for statehood, all officers thereof

should be selected from *bona-fide* residents and citizens of the Territory wherein they are to serve. South Dakota should of right be immediately admitted as a State in the Union under the Constitution framed and adopted by her people, and we heartily indorse the action of the Republican Senate in twice passing bills for her admission. The refusal of the Democratic House of Representatives, for partisan purposes, to favorably consider these bills is a willful violation of the sacred American principle of local self-government, and merits the condemnation of all just men. The pending bills in the Senate for acts to enable the people of Washington, North Dakota, and Montana Territories to form constitutions and establish State governments should be passed without unnecessary delay. The Republican party pledges itself to do all in its power to facilitate the admission of the Territories of New Mexico, Wyoming, Idaho, and Arizona to the enjoyment of self-government as States; such of them as are now qualified as soon as possible, and the others as soon as they become so.

The political power of the Mormon Church in the Territories as exercised in the past is a menace to free institutions too dangerous to be long suffered. Therefore we pledge the Republican party to appropriate legislation asserting the sovereignty of the nation in all Territories where the same is questioned, and, in furtherance of that end, to place upon the statute-books legislation stringent enough to divorce the political from the ecclesiastical power and thus stamp out the attendant wickedness of polygamy.

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

We demand the reduction of letter postage to one cent per ounce.

In a republic like ours, where the citizen is sovereign and the official the servant, where no power is exercised except by the will of the people, it is important that the sovereign—the people—should possess intelligence. The free school is a promoter of that intelligence which is to preserve us a free nation. Therefore the State or nation, or both combined, should support free institutions of learning sufficient to afford to every child growing up in the land the opportunity of a good common-school education.

We earnestly recommend that prompt action be taken by Congress in the enactment of such legislation as will best secure the rehabilitation of our American merchant marine, and we protest against the passage by Congress of a free ship bill, as calculated to work injustice to labor by lessening the wages of those engaged in preparing materials as well as those directly employed in our ship-yards.

We demand appropriations for the early rebuilding of our navy; for the construction of coast fortifications and modern ordnance, and other approved modern means of defense for the protection of our defenseless harbors and cities; for the payment of just pensions to our soldiers; for necessary works of national importance in the improvement of harbors and the channels of internal, coastwise, and foreign commerce; for the encouragement of the shipping interests of the Atlantic, Gulf, and Pacific States, as well as for the payment of the maturing public debt. This policy will give employment to our labor, activity to our various industries, increase security of our country, promote trade, open new and direct markets for our produce, and cheapen the cost of transportation. We affirm this to be far better for our country than the Democratic policy of loaning the Government's money without interest to "pet banks."

The conduct of foreign affairs by the present Administration has been distinguished by its inefficiency and its cowardice. Having withdrawn from the Senate all pending treaties effected by Republican Administrations for the removal of foreign burdens and restrictions upon our commerce and for its extension into better markets, it has neither effected nor pro-

posed any others in their stead. Professing adherence to the Monroe doctrine, it has seen with idle complacency the extension of foreign influence in Central America and of foreign trade everywhere among our neighbors. It has refused to charter, sanction, or encourage any American organization for constructing the Nicaragua Canal, a work of vital importance to the maintenance of the Monroe doctrine and of our national influence in Central and South America, and necessary for the development of trade with our Pacific territory, with South America, and with the islands and further coasts of the Pacific Ocean.

We arraign the present Democratic Administration for its weak and unpatriotic treatment of the fisheries question, and its pusillanimous surrender of the essential privileges to which our fishing-vessels are entitled in Canadian ports under the treaty of 1818, the reciprocal maritime legislation of 1880 and the comity of the nations, and which Canadian fishing-vessels receive in the ports of the United States. We condemn the policy of the present Administration and the Democratic majority in Congress toward our fisheries as unfriendly and conspicuously unpatriotic, and as tending to destroy a valuable national industry and an indispensable resource of defense against a foreign enemy. The name of American applies alike to all citizens of the republic and imposes upon all alike the same obligation of obedience to the laws. At the same time that citizenship is and must be the panoply and safeguard of him who wears it and protect him, whether high or low, rich or poor, in all his civil rights. It should and must afford him protection at home and follow and protect him abroad in whatever land he may be on a lawful errand.

The men who abandoned the Republican party in 1884, and continue to adhere to the Democratic party, have deserted not only the cause of honest government, of sound finance, of freedom, of purity of the ballot, but especially have deserted the cause of reform in the civil service. We will not fail to keep our pledges because they have broken theirs, or because their candidate has broken his. We therefore repeat our declaration of 1884, to wit: The reform of the civil service, auspiciously begun under the Republican Administration, should be completed by the further extension of the reform system already established by law to all the grades of the service to which it is applicable. The spirit and purpose of the reform should be observed in all Executive appointments, and all laws at variance with the object of existing reform legislation should be repealed, to the end that the dangers to free institutions which lurk in the power of official patronage may be wisely and effectively avoided.

The gratitude of the nation to the defenders of the Union can not be measured by laws. The legislation of Congress should conform to the pledge made by a loyal people and be so enlarged and extended as to provide against the possibility that any man who honorably wore the Federal uniform shall become an inmate of an almshouse or dependent upon private charity. In the presence of an overflowing Treasury, it would be a public scandal to do less for those whose valorous service preserved the Government. We denounce the hostile spirit shown by President Cleveland in his numerous vetoes of measures for pension relief, and the action of the Democratic House of Representatives in refusing even a consideration of general pension legislation.

In support of the principles herewith enunciated we invite the co-operation of patriotic men of all parties, and especially of all workingmen, whose prosperity is seriously threatened by the free-trade policy of the present Administration.

The following addendum was adopted in the closing hours of the convention:

The first concern of all good government is the virtue and sobriety of the people and the purity of their

homes. The Republican party cordially sympathizes with all wise and well directed efforts for the promotion of temperance and morality.

Prohibition Convention.—The Prohibition National Convention met at Indianapolis on May 80, and organized by choosing H. O. Delano, of Connecticut, to be temporary chairman. The permanent chairman was Ex-Gov. John P. St. John, of Kansas. Gen. Clinton B. Fisk, of New Jersey, was nominated by acclamation for President, and John A. Brooks, of Missouri, for Vice-President. Considerable discussion arose regarding the platform, especially upon the subject of woman suffrage. The report of the majority of the Platform Committee was finally adopted in the following form:

The Prohibition party, in national convention assembled, acknowledging Almighty God as the source of all power in government, do hereby declare:

1. That the manufacture, importation, exportation, transportation, and sale of alcoholic beverages shall be made public crimes, and punished as such.

2. That such prohibition must be secured through amendments of our national and State constitutions, enforced by adequate laws adequately supported by administrative authority; and to this end the organization of the Prohibition party is imperatively demanded in State and nation.

3. That any form of license, taxation, or regulation of the liquor-traffic is contrary to good government; that any party which supports regulation, license, or tax enters into alliance with such traffic and becomes the actual foe of the State's welfare, and that we arraign the Republican and Democratic parties for their persistent attitude in favor of the licensed iniquity, whereby they oppose the demand of the people for prohibition, and, through open complicity with the liquor cause, defeat the enforcement of law.

4. For the immediate abolition of the internal revenue system, whereby our national Government is deriving support from our greatest national vice.

5. That, an adequate public revenue being necessary, it may properly be raised by import duties and by an equitable assessment upon the property and the legitimate business of the country, but import duties should be so reduced that no surplus shall be accumulated in the Treasury, and that the burdens of taxation shall be removed from foods, clothing, and other comforts and necessities of life.

6. That civil-service appointments for all civil offices, chiefly clerical in their duties, should be based upon moral, intellectual, and physical qualifications, and not upon party service or party necessity.

7. That the right of suffrage rests on no mere circumstance of race, color, sex, or nationality, and that where, from any cause, it has been held from citizens who are of suitable age and mentally and morally qualified for the exercise of an intelligent ballot, it should be restored by the people through the Legislatures of the several States, on such educational basis as they may deem wise.

8. For the abolition of polygamy and the establishment of uniform laws governing marriage and divorce.

9. For prohibiting all combinations of capital to control and to increase the cost of products for popular consumption.

10. For the preservation and defense of the Sabbath as a civil institution without oppressing any who religiously observe the same on any other day than the first day of the week.

That arbitration is the Christian, wise, and economic method of settling national differences, and the same method should, by judicious legislation, be applied to the settlement of disputes between large bodies of employees and employers; that the abolition of the saloon would remove the burdens, moral, physical, pecuniary, and social, which now oppress labor and rob it of its

earnings, and would prove to be the wise and successful way of promoting labor reform; and we invite labor and capital to unite with us for the accomplishment thereof; that monopoly in land is a wrong to the people, and the public land should be reserved to actual settlers, and that men and women should receive equal wages for equal work.

That our immigration laws should be so enforced as to prevent the introduction into our country of all convicts, inmates of other dependent institutions, and of others physically incapacitated for self-support, and that no person should have the ballot in any State who is not a citizen of the United States.

Recognizing and declaring that prohibition of the liquor-traffic has become the dominant issue in national politics, we invite to full party fellowship all those who, on this one dominant issue, are with us agreed, in the full belief that this party can and will remove sectional differences, promote national unity, and insure the best welfare of our entire land.

Union Labor and United Labor Conventions.—On May 15 a national convention of the Union Labor party, consisting of two hundred and seventy-four delegates, from twenty-five States, met at Cincinnati for the purpose of nominating presidential candidates. This party was formed on Feb. 22, 1887, at a convention held in the same city, to which delegates had been invited from the labor and farmers' organizations, including the Knights of Labor, the Agricultural Wheelers, the Corn-growers, the Homesteadry, Farmers' Alliances, Greenbackers, and Grangers. The party thus formed placed a State ticket in the field, in Ohio, in the autumn of 1887, and in Arkansas, Missouri, and nearly all the Western States during the canvass of this year. The convention nominated for President, Alton J. Streeter, of Illinois; and for Vice-President, Charles E. Cunningham, of Arkansas. The platform, after reciting the existing hardships of farmers and laborers, contains the following declarations:

We oppose land monopoly in every form, demand the forfeiture of unearned grants, the limitation of land ownership, and such other legislation as will stop speculation in lands and holding it unused from those whose necessities require it. A homestead should be exempt, to a limited extent, from execution or taxation.

The means of communication and transportation shall be owned by the people, as is the United States postal system.

The establishment of a national monetary system in the interest of the producer, instead of the speculator and usurer, by which the circulating medium in necessary quantity shall be issued directly to the people, without the intervention of banks, and loaned to citizens upon land security, at a low rate of interest, so as to relieve them from the extortion of usury, and enable them to control the money supply. Postal savings banks should be established, and while we have free coinage of gold we should have free coinage of silver. We demand the immediate application of all the money in the United States Treasury to the payment of the bonded debt, and condemn the further issue of interest-bearing bonds, either by the national Government or by States, Territories, or municipalities.

Arbitration should take the place of strikes and other injurious methods of settling labor disputes. The letting of convict labor to contractors should be prohibited, the contract system be abolished on public works, the hours of labor in industrial establishments be reduced commensurate with the increased produc-

tion by labor-saving machinery, employes protected from bodily injury, equal pay for equal work for both sexes, and labor, agricultural, and co-operative associations be fostered and encouraged by law.

We demand the passage of a service pension bill to every honorably discharged soldier and sailor of the United States.

A graduated income-tax is the most equitable system of taxation.

We demand a constitutional amendment making United States Senators elective by a direct vote of the people.

We demand the strict enforcement of laws prohibiting the importation of subjects of foreign countries under contracts.

We demand the passage and enforcement of such legislation as will absolutely exclude the Chinese from the United States.

The right to vote is inherent in citizenship, irrespective of sex, and is properly within the province of State legislation.

The paramount issues to be solved in the interests of humanity are the abolition of usury, monopoly, and trusts, and we denounce the Democratic and Republican parties for creating and perpetuating these monstrous evils.

The Union Labor party drew its support from the Greenbackers, the farmer organizations, and the older labor-reformers. In this it differed from the United Labor party, which was an outgrowth of the Henry George movement of two years ago in New York city. This latter organization supported Henry George in the canvass of 1887 for Secretary of State in New York, and, with the opening of the national canvass, placed in nomination its first national ticket. The National Convention, consisting of ninety delegates, representing nine States, was held at Cincinnati on May 16, one day after the Union Labor Convention, and nominated Robert H. Cowdrey, of Illinois, for President; and William H. T. Wakefield, of Kansas, for Vice-President. The national platform contains the following declarations:

We, the delegates of the United Labor party of the United States, in national convention assembled, hold that the corruptions of government and the impoverishment of the masses result from neglect of the self-evident truths proclaimed by the founders of this republic, that all men are created equal and are endowed with inalienable rights. We aim at the abolition of the system which compels men to pay their fellow-creatures for the use of the common bounties of nature, and permits monopolizers to deprive labor of natural opportunities for employment.

We see access to farming-land denied to labor, except on payment of exorbitant rent or the acceptance of mortgage-burdens, and labor, thus forbidden to employ itself driven into the cities. We see the wage-workers of the cities subjected to this unnatural competition, and forced to pay an exorbitant share of their scanty earnings for cramped and unhealthy lodgings. We see the same intense competition condemning the great majority of business and professional men to a bitter and often unavailing struggle to avoid bankruptcy, and that while the price of all that labor produces ever falls, the price of land ever rises.

We trace these evils to a fundamental wrong—the making of the land on which all must live the exclusive property of but a portion of the community. To this denial of natural rights are due want of employment, low wages, business depressions, that intense competition which makes it so difficult for the majority of men to get a comfortable living, and that wrongful distribution of wealth which is producing

the millionaire on one side and the tramp on the other.

To give all men an interest in the land of their country; to enable all to share in the benefits of social growth and improvement; to prevent the shutting out of labor from employment by the monopolization of natural opportunities; to do away with the one-sided competition which cuts down wages to starvation rates; to restore life to business and prevent periodical depressions; to do away with that monstrous injustice which deprives producers of the fruits of their toil while idlers grow rich; to prevent the conflicts which are arraying class against class, and which are fraught with menacing dangers to society—we propose so to change the existing system of taxation that no one shall be taxed on the wealth he produces, nor any one suffered to appropriate wealth he does not produce by taking to himself the increasing values which the growth of society adds to land.

What we propose is not the disturbing of any man in his holding or title; but, by taxation of land according to its value and not according to its area, to devote to common use and benefit those values which arise not from the exertion of the individual, but from the growth of society, and to abolish all taxes on industry and its products. This increased taxation of land-values must, while relieving the working farmer and small homestead owner of the undue burdens now imposed upon them, make it unprofitable to hold land for speculation, and thus throw open abundant opportunities for the employment of labor and the building up of homes.

We would do away with the present unjust and wasteful system of finance, which piles up hundreds of millions of dollars in treasury vaults while we are paying interest on an enormous debt; and we would establish in its stead a monetary system in which a legal-tender circulating medium should be used by the Government without the intervention of banks.

We wish to abolish the present unjust and wasteful system of ownership of railroads and telegraphs by private corporations—a system which, while failing to supply adequately public needs, impoverishes the farmer, oppresses the manufacturer, hampers the merchant, impedes travel and communication, and builds up enormous fortunes and corrupting monopolies that are becoming more powerful than the Government itself. For this system we would substitute Government ownership and control for the benefit of the whole people instead of private profit.

While declaring the foregoing to be the fundamental principles and aims of the United Labor Party, and while conscious that no reform can give effectual and permanent relief to labor that does not involve the legal recognition of equal rights to natural opportunities, we, nevertheless, as measures of relief from some of the evil effects of ignoring those rights, favor such legislation as may tend to reduce the hours of labor, to prevent the employment of children of tender years, to avoid the competition of convict labor with honest industry, to secure the sanitary inspection of tenements, factories, and mines, and to put an end to the conspiracy laws.

We desire also to so simplify the procedure of our courts, and diminish the expense of legal proceedings, that the poor may therein be placed on an equality with the rich, and the long delays which now result in scandalous miscarriages of justice may be prevented.

Since the ballot is the only means by which in our republic the redress of political and social grievances is to be sought, we especially and emphatically declare for the adoption of what is known as the Australian system of voting, in order that the effectual secrecy of the ballot, and the relief of candidates for public office from the heavy expenses now imposed upon them, may prevent bribery and intimidation, do away with practical discriminations in favor of the rich and unscrupulous, and lessen the pernicious influence of money in politics.

We denounce the Democratic and Republican parties as hopelessly and shamelessly corrupt, and by reason of their affiliation with monopolies, equally unworthy of the suffrages of those who do not live upon public plunder; we therefore require of those who would act with us that they sever all connection with both.

Unsuccessful attempts were made at this time to unite these two labor parties in the support of a single ticket, and on August 2 a conference of their leaders was held at Chicago for the purpose; but as the Union Labor representatives demanded the entire withdrawal of the United Labor ticket, no agreement was reached. The canvass of the latter party was, however, not pushed with enthusiasm, and except in New York and Illinois it polled only a scattering vote.

American Party Convention.—The National Convention of the American party was held at Washington, D. C., on August 14 and 15, delegates to the number of 126 being present. More than half of these were from the State of New York, and their disposition to rule the convention in their own interest early led to a withdrawal of about 25 members from other States, and a consequent division in the party councils. James L. Curtis, of New York, was nominated for President, receiving 45 to 15 for Abram S. Hewitt. The nominee for Vice-President was James R. Greer, of Tennessee, who later declined the honor. The resolutions adopted include the following:

Resolved, That all law-abiding citizens of the United States of America, whether native or foreign born, are politically equals (except as provided by the Constitution), and all are entitled to and should receive the full protection of the laws.

Resolved, That the Constitution of the United States should be so amended as to prohibit the Federal and State Governments from conferring upon any person the right to vote unless such person be a citizen of the United States.

Resolved, That we are in favor of fostering and encouraging American industries of every class and kind, and declare that the assumed issue "Protection" *vs.* "Free Trade" is a fraud and a snare. The best "protection" is that which protects the labor and life blood of the republic from the degrading competition with and contaminations by imported foreigners; and the most dangerous "free trade" is that in paupers, criminals, communists, and anarchists, in which the balance has always been against the United States.

Whereas, One of the greatest evils of unrestricted foreign immigration is the reduction of the wages of the American workingman and workingwoman to the level of the underfed and underpaid labor of foreign countries; therefore,

Resolved, That we demand that no immigrant shall be admitted into the United States without a passport obtained from the American Consul at the port from which he sails; that no passport shall be issued to any pauper, criminal, or insane person, or to any person who, in the judgment of the consul, is not likely to become a desirable citizen of the United States; and that for each immigrant passport there shall be collected by the consul issuing the same the sum of one hundred dollars (\$100), to be by him paid into the Treasury of the United States.

Resolved, That the present naturalization laws of the United States should be unconditionally repealed.

Resolved, That the soil of America should belong to Americans; that no alien non-resident should be per-

mitted to own real estate in the United States, and that the realty possessions of the resident alien should be limited in value and area.

Resolved, That no flag shall float on any public buildings, municipal, State, or national, in the United States, except the municipal, State, or national flag of the United States—the flag of the stars and stripes.

Resolved, That we reassert the American principles of absolute freedom of religious worship and belief, the permanent separation of Church and state; and we oppose the appropriation of public money or property to any church or institution administered by a church. We maintain that all church property should be subject to taxation.

Other Conventions.—The first presidential ticket of the year was nominated by a convention of the Industrial Reform party, at Washington, D. C., on February 22, and contained the names of Albert E. Redstone, of California, for President, and John Colvin, of Kansas, for Vice-President. The new party found only a few supporters, and had no appreciable influence in the election. Another ticket, equally without support at the polls, was nominated by the National Equal Rights party at Des Moines, Iowa, on May 15, bearing the names of Belva Lockwood, of Washington, D. C., for President, and Alfred H. Love, of Philadelphia, for Vice-President. The latter declined the nomination, and the name of Charles Stuart Wells was substituted. A demand for woman suffrage and equal rights of man and woman constituted the most important portion of the platform. On July 16 the Grand Council of the Independent Labor party met at Detroit, and, after discussion of the different parties and candidates, voted to support the Republican candidates. A call issued on August 16 for a national convention of the Greenback party, brought together only eight delegates at Cincinnati on September 12, who issued an address proclaiming the Greenback principles, but made no nominations. On July 25 a convention of colored Democrats was called to meet at Indianapolis to organize a movement to divide the negro vote. There were 64 delegates divided into two factions, each of which strove for control of the convention, and their quarrels tended largely to destroy the influence and effect of the movement. Resolutions supporting the Democratic ticket and approving Democratic principles were adopted. A large and enthusiastic conference of anti-saloon Republicans was held at New York on May 2 and the day following. Representatives were present from nearly every State, and the necessity of solving the liquor problem through the agency of the Republican party was discussed. Resolutions were adopted and a movement organized intended to arrest the growing defection of Prohibitionists from the Republican party.

Political Clubs.—An important feature of the political canvass of this year was the rapid growth of the political club system. Two powerful organizations, the Republican League of the United States and the National Association of Democratic Clubs, were formed, whose influence stimulated the formation of clubs over

the whole country, supplementing and in some cases practically superseding the regular party machinery.

Early in 1887 the Republican Club of New York city began the work of enlisting the Republican clubs already in existence into one compact body, and, by means of circulars and letters, the existence of about three hundred clubs was discovered. A national convention of these organizations was held in New York city, Dec. 15–17, 1887, with about 1,500 delegates in attendance from twenty-three States and Territories. Daniel J. Ryan, of Ohio, was temporary, and William M. Evarts permanent, chairman. A National Republican League was there organized, to be composed of State leagues, which in turn were to be made up of local clubs. James P. Foster, of New York, was elected president; Andrew B. Humphrey secretary; and J. S. Clarkson, of Iowa, chairman of the executive committee; the headquarters being in New York city. New clubs sprung up everywhere, and by August, 1888, 6,500 clubs were reported, with an estimated membership of one million voters. The work of forming clubs in the doubtful States was pushed rapidly. In West Virginia the number increased in six weeks from 4 to 118, and there were over 300 clubs in November. Before the election there were 1,100 clubs in Indiana, with a membership of 80,000, and 1,400 clubs in New York. State leagues were formed and State conventions of Republican clubs were held during the campaign in nearly all the Northern States. A great work was done by these organizations in the distribution of campaign documents, and especially in the enrollment of Republican voters.

The former work was aided and extended by the Home Market Club, of Boston, Mass., which was formed to spread the doctrine of protection. Its work was largely confined to the circulation of documents, nearly thirteen million being issued and distributed, to a great extent, by the local clubs of the Republican League.

In this movement the Democrats were scarcely less active than their opponents. The National Association of Democratic Clubs grew out of a suggestion of the Young Men's Democratic Club of New York to form a league of Democratic clubs to secure the adoption of the principles of tariff and civil-service reform. After much correspondence, several clubs united in a call for a conference, which was held in New York city, April 21, 1888, and was participated in by delegates from twenty-one clubs from fourteen States. This conference called a convention of Democratic clubs, which was held in Baltimore, July 4, 1888, and was attended by 2,400 delegates from 500 clubs. W. E. Russell, of Massachusetts, was chosen temporary, and John Winans permanent, chairman of the convention. The principles of the association were adopted, which henceforth became an organization for the success of the

party. Chauncey F. Black, of Pennsylvania, was elected president; Edward B. Whitney, of New York, secretary; and Robert Grier, of New York, chairman of the executive committee; and headquarters were opened in New York city. State organizations were formed in twelve States, and by November 3,000 clubs were reported from forty-two States and Territories, with an aggregate membership of 800,000. New York led the list with 480 clubs; Kentucky had 301; West Virginia, Pennsylvania, and Illinois more than 200 each; and seven other States more than 100 each. The National Association distributed about one million documents during the canvass, and the State leagues many times that number. The New York State League undertook a unique work in chartering a canal-boat, the "Thomas Jefferson," which, under the command of President Thatcher of the League, with a crew of speakers and a cargo of tariff documents, made a three weeks' voyage across the State, through the Erie and Champlin Canals, holding meetings and distributing documents. The State League of Pennsylvania opened the canvass with a thousand simultaneous meetings in all parts of the State.

Besides these party organizations, the tariff reform clubs throughout the country were active in the canvass, notably the Reform Club of New York, the Massachusetts Tariff Reform League, the New Haven Reform Club, and the American Tariff Reform League of Chicago.

The Presidential Canvass.—On August 6 the candidates of the Prohibition party made public their letters of acceptance. President Cleveland's letter accepting the Democratic nomination was published on September 10, and on the following day that of ex-Senator Harrison appeared. Mr. Morton's letter accepting the vice-presidential nomination appeared on October 2, and ex-Senator Thurman's on October 14. President Cleveland reiterated in his letter the strong views in favor of tariff reduction, and the danger of a surplus in the national Treasury, expressed by him in his message to Congress in December, 1887. The Republicans were not slow in taking up the tariff issue thereby presented, and that question became the absorbing topic of discussion in the canvass. The controversy became largely one between protection and free trade, the Republicans striving to show that the President's utterances and the Mills Bill committed their opponents to a free-trade policy, while they were themselves pledged to abolish the entire internal revenue system before destroying protective tariff rates. Civil-service reform, the Southern problem, the social record of the candidates, and all other questions dwindled into comparative insignificance.

An incident of the later days of the canvass was the publication on Oct. 24 of a letter purporting to be written by one Charles F. Murchison, of Pomona, Cal., to the British

minister at Washington, asking advice in regard to the political situation, and of the reply of Minister West thereto. The writer said he was a naturalized citizen of the United States of English birth, but he still considered England the mother-land. He further said that the information he sought was not for himself alone, but to enable him to give assurances to many other persons in the same situation as himself, for the purpose of influencing their political action as citizens of the United States of English birth. The letter also contained gross reflections upon the conduct of the United States Government in respect to questions in controversy and unsettled between the United States and Great Britain, and both directly and indirectly imputed insincerity in such conduct. The British minister replied that "any political party which openly favored the mother-country at the present moment would lose popularity, and that the party in power is fully aware of that fact"; and that in respect to the "questions with Canada which have been unfortunately reopened since the rejection of the (fisheries) treaty by the Republican majority in the Senate, and by the President's message to which you allude, . . . allowances must be made for the political situation as regards the presidential election."

The President regarded this reply as an interference of Minister West in the politics of this country by giving political advice to American citizens, and notified the British Government of his conduct. No action being taken by that Government for his recall, the President, on Oct. 30, notified him that his presence as the representative of Great Britain was no longer agreeable to this Government, and his passports were delivered to him. The British Government, regarding this action as unduly hasty and discourteous, refused to fill the vacant mission during the remaining months of the Administration. The incident acquired unusual importance from the circumstance that it was a part of the Republican argument throughout the campaign to show that the Democratic party, in its tariff-reform and free-trade views, was adopting a course that would open our markets to British manufacturers, and was hostile to American interests.

The efforts of both parties were directed mainly to the doubtful States of Indiana, New York, New Jersey, and Connecticut. President Cleveland took no active part in the canvass, and Gen. Harrison confined his efforts to short addresses made to the numerous delegations that came to pay their respects to him at his home. Ex-Senator Thurman delivered a series of addresses in the West, and spoke also in New York city and at Newark, N. J. The central figure of the canvass on the Republican side, was Mr. Blaine, whose return in August from his European trip was signalized by a great demonstration in his honor in New York city. He took an active part in the Maine

canvass before the September election, and afterward made a tour of the West, speaking to large audiences.

At the election in November the Democrats carried all the Southern States, as usual, and the Northern States of New Jersey and Connecticut. In New York, while the State Democratic ticket was elected, their National ticket was nearly 15,000 votes behind the Republican ticket. Gen. Harrison was thus assured of 233 electoral votes, while Mr. Cleveland had 168. The popular vote, by counties, may be found in the article UNITED STATES, PRESIDENTIAL ELECTIONS IN. The accompanying table gives it by States.

A presidential candidate nominated by the Socialists of New York city received 2,068 votes.

The result of the Congressional elections was to give control of the popular branch of Congress to the Republicans by a small majority.

The Governor of West Virginia denied certificates of election to two Republicans who were elected to Congress upon the face of the returns and gave them to their Democratic opponents. Should the Republicans be finally seated, the Republican majority in the Fifty-first Congress will be increased from 3 to 7. The Democratic majority in the Fiftieth Congress was 19.

UNITED STATES, FINANCES OF THE. During the fiscal year ended June 30, 1888, the reve-

nues collected by the United States Government averaged more than \$1,000,000 a day, including all Sundays and holidays, or about \$379,000,000 for the twelve months. This aggregate is more by about eight million than for the preceding year, and is at the rate of a little more than six dollars per capita of population, about the average rate of the past fifteen years, and less than half the highest rate of Federal taxation per capita per annum of which the Government has record (\$15.78 per capita in 1866).

The expenditures for the year have been about \$268,000,000, or about the same as in 1887, and greater than in any previous year since 1875.

The surplus in the Treasury at the close of the fiscal year, over and above all accrued liabilities, was about \$108,000,000. It was about \$41,000,000 when the year began.

The average monthly surplus has been twice as great during 1888 as during 1887, and the highest amount has been nearly double the highest aggregate of the preceding year. The surplus at one time during the past year was greater by \$53,487,000 than the highest point previously reached, and has since declined to little less than half its greatest aggregate.

The National Bank depositary system, which has been the subject of much recent discussion, has just rounded out a quarter of a century of its existence. From the beginning of

the fiscal year 1864 to the close of the fiscal year 1888, it has been maintained by each successive Secretary of the Treasury under the discretionary authority conferred by law. The aggregate amount of public funds handled during the twenty-five years by this important adjunct to the Treasury has been nearly \$5,000,000,000, and the balance held has varied at different dates from \$6,000,000 to \$62,000,000. At the close of 1864 the balance was about \$40,000,000, and during the four years following declined steadily to \$23,000,000 in 1868. Since that year it has never risen to the latter figure except in 1878, when it exceeded \$62,000,000, and during the past fiscal year, when it again rose to this high sum, and has been maintained for several months at about \$60,000,000. From 1874 to 1887 the balance never exceeded \$15,000,000, and it is to-day nearly three times as large as it was two years ago. During the entire period the Government has never been subjected to the slightest loss except during the earliest stages, when the system was imperfect and the necessary safeguards had not yet been applied.

During the year just closed the number of depositaries was increased more rapidly than ever before. The system has proved itself to be an important monetary agency of the Government—safe, economical, efficient, and expeditious in the discharge of public business. The important changes of policy toward the depositaries during the past year have relieved the system of the suspicion of favoritism and have placed it upon a basis of better business principles. The undue expansion of the balance far beyond the amount necessary for the true scope and purpose of the depositary system is due exclusively to the present excessive tax laws, and whatever objection is justly made to this large balance will apply with greater force to any other disposition which the Treasury could have made of the money.

The holdings of public money by depositary banks were almost exactly the same at the close of the year as at its beginning, or about \$52,000,000.

The following tables exhibit in detail the revenue and expenditures of the Government for the fiscal year ending June 30, 1888:

REVENUE.	
Customs	\$219,091,173 68
Internal revenue	194,296,871 98
Sales of public lands	11,902,017 28
Profits on coinage	9,587,684 48
Consular, letters patent, and land fees	2,438,448 99
Tax on national banks	1,743,066 85
Customs fees, fines, etc.	1,097,448 90
Pacific Railroad sinking-fund	1,170,831 42
Pacific Railroad interest	681,696 95
Sales of Indian lands	880,087 42
Soldiers' Home fund	432,189 29
Sales of Government property	865,877 98
Tax on seal-skins	817,500 00
Immigrant fund	291,189 50
Surveying public lands	161,890 78
Deductions on mutilated notes, etc.	112,422 05
Sale of naval vessels	105,665 58
Revenues of District of Columbia	2,650,350 81
Miscellaneous	1,838,719 54
Total	\$379,266,074 76

EXPENDITURES.	
Civil list	\$22,852,884 08
Foreign intercourse	1,593,451 40
Indian service	6,249,807 87
Pensions	80,288,508 77
Military establishment	38,522,436 11
Naval establishment	16,994,487 65
Miscellaneous, including public buildings, lighthouses, and collecting the revenue	44,238,351 89
District of Columbia	4,278,118 48
Interest on the public debt	44,715,007 47
Total	\$259,652,958 67
Leaving a surplus of	\$119,613,116 09
Which was applied as follows:	
Purchase of bonds for the sinking-fund, including \$2,552,015.88 paid for premium	\$46,577,165 88
Purchase of 4 and 4½ per-cent. bonds other than for the sinking-fund, including \$5,418,826.58 for premium	81,990,326 58
Redemption of 8-per-cent. loan of 1882	4,178,750 00
Redemption of other loans, fractional currency, etc.	841,138 05
Total	\$53,587,280 51
Leaving a balance added to the cash in the Treasury of	\$66,025,835 58
Total	\$119,613,116 09

It will be seen from the foregoing that, of all the items in the national expenditure, pensions constitute much the largest, and exceed the total cost of administering the legislative, executive, and judicial branches of the Government, as well as the Indian and diplomatic and consular branches. The pension-roll costs the Government more than twice as much as its military establishment and engineering-works, and more than four times as much as the navy, even during these days of increased expenditure in naval construction. This item of pension payments is the only one that is growing in amount. It was \$5,000,000 more in 1888 than in 1887, and \$12,000,000 increase in 1887 over 1886, while the aggregate of other expenditures was no greater for 1888 than for 1887.

As compared with the fiscal year 1887, the revenues for 1888 increased \$11,041,749.38 in the following items: Internal revenue, \$5,473,480.76; customs, \$1,804,280.50; sales of public lands, \$1,947,730.81; profits on coinage, \$458,381.65; consular fees, \$161,426.40; deduction on mutilated notes, etc., \$112,422.05; sale of naval vessels, \$105,665.88; sale of Government property, \$108,044.94; customs fees, \$97,871.98; surveying public lands, \$67,601; immigrant fund, \$32,787; fees on letters patent, \$14,487.86; revenues of the District of Columbia, \$323,290.13; and miscellaneous items, \$339,278.92. There was a decrease of \$3,178,952.28, as follows: Soldiers' Home fund, \$793,070.18; tax on national banks, \$637,284.88; sales of old public buildings, \$624,862.20; sales of Indian lands, \$598,941.38; Pacific Railroad interest, \$223,096.18; Pacific Railroad sinking-fund, \$194,104.44; customs fees, \$50,373; land fees, \$44,111.98; and customs fines, penalties, and forfeitures, \$3,088.64; making a net increase of revenue for the year of \$7,862,797.10. There was a decrease in the expenditures of \$15,877,724.31, as follows: Civil ex-

debt, \$3,026,569.78; military establishment, \$38,589.74. There was an increase in the following: Pensions, \$5,259,406.98; naval establishment, \$1,785,310.85; Indian service, \$54,785.18; making a net decrease in expenditures of \$8,278,221.80.

The revenue derived from the various objects of internal taxation during the past two fiscal years is shown in the following table:

OBJECT.	1887.	1888.
Spirits.....	\$65,939,831 71	\$69,806,166 41
Tobacco.....	80,108,067 13	80,662,481 53
Fermented liquors.....	21,932,187 49	22,324,218 48
State banks and bankers.....	4,298 87	4,292 55
Oleomargarine.....	723,943 04	864,189 88
Miscellaneous.....	249,438 32	165,316 48
Total	\$118,887,801 06	\$124,826,475 83

In 1888 the receipts from customs were \$219,091,173.63; from internal revenue, \$124,296,871.98.

State of the Treasury.—The following is a statement of the condition of the public Treasury on Dec. 31, 1887, and Dec. 31, 1888:

ITEMS.	Dec. 31, 1887.	Dec. 31, 1888.
Assets:		
Gold coin.....	\$189,618,968 88	\$237,854,312 88
Gold bullion.....	122,733,223 19	96,919,458 63
Standard silver dollars.....	218,917,589 00	254,406,869 00
Silver bullion.....	2,232,686 66	4,774,441 16
Trade-dollar bullion.....	6,739,329 54	6,090,795 61
United States notes.....	22,409,424 94	41,125,850 86
National bank notes.....	164,093 00	843,823 00
Deposits in national bank- ing depositories.....	52,199,917 54	52,390,163 79
Fractional and minor coin.....	24,338,259 70	38,733,796 19
National bank notes in pro- cess of redemption.....	4,755,340 74	3,724,728 12
Miscellaneous items.....	4,506,542 02	236,998 95

Balance.....	94,226,168 81	84,870,060 83
Total	\$642,640,200 23	\$711,650,687 24

In the judicious management of the silver coinage and the careful fostering of gold resources, the administration of the Treasury Department has achieved greatest credit and accomplished the most important results. In March, 1885, the Treasury silver holdings, unrepresented by silver certificates in circulation, amounted to \$48,000,000, and in July, 1886, they had risen to \$97,000,000 (\$185,000,000 of standard dollars and bullion in the vaults being

offset by only \$87,500,000 of certificates outstanding). At the close of December, 1888, the net silver holdings were only \$12,900,000 (\$260,000,000 of dollars and bullion being offset by more than \$246,000,000 of outstanding silver certificates).

While thus successful in putting out silver, the Treasury has achieved equally good results in accumulating gold. The net gold fund when the administration began was \$125,700,000, and it soon fell to about \$110,000,000, a dangerously narrow margin, if gold payments were to continue. In little more than two years from that date it was nearly doubled. Three years from the beginning of the administration it reached \$218,800,000, and at the close of 1888 it was \$203,800,000, having doubled during the past decade. In 1878 the Government gold fund was \$100,000,000, and in October, 1887, it reached \$200,000,000. Since the latter date its highest amount has been \$218,000,000, and its lowest \$186,000,000; both extremes having been touched within the past year—the highest in March and the lowest in October. On Jan. 1, 1888, the gold fund was \$208,000,000. Since the amount of \$100,000,000 was reached in 1878, the Government gold holdings have never declined nearly to that limit, except in May, 1885, when the Treasurer resorted to the expedient of borrowing gold from the banks.

The Public Debt.—Two of the most striking features of our recent history have been the increase of population and the decrease of public debt, and these have operated together to cause a reduction of the debt per capita at a rate more rapid than is generally known. When our public debt was at its highest aggregate of nearly \$3,000,000,000, in 1865, and the population fewer than 35,000,000, the debt amounted to more than \$80 for each individual. At the close of the fiscal year 1888 the public debt unpaid and unprovided for, less cash in the Treasury, was about \$1,165,000,000, while the population was 61,894,000. The amount of debt per capita has thus been reduced from over \$80 to less than \$19. The period of less than a quarter of a century has witnessed a reduction of the debt by nearly \$2,000,000,000, and an increase of population by more than 26,000,000. In 1865, when the public debt per capita was over \$80, the Government revenues collected amounted to \$9.60 per capita. In 1888, with the debt at less than \$19 per capita, the revenues amounted to \$6.18 from each individual.

The operation of the present revenue laws, if all the collections could be applied to the payment of the public debt at par value, would cancel the entire amount in less than three years.

The following is a statement of the principal and interest of the national debt at the close of the calendar years 1887 and 1888. But this statement is exclusive of cash applicable to payment of the debt and of cash held by the

Treasury to offset outstanding gold, silver, and currency certificates:

CHARACTER OF DEBT.	Dec. 31, 1887.	Dec. 31, 1888.
Bonds at 4½ per cent.....	\$280,544,600 00	\$181,152,800 00
Bonds at 4 per cent.....	782,442,100 00	681,187,600 00
Refunding certificates at 4 per cent.....	151,580 00	123,240 00
Navy pension fund at 8 per cent.....	14,000,000 00	14,000,000 00
Interest accrued on the above loans.....	10,058,105 86	9,102,193 19
Matured debt.....	3,163,955 26	2,094,695 26
Interest on matured debt.....	178,892 04	160,783 64
Bonds issued to Pacific Railway companies.....	64,622,512 00	64,622,512 00
Interest unpaid thereon.....	1,943,695 33	1,943,215 32
Demand and United States notes.....	346,738,121 00	346,787,823 50
Gold certificates.....	96,734,057 00	190,583,443 00
Silver certificates.....	176,855,423 00	246,219,999 00
Currency certificates.....	6,955,000 00	10,250,000 00
Fractional currency.....	6,942,214 12	6,919,596 47
Total debt.....	\$1,691,860,705 80	\$1,686,363,271 88

Currency Circulation.—The tendency of national financial operations for some time past has been to bring the legal-tender notes to a metallic basis, despite the fact that Congress has not apparently had that end in view, and to prepare the way for their cancellation, although their retirement has not yet been authorized. When the anxiety and apprehension with which these notes have at times been regarded are recalled and the doubts as to the ability of the Government to maintain their credit are remembered, it seems wonderful that, with little aid from statesmanship and financiering, the great problem has solved itself, and this legal-tender currency has been

brought to such a basis as no longer to present a practical question or difficulty as to the means of redemption on the one hand, nor to threaten any financial disturbance as a consequence of the eventual retirement and cancellation of these notes on the other.

Such are the daily operations of the coinage and currency laws that the Treasury could now, without the slightest difficulty, redeem and cancel the greenbacks as rapidly as they would be voluntarily surrendered. At the same time the increase in metallic money has been so rapid and so great, and the expansion of circulation of other forms of paper money has been so large that the greenbacks are no longer essential for the purposes of a convenient currency, and could be withdrawn and canceled in accordance with a conservative plan of gradual retirement without causing any popular inconvenience or injuriously affecting the circulating medium. A statement is given below of the actual paper-money circulation of the United States on Dec. 31, 1887 and Dec. 31, 1888, showing the year's changes in the four forms of note circulation.

The National Banks.—Although a contraction of \$27,700,000 has occurred during the past fiscal year in the national bank-note circulation, only \$11,800,000 of this amount has been due to the withdrawal during that period of bonds deposited with the Treasury as security. The larger amount, or \$15,900,000, came from the fund for the redemption of notes of banks that had before the beginning of the year surrendered this part of their circulation. In other words, the contraction of note-circula-

tion has been much more largely due to the continued retirement of the notes originally based upon the 8-per-cent. bonds, for the redemption of which the banks furnished funds when the 8 per cents were redeemed than from the voluntary surrender of 4 or 4½ per cent. bonds. Expensive as these bonds have become, and slight as is the inducement for holding them as a basis of note-circulation, here is another evidence that the banks surrender their circulation very slowly, and that the contraction which is in progress is more largely due to the compulsory surrender of the 8-per-cent. bonds, when they were being called, than to the subsequent voluntary sale of the high-priced bonds now held as the basis of circulation.

Despite the heavy burden that is now imposed upon bank-note circulation, and the unjust and illogical requirements of law, the banks adhere tenaciously to their bonds, and are making a desperate struggle for existence. The vitality of the system and the strength of its popular support are shown by the pertinacity with which the banks maintain their charters and continue to comply with the requirements, which are steadily becoming more severe as the prices of bonds advance. The analysis of the year's returns shows clearly that scarcely a bond has been surrendered except under the pressure of absolute necessity, and yet the relinquishment has proceeded more rapidly than it can continue without forcing many banks out of the national system.

Public sentiment has demanded the maintenance of the national banks in the great cities and small towns throughout the country, no matter how well established State or private banks may be. The returns show a steady reduction of the bond-deposits to the amounts which the law makes compulsory, and that the new banks organized have deposited less bonds for circulation than a similar number of banks have ever done before. The action of the old banks and the continued admission of new ones show the earnestness of the battle that the banking-system will make for self-preservation; but the returns show, in a manner equally conclusive, the necessity for a prompt reduction in the compulsory amount of bond-deposits.

One respect in which the year's returns will be disappointing is the failure of the banks to make any progress in the substitution of 4 for 4½ per cent. bonds. As the former have several years longer to run, there has been general recognition among bankers of the importance of substituting the long-term for the short-term bonds, and thus securing the maintenance of the bank charters at least as long as the lease of life of the 4-per-cent. bonds. The two classes of bonds are nearly at a par when interest worth is computed; but the past two years have not witnessed any progress in this direction. Two years ago the national banks had on deposit, as security for circulation, about \$315,000,000 of 4-per-cent. bonds, and about \$57,000,000 of 4½ per cents;

one year ago they had about \$116,000,000 4s and about \$70,000,000 4½s; and now they have about \$105,000,000 of 4s and \$69,000,000 4½s. It will thus be seen that the proportion of 4-per-cent. bonds has fallen instead of rising. This is partially offset by the fact that the national bank depositaries have furnished over \$37,000,000 of 4s and less than \$18,000,000 of 4½s as security for deposits; and this amount of 4-per-cents is, to some extent, owned by national banks, which can substitute these bonds for the 4½s now held as security for circulation.

The Comptroller has matured an elaborate plan for the issue of circulation based upon commercial paper and a small cash reserve, and regulated by national-bank unions in various cities, in which the banks as well as the Government will be represented.

The following statement shows the condition of the national banks on Dec. 12, 1888, as shown by reports from 8,150 banks then in operation:

The Coinage.—The gold deposited at the mints and assay-offices during the fiscal year 1888, not

including re-deposits, was 8,882,120.497 standard ounces, of the value of \$72,225,497.56 in the preceding year, an excess of \$4,002,424.69 over the fiscal year 1887. In addition there were re-deposits of the value of \$8,668,959.11. Of the re-deposits of gold, \$4,895,815.84 represents the value of imported bars, and \$4,273,643.27 of fine bars bearing the stamp of the assay-office at New York, sent in for coinage. The total deposits of gold during the fiscal year 1888, including re-deposits as above cited, were 4,348,077.049 standard ounces, of the value of \$80,894,456.67. The deposits and purchases of silver, not including re-deposits, were 35,518,839.97 standard ounces, of the coining value of \$41,331,014.66, against \$47,756,918.75 in the preceding year. In addition there were re-deposits of silver of the coining value of \$491,831.79, of which \$275,189.75 consisted of imported bars, principally of the minor assay-offices, and \$216,642.04 of fine bars. The total deposits and purchases of silver were 35,941,507.92 standard ounces, of the value (calculated at coining rate in standard silver dollars) of \$41,822,846.45. The value of both the gold and silver deposited and purchased at the mints and assay-offices during the fiscal year, not including re-deposits, was \$113,556,512.22, and including re-deposits, \$122,717,308.12. Of the gold received at the mints and assay-offices during the year, \$32,406,306.59 was classified as of domestic production, against \$32,978,027.41 in the preceding year. A reduction of a little over \$500,000 in the production of the United States is thus indicated. The foreign gold bullion deposited aggregated \$21,741,042.44, and the foreign gold coin \$14,596,865.03; a total of \$36,337,927.47, against \$32,467,840.98 in the year preceding. The value of the United States light-weight gold coin deposited for re-coinage, was \$492,512.60. Old material was deposited in the form of jewelry, bars, plate, etc., containing gold of the value of \$2,988,750.90.

Of the silver bullion deposited and purchased, 32,135,165.79 standard ounces, valued at \$37,393,648.34, was classified as of domestic production; and 29,671,470.54 standard ounces of the coining value of \$34,526,803.02, consisted of fine bars bearing the stamp of well known private refineries in the United States, but the classification at the mints of silver bullion is inexact, for the reason that fine silver bars purchased from private refineries are all necessarily classified as of domestic production, while as a matter of fact they are to a large extent composed, as for several years they have been, of silver obtained from ore and bullion imported from Mexico. The silver bullion classified as foreign bullion received at the mints during the year was \$1,668,384.25. Foreign silver coins of the value of \$87,336 were melted during the year. United States silver coins, consisting almost entirely of worn and uncurrent subsidiary coins and old silver dollars, were melted, of the value, at coining rate in

standard silver dollars, of \$494,155.64. In addition, trade-dollars were received and melted of the coining value in silver dollars of \$1,060,174.11 (911,067.18 standard ounces). Old material, consisting of plate, jewelry, etc., was deposited, containing silver of the value of \$627,316.32.

The coinage during the fiscal year 1888 consisted of 109,080,547 pieces, of the value of \$63,719,242.32. The gold consisted of 2,350,534 pieces, of the value of \$28,364,170.50, of which \$16,301,740 was in double-eagles; \$8,998,260 in eagles; \$2,995,510 in half-eagles; \$34,098 in three-dollar pieces; \$15,682.50 in quarter-eagles; and 18,880 gold dollars. The silver coinage consisted of \$32,717,678; \$2,836.50 in half-dollars; \$194,668.25 in quarter-dollars; and \$1,219,917.50 in dimes. The subsidiary coinage amounted to 12,983,521 pieces, of the value of \$1,417,422.25. The minor coinage consisted of 15,207,178 five-cent nickel pieces, of the nominal value of \$760,858.65; 45,573 three-cent nickel pieces, of the nominal value of \$1,367.19; and 45,725,078 one-cent bronze pieces, of the nominal value of \$457,250.73; the total minor coinage amounting to 60,977,819 pieces, of the nominal value of \$1,218,976.57. The coinage of the fiscal year exceeded in number of pieces even the large coinage executed the preceding year, being 109,080,547 pieces in 1888 against 98,122,517 in 1887.

UNITED STATES NAVY. Since 1881, when the United States Navy had fallen into a condition of material decay, a great and successful effort has been made to restore the fleet to the position it occupied prior to 1861, when its ships were in general the best of their classes in the world. The movement began with the appointment, by Secretary William H. Hunt, of the first advisory board, in 1881, to determine the composition of the fleet required by the necessities of national policy. This board was composed of able officers, presided over by Rear-Admiral John Rodgers. Its report commanded general attention, and is still quoted in debates relating to naval construction. It reported that the fleet should be composed of twenty-one armored vessels, seventy unarmored cruisers of different types, five rams, five torpedo-gunboats, and twenty torpedo-boats, and that steel should be the material of which they should be built. The adoption by Congress, at the instance of Secretary William E. Chandler, of the principle that obsolete ships should not be rebuilt or repaired when the expenditure exceeded 20 per cent. of the original cost, was an important step in preparing the way for reconstruction. During Secretary Chandler's administration the "Chicago," "Boston," "Atlanta," and "Dolphin" were built by John Roach, on designs furnished by the second advisory board. In 1885, at a critical time in our naval reconstruction, the Navy Department came under the administration of William O. Whitney. During his administra-

1. 1

IRON-CLAD "MUSKIE."

ARMORED CRUISER "MAINE."

tion the department has maintained an intimate relation with the mechanical industries and ingenuity of the country; its requirements for vessels, guns, armor, torpedoes, and the munitions of war have been of the highest standard, and every suitable encouragement has been given to all ship-builders, manufacturers, and inventors whose efforts promised success. In 1885, forgings for guns of more than 6-inch caliber, armor, steel shafting, rapid-fire and machine guns, torpedoes, and torpedo-boats, could be procured only from abroad. Before the end of the present year (1889) the domestic manufacture of guns of 8-inch, 10-inch, 12-inch, and 16-inch caliber, steel armor of the highest character and greatest thickness, steel shafting for engines of enormous power, rapid-fire and machine guns and ammunition, dynamite-guns, torpedoes, torpedo-boats, and submarine boats will be fully established. As a result of Secretary Whitney's policy, the United States will soon be absolutely independent of foreign aid for the production of every component part of the modern war-ship.

The modern war-ship represents the highest effort of mechanical skill and ingenuity, and has become a machine of the costliest production—high-power guns, armor, machinery of the greatest power, torpedoes, torpedo-boats, and electric lights, all find places in its construction, and the battle-ship of to-day is, under the most favorable conditions, from three to five years in building, while its cost is more than double that of its prototype of twenty years ago. The sentiment throughout the country seems to be decidedly in favor of building a fleet capable of efficiently aiding in the defense of our coasts, and of maintaining our rights and interests abroad. Such a fleet must be composed of a variety of vessels, armored and unarmored, and can be created only at considerable expense, and the appropriations must be continuous and liberal if the object is to be speedily and economically accomplished.

The development of the fleet by new constructions authorized since 1882 is shown in the tables on pages 790 and 791, indicating the principal characteristics of each vessel.

Notes to the Tables.—In all cases, unless noted, boilers and machinery are placed in water-tight compartments; the material of which the vessels are built is steel, except the monitors, which are built of iron; the armor is steel, and will be furnished by the Bethlehem Iron Company, except that for the "Miantonomoh," which is compound armor, purchased in England; the hulls are divided into numerous water-tight compartments, and the bottoms of the larger vessels are double. All are twin-screw vessels, so far as designed, except the "Boston," "Atlanta," "Dolphin," and "Petrel." Rapid-fire and machine guns, forming what is known as the secondary battery, are mounted about the upper and superstructure decks, and in military tops. The main and secondary batteries are placed so as to secure all-round fire. Trial speeds given are for vessels at load draught. Where two amounts are given in the column "Coal Capacity," the first is the normal supply; the second the total bunker capacity. Coal is placed about machin-

ery and boilers for additional protection against gun-fire. Boilers are of the horizontal tubular type, single or double ended.

The "Puritan" is a low free-board, double-turreted monitor, built of iron; armored with a steel belt extending the entire length of the vessel; and carrying four 10-inch breech-loading guns in two armored turrets, besides an efficient secondary battery. The motive power is furnished by two direct-acting horizontal engines. The armor on the turrets is 11½ inches thick. The side armor is 12 inches thick amidships, reduced to 8 inches at the ends. The conning-tower is 12 inches thick.

The "Miantonomoh," "Terror," "Amphitrite," and "Monadnock" are of similar type, though smaller than the "Puritan," but carry the same battery. The machinery of this class, except the "Monadnock," is of the compound type. The machinery of the "Monadnock" is of the triple-expansion type, of recent design, and of much greater power than that of the other vessels of this class. The armor on the turrets of the "Terror," "Amphitrite," and "Monadnock" is 11½ inches thick, and on the sides the armor-belt varies in thickness from 7 inches amidships to 5 inches at the extremities. The conning-tower is 9 inches thick. The "Miantonomoh" is similarly protected by compound armor, purchased in England in 1884.

The "Maine" is an armored cruiser, designed by the Navy Department, building at the Brooklyn Navy-Yard. The material for her construction is on hand, the keel has been laid, and several of the frames placed. The 10-inch guns are mounted in pairs, in two turrets placed *en echelon* on upper deck; two 6-inch guns are mounted in recessed bow ports; two are similarly placed in quarter ports, and two are on the superstructure deck in broadside. The engines are of the vertical triple-expansion type. The protection of the "Maine" consists of an armor-belt 180 feet long and 11 inches thick; the two forward ends are joined by a 6-inch armored athwartship bulkhead. Above the belt and below turret, oval redoubts carrying 10-inch armor protect turret-bases, loading-tubes, machinery, etc.; the turret-armor varies from 10½ inches to 11½ inches in thickness. The conning-tower is 10 inches thick, and a 4½-inch tube runs down from it to the protective deck. The armored deck is 2 inches thick, except on the slope at the after end of the belt, where it is 4 inches.

The "Texas" is an armored battle-ship building at the Norfolk Navy-Yard on designs by William John, of England, submitted in competition in reply to proposals issued by the Navy Department. The material for its construction is now being received. The 12-inch guns are mounted singly in turrets placed *en echelon* on the upper deck. Four 6-inch guns are mounted on the lower deck, and two on the upper deck, near the 12-inch guns. The engines, driving twin screws, are triple expansion. For defense, the vessel has a water-line belt of 12-inch steel armor in wake of magazines, engines, and boilers. The ends are connected by athwartship <->-shaped, 6-inch armored bulkheads. An armored redoubt runs diagonally across the vessel on the main deck, inclosing and protecting bases of turrets and their machinery; this, as well as the turret and conning-tower, carries 12-inch armor. The ammunition-tubes and the tube from conning-tower down to protective deck carry 6-inch and 8-inch armor, respectively. The protective deck, 3 inches thick, covers the armor-belt and curves down forward and abaft it to stem and stern.

The Coast-Defense Vessel No. 1 is a formidable low free board, barbette, twin-screw vessel. The main battery assigned consists of one 16-inch 110-ton breech-loader in forward barbette; one 12-inch in after barbette; one 15-inch pneumatic dynamite-gun in bow; and six 83-pounder rapid-fire guns mounted on the light superstructure that joins the barbettes. The protection consists of an armor-belt extending the entire length of the vessel, sixteen inches thick along vital parts, reduced to six inches at the extremi-

UNARMORED VESSELS (Continued).

Cruisers No. 6, protected cruiser, authorized Sept. 8, 1898, displacement 8,000, speed 20-21. Cruisers No. 7 and 8, protected cruisers, authorized Sept. 8, 1898, displacement 8,000, speed 19-20. Cruisers No. 9, 10, and 11, protected cruisers, authorized Sept. 8, 1898, displacement 8,000, speed 19. Practice-vessel, authorized Sept. 8, 1898, displacement 2,000, speed 18. Cruisers No. 12 and 13, authorized March 1, 1899, displacement 800 to 1,200. In these cruisers, rapid-fire guns of 4-inch caliber, about 58-pounder, will be largely used in the main battery.

ARMORED VESSELS.

[illegible]

Not determined.

ties; a complete armored deck three inches thick over the magazines, boilers, and all machinery, and two inches at the extremities; armor on barbettes, sixteen and fourteen inches, and on conning-tower ten inches. The shields over the barbettes are three inches thick. The engines are of the most approved triple-expansion type. The designs were made in the Navy Department, in conformity with conditions prescribed by Secretary Whitney.

The designs for the armored cruiser of 7,500 tons displacement are in preparation in the Navy Department. The vessel will be an important and formidable addition to the fleet.

Coast-Defense Vessel No. 2 is a vessel of novel type, capable of being submerged on going into action, by means of water-ballast admitted, three feet beyond the ordinary cruising-line of flotation, for the purpose of diminishing the target exposed and increasing the protection to vital parts. Two 12-inch breech-loading guns are mounted in a turret, at a height of eleven feet above the fighting water-line, one 6-inch breech-loader on the deck near the stern, one 16-inch dynamite-gun in the bow. Two torpedo-tubes in the bow. The armor on the turret is ten inches thick, and on the curved upper deck three inches on the crown and five inches on the sides, which extend four feet below the fighting water-line. On top of this armored deck, and between the turret and the stern gun, is a light superstructure, which affords quarters and a convenient working-deck.

The "Dolphin" is a single-screw dispatch-vessel, carrying but a light battery. The engine is of the compound vertical type. The design of the "Dolphin" affords no protection to boilers and machinery.

The "Boston" and the "Atlanta" are central superstructure, single-deck, partially protected cruisers. They are unquestionably very efficient. The design is a modification of the "Esmeralda" type, of which examples are found in several navies. The steel protective deck, over engines and boilers only, is 1½ inch thick. The main battery is mounted as follows: The 8-inch guns, in barbettes on main deck, are placed *en echelon* forward and abaft the superstructure; the 6-inch guns and rapid-fire and heavier machine guns are mounted within the central superstructure. The engines are three-cylinder, compound, horizontal, back-acting, driving a single screw. The "Atlanta" during a six-hour trial developed a mean speed of 15.43 knots and an indicated horse-power of 8,356. The maximum speed was 16.38 knots. The "Boston" during a six-hour trial developed a mean speed of 13.8 knots with a mean indicated horse-power of 3,780; but at this time the bottom was very foul, and under favorable conditions her speed should be greater than that of the "Atlanta."

The "Chicago" is a double-deck, partially protected cruiser. The protective deck is of the same thickness and extent as in the "Boston" and the "Atlanta." The main battery is thus distributed: Four 8-inch guns are mounted in sponsons on the spar-deck, twenty-four feet above the water-line; the eight 6-inch and two 5-inch guns are mounted on the gun-deck. There are two sets of two-cylinder, compound, overhead-beam engines, and fourteen horizontal return-tubular boilers, fitted with exterior furnaces lined with fire-brick. These boilers and engines are altogether unique in war-ships. During a continuous six-hour trial the ship developed a mean speed of 15.3 knots and a mean indicated horse-power of 5,083. The maximum speed for one hour was 16.3 knots. The bottom was foul, and the fire-rooms were not closed for forcing the draught.

The "Charleston" is a protected cruiser of an improved Esmeralda type. The protective deck extends the entire length of the vessel, two inches thick on flat, and three inches on inclined parts. The battery is distributed as in the "Atlanta," except that the 8-inch guns are on the middle line of the ship. The engines are of the two-cylinder compound horizontal type.

The "Newark" is a protected cruiser, designed in the Navy Department to meet the requirements of the Naval Board. The protective deck is complete, two to two and a half inches thick on flat, and three inches on inclined parts. The conning-tower is three inches thick. The battery is mounted on the spar-deck. The engines are of horizontal triple-expansion type, designed by Cramp & Sons.

The "Yorktown," "Concord," and "Bennington," are poop-and-forecastle, partially protected cruisers; designs from same source as those of the "Newark." The protective deck is complete, but only three eighths inch thick. The conning-tower is two inches thick. Two 6-inch guns are mounted on the fore-castle, two on the poop, and two amidships on the main deck. The engines are of the horizontal triple-expansion type.

The "Petrel" is a single-screw, poop-and-forecastle, partially protected cruiser or gun-vessel; designs of hull and machinery made in the Navy Department. The protective deck extends over the boilers and machinery only, and is but three eighths to five sixteenths inch thick. There are two guns on each side, mounted in sponsons about four feet above the main deck and ten feet above the water-line, just abaft the fore-castle and forward of the poop.

The "Baltimore" is a poop-and-forecastle protected cruiser. The protective deck is complete, two and a half inches thick on flat, and four inches on inclined sides. The 8-inch guns are mounted on fore-castle and poop, and the 6-inch guns on the spar-deck. The designs for the "Baltimore" and "Charleston" and their machinery were purchased of Sir William Armstrong & Co., of England.

The "San Francisco" is like the "Newark," with the following modifications: Rig, fore and aft, three masts; the 8-inch guns nearest the extremities are mounted on fore-castle and poop; the engines are horizontal triple-expansion, designed in the Navy Department.

The "Philadelphia" is like the "Baltimore," modified as follows: Rig and distribution of battery same as in the "San Francisco"; the engines of the same type, but designed by Cramp & Sons.

The "Vesuvius" is a vessel of altogether novel type, of high speed, armed with three 16-inch pneumatic dynamite-guns placed abreast at a fixed angle of 16°, the muzzles projecting through the deck about thirty-seven feet from the bow. Thirty full-caliber projectiles are carried. The engines are of the four-cylinder triple-expansion type. On trial, in January, 1889, she ran twice over a measured course of 2.54 knots at a mean speed of 21.64 knots, developing 4,366 indicated horse-power. (For remarks concerning guns, see the following sections.)

For the Cruisers No. 6, 7, 8, 9, 10, 11, 13, 14, the designs are not yet completed. The table indicates the general character for each class.

Guns and Armor.—In 1885 the armament of United States war-ships consisted of smooth-bore guns, principally of 9-inch caliber, supplemented by a few converted 8-inch muzzle-loading rifles and converted 80 and 60 pounder breech-loading rifles. The 8-inch converted muzzle-loading rifles were 11-inch cast-iron, smooth-bore Dahlgrens, converted into rifles by the introduction of a wrought-iron tube (which was afterward rifled) into the cast-iron body, the latter being expanded by heat sufficiently to permit the tough wrought-iron tube to be pushed into place. On cooling, the cast-iron body held the tube securely in place. The 100-pounder and 60-pounder Parrotts were converted into 80 and 60-pounder breech-loaders in a similar manner by the introduction into the bore of a steel tube extending from

"CHARLESTON."

"BALTIMORE."

the breech forward as far as the trunnions; the breech-closure used was of the present type. These converted guns were but make-shifts. It was impossible at that time to obtain forgings in this country

for built-up steel breech-loading guns of high power and approved type heavier than 6-inch caliber. The Midvale Steel Works, at Nicetown, Pa., had undertaken the manufacture of forgings for guns of 3-inch, 5-inch, and 6-inch caliber, and had turned out excellent material for these smaller guns. The Cambria Iron-Works, at Johnstown, Pa., also had made the smaller forgings. But the resources of the country for the production of gun-material in 1885 did not extend farther, and no manufacturers found it expedient to erect a suitable plant for the production of heavier forgings without the promise of such an order as would warrant the great outlay. The 8-inch guns for the "Chicago," "Boston," and "Atlanta," and the 10-inch guns for the "Miantonomoh," were built of forgings purchased in England. These guns were assembled (machined and put together) at the Washington Navy-Yard, at the South Boston Iron-Works, and at the West Point Foundry.

In 1883 the Gun-Foundry Board—Rear-Admiral Simpson, president—under the authority of Congress, visited the principal steel and gun establishments at home and abroad, for the purpose of determining the best methods for the manufacture of heavy ordnance adapted to modern warfare, and in 1884 recommended that steel forgings and material for guns be supplied by private industry, while

the Government should maintain gun-factories in which the material delivered by steel-works should be machined and assembled. The sites chosen for these Government factories were the Washington Navy-Yard for the naval gun-factory, and the Watervliet Arsenal (Troy, N. Y.) for the army. The report also urged an appropriation of \$15,000,000 for forgings, and \$2,000,000 for the plant of the two factories.

Up to this time the question of producing armor of domestic manufacture had received little consideration. In May, 1885, the Board on Fortifications, composed of civilians and officers of the army and navy, was convened, and in January, 1886, renewed the recommendations of the Gun-Foundry Board, and suggested steel as the preferable material for armor-plates. These suggestions and recommendations were also supported by Senator Hawley's select committee in February, 1886. Steel armor and gun-forgings are most economically produced if manufactured in a single establishment, much of the plant for the production of each being common to both, but the creation of such a plant involves an expenditure of about \$3,000,000. In order to make the creation of such an establishment practicable, Secretary Whitney secured, in August, 1886, an appropriation of \$4,000,000 for armor, and \$2,128,000 for guns for the vessels authorized, and immediately invited proposals for the supply of 6,700 tons of steel armor, and 1,220 tons of gun-forgings. In May, 1887, the contract for this was awarded to the Bethlehem Iron Company. The terms of the contract required the company to establish its plant within two and a half years, and begin the delivery of gun-forgings and armor-plates by February, 1890. The contract price of 1,221 tons of gun-forgings was \$851,513, and of 6,700 tons of steel armor-plates, \$3,610,707. The gun-plant is now in working order and producing forgings, and the armor-plates will be forthcoming within the year. When completed, the Bethlehem will be the finest establishment of its kind in the world; its plant includes Whitworth's liquid compression for making ingots; two hydraulic forging-presses, capable of forging the parts of guns up to 16-inch caliber; the heaviest steam-hammer in the world; and tools of the most approved type for machining armor-plates and rough-boring and turning gun-forgings.

The naval gun-factory has been in process of reconstruction since 1887; buildings have been erected, and contracts have been made for the supply of the necessary tools, cranes, etc. Since 1884 the old establishment has turned out two 5-inch, twenty-two 6-inch, four 8-inch, and three 10-inch guns. The yearly capacity of the enlarged factory will in another year be twenty-five 6-inch, four 8-inch, six 10-inch, and four 12-inch guns.

The high-power guns of all nations at the present day are of steel. In all the principle of initial tension is employed, which consists

in giving the exterior portion of the gun a certain initial tension, gradually decreasing toward the interior, and giving to the interior parts a certain normal state of compression by the shrinkage of the outer jacket and hoops. The tube or body of the gun is a single forging, extending almost the entire length of the gun. Over the rear portion of the tube is shrunk a jacket extending about two fifths of the length, and over the remainder of the tube and over the jacket is shrunk a series of hoops, all the parts being locked together so as to form an extremely strong structure. The breech-closure screws into the jacket. The tube and jackets are made from solid steel ingots, forged, tempered in oil, annealed, and bored and machined to the required dimensions. The hoops are forged upon a mandrel, and subsequently treated in the same manner as other forgings. To shrink the jacket on the tube, the latter is placed vertically in a pit, breech end up, and after heating the jacket to a temperature sufficient to expand its interior diameter to the required amount, it is lifted by a crane and dropped over the tube. The hoops are then shrunk on, and finally the trunnion-band is screwed on in place, which also assists in locking the parts together. The gun is then ready to be rifled, and afterward to have the breech-closure and sights fitted. The following are the requirements for material for 6-inch and 8-inch guns:

ELEMENTS.	Tubes.	Jackets.	Hoops.	Remarks.
Tensile strength....lbs.	80,000	85,000	100,000	Test-pieces
Elastic limit....."	35,000	40,000	50,000	3 inches
Elongation....per cent.	22	20	18	long. $\frac{1}{2}$ inch
Contraction of area.."	85	80	80	diameter.

The powder-pressure is usually about 15 tons to the square inch, but the guns may be safely fired under a pressure of 22 tons.

Recently manufacturers of steel have claimed that solid steel-cast guns are preferable to the built-up gun before described. In order to test the claims of these, Congress authorized the construction of three steel-cast guns—the first to be made of Bessemer, the second of open-hearth, and the third of crucible steel. Proposals were received from two firms—the Pittsburgh Steel-Casting Company for the Bessemer gun, and the Standard Steel-Casting Company, of Thurlow, Pa., for the open-hearth gun. No proposals were received for the gun of crucible steel. The Pittsburgh gun exploded on firing the first round under service conditions; the Thurlow gun successfully underwent the trial of ten service-rounds, fired as rapidly as possible. The test of material for the Pittsburgh guns showed very poor characteristics; that of the Thurlow gun very fair characteristics. But a comparison of the weights of the steel-cast gun and the built-up gun shows their relative weight to be 13,000 to 11,000 pounds. No nation has yet adopted the steel-cast gun for the armament of vessels or forts, the material be-

ing considered too uncertain, and the increased weight objectionable.

Gunpowder.—In the improvement of gunpowder probably lies the principal field of development of gun-power. Great improvements have already been made, and study and experiment are being devoted to this question. The initial velocities of projectiles in 1870 ranged between 1,100 feet and 1,800 feet a second, while at present initial velocities of guns in service rise to 2,000 and 2,100 feet with a pressure of but 15 tons to the square inch, and powders recently fired in Germany and France have again raised this velocity to 2,400 and even 2,600 feet with the moderate pressure of 15 to 16 tons. Much attention is being directed to the production of a powder that shall give a high initial velocity with low pressure, and yet be comparatively smokeless. By the employment of gun-cotton and picric powders, much has been accomplished in Europe in this direction. But the new powders are less stable than the old, and doubtless deteriorate under influences of heat or moisture. The powders for United States naval guns (and each caliber has a powder whose exact quality is peculiar to itself) have been developed and manufactured by the Messrs. Dupont, near Wilmington, Del.

Projectiles.—Ordinary shells are still made of cast-iron, but armor-piercing projectiles are made of steel, forged and highly tempered. The manufacture of armor-piercing projectiles has been developed chiefly in France, and has introduced another important element in the relation between the resistance of armor and the capacity of the gun for penetration. So perfect is the manufacture of these projectiles that, when fired under service conditions, they perforate the best armor-plate of a thickness 80 per cent. greater than the caliber of the projectile, and remain practically undeformed. The bursting-charge even in ordinary shells is comparatively small—for 6-inch, 5 to 10 pounds; for the 16-inch (weighing 1,800 pounds), 179 pounds. This has given rise to a further development of the destructiveness of shell-fire by introducing high-explosive shells, whose bursting-charges are dynamite, explosive gelatine, gun-cotton, or melinite. Shells loaded with 500 pounds of dynamite and explosive gelatine are safely fired from the Zalinski dynamite-gun. Gun-cotton is used as a bursting-charge in Germany, while the French use melinite as a burster for shells fired from service-guns under service conditions. High-explosive shells, however, are quickly detonated if the surface hit offers fair resistance, and for this reason armor is coming much more into vogue and is being more distributed over the sides of vessels than has recently been the practice. Four inches of armor are said to be sufficient to cause the detonation of high-explosive shells. The ordinary side-plating of ships is not sufficient to detonate these, and the destructive effects of their explosion within a ship are appalling.

Rapid-Fire Guns.—Rapid-fire guns and revolving cannon have hitherto been procurable only from abroad, the principal type—that of the American inventor and manufacturer Hotchkiss—being made in Europe. In 1887 the Navy Department contracted with the Hotchkiss Ordnance Company for the supply of ninety-four rapid-fire guns and revolving cannon of domestic manufacture, at a cost of \$121,400, to include thirty 6-pounder rapid-fire guns, twenty-two 3-pounder rapid-fire guns, ten 1-pounder rapid-fire guns, thirty-two 37-millimetre revolving cannon. The material for these guns has been supplied by the Midvale Steel Company; the guns are made by Pratt & Whitney, Hartford, Conn.; and the ammunition by the Winchester Arms Company.

A new type of rapid-fire gun, the invention of two naval officers, known as the Driggs-Schröder gun, has been designed and manufactured in this country. It has been tried and favorably reported upon.

Rapid-fire guns are light guns using metallic ammunition, in which the operation of loading is performed wholly or in part by hand, although the empty cartridge is mechanically extracted, and the gun recovers automatically from recoil, if any is permitted. Aiming is done from the shoulder, and the guns, up to 6-pounder caliber, may fire about fifteen aimed shots in a minute. The largest gun of this type adopted for service is the 36-pounder (4.72 inches caliber), which in England has fired ten carefully aimed shots in a minute and thirty-eight seconds; its penetration in wrought-iron is seven inches. In machine-guns the operation of feeding, loading, and extracting the metallic ammunition are successively performed by a continuous action of the breech mechanism; no recoil is permitted. The rapidity of fire is great—60 rounds from Hotchkiss revolving cannon and up to 1,000 rounds from the Gatling gun.

GUNS IN SERVICE IN 1884.

Dynamite-Gun.—The dynamite-gun is the invention of Mr. Mefford, of Ohio, developed and made practicable by Capt. Edmund L. G. Zalinski, of the United States Army, and produced as a marketable weapon by the Pneumatic Gun Company, of New York. The original gun of this system was of 2-inch caliber (see "Annual Cyclopædia" for 1884, page 273). After experimenting with other guns of 4 and 8 inch caliber, the Pneumatic Gun Company has produced 15-inch guns for the "Vesuvius." These are 55 feet long, placed at a fixed angle of 16°, and throw projectiles containing from 500 to 600 pounds of explosive gelatine and dynamite one mile, or sub-caliber projectiles containing 100 or 200 pounds of explosive up to 4,000 yards. The projectiles are discharged by compressed air, at a pressure of about 1,000 pounds, which gives an initial velocity of about 800 feet a second. The trajectory is of course very much curved. The most valuable feature of the system is the electric fuse, which is entirely the invention of Capt. Zalinski, so constructed that the projectile may be exploded upon entering the water or by delayed action explode at any desired depth beneath the surface. The dynamite-gun is not intended to replace the service powder-guns; it is really a torpedo-gun affording a safe means of throwing shells, which are virtually torpedoes charged with a large amount of the highest explosives, through the air to a considerable range and with accuracy. If the chances of dropping its projectile at the desired spot are only fair, this, when successfully placed, will secure results that no other single projectile or torpedo can produce—the probable destruction of any vessel yet built.

Torpedoes.—There are no automobile torpedoes in the United States service. We here occupy an entirely unique position, and have been far in the rear in this, as in many other respects, of Brazil, Chili, Japan, and China. But contracts have been made with the Hotchkiss Ordnance Company to supply the Howell torpedo. This torpedo, the invention of Capt. J. A. Howell, of the United States Navy, is thought to be superior in most respects to the celebrated Whitehead. Its advantages over the Whitehead are comparative smallness, inherent directive force derived from the gyroscopic properties of its fly-wheel, and large explosive capacity. Its disadvantage lies in the fact that it requires an appreciable time to prepare it for discharge. Power is stored in a heavy fly-wheel, in the middle of the torpedo, which, in about thirty seconds, is spun up to a velocity of 10,000 turns a minute by means of a motor. This fly-wheel imparts its power to two propellers, which drive the torpedo. The submersion is automatically controlled by a horizontal rudder, actuated by a hydro-pneumatic cylinder, the piston of which moves with the varying pressures at different depths.

The contractors will furnish a torpedo whose size and performance are guaranteed to be within the following prescribed limits:

NO 1.—COAST DEFENCE.

"VESUVIUS."

"YORKTOWN."

"NEWARK."

Length.	Diam-eter.	Total weight.	Least weight of explosive charge.	Least speed for 400 yards.	Total range.
12 ft.	14.2 in.	458 lbs.	80 lbs.	22½ knots.	1,000 yds
9 ft. 6 in.	14.2 in.	428 lbs.	75 lbs.	22½ knots.	800 yds

The Patrick torpedo, of the controllable type, is made of copper, fusiform, 40 feet long and 24 inches in greatest diameter. It is held at a depth of nearly 4 feet by means of a float 46 feet long and 18 inches in diameter, filled with cotton or lamp-black. The motive power is carbonic-acid gas, contained in liquid form in a flask near the center of the torpedo. From the flask the gas passes through pipes about which an intense heat is obtained by the action of sulphuric acid on quick-lime. The gas thus expanded passes to a six-cylinder engine, which drives the propeller. The range is one mile, and the explosive charge carried 200 pounds. The torpedo is controlled by an electric cable paid out as it runs. It has been tried by a naval board, and upon its report three torpedoes have been ordered by the Navy Department, at a cost of \$55,000. The contractor guarantees a speed of 20 knots. This torpedo is intended for harbor-defense, and is operated from the shore or from a stationary vessel. Undoubtedly it is the best of the controllable type. The French Navy Department has purchased it for coast-defense.

Torpedo-Boats.—The United States occupies a most singular position in regard to torpedo-boats. All nations agree that these are most efficient for coast and harbor defense, and all possess them in large numbers. England has 145; France, 131; Germany, 75; Italy, 120; Spain, 18; Brazil, 15; Chili, 10; Japan, 12; China, 26; the United States, 2.

The "Stiletto" is the single torpedo-boat (unworthy of the title) yet possessed by the United States, although a new first-class boat is being built by Messrs. Herreshoff, at Bristol, R. I. This boat will compare favorably, it is thought, with those built abroad (see table of ships for description). The Fortification Board placed the number of torpedo-boats at 150.

Submarine Boat.—The latest device in naval warfare is the submarine boat, intended to dive beneath the surface, to be there manoeuvred and discharge torpedoes. Submarine boats have been used in naval warfare since 1776, but with unsatisfactory results. Recently they have again come into notice in Europe, and several have been built there. In 1888, the Navy Department published a circular containing its views of the requirements for a submarine boat, and invited proposals for the construction of such a boat under guarantees. After considerable delay in finding any one to undertake this, bids were received in February, 1889, from the Columbia Iron-Works, of Baltimore, in which a very good performance is guaranteed. The dimensions of the boat are: Length, 85 feet; greatest diameter, 10.9 feet; displacement, submerged, 120 tons, with com-

partments empty, 98 tons. The hull is to be of steel; the engine, triple-expansion, driving a single screw; the fuel, petroleum. Diving is to be effected by horizontal rudders. The greatest surface-speed guaranteed is 12 knots, and the speed submerged, 9 knots. The boat is cigar-shaped, and is capable of being operated under three different conditions; first, above the surface, with nearly half of the boat above water; second, awash, with only a few inches of the upper deck exposed; third, completely submerged. The armament consists of a tube placed in a horizontal axis, from which are discharged, either by pneumatic power or powder, 8-inch projectiles, giving a range of several hundred feet, or, if desired, some form of automobile torpedo may be used. In addition to this, there is another 8-inch tube fixed at an angle for over-water fire to a range of about 1,000 yards. The contract for the boat has not yet been awarded.

Personnel.—The *personnel* of the United States Navy consists of 7,500 enlisted men, 750 apprentices, and the following officers: Admiral, 1; vice-admiral, 1; rear-admirals, 6; commodores, 10; captains, 45; commanders, 85; lieutenant-commanders, 74; lieutenants, 250; lieutenants (J. G.), 75; ensigns, 181; medical directors, 15; medical inspectors, 15; surgeons, 50; passed assistant surgeons, 55; assistant surgeons, 28; constructors, 7; assistant constructors, 14; professors of mathematics, 12; civil engineers, 10; pay-directors, 13; pay-inspectors, 13; paymasters, 43; passed assistant paymasters, 28; assistant paymasters, 14; chief engineers, 70; passed assistant engineers, 78; assistant engineers, 68.

Besides these, there are allowed one naval cadet for each congressional district, and ten at large. The course for naval cadets is four years at the Naval Academy, Annapolis, and two years in cruising-ships. At the end of the six years a number of cadets pass into the service, equal to the number of vacancies in the line, engineer and marine corps; usually from 20 to 25, never fewer than 10. The marine corps is composed of 82 officers and about 1,900 enlisted men, under regimental organization, a colonel-commandant commanding. The number of enlisted men and apprentices allowed in the navy is too small, in view of the fact that the fleet is being rapidly increased.

Not more than 50 per cent. of the enlisted men are native or naturalized Americans, and the present small number of apprentices, who are American boys, is not sufficient to give the desired tone to ships' companies. The officers, as a body, are highly educated, well trained, and efficient; but slowness of promotion, by keeping them in subordinate grades to an advanced age, threatens seriously to impair their efficiency. Promotion in the navy is altogether by seniority. The system presents few advantages and affords no incentive to energetic effort and no reward for hard work or distinguished service.

UNITED STATES, PRESIDENTIAL ELECTIONS 'IN. The following tables, referring to presidential contests, include every county in each State of the Union, and reveal the political history of all sections during the past twenty years. Results are shown from 1872 to the election of 1888, the year in which each contest took place being indicated at the top of the column. The figures opposite each county represent the total vote and the plurality, and the capital letter R or D denotes whether the county plurality was Republican or Democratic. By this arrangement not only can the political history of every county be ascertained without difficulty, but increases and decreases can be readily observed and easily noted. Those interested in the political affairs of each State can ascertain, by running the eye down the columns or across the lines, how many counties were carried at each election during the past twenty years by each of the great political parties, and also how many counties have recorded an unwavering allegiance to one party or the other:

Summary.—The increase in the popular vote since 1872 is 4,921,873. The total vote cast in 1872 was 6,446,165; in 1888, 11,368,038. The increase in the electoral vote since 1872 is 25. Electoral vote in 1872, 366; in 1888, 401. The Republican party carried the States by a majority of 25 States in 1872, 4 States in 1876, a tie (of 19 States each), with majority of the popular vote, in 1880, and 2 States in 1888. The Democratic party carried the States by a majority of

2 States in 1884. The Republican party obtained a plurality of the popular vote as follows: 1872, 762,991; 1880, 7,018. The Democratic party obtained a plurality of the popular vote as follows: 1876, 260,985; 1884, 62,683; 1888, 100,476.

One new State (Colorado) has been admitted to the Union since 1872; 91 counties voted for the first time in 1876; 65 counties voted for the first time in 1880; 47 counties voted for the first time in 1884; 69 counties voted for the first time in 1888; 230 counties "changed sides" in 1888, placing a Republican plurality on record, against a Democratic plurality in 1884, or *vice versa*.

Alabama.—There has been an increase of 4,384 in the popular vote since 1872; the total vote in that year being 169,716, and, in 1888, 174,100. In the interval there was a falling off of nearly 20,000, the vote in 1880 being only 151,507, and 153,489 in 1884. The Republican party carried the State by a plurality of 10,828 in 1872. Since that time the record shows Democratic pluralities—1876, 33,772; 1880, 34,509; 1884, 33,929; 1888, 61,128. Three new counties have been formed, according to the returns, since 1872. There is no record of Baker County after 1872, nor of Sanford County after 1876. Five counties changed sides in 1888.

Arkansas.—The increase in the popular vote since 1872 is 76,668. Total vote in 1872, 79,300; in 1888, 156,968. The Republican party carried the State by a plurality of 3,446 in 1872. Since that time the record shows Democratic pluralities—1876, 19,112; 1880, 18,828; 1884, 22,032; 1888, 27,210. Eighteen new counties have been formed since 1872. Eight counties changed sides in 1888.

California.—The increase in the popular vote since 1872 is 155,538. Total vote cast in 1872, 95,306; in 1888, 251,839. The Republican party carried the State in every election except that of 1880, when the Democratic nominee received a plurality of 78. Eleven new counties have been formed since 1872. Seven counties changed sides in 1888.

Colorado.—The increase in the popular vote since 1880 is 38,266. Total vote in 1880, 53,532; in 1888, 91,798. The Republican party carried the State at every election—in 1880, plurality 2,903; 1884, 8,568; 1888, 13,207. Eleven new counties have been formed since 1880. Three counties changed sides in 1888.

Connecticut.—The increase in the popular vote since 1872 is 57,050. Total vote in 1872, 96,928; in 1888, 153,978. The Republican party carried the State by a plurality of 4,348 in 1872, and 3,656 in 1880; the Democratic party by a plurality of 1,712 in 1876; 1,284 in 1884, and 336 in 1888. Two counties changed sides in 1888.

Delaware.—The increase in the popular vote since 1872 is 7,979. Total vote in 1872, 21,806; in 1888, 29,787. The Republican party carried the State by a plurality of 422 in 1872. Since that time the Democratic pluralities have been—1876, 2,629; 1880, 1,033; 1884, 3,923; 1888, 3,441. One county changed sides in 1883.

Florida.—The increase in the popular vote since 1872 is 33,451. Total vote in 1872, 33,190; in 1888, 66,641. The Republican party carried the State by a plurality of 2,386 in 1872, and 926 in 1876. Since that time the Democratic pluralities have been—1880, 4,310; 1884, 3,788; 1888, 12,904. Six new counties have been formed since 1872. Eight counties changed sides in 1888.

Georgia.—A notable increase in the popular vote has been recorded twice since 1872, i. e., in 1876, when the total vote was 180,534 (increase over that of 1872, 37,628), and in 1880, when the total was 155,651 (increase over that of 1872, 12,745). The record for 1884 gives 143,543 (decrease since 1880, 12,108), and the figures given for 1888 show 143,939 (decrease since 1884, 604). The Democratic party carried the State at every election, the plurality being—in 1872, 9,806; 1876, 79,642; 1880, 49,874; 1884, 46,961; 1888, 60,003. One new county has been formed since 1872. Six counties changed sides in 1888.

Illinois.—The increase in the popular vote since 1872 is 317,746. Total vote in 1872, 429,940; in 1888, 747,686. The Republican party carried the State at every election, the pluralities being—in 1872, 53,948; 1876, 1,971; 1880, 40,716; 1884, 24,327; 1888, 22,195. Eight counties changed sides in 1888.

Indiana.—The increase in the popular vote since 1872 is 185,753. Total vote in 1872, 351,196; in 1888, 536,949. The Republican party carried the State by a plurality of 21,098 in 1872; 6,636 in 1880; and 2,848 in 1888. The Democratic party had a plurality of 5,505 in 1876, and 6,512 in 1884. One new county has been formed since 1872. Thirteen counties changed sides in 1888.

Iowa.—The increase in the popular vote since 1872 is 199,157. Total vote in 1872, 204,983; in 1888, 404,140. The Republican party carried the State at every election, the pluralities being—in 1872, 58,149; 1876, 50,191; 1880, 78,069; 1884, 19,773; 1888, 31,711. Eight counties changed sides in 1888.

Kansas.—The increase in the popular vote since 1872 is 230,558. Total vote in 1872, 100,614; in 1888, 331,172. The Republican party carried the State at every election, the pluralities being—in 1872, 33,482; 1876, 32,511; 1880, 31,731; 1884, 64,274; 1888, 79,190. Forty-four counties have been formed since 1872. One county changed sides in 1888.

Kentucky.—The increase in the popular vote since 1872 is 153,646. Total vote in 1872, 191,135; in 1888, 344,781. The Democratic party carried the State at every election, the pluralities being—in 1872, 3,855; 1876, 59,772; 1880, 43,449; 1884, 34,839; 1888, 28,668. Three new counties have been formed since 1872. Sixteen counties changed sides in 1888. There is no record of a vote in Josh Bell County in 1888.

Louisiana.—An increase of importance in the popular vote has only been recorded once since 1872, i. e., in 1876, when the record showed 145,648 (increase over that of 1872, 16,951). The vote of 1880 was 97,201 (decrease from that of 1876, 48,447), and that of 1884 was 109,234. The vote of 1888 was 115,744, an increase of 6,510 over that of 1884, but a decrease of 12,948 as compared with 1872. The Republican party carried the State by a plurality of 14,634 in 1872, and 4,627 in 1876. Since that time the Democratic pluralities have been—in 1880, 27,816; 1884, 16,199; 1888, 54,548. Eight counties have been formed since 1872. Twelve counties changed sides in 1888.

Maine.—The increase in the popular vote since 1872 is 37,741. Total vote in 1872, 90,509; in 1888, 128,250. The Republican party carried the State at every election, the pluralities being—in 1872, 32,335; 1876, 15,814; 1880, 8,868; 1884, 20,060; 1888, 23,258. Every county has recorded a Republican plurality since 1872.

Maryland.—The increase in the popular vote since 1872 is 76,455. Total vote in 1872, 134,466; in 1888, 210,921. The Democratic party carried the State at every election, the pluralities being—in 1872, 908; 1876, 19,756; 1880, 15,191; 1884, 11,118; 1888, 6,182. One new county has been formed since 1872. Three counties changed sides in 1888.

Massachusetts.—The increase in the popular vote since 1872 is 151,716. Total vote in 1872, 192,782; in 1888, 344,448. The Republican party carried the State at every election, the pluralities being—in 1872, 74,212; 1876, 40,423; 1880, 53,215; 1884, 24,372; 1888, 32,037. With one exception (Suffolk County, 1876-'88), every county has recorded a Republican plurality since 1872.

Michigan.—The increase in the popular vote since 1872 is 254,371. Total vote in 1872, 220,942; in 1888, 475,313. The Republican party carried the State at every election, the pluralities being—in 1872, 55,968; 1876, 15,542; 1880, 53,890; 1884, 3,808; 1888, 22,911. Fourteen counties have been formed since 1872. Nineteen counties changed sides in 1888.

Minnesota.—The increase in the popular vote since 1872 is 173,766. Total vote in 1872, 89,540; in 1888, 263,306. The Republican party carried the State at

every election, the pluralities being—in 1872, 20,694; 1876, 21,780; 1880, 40,588; 1884, 41,620; 1888, 38,106. Seventeen new counties have been formed in Minnesota since 1872. Three counties changed sides in 1888.

Mississippi.—The decrease in the popular vote since 1872 is 13,656. There was a conspicuous increase in 1876, when the total vote was 164,778 (increase over 1872, 35,315). The vote in 1880 (117,078) and in 1884 (120,019), compared with that of 1888 (115,807), shows a considerable decrease. The Republican party carried the State by a plurality of 84,887 in 1872. Since that time the Democratic pluralities have been—in 1876, 59,568; 1880, 40,896; 1884, 33,001; 1888, 55,375. Five new counties have been formed since 1872. Five counties changed sides in 1888.

Missouri.—The increase in the popular vote since 1872 is 250,143. Total vote in 1872, 273,050; in 1888, 523,198. The Democratic party carried the State at every election, the pluralities being—in 1872, 29,809; 1876, 54,889; 1880, 55,042; 1884, 33,059; 1888, 25,717. Four new counties have been formed since 1872. Ten counties changed sides in 1888.

Nebraska.—The increase in the popular vote since 1872 is 176,481. Total vote in 1872, 26,141; in 1888, 202,622. The Republican party carried the State at every election, the pluralities being—in 1872, 10,517; 1876, 10,826; 1880, 26,456; 1884, 23,512; 1888, 27,873. Thirty-two counties have been formed since 1872. Six counties changed sides in 1888.

Nevada.—The decrease in the popular vote since 1872 is 2,017. Total vote in 1872, 14,649. There was an increase in 1876, when the total vote was 19,691; but the total fell to 18,348 in 1880, again, to 12,797 in 1884, and again to 12,632 in 1888. The Republican party carried the State at every election except that of 1880, its pluralities being—in 1872, 2,177; 1876, 1,075; 1884, 1,615; 1888, 1,867. The Democratic plurality was 879 in 1880. One county has been formed since 1872. One county changed sides in 1888.

New Hampshire.—The increase in the popular vote since 1872 is 21,941. Total vote in 1872, 68,892; in 1888, 90,833. The Republican party carried the State at every election, the pluralities being—in 1872, 5,444; 1876, 2,954; 1880, 4,058; 1884, 4,063; 1888, 2,272. Three counties changed sides in 1888.

New Jersey.—The increase in the popular vote since 1872 is 134,999. Total vote in 1872, 168,742; in 1888, 303,741. The Republican party carried the State by a plurality of 14,570 in 1872. Since that time the Democratic pluralities have been—in 1876, 11,690; 1880, 2,010; 1884, 4,412; 1888, 7,149.

New York.—The increase in the popular vote since 1872 is 490,437. Total vote in 1872, 829,872; in 1888, 1,320,109. The Republican party carried the State by a plurality of 51,800 in 1872, 21,033 in 1880, and 18,002 in 1888. The Democratic party carried the State by a plurality of 26,568 in 1876, and 1,047 in 1884. Seven counties changed sides in 1888.

North Carolina.—The increase in the popular vote since 1872 is 120,610. Total vote in 1872, 184,863; in 1888, 285,473. The Republican party carried the State by a plurality of 24,675 in 1872. Since that time the Democratic pluralities have been—in 1876, 17,010; 1880, 8,326; 1884, 17,884; 1888, 13,118. Four new counties have been formed since 1872. Sixteen counties changed sides in 1888.

Ohio.—The increase in the popular vote since 1872 is 312,505. Total vote in 1872, 529,436; in 1888, 841,941. The Republican party carried the State at every election, the pluralities being—in 1872, 24,268; 1876, 2,747; 1880, 34,227; 1884, 31,796; 1888, 19,599. Four counties changed sides in 1888.

Oregon.—The increase in the popular vote since 1872 is 41,790. Total vote in 1872, 20,121; in 1888, 61,911. The Republican party carried the State at every election, the pluralities being—in 1872, 3,517; 1876, 547; 1880, 671; 1884, 2,256; 1888, 6,769. Seven new counties have been formed since 1872. Four counties changed sides in 1888.

Pennsylvania.—The increase in the popular vote since 1872 is 434,308. Total vote in 1872, 563,260; in 1888, 997,568. The Republican party carried the State at every election, the pluralities being—in 1872, 135,918; 1876, 17,964; 1880, 37,276; 1884, 81,019; 1888, 79,452. One new county has been formed since 1872. Seven counties changed sides in 1888.

Rhode Island.—The increase in the popular vote since 1872 is 21,772. Total vote in 1872, 18,994; in 1888, 40,766. The Republican party carried the State at every election, the pluralities being—in 1872, 8,336; 1876, 5,075; 1880, 7,410; 1884, 6,439; 1888, 4,438.

South Carolina.—The decrease in the popular vote since 1872 is 15,619. In 1876 the total vote was 182,776 (increase over that of 1872, 87,596). This total was reduced to 91,578 in 1884, and a great falling off was again apparent in 1888, the total for that year being only 79,561 (decrease, compared with the vote of 1884, 12,017). The Republican party carried the State by a plurality of 49,400 in 1872, and 964 in 1876. Since that time, the Democratic pluralities have been—in 1880, 54,241; 1884, 43,031; 1888, 52,089. Two new counties have been formed since 1872. Two counties changed sides in 1888.

Tennessee.—The increase in the popular vote since 1872 is 123,690. Total vote in 1872, 150,046; in 1888, 303,736. The Democratic party carried the State at every election, the pluralities being—in 1872, 8,736; 1876, 43,600; 1880, 30,514; 1884, 2,180; 1888, 19,791. Four new counties have been formed since 1872. Four counties changed sides in 1888.

Texas.—The increase in the popular vote since 1872 is 241,108. Total vote in 1872, 116,408; in 1888, 357,518. The Democratic party carried the State at every election, the pluralities being—in 1872, 16,595; 1876, 59,955; 1880, 98,383; 1884, 131,978; 1888, 146,461. Thirty-three counties have been formed since 1872. Nine counties changed sides in 1888.

Vermont.—The increase in the popular vote since 1872 is 10,439. Total vote in 1872, 53,001; in 1888, 63,440. The Republican party carried the State at every election, the pluralities being—in 1872, 29,961; 1876, 23,838; 1880, 26,909; 1884, 22,183; 1888, 23,404.

Virginia.—The increase in the popular vote since 1872 is 118,929. Total vote in 1872, 185,164; in 1888, 304,093. The Republican party carried the State by a plurality of 1,773 in 1872. Since that time the Democratic pluralities have been—in 1876, 44,112; 1880, 43,956; 1884, 6,141; 1888, 1,539. Six new counties have been formed since 1872. Fifteen counties changed sides in 1888.

West Virginia.—The increase in the popular vote since 1872 is 96,822. Total vote in 1872, 62,366; in 1888, 159,188. The Republican party carried the State by a plurality of 2,264 in 1872. Since that time the Democratic pluralities have been—in 1876, 12,384; 1880, 11,148; 1884, 4,221; 1888, 1,873. Two new counties have been formed since 1872. Seven counties changed sides in 1888.

Wisconsin.—The increase in the popular vote since 1872 is 162,306. Total vote in 1872, 192,308; in 1888, 354,614. The Republican party carried the State at every election, the pluralities being—in 1872, 17,666; 1876, 5,205; 1880, 29,763; 1884, 14,699; 1888, 21,321. Ten counties have been formed since 1872. Seven counties changed sides in 1888.

UNIVERSALISTS. The "Universalist Register" for 1889 gives statistics of this denomination of which the following is a summary: Number of parishes, 971; of families, 41,474; of preachers, 711; of churches, 721; of members, 88,780; of Sunday-schools, 657, with 53,205 members; of church edifices, 816; value of church property, \$7,915,756. The figures show an apparent loss from the previous year of 17 parishes, 9 church organizations, and 1,431 members of Sunday-schools. The loss

is partly accounted for by the dropping from the roll, by order of one of the State conventions, of 28 parishes which had long been inactive. Gains appear of 2,186 families, 973 communicants, 20 church edifices, and \$324,206 in valuation of church property. The twelve schools—four colleges and universities, three theological schools and departments, and five academical institutions—returned 114 teachers and professors, 1,284 students, and \$2,716,500 of property. The Universalist Publishing-House reports net assets of about \$70,000, and publishes and owns the copyrights of 150 volumes and six periodicals.

The funds of the General Convention, as reported upon at its meeting in October, 1888, amount in all to \$193,559, distributed as follows: Murray Centenary fund (in aid of theological students, the distribution of Universalist literature, Church extension, and missions), \$129,549; Theological Scholarship fund (for loans to theological students), \$29,925; Church Extension fund, \$4,149; Gunn Ministerial Relief fund, \$11,218; Ada Tibbetts Memorial fund (valuable property over and above the liens), \$9,500; three other special funds, \$18,223. The aggregate increase of these funds during the convention year 1887-'88 was \$15,833.

The Chapin Home, New York, has an endowment of \$145,000, and returns 56 inmates.

The Woman's Centenary Association reported to the General Convention that its receipts for the year had been \$8,147, and its expenditures \$2,240; and that it had a permanent fund of \$7,647.

The Universalist General Convention met in Chicago, Ill., October 24. The Hon. Hosea Parker presided. The resolution adopted by the General Convention of 1887 providing for holding the meetings of the body biennially instead of annually, was ratified as required by the provisions of the Constitution, to become operative from and after 1889. In connection with this action a proposition was considered for authorizing the trustees to call a Universalist Church Conference to be held in the years intervening between the sessions of the General Convention, for the discussion of questions relating to religion, morals, and education. The discussion of the creed which was proposed for adoption at the General Convention held in New York in 1887 was continued, and the subject was referred to a new committee which is expected to report upon it at a subsequent session of the General Convention. The publishers of the Sunday-school-lesson papers were requested to furnish, in connection with the ordinary papers, a serial exposition of the leading features of Christian doctrine as held by the Universalist Church. A resolution providing for calling an International Conference of Sunday-school workers was referred to a committee to report upon at the next meeting of the General Convention.

URUGUAY, a republic in South America. Area, 69,835 square miles. In 1886 the population was 596,463; that of the city of Montevideo was 115,462 in 1885.

Government.—The President is Gen. Máximo Tajes. The Cabinet is composed of the following ministers: Prime Minister and Interior, Dr. Herrera y Obes; Foreign Affairs, Dr. J. García Lagos; Finance, Dr. N. M. Marqunez; Justice, Public Worship, and Instruction, Dr. M. Berinduague; War and Navy, Col. P. de Leon. The American Consul at Montevideo is Edward J. Hill. The Uruguayan Consul-General at New York is Don Enrique Estrázulas.

Army and Navy.—The standing army was increased in 1887 to about 4,000 men. There is also a police force of 3,200 men, and a National Guard of 20,000. The navy is composed of five small steamers and three gun-boats.

Finance.—On Dec. 1, 1887, the national indebtedness amounted to \$71,000,000, of which \$17,000,000 constituted the home debt and \$54,000,000 the foreign debt, the latter being represented by £10,865,800 five-per-cent. bonds and £4,255,860 six-per-cent. bonds. The conversion of the latter amount into four-per-cent. bonds was effected by issuing in London \$20,000,000 at 82½ per cent., in August, 1888.

South American Congress.—On July 18, 1888, at the invitation of the Argentine Republic and Uruguay, a congress of delegates from South American nations assembled at Montevideo for the purpose of forming a treaty to determine questions of international rights pending between South American nations. This congress is the first of its kind that ever assembled in South America.

Railroads.—On July 1, 1888, there were 558 kilometres of railway in operation. Early in 1888 a Government decree announced the intention of building a railway embracing the following lines: 1. From Montevideo to Rivera, with branch lines to Paysandú and Salto. 2. From Montevideo to Colonia. 3. From Agosto to Carmelo and Nueva Palmira. 4. From Montevideo to the northern frontier and Bazé. 5. From Montevideo eastward to Laguna and Merino. 6. From Salto to Santa Rosa, with a branch line from Peballo to San Eugenio. The Government offers to guarantee seven per cent. interest for forty years on a capital of £5,000 per kilometre.

In October the Central Uruguayan Extension Railway Company (limited) was formed, with a capital of £1,000,000, to build a line of railway from Paso de los Toros to Rivera (Santa Una) on the Brazilian frontier, 288 kilometres, the Government guaranteeing seven per cent. interest for forty years on a capital of £5,000 per kilometre.

Telegraphs.—The length of lines in operation in 1888 was 2,789 kilometres. The first submarine cable for telephone use was laid between Montevideo and Buenos Ayres in the autumn, and it does better service than the overland lines.

Commerce.—Uruguayan foreign commerce has developed as follows, reduced to millions of dollars:

	Imports.	Exports.
1883.....	20,8	25,2
1884.....	24,6	24,8
1885.....	25,8	26,2
1886.....	20,2	22,8

The following Uruguayan products were exports: Cattle, \$800,000; jerked beef, \$2,858,000; preserved beef in tins, \$37,000; extract of beef, \$894,000; hides, \$4,842,000; skins, \$816,000; tallow, \$1,237,000; wool, \$4,998,000; horse-hair, \$185,000; bones and bone-ashes, \$110,000; fertilizers, \$316,000; ostrich-feathers, \$54,000; grain, \$712,000.

The American trade exhibits the following figures:

FISCAL YEAR.	Imports into the United States.	Domestic export to Uruguay.
1886.....	\$4,925,848	\$1,110,545
1887.....	2,318,761	1,393,725
1888.....	2,711,521	1,397,490

Tariff Changes.—The revised customs-tariff became operative on April 1, 1888, the modifications being slight, ad valorem duties being raised from 30½ per cent. to 31 per cent.; goods under schedule No. 2, from 47 per cent. to 48 per cent.; and No. 3, from 48 to 44. On the other hand, the 6½ per mille was abolished, and the number of articles entering duty free notably increased.

Viticulture.—Under the provision of an act of the Uruguayan Congress of 1889, gold medals were awarded to Pascal Harriague, a Frenchman, and F. Vidiella, a Uruguayan, as the first and most successful viticulturists in the republic. The growing of vines has been extending rapidly during late years in Uruguay, and is giving the best results. The Viticultural Society, founded in 1887, with a capital of \$100,000, has acquired lands along the Central Railway; vineyards have been laid out, and 100,000 vines were planted in 1888.

Earthquake.—During the night of July 4-5, 1888, there were, for the first time in forty years, two violent shocks of earthquake at Montevideo, the direction being from northwest to southeast, the shocks extending over fifty seconds. The shocks were felt at sea, the phenomenon coinciding with great cold and a terrific snow-storm in the Cordillera, at Uzpalata, and at Bahía Blanca in the province of Buenos Ayres, Argentine Republic, 39° south latitude, where for the first time a heavy snow-storm occurred.

UTAH. Territorial Government.—The following were the Territorial officers during the year: Governor, Caleb W. West; Secretary, William C. Hall; Treasurer *de facto*, James Jack; Auditor *de facto*, Nephi W. Clayton. (In January the Governor sent to the Council of the Legislature the nomination of Bolivar

Roberts to be Territorial Treasurer, and Arthur Pratt to be Territorial Auditor; but that body refused confirmation, on the ground that the Governor's right of appointment was in dispute in a case pending before the United States Supreme Court. Late in March, after the adjournment of the Legislature, the Governor again made the same nominations, he then having full power of appointment till the next meeting of the Legislature in 1890. The Governor had previously, in March, 1886, appointed the same persons to the same positions; but Treasurer Jack and Auditor Clayton, holding by election of the people, had refused to yield up their offices, and the litigation, which has not yet reached its end in the Supreme Court of the United States, resulted. The appointees of March, 1888, were again refused their offices by the *de facto* officials as before. About the same time they brought suit against the latter, demanding payment of salary from March, 1886, out of the appropriation made by the Legislature in January for the salaries of the Treasurer and Auditor. The determination of this suit will depend upon the decision of the United States Supreme Court case.) Commissioner of Schools, P. L. Williams; Chief-Justice of the Supreme Court, Charles S. Zane, succeeded by Elliott Sandford; Associate Justices, Jacob S. Boreman, and H. P. Henderson. During the year the Territory was allowed, by act of Congress, an additional judge, and John W. Judd was appointed to that position.

Legislative Session.—The Twenty-eighth Territorial Legislature assembled on January 9, and remained in session two months. One of the earliest measures passed was a deficiency appropriation bill, to meet expenses of the Government, for several years unpaid, owing to the veto of appropriation bills passed by the previous Legislature. Several new institutions were provided for—a Territorial Reform School in Weber County at a cost of \$75,000, an Agricultural College, and an agricultural experiment station in connection therewith, in Cache County, to cost \$25,000, and an Institution for Deaf-Mutes, in connection with the University of Deseret, to cost \$20,000. The sum of \$85,451 was appropriated for the completion of buildings at the University of Deseret and to pay debts of the institution previously incurred. For the purpose of meeting these extraordinary expenditures a board of commissioners was established and directed to negotiate a loan not exceeding \$150,000. The bonds for this loan were all taken by a Denver bank at a small premium.

A gift of land from Salt Lake City as a site for Capitol buildings was accepted at this session, and a commission appointed to submit to the next Legislature plans and estimates for a new Capitol building.

The general election for members of the Legislature was fixed in August, 1889, and biennially thereafter, the first meeting of the

Legislature to be on the second Monday of the following January.

An act to prevent crimes against the elective franchise provides penalties for fraudulent registration, fraudulent voting or attempts to vote, tampering with ballot-boxes, forgery or alteration of election returns, or other means used to defeat the purpose of the voter.

Other acts of the session were as follow :

Providing for a compilation of the laws of the Territory.

Raising the age of consent to thirteen years.

Providing that a married woman may join in a deed by her husband, and release her right of dower in the property therein conveyed or encumbered.

Designating May 31 as the time at which new laws shall go into effect, unless otherwise provided in such laws.

Exempting from taxation for six years the property, capital stock, and bonds or mortgages of any company in the Territory engaged in the production and manufacture of sugar from products raised in the Territory.

To prevent the sale or giving away of intoxicating beverages on election-days.

Regulating the business of life insurance.

Regulating marriage in the Territory, prohibiting, among other things, marriage between a negro and a white person, or between a Mongolian and a white person.

Providing that occupying claimants shall not be evicted by process of law till they have been paid the full value of improvements made by them, or unless they refuse to pay upon demand to the successful claimant the full value of his share or claim in the property.

Establishing a uniform system of county governments.

Accepting from Salt Lake City a gift of lands for Agricultural Fair Grounds, and appropriating \$20,000 for the erection of suitable fair buildings.

Railroads.—The railroad system of the Territory at the beginning of the year was as follows: Union Pacific Railroad and branches, 581 miles; Denver and Rio Grande Western and branches, 368 miles; Central Pacific, 154 miles; and San Pete Valley, 34 miles; total, 1,140 miles. Two new roads were in course of construction during the year—the Salt Lake and Fort Douglas and the Salt Lake and Eastern. The former of these, 24 miles in length, was practically completed at the end of the year; on the latter, construction was not far advanced.

Agriculture.—The wheat-crop of the Territory for 1888 is estimated at 3,000,000 bushels; oats, 1,500,000 bushels; barley, 750,000 bushels; rye, 50,000 bushels; corn, 750,000 bushels. There were also produced about 200,000 bushels of apples, 150,000 bushels of peaches, and 75,000 bushels of pears. The hay-crop is estimated at 500,000 tons.

Mining.—Mining for the precious metals began about twenty-five years ago, but was carried on only in a small way until after the completion of the first Pacific Railroad. This gave a market, and from 1871 to 1887, both inclusive, the value of the output was as follows: Gold, \$3,065,692.72; silver, \$73,201,966.51; lead, \$33,792,599.17; copper, \$3,003,889.21; total, \$113,071,147.61. The product

for 1887 is summarized as follows: Copper, \$124,566; refined lead, \$111,750; unrefined lead, \$1,196,788.77; fine silver, \$5,976,884.89; fine gold, \$227,740; total export value, \$7,687,729.66.

Prison.—The report of the United States Penitentiary at Salt Lake City, for the year ending June 30, is as follows: Number in prison July 1, 1887, 197; number received from July 1, 1887, to June 30, 1888, 299; total number in prison during the year, 496; number discharged from July 1, 1887, to June 30, 1888, 315; number remaining in prison July 1, 1888, 181. The Forty-eighth Congress appropriated \$50,000 for the construction of a new prison building, which was completed early in the year, and will accommodate 240 prisoners, by placing two in a cell.

Confiscation of Church Property.—In the suits begun in 1887, under the provisions of the Edmunds-Tucker act, to secure the forfeiture of the property held by the Mormon Church corporation and by the Perpetual Emigrating Fund Company, in which suits a receiver had been appointed to collect and take possession of such property pending the suit, an appeal from the order of the court making such appointment was prayed for by the defendants late in that year, but refused by the Territorial Supreme Court in January, on the ground that the order was merely interlocutory and not final. The receiver during the year instituted numerous investigations and heard witnesses with the view of ascertaining property of the Church and company, took possession of such personal and real property as he could find, and began suits for the rest. The real estate received by him during the year included the Temple Block in Salt Lake City, the Garbo House and grounds, the Tithing-Office and grounds, the Historian's Office and grounds, the Church farm of 1,108 acres, and one undivided half of the Church coal-mines in Summit County. For the escheat and forfeiture of this property, except the Temple Block, a proceeding was begun during the year by information in the Third District Court of the Territory. Before October the receiver had also secured possession of money of the defendants, amounting to \$237,666.15; about 30,000 head of sheep, 4,732 shares of the Deseret Telegraph Company, 300 shares of the Salt Lake City Gas Company, and a few other securities. As to this personality, and on the legal standing of the defendants generally since the Edmunds-Tucker act, the Supreme Court of the Territory rendered a final decree on October 9, a part of which is as follows:

That on the 3d day of March, 1887, the corporation of the Church of Jesus Christ of Latter-Day Saints became and the same was dissolved; and that since said date it has had no legal corporate existence. And it is furthermore adjudged that all and entire the personal property set out in this decree as having belonged to said corporation has, by reason of the dissolution of said corporation as aforesaid, on account of the failure or illegality of the trusts to which it

was dedicated at its acquisition, and for which it has been used by said late corporation and by operation of law, become escheated to and the property of the United States of America, subject to the costs and expenses of this proceeding, and of the receivership by this court instituted and ordered. It is furthermore ordered and adjudged that there is not now, and has not been, since the 3d day of March, 1887, any person legally authorized to take charge of, manage, preserve, and control the personal and real property hereinbefore set out, except the receiver appointed by this court; and it is therefore ordered that the receivership hereinbefore established by this court is continued in full force and effect, and that the said receiver shall continue to exercise all and entire the powers and authority conferred upon him by the decree appointing him.

The Temple Block was excepted from this decree, and the receiver was ordered to surrender possession of it to trustees already appointed for the use of the Mormon Church as a house of worship. An appeal from this decree was taken to the United States Supreme Court, the principal ground therefor being the

constitutionality of the act under which the decision was rendered. No decree had been made at the close of the year by the District Court as to the escheat of the other realty.

Political.—Late in September a call was issued by the Utah Democratic Club for a meeting of representatives at Salt Lake City, on October 6, to form an independent Democratic Territorial organization, the object being to include in the organization all anti-Mormon Democrats of the Territory. This convention accomplished the object for which it was called, and nominated S. R. Thurman as its candidate for delegate to Congress. The People's party (Mormon) held its Territorial Convention at Salt Lake City on October 8, and renominated Delegate John T. Caine. The Republicans, Labor men, and other opponents of Mormonism, joined in supporting Mr. Baskin for delegate. At the November election Caine received 10,127 votes, Baskin 3,484, and Thurman 511.

V

VENEZUELA, a republic in South America. Area, 1,589,398 square kilometres; population in 1886, 2,198,320.

Government.—The President, elected on July 5, 1888, is Don Pablo Rojas Paúl. His term will expire on Feb. 20, 1890. The Vice-President is Dr. S. Pacheco. The Cabinet was formed of the following ministers: Interior, Dr. Nicanor Borges; Treasury, Don Vicente Coronado; Public Credit, Don Bermudez Grau; Public Instruction, Don Santiago Gonzalez Guinan; Public Improvements, Don Nicolas Gil; Public Works, Señor Muñoz Lebar; and Foreign Affairs, Don Agustin Teturiz. The United States Minister Resident at Caracas is Charles L. Scott; the American Consul at Ciudad Bolivar is George F. Underhill. The Venezuelan *chargé d'affaires* at Washington is Don Francisco Antonio Silva. The Consul-General at New York is Dr. Pedro Vicente Mijares.

Finance.—By virtue of a convention concluded on Nov. 24, 1888, between the financial agent of the republic in Europe and the council of foreign bondholders, the debt of the republic was consolidated, making £3,753,420, for which amount 4-per-cent. bonds were issued, bearing interest from Jan. 1, 1889. Part of the customs receipts is to be regularly set aside in pledge for payment of both the principal and the interest. Aside from this conversion, the Government floated an additional loan for £457,000, to which a similar pledge of duties for payment attaches.

Army and Navy.—The effective strength of the permanent army is 2,000 men. The navy is composed of 3 steamers, 1 schooner, and 1 school-ship.

Postal Service.—There are 162 post-offices, which forwarded 2,734,576 items of mail-matter during the fiscal year 1885-'86.

Railroads.—There were in operation, on Jan. 1, 1888, 286 kilometres of railway; in course of construction, 353; authorized, 1,982. Since that time several other lines have been chartered. The railway between Puerto Cabello and Valencia was opened in February, 1888.

Telegraphs.—The length of telegraph lines in Venezuela is 4,462 kilometres, with 80 offices. Communication was opened in 1888 between Caracas, La Guayra, and Colombia, and simultaneously by cable with Hayti.

Steamship Line.—In May, 1888, a new line of steamers was established, the Royal Dutch West Indian Mail Steamship Company, whose steamers ply between New York, Port-au-Prince, Curaçoa, Puerto Cabello, La Guayra, Trinidad, Demerara, and other West Indian ports. Three steamers were placed on the line to begin with.

Commerce.—Venezuela imported in 1887 from England \$2,194,237 worth of merchandise; from France, \$678,441; from Spain, \$148,267. She exported to those countries in the same year goods to the amount of \$705,044, \$3,500,421, and \$707,016, respectively. The American trade was as follows:

FISCAL YEAR.	Import into the United States.	Domestic export to Venezuela.
1886	\$5,791,621	\$2,695,488
1887	8,361,386	2,827,010
1888	10,051,250	3,008,386

The Anglo-Venezuelan Imbroglio.—Early in 1888 there was excitement once more about the frontier dispute between Venezuela and British

Guiana, and the United States was appealed to not to allow Great Britain and her colony to retain Barimas Point, together with the disputed territory in the gold-mines. The Venezuelans insisted that the Monroe doctrine was opposed to such encroachments. The matter was rather coolly received in the United States, both in and out of Congress, in view of the long-pending claim against Venezuela for the seizure of the Venezuelan Steam Transportation Company's steamers in 1871, when there chanced to be a revolution in that country. Meanwhile this dispute about the Guiana border remains in abeyance, England declining to submit to international arbitration.

VERMONT. State Government.—The following were the State officers during the year: Governor, Ebenezer J. Ormsbee (Republican), succeeded by William P. Dillingham (Republican); Lieutenant-Governor, Levi K. Fuller, succeeded by Urban A. Woodbury; Secretary of State, Charles W. Porter; Treasurer, William H. Dubois; Auditor, E. Henry Powell; Superintendent of Education, Justus Dartt; Inspector of Finance, Savings-Banks, and Trust Companies, Carroll S. Page, succeeded by L. O. Greene; Chief Judge of the Supreme Court, Homer E. Royce; Assistant Judges, Jonathan Ross, Wheelock G. Veazey, H. Henry Powers, John W. Rowell, Russell S. Taft, and James M. Tyler, appointed in September, 1887, to succeed William H. Walker, resigned. The Secretary of State and Treasurer are, *ex officio*, Insurance Commissioners.

Legislative Session.—The Legislature met at Montpelier on October 8, and remained in session till November 28. One of the most important acts of the session was the passage of a new law for the government of the public schools. It provides for a State Superintendent of Education, to be chosen by the Legislature; for a County Board of Education, composed of one member from each town, chosen at its annual meeting; and for a County Supervisor of Schools, to be chosen every two years, in May, by the County Board of Education. These county boards have cognizance of all matters of education in their respective counties, including the selection of text-books. The Supervisor is a salaried administrative officer, who examines teachers, grants certificates, visits the schools, advises school-district officers, gives instruction to teachers, and otherwise stimulates the interests of education. The school-district system is still maintained, and the Prudential Committee of the district has still the financial management of the schools in his district, and the selection or dismissal of teachers therefor. Women have the same right to vote as men in school-district meetings. Numerous changes in the details of school management were made.

The Legislature was more liberal than many of its predecessors in the matter of appropriations. The sum of \$1,125,000 was appropriated for 1889 and 1890, for State expenses, and the

Treasurer was authorized to borrow \$500,000 in addition, if necessary. The construction of a State Insane Asylum was authorized, and \$100,000 was appropriated for that purpose. Liberal provision was also made for the Burlington and Middlebury Colleges, and for the Soldiers' Home. In consequence of these appropriations, it became necessary to levy a State tax for 1889 of twenty cents on each \$100 of taxable property in the State.

Amendments to the prohibitory acts were made, in order to secure better enforcement of prohibition, and an act making the payment of a United States special tax as a liquor-seller *prima facie* evidence of liquor-selling was passed. The existing status of the Normal Schools was continued till 1900. Other acts of the session were as follow:

Providing for the sale of leased property for taxes. Empowering the Railroad Commissioners to authorize the running of through trains on Sunday.

Giving the Railroad Commissioners the power to prescribe the method of heating cars, provided that they shall not prohibit the heating by steam from the engine.

Requiring all railroads to issue uniform mileage-tickets in books containing coupons for not more than one thousand miles.

Providing that no personal property shall be exempt from attachment on a suit brought to recover the purchase-money for the same.

Creating a Board of Supervisors of the Insane.

Providing for the care of habitual drunkards at institutions in the State established for their treatment.

To prevent the adulteration of milk and the false branding of butter and cheese.

Providing for the appointment of a commissioner to investigate the agricultural and manufacturing interests of the State, and to devise means for developing the same.

To prohibit discrimination in life or endowment insurance policies.

Fixing the standard weight for a bushel of salt at seventy pounds.

Prohibiting the sale or gift of tobacco to persons under sixteen years of age.

Providing that every person who shall make, alter, or repair any article of personal property, shall have a lien thereon for his just and reasonable charges therefor, and may retain possession of such property till the charges are paid, and may sell the same at public auction after three months, if the value of the article is not over \$100.

To suppress "bucket-shops" and gambling in stocks, bonds, petroleum, cotton, grain, and provisions.

Punishing, by a fine, persons who bet on the result of any election.

Changing the fiscal year so that it shall end on June 30.

FINANCES.—For the year ending July 31, the State Treasurer reports receipts amounting to \$710,052.20; cash on hand at the beginning of the year, \$21,476.77; total, \$731,528.97. The expenditures during the same period were \$643,466.67, leaving a balance of \$88,062.30 on July 31. The assessment of a special property-tax of twelve cents on each \$100 increased the revenue for the year by \$210,017.84, and enabled the Treasurer to pay off a floating debt of \$225,165. The tax on corporations yielded a revenue of \$239,008.61. From convict-labor the sum of \$18,037.50 was derived, and \$61,-

027.83 from the courts and Judges of Probate. Regarding expenditures the Auditor says in his report: "A comparison of the figures for some years back will show a steady increase in State expenses, and that, as a whole, they exceed for the last biennial term the expenses of any two years preceding. This change is wrought principally by more liberal legislation of late years in the matter of special appropriations, increase of salaries and fees, and the transfer to the State of expenses heretofore borne by the counties and towns." The funded debt of the State remains unchanged, consisting of \$135,500 of 6-per-cent. bonds, held by the State Agricultural College fund.

Education.—The following statistics exhibit the condition of the public schools for the school year ending March 31, 1888: Districts, 2,144; schools, 2,547; pupils enrolled, 68,458; average daily attendance, 46,061: male teachers, 479; female teachers, 3,517; total revenue for school purposes, \$628,157.47; total expenditure, not including supervision, \$640,274.07. The enrollment of pupils shows a decrease of nearly 3,000 from the figures of the previous year, and is smaller than has been reported for ten years. The percentage of attendance, based upon the number enrolled, is smaller in Vermont than in any other New England State. "Another two years of experience in the common schools of the State," says the State Superintendent, "has still more fully convinced me of the utter inefficiency of our plan of district management."

At the State Normal School, in Castleton, there were 185 students in attendance during the school year, against 217 for the year 1886-'87; at the Randolph Normal School there were 115; and at the Johnson School about the same number.

Savings-Banks.—The whole number of depositors in all the savings banks and trust companies in the State, June 30, 1888, was 57,520, an increase during the year of 8,710. There was to the credit of such depositors \$16,602,087.76, showing an increase during the year of \$1,015,016.83. Of the total amount of deposits in the different savings-banks and trust companies, \$13,888,186.65 belong to depositors living in the State, being an increase of \$885,642.96 as compared with 1887. The average amount of each deposit is \$288.63, a decrease of \$1.04 as compared with 1887.

Railroads.—There are now 932 miles of railroad in the State. During the year there were constructed and put in operation 12.8 miles of new road—viz., by the Central Vermont Railroad, from Barre to Williamstown, 7.8 miles; by the Clarendon and Pittsford Railroad Company, in Rutland, West Rutland, and Proctor, 5 miles. The Montpelier and Wells River Railroad Company has begun the construction of a road from Montpelier to Barre, which will be completed early in 1889. Returns made to the Railroad Commissioners and the Commissioner of State Taxes for 1888 show the following

railroad earnings for the year ending June 30, 1888: Gross income, \$4,884,372; operating expenses, \$3,819,964; net income, \$1,564,408.

Political.—A Democratic State Convention met at Montpelier on May 10, and nominated the following candidates for State offices: For Governor, Stephen C. Shurtleff; Lieutenant-Governor, Thomas C. O'Sullivan; Treasurer, William E. Peck; Secretary of State, William B. Mayo; Auditor, George M. Dearborn. The platform contained the following:

We reassert our belief that property should be the principal subject of taxation, and that this burden should fall proportionately upon the property taxed, and we demand such legislation as will make the list of each taxable poll one dollar instead of two dollars, and will adjust taxes upon mortgaged property equitably between mortgagor and mortgagee.

We recognize the necessity of controlling by law the traffic in intoxicating liquors, and are in favor of the enforcement of existing laws enacted for that purpose while they remain in force. But we believe a stringent license law with local option would produce better results than the present law, and would increase the revenue rather than burden taxation.

The Republican party in the State has repeatedly professed itself to be in favor of prohibition, and has enacted prohibitory laws; but, although in power, it has neglected to enforce those laws and has left them mainly to such enforcement as has been prompted by greed of gain, revenge, or malice.

Candidates of the Prohibition party were nominated at a convention held at Montpelier on June 12. They were: For Governor, Henry M. Seeley; Lieutenant-Governor, George E. Crowell; Secretary of State, Archibald O. Ferguson; Treasurer, Armentus B. Bixbey; Auditor, Charles S. Parker.

The Republicans held a State Convention on April 4 for the choice of delegates to the Chicago Convention, and a second convention on June 27, at which William P. Dillingham was nominated for Governor and Urban A. Woodbury for Lieutenant-Governor. The Secretary of State, Treasurer, and Auditor were renominated. The following are the more important resolutions adopted:

That the railroads of Vermont were chartered and endowed with certain powers and privileges, primarily for the benefit of all the people, and that their services should be open to all upon the same relative terms and conditions, without discriminations or favoritism in any form or degree; that, in justice to their owners and paying patrons, the practice of issuing free passes to persons other than their officers, employés, and officers and employés of other railroads, ought to be promptly discontinued. We especially deprecate the issuing to and acceptance for use of free passes by State officers, members of the Legislature, and all others whose official acts may concern the rights and interests of the railroads as demoralizing in intent and tendency, and demand that such practices be prohibited by law. We believe that justice between man and man, as well as the obvious interests of the State, require that the principles embodied in what are known as the "long- and short-haul" provisions of the interstate commerce law and the laws of several of our sister States should find a place in the Statutes of Vermont, and that our State Railroad Commission should be clothed with ample power to exact obedience to such laws and to their own judgments and decrees.

This convention reaffirms the devotion of the Re-

publican party to the temperance legislation of the State as enacted by the Republican party, and its determination that no retrograde steps shall be taken, but that the lines shall be advanced until the saloon shall cease to be a power in the land.

The election occurred early in September, and resulted in an unusually large majority for the Republican ticket. For Governor, Dillingham received 48,522 votes; Shurtleff, 19,527; Seeley, 1,372. Of the Legislature chosen at the same time, the Republicans elected the entire 80 members of the Senate, and 219 members of the House; of the remaining 21 members of the House, 19 were Democrats and 2 Independents. At the national election in November, Republican presidential electors were chosen and two Republican Congressmen elected.

VIRGINIA. State Government.—The following were the State officers during the year: Governor, Fitzhugh Lee, Democrat; Lieutenant-Governor, John E. Massey; Secretary of State, H. W. Flournoy; Treasurer, A. W. Harmon; Auditor, Morton Marye; Second Auditor, Frank G. Ruffin; Attorney-General, Rufus A. Ayers; Superintendent of Public Instruction, James L. Buchanan; Commissioner of Agriculture, Thomas Whitehead; Railroad Commissioner, James C. Hill; President of the Supreme Court, Lunsford L. Lewis; Judges, T. T. Fauntleroy, Robert A. Richardson, Benjamin T. Lacy, and Drury A. Hinton.

Legislative Session.—The Legislature, which was in session at the beginning of the year, adjourned on March 5. Among the important bills that became laws were those providing for the establishment of a board of agriculture and further defining and enlarging the duties of the Commissioner of Agriculture; abolishing the compulsory inspection of flour and fish; and inaugurating a system of pensions for Confederate soldiers and appropriating therefor \$65,000 per annum. The pension act is a substitute for a law that has been in force for several years, appropriating \$70,000 annually "for the relief of Confederate soldiers," and establishes a better method of distributing the appropriation than that therein provided. About February 1 a fire at the State Penitentiary in Richmond destroyed the shoe-shops, involving a loss of \$20,000 to the State. To restore this building an appropriation of \$30,000 was made. The appropriation for the State University was reduced from \$40,000 to \$35,000, and that of the Virginia Military Institute from \$35,000 to \$30,000. On the question of selling the State's interest in the Chesapeake and Ohio Railroad, amounting to about 17,621 shares, of the par value of \$100 a share, it was decided to authorize the sale, although the present value of shares was but \$2.50 or \$3. An act was also passed providing for submitting to the voters, at the November election, the question whether a convention should be called to revise the State Constitution. A memorial to Congress was adopted, asking the Federal Government to

assist the State in paying its debt. Other acts of the session were:

To provide for the removal of obstructions from Chickahominy river.

Appropriating money for furnishing the new addition to the Central Lunatic Asylum, and for the support of more inmates.

To prevent the pollution of drinking-water.

To incorporate the Foreign Mission Board of the Southern Baptist Convention.

Authorizing the Governor to hire convicts to the Abingdon Coal and Iron Railroad Company.

To provide for the purchase of certain property, an additional improvement for the State Normal School, and to make appropriation therefor.

To give the assent of the State of Virginia to the provisions of an act of Congress approved March 2, 1887, in relation to an agricultural experiment station.

To authorize clerks of circuit courts to take acknowledgments to deeds and other writings and to certify the same.

Amending the oyster laws and further protecting the oyster interest of the State.

The State Debt.—No settlement of the controversy between the State and its foreign bondholders regarding the State debt was reached during the year. When the conference of 1887, between representatives of the Legislature and of the bondholders, failed to agree upon a compromise adjustment of the liability of the State, the contest reverted again to the courts where the question regarding the right of the State to refuse debt-coupons in payment of taxes was at issue. The act requiring persons offering coupons for taxes to surrender them, file a petition to prove their genuineness, and produce in court the original bond from which they were taken as proof, before such coupons would be received, had been made practically non-enforceable by the decision of the United States Supreme Court declaring the tender of genuine coupons for taxes to be payment, without further proceedings by the tax-payer. The Legislature of 1887 then passed the "coupon-crusher" act, by which, on tender of the coupons, the State was to take the initiative by bringing suit against the tax-payer to compel him to prove his coupons, requiring as proof the production of the original bond. In all these cases the production of the original bond, which was held by the owner in Europe, was of course impossible. The action of the bondholders in obtaining from the Federal Circuit Court an injunction against the State officers from enforcing this act proved abortive, as the United States Supreme Court, late in 1887, declared such a proceeding to be contrary to that clause of the Constitution which forbids suits against a State by foreign citizens. The constitutionality of the "coupon-crusher" act itself was not in issue in this case; but the counsel of the bondholders at once took measures to bring that question before the State courts, to secure a decision, and to obtain an appeal therefrom to the United States Supreme Court. Early in December, 1888, this preliminary procedure had been completed and writs of error were obtained from the State Supreme

Court in four cases, involving all the mooted questions. Later, the United States Supreme Court fixed the second Monday of October, 1889, for a hearing of the cases.

The bondholders adopted another method of forcing coupons upon the State, believing that if they overwhelmed the treasury with these, the State, in order to escape bankruptcy, would be compelled to meet the terms offered by them for settling the debt. They decided to take as much advantage as possible of the existing legislation of the State, and established a central agency at Richmond, with subagencies throughout the State, for the purpose of facilitating and stimulating the use of coupons in paying taxes. Bondholders were urged to send over their bonds to these agencies, that they might be produced in court under the requirements of the "verification" and "coupon-crusher" acts. Tax-payers were urged voluntarily to file petitions under the former act for verification of their coupons, although it had been decided that the State could not compel them to do so; the bonds were produced in court by the agents of the bondholders, and in this way a large and constantly increasing number of coupons were forced upon the State. In Richmond alone, the number of tax-payers filing petitions for verification increased from 231 in 1887 to 720 in 1888. So numerous had these petitions become, that early in 1889 Gov. Lee and others organized a movement to rouse popular sentiment upon the matter and, by

holding public meetings in the six cities and seven counties from which the tender of coupons exclusively came, urged the citizens, as a matter of patriotic duty, to sign resolutions pledging themselves to pay all their taxes hereafter in money, in order to save the State from bankruptcy. Many signatures to such resolutions were obtained.

Political.—There was no election for State officers during the year. State conventions of the various political parties were held, to select delegates to the national nominating conventions and to nominate presidential electors. The Democratic Convention met at Norfolk on May 16, and the Republicans at Petersburg on the following day. The Petersburg Convention witnessed a factional contest between followers of ex-Senator William Mahone and John S. Wise, which resulted in the withdrawal of the latter and the holding of a second convention by his followers. Each faction selected delegates to the Chicago Convention. A resolution was passed by the Mahone Convention, opposing the proposed constitutional convention. At the November election the Democratic presidential electors were chosen. Republican congressmen were elected in the First and Second Congressional Districts, and Democrats in the remaining eight districts.

On the question whether a convention should be called to revise the Constitution, the vote was overwhelmingly in the negative—3,698 yeas to 63,125 nays.

W

WAITE, MORRISON REMICK, jurist, born in Lynn, Conn., Nov. 29, 1816; died in Washington, D. C., March 23, 1888. He was the eldest of eight children of Henry Matson Waite, Chief-Justice of Connecticut, was graduated at Yale College in 1837, in the class that also included William M. Evarts, Edwards Pierrepont, Daniel B. Coe, and Benjamin Silliman, Jr., and immediately began studying law with his father. Soon afterward he removed to Maumee City, Ohio, where he finished his studies, was admitted to the bar in 1839 and began practicing in partnership with Samuel Young. In 1850 the firm removed to Toledo, and in 1854 a new partnership was formed by Mr. Waite and his brother Robert. Though a Whig till 1856 and a Republican thereafter, and possessing wide repute for his legal acumen and success at the bar, he was loath to accept public office based on politics. In 1849 he was elected a member of the State Legislature, and in 1862 was an unwilling and defeated candidate for Congress. He was frequently tendered but always declined a seat on the bench of the Supreme Court of Ohio, preferring to remain at the bar. The office of member of the Legislature was the only one to which he was ever elected as a political preferment. In

1871 he was appointed by President Grant one of the three counsel of the United States before the Geneva Court of Arbitration which passed upon the "Alabama" claims, his associates being his old classmate, William M. Evarts, and Caleb Cushing. Besides his general arguments before that court, he made a special one, on the liability of the British Government for permitting the Confederate steamers to take in supplies of coal in British ports, which attracted much attention in legal and diplomatic circles. He returned to Toledo in November, 1872, and resumed his practice. In 1873 he was unanimously elected by both parties as a member of the Ohio Constitutional Convention, and at its organization was chosen president. On Jan. 19, 1874, he was nominated by President Grant to be the seventh Chief-Justice of the United States, to succeed Salmon Portland Chase, after the United States Senate had rejected the nominations of George H. Williams and Caleb Cushing. After a discussion of one hour the Senate indorsed the nomination, and two days afterward confirmed it, every Senator present, 62, voting in his favor. For his share of circuit labor he took the States of Maryland, West Virginia, Virginia, North Carolina, and South Carolina. In 1876 he was

urged by many friends to permit the use of his name as a candidate for the presidency, but declined in a characteristic letter, in which he declared that no man ought to accept the chief-justiceship unless he took a vow to leave it as honorable as he found it, and expressed the opinion that in the interest of impartial justice the Constitution might wisely have prohibited the election of a Chief-Justice to the presidency. He received the degree of LL. D. from Yale in 1872. (For a portrait of Chief-Justice Waite, see "Annual Cyclopædia" for 1882, page 126.)

WASHINGTON TERRITORY. Territorial Government.—The following were the Territorial officers during the year: Governor, Eugene Semple; Secretary, N. H. Owings; Treasurer, T. M. Ford, succeeded by Frank I. Blodgett; Auditor, T. M. Reed, succeeded by J. M. Murphy; Superintendent of Public Instruction, J. C. Lawrence, succeeded by J. H. Morgan; Chief-Justice of the Supreme Court, Richard A. Jones, who died on August 19, and was succeeded by Charles E. Boyle, by appointment of the President. Chief-Justice Boyle entered upon his duties in November, but died on December 15, after scarcely a month's service. Thomas Burke was then appointed Chief-Justice, entering upon his duties in the last week of the year. Associate Justices, Frank Allyn, William G. Langford, and George Turner, succeeded by Lucius B. Nash. The office of Attorney-General, created by the Legislature in January, was filled by the appointment of J. B. Metcalfe.

Legislative Session.—The Legislature, which was in session at the beginning of the year, adjourned on February 2. An important feature of its work was the passage of an act granting to women over twenty-one years old, otherwise qualified by residence, etc., the right of suffrage in all elections for Territorial or local offices. It is substantially the same act that was passed in 1886 and declared unconstitutional by the Territorial Supreme Court. The law that imposes a tax on the gross earnings of railroads was repealed, and an act taxing railroad property was substituted therefor. A new organization and new rules for the militia were adopted. An annual tax of one fifth of a mill is to be levied for its support, to be kept as a separate fund for militia purposes exclusively. At each general election a brigadier-general and adjutant-general are to be elected. In time of peace the National Guard shall consist of not more than twelve companies of infantry and one company of cavalry, the infantry companies to consist of not fewer than twenty-four or more than sixty men. License-fees for the sale of liquors were fixed at not less than \$800 and not more than \$1,000, 10 per cent. of the fee to be paid into the Territorial treasury, the remainder to be applied for school and local purposes. The county commissioners in counties outside of cities, and the governing authorities in cities,

have sole power to grant licenses and to fix the amount of the fee. The appropriations include \$178,490 for a new building at the Penitentiary and for the purchase of machinery to manufacture grain-sacks therein; \$80,000 for buildings at the School for Defective Youth at Vancouver; \$60,000 for erecting a new hospital for the insane at Medical Lake; \$10,600 for the Territorial University; and \$75,000 for the support of the Insane Asylum for two years. Congress was memorialized to admit the Territory into the Union with North Idaho annexed. Other acts of the session were as follow:

Changing the time of meeting of the Legislature, so that the next session shall begin on the second Monday of January, 1889.

Providing for the commutation of the sentence of prisoners as a reward for good behavior.

Directing the Governor to appoint four lawyers, two from each of the great political parties, as commissioners to codify the laws.

Authorizing organized counties to issue bonds to refund their indebtedness.

An elaborate act in relation to coal-mines, providing for their inspection, regulation, and ventilation, and for escapement-shafts and other appliances for the safety and health of miners.

Regulating the location and recording of quartz-mining claims, and providing for assessment-work done thereon.

Providing a mode of garnishment in civil actions.

Regulating the practice of dentistry by requiring every practitioner to obtain a diploma from some regularly chartered dental college, or a certificate from the Territorial Board of Dentistry created by this act.

Declaring Sundays, New-Year's Day, Fourth of July, Twenty-second of February, Christmas, Thanksgiving, Memorial Day, and days on which general or special elections for delegate or county officers are held, legal holidays.

Abolishing the use of seals upon deeds, and providing that the word "heirs," or other technical terms, shall not be necessary to convey an estate in fee simple.

Providing a penalty for the careless use of firearms. Prescribing a short form of mortgage and acknowledgment.

Authorizing telegraph and telephone companies to exercise the right of eminent domain in constructing their lines.

A new fish and game law.

To punish the giving of false pedigrees of animals.

Revising the procedure in civil actions.

Making it larceny for a bailee to appropriate goods of another in his possession.

To prevent the introduction or spread of contagious diseases among sheep, and providing for the appointment of a county inspector of sheep.

Prohibiting corporations from paying their employees otherwise than in lawful money of the United States.

Authorizing a married man to deed property directly to his wife, and the wife to her husband.

Creating the county of Okanogan out of the western half of Stevens County.

Authorizing county commissioners to levy a tax not exceeding three tenths of a mill to create a fund for the relief of indigent soldiers and sailors and their families, to be expended under the direction of the Grand Army posts.

Declaring it arson for the owner to set fire to an unoccupied building.

Development.—Estimates made by the Governor place the population of the Territory, on Sept. 30, 1888, at 167,982 persons, an increase

of 24,213 over the census returns of 1887. The assessed valuation of the Territory for 1888 exhibits an increase of \$23,058,443 over 1887, the total valuation being \$84,621,182. This large increase is partially due to the assessment of railroad property for *ad-valorem* taxation for the first time. During the year 137 miles of new railroad have been constructed, the total mileage in October being 1,197 miles.

Coal.—For the year ending Sept. 30, the total coal-product of the Territory is estimated at 1,138,801 tons, against 525,705 tons for the year preceding. The mines having the largest yield are as follow: Roslyn, 234,201 tons; Carbon Hill, 203,702 tons; Black Diamond, 186,522 tons; Franklin, 182,921 tons; Newcastle, 158,134 tons.

Charities.—A small appropriation was made by the Legislature of 1885-'86 for the maintenance of a school for defective youth, and a small class of unfortunates that had been assembled at Tacoma were removed to Vancouver and adopted as wards of the Territory. Through the liberality of citizens of Vancouver, a farm was purchased and some buildings erected thereon for the accommodation of this school, and the small appropriation was made to serve. By a bill approved Jan. 26, 1888, an appropriation of \$30,000 was made for a building for this school, and an act approved Jan. 28, 1888, appropriated \$12,000 for maintenance. The building was in process of construction during the year.

Militia.—By the militia act of this year, above referred to, the National Guard of the Territory was placed upon a secure basis. The troops have been provided with uniforms and armories, and the regiments with colors, and the service thus being made more attractive, the companies were immediately recruited up to the maximum. The force now consists of two regiments of infantry and a troop of cavalry, in all 750 officers and men.

The Chinese.—How strong a feeling exists in the Territory against Chinese labor was shown by an incident in Pierce County. The hop-fields in this county are extensive, and when the season for gathering the crop came, it was found that the labor of Indians and others heretofore employed in this work could not be obtained. It was proposed by some of the hop-growers to import Chinese laborers from Portland, Oregon. Rumors of the fact at once created excitement, especially in the city of Tacoma, where a large public meeting was held to consider the situation. Among the resolutions adopted by this meeting were the following:

That the public-school board is most respectfully requested to grant applicant children leave of absence to enable them to go to the hop-fields.

That a committee of five members be appointed in each ward and precinct to take applications, both from employers and employes, to facilitate exchange between both parties.

That under no consideration nor in any emergency will we consent to the reintroduction of Chinese into Pierce County, and that we will use every legal means to prevent the same.

The immediate result was that white people, who had hitherto considered hop-picking as fit only for Indians and foreigners, readily offered their services to the growers, and the crop was gathered without the aid of Chinese.

Local Option.—The Supreme Court of the Territory rendered a decision in January, declaring that the local-option law passed in 1886 was unconstitutional and void. Two of the judges based their opinion on the ground that it delegated legislative power to local bodies, while a third, rejecting this reason, decided that the authority given by the act had by its terms been granted to no legally constituted local officials or bodies. The fourth judge dissented from these views.

Woman Suffrage.—In August the Territorial Supreme Court unanimously decided that the woman-suffrage law of 1888 was unconstitutional, as it had two years before decided regarding a similar law of the Legislature of 1886. The decision recites that the Legislature of the Territory has only such power as is given it by the organic act and other acts of Congress, and the question, therefore, turns upon the construction of the word "citizen" in that act. The court finds that the use of that term was to indicate males only. Section 1,859 refers to "male citizens" and the court reasons that in all places where the mere word citizen is used it means "male citizen." They find that the Constitution of the United States and all laws of Congress were made with the purpose and intention of males alone exercising the right of franchise.

Political.—On Sept. 4 a Democratic Territorial Convention met at Spokane Falls, and re-nominated Delegate Charles S. Voorhees for Congress. J. J. Hunt was nominated for Brigadier-General of the Territorial militia, and Hilory Butler for Adjutant-General. The platform adopted contains the following:

That we are opposed to the un-American policy of interfering with or destroying any now legally existing private or public business interests, by sumptuary laws or otherwise, without just compensation and due process of law.

The Republican Territorial Convention met at Ellensburg on Sept. 11, and nominated John B. Allen for Delegate, A. P. Curry for Brigadier-General, and R. G. O'Brien for Adjutant-General. Its platform contains the following:

We arraign the Democratic Administration for its failure to place an adequate force on the frontier of Washington Territory to prevent the unlawful entry of Chinese.

We heartily advocate the forfeiture of all unearned land grants within our Territory, and their restriction to the use of actual settlers, and we demand the immediate passage of the Dolph Bill declaring forfeiture of that portion of the grant to the Northern Pacific Railway Company between Wallula and Portland.

We are in favor of legislation establishing the eight-hour system for the working of mines, and prohibiting the employment of child labor therein, and we disapprove of the introduction of armed men for the purpose of intimidating and humiliating laborers in mines, mills, etc.

We believe that the charges of transportation, warehouse, and elevator companies are subjects to be regulated by law, and we favor the enactment of such laws as, while assuring to capital a fair return for its use, will fully protect the people from unjust or discriminating charges or tariffs.

When the Territory of Washington is admitted into the Union, we ask that the boundaries be extended to include North Idaho.

A Prohibition ticket was also in the field. At the November election the Republican candidates were successful, changing a Democratic plurality of 2,200 in 1886 to a Republican plurality of over 7,300. For Delegates, Allen received 26,291 votes; Voorhees, 18,920; and Roger S. Greene (Prohibition), 1,187. At the same election, members of the Territorial Legislature for 1889 were chosen. The Republicans elected 11 of the 12 members of the Council, and 21 of the 24 members of the Lower House.

WEST INDIES. British. Bahamas.—The Bahamas are a chain of islands lying between 20° 42' and 27° 34' north latitude, and 72° 40' and 79° 5' west longitude, composed of about twenty inhabited islands and an immense number of islets and rocks, comprising altogether 4,466 square miles. The principal island is New Providence. The population in 1886 was 47,278. The town of Nassau has about 5,000 inhabitants. The Governor is H. A. Blake. The commercial relations of the colony are mainly with the United States. Considerable quantities of pineapples, oranges, and bananas are exported. The public debt amounts to £83,126. The revenue in 1886 was £43,920; the expenditure, £44,629. The imports in 1886 were valued at £189,410, and the exports at £150,890. The total tonnage entered and cleared in the same year was 209,996.

Barbadoes is in latitude 18° 4' north, longitude 59° 7' west, and is the most windward of the Caribbean Islands. It is nearly 21 English miles long by 14 in breadth. The population of the island is 180,000. The Governor is Sir Charles C. Lees. Almost the sole productions are sugar and molasses. In 1886 the island exported 45,768 hogsheads of the former and 83,218 puncheons of the latter. The public debt does not exceed £29,800. The revenue in 1886 was £186,286, and the expenditure £186,628. The total imports reached £863,491; the exports, £739,911. The aggregate tonnage of vessels entered and cleared in 1886 was 916,242.

Bermuda.—The "Bermudas" form a group of about 300 small islands in the western Atlantic Ocean, in latitude 32° 15' north and longitude 64° 51' west. The Governor is Lieut.-Gen. Thomas Lionel John Galloway. The population in 1886 was 15,177; that of Hamilton, the capital, 2,100. The public debt in 1886 was £2,714; the revenue, £80,518; and the expenditure £28,432. The chief products are early potatoes, onions, tomatoes, and beets, which are sent to New York. The imports in 1886 were valued at £279,190; the exports, £78,546. The total tonnage entered and cleared in the same year was 281,528.

British Guiana.—This colony is on the South American Continent, extending from east to west about 200 miles. It includes the settlements of Demerara, Essequibo, and Berbice. Its area is about 109,000 square miles. About 180 square miles are under cultivation. The Governor is Charles Bruce. The capital is Georgetown, with 52,000 inhabitants. The chief product is sugar, there being, in 1886, in active operation, 105 sugar-estates, cultivating 76,203 acres. The population of the colony in 1886 was 274,311, of whom 74,026 were aborigines; 94,782 East Indians; 3,346 Chinese; 11,847 Portuguese; and 4,231 negroes. The public debt, on Dec. 31, 1886, was £446,700. The revenue in 1886 was £446,025 and the expenditure £476,964. The imports in 1886 were valued at £1,486,297; exports, £1,842,585. The tonnage of shipping entered and cleared in 1886 was 627,845.

Jamaica, an island in the Caribbean Sea, southward of the eastern extremity of Cuba. The Cayman Islands are dependencies of Jamaica, and have an area of 89 miles. The population of Jamaica in 1886 was 620,000, the number of whites not exceeding 15,000. The population of Kingston, the capital, is 38,566. The Governor is Gen. Sir H. W. Norman. The chief crops are sugar, coffee, ginger, and pimento; and the exports comprise, in addition to those products, rum, dyewoods, and fruit. There are 150 acres of Government cinchona-plantations. The number of sugar-estates in operation is 198. The public debt amounts to £1,562,548. The revenue in 1886 was £564,875; the expenditure, £582,785. The imports in 1886 were valued at £1,325,608; the exports at £1,280,118. The amount of shipping entered and cleared in 1886 was 881,516 tons.

Trinidad.—This island is about sixteen miles eastward of Venezuela, and is separated from the continent by the Gulf of Paria, into which fall the northern mouths of the Orinoco. The colony will henceforth include Tobago. The population in 1886 was 178,270; that of Port of Spain, the capital, being 31,858; of San Fernando, 6,335. The total length of railroads in operation, all Government property, is 51½ miles. There are 68 miles of telegraph. The public debt amounts to £571,880. The revenue in 1886 was £453,407; the expenditure, £443,503. The imports in the same year were valued at £2,503,514; the exports at £2,509,140. The amount of shipping entered and cleared in 1886 was 1,196,076 tons.

British Honduras, a colony on the eastern coast of Central America, bounded north by Yucatan, west by a straight line drawn from the rapids of Gracias-á-Dios on the river Saratón to Garbutt's Falls on the river Belize, and thence due north to the Mexican frontier. The area is 7,562 square miles. The population does not exceed 30,000; that of the chief port, Belize, being 5,767. The Governor is K. T. Goldsworthy. The public debt amounts

to \$268,750. The revenue in 1886 was \$271,810; the expenditure, \$302,775. In the forests and wilds are found the cedar, rose-wood, bullet-tree, faustic, lignum-vitæ, sapodilla, Santa Maria, iron-wood, red and white pine, India-rubber, and gutta-percha trees. The cocoanut flourishes, as do also the cahoon-plant and the ground-nut. The cultivation of fruit (bananas and plantains) and its shipment to New Orleans, are extending and proving remunerative. Arrangements are being made to ship fruit to the European markets, in steamers fitted with refrigerating apparatus. The chief industry is wood-cutting, now 200 years old; 3,000,000 feet of mahogany and 17,000 tons of logwood are on an average exported annually. There are 61 sugar-mills and large fruit-plantations. The chief exports are logwood, mahogany, sugar, fruit, India-rubber, tortoise-shell, and sarsaparilla. The imports in 1886 were valued at \$1,179,813; the exports at \$1,400,234. The shipping entered and cleared in 1886 was 237,254 tons.

French.—*Guadeloupe* and its dependencies have an area of 1,870 square kilometres; the population numbering 182,619. The Governor is M. Le Boucher. The public indebtedness is 1,001,000 francs; the budget for 1886 estimated the income at 4,158,000 francs, and the outlay at the same sum. The home Government spent on the colony, in the same year, 2,118,000 francs. The imports of merchandise in 1886 amounted to 17,500,000 francs; the exports to 16,300,000. There entered the harbors 417 sea-going vessels. During the fiscal year 1887 the colony exported 45,646 tons of sugar in crystals, and 2,269 tons of brown sugar; during 1888 the amounts were respectively 40,878 and 1,690 tons. The rum exportation was 2,904,166 litres in 1887, declining to 2,636,322 in 1888. The molasses importation declined from 832,280 litres in 1887 to 184,926 in 1888. In January, 1889, the General Council of Guadeloupe passed a law favoring importation into the colony of certain manufactures of the mother-country, by fixing higher duties on articles made outside of France. Thus the duty on foreign cotton goods is doubled, the duties on shoe-leather and boots and shoes are materially raised, as are also those on butter, wines, and codfish. By way of reciprocity, the home Government is urged to reduce the duties now levied in France on coffee, cocoa, vanilla-beans, and pimento, of colonial growth.

Martinique covers 988 square kilometres, and the population is 175,755. The Governor is Albert Grodet. The island chiefly produces sugar, the yield of which in 1888 was 50,000 tons. The public debt does not exceed 435,000 francs; the budget for 1886 showed expenditures to the amount of 4,584,000 francs. The home Government, in 1886, spent on the colony 2,187,000 francs. The import of merchandise reached 23,700,000 francs in 1886, while the export amounted to 20,400,000 francs. The

number of sea-going vessels entering in the same year was 897.

French Guiana is still a penal colony. The climate being considered unhealthful, it attracts but little immigration, in spite of its exuberantly fertile soil and manifold resources, among which placer and quartz gold are prominent. The population (exclusive of the wild Indians) is only 26,905. The Governor is M. Gerville-Réaché. The colony has no public debt. The budget for 1886 showed an outlay of 2,123,000 francs, the home Government at the same time spending on the colony 3,266,000 francs. The import of merchandise was 7,200,000 francs; the export, 4,700,000 francs. There entered, in the same year, the port of Cayenne, 86 sea-going vessels.

Spanish.—*Porto Rico* is the lesser of the Spanish Antilles. (For area and population, see "Annual Cyclopædia" for 1885.) The Governor and Captain-General is L. Tabán. The American Consul at St. Johns is Edward Conroy. The island is in a remarkably prosperous condition, and continually attracts immigration from Spain, the Canary Islands, and the other West Indies. The population of the leading cities is as follows: Ponce, 37,545; San German, 30,146; Mayaguez, 26,446; Arecibo, 25,457; Naguabo, 24,912; St. Johns (the capital), 23,414. A railroad is to be built to connect the above-named ports and thus encircle the entire island. It will measure 546 kilometres. The cost is estimated at 50,000,000 francs, on which the Government guarantees an annual interest of 8 per cent. In 1888 there were in operation 838 kilometres of telegraph, the number of offices being 85. The colonial budget for 1888-'89 fixes the expenditure at \$3,973,491, and the revenue at \$3,863,100. The peninsula and foreign trade movement in 1886 was: Imports, \$11,116,548; exports, \$10,293,544. The chief articles exported were: Sugar, 59,333 tons; coffee, 16,761 tons; molasses, 20,086 tons; tobacco, 2,053 tons. In 1887 the export of sugar increased to 81,855 tons. The number of vessels entered Portorican ports in 1886 was 1,874, with a tonnage of 96,855. The American trade with Porto Rico has been as follows:

FISCAL YEAR.	Imports into the United States.	Domestic exports from the United States
1886	\$4,594,544	\$1,676,929
1887	4,661,690	1,701,241
1888	4,412,438	1,920,358

The Spanish Transatlantic Steamship Company began on Oct. 30, 1888, a new steamship service between New York and Porto Rico.

WEST VIRGINIA. State Government.—The following were the State officers during the year: Governor, E. Willis Wilson, Democrat; Secretary of State, Henry S. Walker; Treasurer, William T. Thompson; Auditor, Patrick F. Duffey; Attorney-General, Alfred Caldwell; Superintendent of Free Schools, Benjamin S. Morgan; President of the Supreme

Court of Appeals, Okey Johnson; Judges, Thomas C. Green, Adam C. Snyder, and Samuel Woods.

Finances.—The following statement shows the operations of the State treasury for the biennial period ending Sept. 30, 1888: Receipts for the fiscal year ended Sept. 30, 1887, \$1,316,020.58; balance at the end of the preceding year, \$368,001.80; making a total of \$1,684,022.38; disbursements during the same period, \$1,924,116.55; balance at the end of 1887, \$359,905.83. Receipts during the year ended Sept. 30, 1888, \$1,205,119.71; balance at the end of preceding year, \$359,905.83; making a total of \$1,565,025.54; disbursements during the same period, \$1,227,288.98; balance at the end of 1888, \$337,736.56.

The balance in the State fund on Sept. 30, 1888, was \$52,974.80; in the general school fund, \$279,811.16; and in the school fund, \$4,950.60.

During the two years 1887 and 1888 it became necessary, in order to meet unusually large appropriations, to borrow \$143,000, of which sum \$125,000 was borrowed from banks and \$18,000 from the board of the school fund, all of which amounts have since been paid, and in addition thereto the sum of \$67,545.46, on account of claims filed by sheriffs prior to 1885. There has also been paid \$7,000 on account of the \$59,000, which was borrowed from the board of the school fund during 1885 and 1886.

There was expended on account of criminal charges during the fiscal year ending in September, 1887, \$117,632.46, and for the year ending in September, 1888, \$65,882.87.

The assessment of property in the State for 1887, was as follows: Real property, \$118,181,936; personal property, \$43,978,803; railroad property, \$15,185,650. For 1888 the assessment was: Real property, \$119,414,484; personal property, \$44,469,225; railroad property, \$15,501,670. The past six years have shown an increase in the wealth of the State, especially in railroad property, which has grown in value from \$8,458,904 to \$15,501,670. Real property has increased from \$106,958,187, and personal property from \$39,637,735.

Education.—The number of youth in the State between six and twenty-one years, according to the enumeration of 1887, was 249,178; according to that of 1888, 256,360. The number enrolled in the free schools for 1887 was 179,507; for 1888, 189,251. For 1887 the average daily attendance was 108,298, and for 1888 122,020. There were 4,603 schools of all grades in 1887, and 4,816 in 1888, an increase of 216; 5,089 teachers were employed in 1887, and 5,238 in 1888. The number of school-houses in 1887 was 4,465; in 1888, 4,567. The average length of the school year increased from four months and nineteen days in 1887 to five months and two days in 1888. The average salary per month paid teachers holding number one certificates for 1887 was \$31.52; for 1888 it was

\$33. The same salary was paid males and females for the same grade of work. The State also supports six normal schools and a State University.

Immigration.—The first organized movement to promote immigration to the State was begun during the year. On February 29, at the invitation of the Chamber of Commerce of Wheeling, about 1,000 business men of the State met in that city and organized the West Virginia Immigration and Development Association, said association to have in each county a county auxiliary, to be organized as soon as practicable by the representatives of each county in this convention, the necessary steps to be taken to organize the counties not here represented.

Election Frauds.—The Governor says, in his biennial message to the Legislature, in 1889:

Reproach has been cast upon our State as never before by illegal, fraudulent, and corrupt voting in almost every county within its borders. This is so palpable that "he who runs may read." The capitulations of 1884 were 132,522, and the entire vote, after the most active political campaign ever made in the State, 187,527. The capitulations of 1888 were 147,408, and the vote 159,440. The difference in the capitulations and the vote in 1884 was 4,065, in 1888 it was 12,032. This shows an increase of votes in four years of 21,853, which, if legitimate, would indicate a population of 900,000, and an increase in four years of much more than 100,000. It is certain that no such increase has taken place.

The Governor advises, among other remedies, the passage of a registration act, although its operation would seem to be limited, if not destroyed, by the following provisions of the State Constitution:

No citizen shall ever be denied or refused the right or privilege of voting at an election, because his name is not, or has not been registered or listed as a qualified voter.

The Legislature shall never authorize or establish any board or court of registration of voters.

Freshets.—On July 11 and 12, in consequence of heavy rains, an unusual rise and overflow of many of the rivers of the State occurred, inundating a large territory and sweeping away bridges, buildings, crops, and other property. The rise of the waters was in many streams greater than ever before known. Scarcely a week later, on July 19, the city of Wheeling and vicinity was visited by a storm of great fury, though scarcely of an hour's duration, which destroyed bridges in the city limits, eight people thereon being drowned, and caused great loss of property. On August 21, another destructive storm swelled the rivers and swept away bridges and property in the northern portion of the State. The homes and entire property of many were swept away, and whole villages were for a time dependent on the charity of their neighbors.

Political.—The earliest nominations for State officers were made by the Union Labor party, which met in convention at Charleston on May 3, and selected as candidates, S. H. Piersol for Governor; J. H. Burt for Auditor, who later

withdrew from the ticket and gave his support to the Republicans; S. P. Hawver for Treasurer; D. D. T. Farnsworth for Attorney-General; and O. D. Hill for Superintendent of Free Schools. The platform included the following:

We favor the enactment of such laws as will cause the operator to pay the miner for all merchantable coal.

In releasing the revenues necessary to carry on the State Government the property of corporations shall have no advantage over property owned by individuals.

We favor the enactment of such laws in general as shall so change our laws as to place them abreast of those of the most populous and prosperous States of the Union; that shall remove the last vestige of antiquated mossback laws that hamper commerce, retard development, depreciate capital, stand as a menace to immigration, and chain West Virginia and her destiny to the past, not the future.

The passage of the miners' bill at the last session of the Legislature, containing the conspiracy feature, is a blow to organized labor, and passed designedly for the purpose of overawing those who are connected therewith.

On July 31, the Prohibitionists met at Parkersburg and nominated a State ticket headed by Thomas R. Carskadon for Governor.

The Democratic State Convention was held at Huntington on August 16. Its nominees were: A. B. Fleming for Governor, Patrick F. Duffy for Auditor, W. T. Thompson for Treasurer, Alfred Caldwell for Attorney-General, B. S. Morgan for Superintendent of Free Schools, and Henry Brannon and J. T. English for Judges of the Supreme Court of Appeals.

The platform approved President Cleveland's message, and the Mills Bill, the present State Administration, and that of the United States; denied that the Democratic party was for free trade, and declared for the St. Louis platform.

On August 22, the Republicans held their State Convention at Charleston, and nominated Gen. Nathan Goff for Governor by acclamation. Other candidates upon the ticket were: For Auditor, George M. Bowers; for Treasurer, Hiram Lewis; for Attorney-General, William P. Hubbard; for Superintendent of Schools, F. B. McLure; for Judges of the Supreme Court of Appeals, John W. Mason and H. C. McWharter. The resolutions approve the Chicago platform, demand protection not only for manufactures but for raw materials and for all farm-products, demand a tax of \$200 or more on immigrants for the protection of American labor, and oppose the importation of contract or pauper labor.

The following were also a part of the platform:

Whereas, The passage of the miners' bill by the Democratic Legislature of 1887, containing the conspiracy feature, was a direct blow at organized labor, and was passed with the design and purpose of overawing those who are connected therewith; *Therefore, be it resolved*, We pledge our party to repeal so much of Chapter 50 of the Acts of 1887 as refers to conspiracy, and also provide that the inspector shall be a practical miner instead of a civil engineer, as is now required by law.

On September 12 a convention of about fifty delegates, calling themselves the "Colored In-

dependents," met at Charleston and placed in nomination presidential electors and a State ticket containing the following names: For Governor, W. H. Davis; Auditor, E. A. Turner; Treasurer, Alfred Whiting. The resolutions adopted denounce the Republican party, ask the Legislature to prevent discriminating branches of study in the public schools; oppose monopolies, corporations, trusts; oppose taking the revenue off whisky and tobacco, and ask that all necessities be placed upon the free list and that the tariff be reduced to prevent a surplus.

An address was issued to the colored voters, urging them to desert the Republican party and to stand together.

At the November election the contest was close, and the result remained in doubt until returns were received from the last election district. It then appeared that, while the Democrats had elected their candidates for presidential electors and nearly all their State ticket, the Republican candidate for Governor had a plurality of 106 votes on the face of the returns. As certified by the local officials, the vote stood: Goff, 78,904; Fleming, 78,798; Carskadon, about 1,000; and Piersol, about 1,400. The official vote for Treasurer was: Thompson, 78,969; Lewis, 78,127; Hawver, 1,399; and Bodley, 1,035. For Auditor: Duffey, 78,855; Bowers, 78,201; Sayre, 1,438; Bains, 1,027. For Attorney-General: Caldwell, 78,687; Hubbard, 78,520; Farnsworth, 1,579; Myers, 935. The Democratic candidates for Superintendent of Free Schools and for Supreme Judges were also elected. The Legislature chosen at the same time will contain in the Senate, 12 Democrats, 13 Republicans, and 1 Union Labor man, and in the House, 34 Democrats and 31 Republicans, giving the Democrats on joint ballot a majority of one vote. On the face of the returns, Democratic Congressmen were elected in the First and Second districts, and Republicans in the Third and Fourth, in each case by narrow pluralities. The Democratic candidate in the First District was elected by 16 votes, while in the Third the Republicans claimed only 13 more votes than their opponents. On December 26, Gov. Wilson issued certificates of election to the Democratic candidates in the First and Second districts, but refused to issue any for the other districts, alleging that, as there was a contest over the returns in those districts, he could not legally do so.

At the same election, three constitutional amendments were submitted to the people, and all of them were rejected. The most important one, prohibiting the manufacture and sale of liquor, failed of adoption by about 35,000 votes.

WILHELM I, Emperor of Germany, born in Potsdam, Prussia, March 22, 1797; died in Berlin, March 9, 1888. He was the second son of Friedrich Wilhelm, Crown-Prince of Prussia, and his wife Princess Luise, daughter of the Grand Duke of Mecklenburg-Strelitz.

Prince Wilhelm, as he was called (his full name being Friedrich Wilhelm Ludwig) was pronounced a weakly child by the physicians, and until he grew to manhood his health was a subject of solicitude. His father ascended the Prussian throne as Friedrich Wilhelm III when the prince was six months old. In his parents' retreat, at Paretz, Wilhelm was accustomed to simple living, and from the teachings of his philosophical father and the Rev. Dr. Delbrück, his tutor, he imbibed high notions of duty. In Berlin he was made familiar with another life, that of a luxurious and profligate aristocracy, inflated with pride and arrogance. After the defeat at Jena, on Oct. 14, 1806, the King and his family became exiles from Prussia. The two princes were taken to their mother at Schwedt, in Pomerania, and with her took their flight in an open carriage along the sea-shore in mid-winter to Stettin, Königsberg, and Memel. Wilhelm and the Queen both sickened with typhus fever before reaching Memel, whence they were obliged, six months later, to emigrate to Tilsit, where the unfortunate Queen, when forced to receive Napoleon, replied to his taunts that it was a pardonable error in the descendants of Frederick the Great to overrate their strength. From the day when the Prussian and Austrian armies were defeated by the "upstart" till she died of a broken heart in 1810, when the foe was still unexpelled, the proud and patriotic Luise never ceased to admonish her sons to revenge the humiliation of Jena when the opportunity came, and redeem the glory of Prussian arms. Friedrich Wilhelm III was restored by the grace of the victor to his reconstructed and diminished kingdom in 1809.

Wilhelm from his earliest childhood was interested in military forms and trappings. Having no outlook for the succession, he aspired to be a distinguished general. He was made a lieutenant in 1807, and Capt. Reiske, his military instructor, praised his rapid acquisition of technical details. In the war of the allies against Napoleon his father took him to the field for six weeks, saying that he was too weak in health for a longer campaign, and at Bar-sur-Aube, Feb. 27, 1814, sent him to the front to learn the name of a Russian regiment that was gallantly advancing. The prince's coolness under fire won for him the coveted Iron Cross and the Russian order of St. George.

Friedrich Wilhelm, the elder brother, was a philosopher and philanthropist, like his father, and a gay, companionable, and witty man. Wilhelm was not liked. He was narrow-minded and morosely set in his opinions, regarding politics and the state with the instincts of a "drill sergeant" from the standpoint of absolutism. On June 11, 1829, Prince Wilhelm married Augusta, daughter of the Grand Duke of Saxe-Weimar. The marriage was unhappy, because the prince was deeply attached to another woman, the Princess Radziwill, and was compelled by his father to marry the Weimar princess

against his inclination. In 1840 Friedrich Wilhelm IV came to the throne, and his soldierly brother, who was popular only among military men, was acknowledged as his heir.

As Prince of Prussia Wilhelm was accorded an important influence on the decisions of Government. He strengthened the Conservative resolutions of the King, but could not withhold him from granting a constitution in 1847. The irresolute monarch was induced by his brother and other Absolutist advisers to nullify the charter that he had signed, and to declare at the opening of the Diet that no sheet of paper should stand between him and his subjects. The revolution of 1848 followed, and the ruthless action of the military under Prince Wilhelm's orders could not avert the enactment of a genuine constitution. He would have "riddled Berlin with bullets" before yielding had he been king. The "cartridge prince," as he was nicknamed for that expression, was the special object of popular hatred and fury. "The Prince of Prussia was his murderer," cried a woman whose son had fallen at the barricades, walking through the streets beside the litter on which the corpse was borne to the burial-ground. "I will remember that," threatened the prince, when a stone aimed at his head crashed through his palace-window. The King left Berlin, against the strenuous protests of his brother, and the troops were then withdrawn. "No music while our sons are dying!" shouted the populace, when the band of the guards struck up a martial strain. The mob hunted the prince in his palace, and hung from the balcony the black, red, and gold flag, emblematic of German unity and liberty, while Prince Wilhelm and his wife slunk through the back streets of Berlin, cold and hungry, until they could reach the house of a friend. Disguised in the dirty clothes of a laborer, the prince made his way on foot to Hamburg, and escaped to England. The King cloaked his ignominious flight with the pretense of an important political mission. Soon afterward the reaction set in, and the prince, under the protection of a mandate for the National Parliament at Frankfort, went back to Germany, and appeared in the Assembly in his general's uniform. When he returned to Berlin the Prince of Prussia professed a conversion to constitutional principles, and promised to support his brother in the course in which the spirit and the necessities of the time had compelled him to embark. The royal pledges were violated, and the National Assembly was broken up by the military when it insisted on parliamentary government. The King then proclaimed a constitution devised by the upholders of divine right, giving Parliament only advisory powers in legislation and supervision of the finances, while it restricted individual liberty and extended the powers of the police. Prince Wilhelm openly sided with the King against the National Assembly, applauded the refusal of a parliamentary system, objected to

the conferring of any share in legislation on an assembly elected by universal male suffrage, and finally placed himself at the head of the Prussian army that was sent to disperse the Frankfort Parliament and put an end to popular government by defeating the national army in Baden. But the police *régime* under the Manteuffel, Westphalen, and Hinckeldey ministries found no favor in the eyes of the upright prince, and the abasement of Prussia before Russia and Austria so incensed him that he would have gone to war with Russia, though the Emperor Nicholas was his brother-in-law and the guardian of monarchical principles in Europe, rather than renounce Prussian supremacy in Germany and accede to the resuscitation of the old Bund, as was done in the treaty of Olmütz. When the Crimean War broke out, in 1854, he dissuaded his brother from making an alliance with the power that had so humiliated Prussia.

After the peace of Paris was signed in 1856, King Friedrich Wilhelm, who began to show symptoms of insanity, resigned the direction of public business into the hands of the Prince of Prussia. The decree was twice renewed, and when the King's condition grew worse, Prince Wilhelm was appointed Regent on Oct. 9, 1858. Disgusted with the "white terror," the Prince Regent determined to create a Liberal administration, to the head of which he called Prince Hohenzollern-Sigmaringen, by whom, with the aid of his colleague Rudolf von Auerwald and others of like opinions, police espionage and repression were abolished. When Napoleon III made war on Austria in 1859 the Emperor Franz Josef gave up the Italian provinces and hastened to conclude peace as soon as he heard of the proposal of Prussia in the Diet to mobilize the German armies and send them to the Rhine, preferring to suffer the diminution of his own territory rather than aid in the aggrandizement of his rival for military supremacy in Germany. On the death of Friedrich Wilhelm the Prince-Regent succeeded to the throne as William I, Jan. 2, 1861. He had already begun to prepare for the struggle with Austria, being aided in the development of his policy by the genius of Otto von Bismarck. The German people had no predilection for a military state, and in the Prussian and German Parliaments it was proposed to convert the armies into a militia with elective officers following civil occupations in time of peace, a scheme which the Prince of Prussia had opposed in an anonymous pamphlet. In 1860 Bismarck brought in a budget authorizing the doubling of the army. The minister had incurred great unpopularity by aiding Russia to suppress the Polish insurrection, and the Assembly rejected the military bill by a large majority, whereupon Bismarck declared that, as the House of Lords had accepted the budget rejected by the Chamber, there was no properly authorized budget, and the Government must therefore frame one to

suit the exigencies of the case. This singular interpretation of the Constitution was sustained by the supreme tribunal, packed for the purpose, and for four years the administration was carried on without a properly voted budget. The people protested against the collection of taxes, but did not openly resist the despotism of the Hohenzollern and his Prime Minister. The terror and dismay that hung over the country in this period was not dispelled by the successes of the Danish war and the acquisition of Schleswig-Holstein in 1864, and when Prussia went to war with Austria in 1866 for the retention of the duchies, the Prussian people mistrusted their rulers and feared a bargain with Napoleon for the cession of the Rhine frontier. The sudden and complete victory of the North German armies, paving the way to German unity, dissipated all doubts, and nearly reconciled the people to the usurpation of their liberties, since it had led to the triumph of their national ambition. Parliament at once voted an indemnity for all military expenditure. King Wilhelm and his counselors began forthwith to prepare for the greater war that must ensue from the refusal of the Emperor Napoleon's demand for the cession of Mayence and the Rhine frontier of 1814, as compensation for German unity and the baffling of his subsequent designs on Belgium and Luxemburg. King Wilhelm concluded secret offensive and defensive alliances with each of the South German states after the campaign of 1866, and therefore acceded without demur to the article placed in the Treaty of Prague to appease French susceptibilities, to the effect that those states should maintain "an international and independent position." The Franco-Prussian War of 1870 was planned by King Wilhelm, under the guidance of Count Bismarck, as the means of consolidating the power of Prussia and completing the political unification of Germany. Count Moltke, as early as the winter of 1868, elaborated a complete scheme for the invasion of France. Napoleon III more confidently and more hastily rushed into the war in the expectation of crushing the military power of Prussia and retrieving his political position at home. Both governments were eager to seize on the dispute about the candidacy of Prince Leopold of Hohenzollern for the Spanish throne, as a device for kindling popular enthusiasm in the war. King Wilhelm, accustomed from his youth to a soldier's fare, marched across the frontier with his armies at the age of 73, frequently exposed himself to the enemy's fire in the hottest battles, and by his presence inspired his troops with irresistible courage.

On Jan. 18, 1871, the 170th anniversary of the coronation of the first King of Prussia, the victorious monarch was acclaimed German Emperor by the princes of the German states and the commanders of the army, in the Hall of Mirrors at Versailles. As soon as the war was over, and the German Empire established

on a firm foundation, Prince Bismarck engaged his master in a conflict with the Catholic Church, considering the lately promulgated doctrine of papal infallibility a menace to the state, and the attitude of the clericals in the Reichstag an obstacle to the amalgamation of the various elements composing the Empire. When the era of the Kulturkampf was ended, and the force of Separatist resistance had spent itself, the republican and socialistic ideas that were an important element in the revolutionary movement of 1848 asserted themselves in the Social-Democratic agitation. A desperado named Hödel, inflamed with revolutionary passion and desire for notoriety, fired at the Emperor as he was passing along the avenue Unter den Linden, on May 11, 1878. The ministry presented a bill to suppress the Socialist movement, which the Reichstag rejected by a majority of nearly 200 votes. Dr. Nobiling, an educated Socialist, moved by the same impulses that actuated Hödel's attempt, fired with buckshot at the Emperor in his carriage on June 2, and wounded him severely. The Reichstag was at once dissolved, and a new one passed Prince Bismarck's anti-Socialist bill. The law expired in 1881, and has been repeatedly renewed and strengthened. The Social-Democratic party, by the unsparing use of repressive powers, was disorganized, but not destroyed. At length the Emperor and his Chancellor turned to constructive legislation, in order to promote contentment and avert the danger of revolution, devising a scheme of social reform that is intended to make the lot of the laboring-man easier and to secure him against want. The military system has been developed and extended on the lines approved by Wilhelm I. The creation of the Prussian army he considered the chief task of his life. His foreign policy was shaped so as to retain the acquisitions of the French war, and, to guard against a combined attack from France and Russia, a military alliance was entered into with Austria-Hungary and Italy.

The Emperor Wilhelm was a soldier in all his habits. He slept on a hard couch, ate simple food, drank sparingly of wine, and used no tobacco. He was pious and orthodox in his religious faith.

WILHELM II, Emperor of Germany, born in Berlin, Jan. 27, 1859. He is the eldest son of Frederick III of Prussia, the second Emperor of Germany, and of his wife Victoria, the Princess Royal of England. He early developed a liking for military affairs, and was encouraged in such tastes by his grandfather, learning many details of tactics, drill, and discipline before he could read. He imbibed also the old Emperor's monarchical ideas of government and his dislike for popular representative government. His earliest teacher was an English governess. He was sent to Bonn to study political science, jurisprudence, and mathematics, and in 1882, by his grandfather's directions, was placed with Dr. Aschenbusch,

president of the province of Brandenburg, to learn the practical details and the administrative routine of the civil service. He also had instruction from Prince Bismarck, whom he visited once a fortnight. In military matters he became as proficient as his grandfather. Prince Wilhelm (whose full name is Friedrich Wilhelm Victor Albrecht), married the Princess Augusta Victoria, daughter of Friedrich, Duke of Schleswig-Holstein, on Feb. 27, 1881. The family consists of five sons, of whom the eldest, the Crown-Prince Friedrich Wilhelm Victor August Ernst, was born on May 6, 1882. For portraits of the Emperor Wilhelm II and the Crown-Prince, see the "Annual Cyclopædia" for 1887, page 821.

WISCONSIN. State Government.—The following were the State officers during the year: Governor, Jeremiah M. Rusk, Republican; Lieutenant-Governor, George W. Ryland; Secretary of State, Ernst G. Timme; Treasurer, Henry B. Harshaw; Attorney-General, Charles E. Estabrook; Superintendent of Public Schools, Jesse B. Thayer; Insurance Commissioner, Philip Cheek; Railroad Commissioner, Atley Peterson; Chief-Justice of the Supreme Court, Orsamus Cole; Associate Justices, William P. Lyon, David Taylor, John B. Cassoday, and Harlow S. Orton.

Finance.—On Oct. 1, 1886, the balance in the treasury aggregated \$786,720.24; the total receipts for the succeeding biennial period were \$5,469,996.10, and the disbursements \$5,447,072.82, leaving a balance in the treasury on Sept. 30, 1888, of \$750,702.44. Of this balance, there was in the general fund \$304,139.09 and in the school fund \$151,241.85. The receipts of the general fund for the fiscal year 1886-'87 were \$1,805,122.76; and the disbursements \$2,171,201.79; for the year 1887-'88 the receipts were \$2,284,513.26, and the disbursements \$2,099,984.99. The receipts from the State tax for the former year were \$902,484.88; for the latter year, \$996,504.41. The tax on railroads yielded in the former year \$768,994.56; in the latter, \$1,068,632.96. The State debt on September 30 amounted to \$2,251,000, all of which is held by State funds.

Statistics.—The assessed valuation for 1888 is as follows: Personal property, \$125,922,683; city and village lots, \$152,545,964; other real estate, \$302,996,102; total, \$581,264,749. There were assessed 404,036 horses, 1,236,452 cattle, 728,689 sheep and lambs, and 540,231 swine.

Education.—The whole number of persons enrolled between the ages of four and twenty years, June 30, 1888, was 567,702, and of this number only 265,477 were reported as attending the public schools. The following amounts were paid by the State for educational purposes in 1888: Support of university, \$218,856.71; normal schools, \$99,229.58; common and high schools, \$3,509,786.75.

In 1885 the Legislature passed an act giving to women the right of suffrage in municipal elections, on all matters relating to schools.

The State Supreme Court, in January, interpreted this to allow women to vote for school-officers, but not for such other municipal officers, like the mayor, as only indirectly controlled educational matters.

Charities.—Wisconsin has a peculiar system for the maintenance and care of its insane. This system includes two exclusively State institutions and the Milwaukee County Asylum, which is both governed and maintained in part by the State. These institutions have a normal capacity for the care of 1,370 patients, and at the close of the fiscal year had 1,425 inmates.

In addition to these hospitals proper there are now 16 county asylums for the care of the chronic insane, with two others in process of erection. The combined capacity of these asylums will be sufficient to accommodate 1,505 inmates. These asylums, while they are maintained and managed by the counties exclusively in which they are situated, yet when conducted in a manner satisfactory to the State Board of Charities and Reform, become entitled to assistance from the State at the rate of \$1.50 a week for each inmate.

The School for the Deaf cost the State \$35,515.80 for 1887, and \$37,609.29 for 1888. The number of pupils in attendance in 1887 was 198; in 1888, 206. The School for the Blind maintained 73 pupils in 1887 at a cost of \$19,630.52, and 84 pupils in 1888 at a cost of \$20,965.41.

The last two Legislatures made provision for the establishment and maintenance of a State public school at Sparta. There has been expended for that institution \$95,000 for lands and buildings—\$30,000 in 1885, and \$65,000 in 1887. Five substantial cottages and one large main building have been erected, and surrounding these is a farm of 165 acres, nearly all under cultivation. The cost for current expenses in 1888 was \$20,128.48. The school was opened Nov. 13, 1886, and from that time to Sept. 30, 1888, 301 children were received. At the close of the present year there were 184 remaining in the school.

Prisons.—The average number of prisoners confined in the State prison in 1887 was 448; in 1888, 441. The total expense for the support of the prison for the past two years was \$59,325.53 for 1887, and \$61,073.87 for the fiscal year ending Sept. 30, 1888. Total for the two years, \$120,399.40. Of this amount \$99,187.96 was received from the prison-labor contractor. This leaves the net cost of the prison to the State for the two years, \$21,211.44.

The Industrial School for Boys cost the State for 1887, \$45,583.12; and for 1888, \$49,104.25. The average population of the school in 1887 was 334, and in 1888, 359.

Railroads.—At the close of 1888 the entire mileage of the State was 5,178 miles, an increase in two years of 400 miles. Of this, 340 miles were built in 1887 and 60 miles in 1888. The entire cost of the railroads of Wisconsin,

as reported on June 30, 1888, was \$208,867,-606.27. The capital stock at the same date was \$97,898,515.86. The amount of debt, funded or unfunded, was \$117,547,909.35, or a total of capital stock and debt of \$214,941,425.21. There was earned on Wisconsin railroads for the year ending June 30, 1888, \$24,891,619.06, of which \$6,266,259.35 was for transportation of passengers, and \$17,165,959.24 for freight, and \$1,459,400.47 for mails, express, etc. There has been a decrease in the cost of freight carriage in ten years of over 50 per cent.

Fisheries.—The value of the catch of Wisconsin fishermen on the Great Lakes in 1888 was \$270,595.06; value of property, \$337,706; number of persons employed, 628. Fishing is assuming an important place among the State industries.

Militia.—The National Guard consists of three regiments, one battalion of infantry, one troop of cavalry, and one light battery, aggregating 2,282 officers and enlisted men. The expenses for 1887 were \$54,990.14, and for 1888, \$56,927.87.

Political.—Democratic and Republican State Conventions for the choice of delegates to the National Conventions were held on May 1 and 9 respectively. On May 28 the Prohibitionists, in State Convention at Madison, selected delegates to the Indianapolis Convention and nominated the following candidates for State offices: for Governor, E. G. Durant; Lieutenant-Governor, Christopher Carlson; Secretary of State, Nelson La Due; Treasurer, L. W. Hoyt; Attorney-General, Charles E. Pike; Superintendent of Public Schools, J. H. Gould; Railroad Commissioner, E. W. Drake; Insurance Commissioner, S. M. Bixby.

On July 24 a State Convention of the Union Labor party met at Oshkosh and nominated the following ticket: For Governor, D. Frank Powell; Lieutenant-Governor, Nelson E. Allen; Secretary of State, William M. Lockwood; Treasurer, Alfred Manheimer; Attorney-General, T. E. Ryan; Superintendent of Public Schools, E. W. Krackowitzer; Railroad Commissioner, John E. Thomas; Insurance Commissioner, Rittner Stephens. This ticket was changed before the election by the substitution of Kerellio Shawoan for Attorney-General, Joseph W. Stewart for Superintendent of Public Schools, and Frank J. Heines for Railroad Commissioner. Resolutions were adopted, demanding:

Taxation of all notes and mortgages.

All laws should be simplified so that there is but one law on one subject, and that worded in plain language, which will enable the people to understand the law without paying enormous fees to lawyers.

The one-man power has no place in a republic; hence all public officials, as far as practicable, should be elected by a direct vote of the people, and the voters be allowed to recall all unfaithful, inefficient, and dishonest officials.

A revision of the patent laws giving inventors a premium for their inventions and then giving the free use of such inventions to all the people, which will prevent the system of monopoly now existing, and

stop the robbery of both inventors and the people by heartless and greedy capitalists.

The Republican Convention for the nomination of State officers met at Milwaukee on Aug. 22, and on the first formal ballot chose William D. Hoard as candidate for Governor. All the other State officers were renominated. A very short platform was adopted, including the following:

With regard to the affairs of the State, they [the Republicans of Wisconsin] offer as the best guarantee of the future and the strongest claim to the continued confidence of the people, the record of the present Republican Administration and its predecessors. It is a record of the honest, economical, impartial and judicious application of sound business methods to the conduct of the various departments of the State Government.

The Democratic State Convention met at Milwaukee Sept. 5, and nominated James Morgan for Governor, Andrew Kull for Lieutenant-Governor, August C. Larson for Secretary of State, Theodore Kersten for Treasurer, Timothy E. Ryan for Attorney-General, Amos Squire for Superintendent of Schools, Herman Naber for Railroad Commissioner, and Evan W. Evans for Insurance Commissioner.

At the November election, Hoard received for Governor 175,690 votes; Morgan, 155,428 votes; Durant, 14,373; Powell, 9,196. The other candidates on the Republican ticket were also elected. The Legislature chosen at the same time will be composed as follows: Senate—Republicans 24, Democrats 6, Union Labor men 2, Independent 1; House—Republicans 70, Democrats 18, Independent 1. Democratic Congressmen were chosen in the Second and Fifth Districts, and Republicans in the remaining seven districts.

A proposed amendment to the Constitution, giving the Legislature power to prescribe the powers, duties, and compensation of the State Superintendent of Schools, was defeated, 12,967 votes in favor of it and 18,342 against it.

WYOMING TERRITORY. Territorial Government.—The following were the Territorial officers during the year: Governor, Thomas Moonlight; Secretary of Territory, Samuel D. Shannon; Auditor, Mortimer N. Grant; Treasurer, William P. Gannett, succeeded by Luke Voorhees; Attorney-General, Hugo Douzelman; Superintendent of Education, John Slaughter; Chief-Justice of the Supreme Court, William L. Maginnis; Associate, Samuel T. Corn and Jacob P. Blair, succeeded by M. O. Saufley.

Legislative Session.—The tenth Territorial Legislature was in session from Jan. 10 to March 9. Its most important legislation relative to public institutions and the Territorial finances is discussed below. The so-called "maverick" stock-law was repealed at this session, and in its stead an act was passed creating a board of live-stock commissioners, consisting of one member from each county, appointed by the Governor for two years. This board has the appointment of local stock-inspectors, who are to take up and sell strays, mavericks, and oth-

erwise to carry out the provisions of the law, and has control of the funds derived from such sales. A law providing for a more strict observance of the Sabbath was passed. Three new counties were created—Converse from portions of Laramie and Albany Counties, Sheridan from a portion of Johnson County, and Natrona out of a portion of Carbon County. The two former were organized during the year. A law for the promotion of immigration makes the Secretary of the Territory a commissioner of immigration, and provides a small appropriation for his use in making known the advantages of the Territory. A rearrangement of legislative districts and a reapportionment of members of the Legislature was made necessary by the creation of new counties. Congress was memorialized to provide for the early admission of the Territory as a State. The bounty laws were repealed. Other acts of the session were as follow:

Authorizing the Governor to designate Arbor Day, and to encourage tree-planting.

Regulating the business of foreign mutual life-insurance companies in the Territory.

Requiring all banks (except national banks) to publish sworn statements once each quarter, regarding their financial condition, and providing penalties for receiving deposits when the bank is in an insolvent condition.

Describing lawful fences in the Territory, and providing for penalties when the provisions of the act are violated.

Making it a felony to sign any false certificate of acknowledgment or jurat.

Authorizing the semi-annual payment of interest on bonds.

Prohibiting the unauthorized wearing of the Grand Army badge and using the letters "G. A. R." for business purposes.

Requiring owners and operators of oil-lands to plug their wells so as to shut off all water from the oil-bearing rock, and to exclude the oil and gas from the water before abandonment.

Providing for the exercise of the right of eminent domain by railroad companies.

Providing for reports of Territorial officers and boards of public institutions.

Providing for the organization, management, and control of banks, banking institutions, savings-banks, and trust and loan companies.

To protect grazing lands of Wyoming from live-stock brought temporarily into the Territory from other States and Territories.

Creating the office of Territorial Engineer, and concerning appropriation of water.

Regulating the practice of pharmacy.

Providing for the release of dower by married women.

To make the mechanics' lien laws of Laramie County applicable to all parts of the Territory.

Providing a method for the taxation of live-stock on the open range.

Providing for the bonding of school districts.

Finances.—The Territorial debt at the beginning of the year was \$280, in the form of 6-per-cent bonds, issued to raise funds for the construction of necessary public buildings. It was increased to \$320,000 by the Legislature of this year, which authorized the issue of \$90,000 in 6-per-cent bonds payable in forty years. These bonds were sold at an average premium of 12 per cent.

The assessed valuation of the Territory is about \$81,000,000, or over \$1,000,000 less than in 1887. As the Legislature increased the bonded debt up to the prescribed limit of one per cent. of the valuation on the basis of the assessment for 1887, which was the latest then available, it follows that the Territorial indebtedness of \$320,000 now exceeds the one per cent. limit. The valuation of railroad property, included in the above total, was \$5,908,984, an increase of over \$150,000 above 1887. The tax-levy for Territorial purposes was increased this year from slightly over 3 mills in 1887 to $6\frac{1}{8}$ mills, apportioned as follows: General fund, $2\frac{1}{2}$ mills; Capitol-building fund,

\$30,000 this year for its completion and enlargement. For finishing and enlarging the new University building \$25,000 was appropriated. A Penitentiary building at Rawlins was also provided for by the Legislature of this year, \$30,000 being appropriated. The sum of \$5,000 was appropriated for a Poor Asylum building at Lander, which shall cost, when completed, not more than \$25,000. A building for the Deaf, Dumb, and Blind Asylum at Cheyenne has been erected, with the appropriation of \$8,000 made by the Legislature of 1886 for that purpose, but no provision has yet been made for the support or management of the institution, and the building is unused.

STATE HOUSE AT CHEYENNE.

$2\frac{1}{2}$ mills; university income-tax, $\frac{1}{8}$ mill; Territorial bond-tax, $\frac{1}{8}$ of a mill; insane asylum bond-tax, $\frac{1}{8}$ of a mill; stock indemnity fund, $\frac{1}{8}$ of a mill.

Public Buildings.—Prior to 1886 the Territory was almost without public buildings, but the Legislatures of that and the present year have provided liberally therefor. The Capitol-building, begun in 1886, was so far completed in January as to be occupied by the Legislature during the session, the sum of \$150,000 being expended in its erection. A further appropriation of \$125,000 was made this year for enlarging the building by the addition of wings, and an extra tax of $2\frac{1}{2}$ mills was imposed for 1888 and 1889 to raise this sum. The building already completed is a substantial structure of cut and dressed stone, provided with the latest modern conveniences.

The Insane Asylum building, for which \$30,000 was appropriated in 1886, received another

Education.—The latest report of the Territorial Superintendent, for the year ending with October, 1887, presents the following statistics: Number of school-houses, 124; schools, 187; male pupils, 2,890; female pupils, 2,782; teachers, 281. The average monthly salary of teachers was \$59.90. The first year of the University of Wyoming, which began on Sept. 1, 1887, was considered successful. An additional appropriation of \$25,000 for the completion of the University building at Laramie City was made by the Legislature this year, and the annual levy for its support was increased from one fourth to one half of a mill, providing an income for 1888-'89 of about \$15,500. The school and university public lands given by the Federal Government to the various States and Territories for educational purposes, do not by law become available until Statehood is attained, but, by a special law passed by Congress in August, the Territory of Wyoming is author-

ized to lease these lands for a term not exceeding five years, and a considerable increased revenue to both the school and university funds is expected from these leases.

Settlement.—The total number of acres of the public domain taken up in Wyoming, up to and inclusive of June 30, 1887, was 2,041,730; during the year ending June 30, 1888, 317,356; total, 2,359,086. This is scarcely one thirtieth of the area of the Territory.

Railroads.—The report of the Governor, dated in September, shows that 139 miles of new road were constructed during the preceding twelve months, making the total length of railroads 891 miles. The Wyoming Central has extended its road as far west as Fort Casper, or the old Platte Bridge, a distance of about 132 miles in the Territory, and for the present seems to rest there. The Cheyenne and Northern has completed the road to the Platte river in a north-westerly direction from Cheyenne, 125 miles. The Burlington and Missouri Railroad has in operation a line to Cheyenne from Sterling, on the South Platte river, 29 miles.

Coal.—Every county in the Territory has its deposits of coal, which are nowhere at such depth as to make mining expensive. No anthracite coal has been discovered. The largest mines are those operated by the Union Pacific Railroad Company. Returns from all the large companies show that the total product for 1887 was about 1,170,318 tons.

Political.—The Democratic Territorial Convention met at Cheyenne, on October 6, and nominated Caleb Perry Organ for delegate to Congress. The resolutions include the following:

The Democrats heartily favor the appointment of residents of the Territory to the Federal offices.

We desire to place ourselves on record as being emphatically opposed to the lavish use of money in our Territorial and local elections.

We believe the people of this Territory are law-abiding, and their sense of justice is sufficiently strong, with the aid of their local government, not only to maintain the public peace but to protect public and private property, and are therefore opposed to the importation of foreign police mercenaries.

On October 10 the Republican Territorial Convention met at Cheyenne, and renominated Delegate Joseph M. Carey. The platform contains the following:

The Republicans of Wyoming favor home rule, and will hail with delight the era of self-government. We now have the taxable wealth and the population necessary to support a State government, and, being therefore entitled to admission into the Union, we earnestly favor such Congressional legislation as will enable us to adopt a Constitution and secure the rights of Statehood.

We favor the adoption and enforcement of a liberal and honest policy relating to the deposition of the public lands, and we further urge the importance of securing Government aid in the construction of reservoirs in which the waters of Wyoming may be stored for the use of the people.

The Republican party is strenuously opposed to the use of money for the purpose of influencing votes, and heartily condemns this outrageous practice, which was so early introduced into our Territorial elections by the Democracy.

Both parties declare their strong opposition to Chinese immigration. At the November election, Carey received 10,451 votes, and Organ, 7,557. Members of the next Territorial Legislature were chosen as follow: Senate, Republicans, 5; Democrats, 7; House, Republicans, 17; Democrats, 7.

Y

YOUNG MEN'S CHRISTIAN ASSOCIATION. The "Year-Book" of the Young Men's Christian Association for 1888 gives lists of 1,250 associations in America, and 8,840 in the world. Of the American associations, 77 are engaged specially in work among railroad men, 10 among German-speaking young men, 273 in colleges, 29 among colored men, and 18 among Indians; 226 make mention in their reports of classes in from one to fifteen branches of study, 287 of special attention to physical culture through gymnasiums and other sports, 63 of special work among commercial travelers, 158 of organized boys' departments, and 435 of woman's auxiliaries. Among other special services spoken of are 398 Bible-classes, 367 Bible training classes, and 661 weekly prayer-meetings. The associations employ 752 men for their entire time as secretaries and assistant secretaries. The whole number of members in the American associations is 175,000, the buildings owned by them are valued at \$5,609,265, and their entire property at \$7,261,658. The expenditure in 1887 was \$1,161,388 in

VOL. XXVIII.—54 A

local work, and \$104,949 in general work. From other countries there were reported to the International Conference at Stockholm:

The associations of the world are represented in an International Union, which has a Central Executive Committee composed of delegates from each nationality, with a president, secretary, and offices at Geneva. Through this committee are arranged the triennial World's Con-

ferences, of which the eleventh, in Stockholm, was opened Aug. 15. About 400 delegates attended; Bishop K. H. Gez von Scheele, of Visby, Sweden, was president. The review of the association work showed that it had increased largely in Germany, Switzerland, Holland, Norway, Sweden, and Paris. The following subjects were considered in formal written papers, with general discussions following them; "What the Bible says to the Young Men of Our Day," "What Means ought to be employed for the Spiritual Development of the Members and for the Conversion of Young Men in general," "The Mutual Duties of Members of the Young Men's Christian Association," "The Means which ought to be employed by the Association for the Moral Development of their Members," "Creation

and Organization of Associations," "Different Kinds of Young Men's Christian Associations," "The Real Source of Life for our Associations," "The Different Means employed for the Physical Development of Young Men," "The Young Men's Christian Association as compared with the True and False Socialism," and "The Association's Work in Non-Protestant Countries." Public meetings, held in the afternoon of each of the five days of the session of the Conference, were addressed by Messrs. Gustave Topfel, President of the Executive Central Committee; Krummacher, of Elberfeld; Scholt, of Drammen; Williams, of London; Frommel, court chaplain at Berlin; Hoskins, of London; Beck, of Denmark; Lyons, of France; Favre, of Geneva; Morse, of New York; Farwell, of Chicago, and others.

Z

ZANZIBAR, a monarchy on the eastern coast of Africa. The reigning Sultan or Seyyid is Khalifa, who succeeded his brother, Bargash ben-Said, on March 27, 1888. The island of Zanzibar has an area of 1,690 square kilometres, or 625 square miles. The Sultan's authority formerly extended along the coast of the mainland from Warsheikh to Delgado Bay, about 900 miles. In 1886 Germany established a protectorate over the interior, from the river Rovuma northward to Kilimandjaro. North of that mountain, as far as Tana river, England's sphere of influence extends, in accordance with an agreement between the two powers. Zanzibar's sovereign rights were limited to the coast between Kipini on the Ozi river and Cape Delgado, and to the garrisoned stations of Lamoo, Kismayu, Brava, Merka, Mukdusha, and Warsheikh. The population of the island of Zanzibar is about 200,000, half of whom live in the city of Zanzibar. The rulers are Arabs, and the subject population mostly negroes. The entire Arab population on the eastern coast of Africa and in the island of Zanzibar does not exceed 2,500; yet they own all the valuable soil, hold the bulk of the population in slavery, and monopolize the slave-trade. There are about 6,000 Indian traders and slave-owners in Zanzibar and on the coast, and 150 Europeans who reside in the towns.

War against Europeans.—The Arabs of Zanzibar and the interior of Africa, who, in spite of the convention made in 1873 between the Sultan of Zanzibar and the English Government, continue to supply Asia with negro slaves, organized an attack on the European settlements in the autumn of 1888, with the object of driving away the Germans, in order to keep open the caravan routes to the sea and avert the suppression of the slave-traffic. The Arab slave-traders in the vicinity of Lake Nyassa beleaguered the British missionary stations, which were on ground claimed by Portugal.

Soon afterward the Yaos, the northernmost branch of the Kaffirs, began to pour into the German settlements. On September 20, thousands of armed men from the south bank of the Rovuma appeared before Mikandini. At some of the harbors the natives refused to receive the German officials. The inhabitants finally took up arms and drove the Germans from all their establishments on the coast. When Ernst Vohsen, the chief director of the German East African Company, attempted to land at Pangani on September 5, a line of Arabs along the shore fired at the Germans, declaring that they were banded together to make a stand against the oppression and insults of the company's officials. Herr Michahelles, the German consul-general, and Herr Vohsen, in an interview with the Sultan, contradicted the stories of German violence and tyranny. They admitted that they could not return to Pangani and Tanga for some time, and accepted the arrangement proposed by Seyyid Khalifa, to the effect that the Sultan was to appoint his own governors and garrisons, and administer justice; and that the Germans were to nominate natives to superintend customs, and not to attempt to land at the ports until the population was willing to receive them. The German flag was not to be re-hoisted. The coast population would not accept an arrangement that contemplated the reinstatement of the Germans. Gen. Matthews, commanding the troops of the Sultan, who was sent to reassert the Sultan's authority in Pangani, was defeated and driven away by the rebels. The German gun-boats thereupon shelled Pangani and other places.

Blockade of the Coast.—The English colonial project, which had been begun in order to prevent the Germans from acquiring dominion over all the lake-region and the trade-routes, suffered likewise. The Sultan had lost all authority on the mainland. More than 1,000

Indian subjects of Great Britain, engaged in trading and agriculture, had abandoned their possessions and fled to Zanzibar. British missionary settlements had been destroyed, and some of the missionaries who could not escape were besieged in their stations. Lord Salisbury, who had made the British Government a partner in the German scheme for the conquest of the most productive regions of the African Continent, accepted Prince Bismarck's proposal to fight the slave-traders and restore European prestige by blockading the coast. Portugal, having important colonial interests to conserve, and Italy, ambitions of extending her influence in East Africa, were induced to promise assistance with their war-vessels in the naval blockade. France has no important colonial interests in this part of the continent, but she has some commerce with the African tribes, which must suffer by a blockade. The Arab dhows, when chased, have been accustomed to display the French flag, which usually has saved them from capture.

The slave trade fell away in consequence of the abolition of slavery in American countries, the co-operation of the Sultan of Zanzibar in the efforts to suppress the traffic, and the vigilance of the English patrol off the eastern coast of Africa. Recently, however, there has been an increase in the traffic. This fact has been ascribed to the establishments of the French in Madagascar and the Comoro Islands, owing to the increase of French shipping in these seas, and the facility thus given to slavers to escape under false colors. The slave-raids are now attended with more cruelty, destruction of life, and desolation than they were when the supply of slaves was more abundant and not so remote from the sea-coast. The export of slaves is variously estimated from 60,000 to 180,000 a year. At least ten lives are sacrificed in bringing one slave to market. A large proportion of the slaves that are taken die on the march or on shipboard, and the people who are not fit for slaves—the aged, the women, and the children—are either butchered by the raiders or left to starve. Large areas, once populous, have been stripped of inhabitants.

The English were not entirely sincere in their efforts to uproot slavery and put an end to the traffic in men, and the Germans were still less so, for the laws that the British Government had compelled the Sultan to enact, prohibiting the holding or hiring of slaves in the Zanzibar dominions, had, in the interest of Indian and British capitalists, been suffered to fall into desuetude, while the enterprise of the German East Africa Company was based upon slave-labor. The Belgian Government, through its consul at Zanzibar, recruited slaves for the Congo Free State, paying their masters their market value, while the slaves received an equal sum for the term of their indentures.

The French Government refused the request of the German and English Governments for

liberty to search French vessels, adhering to the principle of international law that the right of search can be exercised only in case of an effective blockade, which would require three times the naval force that the parties to the blockade were disposed to employ. M. Goblet subsequently yielded when the suppression of the slave-trade was represented to him as the object of the blockade, conceding the right to search ships and boats flying French colors that were suspected of carrying slaves, but still insisted that the search for contraband of war and its seizure should be conditional on the blockade being made effective. To show its sincerity in desiring to stop the slave-traffic, the French Government sent a vessel to co-operate in the blockade.

Admiral Deinhard, of the German blockading fleet, and Admiral Fremantle, of the co-operating English squadron, declared the blockade of the coast for the purpose of preventing the exportation of slaves and the importation of arms and munitions of war in a proclamation issued on December 2. The German fleet undertook to watch the coast south of the Wanga to Lindi, and the English fleet from the Wanga northward to the island of Lamu. The English East Africa Company conciliated the Arabs in Mombassa by paying for 1,500 runaway slaves who had been harbored by the missionaries. The German squadron, which bombarded the coast opposite Zanzibar before the vessels took up their stations in the blockade, consisted of the frigate "Leipzig," the corvettes "Carola" and "Sophie," the cruisers "Möwe" and "Schwalbe," and the dispatch-boat "Pfeil." The German land force at Bagamoyo was besieged by the Arab leader, Bushire. The Germans strengthened their position at that point and at Dar-es-Salaam by building stone forts, and prepared to recover the other harbors by force of arms under protection of the blockade. They recruited native soldiers, who were employed in ineffectual operations against the coast tribes at Sadani and elsewhere, thereby closing the caravan routes and bringing ruin upon the British Indians that they had induced to resume trade, many of whom were plundered by the black soldiers in the employ of the German company. Bushire, who had 2,500 men armed with breech-loaders, captured Bagamoyo, and cut off the retreat of the Germans, who were besieged in their block-houses till December 7, when the shells of the war-vessels compelled the Arabs to withdraw. The town was laid in ruins. The German vessels bombarded Lindi, Mikandini, Tanga, Pangani, and other coast towns, destroying much property belonging to East Indians, and causing the owners to be detained as prisoners by the Arabs. The Portuguese authorities on December 10 announced the extension of the blockade and the prohibition of the importation of arms from the Rovuma to Pomba Bay, in 18° of south latitude.
